U.S. Regulation of the International Securities and Derivatives Markets

Twelfth Edition

Securities Markets

by Edward F. Greene, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar and Adam E. Fleisher

---

U.S. Regulation of the International Securities and Derivatives Markets, Twelfth Edition, Securities Markets provides the only available comprehensive analysis of the application of U.S. securities laws to participants and transactions in securities in the international capital and financial markets. The book provides in-depth analysis of the legal framework for all types of securities offerings—from registered IPOs to Rule 144A offerings, including the principal issues a foreign company should consider when deciding whether and how to offer securities in the United States (*i.e.*, publicly or privately). It also offers guidance on U.S. regulations governing brokers and dealers, investment companies and investment advisers.

Prior editions of this treatise covered both U.S. regulation of the international securities markets and U.S. regulation of the international derivatives markets. With this Twelfth Edition, we have divided the topics into two separate volumes. For a detailed description of the U.S. regulatory regime governing international financial transactions involving derivatives, as well as the U.S. regulatory regime governing futures commission merchants, dealers in swaps and security-based swaps, major participants in swaps and security-based swaps, commodity pool operators and commodity trading advisors, please refer to *U.S. Regulation of the International Securities and Derivatives Markets, Twelfth Edition, Derivatives Markets*, forthcoming.

This treatise was authored by a team of attorneys at Cleary Gottlieb Steen & Hamilton LLP, renowned as one of the foremost law firms in international capital markets and financial transactions.

The book is divided into 16 chapters:

Chapter 1: **Statutory and Regulatory Framework** introduces the key pieces of legislation that are discussed in more detail in subsequent chapters and discusses the principal ways in which this legislation is evolving.

Chapter 2: **Key Considerations for a Foreign Company Accessing the U.S. Capital Markets for the First Time** is an entirely new chapter that presents the key issues for a foreign company considering offering securities in the United States for the first time, including whether to do so as a public offering or private placement.

Chapter 3: **The U.S. Public Offering Process for Foreign Issuers** discusses in detail the U.S. public offering process and the considerations that will affect how a foreign company approaches the U.S. public market.

Chapter 4: **Foreign Issuer Disclosure in the U.S. Public Securities Market** details the disclosure required of foreign issuers under the SEC's rules for public offerings and reporting companies, and it explores the major issues foreign issuers often encounter in attempting to meet these disclosure requirements.

Chapter 5: **Corporate Governance and Similar Requirements Applicable to Reporting Foreign Private Issuers** now consolidates in one chapter a detailed discussion of the corporate governance requirements applicable to a foreign company that is public in the United States.

Chapter 6: **Certain Requirements Relating to Directors, Officers and Major Shareholders of Foreign Private Issuers that Are Public Companies in the United States** analyzes the reporting obligations under the U.S. securities laws applicable to senior officers, directors and significant shareholders of foreign companies whose securities are publicly traded in the United States.

Chapter 7: **Private Offerings in the United States by Foreign Issuers** deals with Rule 144A offerings and other private placements exempt from Securities Act registration.

Chapter 8: **Financings Outside the United States** discusses the requirements of the safe harbor provisions of Regulation S that afford an exemption from Securities Act registration for securities offerings outside the United States.

Chapter 9: **Tender Offers, Repurchases of Equity Securities, Liability Management, Business Combinations** describes the rules governing tender and exchange offers, liability management transactions, business combinations and other issues relating to the acquisition—whether by the company or third parties—of significant interests in companies whose securities trade in the United States or that conduct business in the United States.

Chapter 10: **Selected Practical Issues in Cross-Border Offerings** discusses various practical issues related to international offerings as well as certain types of nontraditional offerings, such as continuous offerings, block trades, rights offerings, spin-offs and offerings of tracking stock and contingent value rights.

Chapter 11: **Enforcement of the U.S. Securities Laws** addresses governmental and private remedies, including class actions, relating to violations of the U.S. securities laws.

Chapter 12: **Categorization and Regulation of Securities** analyzes the continuing evolution of the jurisprudence governing the legal status of certain financial instruments, including derivatives, under the U.S. securities laws.

Chapter 13: **The U.S.-Canadian Multijurisdictional Disclosure System** analyzes the MJDS, which provides for complex reciprocal arrangements intended to facilitate certain U.S.-Canadian cross-border securities offerings and tender offers.

Chapter 14: **Foreign and Foreign-Owned Broker-Dealers** discusses the regulatory frameworks applicable to broker-dealers, focusing on jurisdictional issues, registration requirements and applicable exemptive provisions, and summarizing the regulatory regime applicable to registered entities.

Chapter 15: **Foreign Investment Companies** describes the regulatory framework applicable to investment companies, focusing on jurisdictional issues, registration requirements and applicable exemptive provisions.

Chapter 16: **Foreign and Foreign-Owned Investment Advisers** discusses the regulatory frameworks applicable to investment advisers, focusing on jurisdictional issues, registration requirements and applicable exemptive provisions.

The *Guide to Locating Relevant Forms, Statutes, Rules and Regulations*, which is now part of the front matter of this book, guides readers to the location of electronic copies of a wide variety of the authorities cited in the book, including statutory provisions, rules, regulations, forms, cases and administrative decisions.

Highlights of the Twelfth Edition

This Twelfth Edition covers a number of topics not previously discussed in the book and has been reorganized and streamlined. New Chapter 2 presents the key issues for a foreign company considering offering securities in the United States for the first time, including whether to do so in a public offering or private placement. This new chapter functions as an executive summary of issues that are discussed in detail later in the book, and includes a roadmap to these subsequent discussions. In addition, this Twelfth Edition now covers pre-deal communications such as pilot fishing and the role of anchor and cornerstone investors (discussed in Chapter 3) and liability management (discussed in Chapter 9). Chapter 10 includes a new discussion of contingent value rights. We have also reorganized the book to consolidate the discussion of corporate governance requirements applicable to foreign issuers in one chapter (new Chapter 5) and to present in one chapter the discussion of requirements applicable to senior officers, directors and significant shareholders of U.S. public companies (new Chapter 6).

This Twelfth Edition also discusses recent developments in a number of areas. Continuing its emphasis on facilitating access to the capital markets for issuers previously evidenced by the passage of the Jumpstart Our Business Startups Act (the “JOBS Act”) in 2012, in late 2015 Congress passed the Fixing America's Surface Transportation Act (the “FAST Act”), which, among other legislation, included several bills designed to facilitate the offer and sale of securities by providing accommodations related to the SEC registration process for “emerging growth companies” beyond those that had been provided by the JOBS Act. We discuss those additional accommodations in Chapter 4. In 2016, the SEC staff published several Compliance and Disclosure Interpretations aimed at curbing what it perceived to be increased misuse of non-GAAP measures; Chapter 4 discusses those interpretations as well as the SEC staff's subsequent posture with respect to non-GAAP measures in several comment letters to issuers. In Chapter 9, we discuss the *Marblegate Asset Management v. Education Management Corp.* line of cases interpreting § 316(b) of the Trust Indenture Act with respect to the meaning of “impairment” of the rights of debt holders to receive principal and interest when due in the context of restructuring transactions. Lastly, Chapter 11 discusses the courts' evolving interpretation of what constitutes a “personal benefit” for purposes of insider trading liability, which culminated in the Supreme Court's unanimous decision in *Salman v. United States* in late 2016.

This book covers, among other topics, rules and requirements applicable to public companies in the United States that were adopted pursuant to the Dodd-Frank Act, including certain disclosure-related rules that were intended to achieve social or political goals. The Trump administration has moved quickly to reverse certain of these Dodd-Frank related rules, as discussed in detail in Chapter 4 with respect to conflict minerals and resource extraction payments. The administration has also moved to reverse a Dodd-Frank mandated rule recently promulgated by the Department of Labor regarding the fiduciary duty of financial advisors under certain circumstances, which is discussed in Chapter 14. More generally, President Trump has stated publicly he intends to undertake a thorough reexamination of the Dodd-Frank Act, and it remains to be seen whether he will achieve a significant scaling back of Dodd-Frank, in the form of modification or repeal of existing rules, enforcement priorities or otherwise, during the course of his administration. It also remains to be seen whether the SEC under the new administration and new Chair nominee Jay Clayton will make liberalizing rule changes, including adoption of pending rule proposals with respect to, among other things, streamlining disclosure requirements.

p. v

Edward F. Greene

Edward F. Greene is senior counsel at Cleary Gottlieb. His practice focuses on securities, corporate governance, regulatory and financial services reform and other corporate law matters.

Mr. Greene served as General Counsel of the Securities and Exchange Commission from 1981 to 1982 and as Director of the Division of Corporation Finance from 1979 to 1981. From 2004 to 2008, he served as General Counsel of Citigroup's Institutional Clients Group.

Mr. Greene is the author of several books and law review articles, including *The Sarbanes-Oxley Act: Analysis and Practice*, which was co-authored with Cleary partners and is widely used as an essential source of practical advice. Mr. Greene has been recognized as one of the best capital markets lawyers by *Chambers Global*.

Mr. Greene originally joined the firm in 1982 and returned in 2009. During his more than 20-year tenure at Cleary Gottlieb, Mr. Greene was also resident in the firm's Washington, Tokyo and London offices, and was the first licensed foreign lawyer to be admitted to practice law in Japan in 1987. He is a member of the Bar in New York.

Mr. Greene received an LL.B. from Harvard Law School in 1966 and an undergraduate degree from Amherst College in 1963. He is currently a Senior Research Scholar and Lecturer-in-Law at Columbia Law School and has been a Lecturer at Harvard Law School and an Adjunct Professor of Law at the University of Pennsylvania and Georgetown University Law Center. He was appointed to the Nomura Chair of International Securities Regulation (a part-time position) by the law faculty of the University of Tokyo for the 1989-1990 academic year, was Chairman of the Legal Advisory Board of the New York Stock Exchange from 1995 until 2001 and was a member of the SEC's Advisory Committee on Capital Formation and Regulatory Processes and a Trustee and member of the Executive Committee of the Practicing Law Institute (“PLI”). Mr. Greene is on the Board of Advisors of the *Capital Markets Law Journal*, published by Oxford University Press.

Leslie N. Silverman

Leslie N. Silverman is a partner at Cleary Gottlieb, and his practice focuses on the domestic and international capital markets, representing both issuers and underwriters. Mr. Silverman has extensive experience, in particular, in cross-border offerings and the development of new financial products. He regularly counsels companies on compliance with the Jumpstart Our Business Startups Act, Dodd-Frank and Sarbanes-Oxley Acts, the SEC's implementing regulations and related corporate governance matters.

Mr. Silverman is widely published and is one of the authors of *PLI’s Guide to the Securities Offering Reforms* (Practising Law Institute, 2005) and *The Sarbanes-Oxley Act of 2002: Analysis and Practice* (Aspen Publishers, 2003). He also co-authored “Private Offerings: SEC Liberalizes the Rules but also Proposes New Requirements,” in *VC Experts* (October 23, 2013), “SEC's Silent Opposition to Arbitration Bylaws Is Speaking Volumes,” in *The National Law Journal* (August 12, 2013), and “Stockholder Adoption of Mandatory Individual Arbitration for Stockholder Disputes,” in the *Harvard Journal of Law & Public Policy* (Summer 2013). He is currently serving as a member of, and counsel to, the Committee on Capital Markets Regulation. He is distinguished as one of the world's best lawyers by *Chambers Global*, *Chambers USA*, *Chambers Latin America*, *IFLR 1000: The Guide to the World’s Leading Law Firms*, *The International Who’s Who of Business Lawyers*, *The Legal Media Group Guide to the World's Leading Capital Markets Lawyers*, *The Best Lawyers in America*, *The Legal 500 U.S.* and *PLC Which Lawyer? Yearbook*.

Mr. Silverman joined the firm in 1974 and became a partner in 1982. From 1985 to 1989, he was resident in the London office. He received a J.D. from Yale Law School in 1973, where he was an editor of the *Law Journal*, and an undergraduate degree, *summa cum laude*, from the Wharton School of the University of Pennsylvania. He also served as law clerk to Chief Judge Irving R. Kaufman of the U.S. Court of Appeals for the Second Circuit.

Mr. Silverman is a member of the Bars in New York and the District of Columbia, and is admitted to practice before the U.S. Court of Appeals, Second Circuit, and the U.S. District Court for the Southern District of New York.

Daniel A. Braverman

Daniel A. Braverman retired as a partner of Cleary Gottlieb at the end of 2013 and is now a senior counsel at the firm.

While a partner, Mr. Braverman not only focused on international finance, but he also worked in the mergers and acquisitions, joint venture and restructuring areas, and he assumed responsibility for a significant part of the firm's practice in Russia. Mr. Braverman joined the firm as an associate in 1985, became a partner in 1994 and a senior counsel in 2014.

Mr. Braverman is distinguished as a "Senior Statesman" and leading lawyer for capital markets by *Chambers UK*, *Chambers Global*, *Chambers Europe* and *The Legal 500 UK.* He was ranked as a "Star Individual" by *Chambers Global* 2012 for Russia Capital Markets, Overseas Counsel, the only lawyer in this category to be so ranked. He is also ranked as a "Senior Statesman" in *Chambers Global* as a leading Foreign Expert for Russia Restructuring/Insolvency and Russia Corporate/M&A.

Mr. Braverman received a J.D. in 1985 from Yale Law School, an M.Sc. in Politics (with reference to China) in 1982 from the School of Oriental and African Studies of the University of London while on a Marshall Scholarship, and a B.A., *summa cum laude*, in East Asian Studies from Harvard College in 1980.

Mr. Braverman is a member of the Bar in New York, and he has qualified as a Canadian Ski Instructors' Alliance ("CSIA") Level 2 ski instructor. He spends part of the year in Argentière, France.

Sebastian R. Sperber

Sebastian R. Sperber is a partner at Cleary Gottlieb Steen & Hamilton LLP based in the London office. Mr. Sperber's practice focuses on international capital markets transactions and merger and acquisition transactions. He regularly counsels companies on compliance with U.S. securities law requirements and related corporate governance matters.

Mr. Sperber has devoted a substantial amount of time to working on global equity offerings, including privatization transactions in several countries. His M&A experience includes both public and private transactions in various industries in Europe and Asia. His practice also includes derivative products, and he has assisted a number of clients in structuring "over-the-counter" ("OTC") and listed instruments.

Mr. Sperber has been recognized by *Chambers Global*, *Chambers UK*, *The Legal 500* and *IFLR 1000: Guide to the World's Leading Law Firms* for his work in the debt and equity capital markets, and by *IFLR 1000: Guide to the World's Leading Law Firms* in the M&A: Premium Deals, £250m+ category.

Mr. Sperber is widely published on topics in the capital markets, and frequently speaks on such topics at professional conferences. Publications co-authored by him include the firm's treatise on *The Sarbanes-Oxley Act: Analysis and Practice* (2003).

Mr. Sperber received a J.D. in 1988 from Columbia Law School, where he was a Harlan Fiske Stone Scholar and Editor-in-Chief of the *Columbia Journal of Transnational Law*, and a B.A., *cum laude*, in 1985 from Columbia College. Mr. Sperber serves on the board of advisors of the *Columbia Journal of Transnational Law Association,* *Inc.*

Mr. Sperber joined the firm in its New York office in 1988 and became a partner in 1997. From 1990 to 2000 (except for a stint in Hong Kong in 1998), he was resident in the London office. He spent 2001 to early 2004 in Hong Kong and then returned to London. He is a member of the Bar in New York.

p. vii

p. viii

Nicolas Grabar

Nicolas Grabar is a partner at Cleary Gottlieb, and his practice focuses on international capital markets and securities regulation and on the representation of large reporting companies. He plays a primary role in the firm's work for *Fortune 100* companies, leading Mexican and Brazilian businesses, sovereigns and global investment banks.

Mr. Grabar has extensive experience in international financings in public and private markets, in U.S. securities law and regulations applicable to foreign issuers and in the regulation of financial reporting. He has also specialized in the telecommunications and natural resources sectors and has advised on acquisitions, joint ventures, privatizations and debt restructuring. Mr. Grabar has been repeatedly recognized for his work on behalf of clients, including by the *American Lawyer*, which named him a “Dealmaker of the Year” in 2011, and by *Latin Lawyer*, which named him its “International Lawyer of the Year” in 2016. The publication described him as “an elite dealmaker with a reputation for assisting on novel financing structures that set precedents for others to follow.”

Mr. Grabar received a J.D., *cum laude*, from Harvard Law School in 1982 and a B.A., *magna cum laude*, from Harvard College in 1978. He served as law clerk to the Honorable Pierre N. Leval of the U.S. District Court for the Southern District of New York.

Mr. Grabar is frequently published in publications such as *Harvard Law School Forum on Corporate Governance and Financial Regulation* and authors memoranda on SEC reporting matters.

Mr. Grabar is a member of the Board of Directors at the Council of the Americas. From 2002 to 2010, he served as chair of the annual program on global capital markets at the Practicing Law Institute. He is also a former Chair of the Financial Reporting Committee of the New York City Bar Association. He is a member of TriBar Committee on Legal Opinions and a member of the Board of Trustees at Brooklyn Youth Chorus Association.

Mr. Grabar joined the firm in 1984 and became a partner in 1991. From 1985 to 1989, he was resident in the Paris office.

Adam E. Fleisher

Adam E. Fleisher is a partner at Cleary Gottlieb based in the New York Office and his practice focuses on a wide range of corporate finance transactions and securities regulatory matters, including, in particular, in the asset management space.

Mr. Fleisher is a Visiting Clinical Lecturer (co-teacher, “Advanced Issues in Capital Markets: Role of Counsel for Issuers and Underwriters in an Initial Public Offering”) at Yale Law School, U.S. Advisory Board Member at Practical Law Company and former Secretary of the Financial Reporting Committee at the Association of the Bar of the City of New York.

p. viii

p. ix

Mr. Fleisher received a J.D. from Yale Law School in 2000 and an A.B. from Harvard University in 1997, and he is a member of the Bar in New York.

Mr. Fleisher is a frequent speaker on legal topics and an author of numerous articles, including: “United States,” *Getting the Deal Through: Debt Capital Markets*, contributing eds., David C. Lopez, Adam E. Fleisher, Dase Kim (2014, 2015 and 2016 editions); “Going Public: A Guide to U.S. IPOs for Founders, Officers, Directors and Other Market Participants,” Adam E. Fleisher, Rebecca Tabb and Andra Troy, republished as “The Registered

Offering," in *Financial Product Fundamentals* treatise (2nd ed. 2015); "The Mechanics of A/B Exchange Offers," *Practical Law, The Journal*, Adam E. Fleisher, David E. Webb and Angela K. Chen (2015); "Regulation M: What the Deal Team Needs to Know," *Practical Law Company Practice Note*, Adam E. Fleisher and Jung W. Ju (2012 and 2015); "Alternatives to Traditional Securities Offerings," *Financial Product Fundamentals* treatise; Adam Fleisher, Joon Hur and Jesse Brush (2013); "Communication with Financial Analysts and Related Disclosure Issues," The Columbia Law School Blue Sky Blog on Corporations and The Capital Markets, Leslie N. Silverman, Adam E. Fleisher, Brian T. Sandstrom and Daseul Kim; (2013); "Selling Shares in a Newly Public Company," *Butterworths Journal of International Banking and Financial Law*, Adam Fleisher and Dase Kim (2013); "Regulation S Selling and Transfer Restrictions: A Basic User's Guide," *Insights, The Corporate & Securities Law Advisor*, Adam Fleisher and Peter Castellon (2012); "The Deal Team's Guide to Regulation M," *Practical Law, The Journal*, Adam E. Fleisher and Jung W. Ju (2013); "Recent Cases Address Important Section 16 Short-Swing Issues," *Insights, The Corporate & Securities Law Advisor*, Arthur H. Kohn, Adam E. Fleisher and Paris Nathaniel Nicholls (2012); "Revised Rule 144 and Registration Rights: Market Practice Two Years On," *Practical Law, The Journal*, Adam E. Fleisher and Jung W. Ju (2010).

Mr. Fleisher joined the firm in the New York office in 2000 and became a partner in 2008. He was resident in the firm's London office from 2001 to 2005.

U.S. Regulation of the International Securities and Derivatives Markets, PREFACE

U.S. Regulation of the International Securities and Derivatives Markets
11th and 12th Editions

Click to open document in a browser

p. xix

U.S. Regulation of the International Securities and Derivatives Markets, Twelfth Edition, Securities Markets, describes in detail the U.S. regulatory regime applicable to foreign companies entering the U.S. capital markets, including the principal issues a foreign company should consider when deciding whether, and if so, how, to offer securities in the United States (*i.e.*, publicly or privately). It also analyzes how the U.S. regulatory regime applies to securities brokers and dealers, investment companies and investment advisers. Except where otherwise noted, this edition speaks as of January 1, 2017.

Prior editions of this treatise covered both U.S. regulation of the international securities markets and U.S. regulation of the international derivatives markets. With this Twelfth Edition, we have divided the topics into two separate volumes. For a detailed description of the U.S. regulatory regime governing international financial transactions involving derivatives, as well as the U.S. regulatory regime governing futures commission merchants, dealers in swaps and security-based swaps, major participants in swaps and security-based swaps, commodity pool operators and commodity trading advisors, please refer to *U.S. Regulation of the International Securities and Derivatives Markets, Twelfth Edition, Derivatives Markets*, forthcoming.

This book is divided into 16 chapters. In Chapter 1, we provide an overview of the U.S. securities statutory and regulatory framework, introducing the key pieces of legislation discussed in detail throughout the book. We then, in an entirely new Chapter 2, present the key issues for a foreign company considering offering securities in the United States for the first time, including whether to do so as a public offering or private placement. Chapters 3 through 6 discuss the U.S. legal considerations involved in conducting a public offering of securities in the United States and becoming a U.S. public company, reorganized to more clearly divide the subject matter into the public offering process (Chapter 3), the ongoing reporting requirements of a public company (Chapter 4), the corporate governance requirements applicable to a public company (Chapter 5) and the requirements applicable to senior officers, directors and significant shareholders of U.S. public companies (Chapter 6). In Chapter 7, we discuss private offerings, and in Chapter 8 we discuss offerings outside the United States. Chapter 9 describes the rules governing liability management transactions, tender and exchange offers, business combinations and other issues relating to the acquisition of significant interests in companies whose securities trade in the

p. xix

p. xx

United States or that conduct business in the United States. Chapter 10 discusses various practical issues related to global offerings as well as certain types of nontraditional offerings, such as continuous offerings, block trades, rights offerings, spin-offs and offerings of tracking stock. Chapter 11 describes the risks and remedies for violations of the U.S. securities laws, and we analyze in Chapter 12 whether particular instruments, including derivatives, are “securities” for the purposes of the U.S. securities laws. Chapter 13 discusses the Multijurisdictional Disclosure System, or “MJDS,” which is applicable to certain U.S.-Canadian cross-border securities offerings and tender offers. The remaining three chapters of the book focus on the U.S. laws that apply to particular kinds of foreign financial institutions conducting operations in the United States directly or through U.S. affiliates—broker-dealers, investment companies and investment advisers.

A book covering the regulation of such a wide range of activities as this treatise must omit certain topics. As we prepared this Twelfth Edition we reconsidered our focus. As a result, we eliminated the chapter on the U.S. regulation of the securities activities of banks, a topic covered more thoroughly than we could in Guide to Bank

UNDERWRITING, DEALING AND BROKERAGE ACTIVITIES (Robert L. Tortoriello, Derek M. Bush & Hugh C. Conroy eds., 21st Ed. Thompson, 2016), which is also published by our firm. We also refocused on specifically U.S. regulation of the securities markets, eliminating the chapter on EU regulation. Readers interested in EU regulation of the securities markets may wish to refer to another publication of our firm, EUROPEAN SECURITIES LAW (Raj Panasar & Philip Boechman eds., 2nd Ed., 2014). As in prior editions, we do not discuss in this edition the detail of U.S. state laws, many of which not only deal with the sale of securities to their residents but also regulate broker-dealers, investment advisers and corporate takeovers. We do, however, touch on these areas where they are most relevant.

In the *Guide to Locating Relevant Forms, Statutes, Rules and Regulations* that is now part of the front matter of the treatise, we describe where readers may locate electronic copies of a wide variety of the authorities cited in this book, including statutory provisions, rules, regulations, forms, cases and administrative decisions.

This book is the result of the efforts of many lawyers in the international law firm of Cleary Gottlieb Steen & Hamilton LLP, which has its principal office in New York and other offices in Washington, Paris, Brussels, London, Frankfurt, Cologne, Rome, Milan, Moscow, Hong Kong, Beijing, Buenos Aires, São Paulo, Abu Dhabi and Seoul. The firm owes a very special thanks to Andrea M. Basham, a senior attorney who revised several chapters in this Twelfth Edition and coordinated the revision and review of all chapters in this Twelfth Edition. The firm thanks paralegals Barbara Gaffney, Heidi Rasciner and Karen Simpson, without whose organizational and myriad other skills this book would not have been completed. The firm further thanks partners Robin M. Bergen, Craig B.

p. xx

p. xxi

Brod, Daniel P. Culley, Michael D. Dayan, Sandra L. Flow, Jared Gerber, Simon Jay, Richard S. Lincer, Paul D. Marquardt, Aaron J. Meyers and Raj Panasar; counsels Mary E. Alcock, Helena K. Grannis and Emmanuel Ronco; senior attorneys Elizabeth A. Chang, James Corsiglia, Meghan Irmler, David Parish and Christopher F. Smith; associates Nina E. Bell, Elizabeth K. Bieber, Nathan Brownback, Angela K. Chen, Kimberly Brunelle, Katherine M. Clemens, Sarah Crandall, Izukanne Emeagwali, Jocelyn Greer, Matthew Hamilton-Foyn, Daseul (Dase) Kim, Igor Kleyman, Erin E. Langley, Evan J. Leitch, Daniel Rainer, Chrishan Raja, Aslam A. Rawoof, Sam Raymond, Marc Rotter, Manual Silva and Nicholas C. Steer; and former associate Laura K. Palmer for their assistance in drafting this Twelfth Edition. The firm also thanks Kenneth Ottenbreit and Gordon Cameron of Stikeman Elliot for their assistance with certain Canadian securities law matters discussed in Chapter 13, and David Aman for his assistance with Chapter 14. While we gladly acknowledge the efforts and insights of all these persons, responsibility for shortcomings in the book is of course ours alone.

U.S. Regulation of the International Securities and Derivatives Markets, GUIDE TO LOCATING RELEVANT FORMS, STATUTES, RULES AND REGULATIONS

U.S. Regulation of the International Securities and Derivatives Markets

Click to open document in a browser

p. xxiii

This book discusses and cites a wide variety of authorities, including statutory provisions, rules, regulations, forms, judicial cases, administrative decisions and a wealth of other sources. Instead of appending, as we have in prior editions, a small subset of these materials for reference, we have prepared a guide, set forth below, directing readers to websites where many of the sources may be accessed. Referring readers to websites instead of reproducing selected materials in their entirety allows us to provide a more comprehensive resource and reflects the prevailing practice among practitioners of retrieving online the current version of an item they need.

Most of the websites set forth below are the official websites of the relevant regulatory agency (*e.g.*, the SEC). We list a freely available third-party website when the third-party website offers a more user-friendly version of a particular item. Many practitioners prefer to use such third-party websites more generally for access to the text of key securities laws and SEC rules. Practitioners may also consult a number of subscription services that offer ready access to an array of primary and secondary materials and often have sophisticated search capabilities.

Regulatory agencies may post only current or relatively recent materials. The guide below therefore describes, where possible, how to obtain older materials in paper format.

The URLs included in the list below are current as of ***October 27, 2016***. While they are subject to change, it should be possible and relatively easy to navigate to the new location of a particular authority from the relevant agency's home page.

U.S. Regulation of the International Securities and Derivatives Markets, § 1.01, KEY SECURITIES LAW ELEMENTS—HISTORICAL EVOLUTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 1.01 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

p. 1-3

Much of the legislation discussed in this book was enacted in response to market excesses and abuses in the 1920s that were thought to have contributed to the market crash of 1929. This legislation reflected a broad tendency toward intervention in the economy that characterized the New Deal, and included the Securities Act of 1933 (the "Securities Act"), [1] the Securities Exchange Act of 1934 (the "Exchange Act"), [2] the Trust Indenture Act of 1939 (the "Trust Indenture Act"), [3] the Investment Advisers Act of 1940 (the "Advisers Act") [4] and the Investment Company Act of 1940 (the "Investment Company Act"). [5] In this book, we focus on the applicability of this legislation and the rules and regulations promulgated thereunder to foreign companies. [6]

These securities statutes have been amended frequently to adapt to changes in the market, but their policy underpinnings and their regulatory framework remain substantially the same. However, in the early 2000s they were thought to be deficient in light of the Enron, WorldCom and other accounting scandals and corporate governance abuses, and, in 2002, then President Bush signed into law the most sweeping legislation affecting public companies since the 1930s—the Sarbanes-Oxley Act of 2002 (the "Sarbanes-Oxley Act"). [7] The Sarbanes-Oxley Act and the rules adopted thereunder significantly amended the Exchange Act and the rules and forms thereunder and under the Securities Act. With the goal of strengthening corporate governance standards, these provisions included, among other measures, requirements for more stringent corporate governance controls than previously existed. [8] Several of the rules adopted under the

p. 1-3

p. 1-4

Sarbanes-Oxley Act imposed more detailed public disclosure requirements, although notably with greater applicability to domestic issuers than to foreign private issuers, [9] combined with stricter penalties for wrongdoing. In addition, the Sarbanes-Oxley Act established the Public Company Accounting Oversight Board (the "PCAOB"), a separate private entity subject to oversight by the Securities and Exchange Commission (the "SEC"), to supervise the registration and regulation of firms that audit public companies. Audit firms previously had not been subject to substantive federal regulation.

We discuss compliance with the corporate governance requirements established by the Sarbanes-Oxley Act and the rules adopted thereunder in detail in Chapter 5 and note other changes to the regulatory structure that were effected by the Sarbanes-Oxley Act throughout this book.

In 2010, in response to the global financial crisis, Congress felt it had to make even more radical changes to the regulatory structure than were incorporated in the Sarbanes-Oxley Act. Thus, it enacted the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"). [10] The Dodd-Frank Act marked the most significant legislative change in the regulatory framework for bank and non-bank financial institutions since the 1930s. [11]

p. 1-4

p. 1-5

Fundamental changes have also been made pursuant to the Dodd-Frank Act in the regulation of derivatives, [12] credit rating agencies and hedge and private equity fund advisers.

As a result of lingering concerns over corporate governance practices even after the changes imposed by the

Sarbanes-Oxley Act, the Dodd-Frank Act included various corporate governance provisions that are generally applicable to public companies listed in the United States, especially regarding executive compensation and compensation committees, although in most cases foreign private issuers are excluded from these requirements. [12.1]

The Dodd-Frank Act also imposed several additional disclosure requirements on U.S. public companies. These included specialized disclosure relating to (a) conflict minerals, (b) mine safety and (c) payments to governments by companies engaged in resource extraction. These disclosure-related mandates were unrelated to the broader financial regulatory purposes of most of the Dodd-Frank Act and presented special challenges for the SEC, because Congress sought to use the SEC disclosure system to promote public policy objectives that were not directly related to traditional concepts of investor protection. [14.1]

The Trump administration has moved quickly to reverse this approach, as discussed in detail in Chapter 4 with respect to conflict minerals and resource extraction payments, and Chapter 14 with respect to a rule recently promulgated by the Department of Labor regarding the fiduciary duty of financial advisors under certain circumstances. More generally, President Trump has stated publicly he intends to undertake a thorough reexamination of the Dodd-Frank Act, [14.2] and it remains to be seen whether he will achieve a significant scaling back of Dodd-Frank, in the form of modification or repeal of existing rules, enforcement priorities or otherwise, during the course of his administration.

Although the primary purpose of the securities statutes when enacted was to protect the retail investor in the domestic markets, their prohibitions and requirements also extended, by the scope of their language, to transactions involving only sophisticated institutions (with the exception of certain exemptions to the registration requirements of the Securities Act and, as discussed

p. 1-5
p. 1-6

below, the Investment Company Act). In other words, the statutory structure of the securities legislation when enacted generally failed to include any concept of differential regulation that might impose fewer rules in situations where the only participants are major institutions or professional investors. Because of this omission, the SEC, the statutory body created by the Exchange Act to oversee the application of the statutes, has resorted to administrative creativity to overcome the rigidity of the original statutory structure. Perhaps the best example of that creativity is Rule 144A, discussed in Chapter 7.

Institutional investors are dominant market participants, and they and the financial intermediaries with whom they principally deal have typically been at the forefront of those urging the SEC to take liberalizing steps. Although these investors have been willing to maximize investment opportunity by waiving the protections the structure is designed to afford them, the limited exemptive authority of the SEC that existed until 1996 sometimes made accommodation difficult. In 1996, Congress amended the Securities Act and the Exchange Act to grant to the SEC for the first time the authority to exempt any person, security or transaction, or any class or classes thereof, from the provisions of each act. [15] In this regard, the Securities Act, the Exchange Act and the Investment Company Act were also amended to provide that whenever the SEC is engaged in rulemaking and is required to consider or determine whether an action is necessary or appropriate in the public interest, it must also consider, in addition to the protection of investors, whether the action will promote efficiency, competition and capital formation.

Relying in part on this exemptive authority, in 1998 the SEC proposed major changes to the rules governing offerings, embodied in what came to be called the "Aircraft Carrier Release." [16] While the SEC largely withdrew the major restructuring contemplated by the Aircraft Carrier Release in light of extensive criticism, the SEC adopted significant reforms to the U.S. public offering process in July 2005 (the "Securities Offering Reforms"). [17] The Securities Offering Reforms (i) expanded permissible communications outside the prospectus in connection with registered offerings, (ii) clarified the liability framework applicable to registered offerings under the Securities Act, and (iii) streamlined the securities registration process. [18] Prior to the adoption of these significant reforms, the SEC also adopted some of the reforms proposed by the Aircraft

p. 1-6
p. 1-7

Carrier Release, such as rules relating to integrating public and private offerings. [19] The SEC has also used this exemptive authority to adopt exemptions from the registration provisions of the Securities Act applicable to securities issued in certain cross-border rights offerings and business combinations. In addition, the Investment Company Act was amended to establish exemptions for private investment companies whose securities are held by an unlimited number of "qualified purchasers" and for swap dealers and similar "market intermediaries." [20] Qualified purchasers include institutional investors and individuals owning at least $5 million in investments. [21]

In 2012, the Jumpstart Our Business Startups Act (the "JOBS Act") [22] was signed into law. The JOBS Act was intended to facilitate capital formation in a variety of ways—including by making the IPO process less burdensome for "emerging growth companies" ("EGCs"), a new class of issuer created by the JOBS Act. Although the provisions of the JOBS Act were designed to facilitate access to the U.S. capital markets for domestic companies, several provisions affect foreign companies as well. The JOBS Act allows an EGC to take advantage of significant regulatory concessions (the so-called "IPO on-ramp" provisions) in carrying out a common stock IPO and for up to five years after an IPO or until an issuer loses EGC status. [23] In late 2015, then President Obama signed into law the Fixing America's Surface Transportation Act (the "FAST Act"), which, among other legislation, included several bills designed to facilitate the offer and sale of securities by providing additional accommodations related to the SEC registration process for EGCs. [24]

The JOBS Act also directed the SEC (a) to amend Rule 144A under the Securities Act to eliminate any restriction on offers of securities sold under Rule 144A, including by means of general solicitation or general advertising, provided that only qualified institutional buyers ("QIBs" or persons the seller, or any person acting on the seller's behalf, reasonably believes to be QIBs) purchase the securities, [25] and (b) to revise its rules to remove the prohibition on general solicitation or general advertising for offerings under Rule 506 of Regulation D under the Securities Act in which all purchasers are accredited investors and the issuer

p. 1-7
p. 1-8

takes reasonable steps to confirm their accredited investor status. [26] The SEC's new rules enacting these changes went into effect on September 23, 2013. [27]

Footnotes

1 Securities Act of 1933, 15 U.S.C. §§ 77a–77aa, *as amended*.

2 Securities Exchange Act of 1934, 15 U.S.C. §§ 78a–78pp, *as amended*.

3 Trust Indenture Act of 1939, 15 U.S.C. §§ 77aaa–77bbbb, *as amended*.

4 Investment Advisers Act of 1940, 15 U.S.C. §§ 80b-1–80b-21, *as amended*.

5 Investment Company Act of 1940, 15 U.S.C. § 80a-1–80a-64, *as amended*.

6 Unless otherwise indicated, references to foreign companies or foreign issuers in this book refer to "foreign private issuers" as such term is defined in Rule 3b-4 under the Exchange Act.

7 Sarbanes-Oxley Act of 2002, Pub. L. No. 107-204, 116 Stat. 745 (2002). The Gramm-Leach-Bliley Act, enacted in 1999, also resulted in significant changes in the structure of the securities regulatory framework, particularly with respect to the regulatory regime governing the provision of financial services in the United States.

8 Among other measures, these include the requirements that: (i) CEOs and CFOs certify the accuracy and completeness of their company's periodic reports (with criminal liability for false certifications) and establish and periodically evaluate disclosure controls and procedures and internal control over financial reporting designed to ensure the timely collection and processing of information required to be reported to the SEC and for preparation of financial statements in accordance with generally accepted accounting principles, (ii) all listed companies establish an independent audit committee to hire their auditors and oversee their audits, (iii) CEOs and CFOs disgorge their compensation following a restatement of financial statements resulting

from misconduct, (iv) officers and directors refrain from trading in their company's equity securities during retirement plan blackout periods, (v) no company extend or maintain loans or credit to its executive officers or directors. For further discussion of these requirements, *see* Chapter 5.

9 For example, the Sarbanes-Oxley Act required the SEC to adopt rules requiring companies to rapidly disclose material changes in their financial condition and results of operations. In response to this requirement, the SEC in 2004 significantly expanded the list of items that U.S. issuers must disclose on Form 8-K (which requires domestic issuers to report certain material corporate events on a current basis) and generally shortened the deadline for U.S. issuers to file reports on Form 8-K to four business days after the occurrence of the event requiring disclosure. *See* SEC Release No. 33-8400 (Mar. 16, 2004). Although the SEC did not amend Form 6-K (which requires foreign private issuers promptly to disclose in a submission to the SEC material developments already disclosed publicly outside the United States), foreign private issuers should consider the list of items in Form 8-K in deciding whether particular press releases or home-country filings are material (and thus covered by Form 6-K) and which Form 6-K reports should be incorporated into their Securities Act registration statements. *See* § 4.02[3][c][iii] for a discussion of the Form 6-K requirements.

10 Pub. L. No. 111-203, 124 Stat. 1376 (2010).

11 Pursuant to the Dodd-Frank Act, existing and newly established regulators acting through the Financial Stability Oversight Council have enhanced powers to oversee and control the activities of systemically important financial institutions ("SIFIs"), including setting capital and leverage requirements, restricting activities that threaten the institutions or markets and overseeing compensation and governance practices. All banks and bank holding companies with $50 billion or more of U.S. assets are SIFIs. Proprietary trading by U.S. banks and bank holding companies also has been heavily regulated under the so-called "Volcker Rule," and consumer protection has been heightened with the establishment of the Consumer Protection Bureau. Although outside the scope of this Treatise, for a detailed discussion of the current regulation of the financial services industry in the United States, including the impact of the Dodd-Frank Act, *see* Robert L. Tortoriello, Derek M. Bush, Hugh C. Conroy, Jr., GUIDE TO BANK UNDERWRITING, DEALING AND BROKERAGE ACTIVITIES (21st ed. Thomson, 2016) Part I.

22 Pub. L. No. 112-106, 126 Stat. 306 (2012).

23 JOBS Act § 101(a). *See generally* Chapter 3 for further discussion of the accommodations available to EGCs.

24 Pub. L. No. 114-94, 129 Stat. 1312 (2015).

25 JOBS Act § 201(a)(2).

26 JOBS Act § 201(a)(1).

27 SEC Release No. 33-9415 (July 10, 2013). *See* Chapter 7 for further discussion of the elimination of the prohibition on general solicitation and general advertising for certain private placements. Acknowledging that allowing general solicitation in private offerings represents a major change in how Rule 506 and Rule 144A offerings can be conducted, the SEC directed its staff to monitor market practices in offerings conducted with general solicitation and proposed a series of additional rule changes that would, if adopted, impose significant new requirements on Rule 506 offerings, particularly those that are conducted with general solicitation. As of January 1, 2017, these rules had not yet been adopted. SEC Release No. 33-9416 (July 10, 2013).

U.S. Regulation of the International Securities and Derivatives Markets, § 1.02, THE SECURITIES ACT

U.S. Regulation of the International Securities and Derivatives Markets

11th and 12th Editions

Click to open document in a browser

The Securities Act was designed to regulate at the federal level offerings of securities to the public; subsequent trading of those securities in secondary market transactions was to be regulated by the Exchange Act. The primary method of federal securities regulation is through disclosure, not administrative approval of the merits of the offering.

The Securities Act requires that every offer and sale of a security involving U.S. jurisdictional means be registered with the SEC unless an exemption is available. [28] There are exemptions for certain types of securities and transactions, including secondary market transactions. A major exemption covers offers and sales not involving a "public offering"—an undefined term. [29] If the security being sold is not registered, the seller has the burden of establishing eligibility for an exemption. A failure to do so allows the buyer to rescind the transaction if it acts within the prescribed period. [30] This ability to rescind solely on the grounds of failure to register, as opposed to misleading disclosure, gives the statute an *in terrorem* effect. For this reason, registration raises critical issues not only for domestic transactions but also for overseas offerings that might flow back into the United States, and many international financings not in fact registered with the SEC are conditioned on receiving an opinion of U.S. counsel that registration is not required.

Registration of public offerings requires preparing and filing a registration statement for review and comment by the staff of the SEC. The registration statement consists essentially of a prospectus, which must remain accurate in all material respects during the offering and, in certain cases, for a period thereafter. The prospectus also must be accurate in all material respects at the time of every sale of a security underwritten by or allotted to an underwriter or dealer, whenever the sale occurs.

p. 1-9

The Securities Act provides a statutory framework for the disclosures an issuer must make to conduct a public offering in the United States. There are detailed rules concerning the type and level of disclosure about the registrant's business that must be provided. The disclosure that must be included in the prospectus does not depend on the nature of the intended audience. Similar rules cover the scope and presentation of financial statements and other financial information. [31] In recognition of the periodic disclosure to the trading markets that reporting companies are required to make pursuant to the Exchange Act, many prospectuses are now allowed to incorporate information by reference to other SEC filings; and "shelf registration" procedures permit securities to be registered in advance and distributed at any time without additional action by the SEC staff. [32]

The SEC historically has been urged to allow well-known foreign companies to use their home-market documents when financing in the United States. In 1991, the SEC and Canadian regulators agreed, in an initial implementation of this approach, on a multijurisdictional disclosure mutual recognition system that benefits substantial Canadian issuers making U.S. offerings. [33] Following its adoption of that system, the SEC shifted away from mutual recognition as such, but modified the disclosures required for foreign private issuers in two significant respects. First, the SEC revised Form 20-F, the principal disclosure form used by foreign private issuers, to replace almost all of the former Form 20-F requirements with international disclosure standards adopted by the International Organization of Securities Commissions ("IOSCO"). Second, the SEC permitted foreign private issuers to present financial statements prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the IASB. [34]

One of the vexing questions under the Securities Act is determining when a distribution is complete. Investors are entitled to rely on a complying prospectus at the time of any sale that is part of the distribution, while no such prospectus requirement exists for subsequent sales in the secondary market. This problem was especially acute for securities issued outside the United States, using a prospectus that does not meet SEC requirements. Years ago, the SEC and

p. 1-9
p. 1-10

the private bar established mechanisms to permit offshore offerings to be made free of the U.S. registration provisions. However, there was at the time no consensus about when the offshore distribution was complete so that the securities distributed could be resold in the United States in transactions exempt from prospectus requirements as secondary market sales. [35] This uncertainty was troublesome because every transaction in a security, no matter how remote from its initial sale, must have an exemption from the registration provisions of the Securities Act. [36] The SEC's adoption of Regulation S has virtually eliminated this uncertainty. [37]

U.S. Regulation of the International Securities and Derivatives Markets, § 1.03, THE EXCHANGE ACT

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 1.03 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

The Exchange Act generally requires any company with (i) a security listed on a U.S. exchange [38] or (ii) 2000 or more record holders of a class of equity security, unless fewer than 500 holders are not accredited investors, and $10 million or more in assets to register that class of securities with the SEC, and thereafter, in the case of U.S. companies, to file annual and quarterly reports. [39]

Foreign companies that are not listed on a U.S. exchange but are nonetheless subject to a registration requirement under § 12(g) are obliged to file annual reports, unless they have fewer than 300 U.S. shareholders or they publish specified information in English on their website, so long as in either case their securities are not listed on a U.S. exchange or quoted on the OTC Bulletin Board. [40] In addition, every company, U.S. or foreign, making a public offering of debt or

p. 1-11

equity securities in the United States must file periodic reports for one year and for so long thereafter until the securities offered are held by fewer than 300 persons (or in the case of a foreign company, held by fewer than 300 U.S. persons or, in the case of a class of equity of a foreign company, until U.S. trading volume comprises less than 5% of the class's worldwide trading volume and certain other conditions are met). [41]

The Exchange Act provides the framework for the disclosures an issuer must make in connection with both (i) an initial registration of securities that are listed on a national (U.S.) securities exchange or of equity securities that are otherwise publicly held as described above, and (ii) periodic reports following initial registration or a public offering as described above. The disclosure required for initial Exchange Act registration and subsequent reporting is substantially the same as the disclosure that would be made if the company were making a public offering under the Securities Act—reflecting a judgment by the SEC that there should be little difference between the information needed to make an informed decision to purchase securities in a distribution and that needed to make an informed decision to purchase securities in the secondary market. [42]

The Exchange Act also regulates a wide variety of market activities and participants. It requires disclosure of ownership in excess of 5% of any class of voting equity securities registered under the Exchange Act and sets out rules applicable to tender and exchange offers where, after consummation of an offer, the bidder would be the direct or indirect beneficial owner of more than 5% of any class of registered equity securities (whether or not entitled to vote). [43] These rules are applicable whether or not they conflict with those of another jurisdiction, which may also apply, for example, because the target is a non-U.S.

p. 1-11

p. 1-12

company. [44] In addition, the Exchange Act regulates all persons acting in the United States as broker-dealers, clearing agents, information processors or securities depositaries. [45] While only the entity performing the service, not its holding company, if any, is regulated, the SEC has been empowered to require a registered broker-dealer to provide certain financial information about its unregulated affiliates and to restrict upstream distributions of capital by the broker-dealer in certain instances. [46]

In addition, the Exchange Act regulates securities exchanges and contains broad rules barring manipulative market conduct on or off the floor of an exchange. [47] These market manipulation rules are also applied in certain circumstances to activities on markets outside the United States. [48] The principal markets for foreign securities in the United States are the New York Stock Exchange, Inc. (the "NYSE") and Nasdaq. [49] These and the other national securities exchanges, as well as FINRA, are industry self-regulatory organizations, or "SROs." [50] The SROs are required to regulate their member broker-dealers in the

p. 1-12

p. 1-13

public interest, and their rules are subject to review and approval by the SEC. Virtually every broker-dealer must be a member of FINRA. [51]

The Exchange Act also requires each issuer that has registered a class of equity securities or otherwise has a periodic reporting obligation under the Exchange Act and its subsidiaries (domestic or foreign) to maintain accurate books and records and an adequate system of internal controls. [52] It bars certain foreign corrupt payments by any company, U.S. or foreign, whose securities are registered, and it prohibits any officer or director from lying to the firm's auditors. [53]

"Insider trading" in connection with transactions in securities and securities-based swaps is also made unlawful by the Exchange Act, although the Congress and the SEC have never defined the offense. Its contours have been established through the application by the courts—sometimes in actions brought by the SEC (in its enforcement capacity) or the Department of Justice and sometimes in suits brought by private parties—of a broad general prohibition against fraud to particular fact patterns involving trading while in possession of material nonpublic information. [54] As a result, the penalties are severe, while the conduct prohibited is sometimes uncertain. [55]

The approach followed in dealing with "insider trading" reflects an important characteristic of the regulation of U.S. financial markets. Often the rules regulating these markets are general in scope and must be fleshed out through interpretation by the SEC staff and through litigation by both the government and the private bar. For this reason, many of the rules about market conduct have their origin in decisional law construing the statutory and regulatory framework.

Footnotes

38 § 12(b) of the Exchange Act. The NASDAQ Stock Market LLC ("Nasdaq") became an independent registered national securities exchange in August 2006. Prior to that time, it had been operated by the National Association of Securities Dealers, Inc. ("NASD," now known as "FINRA") as an interdealer quotation system. *See* SEC Release No. 34-53128 (Jan. 13, 2006). As a result of this change, the securities of issuers listed on Nasdaq automatically became registered under § 12(b), instead of § 12(g), of the Exchange Act. Nasdaq rules had required registration under § 12(g) for the quotation of securities, even though § 12(g) itself would only have required registration if the total assets and number of shareholders of the issuer exceeded the thresholds specified in that section.

39 § 12(g) of the Exchange Act and Rule 12g-1 thereunder. The JOBS Act amended § 12(g) of the Exchange Act to increase the previous holder of record threshold from 500 persons to 2,000 persons. The JOBS Act also created a separate holder of record threshold for banks and bank holding companies, which is 2,000 persons with no limit on the number of investors that are not accredited investors. For all companies, the holder of record threshold was amended to exclude securities held by persons who received the securities pursuant to employee compensation plans in transactions exempt from Securities Act registration.

40 Subject to certain exceptions, the OTC Bulletin Board rules require issuers to be subject to the periodic reporting requirements of the Exchange Act. *See* FINRA Rules, Rule 6530, FINRA Manual. *See also* § 4.02[3], for a discussion of Rule 12g3-2(b) under the Exchange Act, which sets out the circumstances in which foreign issuers may publish specified information in English on their website in lieu of registering under the Exchange Act.

41 In 2007, the SEC adopted rules that substantially liberalize the ability of foreign private issuers to terminate their Exchange Act reporting obligations. *See* SEC Release No. 34-55540 (Mar. 27, 2007); § 4.11.

42 Prior to the Securities Offering Reforms, the Securities Act required that the information actually be

delivered to the investor in some form, while under the Exchange Act the investor had to obtain the information itself—the issuer's only obligation being to file it with the SEC. Recognizing investors' increasing ability to access information through the Internet, the reforms adopted "access equals delivery" rules, which permit the electronic filing of a prospectus to qualify as delivery of the prospectus for Securities Act purposes in certain circumstances. *See* Rules 172 and 173 under the Securities Act. *See also* § 3.02[1][e].

43 *See* §§ 13(d) and 14(d) of the Exchange Act; §§ 6.04, 4.07[9] and 9.07. In addition, there are some provisions that apply to a tender offer for any securities held by a U.S. person, whether or not they are equity securities registered under the Exchange Act. *See* § 14(e) of the Exchange Act and Regulation 14E thereunder; §§ 9.05[4] and 6.04[2].

44 *But see* § 9.05[9] for a discussion of rules exempting from the U.S. tender offer regulations and registration requirements of the Securities Act certain tender and exchange offers for securities of foreign issuers.

45 *See* §§ 15(a) and 17 of the Exchange Act. The Gramm-Leach-Bliley Act eliminated an exemption for banks acting as broker-dealers subject to a number of important, but narrow, exceptions. *See* Robert L. Tortoriello, Derek M. Bush, Hugh C. Conroy, Jr., GUIDE TO BANK UNDERWRITING, DEALING AND BROKERAGE ACTIVITIES (21st ed. Thomson, 2016), Part II.D.3.b.

46 Rules have been adopted by which distributions to the holding company are subject to certain notice requirements, as well as other restrictions. *See* § 14.08[3][b]. If the holding company is designated as a SIFI under the Dodd-Frank Act by the FSOC, it would be subject to regulation by the Federal Reserve Board.

47 *See* § 9 of the Exchange Act.

48 These circumstances have been limited in the context of U.S. private litigation by *Morrison v. National Australia Bank*, 130 S. Ct. 2869 (2010) and subsequent cases, discussed in Chapter 11, though the Dodd-Frank Act granted the SEC explicit power, in response to the limitations of *Morrison*, to take action with respect to conduct outside the United States having a significant effect on U.S. markets.

49 Technological developments have spawned a growing number of alternative trading systems ("ATSs") that furnish services traditionally provided solely by registered securities exchanges. Due to concerns that overly burdensome regulation in the United States has been driving ATSs offshore, the SEC adopted more flexible rules that do not require ATSs to register as "exchanges." *See* SEC Release No. 34-40760 (Dec. 8, 1998). Similar concerns over trading being driven offshore resulted in the relaxation of broker-dealer registration requirements for certain dealers in over-the-counter derivatives, or so-called "broker-dealer lite." *See* SEC Release No. 34-40594 (Oct. 23, 1998).

50 In order to register as a broker-dealer with the SEC, a broker-dealer must become a member of a national securities association, except in certain very limited circumstances. The only existing national securities association is FINRA—formerly known as the "NASD" until it was renamed in 2007, at which time it also absorbed the member regulation, arbitration and enforcement functions of the NYSE. *See* SEC Release No. 34-56145 (July 26, 2007). FINRA is now responsible for regulating all securities firms that do business with the public in the United States, including with respect to professional training, testing and licensing of registered persons, arbitration and mediation. FINRA is also responsible, by contract, for regulating Nasdaq, the American Stock Exchange LLC and the International Securities Exchange, LLC. *See* § 14.06[1], Note 249.

51 *See* § 15(b)(8) of the Exchange Act.

52 *See* § 13(b) of the Exchange Act. In addition, § 404 of the Sarbanes-Oxley Act went further by requiring the monitoring and affirmation of internal controls (which it called internal control over financial reporting), and the rules adopted thereunder require that such issuers' annual reports include an internal control report stating that management is responsible for establishing internal control over financial reporting, containing management's evaluation of its effectiveness, and providing the auditor's attestation as to that assessment. *See* §§ 5.03 and 5.04. Lastly, when the SEC implemented the CEO/CFO certification requirement pursuant to § 302 of the Sarbanes-Oxley Act, it also adopted a prior SEC proposal to maintain and certify annually as to the effectiveness of the issuer's disclosure controls and procedures (a broader concept than internal control over financial reporting). *See* § 5.04[3]. SEC Release No. 34-46300 (Aug. 2, 2002) (summarizing the

differences between the SEC proposals and the statutory requirements).

53 Rule 13b2-1 under the Exchange Act; *see* § 5.04[1].

54 *See* § 10(b) of the Exchange Act and Rule 10b-5 thereunder; § 11.05[2].

55 The enactment of Regulation FD, which prohibits selective disclosure by U.S. issuers, was intended to provide greater certainty in this area. *See* SEC Release No. 33-7881 (Aug. 15, 2000); § 3.02[3][c][vi].

U.S. Regulation of the International Securities and Derivatives Markets, § 1.04, THE INVESTMENT COMPANY ACT

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 1.04 (11th and 12th Editions 2014-2017)

Click to open document in a browser

p. 1-14

The Investment Company Act, the principal source of U.S. regulation of collective investment vehicles, was designed to address through a detailed regulatory scheme specific industry abuses that occurred in the 1930s and earlier. As a result, it is one of the most complex of the U.S. securities laws.

The Investment Company Act covers a wide range of companies. Every "investment company" is subject to regulation, unless expressly exempted or excluded. An "investment company" is defined either in terms of its purpose or in terms of the assets it holds, to minimize the possibility that an entity could inappropriately escape regulation. [56] Thus, the term "investment company" encompasses not only every entity that holds itself out as being engaged primarily in "investing, reinvesting or trading in securities," [57] but also any entity that is engaged in the business of investing, reinvesting, owning, holding or trading in securities (a concept that the SEC staff has interpreted expansively) if securities (excluding U.S. government and agency securities and securities of majority-owned subsidiaries that are not themselves investment companies) represent 40% or more of the value of its assets. [58]

Moreover, in view of the Investment Company Act's remedial purposes, the SEC has applied an expansive interpretation to the definition of "security" in the Act. While the text of that definition is virtually identical to the definitions found in the other securities laws, the staff of the SEC has consistently taken the position that a variety of instruments and items that are not "securities" under those other statutes—such as commercial bank loans, affiliate loans, certain insurance instruments, commercial and other ordinary-course credit arrangements and the like—are "securities" for the purposes of the Investment Company Act. [59]

Any investment company that is not excluded or exempted not only must register with the SEC but also must be structured to fit within the definition of one of three categories of investment companies: a unit investment trust, a face amount certificate company or a management company. Unit investment trusts are entities, organized under a trust indenture or similar instrument without a board of directors or similar body that only issue securities redeemable at net asset value at any time at the option of the holder. Unit investment trusts are therefore generally fixed and unmanaged pools of securities in which the holders have an undivided interest. Face amount certificate companies are extremely rare now. Management companies comprise the rest and are divided into open-end

p. 1-14

p. 1-15

and close-end companies. Open-end companies, the investment vehicles commonly referred to as "mutual funds" in the U.S. market, are defined as those having securities redeemable at any time at the option of the holder for the net asset value of the underlying securities; closed-end companies include all others. The requirements applicable to a registered investment company depend in part on its classification. If a company does not fit within one of these categories, it cannot register and therefore cannot do business unless an exemption is available under the statute or granted by the SEC. Exchange-traded funds, one of the most popular types of investment vehicles introduced in recent years, are an example of a structure operating only as a result of SEC-granted exemptions. [60]

There is no doubt that conventional mutual funds and investment companies are intended to be the primary subjects of Investment Company Act regulation. However, the combination of the asset-based definition of investment company and the broad interpretation of the definition of security has also brought within the regulatory range of the Investment Company Act other sorts of entities, sometimes referred to as "inadvertent investment companies," for which the appropriateness of Investment Company Act regulation is far less obvious. These companies include holding companies that own controlling, but less than majority, interests in other companies, as is customary in many markets outside the United States, and finance subsidiaries whose assets consist of loans to their parents and affiliates (although Rule 3a-5 under the Investment Company Act provides that finance subsidiaries meeting certain conditions are excluded from the definition of "investment company"). [61]

A registered investment company is subject to very significant regulatory requirements under the Investment Company Act. [62] While disclosure to investors and potential investors is an important part of the Investment Company Act's scheme, the primary focus is on substantive regulation, including regulation of the following: the make-up and conduct of the board of directors; transactions between an investment company and its promoters, underwriters, advisers and

p. 1-15

p. 1-16

other affiliated persons; issuance of debt or other "senior" securities and other borrowings (including certain derivative transactions) that create leverage; investment in other companies; and securities custody arrangements. The extent of these regulations makes the management of an operating company that did not intend to be an investment company, but "inadvertently" fell within the definition, impossible for all practical purposes.

The Investment Company Act and the rules thereunder contain a number of provisions excluding particular types of entities either from the definition of investment company or from the operation of the Act. [63] In addition, the Act grants authority to the SEC to exempt entities either from specific provisions or from its provisions generally, where such exemption is "necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions" of the Act. [64] While this exemptive authority provides necessary flexibility to a rigid statute, in recent practice such exemptions have been both expensive and time-consuming to obtain; other than in cases of routine relief identical to previously granted exemptions, this process now typically requires months and often longer where novel issues are presented.

While the types of companies specified in the Investment Company Act might have been accurate descriptions of the types of investment companies that were in existence when the Investment Company Act was adopted over 70 years ago, they are now proscriptive and limiting because they require investment companies to meet requirements that may be inconsistent with business objectives. Even without the Act's general restriction on offerings in the United States by foreign funds, these mandatory classifications would prevent registration and compliance by foreign funds that operate consistently with legal requirements in the jurisdictions in which they are organized or their securities are offered. For example, offshore-unmanaged pools can be established without redeemable securities, yet such entities are inconsistent with the Investment Company Act's typology.

As another important example of the Investment Company Act's restrictive typology, many entities have been established both in the United States and offshore to hold and "securitize" various types of financial instruments, *e.g.*, mortgages, receivables of various sorts and fixed income securities, such as noninvestment grade bonds. These entities issue securities the payments on which are structured to produce particular cash flows based on payments made on the underlying financial instruments. Often the issuing vehicles issue two or more classes of securities, with different levels of seniority or subordination or different predicted maturity ranges. These "asset-backed arrangements" ("ABAs"), if

p. 1-16

p. 1-17

they are not exempt from regulation under the Investment Company Act, do not neatly fit into any of the classifications thereunder or satisfy the resulting requirements. A rule exempting most ABAs from registration under the Act and an amendment to the Act permitting an unlimited number of "qualified purchasers" to invest privately in any vehicle without requiring the vehicle to register as an investment company have helped reduce, but not eliminate, uncertainty with respect to offerings by ABAs. [65]

The Investment Company Act regulates foreign investment companies by restricting their offerings of securities in the United States. A foreign investment company is prohibited under the Act from making a public offering in the United States unless it has received an order from the SEC registering it as an investment company, which generally would impose conditions that parallel the provisions of the Act. Foreign investment companies must apply for such an order through a special process with the SEC rather than following the procedures applicable to U.S. investment companies. [66] The requirements that must be met to obtain such an order are such that, with the exception of a few Canadian investment companies, U.S. public offerings by foreign investment companies are effectively prohibited. While the Investment Company Act does not explicitly address private offerings by foreign investment companies, the SEC staff has attempted to place stringent limitations on such offerings that are derived from the rules applicable to U.S. private investment companies (including restricting U.S. investors to "qualified purchasers" or limiting the number of U.S. beneficial owners to 100). [67] As a result of these restrictions, offerings by foreign investment companies that would be considered private offerings for purposes of the Securities Act may not be deemed private offerings for purposes of the Investment Company Act.

U.S. Regulation of the International Securities and Derivatives Markets, § 1.05, THE ADVISERS ACT

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 1.05 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

The Advisers Act generally requires registration of those in the business of giving advice about securities (other than as an incident to a brokerage business) unless one of the few exemptions from registration is available. [68] The Dodd-Frank Act amended the Advisers Act to eliminate the exemption used by most

p. 1-18

hedge and private equity fund advisers to not register as advisers under the Advisers Act, which applied if the adviser had fewer than 15 clients and did not hold itself out to the public as an adviser. [69] As a result, most advisers must now register, although limited exemptions under the Dodd-Frank Act allow certain advisers to private funds to remain unregistered or to file with the SEC as "exempt reporting advisers." [70] The Dodd-Frank Act did not subject these funds themselves to a registration requirement. [71] While there are no financial or other eligibility requirements for registration, there are rules applicable to, among other activities, the fees that can be charged to clients, dealing as principal with a client, advertising and marketing materials, disclosure of conflicts of interest, information that must be given in advance of establishing a client relationship, and political contributions by the adviser and certain of its personnel. [72] Certain conduct is also prohibited whether or not an adviser is required to register. [73]

Each registered adviser is subject to periodic inspection by the staff of the SEC and must maintain detailed books and records about transactions on behalf of its clients. [74] Regulatory responsibility for oversight and periodic inspection of investment advisers is divided between the SEC and the states, primarily based on the criterion of assets under management. In 1996, the Advisers Act was amended to preclude advisers from registering with the SEC unless they had at least $25 million of assets under management. [75] The Dodd-Frank Act raised that threshold to $100 million of assets under management. It also created a new category called "mid-sized" advisers for advisers with assets under management of between $25 million and $100 million. A mid-sized adviser is generally required to register in the state where it maintains its principal office and place of business instead of with the SEC, unless the adviser advises registered investment companies or business development companies, or is not subject to examination by a state securities authority. [76] However, the antifraud prohibitions of the Advisers Act continue to apply to all advisers.

p. 1-18

p. 1-19

The SEC staff had historically applied the Advisers Act and related rules to a registered adviser's dealings with all of its clients—even where the adviser and its clients were located outside the United States and even if the U.S. rules conflicted with the rules in the jurisdictions where they were located. As a consequence, most foreign intermediaries registered separate affiliates as advisers. [77]

Since 1992, the SEC staff has implemented the conclusions that the SEC reached in a comprehensive report that evaluated the Advisers Act, including the staff's extraterritorial application of the act to foreign advisers and their non-U.S. clients. [78] In a series of no-action letters in the 1990s, the staff took the position that a registered foreign adviser is not required to comply with the substantive provisions of the Advisers Act and related regulation with respect to its non-U.S. clients. [79] The letters have also relaxed the criteria necessary to establish the "independence" of a registered adviser subsidiary or affiliate from its parent or other affiliates, so that the parent or other affiliate adviser is not also required to register as an investment adviser. [80]

Footnotes

68 There is a limited exemption for advisers solely to private funds with less than $150 million in assets under management in the United States, and for certain foreign advisers without a place of business in the United States and that (i) during the preceding 12 months had in total fewer than 15 clients and investors in the United States in private funds advised by the foreign adviser, (ii) had assets under management attributable to clients and investors in the United States of less than $25 million, and (iii) do not manage registered investment companies or hold themselves out generally to the public in the United States as an investment adviser. *See* § 16.03.

69 *See* § 16.03.

70 Section 619 of the Dodd-Frank Act, commonly referred to as the "Volcker Rule," limits the ability of bank holding companies ("BHCs"), foreign banking organizations treated as BHCs, and their subsidiaries and affiliates to sponsor or invest in hedge funds and private equity funds.

71 *See* § 16.03[3].

72 *See* §§ 16.05, 16.06, 16.07 and 16.08.

The federal securities statutes covered in this volume are administered by the SEC, a statutory body created by the Exchange Act. Its ruling body is a commission consisting of five members appointed by the President of the United States after confirmation by the U.S. Senate, one of whom is designated Chair by the President. [81] The SEC employs several thousand people across various divisions, including the Division of Enforcement, which is empowered to conduct investigations of violations, to issue cease-and-desist orders and to seek relief in the federal courts. Over the more than 80 years during which it has been in existence, the SEC has created an enormous body of precedent, through interpretive rulings, regulations, no-action letters, administrative orders and cases it has instituted in federal courts. Because of the breadth and reach of the statutes administered, the strong tradition of enforcement and the consequences of violating the statutes, most practitioners closely consult the SEC's staff, who are usually quite responsive.

p. 1-20

The Bank Secrecy Act of 1970 (the "BSA") [82] imposes a variety of recordkeeping, reporting and other anti-money laundering compliance obligations on financial institutions. The list of financial institutions that are subject to BSA regulation includes, among others: banks (including U.S. branches and agencies of non-U.S. banks), trust companies, private bankers, thrifts, brokers and dealers in securities or commodities, FCMs and registered investment companies. [83]

Apart from the regulatory requirements of the BSA, money laundering is a criminal offense under U.S. federal law. [84] The federal criminal anti-money laundering statutes provide substantial penalties for persons who conduct or attempt to conduct certain financial transactions that involve the proceeds of a broad range of enumerated "specified unlawful activities." The laws are extremely broad and are implicated not only by drug trafficking activities but also by many types of "white collar" criminal offenses. [85]

Title III of the USA PATRIOT Act (the "PATRIOT Act"), [86] known as the International Money Laundering Abatement and Anti-Terrorist Financing Act of 2001, effected a major expansion of U.S. anti-money laundering laws. Among other things, the Patriot Act amended the BSA to impose a variety of new compliance obligations on financial institutions (particularly with regard to transactions and account relationships with non-U.S. banks and other non-U.S. financial institutions), broadened the scope of financial institutions subject to compliance requirements, expanded U.S. civil and criminal forfeiture laws and increased the penalties for criminal anti-money laundering violations.

Footnotes

82 Bank Secrecy Act of 1970, Pub. L. No. 91-508, 84 Stat. 1118 (Oct. 26, 1970), 12 U.S.C. §§ 1951–59, *as amended*, and 31 U.S.C. §§ 5311–32, *as amended*.

83 In May 2003, the Financial Crimes Enforcement Network ("FinCEN")—the bureau of the Treasury Department that is principally responsible for administering the BSA—issued a proposal to extend BSA regulation to certain investment advisers. The proposal was withdrawn in October 2008, however, and FinCEN has not issued a new proposal to require investment advisers to adopt an anti-money laundering policy. *See* § 16.15. *See also* Robert L. Tortoriello, Derek M. Bush, Hugh C. Conroy, Jr., GUIDE TO BANK UNDERWRITING, DEALING AND BROKERAGE ACTIVITIES (21st ed. Thomson, 2016) Part I.

p. 2-3

This chapter provides a general overview of the principal issues a foreign company should consider when deciding whether to offer securities in the United States for the first time, and, if it wishes to do so, whether to offer them in the U.S. public or private markets. The issues are presented in summary form, with references to the detailed discussions appearing elsewhere in this treatise. When we refer to foreign companies and the requirements applicable to them, we are referring to "foreign private issuers"—companies organized outside the United States with either 50% or fewer U.S. shareholders or lacking other specified U.S. connections.

With respect to accessing the U.S. public markets, the focus in this chapter is on those issues that can affect the feasibility of, or substantially delay, a public offering, that impose substantial burdens on the company in connection with or following a public offering or that might be considered particularly sensitive by the company's senior officers, directors or major shareholders. Foreign companies already public outside the United States may also seek to have their shares trade in the U.S. public market without conducting a U.S. public offering, for example by listing outstanding shares on a U.S. exchange or arranging for them to be traded over the counter. Listing on a U.S. exchange subjects the issuer to many of the same burdens as a public offering, but is unlikely to be as effective in developing a deep and stable U.S. shareholder base. Arranging for over the counter trading is, on the other hand, very simple, but is even less likely to have a major impact. It could, however, be a low-cost way of engaging with the U.S. market for the first time, to help guide decisions about next steps. We discuss those alternatives in Chapter 3 as part of a more detailed discussion of the principal advantages and disadvantages of accessing the U.S. markets.

U.S. Regulation of the International Securities and Derivatives Markets, § 2.02, GENERAL CONSIDERATIONS

[1] Public Offerings

Conducting a public offering and listing in the United States, likely as part of an international offering, can afford a number of benefits. Most important, because of expected U.S. demand, the pricing might be enhanced and the size of the offering increased, adding to liquidity. The United States remains the deepest capital market in the world, and in a U.S. public offering securities may be offered not just to large institutions but to all U.S. investors. A public offering thus maximizes U.S. demand. Moreover, in some sectors, for example high tech, valuations could be better in the United States than elsewhere.

In addition, securities sold in a U.S. public offering generally may be freely resold in the United States thereafter, providing U.S. investors easy access to an

p. 2-4

active secondary market. This access reduces the risk of a liquidity discount that might apply in a U.S. private placement; as discussed in § 7.01, privately placed securities are not freely tradeable in the United States for a year, and if there is no liquid trading market outside the United States, this restriction could have a significant impact.

Once a foreign company is public in the United States, it can take advantage of streamlined procedures for subsequent offerings, so-called shelf registration, and if it is of a certain size, will have instant access to the U.S. markets as a well-known seasoned issuer. It will also find it easier to use its securities as currency for the acquisition of U.S. companies (or other companies with a large U.S. shareholder base). Shelf registration is discussed in § 3.02[2], and the use of securities in acquisitions in § 9.05[4].

The regulatory process for a U.S. public offering, which we discuss in Chapter 3, is relatively straightforward compared to the processes in other leading international listing venues, such as London and Hong Kong. Substantive review is carried out by one regulator (the SEC), and the reports and opinions required of auditors, legal advisors and other experts are limited; in the case of auditors, for example, the "comfort letter" is the only item provided beyond their audit opinion. The processes in London and Hong Kong by contrast involve more extensive third-party reports and opinions, in particular from accountants, and these can be costly and time consuming to prepare. The need for certain of these additional reports and opinions is driven principally by the relevant listing rules and/or the requirements of the investment bank acting as one of the lead underwriters that is chosen by the company to act as its "sponsor." The sponsor has certain responsibilities with respect to the integrity of the listing processes in London and Hong Kong. Moreover, in Hong Kong, two regulatory authorities— the Securities and Futures Commission and The Stock Exchange of Hong Kong Limited—provide substantive review, which can complicate and delay the process. In addition, Hong Kong only permits listings by companies incorporated in certain eligible jurisdictions.

With respect to corporate governance, the United States generally imposes relatively few requirements on foreign companies, deferring instead to the company's jurisdiction of incorporation or foreign listing authority for these matters, except insofar as audit committees and internal controls are concerned. This contrasts with the requirements in Hong Kong and standard practice in London, where in each case the composition of a company's board of directors and board committees is more tightly regulated as a consequence of obtaining a listing.

Balanced against these advantages of accessing the U.S. public market are a number of challenges, including:

- coordinating a U.S. public offering with a concurrent listing and public offering in the issuer's home or other foreign market;

p. 2-4
p. 2-5

- strict auditing and financial statement requirements, and the willingness of the SEC accounting staff to challenge a company's application of accounting principles;
- potentially burdensome audit committee and internal control requirements;
- extensive disclosure requirements, both in connection with the offering itself and pursuant to subsequent ongoing reporting obligations;
- potential liability for inaccurate or incomplete disclosure in a threatening litigation environment, which permits class actions on the basis of liability standards that are considerably easier for plaintiffs to establish than the intentional or reckless misconduct that is required to be proved under customary anti-fraud provisions; and
- active enforcement by the SEC and the criminal division of the U.S. Department of Justice ("DOJ"), including in respect of violations of U.S. law that take place predominantly outside the United States, such as under the anti-bribery provisions of the Foreign Corrupt Practices Act (the "FCPA").

Compounding these challenges, the ongoing requirements applicable to a foreign company that has gone public in the United States can change dramatically from the requirements in place when the offering was conducted, as they did in 2002 with the adoption of the Sarbanes-Oxley Act. That act added substantial new requirements regarding audit committees and internal controls, as well as clawback of executive compensation in the event of certain accounting irregularities. And the United States is perhaps more likely than other countries to adopt changes not merely to meet traditional investor protection concerns but also to serve wider social objectives. This appears to have been the case, for example, in the recently adopted requirement for U.S. public companies to disclose their use of conflict minerals sourced from the Democratic Republic of the Congo or adjoining countries. Finally, although a foreign company that does go public in the United States can eliminate the applicable ongoing requirements through delisting and deregistration, it may do this only if the United States represents a de minimis proportion of its trading and shareholder base and certain other conditions are met.

[2] Private Offerings

A foreign company can avoid many of these challenges by accessing the U.S. private market instead. The most common way of accessing this market is by offering the securities to large U.S. institutions—qualified institutional buyers, or "QIBs"—on the basis of Rule 144A under the Securities Act, generally in conjunction with a listing and public offering elsewhere. Though not as deep as the U.S. public market, the Rule 144A market is substantial, and can generate

p. 2-5
p. 2-6

significant pricing benefits, especially if the QIBs are able to resell the securities they buy into a relatively liquid foreign market after the offering. For a company offering debt securities, or whose local or other foreign equity market is liquid, a Rule 144A offering is generally the preferred option.

None of the initial or subsequent ongoing requirements and other concerns referred to above would apply in a Rule 144A offering, and liability to private plaintiffs would be only for fraud (though the SEC could still bring an enforcement action against the foreign company and its underwriters for negligence). For reasons of marketing, reputation and liability protection, however, the scope of disclosure and due diligence in a Rule 144A offering tends to approach that of a U.S. public offering, though there is considerable flexibility where obstacles appear.

As a practical matter the scope of disclosure in the U.S. offering document is determined by what foreign rules require, what the company wants to disclose, what the underwriters ask the company to disclose for marketing purposes (which itself is often driven by the scope of disclosure of public companies in the same sector) and what the U.S. lawyers require in order to deliver so-called 10b-5 letters. These are letters, required by the underwriters to be delivered at closing in both U.S public offerings and private placements, in which the U.S. lawyers state in effect that, having reviewed the affairs of the company, nothing has come to their attention to make them believe that the prospectus (or other offering document) contains a material misstatement or omission.

In rare cases, a foreign company may be unable to access either the public or private markets in the United States. While, generally speaking, a company reluctant to enter the U.S. public market for one reason or another should be able to offer securities in the less regulated U.S. private market, there may nonetheless be critical disclosures it is unable or unwilling to make, at least at the time of the offering, and the failure to do so would preclude issuance of a 10b-5 letter. Common instances involve disclosure in respect of significant recent or probable acquisitions, contingencies arising from potentially illegal conduct and sensitive matters relating to major shareholders, such as related party transactions and beneficial ownership. In addition, a foreign "investment company" is not permitted to offer its securities to the public in the United States, and may offer its securities on a private basis in ways that are relatively straightforward for debt but more difficult for equity. The definition of "investment company" is broad, capturing not only mutual funds and other collective investment vehicles but also industrial or other companies that hold minority interests in businesses that account for at least 40% of their value and do not benefit from an applicable exception. This "inadvertent investment company" issue is discussed in § 15.02. Careful attention should be paid to a foreign company's possible status as an investment company early in the process if there is cause for doubt.

U.S. Regulation of the International Securities and Derivatives Markets, § 2.03, CONSIDERATIONS WITH RESPECT TO A U.S. PUBLIC OFFERING

U.S. Regulation of the International Securities and Derivatives Markets

p. 2-7

Before considering the specific issues that might be of concern to a foreign company deciding whether to access the U.S. public market, the ways in which the conduct of a U.S. public offering can affect the foreign component of an international offering should be understood. There are three principal areas: timing, publicity, and disclosure.

In the absence of special considerations, and assuming the availability of the requisite financial statements and other financial information, it could take two to three months for a private company to prepare a registration statement (which includes the prospectus) for filing with the SEC and for offering participants to complete their due diligence. To allow a foreign company to coordinate its initial public offerings in and outside the United States, the SEC permits a foreign company with or concurrently seeking a listing outside the United States to engage in the SEC review process confidentially until comments have been resolved. This accommodation also applies to foreign governments registering debt securities, foreign issuers being privatized by foreign governments and foreign issuers that can demonstrate that the public filing would conflict with the law of an applicable foreign jurisdiction. We discuss the possibility of confidential review in § 3.02[1][c].

The SEC staff will generally take about one month to review and comment initially. The time required to respond to and resolve SEC comments will vary, depending on the nature of the comments themselves. It is generally only after the SEC's comments are resolved that the prospectus is printed and the marketing is begun in the United States. It is generally undesirable for marketing to commence in one market before it commences in others, so a foreign company could find that any concurrent local or other foreign market listing and public offering it intends to conduct could be delayed pending completion of the U.S. review process.

The United States has rules designed to ensure that only the publicly filed and SEC-reviewed prospectus is used to market the offering in the United States, rather than other marketing materials. Accordingly, publicity in the United States is strictly limited. Section 3.02 covers what a company can say and when during the offering process. While these rules are not intended to interfere with publicity elsewhere, the steps required to isolate the United States from publicity abroad in the age of the internet can be difficult and burdensome. We discuss these steps in § 3.02[3]. Violations of the rules can lead the SEC to delay the offering or to require the company to include the offending communications—for example, projections or other forward-looking statements—in the prospectus, exposing offering participants to heightened risk of liability.

p. 2-7

p. 2-8

Finally, with limited exceptions, the United States does not defer to the requirements of foreign markets when it comes to disclosure—it follows the national treatment model. A foreign company seeking to access the U.S. public market must, therefore, generally follow the same rules that apply to U.S. companies and comply with the U.S. disclosure requirements, which may be more extensive than those applicable in its home market. While the SEC has made some accommodations for foreign companies by exempting them from or modifying certain disclosure requirements, the rules are broadly similar. And because it is generally undesirable to offer securities in different markets on the basis of materially different information, as a practical matter the more extensive U.S. disclosure requirements can determine substantial aspects of the disclosure in the local or other foreign markets where a foreign company may be listing and conducting a public offering. On the other hand, some disclosure requirements in other markets—such as with respect to the inclusion of projections in the prospectus—are inconsistent with U.S. practice, and as a consequence raise difficulties.

[1] Auditing and Financial Statement Requirements in a U.S. Public Offering

A company's financial statements constitute a critical part of its prospectus. In the case of a U.S. public offering, the United States regulates the relationship between a company and its auditors, how the audits are to be conducted, the accounting principles that may be used, the periods to be covered and, in the case of recent or probable acquisitions, the inclusion of target financial statements and pro forma financial information. Collectively, these requirements can have a substantial impact on the feasibility and timing of a U.S. public offering.

[a] Auditor Independence

A foreign company conducting a U.S. public offering must include financial statements in its prospectus that have been audited by accountants that are "independent" within the meaning of U.S. rules. These rules, discussed in § 5.03[1], not only prohibit the provision of certain services that accounting firms often provide while they are acting as a foreign company's auditors but also regulate certain other aspects of the relationship between a company and its auditors. Auditor independence is a threshold issue that must be considered at an early stage to avoid unwelcome surprises down the road.

[b] Conduct of Audits

p. 2-8
p. 2-9

In addition to imposing strict requirements on auditor independence, the United States also requires auditors to be registered with the Public Company Accounting Oversight Board ("PCAOB") and to conduct their audits in accordance with PCAOB generally accepted auditing standards. These requirements are described in § 5.03[3]. If a company has not been audited in accordance with these U.S. standards, additional auditing work may be required.

[c] Accounting Principles

Generally, a foreign company has the option to prepare its financial statements in accordance with U.S. generally accepted accounting principles ("U.S. GAAP"), International Financial Reporting Standards issued by the International Accounting Standards Board ("IASB-IFRS") or any other comprehensive body of accounting principles. A company that has adopted accounting principles other than U.S. GAAP or IASB-IFRS, including other variants of International Financial Reporting Standards, must provide in its financial statements a "reconciliation" to U.S. GAAP that quantifies the material variations between the company's results under its chosen body of accounting principles and U.S. GAAP. These rules are described in § 4.05[2]. Regardless of the accounting principles a company has adopted, the SEC is perhaps more likely than any other regulator to ask questions about a company's financial statements, making it desirable to resolve any potential significant accounting issues at an early stage, usually through a pre-filing conference with the SEC's accounting staff.

[d] Periods Covered and Segment Breakdowns

Section 4.05 sets out in detail the financial statement requirements in SEC registration statements and other filings. In the initial public offering of any foreign company whose financial statements are under U.S. GAAP, two years of audited financial statements are required; otherwise, generally three years are required. In addition, unaudited interim financial statements must be included if the offering takes place more than a specified period after the date of the most recent audited balance sheet. As a practical matter, any unaudited interim financial statements will have to be "reviewed" by the company's auditors. The financial statements must also contain a note showing a breakdown of key balance sheet and income statement line items by business and geographic segment for each period covered.

[e] Target Financial Statements and *Pro Forma* Financial Information

p. 2-9
p. 2-10

If a company has recently acquired another business that is significant as defined by the SEC, or if a significant acquisition is probable, financial statements of the target and pro forma financial information showing the impact of the acquisition may be required. The applicability of this requirement, and the periods the financial statements of the target must cover, vary depending on the size of the target relative to the acquirer. If financial statements are required, they must be audited and prepared in accordance with the same rules that apply to the issuer's financial statements. Difficulties can arise if the requisite target financial statements are not readily available, and waivers are difficult to obtain. The requirements regarding the inclusion of target financial statements and pro forma financial information are set forth in § 4.05[5][a].

[2] Audit Committee and Internal Control Requirements in and Following a U.S. Public Offering

As noted above, the United States generally defers to a foreign company's jurisdiction of incorporation or foreign listing authority for corporate governance matters. A significant exception to this rule relates to audit committee and internal control requirements, most of which were introduced by the Sarbanes-Oxley Act after the accounting scandals relating to Enron, WorldCom and other companies. Other internal control requirements were introduced earlier, in the mid-1970s, by the FCPA in the wake of the bribery scandals of that time. In addition, U.S. rules specifically prohibit certain conduct by company personnel in the company's dealings with its auditors, and the SEC has brought a number of proceedings against individuals alleging violations of these rules, which we discuss in § 5.03[5].

[a] Audit Committee Requirements

Any foreign company listing its securities on a U.S. stock exchange must have an audit committee whose independence may be phased in over time. Initially, the committee must have at least one independent director, after 90 days a majority must be independent, and after a year all must be independent. The independence requirements include prohibitions on the receipt of consulting, advisory or other compensatory fees and limits on stock ownership. At least one member of the committee is expected to be a "financial expert," and if that is not the case, the company must explain why not.

The audit committee must have power over the appointment, compensation and oversight of the company's auditors (who must report directly to the

p. 2-10
p. 2-11

committee), must have the authority to engage independent counsel and other advisors and must establish procedures for the receipt, retention and treatment of complaints regarding accounting controls or auditing matters and allow employees to make confidential and anonymous submissions of concerns regarding those matters.

We discuss these audit committee requirements in § 5.02.

[b] Controls

The control requirements that apply to any publicly held company in the United States (a "U.S. public company") can be burdensome to meet. In particular, the cost of meeting the requirements relating to "internal control over financial reporting" has been an important factor in decisions by a number of foreign companies against going public in the United States.

[i] *Internal Control Over Financial Reporting and Auditor Attestation*

The management of each U.S. public company, with the participation of its CEO and CFO, is required to evaluate the effectiveness, as of the end of each financial year, of the company's internal control over financial reporting. "Internal control over financial reporting" is a term of art defined as a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that: (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the issuer; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the issuer are being made only in accordance with authorizations of management and directors of the issuer; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the issuer's assets that could have a material effect on the financial statements.

Each U.S. public company must include in its second annual report filed with the SEC and in all annual reports thereafter an internal control report containing:

- a statement of management's responsibility for establishing and maintaining adequate internal control over financial reporting;
- a statement identifying the framework used by management to evaluate the effectiveness of this internal control over financial reporting; and

p. 2-11
p. 2-12

- an assessment by management of the effectiveness of this internal control as of the end of the most recent financial year, including a statement as to whether or not internal control over financial reporting is effective.

The auditors of any U.S. public company meeting a certain relatively low size test (generally, a market capitalization of more than $75 million held by non-affiliates) are required to provide an "attestation report" of management's evaluation of internal control over financial reporting. This attestation report must also be included in the company's annual report.

Any company that is an "emerging growth company" when it goes public in the United States may defer the auditor attestation (but not the management report) on internal controls until the earlier of the time when it ceases to meet the definition of an "emerging growth company" and five years after the IPO. An "emerging growth company" is one that at the time of its initial public offering in the United States has less than $1 billion in annual gross revenues, has not issued more than $1 billion in non-convertible debt securities over the past three years and does not have a market capitalization of more than $700 million held by non-affiliates.

We discuss internal control over financial reporting and auditor attestations in § 5.04[2].

[ii] *Disclosure Controls and Procedures*

As we discuss in § 5.04[3], U.S. public companies are also required to maintain "disclosure controls and procedures," another term of art. Disclosure controls and procedures cover both financial and non-financial information, and are defined as controls and other procedures designed to ensure that information required to be disclosed is recorded, processed, summarized and reported in a timely and accurate manner. Management of a U.S. public company is required to evaluate, with the participation of its CEO and CFO, the effectiveness of its disclosure controls and procedures as of the end of each financial year.

The SEC has recommended that companies establish disclosure committees, comprising a small number of key management employees with responsibility for disclosure and reporting matters (such as the CFO, the head of treasury, the director of investor relations, the director of communications, the chief accounting officer, the chief compliance officer and the general counsel) that meets regularly to coordinate disclosure policy and practice.

[iii] *Books and Records Requirements of the FCPA*

Any foreign company conducting a U.S. public offering becomes a U.S. public company and therefore subject to the FCPA. The FCPA is far broader than

p. 2-12

p. 2-13

its name implies and includes "books and records" provisions that apply not only to bribery-related violations but also to a company's accounting controls generally.

As we discuss in § 5.04[5], the FCPA requires U.S. public companies to maintain books, records and accounts that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company and to devise and maintain an adequate system of internal accounting controls. Such system must be sufficient to provide assurances that:

- transactions are executed in accordance with management's general or specific authorization;
- transactions are recorded as necessary to permit the preparation of financial statements in conformity with generally accepted accounting principles or other applicable criteria and maintain accountability for assets;
- access to assets is permitted only in accordance with management's authorization; and
- actual corporate assets are compared with recorded assets at "reasonable intervals" and "appropriate action" is taken if there are discrepancies.

The criminal division of the DOJ and the SEC staff have stated that those provisions "form the backbone for most accounting fraud and issuer disclosure cases brought by the DOJ and SEC."

[iv] *CEO/CFO Certifications*

The CEO and CFO of a U.S. public company must provide specified certifications as part of each annual report relating to its accuracy and completeness, the fairness of the presentation in the company's financial statements of its financial condition, results of operations and cash flows and the adequacy of the company's internal control over financial reporting and disclosure controls and procedures.

In addition, the annual report must be accompanied by a separate written statement of the CEO and CFO certifying that the report fully complies with applicable disclosure requirements and that the information contained in the report fairly presents the financial condition and results of operations of the company.

A CEO or CFO providing a false certification could be subject, in his or her personal capacity, to SEC actions and private actions and, in certain cases of knowing or willful misconduct, criminal liability.

We discuss these certification requirements in § 5.04[4].

[v] *Reporting Illegality; Special Investigations*

p. 2-13

p. 2-14

The United States requires a public company's auditors to report violations of law of which they become aware to appropriate governing bodies within the company and, where the illegality is material to the financial statements and the company fails to take remedial action, to appropriate governmental authorities. The company's lawyers are also required to report violations of law to appropriate officers or governing bodies within the company. In addition, whistleblowers are given material monetary and other incentives to act, and are protected against retaliation. The rules regarding auditors, lawyers and whistleblowers are described in §§ 5.03[1], 5.05[4] and 5.05[5], respectively.

If a board of directors of a U.S. public company becomes aware, through its auditors, lawyers or otherwise, of possibly material illegal conduct, the best practice is for it to commission a special investigation, supervised by a committee of independent directors and conducted by experienced outside counsel. These investigations can be intrusive, burdensome and costly, and may lead to difficult public disclosure, but in the end they can help mitigate the consequences to the company if illegal conduct did occur and the SEC or DOJ seeks to enforce the law. The anti-bribery provisions of the FCPA have recently given foreign companies that have gone public in the United States cause for concerns of this kind. These matters are discussed in § 5.04[5].

[3] Disclosure Requirements in and Following a U.S. Public Offering

The United States has an integrated disclosure system, described in detail in Chapter 4, meaning that the requirements that apply in the initial public offering form the basis for the annual report that is required each year thereafter. In each case, the company is required to include audited financial statements, describe its business in considerable detail, analyze its financial condition, results of operations (including on a segment basis), liquidity and capital resources and set out the risks to which it is subject. These requirements do not differ substantially from those that apply elsewhere, for example, in London or Hong Kong, though in some sensitive areas of disclosure, for example in relation to related party transactions, greater detail may be called for. With respect to interim reporting, the U.S. securities laws generally allow a foreign company to furnish whatever it publishes elsewhere, though the U.S. stock exchanges require at least half-yearly interim reporting, on an unaudited basis.

[a] Special Industry Disclosure

The United States has specific disclosure requirements for companies in certain industries, such as banking, oil and gas and mining, which we discuss in

p. 2-14

p. 2-15

§§ 4.07[8], 4.07[5] and 4.07[4], respectively. The information called for can, in some cases, go well beyond what is required in other markets.

For example, banks are required to disclose average balance sheet data, including interest-earning assets and interest-bearing liabilities, as well as corresponding average rate and yield data. Generally, daily averaging is required, though if collecting this data would involve unwarranted or undue burden or expense, end-of-week or end-of-month averaging may be allowed instead.

Since 2008, the United States has permitted oil and gas companies to disclose probable and possible reserves in addition to proven reserves, and has largely adopted international definitions. However, the reserves, production, drilling and other information required to be disclosed by oil and gas companies still is more extensive than what is required in other markets. On the other hand, the United States continues to prohibit the disclosure of oil and gas resources other than reserves, except when required by foreign law.

The SEC is currently in the process of revising its mining disclosure requirements to align them more closely with international reporting standards. In addition, U.S. public companies are required to disclose, in an exhibit to their annual reports, certain information relating to violations of the U.S. Federal Mine Safety and Health Act of 1977 and mining-related fatalities.

[b] Related Party Transactions

Transactions and proposed transactions between the company and related parties, discussed in § 4.07[10], are required to be disclosed if those transactions occurred within the past three financial years and involved loans, were material to either the company or the related party or were unusual in their nature or conditions. The list of persons considered to be related parties for these purposes includes:

- entities that are under common control with, control or are controlled by the company;
- unconsolidated entities over which the company has significant influence;
- directors and key management personnel, and certain of their close family members, and enterprises over which any of the foregoing persons have significant influence; and
- shareholders with significant influence over the issuer and certain of their close family members, and enterprises over which any of the foregoing persons have significant influence.

"Significant influence" is defined as "the power to participate in the financial and operating policy decisions of the enterprise but is less than control over those policies. Shareholders beneficially owning a 10% interest in the voting power of the company are presumed to have a significant influence on the company."

Companies are required to disclose the amount of outstanding loans to or from a related party as of the most recent practicable date, the largest amount outstanding during the relevant three-year period, the nature of the loan and transaction in which it was incurred and the interest rate. For other types of transactions with related parties, the nature and extent of the arrangement must be disclosed. As a practical matter, the starting point for related party transaction disclosure is the relevant note to the financial statements, but more detail is often required.

As discussed in § 5.05[1], companies are also prohibited from making or maintaining loans to their officers or directors—one effect of this prohibition is that any outstanding loans to officers or directors must be repaid or otherwise terminated before a U.S. public offering.

[c] Compensation of Officers and Directors; Share Ownership of Officers, Directors and Significant Shareholders

A foreign company conducting a U.S. public offering is required to disclose, in the aggregate, the amount of compensation paid, including contingent or deferred compensation accrued and benefits in-kind granted, to its officers and directors. Compensation paid on an individual basis only needs to be included if required by the company's home country or if that information is otherwise publicly disclosed by the company. If compensation is paid pursuant to a bonus plan or profit sharing plan, or in the form of options, additional disclosure is required. In addition, companies are required to disclose the total amount set aside or accrued to provide pension, retirement or similar benefits. We discuss the requirements for compensation disclosure in § 4.07[9].

A foreign company must also disclose the share ownership of each of its directors and senior officers, as well as any share options held by them. With respect to options, the company must disclose the number of shares covered, the purchase price, if any, the exercise price and the expiration date. If, however, any individual director or senior officer owns less than 1% of the relevant class of shares and that share ownership has not previously been disclosed to shareholders or otherwise made public, the company may state that the individual owns less than 1% of the class instead of providing the individual share ownership. We discuss the disclosure requirements with respect to the share ownership of directors and senior officers in § 4.07[9].

The company must also disclose certain information regarding any holder of 5% or more of any class of its voting securities (or such lesser percentage it is required to disclose in its home country), to the extent the information is

p. 2-16

p. 2-17

known to the company or can be ascertained from public filings. In addition, to the extent known to the company, it must identify any controlling person and describe the nature of its control, including the amount and proportion of capital held giving a right to vote. Any arrangements known to the company that could result in a change of control must also be disclosed. These requirements are described in § 6.03[2].

[d] Public Filing of Material Contracts

As we discuss in § 4.04[4], a foreign company is required to file publicly with the SEC copies of material contracts at the time of a public offering and in connection with its annual reports. In addition, a summary of each material contract must be included in the offering prospectus or annual report.

Generally, material contracts are those that are not of a type that ordinarily accompanies the kind of business the issuer and its subsidiaries conduct, were entered into within the last two years or remain to be performed in whole or part and are either for an amount material to the issuer or are significant enough for other reasons to be considered material to the issuer. Contracts on which the business is substantially dependent and material leases over property are also considered to be material.

Contracts with directors, officers and significant shareholders are deemed to be material (with one limited exception for the sale of current assets at market price). This includes service contracts for directors and officers.

The public filing of otherwise confidential material contracts may be harmful to a company or violate the terms of the contracts themselves. The SEC has a procedure, discussed in § 3.02[1][c], for requesting the confidential treatment of certain information in public filings, including material contracts. The company must identify the specific portion of any filing that it deems confidential and state the basis for the company's objection to public disclosure of that information, along with an analysis of the applicable exemptions from the rules and regulations under the U.S. Freedom of Information Act. The SEC staff reviews each confidential treatment request and will only grant confidential treatment if the request is narrowly drawn and meets specific criteria, usually relating to the prospect that public disclosure will result in competitive harm. While it is rare for an entire contract to be granted confidential treatment, requests for particularly sensitive provisions to be kept confidential are often granted. This is a matter that should be dealt with early in the public offering process.

[e] Disclosure Requirements to Achieve Social or Political Goals

In recent years, the United States has promulgated laws requiring periodic disclosure by public companies in the United States in order to achieve

p. 2-17

p. 2-18

public-policy goals unrelated to traditional concepts of investor protection. The two principal examples are the conflict minerals disclosure rule, adopted pursuant to § 1502 of the Dodd-Frank Act, and the IRANNOTICE disclosure rule, adopted pursuant to the Iran Threat Reduction and Syria Human Rights Act of 2012. A third example, the resource extraction payments disclosure rule, adopted pursuant to § 1504 of the Dodd-Frank Act, was recently disallowed after its adoption. We discuss the requirements regarding conflicts minerals disclosure below and in § 4.08[1], the IRANNOTICE disclosure requirements below and in § 4.07[13] and the now vacated resource extraction payments disclosure rule in § 4.08[2].

The conflict minerals disclosure is intended to identify the possible direct or indirect financing or benefitting of armed groups in the Democratic Republic of the Congo or an adjoining country (the "covered countries"). It seeks to do this by requiring any U.S. public company to disclose its use of certain minerals originating there. The minerals in question are cassiterite, columbite-tantalite, gold, wolframite and three derivatives: tin, tantalum and tungsten. The requirements apply not just to any of these minerals the company acquires itself but also to those included in any components (including generic components) in the company's products.

In determining what disclosures should be made, the company must first determine whether it manufactures any products for which conflict minerals are necessary to the functionality or production. If not, no filing is required. If so, the company must conduct a "reasonable country of origin inquiry" to determine whether such conflict minerals originated in the covered counties or came from scrap or recycled sources.

If the company determines the conflict minerals did not originate in a covered country or came from scrap or recycled sources, or if it has no reason to believe the conflict minerals may have originated in a covered country or reasonably believes the conflict minerals came from scrap or recycled sources, the company must make such disclosures but need not file a conflict minerals report.

If the company determines that any of the conflict minerals originated in a covered country and are not from scrap or recycled sources or has reason to believe that such minerals may have originated in a covered country or does not reasonably believe that such minerals are from scrap or recycled sources, it must conduct due diligence on the source and chain of custody of the conflict minerals. Due diligence efforts must conform to a nationally or internationally recognized due diligence framework. The company must then prepare and disclose a conflict minerals report that describes the due diligence process undertaken, any product that contains conflict minerals that the company cannot determine are not directly or indirectly financing or benefitting armed groups in a covered country, the facilities used to process the conflict minerals used in those products,

p. 2-18

p. 2-19

the country of origin of those minerals and the company's efforts to determine the mine or location of origin with the greatest possible specificity.

In 2012, Congress passed the Iran Threat Reduction and Syria Human Rights Act, which among other things requires any company that is required to file quarterly or annual reports to make specific disclosures in its public filings if it or an affiliate has knowingly engaged in certain activities or transactions with Iran or other specified countries or entities. Disclosure, which is made annually on a form designated as the IRANNOTICE, must include: (i) the nature and extent of the activity; (ii) the gross revenues and net profits attributable to the activity; and (iii) whether the issuer or affiliate intends to continue the activity. As a result, while it is not *per se* illegal for non-U.S. companies listed in the United States to engage in business with U.S.-sanctioned parties linked to Iran, failure to make the required disclosures constitutes a violation of U.S. securities law and may result in civil and criminal penalties.

[4] Potential Liabilities in and Following a U.S. Public Offering

As we discuss in Chapter 11, the risk of litigation can be a significant deterrent to entering the U.S. public market: private litigation in connection with the offering itself or in relation to communications thereafter is facilitated by an active plaintiffs' bar and the possibility of class actions; and public authorities, such as the SEC and the criminal division of the DOJ, play an active role in enforcing the securities laws.

The standard of liability that applies in a U.S. public offering is unusually stringent. The issuer faces strict liability for material misstatements or omissions in the prospectus used in the offering—it has no defense. Directors, the CEO, CFO and chief accounting officer, and the underwriters, are also liable, unless they can show they conducted adequate due diligence. Even controlling shareholders can be held liable in certain circumstances. We discuss potential liability in a U.S. public offering in § 11.03.

On the other hand, the standard that applies to communications after the offering, including in reports filed with the SEC and in press releases, is akin to fraud and generally requires knowing or reckless misconduct. Though these fraud standards may be formally less stringent than those in foreign markets, where a negligence standard is not uncommon, the active plaintiffs' bar and prevalence of class actions can make the United States a more threatening litigation environment even with respect to post-offering communications, notwithstanding the formal difference in the standard of liability. We discuss potential liability for post-offering communications and class actions in §§ 11.05 and 11.09[a].

The SEC and the criminal division of the DOJ also actively enforce the U.S. securities laws, both in connection with public offerings and in relation to

p. 2-19

p. 2-20

ongoing reporting and other communications to the market thereafter. The enforcement powers of the SEC and DOJ are described in §§ 11.07, 11.08 and 11.09. The SEC also has the power to bar any person from being an officer or director of a U.S. public company if the person has violated the U.S. securities laws in ways that demonstrate unfitness to serve as an officer or director. This power is described in § 11.07[2][b].

In addition to pursuing companies for disclosure and accounting controls violations, the SEC and the criminal division of the DOJ have recently stepped up their enforcement of the anti-bribery provisions of the FCPA, giving rise to substantial settlements by, and reputational damage to, foreign companies that have gone public in the United States. *See* § 11.08.

Finally, under the Sarbanes-Oxley Act, in the event of a restatement of a U.S. public company's financial statements by reason of material non-compliance as a result of misconduct, the CEO and the CFO must reimburse the company for all incentive or equity based compensation paid in the years for which the financial statements are restated, and pay the company all profits from the sale of any of the company's securities during the 12-month period following publication of the incorrect financial statements. This is described in §§ 5.05[2] and 11.07[2][a]. More recently, the SEC, pursuant to the Dodd-Frank Act, proposed a rule that would require U.S. stock exchanges to impose an even stricter "clawback" obligation on current and former executive officers of a listed company, which has not yet been adopted. *See* § 5.05[2].

[5] Communications with Research Analysts in and Following a U.S. Public Offering

Going public in the United States can affect how a foreign company deals with research analysts in several ways, which we discuss in § 4.10.

First, in connection with the U.S. public offering itself, research reports may not be distributed into the United States, though they may be distributed elsewhere as part of the international marketing effort. This requires the underwriters to implement procedures to ensure that their analysts do not send their research reports into the United States.

Second, once public in the United States, a foreign company should not provide material non-public information to analysts unless it makes that information available to the general public at the same time. While the specific regulation applicable to U.S. companies prohibiting selective disclosure to analysts does not apply to foreign companies, any failure to comply with the principles that lie behind it could subject a foreign company, and any of its directors or officers involved in the communication, to liability for insider trading under the anti-fraud provisions of the U.S. securities laws.

p. 2-20

p. 2-21

Third, it is important that research reports published after a foreign company is public in the United States be the work of the analysts and not of the company, to minimize the risk that any such entanglement might subject the company to anti-fraud liability for alleged misstatements or omissions in those reports. Accordingly, U.S. public companies limit their involvement with research reports to reviewing them for factual accuracy.

Finally, communications with analysts or to the public through press releases or otherwise can impose on a company a duty to update them should circumstances change. Although courts have generally held that routine earnings guidance will not give rise to that duty because such guidance is inherently uncertain, companies have been found to have breached a duty to update where they fail to update a forward-looking statement when it expressed as a matter of company policy (*e.g.*, a leverage policy or other predicates to a financial projection) after that policy has changed.

[6] Reporting and Sales by Significant Shareholders Following a U.S. Public Offering

Going public in the United States affects not only the company but also its significant shareholders. As noted above, controlling shareholders can be liable for material misstatements or omissions by the company in certain circumstances. In addition, significant shareholders must report their ownership publicly. And, perhaps surprisingly, shareholders who are considered to be "affiliates" of the company face limitations on how they may sell their shares in the United States, notwithstanding a prior U.S. listing of those shares.

[a] Reporting

Any person who beneficially owns or acquires at least 5% of the voting rights in a U.S. public company is required to report that ownership publicly in a filing with the SEC. Once the 5% threshold is crossed, increases or decreases in beneficial ownership are required to be reported as well. The requirements are discussed in § 6.04.

[b] Sales

Generally, once a foreign company goes public in the United States, its shares may be freely sold there by the shareholders. As mentioned above, and as discussed in § 6.06, restrictions do apply, however, to sales by shareholders considered to be "affiliates" of the company. An "affiliate" of a company is any person that controls, is controlled by or is under common control with the company,

p. 2-21

p. 2-22

and can include, for example, shareholders holding more than 10% of the voting rights in the company as well as directors and executive officers.

An affiliate of a company that goes public in the United States may subsequently sell shares only in the following ways:

- Pursuant to a further registration statement filed by the company with the SEC covering the shares to be sold, often through a "shelf registration";
- Subject to certain volume and manner-of-sale restrictions;
- In a private placement, including under Rule 144A if the shares were issued prior to the company's U.S. listing; and
- Outside the United States.

In addition, affiliates of the company are generally subject to "lock-up" agreements with the company's underwriters, preventing sales for a certain period after an offering.

Because of the prohibition in the United States on trading on the basis of material non-public information, officers and directors restrict their trading in the company's securities to certain "window" periods that follow financial reporting by the company and then only if the company, which generally monitors requested trading by officers and directors, is comfortable there is no material non-public information at the time. *See* § 5.05[7].

[7] Delisting and Deregistration

Any U.S. public company may delist its securities from a U.S. exchange by furnishing the exchange with a copy of the Board resolutions authorizing delisting.

A foreign company that has offered its shares to the public in the United States may terminate its ongoing obligations only if:

- It has had, for at least 12 months, a listing on an exchange in a foreign jurisdiction, which, either singly or together with one other foreign jurisdiction, accounted for at least 55% of the trading worldwide (and, if aggregating two markets, at least one had more trading than the United States);
- It meets one of the two following tests:
    - the average daily trading volume in the United States was no greater than 5% of the average on a worldwide basis during a recent 12-month period; or

p. 2-22

    - the shares are held by fewer than 300 holders on a worldwide basis or less than 300 holders in the United States;

- It has met all its reporting obligations for 12 months and has filed at least one annual report with the SEC; and
- It has not conducted a U.S. public offering for 12 months, subject to certain limited exceptions.

If a foreign company cannot meet these tests, it will remain subject to U.S. ongoing requirements, including any that were implemented after it went public in the United States. We discuss the delisting and deregistration rules and processes in § 4.11.

U.S. Regulation of the International Securities and Derivatives Markets, § 2.04, CONSIDERATIONS WITH RESPECT TO A U.S. PRIVATE OFFERING

U.S. Regulation of the International Securities and Derivatives Markets

11th and 12th Editions

Click to open document in a browser

As we discuss in Chapter 7, if a foreign company finds that the benefits of a U.S. public offering are outweighed by the challenges, a Rule 144A offering is an attractive alternative. QIBs comprise a substantial part of the U.S. capital market, and the demand they represent can enhance the pricing and increase the size of an international offering, particularly where there is a liquid foreign market where resales can be made after the offering, reducing or eliminating any liquidity discount. We discuss the resale of privately placed securities into markets outside the United States in § 8.02[2].

None of the requirements in and following a U.S. public offering apply in and following a Rule 144A offering, and there is no review by a U.S. regulator. It is therefore relatively straightforward to integrate a Rule 144A offering with a listing and public offering in a foreign company's home or other foreign market. Generally speaking, the foreign requirements will be the starting point for determining the timing of the offering and the scope of disclosure.

Nonetheless, the anti-fraud provisions of the U.S. securities laws do apply to a Rule 144A offering, and recklessness, as well as intent, can satisfy the scienter requirement. Moreover, the SEC may bring actions for negligent disclosure as well. We discuss the potential for liability in a private offering in §§ 7.02[4] and 11.04. Accordingly, although, as a technical matter, the restrictions on publicity and the distribution of research reports in the United States are more relaxed in a Rule 144A offering, liability concerns have led offering participants to isolate the United States from these communications in the same way as in a U.S. public offering. We discuss publicity and research in connection with private offerings in §§ 7.02[4] and 7.02[5].

U.S. marketing considerations and the potential for liability under the U.S. securities laws tend to drive disclosure in the offering document and related due

p. 2-24

diligence by the underwriters (including receipt of 10b-5 letters) towards the norms of a U.S. public offering. Although international and U.S. practices with respect to the scope of due diligence have converged over time, there may still be some aspects of U.S. practice, such as review by the U.S. lawyers of several years' worth of minutes of a company's board of directors and key board committees, that may be viewed as unduly intrusive. We describe U.S. due diligence practices in §§ 11.03[1] and 11.03[2].

Where disclosure or governance difficulties arise in a Rule 144A offering, however, there is considerably more room for flexibility than in a public offering. For example:

- If a foreign company's auditors are independent under a widely recognized foreign standard, that should suffice, even if there would be questions under the U.S. definition, and audits conducted under widely recognized auditing standards should be sufficient as well;
- Reconciliation of a foreign company's financial statements to U.S. GAAP should not be required even if the financial statements are prepared under accounting principles other than IASB-IFRS, so long as they are widely recognized;
- If, in the event of a recent or probable acquisition, financial information for the target company is not available in the form required for a U.S. public offering, alternatives can be considered, depending on the size of the target relative to the acquiror;

- The company need not meet the audit committee and control requirements of a U.S. public company, though acceptable control systems will be necessary, and some members of the board and its key committees should be independent; and
- While the special disclosure requirements that apply to banks, oil and gas companies and mining companies may not be disregarded, they can be applied flexibly, recognizing, for example, in the case of banks, that averaging on a quarterly or even semi-annual basis may be acceptable, and in the case of oil and gas companies, that resources other than reserves may be disclosed and all the detail called for by the U.S. rules need not be provided.

We discuss these and similar issues in § 7.03.

As a practical matter, the company's underwriters, and the U.S. lawyers for the company and the underwriters, will provide guidance as to what should be included in the offering document to meet U.S. marketing needs and reduce U.S. legal risk. U.S. investors will be comparing the company to similar businesses

p. 2-24

p. 2-25

that may well be public in the United States, and will wish to be provided information that is similar in scope, driving disclosure towards U.S. public offering standards. And for purposes of legal protection, the underwriters will require U.S. counsel to deliver 10b-5 letters in relation to the offering document, and the starting point for U.S. counsel here will be the scope of disclosure in a U.S. public offering.

U.S. Regulation of the International Securities and Derivatives Markets, § 3.01, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 3.01 (11th and 12th Editions 2014-2017)

p. 3-7

In the early 1990s, when the first edition of this book was published, many foreign companies, [1] including many large companies, sought to undertake public offerings or exchange listings or otherwise access the public capital markets in the United States. This phenomenon continued and even accelerated for many years.

However, more recently, and especially since the passage of the Sarbanes-Oxley Act in 2002, there have been at least four major shifts in the way that foreign companies and investors consider global capital pools and flows and global financial markets. These shifts all affect the U.S. capital markets. First, the locus of capital has become far more diversified across the globe, with important potential investors located throughout the world, in Europe, Asia, the Middle East and Latin America, as well as North America. As a result, accessing capital in the United States is less important than it used to be. Second, and related to the first, exchanges and markets outside the United States have become deeper and more liquid, in Asia and Latin America as well as Europe. So for at least some foreign issuers, a U.S. listing may not add a major additional source of liquidity, and for investors, at least some local markets outside the United States provide sufficient liquidity to support their investment. In these cases, the additional liquidity, if any, provided by U.S. markets or exchanges (or other major international markets, such as London) is therefore no longer necessary. Third,

p. 3-7

p. 3-8

investors perceive that global accounting, financial and other disclosure standards and trading market quality and integrity have improved in many markets to the point where, as in the case of market liquidity, a listing in the United States, and compliance with its standards, is no longer essential. There is a view that, with global institutional investor pressure and vigilance, local markets outside the United States are not only sufficiently deep and liquid but also sufficiently open and honest to support significant investment. And fourth, at the same time as the advantages to foreign companies of accessing U.S. markets have become less clear, heightened U.S. regulatory burdens, initiated by the Sarbanes-Oxley Act and the Dodd-Frank Act, have increased the apparent disadvantages of accessing the U.S. capital markets in a manner that requires registration or reporting under the U.S. securities laws, and the resultant entanglements with U.S. regulations.

The Sarbanes-Oxley Act reflects the U.S. approach to regulating foreign issuers present in or wishing to access the U.S. market—that is, national treatment. The same rules apply to domestic and foreign issuers. With very limited exceptions, there is no deference to the regulatory requirements of the home country in the case of foreign issuers, whether or not there is a conflict with the home country regulatory regime.

An alternative to the national treatment model is mutual recognition or a finding of equivalency, in which case the United States as host country would rely on, and defer to, the regulatory requirements of the home country. As we discuss in Chapter 13, the United States implemented a Multi-Jurisdictional Disclosure System with Canada, implementing mutual recognition between the two countries. Canadian and U.S. companies as a result can use their home country disclosure documents when raising capital in the host country and can comply with the periodic disclosure requirements of the home country.

However, the United States has not pursued this approach with Europe or other key markets with respect to capital raising, [2] except insofar as it revised the requirements applicable to foreign issuers in Form 20-F, incorporating international standards, and it allowed foreign issuers to use International Financial Reporting Standards in connection with listings or capital raising. Rather, the United States continues to set and revise the ground rules for access to the U.S. capital markets and generally does not defer to the home country. [3]

p. 3-8

p. 3-9

While the environment has changed dramatically both within and outside the United States, a foreign company's determination as to whether and how to approach the U.S. markets, as always, depends principally on the company's objectives. These objectives can include one or more of the following:

- raising capital in the United States (separately or as part of a larger global offering);
- entering the U.S. public market to facilitate the use of its securities as consideration for an acquisition from U.S. securityholders;
- obtaining a U.S. exchange listing [4] to broaden its trading market, especially where its local market cannot support global trading or does not satisfy investors' standards;
- taking a less extreme step to broaden its trading market by facilitating over-the-counter trading in the United States; or
- seeking to obtain valuations or analyst coverage that may accompany listing on a U.S. exchange.

The various choices open to foreign issuers can be taken one-at-a-time; they can be viewed as possible incremental steps towards accessing the U.S. markets; and no one choice precludes a different choice in the future.

The principal source of capital in the United States and globally for most foreign issuers, as for most U.S. issuers, is institutional investors. In recent years,

p. 3-9

p. 3-10

against the backdrop of the changes in U.S. and global markets described above, foreign issuers that have an adequate local market and seek to raise capital in the United States have in a majority of cases attracted U.S. institutional investors in private offerings without a U.S. listing or extending their offering to the U.S. public market. That approach, which does not require registration of an offering of securities with the SEC or ongoing compliance with U.S. reporting requirements, is described in Chapter 7. In the case of an unregistered private offering accompanying a non-U.S. offering, the issues relating to the non-U.S. offering are discussed in Chapter 8. Any of the other options for accessing the U.S. markets enumerated above, other than facilitating over-the-counter trading in the United States, [5] requires registration of the issuer's securities under the Exchange Act and, in the case of a public offering in the United States, the registration of the transaction with the SEC under the Securities Act.

The relative benefits of accessing the U.S. public markets have become fact-specific and require analysis of the circumstances of particular issuers and particular offering strategies. There is a clear perception that in some cases the benefits do not justify the burdens. [6] Consistent with the market changes enumerated above, a few factors do appear to be noteworthy, including the following:

- Accessing the U.S. public markets and registering securities under the Exchange Act involves a number of complex steps. The legal and regulatory risks and burdens to which a company and certain of its officers become subject by virtue of Exchange Act registration are significant and have increased in recent years.

p. 3-10

p. 3-11

- As noted above, global institutional investors have been increasingly willing to invest in securities of issuers from certain markets that do not have a U.S. listing, or even any secondary listing in an international market center. [7]

- Significant numbers of high-tech foreign issuers continue to undertake public offerings and list in the United States and register under the Securities Act and the Exchange Act. [8]
- There seems to be a general consensus, although not unanimity, that valuations remain higher for companies with U.S. listings. [9]

As to the first point, U.S. disclosure and accounting requirements are more onerous in most cases than the requirements imposed by the foreign company's domestic regulator or market. Moreover, the effort and expense required to list or publicly offer securities in the United States can be significantly greater than for listings or public offerings in other markets. Furthermore, there is no assurance that creating an ADR program in the United States—even a listed program—will actually result in significant U.S. trading or that securities offered in the United States will stay there and not flow promptly back into the home market (assuming the issuer has a home market listing as well), thus frustrating an issuer's possible goal of expanding its shareholder base through the creation of an active U.S. secondary market. Once public, additional disclosure or other obligations not in effect at the time of the offering may be imposed, as exemplified by the Sarbanes-Oxley Act. Finally, there is a general belief among many that the litigation, enforcement and liability risk that accompanies U.S. offerings or listings is higher than in other jurisdictions.

p. 3-11

p. 3-12

The acuteness of the burdens of Exchange Act registration increased with the enactment of the Sarbanes-Oxley Act, the consequences of which included the following: [10]

- significant changes in the regulation of independent auditors and the environment for audits;
- addition of significant disclosure requirements;
- requirements for the assessment by management and attestation by independent auditors of the effectiveness of internal control over financial reporting; [11]
- imposition of new independence standards and requirements on audit committees; and
- increased attention on the responsibility of principal executive officers and principal financial officers for the disclosure and controls of their companies. [12]

In addition and of particular significance for foreign issuers, the U.S. Congress in passing the Sarbanes-Oxley Act made essentially no provision for foreign issuers and gave the SEC essentially no particular authority to treat foreign issuers differently in making rules to implement the Sarbanes-Oxley Act. As a result, while the SEC did make some significant concessions for foreign issuers (for example, in crafting the requirements for audit committees), the basic contours of the Sarbanes-Oxley Act and the rules thereunder apply to foreign as well as U.S. issuers. Perhaps most importantly, the Sarbanes-Oxley Act may have led to the realization for the first time among foreign issuers generally that the U.S. legal and regulatory system, and the political system in particular, could impose new and greater requirements on foreign issuers than their home or other jurisdictions. Both the additional requirements and the psychological impact of the passage of the Sarbanes-Oxley Act have affected the calculus of foreign issuers in deciding whether to access the U.S. public markets.

p. 3-12

p. 3-13

The Dodd-Frank Act, while some of its provisions provided exemptions for foreign issuers, also imposed some additional requirements on foreign issuers. For example, foreign issuers are subject to the conflict minerals and resource extraction payments disclosure requirements imposed by Dodd-Frank as discussed in Chapter 4. On the other hand, foreign issuers are exempt from compensation committee adviser rules applicable to U.S. companies. The SEC has completed rulemaking or has proposed rulemaking relating to nearly all Dodd-Frank imposed mandates. [13]

While the Sarbanes-Oxley Act and the Dodd-Frank Act have added to the burdens of foreign issuers in the U.S. public markets, it is also true that the SEC has taken steps that could alleviate some of the burdens for foreign issuers that access the U.S. public markets. In particular, first, the SEC in March 2007 adopted amendments to its rules making deregistration for foreign issuers under the Exchange Act considerably less onerous. [14] The SEC clearly intends not only to make it easier for a foreign issuer to deregister and leave the public markets of the United States, but also seeks to make it more attractive for a foreign issuer to enter the U.S. public markets by making it easier for it to leave if the entrance is not successful in achieving the issuer's aims. [15]

Second, the SEC in 2007 adopted amendments to its rules under which it would accept from foreign companies financial statements prepared under International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board (the "IASB") without requiring reconciliation to United States generally accepted accounting principles ("U.S. GAAP"). [16] As discussed in § 4.05[1], these reconciliation requirements were in the past among the most onerous burdens for foreign companies accessing the U.S. public markets. [17]

Finally, in June 2005, the SEC adopted the most significant changes in decades to the securities registration and public offering rules under the Securities Act (the "Securities Offering Reforms"). [18] The reforms build on the existing integrated disclosure and shelf registration systems to achieve the SEC's goals

p. 3-13
p. 3-14

of modernizing and liberalizing the securities offering and communications processes without compromising investor protection. The reforms have accomplished the following:

- facilitated greater availability of information to investors and the market;
- eliminated barriers to open communications;
- reflected the increased importance of electronic dissemination of information, including the use of the Internet;
- made the capital formation process more efficient; and
- clarified the timing of disclosure liability. [19]

The SEC's reforms were also motivated by its desire to attract a greater volume of transactions by both U.S. and foreign issuers to the U.S. public market through registration. By providing greater flexibility for registered offerings, the reforms aim to reduce reliance on unregistered offerings, particularly unregistered offerings to large institutional investors facilitated by Rule 144A under the Securities Act.

One cornerstone of the reforms was the creation of a new category of issuers referred to as "well-known seasoned issuers" or "WKSIs." A WKSI, as discussed in more detail in § 3.02[3][a][ii], is in general terms a company that has been reporting on a timely basis under the Exchange Act for one year and has public market float not held by affiliates of its common equity of at least $700 million or the foreign currency equivalent. [20] An issuer meeting the requirements for WKSI status, including a foreign issuer, is eligible for "automatic shelf registration," a simpler and more flexible registration process that assures that registered offerings can proceed without SEC review. The ease of market access under automatic shelf registration significantly exceeds that available elsewhere in the global capital markets To the extent that public offerings under automatic shelf registration provide advantages for foreign issuers, this factor may become part of the calculus for a foreign company as to whether it should enter the U.S. public markets and especially, if it is already registered and reporting under the Exchange Act, whether it should maintain that status. [21]

In 2013, Congress passed the Jumpstart Our Business Startups Act (the "JOBS Act"). The JOBS Act is intended to facilitate capital formation in a

p. 3-14
p. 3-15

variety of ways—including by making the IPO process less burdensome for "emerging growth companies" ("EGCs"), a new class of issuer including currently private companies with annual revenues of less than $1 billion. [22] The JOBS Act provides relief from some SEC disclosure requirements for an EGC's IPO and for its ongoing reporting for up to five years. The most important relief for foreign issuers is that (a) an EGC is permitted to provide only two years (rather than three) of audited financial statements, and only those two years (rather than five) as selected financial data, in its IPO, and (b) an EGC does not have to provide an independent audit of its assessment of its internal control over financial reporting.

The JOBS Act provides for SEC review of an IPO registration statement of an EGC to remain confidential until 15 days before the road show begins. The SEC already allows confidential review for a foreign issuer that meets certain requirements, [23] and that practice continues for a foreign issuer that meets those requirements and does not file as an EGC. The JOBS Act also permits certain pre-filing and post-filing communications with investors by an EGC, or by a person authorized to act on the EGC's behalf, to determine whether such investors have an interest in a contemplated securities offering. [24]

Notwithstanding these recent developments, given the increased commercial and regulatory quality of non-U.S. markets and the ability of foreign issuers to reach U.S. institutional investors successfully without accessing the U.S. public markets, the extent to which foreign issuers, in particular those outside the technology sector, list on U.S. exchanges and access the U.S. public markets has declined since it peaked in 2001. [25]

Nonetheless, foreign companies continue to make initial offerings and list on exchanges in the United States and maintain such listings, with U.S. exchanges ranking third behind Asia-Pacific exchanges and European exchanges in terms of funds raised in global IPOs in 2015 and the first three quarters of 2016. [26] Although the number of foreign reporting companies continues to

p. 3-15

p. 3-16

decline, especially following the adoption of the rules easing requirements for deregistration, the majority of foreign companies that were reporting companies under the Exchange Act at the time of the adoption of the Sarbanes-Oxley Act continue to be Exchange Act reporting companies. [27]

For those foreign companies seeking access to U.S. trading markets, public secondary trading of equity securities [28] in the United States takes place in two principal types of markets: (i) the securities exchanges (the New York Stock Exchange ("NYSE") [29] and Nasdaq, [30] and various regional or other smaller stock exchanges), and (ii) over-the-counter ("OTC") markets including the "electronic bulletin board" operated by FINRA (the "OTC Bulletin Board") [31] and a separate

p. 3-16

p. 3-17

OTC market for which certain price information is reported in the "pink sheets." [32]

Listing securities on an exchange requires the issuer's participation and compliance with the relevant listing requirements (including eligibility criteria) of the exchange. [33] It also involves the preparation and filing with the SEC of a registration statement under the Exchange Act, a substantial document setting forth information and financial statements required by detailed SEC rules. Registration under the Exchange Act also triggers requirements to comply with the Sarbanes-Oxley Act and the Dodd-Frank Act. [34] The listing process is discussed in § 3.03, and exchange listing rules applicable to listed foreign issuers are discussed in Chapter 5.

Commencement of secondary trading in the pink sheet OTC market can be accomplished more easily. There are no listing requirements for securities to trade in the pink sheets, and a foreign issuer need not register such securities under the Exchange Act so long as it is exempt from the registration requirements

p. 3-17

p. 3-18

of the Exchange Act pursuant to Rule 12g3-2(b) thereunder by, among other things, making available on its website in English certain information. [35] Trading can even start without the issuer's involvement. [36]

A foreign company can go further than facilitating secondary market trading and carry out a public offering to raise capital in the public markets in the United States. This step involves registration of the offering under the Securities Act. Usually, in the case of an equity offering, the securities will at the same time be listed on an exchange, and the listing is subject to a registration requirement under the Exchange Act, which involves a technically separate step that is procedural but not substantive.

If a foreign issuer, particularly one that is already public in another market, follows the two-step process of doing a listing first, followed by a public offering, the existence of the listing will reduce the time pressure on the offering process, and if sufficient time elapses between the two steps, the company may become eligible to use short-form Securities Act registration statements for its offerings. [37] These short-form registration statements incorporate by reference the information about an issuer that is filed with the SEC under the Exchange Act as a consequence of listing and thus facilitate Securities Act registration. The company may also become eligible to use shelf registration, which substantially expedites the offering process, or automatic shelf registration, which goes further to permit immediate U.S. public market access. [38] Securities Act registration of a public offering in the United States is discussed in this Chapter 3, and related disclosure and accounting issues are discussed in Chapter 4.

Footnotes

1 Unless otherwise indicated, references to foreign companies or foreign issuers in this book refer to "foreign private issuers" as such term is defined under the Securities Act and the Exchange Act. A corporation incorporated or organized under the laws of a foreign country is a "foreign private issuer" unless (i) more than 50% of its outstanding voting securities are directly or indirectly owned by residents of the United States and (ii) (a) the majority of its executive officers or directors are U.S. citizens or residents, (b) more than 50% of its assets are located in the United States, or (c) its business is administered principally in the United States. *See* Rule 405 under the Securities Act and Rule 3b-4 under the Exchange Act. For discussion of the application of the definition of "foreign private issuer" in certain circumstances, *see* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Rules, Questions 110.02–110.08 (Dec. 8. 2016).

As a result of the reference in clause (i) above to the "indirect" ownership of voting securities, an issuer is required to take account of beneficial ownership reports provided to it or publicly filed (in the United States or other jurisdictions) and to "look through" the record ownership of brokers, dealers, banks and nominees located in the United States, in the issuer's home jurisdiction or in the primary trading market for the issuer's securities to determine the residency of their client beneficial owners. These brokers, dealers, banks or other nominees may be unwilling or unable to provide information about their client accounts, and if the issuer is unable to obtain this information after reasonable inquiry or if the cost of obtaining it is unreasonable, the issuer may assume that the beneficial owners are resident in the jurisdiction where the nominee has its principal place of business. *See* SEC Release No. 33-7745 (Sept. 28, 1999). If a foreign company does not qualify as a "foreign private issuer," it is subject to the provisions of the U.S. securities laws applicable to U.S. issuers.

2 The United States has entered into an agreement with Australia utilizing mutual recognition not in the context of capital raising but rather regulation of financial intermediaries. It provides broker-dealers and stock exchanges access to cross-border investors relying on home country regulation, but it has not been taken advantage of by any market participants.

3 The European Union ("EU"), in contrast, has been more open to regulatory approaches that include elements of mutual recognition. The EU does not rely solely on national treatment in addressing non-EU issuers and other institutions; rather, if the EU finds the regime of a home country "equivalent," it is willing to defer to the home country regime, though activity taking place in an EU jurisdiction will be subject to the liability standards of that jurisdiction. If equivalency is not established, then the national treatment model applies. Equivalency may be important in implementing Brexit, if the United Kingdom ceases to remain a member of the EU single market. A determination of equivalency in particular areas, largely on the basis of UK regulatory structures put in place while the United Kingdom was part of the EU, could give the United Kingdom access to the single market in those areas. The outcome remains altogether uncertain, however, as does the prospect that an equivalency-based mutual recognition regime between the EU and the United Kingdom could provide an impetus for the United States to explore such a regulatory approach in the future.

4 The principal U.S. markets for foreign issuers have been the New York Stock Exchange, discussed in §

3.03[2][b], and Nasdaq, discussed in § 3.03[2][c]. Until 2006, Nasdaq was an automated inter-dealer quotation system, and was not registered as a national securities exchange under the Exchange Act. However, on January 13, 2006, the SEC approved the application of Nasdaq to register the Nasdaq Stock Market LLC, a wholly owned subsidiary of Nasdaq, as a national securities exchange. SEC Release No. 34-53128 (Jan. 13, 2006). Furthermore, on June 30, 2006, the SEC approved certain changes to the rules of the NASD, the predecessor of the Financial Industry Regulatory Authority, Inc. ("FINRA"), to reflect Nasdaq's separation from the NASD (and now FINRA) as a result of its status as a national securities exchange. On August 1, 2006, Nasdaq began operating as an exchange in Nasdaq-listed securities and, on February 12, 2007, it began operating as an exchange in non-Nasdaq listed securities. Exchange registration gives Nasdaq its own Self Regulatory Organization, or SRO, license. *See* SEC Release No. 34-54084 (June 30, 2006).

5 Facilitating such trading generally involves the establishment of an unlisted American Depositary Receipt program. As discussed in § 3.04[1], ADR programs are formally created, and the ADRs are issued, by commercial banks acting as depositaries. Frequently, where an issuer sponsors an ADR program, the depositary bank may agree to bear part of the expense. ADR programs can also be established by a broker-dealer without the issuer's involvement (so-called "unsponsored programs"). Such programs and their impact on issuers are also discussed in § 3.04.

6 *See* Craig Doidge *et al.*, *The U.S. Listing Gap*, Fisher College of Business Working Paper No. 2015-03-07 (2015); Nicholas Calcina Howson, *et al.*, *Reverse Cross-listings – The Coming Race to List in Emerging Markets and an Enhanced Understanding of Classical Bonding*, 47 CORNELL INT'L L.J. 607 (2014); Marlin R.H. Jensen, *et al.*, *When IPOs Migrate*, 4 ACAD. OF ECON. & FIN. J. (2013). Additionally, there seems to be little dispute that the largest and highest profile global offerings, such as large state privatizations, have proceeded without U.S. listings and Exchange Act registration, even while they are accompanied by offerings to U.S. institutional investors. *See* Christopher Hung Nie Woo, *United States Securities Regulation and Foreign Private Issuers: Lessons from the Sarbanes-Oxley Act*, 48 AM. BUS. L.J. 119 (2011); *see also Interim Report of the Committee on Capital Markets Regulation*, 29–38 (Nov. 30, 2006).

7 For example, the state privatizations of Industrial & Commercial Bank of China and Bank of China proceeded with no listing in the United States, and these offerings also had no listing in London, but only in Hong Kong. In 2010, the $22.1 billion initial public offering ("IPO") of Agricultural Bank of China Ltd. proceeded with listings only in Hong Kong and Shanghai. Similarly, the $7.4 billion IPO of the Postal Savings Bank of China in 2016 and the $4.5 billion IPO of Nets A/S opened with listings only in Hong Kong and Nasdaq Copenhagen, respectively. Each of these offerings included a significant placement to U.S. institutional investors and to other global institutional investors. In recent years, Latin American issuers have also increasingly opted for local initial public offerings with a significant placement to the U.S. institutional investors but without registration in the United States.

8 For example, the $25 billion IPO of the Chinese ecommerce company Alibaba, the largest IPO to date, listed on the NYSE.

9 *See* Nicholas Calcina Howson, *et al*. *Reverse Cross-listings – The Coming Race to List in Emerging Markets and an Enhanced Understanding of Classical Bonding*, 47 CORNELL INT'L L.J. 607 (2014); Christopher Hung Nie Woo, *United States Securities Regulation and Foreign Private Issuers: Lessons from the Sarbanes-Oxley Act*, 48 AM. BUS. L.J. 119 (2011).

10 The JOBS Act, discussed below, provides some lessening of the burdens introduced by the Sarbanes-Oxley Act for certain smaller issuers.

11 As discussed in § 5.04[2][a], Note 140 the requirement for an auditor attestation has been eliminated for smaller companies, including smaller foreign companies, by the Dodd-Frank Act.

12 The Sarbanes-Oxley Act is discussed in Chapter 5, *see* § 5.04[2] (describing the requirements for internal control over financial reporting and related required officer certifications), § 5.02[2] (setting out the independent audit committee obligations imposed by § 301 of the Sarbanes-Oxley Act on issuers with securities listed on a U.S. national securities exchange) and § 5.03 (detailing provisions of the Sarbanes-

Oxley Act regulating auditor independence, auditor reports to audit committees, expanded disclosure of principal accountants' fees and audit committee actions and the retention of records relevant to audits and reviews).

13 *See generally* Chapter 4 for descriptions of these provisions.

14 *See* SEC Release 34-55540 (Mar. 27, 2007). *See* § 4.11[2][a] for a discussion of requirements for termination of Exchange Act registration under Rule 12h-6 under the Exchange Act; *see also* Rule 12h-6).

15 Christopher Cox, SEC Chairman, Opening Statements at the SEC Open Meeting (Dec. 13, 2006); *see also* SEC Release No. 34-55540 (Mar. 27, 2007). *See also* Steven M. Davidoff, *Rhetoric and Reality: A Historical Perspective on the Regulation of Foreign Private Issuers*, 79 U. OF CINCINNATI L. REV. 619, 635–37 (2010).

16 *See* SEC Release 33-8879 (Dec. 21, 2007).

17 *See* Steven M. Davidoff, *Rhetoric and Reality: A Historical Perspective on the Regulation of Foreign Private Issuers*, 79. U. OF CINCINNATI L. Rev. 619, 639–43 (2010).

18 SEC Release No. 33-8591 (July 19, 2005) (the "Securities Offering Reform Release"); *see also* SEC Release No. 33-8501 (Nov. 3, 2004); SEC Release No. 33-7606 (Nov. 3, 1998), as amended by SEC Release No. 33-7606A (Nov. 13, 1998).

19 The SEC's actions relating to liability as part of these reforms are discussed in § 11.03. The other aspects of these reforms are addressed principally in § 3.02.

20 A WKSI also cannot be an "ineligible issuer." *See* §3.02[3][a][ii].

21 While the Securities Offering Reforms did facilitate initial public offerings to some degree, the greatest advantages accrued to large issuers, U.S. and foreign, that are already public in the United States.

22 The JOBS Act defines an EGC as an issuer with total annual gross revenues of less than $1 billion during its most recent financial year. An issuer that was an EGC as of the first day of that financial year will remain an EGC until (i) the last day of the financial year five years after its initial public offering, (ii) the last day of the financial year in which it has annual gross revenues of $1 billion or more, (iii) it has issued more than $1 billion in nonconvertible debt during a three-year period, or (iv) it is a "large accelerated filer" (generally, a company with a public float of at least $700 million that has been publicly reporting for at least one year). By its terms, the JOBS Act generally applies equally to domestic and foreign EGCs.

23 *See infra* Note 69 and accompanying text.

24 *See* § 3.02[3][b][iv].

25 *See* SEC, Division of Corporation Finance, International Registered and Reporting Companies (Dec. 31, 2015).

26 In 2015, U.S. exchanges accounted for 17% of funds raised in global IPOs, compared to 46% for Asia-Pacific Exchanges and 35% for European exchanges. In the first three quarters of 2016, U.S. exchanges accounted for 17% of funds raised in global IPOs, compared to 53% for Asia-Pacific exchanges and 25% for European exchanges. *See* Ernst & Young, *Global IPO Trends 2015 Q4* (2015) and Ernst & Young, *Global IPO Trends 2016 Q3* (2016).

27 As of December 31, 2015, 923 foreign companies from 53 countries were periodically reporting to the SEC under Exchange Act requirements, whereas only 434 foreign companies were reporting to the SEC in 1990. *See* SEC, International Registered and Reporting Companies (Dec. 31, 2015). The 923 foreign companies represent a decline from the high of 1,344 in 2001. The number had hovered at around 1,200 from 2003 to 2006. As of November 1, 2016, a search of the SEC's Electronic Data Gathering and Retrieval system ("EDGAR") shows that 503 foreign companies had filed notices of deregistration since the March 2007 changes to deregistration.

28 For a discussion of special considerations relating to the registration of debt securities, *see* § 3.05.

29 An issuer wishing to list equity securities on the NYSE can choose from three NYSE markets: NYSE, NYSE MKT and NYSE Arca. Listings on the NYSE are for large- and medium-sized companies. NYSE MKT supports small-cap companies with less strenuous criteria. *See* § 3.03[2][b] for a description of the listing

criteria for NYSE and NYSE MKT. NYSE Arca is an all-electronic exchange that primarily lists exchange-traded notes, funds and other products.

30 An issuer wishing to list equity securities on Nasdaq can choose from three Nasdaq markets: Nasdaq Global Select Market ("Nasdaq/GSM") Nasdaq Global Market and Nasdaq Capital Market. Listings on the Nasdaq/GSM are for large- and medium-sized companies, with Nasdaq Global Markets and Nasdaq Capital Market listings available for smaller companies. The requirements to list on the Nasdaq Global Market and Nasdaq Capital Market are less difficult to meet than current NYSE requirements, especially with respect to the requirements for inclusion of shares of common stock of foreign issuers (or ADRs representing such shares) in the Nasdaq Capital Market.

31 In connection with its becoming a national securities exchange, Nasdaq separated from the NASD (the predecessor of FINRA), which is a self-regulatory organization that had originated Nasdaq and had later been its parent. *See* SEC Release No. 34-53128 (Jan. 13, 2006); SEC Release No. 34-54084 (June 30, 2006). As part of the plan of separation from the NASD, Nasdaq sold its interest in the OTC Bulletin Board to the NASD and only offers certain technological services and operational support, while FINRA (as the successor to the NASD) has full responsibility for all other matters. *See* SEC Release No. 34-54084 (June 30, 2006); NASD/Nasdaq Trade Reporting Facility Frequently Asked Questions (FAQs) (Feb. 14, 2007). The OTC Bulletin Board permits FINRA members that are market-makers to view, enter, update and display quotations, solicitations for quotations and indications of interest for particular OTC securities that are not traded on any national securities exchange. Brokers for investors wanting to trade in securities quoted on the OTC Bulletin Board generally contact one of the listed market-makers in the securities. *See* SEC Release No. 34-38456 (Mar. 31, 1997). *See* FINRA Rules, Rule 6500, FINRA MANUAL.

32 The pink sheets, which are now distributed electronically by OTC Markets Group Inc. and were originally named for the color of the paper on which OTC quotes were distributed, display quotes from broker-dealers for OTC shares. For OTC corporate debt, OTC Markets Group Inc. distributes "yellow sheets." As with the OTC Bulletin Board, brokers for investors wishing to trade generally contact one of the listed market-makers.

For a discussion of the SEC's rules governing "alternative trading systems" and "internal broker-dealer systems" adopted in response to the creation of Internet-based alternative electronic trading systems for secondary trading, *see* § 14.10[1].

33 The OTC Bulletin Board does not impose substantive requirements on an issuer seeking to obtain a quotation for a class of securities. However, in contrast to issuers whose securities are quoted in the pink sheets, issuers must generally be subject to and current with the reporting requirements of the Exchange Act. These issuers tend to be smaller, and so the various accommodations for smaller companies may apply.

34 *See* §§ 3.02[1][b] and 4.04 for a discussion of Form 20-F, the Exchange Act registration statement for foreign issuers. Such registration requirements, as well as periodic reporting and certain other requirements to which a company becomes subject as a result of Exchange Act registration, including those obligations imposed on companies by the Sarbanes-Oxley Act and the Dodd-Frank Act, are also discussed in Chapter 4 and Chapter 5.

In 1994, the SEC adopted Rule 3a12-11 under the Exchange Act, and amended certain rules under the Exchange Act, in order to reduce previous regulatory distinctions between debt securities listed on a national securities exchange and those traded in the OTC market. SEC Release No. 34-34922 (Nov. 1, 1994). The changes simplified registration procedures under the Exchange Act for listed debt securities and exempted listed debt securities from the borrowing restrictions and proxy rules of the Exchange Act (other than the antifraud rules and certain other rules that relate to the transmission to beneficial owners of proxy and consent materials and information statements).

In 2006, the SEC permitted NYSE member organizations to trade debt securities on the NYSE that are not registered under § 12(b) of the Exchange Act, but are issued by NYSE-listed companies or their wholly owned subsidiaries and that meet certain other conditions. *See* SEC Release No. 34-54766 (Nov. 16, 2006); SEC Release No. 34-54767 (Nov. 16, 2006); SEC Release No. 34-55496 (Mar. 20, 2007). The NYSE Bonds market provides trading opportunities for a wide variety of debt, including corporate, foreign issuer, non-U.S. dollar denominated and municipal debt.

35 *See* the discussion regarding Rule 12g3-2(b) under the Exchange Act in § 4.02[3][a][iv].

36 ADR issuers must comply with SEC Rule 10b-17 (requiring timely notice to FINRA of certain corporate actions, including dividends, stock splits, reverse splits, name changes, mergers, acquisitions, dissolutions, bankruptcies or liquidations, at least 10 days prior to the record date). Issuers who fail to report such corporate actions in the required time may be subject to fines up to $5,000. *See* FINRA's Notice to Member 10-38. ADR depositaries, as the ADR issuers, comply with this requirement when they seek OTC listing.

37 The short-form registration statement for foreign issuers is Form F-3. *See* § 3.02[1][b] for a discussion of the eligibility requirements.

38 *See* Rule 415 under the Securities Act and the eligibility requirements for the use of Form F-3. Shelf registration, including "automatic shelf registration," is discussed in § 3.02[2][C].

U.S. Regulation of the International Securities and Derivatives Markets, § 3.02, REGISTERED PUBLIC EQUITY OFFERINGS IN THE UNITED STATES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 3.02 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

A foreign company making a public offering in the United States must, like a U.S. issuer, register the securities being offered under the Securities Act. An issuer becomes subject to the reporting requirements of the Exchange Act as a consequence of the registered public offering, [39] regardless of whether it lists on

p. 3-19

an exchange, although it must separately register under the Exchange Act if it does list on an exchange. [40] Filing a registration statement under the Securities Act or registering securities under the Exchange Act (in connection with a Securities Act filing or on its own) also triggers the applicability of the Sarbanes-Oxley Act and the Dodd-Frank Act. [41]

[1] Overview of Registration Under the Securities Act

[a] General Statutory Scheme

Any offer or sale of securities must be registered with the SEC under §5 of the Securities Act, unless an exemption is available. With limited exceptions, no exemption is available for U.S. public offerings. Accordingly, public offerings must be registered to comply with § 5 of the Securities Act. Registration is accomplished by filing a registration statement with the SEC, which must become effective before sales can be made.

As a practical matter, the offering process can be divided into three stages, because of the provisions of § 5 of the Securities Act. The first stage is the "quiet period," which is the period after the decision to proceed with an offering has been taken but before the registration statement is filed. The second stage is the "waiting period" between filing and effectiveness of the registration statement, and the third stage is the "post-effective period" after the registration statement becomes effective. [42] Various rules govern what kind of offers may or may not be

p. 3-19

p. 3-20

made during each of the three stages. Violations of restrictions on offers during each stage are sometimes referred to as "gun-jumping."

As noted above, and as discussed more fully in §3.02(2)(c) below, because shelf registration statements of WKSIs are automatically effective, there is no second stage for WKSIs in most cases. Further, as a result of exceptions from many of the pre-filing offering restrictions for WKSIs, the concerns for WKSIs regarding pre-filing activities are much reduced.

The Securities Act defines "offer" as including "every attempt or offer to dispose of, or solicitation of an offer to buy, a security or interest in a security for value." [43] Because "offer" is defined so broadly, the issuer, the underwriters and all others involved in the process must be careful to distinguish between permissible communications and illegal offers and not engage in communications and activities that might be viewed as impermissibly affecting the market for the securities to be offered. Any unusual publicity about the issuer or the proposed offering made in, or, in some cases, accessible in, the United States in advance of the filing or between the filing and its effective date may be viewed by the SEC as impermissible because it is likely to stimulate public interest in these securities and thus precondition the market. Publicity can be a significant issue in a global offering with a U.S. tranche, primarily because other jurisdictions do not impose such strict limitations.

The registration statement sets out extensive information about the business and financial condition of the issuer and about the offering in accordance with detailed SEC rules. [44] While the SEC does not formally approve the contents of a registration statement or prospectus (and indeed it is a criminal offense to state that the SEC has given such approval), [45] and does not make any determination of the merits of the offering, the SEC staff does review almost all registration statements of issuers that have not filed previously under either the Securities Act or the Exchange Act. As part of that review process, the staff provides comments about disclosure that it believes is not in compliance with the SEC's rules or is otherwise unclear, incomplete, insufficient or unsubstantiated.

p. 3-20

p. 3-21

The following sections set forth the basic procedures and considerations for SEC registration, including forms, timing and prospectus delivery.

[b] Registration Forms

Foreign companies [46] generally file their Securities Act registration statement on one of two SEC forms: [47] Form F-1 (a so called "long-form" registration statement) or F-3 (a so called "short-form" registration statement). [48] Each form requires the disclosure about an issuer that is called for by Form 20-F. [49] *****************In addition, each form also requires information regarding the nature and terms of the particular offering. [50] The principal difference between the forms is the amount of information that may be incorporated by reference from Exchange Act reports.

Form F-1 allows eligible registrants to incorporate by reference their Form 20-F filed prior to the effective date of the Form F-1 and any specified Form 6-K s submitted to the SEC prior to that effective date. Form F-1, however, does not permit incorporation from subsequently filed documents. Registrants eligible for the backward incorporation by reference permitted under Form F-1 must have filed all required reports under the Exchange Act for a period of 12 months (or such shorter period as they have been subject to those requirements) and have filed an annual report on Form 20-F with the SEC. Therefore, initial public offerings in the United States and any follow-on offerings before a registrant's first annual report has been filed are required to be on Form F-1 without the benefit of any incorporation by reference. [51]

p. 3-21

p. 3-22

Form F-3 allows both backward incorporation by reference and forward incorporation of any Form 20-F s or Form 6-K s filed or submitted to the SEC after the effective date of the Form F-3. [52] This not only expedites preparation of the Form F-3 but also facilitates keeping it current after its effective date, which is important in connection with shelf-registration. [53]

Qualification to use Form F-3 depends upon whether the issuer meets certain conditions and the length of time that it has been filing periodic reports under the Exchange Act. [54]

A foreign company generally may register securities on Form F-3 if (i) it has been required to file reports with the SEC for at least 12 months (provided that all reports required to be filed have been filed in a timely fashion) and has filed at least one annual report on Form 20-F, (ii) its common stock held by nonaffiliates has an aggregate worldwide market capitalization (or "public float") of at least $75 million and (iii) it has not defaulted on certain payments. [55] The public float requirement is not applicable if at least one class of the issuer's common equity is listed on a national securities exchange and it does not sell more than one-third of its public float over the 12-month period (including the current sale). [56]

The public float requirement also is not applicable if the issuer is issuing nonconvertible securities, other than common equity, and (i) has issued (as of a date within 60 days prior to the filing of the registration statement) at least $1

p. 3-22

p. 3-23

billion over the prior three years in nonconvertible securities, other than common equity, in primary offerings for cash (not through exchange offers) registered under the Securities Act; (ii) has outstanding (as of a date within 60 days prior to the filing of the registration statement) at least $750 million of nonconvertible securities, other than common equity, issued in primary offerings for cash (not through exchange offers) registered under the Securities Act; (iii) is a wholly-owned subsidiary of a WKSI; [57] or (iv) is a majority-owned operating partnership of a real estate investment trust that qualifies as a WKSI [58]

The public float requirement also is not applicable for use of Form F-3 in connection with secondary offerings, certain rights offerings, dividend or interest reinvestment plans, conversion of convertible securities and the exercise of warrants. [59]

In addition to incorporation of information by reference to Exchange Act reports, a Form F-3 must also provide information regarding material changes in the foreign company's business and financial condition that have occurred since the end of the fiscal year covered by the Form 20-F incorporated by reference in the registration statement, [60] as well as regarding significant business acquisitions, changes in accounting principles, corrections of previous accounting errors and material dispositions of assets outside the normal course of business, if that information is not contained in filings (or Form 6-K submissions) under the Exchange Act incorporated by reference. [61]

Financial statements included in an annual report on Form 20-F may not suffice to meet the requirements of the Securities Act. In particular, if the financial statements in the annual report on Form 20-F are not sufficiently current to comply with the requirements of Item 8 of Form 20-F, current financial statements must be included in the prospectus or an amended Form 20-F. [62]

p. 3-23

p. 3-24

The fee for filing a registration statement under the Securities Act (other than an automatic shelf registration statement) is a percentage of the estimated maximum aggregate offering price of the securities being registered. [63] No registration fees are due when an automatic shelf registration statement on Form S-3 or F-3 is initially filed by a WKSI. Instead, WKSIs are allowed to pay the necessary filing fee at the time of each shelf takedown (*e.g.*, when the prospectus supplement is filed) or at any time prior to each takedown. [64]

[c] Timing Considerations

Depending in large part upon whether it has previously offered its securities publicly in the United States or listed its securities on a U.S. stock exchange, an issuer may require a considerable amount of time and planning to prepare a registration statement under the Securities Act. The issuer is generally responsible in the first instance for the preparation of its registration statement, with the assistance of its counsel and independent accountants.

For an issuer that has not previously prepared a Securities Act or Exchange Act registration statement, the length of time required to compile the necessary information and draft the registration statement often depends on the amount of work needed to prepare audited consolidated financial statements. The financial statements—which can require substantial restatement and revision of the issuer's normal financial statements—generally must include audited statements of income, cash flows and statements of changes in equity for the three most recent fiscal years and audited balance sheets as of the end of the three most recent fiscal years, in each case audited in accordance with generally accepted auditing standards in the United States. [65] For foreign issuers, these financial statements, and any required financial statements for interim periods, generally must be in

p. 3-24

p. 3-25

accordance with U.S. GAAP or IFRS as issued by the IASB or reconciled to U.S. GAAP. [66] The registration statement must also include certain income statement and balance sheet items for five years. [67] An EGC is also permitted to provide only two years (rather than three) of audited financial statements, and only those two years (rather than five) of selected financial data, in its IPO registration statement. [68] This accounting work can take months to prepare, [69] especially when the foreign issuer does not already report under IASB-adopted IFRS.

In certain cases, foreign companies may submit draft registration statements to the SEC on a confidential basis: (1) a foreign government registering its debt securities; (2) a foreign private issuer that is listed or is concurrently listing its securities on a non-U.S. securities exchange; (3) a foreign private issuer that is being privatized by a foreign government; or (4) a foreign private issuer

p. 3-25
p. 3-26

that can demonstrate that the public filing of an initial registration statement would conflict with the law of an applicable foreign jurisdiction. [70] Under the JOBS Act, EGCs may also submit a draft IPO registration statement for confidential SEC review.

The staff insists that confidential submissions by foreign issuers be substantially complete to be eligible for review and that the financial statements be current at the time of submission (although as in the case of formal filings, an estimated price range and size of offering is not required at that time). The staff has indicated that it will expect the auditor's report to be signed and dated at the time the draft registration statement is first submitted, unless special arrangements have been agreed in advance with the Office of International Corporate Finance.

If a registration statement is confidentially submitted to the SEC and commented upon in this manner, the preliminary prospectus will typically be distributed upon the first public filing of the registration statement after all SEC comments have been incorporated.

Upon the first public filing, issuers must also file publicly the first confidential submission and all amendments thereto. The SEC makes all comment and response correspondence publicly available no earlier than 20 business days after it has declared a registration statement effective.

For foreign issuers that qualify as EGCs and choose to take advantage of any of the benefits available to EGCs, the confidential filing process should follow the rules and SEC guidance provided in connection with the implementation of the JOBS Act, which differ in some respects from the guidance for confidential submissions by foreign issuers. For example, EGCs must publicly file confidential submissions at least 15 days before commencing a road show.

Once a registration statement has been filed, it may be reviewed by the staff, [71] who will give their comments in writing. [72] Not all filings are reviewed.

p. 3-26
p. 3-27

However, a filing will almost always be selected for review if it is an initial public offering or other first filing by the issuer, and chances of review of later filings are heightened if there has been a material change in the issuer's business or structure or financial condition. [73] While the period of SEC review may vary widely, the SEC staff will generally take about one month to review and comment initially. [74] Depending on the nature and extent of the comments, it should generally be possible to respond to them within a week or two. Responses to the SEC's comments are generally incorporated into an amendment to the registration statement, which is accompanied by a letter explaining the amendment and otherwise addressing the comments. Successive rounds of comments may be made by the SEC staff, although generally with shorter review times than the initial comments. Once the comments have been addressed to the satisfaction of the reviewers, the registration statement, as amended, will be declared effective on a date selected by the issuer. [75]

p. 3-27
p. 3-28

In the United States, in initial public offerings and other heavily marketed offerings it is customary to distribute the preliminary prospectus widely to prospective investors. In such cases, where the issuer anticipates that the staff will review a registration statement and may have extensive comments, particularly in the case of initial public offerings, it generally makes a "quiet filing" when the confidential submission process described above is not available; it files the registration statement with the preliminary prospectus but does not widely distribute the prospectus or commence marketing efforts until one or more rounds of SEC staff comments have been received and addressed. The preliminary prospectus generally does not contain pricing and certain other information relating to the offering not available or not determined at the time of filing, but is otherwise generally complete.

After the comment process is completed and, in the case of an initial public offering involving confidential review, the registration statement containing the form of preliminary prospectus is filed publicly and the preliminary prospectus, which will now include the price range and offering size, [76] is distributed to investors, executive officers of the issuer and representatives of the underwriters typically participate in road shows, arranged between institutional investors and management at which the preliminary prospectus is made available and management responds to questions. The transmission of electronic road shows, which are presentations by video or Internet, is permitted, provided that conditions regarding use of a free writing prospectus applicable to electronic road shows are satisfied. [77] During this marketing period, the underwriters obtain indications of interest regarding the securities being marketed. [78] This is commonly referred to as "bookbuilding." [79]

At the conclusion of this bookbuilding period (which may last from a few days to several weeks), the lead underwriters negotiate the share price and size

p. 3-28

p. 3-29

of the offering with the issuer and/or selling shareholders based on the indications of interest and other relevant factors. [80] In a public offering of shares that are already listed on a securities exchange, pricing is usually based on the quoted share price or a formula related to that price. After the share price and offering size are set, the underwriting agreement is signed. [81]

p. 3-29

p. 3-30

In the case of initial public offerings and other registration statements that do not follow delayed-offering procedures under shelf registration, [82] the amendment to the registration statement containing the final prospectus may be filed and declared effective by the SEC on request either before or after the pricing of the securities. In the former case, which is far more common, the amendment will be filed and the registration statement declared effective without information in the prospectus about the public offering price and the composition of the underwriting syndicate. The offering must be priced within 15 business days after effectiveness. [83] In the latter case, the amendment is known as a "pricing amendment" and contains a final prospectus that includes the pricing and underwriting information previously omitted from the preliminary prospectus.

If the securities of a foreign company will, when sold, be listed on a national securities exchange, the issuer and the underwriters may decide to time the pricing of the securities so that they trade first at the opening of business on the U.S. exchange. Alternatively, the pricing of newly issued securities that are also being listed on an overseas exchange that is expected to be the primary trading market may be timed so that they trade first on that overseas exchange, where the trading will benefit from greater liquidity. In any event, in light of the time

p. 3-30

p. 3-31

differences between trading hours on U.S. and overseas markets, having the registration statement declared effective prior to pricing, either by using shelf registration where available or by utilizing Rule 430A, provides the greatest flexibility.

If there is a need to update the disclosure about the issuer or make any corrections to the information in the preliminary prospectus, participants in a registered securities offering need to assess whether such updates or corrections arising since the date of the most recent preliminary prospectus circulated to potential investors should be included in a new preliminary prospectus or, more likely, a free writing prospectus, which, in either case, would be circulated to investors prior to pricing. [84] Consideration should also be given to the length of time between conveyance of the corrected or updated information to investors and the pricing of the securities offering during which investors would be able to process the updated disclosure.

After effectiveness, and as soon as possible after pricing, relevant pricing terms and any other material changes are conveyed to investors, usually orally in the case of equity securities (or through a term sheet in the case of debt securities), the form of which has usually been pre-agreed between the issuer and the underwriters. The underwriters generally confirm their sales orally, followed by a written confirmation of sale that is required by SEC regulations to include specific information. [85] The final prospectus (including the pricing information) is filed with the SEC within two business days of pricing.

In purely domestic U.S. transactions, the closing typically occurs three or four business days later, while in U.S. offerings by non-U.S. issuers, the closing sometimes does not occur until five or more business days later. [86] Regardless of the length of the settlement period, the closing is subject to certain conditions being met, including the delivery of legal opinions and accountants' negative comfort letters and the absence of material adverse changes in the issuer's business or serious disruptions in the financial markets.

[d] Requirements Regarding Disclosure in the Preliminary Prospectus of Price Range and Estimation of Number of Shares to be Sold

p. 3-31
p. 3-32

If the registrant is not an SEC-reporting company prior to filing the registration statement, Item 501(b)(3) of Regulation S-K requires the preliminary prospectus first "circulated," or distributed to the market, to contain an estimated price range (which, according to SEC staff guidance, cannot be wider than $2 (if the maximum price is $10/share or less) or 20% of the high end of the estimated range (if the maximum price is greater than $10/share) and an estimated maximum size of the offering. [87] With respect to foreign registrants that are listed in their home country prior to filing, the SEC staff has often permitted such registrants to provide share price information for the home market as of a recent date in lieu of the price range information referred to above. Filings during the period when comments are received and responded to and prior to the circulation of the preliminary prospectus and marketing customarily do not carry a price range or final estimated offering size. [88]

If the registrant is an SEC-reporting company prior to filing a registration statement, it is not required to include a price range or indicative offering size in the preliminary prospectus.

[e] Requirements Regarding Prospectus Delivery

p. 3-32
p. 3-33

[i] *General Framework*

Underwriters are required to deliver preliminary prospectuses to prospective purchasers in initial public offerings. Delivery to such purchasers must take place at least 48 hours prior to sending them confirmations of sale. [89]

Section 5 of the Securities Act requires that a final prospectus containing all required information must precede or accompany the confirmation of sale sent to each purchaser and must be sent prior to the delivery of securities. [90] This requirement is deemed to be satisfied as long as the final prospectus is filed with the SEC by the required filing date provided in Rule 424 under the Securities Act [91] or the issuer has made a good faith and reasonable effort to file such a prospectus within the required time under Rule 424, and if the issuer has not timely filed the prospectus, the issuer files the prospectus as soon as practicable thereafter. [92] This allows settlement and delivery of securities to investors with only a

p. 3-33
p. 3-34

confirmation from the underwriter (which is often electronic) and no delivery of a final prospectus.

Section 4(a)(3) of the Securities Act and Rule 174 thereunder impose a prospectus delivery requirement in certain cases on dealers that are not underwriters. The requirement applies in the case of sales by dealers of unsold allotment securities. [93] Section 4(a)(3) also contains a general prospectus delivery requirement for secondary market sales by dealers for 40 days after the later of the *bona fide* offering date and the effective date of the registration statement (90 days for an issuer that has not sold securities pursuant to an effective prior registration statement). Rule 174 eliminates or reduces this requirement in most cases in connection with registered offerings. In particular, (i) it eliminates the requirement for issuers that are reporting companies immediately prior to the effectiveness of the registration statement, (ii) it eliminates the requirement for offerings pursuant to shelf registration statements except with respect to the first *bona fide* offering off the shelf, and (iii) it reduces the requirement from 40 (or 90) to 25 days in the case of offerings of securities listed on a U.S. national securities exchange. The result of this regulatory framework is generally to require prospectus delivery by dealers in the case of unsold allotment securities at any time and in the case of initial public offerings for 25 days in the case of securities listed on a national securities exchange and for 90 days in the case of securities not so listed. Dealers may rely on SEC filing under Rule 172 to satisfy their delivery requirement (other than for blank check companies), so that no prospectus need be delivered if the filing requirements of Rule 172 are satisfied. [94]

[ii] *Electronic Document Distribution*

The SEC expressly permits the Internet to be used for the dissemination of mandatory disclosure documents in a U.S.-registered offering. [95] The same liability rules apply to documents distributed electronically as to documents distributed in paper form. SEC rules provide that electronic access to certain mandatory

p. 3-34

p. 3-35

disclosure documents satisfies the delivery obligation. [96] In order for electronic delivery to satisfy the SEC's requirements for the delivery of other mandatory disclosure documents (such as a preliminary prospectus in an initial public offering), the SEC requires either evidence of actual receipt of the documents by the investor [97] or a combination of the following:

- notice that a document is available electronically;
- access to the Internet or to the electronic medium employed; and
- consent to delivery through the electronic medium employed.

To satisfy the first element, notice, an investor should receive written notice of electronic delivery of the particular required document, unless an issuer or market intermediary can otherwise establish that delivery has been made. If the document is physically delivered or delivered by electronic mail, that communication itself, because it permits certification of receipt, should be sufficient notice. If the document is posted on a website, however, separate advance notice is necessary. Moreover, messages posted to an investor's account on a broker-dealer's website do not fulfill the notice requirement. [98]

To satisfy the second element, access, the electronic medium employed for delivery should not be so burdensome to use as to prevent access. [99] In addition, to demonstrate access either there should be an adequate opportunity for the recipient to retain a permanent record of the electronic information—by printing or downloading, for example—or the recipient should have ongoing electronic

p. 3-35

p. 3-36

access equivalent to personal retention. [100] Thus, information posted on a website for only a brief period of time is unlikely to constitute adequate access, and a document made available by posting on the Internet, through on-line services, or by similar means should be accessible for as long as the delivery requirement for that document applies. [101] Finally, to establish access, an investor must be provided with a paper version of the document if the investor exercises its prerogative to revoke its prior consent to electronic delivery or merely requests a supplemental paper copy. [102]

Information on a website is deemed part of a prospectus only if an issuer or person acting on behalf of an issuer (including an intermediary with delivery obligations) acts to make the website part of the prospectus. Close proximity of information on a website to a prospectus does not, by itself, make that information an "offer to sell," "offer for sale" or "offer" within the meaning of the Securities Act, although it may result in the documents being delivered together. Regardless of proximity to the prospectus, website content should be reviewed in its entirety to determine whether it contains information that is inconsistent with the prospectus or otherwise may raise liability concerns. Hyperlinks to or from a website may make the hyperlinked information part of the prospectus and are generally avoided.

To satisfy the third element, consent, an investor should be apprised of the specific type of electronic medium to be used, the potential costs associated with electronic delivery, the duration of the consent and the documents for which consent will be effective and the fact that the consent is revocable at any time. Consent will not be deemed to have been obtained merely by an investor's failing affirmatively to object when notified of proposed electronic delivery. [103]

Investors may consent to electronic delivery telephonically, as long as a record of the call is retained. The record must indicate the breadth of the consent and the electronic media to be used. Further, such consent must be obtained in a manner that ensures its authenticity.

An investor may provide global consent to electronic delivery covering all documents of multiple issuers, so long as the consent is adequately informed. In such cases, particular care must be taken to ensure that the investor understands

p. 3-36

p. 3-37

that it is providing a global consent to electronic delivery. [104] Where an investor has provided its global consent, its right to revoke in connection with a global consent may be limited to an "all issuers or none" basis. Although the consent must specify the electronic media to be used, it need not specify the medium to be used by any particular issuer. A global consent need not identify the issuers it covers and may permit additional issuers to be added later without further consent.

When an issuer offers securities to its own employees, the requirements for electronic delivery will be deemed to be satisfied (i) when an employee uses the issuer's electronic mail system to execute his or her duties or (ii) where an employee can be expected to receive through alternate means e-mail messages sent to employees.

In 2001, the SEC for the first time (and so far the only time) declared effective a registration statement providing that the issuer would communicate with investors only through the Internet. [105] This registration statement was submitted to the SEC by The American Life Insurance Company of New York with respect to its proposed issuance of variable annuity contracts. The related SEC releases reflected important departures from the prior SEC pronouncements regarding the electronic delivery of materials insofar as the SEC did not require that American Life provide notice of website postings or provide paper versions of any documents posted on the Internet with respect to the annuities in question.

Other than with respect to its adoption of Rule 172, the SEC has not extended the American Life decision to other contexts involving delivery of preliminary prospectuses. The SEC noted that its American Life decision "reflects the particular facts and circumstances applicable here" and should not be read "as predetermining the outcome in any other circumstance." [106] Indeed, the SEC could seek to distinguish this ruling on the basis of the nature of the securities involved. [107] Nevertheless, the SEC did indicate that it had revisited its past

p. 3-37

p. 3-38

pronouncements on electronic delivery in light of the Electronic Signatures in Global and National Commerce Act [108] and was reviewing whether these previous pronouncements should be modified. Future SEC action in this area may, as in the past, be taken through interpretive guidance.

[2] Shelf Registration

[a] Overview

A shelf registration statement is used to register future offerings without the need to provide details regarding those offerings at the time the shelf becomes effective. Once a shelf registration statement has become effective, securities can be publicly offered and sold under it (referred to as a "taking down" securities "off the shelf") without further approval from the SEC.

Compared with conventional registration procedures, shelf registration presents significant advantages in terms of an issuer's ability to consummate an offering quickly to take advantage of market opportunities. Having an effective registration statement on file allows immediate communications with prospective investors without raising "gun-jumping" considerations (although the issuer must comply with free writing prospectus requirements for any writing [109]). Except for disclosure in a prospectus supplement of material recent developments insofar as they have not previously been disclosed in a filing under the Exchange Act that is incorporated by reference, the description of the issuer (and any guarantor) will have been completed in advance of the offering and will be included (or incorporated by reference) in the base prospectus included as part of the already effective registration statement. [110] Because the shelf registration statement is already effective, an offering can ordinarily be made without delay

p. 3-38

p. 3-39

for review or action by the SEC. An underwriting agreement can be signed and sales of securities to investors made and confirmed immediately (although, in practice, a preliminary prospectus supplement is generally prepared and used, it is not required to be filed until after such use).

A shelf registration statement can register sales of new securities by their issuer (a "primary shelf"), resales of outstanding securities by their owners (a "secondary shelf") or a combination of the two. A foreign issuer that is eligible to use Form F-3 for primary offerings may file a shelf registration statement on that form regardless of whether the offerings being registered are to be made on an immediate basis, a delayed basis or a continuous basis. [111] Shelf registration can be used for secondary offerings of securities whether or not the issuer of those securities would be eligible to use Form F-3 for a primary offering. [112]

A shelf registration statement generally expires three years (subject to a limited extension) [113] after the initial effective date of the registration statement. As a result, new shelf registration statements must be filed every three years, with unsold securities and unused fees carried forward to the new registration statement. [114] The three-year expiration rule, however, does not apply to secondary-only [115] or acquisition shelf registration statements that are not automatic shelf registration statements. [116]

The unallocated or "universal" shelf registration process allows issuers to register, and pay a fee for, an aggregate dollar amount of securities of different classes on a single shelf registration statement. [117] While entities that are not

p. 3-39

p. 3-40

WKSIs must specify the particular classes of securities they are registering, the registration fee is not allocated among those classes at the time of filing and the classes may include both debt and equity securities. For each offering of securities off that shelf registration statement, the prospectus supplement lists the amount and class of securities being offered, and the value of the offering is subtracted from the total dollar amount of securities registered. [118] As an additional option, a WKSI may elect to pay the necessary filing fee at the time of each shelf takedown rather than prepaying fees. [119]

[b] General Procedures

A shelf registration statement contains a basic prospectus, usually referred to as a "base prospectus," providing the same information regarding the issuer that is included in a conventional prospectus, including information incorporated by reference from the issuer's most recent annual report on Form 20-F and subsequent filings under the Exchange Act. The base prospectus, however, usually contains only a general description of the types of securities that could be offered "off the shelf" and of the various ways in which such securities could be distributed. In order to have maximum flexibility, a company may provide in general terms for the issuance of many different types of securities. In addition, provision may be made for several different means of distribution, such as firm commitment or "best efforts" underwritings, agency placements and direct sales.

To comply with the Trust Indenture Act, if debt securities are registered the company must also file, as exhibits, forms of the trust indentures under which those securities are to be issued. [120]

Rule 430B under the Securities Act permits information that is unknown or not reasonably available to be omitted from a base prospectus in delayed offerings and later included in a prospectus supplement, an Exchange Act report incorporated by reference or a post-effective amendment. Market practice has generally been to use a prospectus supplement. The prospectus supplement for each specific offering would generally include terms of the securities being offered, the pricing, the plan of distribution (including any underwriting or sales arrangements) and, if necessary, disclosure of material recent developments concerning the issuer not included in incorporated documents. Rule 430B also provides that issuers eligible to use Form S-3 or F-3 for primary offerings may in certain circumstances described below omit information about the identities of

p. 3-40

p. 3-41

selling securityholders and the amount of securities to be sold by such holders. [121] The prospectus supplement must be filed with the SEC, but no SEC action is required with respect to the prospectus supplement.

Rule 430B provides that information contained in a prospectus supplement will be deemed part of the related registration statement. Rule 430C codifies similar provisions relating to shelf registrations by issuers not eligible to use Form S-3 or F-3 for primary offerings. As a result, prospectus supplements will be considered part of the related registration statement for purposes of liability under § 11 of the Securities Act as of the dates described below.

The date on which the information in a prospectus supplement will be deemed to be part of the related registration statement for purposes of § 11 liability of issuers and underwriters only will be determined as follows:

- for supplements filed in connection with most shelf takedowns, under Rule 430B, the earlier of the date that the supplement is first used [122] and the date and time of the first contract of sale of securities to which the supplement relates; [123] and
- for other supplements filed under Rule 430B or 430C, as applicable, as of the date the prospectus supplement is first used.

Rule 430B creates a new effective date for most delayed offerings for purposes of shelf registration statement liability under § 11 for issuers and underwriters. That effective date is the date a prospectus supplement filed in connection with the takedown is deemed part of the registration statement. [124] The undertakings included in Item 512 of Regulation S-K require issuers to agree to this § 11 liability as of the dates described above.

p. 3-41

p. 3-42

The updating of the effective date based on use of prospectus supplements for § 11 liability purposes, however, does not apply to directors or signing officers of the issuer or to auditors or other experts. Unless a registration statement is updated by a prospectus supplement filed to provide updating information pursuant to § 10(a)(3) of the Securities Act or by a prospectus supplement reflecting fundamental changes in the information set forth in the registration statement, a prospectus supplement filing will not create a new effective date for directors or signing officers of the issuer. [125] Similarly, the effective date for auditors and other experts will not change with the filing of a prospectus supplement, unless the prospectus supplement (or any Exchange Act report incorporated by reference into the prospectus or registration statement or any post-effective amendment) contains new audited financial statements, a new report or opinion or other information requiring the filing of a new consent under § 7 of the Securities Act.

Many foreign issuers use a shelf registration statement to facilitate a medium-term note ("MTN") program. In this case, the issuer and the placement agent(s) for the program prepare a prospectus supplement that covers the entire projected amount of MTNs to be issued and describes the general terms of the MTNs and the particulars of the distribution arrangements. As individual MTNs are sold, definitive maturity, interest rate and pricing information is detailed in a pricing supplement "sticker," which either is affixed to the cover of the prospectus supplement or comprises a separate sheet. [126] For shelf registration purposes the sticker is a separate prospectus supplement and, like other prospectus supplements, is filed with the SEC without any need for SEC action. [127] As discussed above, it is also deemed to be part of the registration statement and triggers a new effective date.

Foreign governmental issuers that use Schedule B [128] may also file shelf registration statements if they have had an effective registration statement in the United States, and have not defaulted on payments of principal or interest within the last five years. [129] In the case of securities that are guaranteed by a foreign government, the SEC staff has occasionally permitted the issuer to file a shelf

p. 3-42

p. 3-43

registration statement on the basis that the related government had satisfied this "seasoning" requirement, even though the issuer itself had not. [130]

[c] Automatic Shelf Registration

As a result of the Securities Offering Reforms, WKSIs [131] can use a more flexible version of shelf registration, called "automatic shelf registration," for filings on Form S-3 or F-3. [132] Automatic shelf registration statements and post-effective amendments become effective immediately upon filing, without SEC staff review that would delay effectiveness, [133] and are deemed filed on the proper form. [134] These provisions effectively ensure that under automatic shelf registration there are no SEC staff regulatory obstacles, in particular no risk of delay because of SEC review, to immediate access to the U.S. public markets.

Under the rules, WKSIs can register an unspecified amount of securities to be offered, without indicating whether the securities will be sold in primary

p. 3-43

p. 3-44

offerings or secondary offerings on behalf of selling securityholders. Further, under Rule 430B under the Securities Act, automatic shelf issuers are permitted to omit from the base prospectus not only information that is unknown or not reasonably available to the issuer, but also the following additional information: (i) whether the offering is a primary or secondary offering, (ii) the description of the securities, other than the name or class of the securities, (iii) the names of any selling securityholders, and (iv) any plan of distribution. Omitted information may be incorporated by reference to Exchange Act reports [135] or be contained in the prospectus or prospectus supplement that is deemed to be part of the registration statement.

Issuers may register classes of securities without allocating the mix of securities registered among the issuer, eligible subsidiaries or selling securityholders. [136] Rule 413(b) under the Securities Act also permits WKSIs to add new classes of securities or securities of an eligible subsidiary to an automatic shelf registration statement at any time before the sale of those securities by filing an automatically effective post-effective amendment, as described above, to register an unspecified amount of the new class of security. Additional information about the new class, including additional disclosures, may be included in the amendment, a prospectus supplement or Exchange Act report incorporated by reference. New issuers and new guarantors may also be added by filing an automatically effective post-effective amendment. [137]

p. 3-44

p. 3-45

An issuer that qualifies for WKSI status based only on its aggregated registered nonconvertible securities other than common equity can only register nonconvertible securities other than common equity on an automatic shelf registration statement, unless that issuer is also eligible to register a primary offering of its securities on Form S-3 or F-3, in which case it can register any offering of its securities for cash using automatic shelf registration. [138]

Under the rules, no fees are due when an automatic shelf registration statement is initially filed. Instead, WKSIs are allowed, but not required, to pay the necessary filing fee at the time of each shelf takedown (*e.g.*, when the prospectus supplement is filed) or at any time prior to each takedown. If an issuer elects to take advantage of this "pay-as-you-go" filing fee approach, the cover page of each prospectus supplement filed should include a fee table presenting the calculation of the registration fee. Fees must be actually paid within the time required for filing the related prospectus supplement under Rule 424, but a four business day cure period has been provided in Rule 456(b)(1)(i) under the Securities Act for issuers who make a good faith effort to timely pay the fee. As is the case under the rules applicable to all issuers, the amount of the filing fee is calculated based on the fee schedule in effect at the time of payment (*i.e.*, upon filing if paying fees in advance or at the time of a takedown if paying-as-you-go) in accordance with Rule 457 under the Securities Act, and thus the fee amount may vary depending on the time of payment. [139]

[3] Rules Governing Communications

[a] The Communications Regime

[i] *Overview of Rules Governing Prohibited and Permitted Communications During the Three Offering Stages*

Section 5 of the Securities Act and related rules impose varying restrictions on the types of communications that can be made during each of the three stages in the offering process: the quiet period, the waiting period and the post-effective period. [140] The release of a communication during the offering process would violate § 5 if it constitutes an impermissible "offer" (a term that has broad meaning in the Securities Act). [141] A communication does not violate § 5 if it falls

p. 3-45

p. 3-46

within a safe harbor excluding it from the definition of "offer" under § 2(a)(3) of the Securities Act, doesn't otherwise constitute an offer or is a permissible offer.

Communications in violation of § 5 (so-called "gun-jumping") could cause the SEC to delay the proposed offering, or, upon completion of the offering and sale, could give purchasers a strict liability right to rescind their purchases. Even communications that are released in compliance with U.S. securities laws may prompt the SEC in certain circumstances to require the inclusion of the publicly-released information into the registration statement, thereby subjecting the offering participants, including the issuer, to Securities Act liability for the content of such communications. Because of these concerns, offering participants must pay careful attention to the issuer- or offering-related publicity released during the offering process. Publicity issues in the context of a global offering with a U.S. component are particularly complicated, primarily because other jurisdictions do not impose as strict limitations as the United States.

In connection with the Securities Offering Reforms, the SEC acknowledged that the previous regulatory scheme unnecessarily hindered communications that would be helpful to investors and provided different classes of investors unequal access to information. [142] In addition, the SEC recognized that the distinction between permissible communications and illegal offers violating § 5 of the Securities Act is not clear and requires a "facts and circumstances" analysis and discourages the disclosure of truthful information that can be useful to the market. To reduce the uncertainty and promote the dissemination of more information regarding offerings to all investors, the reforms liberalized many of the restrictions on communications prior to and during offerings.

[ii] *Categorization of Issuers Under Securities Offering Reforms*

A determination as to whether a communication constitutes an impermissible offer and the related SEC regulatory regime is based on several factors, including the timing of the communication, the nature of the communication and the status of the issuer (*i.e.*, whether it is a WKSI, a "seasoned issuer," an "unseasoned issuer," a non-reporting company, an ineligible issuer or an EGC).

The Securities Offering Reforms created new categories of issuers, the most significant of which is a WKSI. [143] A WKSI is generally a company that,

p. 3-46

p. 3-47

within 60 days of the determination date described in the next paragraph, (i) meets the registrant requirements of Form S-3 or F-3, including having timely filed its Exchange Act reports for the preceding 12 calendar months, and (ii) either (1) has a worldwide market value of its voting and nonvoting common equity held by nonaffiliates of at least $700 million [144] or (2) (x) has issued in the preceding three years at least $1 billion aggregate principal amount of registered nonconvertible securities, other than common equity, in primary offerings for cash [145] and (y) registers only nonconvertible securities, other than common equity (unless the issuer also meets the $75 million public float requirement of Form S-3 or F-3). [146] , [147]

The determination date for WKSI status of an issuer is the later of (i) the time of filing of the issuer's most recent shelf registration statement and (ii) the time of the issuer's most recent annual amendment to a shelf registration statement, which typically occurs at the time of filing the issuer's most recent annual report on Form 10-K or 20-F (or the time by which the report should have been filed if not filed by the applicable due date). In addition, to qualify as a WKSI,

p. 3-47

p. 3-48

the issuer may not fall within the category of "ineligible issuers" described below.

Other categories of issuers created by the Securities Offering Reforms include "seasoned issuers" (issuers eligible to use Form S-3 or F-3 to register a primary offering of securities), [148] "unseasoned issuers" (issuers that are required to file reports under §§ 13 or 15(d) of the Exchange Act, but do not satisfy the requirements of Form S-3 or F-3 for a primary offering of its securities) [149] and "non-reporting issuers" (issuers that are not required to file reports under § 13 or § 15(d) of the Exchange Act, including issuers that voluntarily file Exchange Act reports).

Issuers that fall within specified "bad boy" or certain other specified categories are ineligible to qualify as WKSIs and, therefore, are not eligible for automatic shelf registration, discussed in § 3.02[2][c]. In addition, ineligible issuers may not use free writing prospectuses, except that ineligible issuers other than blank check companies, shell companies and penny stock issuers may use free writing prospectuses that are limited to descriptions of the terms of the offered securities or the offering. [150]

Ineligible issuers include:

- issuers that are not current in their Exchange Act reports (as of the relevant date of determination), [151] other than reports on Form 8-K filed to disclose (i) entry into or termination of a material definitive agreement, (ii) creation, acceleration or increase of a direct financial obligation or off-balance sheet

p. 3-48

p. 3-49

  arrangement, (iii) costs associated with an exit or disposal plan, (iv) a material charge for impairment of assets, (v) nonreliance on previously issued financial statements due to an error in such financial statements, or (vi) with regard to asset-backed securities, any informational or computational material, a change in credit enhancement or other external support, or any update of material pool characteristics; [152]
- blank check companies, shell companies (other than a business combinationrelated shell company) and penny stock issuers (in each case, at any time over the past three years (including predecessors));
- limited partnerships offering and selling their securities (other than in a firm commitment underwriting);
- issuers that have filed for bankruptcy or insolvency or that have had an involuntary bankruptcy petition filed against them (if the case is not dismissed within 90 days) or the conversion of a bankruptcy case to

a voluntary proceeding within the past three years; [153]

- an issuer or any entity that was at the time a subsidiary of an issuer [154] that was convicted within the past three years of a felony or misdemeanor described in § 15(b)(4)(B) of the Exchange Act, such as larceny, making of false reports or robbery;
- issuers the registration statements of which are, or within the past three years have been, the subject of refusal or stop orders under the Securities Act; or
- issuers (or their subsidiaries) that within the past three years have been made the subject of a judicial or administrative decree or order finding a violation of the antifraud provisions of the federal securities laws or requiring the cessation of violations of the antifraud provisions of the federal securities laws, or prohibiting certain conduct or activities regarding the antifraud provisions of the federal securities laws. [155]

p. 3-49
p. 3-50

For purposes of WKSI status, ineligible issuer status is determined at the time of determination of WKSI status. The date of determination as to whether an issuer is an ineligible issuer for purposes of eligibility to use free writing prospectuses is either (i) the time of filing the corresponding registration statement or (ii) for offerings registered pursuant to Rule 415, the earliest time after filing the corresponding registration statement at which the issuer or another offering participant makes a *bona fide* offer of the securities registered. [156]

[iii] *Safe Harbors for Permitted Communications During Any Offering Period*

p. 3-50
p. 3-51

[A] Safe Harbor for Release of Factual Business Information by All Issuers

As part of the Securities Offering Reforms, the SEC adopted a nonexclusive safe harbor from "gun-jumping" violations that permits ongoing communication of regularly released "factual business information" at any time during the offering process by or on behalf of all issuers (other than investment companies and business development companies). [157] This protection essentially codifies the SEC's view that factual communications do not violate § 5 of the Securities Act. [158] Under Rules 168 (for reporting issuers) and 169 (for non-reporting issuers) under the Securities Act, factual business information is defined to include the following types of information: [159]

- factual information about the issuer or its business or financial developments or other aspects of its business (for all issuers);
- advertisements of, or other information about, the issuer's products or services (for all issuers);
- dividend notices (only for reporting issuers); and
- information set forth in any report or other materials that a reporting issuer files with, or furnishes to, the SEC under the Exchange Act (only for reporting issuers). [160]

p. 3-51
p. 3-52

Factual business communications are not be required to be filed with the SEC.

To qualify for the protection of the safe harbor, the issuer must have previously released the same type of information in the ordinary course of its business, and the timing, manner and form in which the information is released or disseminated must be materially consistent with past disclosure. For non-reporting issuers, the information must also be intended for persons, such as customers or suppliers, other than in their capacity as investors or potential investors, and it must be released by employees or agents of the issuer who have historically provided such information. [161] The rules do not establish or require any minimum time period to satisfy the regularly released condition, but the Securities Offering Reform Release provides that the issuer must have some "track record" of releasing the particular type of information, which could include only one previous release. [162] Communications containing information about a registered offering or information disseminated as part of the offering activities do not qualify for this safe harbor. [163] Factual business information generally does not include predictions, projections, forecasts or opinions with respect to the valuation of a security. [164] In addition, the rules provide that the safe

p. 3-52

p. 3-53

harbor is not available for any communication that is part of a plan or scheme to evade the requirements of § 5 of the Securities Act.

In practice, issuers may release customary shareholder reports, advertise their products, issue press releases concerning material business developments and respond to legitimate unsolicited requests for factual information about their affairs. However, until the offering of the company's securities in the United States has been completed, it would be inadvisable for a foreign company to (i) schedule a meeting or call with U.S. securities analysts or any similar group that would be unusual in light of past practices or in which it would be difficult to avoid questions and speculation about the offering of securities, (ii) engage in any public relations activities in the United States that are unusual in the light of past practices and the nature of the information being communicated or (iii) instigate, or cooperate in the preparation of, any press report in the United States regarding the company or its key officers that is unusual in light of past practices and the nature of the information being communicated. A company may also engage in its customary activities consistent with its past practices outside the United States with respect to publicity, disclosure and announcements. [165]

Notwithstanding the SEC's modernized and liberalized approach to communications, an illustration of the different national approaches to permissible levels of publicity is the level of advertising that has preceded many privatizations in Europe, which were preceded by full-scale television and press advertising campaigns and distributions of brochures describing the company and the offer process that were considered to be an integral part of the marketing efforts, even though offers technically could be made only on the basis of prospectuses that contained mandated disclosure. [166] In the United States, by contrast, even after the 2005 changes in communication rules, a more conservative approach should be taken to avoid violations of § 5 of the Securities Act and, even when permissible, because it is unlikely that offering participants and their counsel

p. 3-53

p. 3-54

could become comfortable with such activities under the civil liability provisions of § 12(a)(2) of the Securities Act and Rule 10b-5 under the Exchange Act. [167]

[B] Safe Harbor for Release of Forward-Looking Information by Reporting Issuers

In recent years, Congress and the SEC have encouraged and, in some cases, required issuers to disclose forward-looking information that they judge would be useful to the market and investors. [168] Consistent with this development, Rule 168 under the Securities Act includes a safe harbor from gun-jumping violations that permits the ongoing communication of regularly released forward-looking information at any time during the offering process by or on behalf of reporting issuers only. [169] Rule 168 defines forward-looking information for purposes of the safe harbor to be limited to the following types of information: (i) projections of the issuer's revenues, income (loss), earnings (loss) per share, capital expenditures, dividends, capital structure or other financial items, (ii) statements about management's plans and objectives for future operations, including plans or objectives relating to the products or services of the issuer, (iii) statements about the issuer's future economic performance, including statements of the type contemplated by MD&A, and (iv) assumptions underlying or relating to any of the foregoing information. The safe harbor for forward-looking information is subject to the same conditions regarding consistency with past practice as apply to the safe harbor for factual business information released by reporting issuers. [170] In addition, as with the safe harbor for factual business information, the safe harbor for forward-looking information is not available for any communication that is part of a plan or scheme to evade the requirements of § 5 of the Securities Act.

[b] The Quiet Period: Before Filing a Registration Statement

p. 3-54
p. 3-55

Except for communications by WKSIs and "test the waters" communications by EGCs, [171] offers made prior to the filing of a registration statement are violations of § 5 of the Securities Act. [172] However, certain forms of communications that might otherwise be considered to be "offers" are permissible during the quiet period, provided the applicable restrictions are complied with, as discussed below.

[i] *Bright Line Exclusion for Communications Made More than 30 Days Before Filing a Registration Statement*

Rule 163A under the Securities Act provides that a communication made by or on behalf of any issuer more than 30 days prior to the filing of a registration statement will not constitute an "offer" in violation of § 5. This nonexclusive safe harbor is only available for communications made "by or on behalf of" [173] the issuer (communications by an underwriter are not covered, even if authorized or approved by an issuer) that do not reference a securities offering that is or will be the subject of a registration statement and only if "reasonable steps" were taken by the issuer to ensure that a permissible communication is not redistributed or republished during the 30-day period prior to filing. [174]

[ii] *Certain Notices of Public Offering Pursuant to Rule 135*

p. 3-55
p. 3-56

At any time prior to filing a registration statement, an issuer may publicly disclose that it intends to make a public offering of securities if certain conditions are met. Any such public announcement must state that the notice does not constitute an offer of any securities for sale, and it may contain no more information than the name of the issuer; the title, amount and basic terms of the securities proposed to be offered; the anticipated time of the offering; a brief statement of the manner and purpose of the offering; information on whether the issuer is directing the offering to only a particular class of purchasers; and any statements or legends required by the laws of any state or foreign country or administrative authority. [175] Underwriters may not be named. [176]

[iii] *Use of Free writing Prospectuses by WKSIs Before Filing a Registration Statement*

Rule 163 under the Securities Act permits WKSIs (or their agents or representatives, other than an underwriter or dealer) [177] to make unrestricted oral and written offers before filing a registration statement, but any written offer will be considered a free writing prospectus and will generally have to be filed upon filing a registration statement or amendment covering the securities. [178] These

p. 3-56
p. 3-57

communications, while exempt from the gun-jumping restrictions, are subject to the liability standards applicable to offers, as well as the antifraud provisions of the federal securities laws. [179]

[iv] *Permitted “Test the Waters” Communications by EGCs*

The JOBS Act permits pre-filing and post-filing communications with institutional investors by an EGC, or by a person authorized to act on the EGC's behalf, to determine whether such investors have an interest in a contemplated securities offering. These communications may be oral or written, but may only be made to QIBs or institutional accredited investors. [180] Unlike written communications by WKSIs during the quiet period, written "test the waters" communications by EGCs are not required to be filed as free writing prospectuses.

The "test the waters" provisions of the JOBS Act are available to an EGC with respect to the offering of any security and are not limited to an IPO of common stock. An EGC engaging in "test the waters" communications in connection with an exchange offer or merger must comply with applicable regulatory requirements under the Exchange Act, such as filings required under Exchange Act Rules 13e-4(c), 14a-12(b) and 14d-2(b) for pre-commencement tender offer communications and proxy soliciting materials in connection with a business combination. An issuer must determine whether it qualifies as an EGC at the time it engages in "test the waters" communications, and SEC staff FAQs clarify that if a company engages in "test the waters" communications while it is an EGC and subsequently loses EGC status, the SEC will not view the "test the waters" communications as having violated § 5 of the Securities Act. [181]

Notwithstanding the changes introduced by the JOBS Act, both issuers and underwriters will be subject to potential federal securities law antifraud liability, including liability under § 12(a)(2) of the Securities Act and § 10(b) of the

p. 3-57

p. 3-58

Exchange Act, for any oral or written communications that are permitted by the "test the waters" provisions of the JOBS Act. As part of its review of a registration statement, the SEC staff often requests copies of any materials used in "test the waters" communications.

[v] *Marketing-Related Considerations During the Quiet Period*

[A] Premarketing/Investor Education/Pilot Fishing

Premarketing is an umbrella term used to describe a range of activities undertaken by market participants prior to the formal launch of an offering of securities, including investor education initiatives (and underwriter sales force meetings in support of such initiatives), pilot fishing (also called presounding), "test the waters" communications by EGCs, pre-deal research and nondeal road shows. [182] Issuers conducting premarketing activities both inside and outside the United States also will have to consider local law requirements, including the Market Abuse Regulation in the European Union.

Premarketing is used for a variety of reasons, including to assess the depth of demand for a proposed offering, gather market feedback for a potential transaction structure or provide investors more opportunities to engage with management and learn about the issuer. Although premarketing activities were once more commonly a feature of European offerings, they are increasingly being used in U.S. offerings. Premarketing may be particularly important during periods of high market volatility, helping to minimize the chances of having to "pull" a deal after formal launch.

Premarketing activities are featured in a variety of transactions, including IPOs, U.S. registered follow-on equity offerings and equity and debt offerings under Rule 144A and/or Regulation S. In the context of U.S. registered offerings, premarketing activities in the United States during the quiet period are subject to the restrictions on communications discussed above and are generally limited to communications that fall within the safe harbors afforded by Rules 163A or 135 under the Securities Act, communications by WKSIs pursuant to Rule 163 under the Securities Act and "test the waters" communications by EGCs.

Investor education refers to meetings between research analysts (employees of the underwriters) and prospective investors (and without the participation of investment banking personnel) to discuss an issuer and its securities prior to

p. 3-58

p. 3-59

the commencement of marketing. [183] Investor education meetings are designed to assist investors in better understanding the issuer and the offering and are not intended to market or make solicitations in respect of a proposed transaction. In the context of a U.S. registered offering, investor education meetings may only be conducted after a registration statement has been publicly filed and thus do not take place during the quiet period. *See* § 3.02[3][c][iii][A] for a discussion of investor education activities carried out after the public filing of a registration statement in the United States.

Pilot fishing refers to meetings between an issuer, investment bankers and potential investors prior to launch to discuss a proposed transaction to obtain feedback on appropriate benchmark offerings and valuation multiples to help bankers determine the range of valuations that would be appropriate to the planned offering. From the perspective of an issuer, pilot fishing is seen as a useful way to gain feedback about investor concerns and appropriate timing for a transaction before an offering is publicly announced. From the perspective of an investor, pilot fishing offers the opportunity to meet with management at an early stage of the process and to get better acquainted with the issuer ahead of formal launch.

In the context of U.S. registered offerings, pilot fishing activities in the United States during the quiet period are subject to the same restrictions on communications as discussed above with respect to investor education—that is, they can only be conducted after a registration statement has been publicly filed, [184] except that "test the waters" communications by EGCs may be made to QIBs and institutional accredited investors at any time. *See* § 3.02[3][b][v] for a discussion of pilot fishing activities carried out after the public filing of a registration statement in the United States. Pilot fishing communications with non-U.S. investors outside the United States may be permissible in global IPOs that include a non-U.S. registered portion of the offering. In addition, in a global IPO with a U.S. registered component, pre-deal research may be distributed outside the United States at any time, provided certain restrictions are complied with. [185]

[B] Side-by-Side Private Placements/Cornerstone Investors

p. 3-59
p. 3-60

Premarketing considerations are implicated in the context of a side-by-side private placement and public offering. [186] In side-by-side private offerings, sophisticated, typically institutional investors that have a preexisting relationship with the issuer may agree to purchase shares in a private transaction at the same time as the public offering is executed. These investors are often called cornerstone investors. Outside the context of U.S. registered offerings, potential cornerstone investors are not unusual and typically are approached by investment bankers or by the issuer directly following a pilot fishing exercise (and need not have a preexisting relationship with the issuer). Typically discussions with potential investors for a side-by-side investment are started prior to the filing of a registration statement to maintain the ability of the parties to conduct the transaction on a private basis, [187] and those cornerstone investors will receive restricted shares (*i.e.*, shares that are not freely tradable) at closing. [188]

To aid in their investment decision, cornerstone investors benefit from the information shared through the pilot fishing exercise and, subject to signing a confidentiality agreement, are often given nonpublic information about the issuer (which is later made available to all investors through the prospectus disclosure), including, in the case of a U.S. registered offering, a draft registration statement. Normally, the cornerstone investor agrees to pay the offering price, which is still undetermined when the investor commits. The participation of a cornerstone investor, in the case of a U.S. registered offering, generally is disclosed in the registration statement, [189] and, as evidence of the issuer's ability to generate demand in the offering, can be an effective premarketing tool. A cornerstone investor generally enters into separate purchase arrangements with the issuer, allowing it to opt out of its commitment if the final disclosure document changes in a materially adverse way from the draft reviewed by the investor.

p. 3-60
p. 3-61

In contrast to cornerstone investors, which have separate purchase arrangements with the issuer, an "anchor investor" may purchase a significant portion of an offering but applies for shares through the underwriters, the same as other institutional investors. Because they purchase through the underwriters after the registration statement is effective, anchor investors receive freely tradable shares. The involvement of anchor investors can help to generate demand in a bookbuilding process, but anchor investors are generally not named in the prospectus. [190]

[c] The Waiting Period: After Filing a Registration Statement

Communications by the issuer regarding the offering are also restricted during the period between the filing of the registration statement and its effectiveness, although the issuer may make oral [191] offers during this period, and written offers subject to certain conditions. Subject to certain exceptions (as discussed below), under the Securities Act written offers can only be made using the statutory prospectus, and under SEC rules in the case of a non-reporting issuer (*e.g.*, in the context of an IPO), only when the maximum number of shares and a price range for the offering are included on the front cover of the preliminary prospectus.

[i] *Rule 134*

Rule 134 under the Securities Act provides a nonexclusive safe harbor from the gun-jumping provisions for limited public notices about an offering made after any issuer files its registration statement. [192] The notices may include the following information:

p. 3-61
p. 3-62

- information about an issuer and its business (including where to contact the issuer);
- information about the terms (but not the use of detailed term sheets) of the securities being offered, including:
    - the title of the securities (including a designation as to whether the securities are convertible, exercisable or exchangeable and as to the ranking of the securities);
    - information about final interest rates and yield to maturity information, including information on securities with comparable maturities and credit ratings, or if the final maturity, interest rate provisions or yield are not known, the probable final maturity, interest rate provisions or yield range, so long as, in each case where it is required, the prospectus includes a price range; [193] and
    - the price of the security or, if not known, the method of its determination or a *bona fide* estimate of the price range, in which case the registration statement must include the price range;
- a brief description of the intended use of proceeds of the offering;
- certain factual information about an offering, including underwriter information, the anticipated schedule of the offering and a description of marketing events, and the type of underwriting (if, in each case, this information is already disclosed in the prospectus), as well as the names of the underwriters and their additional roles, if any, within the underwriting syndicate (*e.g.*, lead book-running manager);
- a statement about the permissibility or status of the investment under Employee Retirement Income Security Act of 1974, as amended ("ERISA"); and
- factual information about procedures for account opening and submitting indications of interest and conditional offers to purchase (*e.g.*, a broker could inform investors of the procedural aspects of any auction or a directed share program) and procedures regarding directed share programs and other participation in offerings by officers, directors and employees of the issuer. [194]

p. 3-62
p. 3-63

Rule 134 allows those providing notices in reliance on Rule 134 to include the uniform resource locator, or "URL" address to the statutory prospectus that notifies investors where they can obtain the statutory prospectus, which can also be satisfied by the inclusion of an active hyperlink to that prospectus. If a URL is not included, Rule 134 requires use of a prescribed legend (if a registration statement has not yet become effective) or the inclusion of the name and address of persons from whom a written prospectus for the offering may be obtained. In addition, communications soliciting indications of interest under Rule 134(d) are only permissible if a statutory prospectus (including a price range where required) is available. [195]

[ii] *Permitted "Test the Waters" Communications by EGCs*

As discussed above in § 3.02[3][b][iv], the JOBS Act provides exceptions from § 5 of the Securities Act that permit pre- and post-filing oral and written communications by EGCs to QIBs and institutional accredited investors. Under the "test the waters" provisions of the JOBS Act, issuers and their authorized representatives are permitted to gauge interest in a potential offering prior to establishing a price range for a preliminary prospectus. Section 105(c) of the JOBS Act expressly permits such communications to determine whether potential investors "might have an interest in a contemplated securities offering," but does not permit an issuer or its authorized representative to solicit binding orders from potential investors as part of these communications. The SEC staff has addressed the question whether, in the course of "test the waters" communications, prospective investors in EGC securities offerings can be asked for nonbinding indications of interest ("IOIs") before a preliminary prospectus has been made available to the broker-dealer personnel soliciting the nonbinding IOIs. [196] The question arises because Rule 15c2-8(e) under the Exchange Act prohibits solicitation of customer orders after a registration statement has been filed, unless a preliminary prospectus, which must include a price range, is made available to

p. 3-63

p. 3-64

the broker-dealer personnel soliciting the orders. The SEC guidance distinguishes between solicitation of customer orders, which involves soliciting a commitment, and solicitation of nonbinding IOIs. Investment banking personnel can ask a potential customer how many shares the customer may be willing to purchase at a specific offering price, provided the potential customer is not then committed to purchase the securities.

[iii] *Marketing Considerations During the Waiting Period*

[A] Premarketing/Investor Education/Pilot Fishing

Premarketing [197] during the waiting period refers to communications made after the first public filing of the registration statement, but before all SEC comments on the registration statement have been cleared (in contrast, the "marketing" stage generally commences after launch of the transaction, that is to say, after all SEC comments have been cleared). [198] During the waiting period, premarketing activities are subject to the same restrictions on publicity governing other types of communications after filing of the registration statement. While oral communications are permissible, written communications are limited to statutory and free writing prospectuses, Rule 134 notices and "test the waters" communications by EGCs.

As a result of these restrictions on publicity, premarketing activities during the waiting period are generally limited to oral presentations by research analysts to prospective investors in investor education meetings, [199] oral presentations by investment bankers and the issuer to prospective investors in pilot fishing meetings, [200] "test the waters" communications by EGCs and, with respect to offerings outside the United States, pre-deal research distributed outside the United States.

As discussed above, investor education meetings between research analysts and prospective investors are designed to assist investors with price discovery and, more generally, to give investors a better understanding of the issuer and the offering. There is very little guidance from U.S. regulators regarding the various legal issues raised by investor education meetings. As a result, financial institutions typically have policies and procedures for investor education activities in

p. 3-64
p. 3-65

various contexts. Investor education meetings may take place only after a registration statement is filed, but typically conclude before formal marketing has begun. Investor participation is generally restricted to a limited number of QIBs (in general not more than 20 or so accounts across all lead managers participating in the offering). Investor education meetings, which typically are private, one-on-one meetings with individual investors, are limited to oral communications in person, by telephone or via videoconference. Telephone calls are typically scripted and monitored. Pre-approved slideshows containing appropriate legends may be used. The information shared at investor education meetings must be factual in nature, neutral in tone and limited to information that is publicly available or contained in the registration statement. Material, nonpublic information is typically not disclosed, and views on specific valuations, price targets or financial projections are typically not expressed (and indications of interest are not sought). Orders must not be solicited or obtained at investor education meetings. Records of meetings are typically kept, including the date and time of meetings and the contact information of those who attended, and attendees generally receive the preliminary prospectus, once available.

During the waiting period, pilot fishing activities in the context of a U.S. registered IPO may take place in the United States. As with other forms of pre-marketing permitted during the waiting period, the information disclosed in the context of a pilot fishing exercise must be limited to oral communications. The limitations on numbers of investors, and use of approved, scripted materials in investor education meetings, discussed above, apply generally to pilot fishing activities.

In the context of a U.S. registered IPO, the distribution of pre-deal research in the United States is prohibited, except in the context of EGCs. [201] In a global IPO with a U.S. registered component, pre-deal research may be distributed outside the United States at any time, provided certain restrictions are complied with. [202]

If the issuer already has listed securities, premarketing becomes less practical since such efforts may require investors to be "wall-crossed" well in advance of a proposed offering. Wall-crossing refers to the practice whereby issuers who already have a shelf registration statement on file with the SEC confidentially premarket a public securities offering to a limited number of potential investors before announcing their intention to raise capital publicly. To mitigate selective disclosure concerns in these types of offerings, before an issuer engages in pilot fishing, it would require the potential investors to agree in

p. 3-65
p. 3-66

advance to maintain the confidentiality of issuer-related information provided to them and to agree not to trade until public announcement of the offering (or its abandonment). Because wall-crossed investors are potentially in possession of material nonpublic information, should the deal not proceed, these investors may need to be "cleansed" before they could trade in the issuer's securities. Cleansing is usually accomplished through the issuance of a press release that publicly discloses the material (previously) nonpublic information or by waiting a certain period of time, often called a "cleansing period," for the information to either be released or otherwise become stale.

[B] The Road Show

A road show is a presentation by senior management (usually accompanied by representatives from the lead underwriters) designed to market a forthcoming offering of securities. [203] Road shows are used by U.S. and foreign issuers to market offerings for equity, debt and convertible securities both in the context of registered offerings (*e.g.*, IPOs and follow-on offerings) and unregistered offerings (*e.g.*, offerings in reliance on Rule 144A or Regulation S).

Road shows are used for a variety of reasons. They can generate investor interest in an offering and help underwriters in their bookbuilding efforts. Road shows also give prospective investors an opportunity to learn about the issuer, the management and the reasons for the proposed offering. Road shows vary in their length of time. For IPOs, where issuers generally are less familiar to the investor community than reporting companies, road shows can last for up to two weeks. For other types of offering by more frequent issuers, a road show can be done in one or two days. Depending on the type of offering, frequent issuers may decide against organizing a road show, relying instead on a brief press release and investor calls as a means to market the offering.

Except for "test the waters" communications by EGCs and for WKSIs in a U.S. registered offering, a road show can begin only after the registration statement has been filed (and normally after all SEC comments have been cleared and a preliminary prospectus has been prepared). Road shows typically finish before the registration statement is declared effective. Although WKSIs are permitted to conduct a road show before filing of the registration statement, the issuer and its advisors will need to consider several issues before commencing the road show. First, the road show will be subject to liability under § 12(a)(2) of the Securities Act and Rule 10b-5 under the Exchange Act. Second, Regulation FD applies to

p. 3-66

p. 3-67

WKSI road shows taking place before the filing of a registration statement. This means that material nonpublic information contained in the road show must be either removed or made publicly available (or, alternatively, the issuer may require recipients of the road show to expressly agree to keep it confidential). Third, the road show presentations (that are not oral presentations) will need to include a free writing prospectus legend. Because of these considerations, WKSIs generally wait until the registration statement has been filed before commencing the road show.

During the waiting period, oral offers are permitted and permissible written offers are limited to the preliminary prospectus and free writing prospectuses. Traditional road shows, consisting of live in-person presentations or meetings, are oral communications. A slide deck, videos, visual aids or other materials accompanying the live presentations are also oral communications, provided that any handouts distributed at the presentations are returned by the attendees at or before completion of the presentation. [204] A live stream of a road show presentation, live telephone conversation or broadcasts to overflow rooms at live road shows are also oral communications.

Under Rule 433 of the Securities Act, a road show that is a written communication is a free writing prospectus. [205] Under Rule 405 of the Securities Act, a "written communication" consists of any communication that is written, printed, a radio or television broadcast, or a graphic communication. [206] A "graphic communication" includes "all forms of electronic media, including, but not limited to, audiotapes, videotapes, facsimiles, CD-ROM, electronic mail, Internet Web sites, substantially similar messages widely distributed (rather than individually distributed) on telephone answering or voice mail systems, computers, computer networks and other forms of computer data compilation … [but] shall not include a communication that, at the time of the communication, originates live, in real-time to a live audience and does not originate in recorded form or otherwise as a graphic communication, although it is transmitted through graphic means." [207] Accordingly, recorded road shows (including live telephone calls, videos or webcast conferences that are recorded by the originating party), slides and other handouts distributed at the road show presentation but not collected from attendees at or before completion of the presentation, information posted on websites and all radio or television broadcasts (whether or not live). are written communications and, thus, free writing prospectuses.

p. 3-67

p. 3-68

A road show that is a free writing prospectus will need to be filed with the SEC if it relates to the IPO of common equity or convertible equity securities by a non-reporting issuer *unless* at least one *bona fide* electronic road show (otherwise known as a retail road show) is made generally available to investors. [208] In practice, issuers make *bona fide* electronic road shows available to the public, and, as such, IPO road shows are rarely filed with the SEC.

All road shows, whether an oral or written communication and whether or not filed with the SEC, are subject to liability under § 12(a)(2) of the Securities Act and Rule 10b-5 under the Exchange Act. [209]

[iv] *Permitted Use of a Free Writing Prospectus*

[A] Overview

Before the adoption of the Securities Offering Reforms, written offers (other than by means of the preliminary prospectus), even those made after filing of the registration statement but before the registration statement was effective, were violations of § 5 of the Securities Act. To eliminate this outmoded prohibition and promote the dissemination of useful information, the SEC introduced the concept of the "free writing prospectus" in the Securities Offering Reforms and provided an exemption for written offers other than a preliminary prospectus that meet the conditions for use of a free writing prospectus. [210] These rules define a "free writing prospectus" as any written communication representing an offer to sell or a solicitation of an offer to buy securities that is or will be the subject of a registration statement that does not otherwise satisfy the statutory

p. 3-68

p. 3-69

prospectus requirements. [211] Where a free writing prospectus is prepared by or on behalf of, [212] or used or referred to by, the issuer, it is defined as an "issuer free writing prospectus." Whether a particular communication is an offer will be determined, as was the case in the past, based on the particular facts and circumstances of the communication, and not all communications related to an offering will be an offer required to fall within the framework for free writing prospectuses.

Rule 164 under the Securities Act provides a nonexclusive safe harbor for the use of a free writing prospectus by an eligible issuer [213] or any other offering participant (including an underwriter or dealer) after an eligible issuer has filed a registration statement and the conditions set forth in Rule 433 under the Securities Act are satisfied. [214] Most ineligible issuers (and their offering participants) may use free writing prospectuses the contents of which are limited to descriptions of the terms of the offered securities and the offering. [215] Where Rule 164 applies, Rule 433 contains the eligibility, legend, [216] filing and record

p. 3-69

p. 3-70

retention [217] requirements for using a free writing prospectus after a registration statement has been filed. [218]

Rule 433, which permits the use of a free writing prospectus, does not provide any line-item or other specific disclosure or informational requirements, other than a legend. The free writing prospectus will not have to be filed as part of the registration statement and, thus, will not be subject to liability under § 11 of the Securities Act. Moreover, the SEC has amended Rule 408 to make clear that a failure to include information from a free writing prospectus in a registration statement will not be considered, by itself, an omission of material information required to be included in the registration statement. Any free writing prospectus, regardless of whether it was filed, will be subject to liability under § 12(a)(2) of the Securities Act and Rule 10b-5 under the Exchange Act. [219]

Rule 433 prohibits a free writing prospectus from containing any information that "conflicts with" any information in the registration statement. Based on informal guidance from the SEC staff, the SEC's intention is to prohibit only free writing prospectuses that cannot be reconciled with the statutory prospectus. Accordingly, any free writing prospectus that makes clear it is correcting, updating or otherwise revising information in a statutory prospectus will be permitted (and, indeed, encouraged).

[B] Preliminary Prospectus Requirements for Non-Reporting and Unseasoned Issuers

Use of a free writing prospectus by seasoned issuers and WKSIs and related offering participants is not conditioned on actual delivery of a preliminary prospectus. Rule 433 under the Securities Act requires a free writing prospectus used in these circumstances to include the URL address of the SEC's website where the preliminary or base prospectus may be accessed. [220]

Use of a free writing prospectus by non-reporting and unseasoned issuers and related offering participants is permitted only if the most recent statutory

p. 3-70

p. 3-71

prospectus accompanies or precedes the free writing prospectus. [221] The statutory prospectus would not have to be provided through the same medium as the free writing prospectus so long as it is provided at the required time. For electronic free writing prospectuses, this delivery requirement may be satisfied by including a hyperlink to the most recent prospectus. This ability to satisfy the delivery requirement by a hyperlink contrasts with the SEC's prior guidance that advance consent must be provided for electronic delivery, [222] and is an example of the manner in which the Securities Offering Reforms represented the beginning of an SEC effort to encourage and rationalize the use of electronic means of communications. Once an investor has been sent a preliminary prospectus, additional free writing prospectuses may be distributed to the investor without having to provide another statutory prospectus, unless there has been a material change to the information in the preliminary prospectus. After effectiveness and availability of a final prospectus, no earlier statutory prospectus may be provided, and offering material other than the final prospectus may be used only if accompanied or preceded by a final prospectus.

[C] Filing Conditions

Under Rule 433, issuers will generally be required to file free writing prospectuses on or before the date of their first use [223] under the following circumstances:

- Where a free writing prospectus is prepared by or on behalf of the issuer or used or referred to by the issuer—an "issuer free writing prospectus."
- Where a free writing prospectus prepared by or on behalf of or used by an offering participant other than the issuer contains material information about the issuer or its securities that has been provided by or on behalf of the

  p. 3-71

  p. 3-72

  issuer— "issuer information"—that is not already contained or incorporated in the registration statement or a filed free writing prospectus. [224] This condition does not apply if the free writing prospectus contains information prepared on the basis of or derived from issuer information but not issuer information itself.
- Where a free writing prospectus prepared by or on behalf of or used by the issuer or any offering participant contains a description of the final terms of the issuer's securities or of the offering, after such terms have been established for all classes in the offering (in which case the free writing prospectus would have to be filed within two days after the later of (i) the date such terms became final for all classes and (ii) the date of first use). [225]

As discussed below, an important exception to the timing of filing a free writing prospectus relates to an independently prepared media publication, which is required to be filed within four business days after the issuer or offering participant becomes aware of its publication or first broadcast.

A free writing prospectus would not have to be filed by the issuer if it did not contain substantive changes from or additions to a previously filed free writing prospectus. In addition, a free writing prospectus used at the same time as a communication in a business combination transaction subject to Rule 425 under the Securities Act will not have to be filed if certain conditions imposed in connection with the rules applicable to business combination transactions are met. [226]

While the rules do not generally require that offering participants file free writing prospectuses that they prepare (*e.g.*, communications with proprietary underwriter information), a free writing prospectus prepared by an offering participant other than the issuer that is distributed in a manner reasonably designed to lead to its broad, unrestricted dissemination would require filing by that

p. 3-72

p. 3-73

offering participant on or before the date of first use, unless it has already been filed. [227]

Rule 164 under the Securities Act permits an issuer or any other person to cure any immaterial or unintentional failure to file or delay in filing a free writing prospectus without losing the ability to rely on the safe harbor. The cure provisions are available if a good faith and reasonable effort was made to comply with the filing condition and the free writing prospectus is filed as soon as practicable after the discovery of such failure. Similarly, an immaterial or unintentional failure to include the specified legend in a free writing prospectus will not preclude reliance on the safe harbor so long as a good faith and reasonable effort was made to comply with the legending condition and the free writing prospectus is amended to include or correct the legend as soon as practicable after discovery of the omitted or incorrect legend. [228] In addition, a free writing prospectus including the correct legend would have to be retransmitted by substantially the same means as, and directed to substantially the same prospective purchasers to whom, the free writing prospectus was originally transmitted. [229]

[v] *Treatment of Certain Communications Under Free Writing Prospectus Rules*

[A] Media Publications

Rule 433 under the Securities Act provides for special treatment of free writing prospectuses that are independently prepared and published by the media. When issuers or offering participants provide issuer or offering-related information to the media, its publication or broadcast (in any format) will constitute a free writing prospectus if the written distribution of such information by the issuer or offering participant would constitute a written offer. Except for

p. 3-73

p. 3-74

WKSIs, publication of such information prior to filing a registration statement would violate § 5 of the Securities Act, unless otherwise exempted.

For independently prepared media publications that are free writing prospectuses [230] and for which no payment is made or consideration given by or on behalf of the issuer or other offering participant, Rule 433 requires the issuer (or offering participant if appropriate) to file the publication with the required free writing prospectus legend within four business days after the issuer or offering participant becomes aware of its publication or first broadcast. For non-reporting and seasoned issuers, in these instances, the statutory prospectus would not be required to precede or accompany distribution of the free writing prospectus. [231]

[B] Offers on Websites

Rule 433 makes clear that an offer of an issuer's securities that is contained on an issuer's or offering participant's website, or hyperlinked by the issuer or offering participant from its website to a third-party website, is considered a written offer and, unless exempt, a free writing prospectus. In addition,

p. 3-74

p. 3-75

the information on the hyperlinked website could be part of that free writing prospectus.

[C] Historical Information on an Issuer’s Website

Historical issuer information that is properly identified as such and located in a separate section of an issuer's website containing historical information (*e.g.*, archives) would not be considered an offer (and, therefore, is not a free writing prospectus) even if accessed at a later time—unless such information is used or referred to (by hyperlink or otherwise) in connection with an offering, including by incorporation by reference.

[D] Term Sheets

A free writing prospectus (or portion thereof) that contains only a description of the issuer's securities being offered or of the offering, regardless of who prepared or used it, will not be subject to filing unless it reflects the final terms of the securities being offered or the offering and until final terms have been established for all classes in the offering. Thus, preliminary term sheets or other materials limited to describing the terms of the securities being offered that do not contain the final terms of those securities or the offering may be free writing prospectuses but will not be required to be filed. The filing of a final prospectus supplement under Rule 424 under the Securities Act will not satisfy the filing requirement for a final term sheet (despite the fact that the timing of the filing requirement will in many cases be the same for both documents). [232]

[vi] *Interaction of Communications Rules with Regulation FD*

As discussed in Chapter 4, Regulation FD (Fair Disclosure) requires that whenever an issuer intentionally discloses material nonpublic information, it must do so through a general public disclosure, and that whenever an issuer learns that it has made a non-intentional selective disclosure, it must make public disclosure of that information promptly. [233] Primary registered offerings of securities are generally not subject to Regulation FD, and the following disclosures made by an issuer in communications in connection with a registered securities offering are not subject to Regulation FD:

p. 3-75

p. 3-76

- a registration statement filed under the Securities Act for sales of securities by an issuer (but not for registration statements related only to secondary sales), including a prospectus included in such registration statement; [234]
- a free writing prospectus used after filing of a registration statement;
- a communication falling within the exception to the definition of prospectus contained in clause (a) of § 2(a)(10) of the Securities Act (for so-called "free writings");
- any other preliminary prospectus under § 10(b) of the Securities Act;
- a notice permitted by Rule 135 or communication permitted by Rule 134 under the Securities Act; and
- an oral communication made in connection with a registered offering after filing of the registration statement.

At the same time, the Securities Offering Reform Release makes clear that many of the communications that are not deemed to be "offers"— *e.g.*, regularly released factual business information, regularly released forward-looking information or pre-filing communications—are subject to Regulation FD.

Though Regulation FD does not apply to foreign private issuers, compliance is indicative of best practice, and relevant to questions of insider trading. [235]

[d] The Post-Effective Period: After a Registration Statement Becomes Effective

The SEC has a long-standing position that so long as an issuer is "in registration" it should not engage in communication activity outside the prospectus that could be deemed an "offer." An issuer remains "in registration" after the effectiveness of a registration statement through the end of the period that prospectus delivery requirements apply. [236] Rule 174 under the Securities Act eliminates the prospectus delivery period required by §4(a)(3) of the Securities Act for issuers that are reporting companies immediately prior to the effectiveness of a registration statement; however, a prospectus is required to be delivered by dealers in the case of unsold allotment securities and in the case of initial public offerings for 25

p. 3-76

p. 3-77

days in the case of securities listed on a national securities exchange and for 90 days in the case of securities not so listed, measured from the later of the *bona fide* offering date and the effective date of the registration statement. [237]

In order to avoid publication of information by a company in registration that could constitute an impermissible offer, issuers should not initiate investor relations or new publicity efforts following an IPO during the prospectus delivery period. [238] Issuers can respond to legitimate inquiries for information about the company's financial condition and business operations, but such communication should be limited to factual information and should not include such things as predictions, projections, forecasts or opinions with respect to value. [239]

Rule 134, discussed above in § 3.02[3][c][i], also permits an issuer to advertise its public offering after the filing of the registration statement in a press release. Typically, such press releases are used to announce a successful offering and are therefore released after pricing following effectiveness of the registration statement. Underwriters also often publish a limited advertisement known as a "tombstone ad" after a successful offering. Tombstone ads are subject to the same, Rule 134-based limitations as to content if issued when communication restrictions continue to apply during the post-effective period.

[e] Research Reports [240]

The issuance of research reports during, or in connection with, an offering, even an IPO, historically has been a customary market practice outside the United States. [241] In the context of U.S.-registered IPOs, however, research reports generally are not distributed in or into the United States because of liability concerns and, except with respect to EGCs, [242] restrictions in § 5 of the Securities Act. [243] In the context of U.S. registered offerings by U.S. reporting

p. 3-77
p. 3-78

issuers or certain eligible foreign private issuers (as defined below), the distribution of research reports in or into the United States is permissible under § 5 of the Securities Act, provided the conditions of certain nonexclusive safe harbors are met, but is still subject to prudential restriction because of liability concerns.

To ensure compliance with rules governing the content and dissemination of research reports, the practice in global offerings is to distribute research report guidelines to all offering participants. [244]

[i] *Research Reports in the Context of U.S.-Registered IPOs*

In the context of U.S.-registered IPOs, underwriting syndicates, for the reasons discussed above, generally prohibit the release of research reports in or into the United States during a prescribed blackout period, which typically runs until the later of (i) completion of the distribution of securities that are the subject of the offering and (ii) 25 calendar days [245] after the pricing date of the offering. In the context of global offerings with a U.S. registered component, underwriting syndicates may permit the release of research reports outside the United States (subject to applicable local law requirements). [246]

[ii] *Research Reports in the Context of U.S.-Registered Offerings by U.S. Reporting Companies or Foreign Private Issuers Meeting Certain Conditions*

Underwriters for an offering by a publicly traded company often will have issued research reports about the company and may wish to update those reports in advance of or during an offering. The SEC recognizes that research is essential to an efficient market. Nevertheless, it believes that investors purchasing securities in a registered offering should rely primarily on disclosure in the prospectus and any free writing prospectus.

Accordingly, the SEC has promulgated limited, nonexclusive safe harbors under the Securities Act with respect to the dissemination of certain communications around the time of an offering that protect broker-dealers participating in

p. 3-78
p. 3-79

the offering from § 5 liability if they distribute research reports regarding the issuer at these times but only if specified conditions are satisfied. The exceptions that allow the publication of research reports and other information during a U.S. public offering acknowledge that, in the case of seasoned issuers, the policy of ensuring that offers to investors are made only on the basis of the disclosure in the prospectus is outweighed by the importance of keeping such issuers' existing shareholders and the market informed. Such issuers have a wide market following, and most investors already have much information about them. [247]

[A] Research Reports by Broker-Dealers Participating in the Offering

Provided certain conditions are met, Rule 139 under the Securities Act permits broker-dealers that are or will be participating in a U.S. public offering of securities to publish research reports [248] about an issuer [249] or its securities at any time during the offering (*i.e.*, whether before or after filing of the registration statement or before or after effectiveness of such registration statement).

The issuer must be a seasoned reporting company under the Exchange Act (*i.e.*, eligible to use Form S-3 or Form F-3) or a foreign private issuer that satisfies the following criteria: (i) it meets the registrant eligibility requirements for the use of Form F-3 other than certain reporting history requirements, (ii) it meets the Form F-3's public float requirement or is offering nonconvertible securities other than common equity and (iii) it has had securities trading on a "designated offshore securities market" (as defined in Regulation S under the Securities Act) for at least 12 months or has a worldwide market value of its outstanding common equity held by nonaffiliates of $700 million or more (such an issuer, an "Eligible Foreign Private Issuer"). [250] To take advantage of the Rule 139 safe harbor, research reports on the issuer must be published in the regular

p. 3-79
p. 3-80

course of the broker-dealer's business and cannot represent the initiation of coverage on the issuer or its securities or the reinitiation of such coverage following a previous discontinuation. [251]

Rule 139 also permits broker-dealers that are or will be participating in a U.S. public offering of securities to publish research reports about the issuer's industry at any time during the offering (*i.e.*, whether before or after filing of the registration statement or before or after effectiveness of such registration statement), provided certain conditions are met. For industry reports, (i) the issuer [252] must be a reporting company under the Exchange Act or an Eligible Foreign Private Issuer, (ii) the research report must include similar information with respect to a substantial number of issuers in the issuer's industry or contain a comprehensive list of securities recommended by the broker-dealer, (iii) the analysis regarding the issuer or its security should be given no greater prominence than that given to other securities or issuers and (iv) the broker-dealer must publish such research reports in the regular course of its business and, at the time of publication, is including similar information about the issuer or its securities in similar reports. [253]

[B] Research Reports by Broker-Dealers About Securities Other Than Those Being Offered

Broker-dealers that are or will be participating in an offering of securities of an issuer [254] may also publish at any time during the offering (*i.e.*, whether

p. 3-80
p. 3-81

before or after filing of the registration statement or before or after effectiveness of such registration statement) certain information with respect to certain other securities of the issuer, [255] provided that the issuer is a reporting issuer current in its Exchange Act reports or an Eligible Foreign Private Issuer. [256] In addition, the broker-dealer must have previously published or distributed, in the regular course of its business, research reports on the types of securities that are the subject of the reports (though not necessarily securities of the subject issuer). [257]

[iii] *Research Reports by Broker-Dealers Not Participating in the Offering*

A broker-dealer not participating in an offering of securities (whether in the context of U.S registered IPOs or U.S. registered offerings by U.S. reporting companies or foreign private issuers meeting certain conditions) may publish research with respect to such securities at any time during the offering (*i.e.*, whether before or after filing of the registration statement or before or after effectiveness of the registration statement) if such broker-dealer (i) is not compensated for such publication by persons participating in the offering, (ii) is not acting under any direct or indirect arrangement or understanding with the issuer, any selling securityholder, any participant in the distribution of the securities or any other person interested in the securities and (iii) publishes the research report [258] in the ordinary course of its business. [259]

[iv] *Research Reports in the Context of U.S.-Registered Offerings by EGCs*

p. 3-81
p. 3-82

The JOBS Act provides that pre-deal research reports on an EGC do not violate the "gun-jumping" restrictions in the Securities Act. This exemption from the gun-jumping restrictions applies to all public offerings of common stock by EGCs (not just EGC IPOs). The JOBS Act provides that the publication or distribution of a research report by a broker or dealer about an EGC that is the subject of a proposed public offering of common stock pursuant to an SEC registration statement does not constitute an offer for sale or offer to sell a security for purposes of § 2(a)(10) or § 5(c) of the Securities Act, regardless of whether the registration statement has been filed or is effective, and regardless of whether the broker or dealer will participate in the offering. [260]

This lifting of prohibitions on underwriter research is more expansive than the safe harbor provided by Rule 139 under the Securities Act for pre-offering research, which is designed to permit the continuation of ordinary course research on companies that are already publicly traded. The definition of "research report" as used in the JOBS Act is also broader than the definition of "research report" used in Rule 139, in that it includes oral communications. This difference is rooted in the difference in objectives between the JOBS Act (fostering research coverage of EGCs to facilitate their common stock offerings) and Rule 139 (not interfering with ongoing publication of research reports).

By eliminating research reports on EGCs from the definition of "prospectus" in § 2(a)(10) of the Securities Act, the JOBS Act also affects the liability regime of the Securities Act, because research reports on EGCs are no longer subject to liability for material misstatements or omissions under § 12(a)(2). Because § 12(a)(2) refers separately to oral statements, however, materially defective oral communications may still fall within § 12(a)(2)’s liability provisions, whether or not they are research reports. In addition, research reports will still fall within the definition of "offer" covered by the antifraud provisions of § 17 of the Securities Act enforceable by the SEC.

Significantly, the JOBS Act also does not limit the potential for federal securities law antifraud liability for research reports under § 10(b) of the Exchange Act. Accordingly, underwriters generally are unwilling to accept the liability risk associated with publishing research concerning EGCs that is permitted by the JOBS Act.

[v] *Distribution of Research Reports Outside the United States*

p. 3-82
p. 3-83

The restrictions resulting from § 5 of the Securities Act do not apply to activities abroad with respect to concurrent offerings outside the United States by non-U.S. issuers, so long as those offerings are being made in reliance on the exemption from the registration requirements of § 5 provided by Regulation S under the Securities Act. Thus, so long as research reports are isolated from the United States, they should not be restricted by § 5 of the Securities Act. [261] Isolation is generally accomplished by limiting mailings to addresses outside the United States, placing a restrictive legend [262] on the face of the reports and

p. 3-83
p. 3-84

sending a cover letter or other form of notice together with each report that highlights the prohibitions against distribution to U.S. persons or into the United States. [263]

[vi] *Disclosure Liability Applicable to Research Reports*

One issue that must be considered in connection with the issuance of research reports, including in particular Rule 138 or Rule 139 research reports by broker-dealers participating in a U.S. public offering, is the potential liability associated with the contents of such reports. There is a risk that an investor might sue the distributor of the research report, and possibly the issuer, on the basis of any material misstatements or omissions in the report. Because Rule 138 and Rule 139 provide that covered research reports are not "offers for sale" or "offers to sell" for purposes of §§ 2(a)(10) and 5(c) of the Securities Act, liability for any material misstatement or omission would arise principally under § 10(b) of the Exchange Act and Rule 10b-5 thereunder. [264] Although the preparer of the report might be willing to accept the potential liability risks associated with the contents, because it presumably has satisfied itself as to their accuracy, the issuer also might be held liable for such contents if it has been involved in the preparation of the report (including by holding informational meetings with brokerdealers or otherwise providing comments to the report). [265]

p. 3-84

p. 3-85

In the past, the practices of U.S.-based investment banking firms and their non-U.S. affiliates on the one hand, and their European-based counterparts on the other, diverged with respect to the distribution of research relating specifically to an issuer that is the subject of an offering. While many European financial houses routinely distributed such research in the United States if Rule 139 was available (subject to a "blackout period," typically of one to two weeks prior to distribution of the preliminary prospectus), most U.S. firms did not distribute such research in the United States even where Rule 139 was available due to liability concerns (although a number of U.S. underwriters countenanced industry-wide research that merely referred to the issuer). [266] Increasingly, however, U.S. firms have been willing to distribute research during an offering in reliance on Rule 139, in some cases stripping out the recommendation with respect to the issuer's securities to attempt to minimize liability concerns.

These liability concerns, and the resulting restrictions on the distribution of research, have created a regulatory dilemma in the United States and elsewhere. The reluctance of market participants to provide forward-looking information, such as projections and forecasts, in a prospectus filed as part of a registration statement [267] means that forward-looking information is frequently available to investors only orally from members of the syndicate and through research reports. Not only do restrictions on this information impede investor access to forecasts, but brokers' salespeople are frequently pressed to inform clients orally of the view of the in-house analyst even when research reports are not being distributed. Under these circumstances, investors often get an oversimplified view of the analysts' impressions, without the detailed and nuanced analysis that a written report would provide.

[vii] *Publicity Considerations Concerning Internet Communications*

p. 3-85

p. 3-86

Under the Securities Act, communications via the Internet are treated as written communications, like those in newspapers or other traditional media. Issuers restrict publicity during an offering and are similarly advised not to establish or expand websites during the period that publicity restrictions may be in effect—typically until the end of the prospectus delivery period. [268] However, consistent with the ability of issuers to disseminate ordinary course corporate communications not relating to an offering under the standard U.S. publicity restrictions, issuers may continue to use an existing website during an offering for ordinary course communications, as long as that information does not conflict with information in the prospectus for the offering. [269] Press releases that can be issued pursuant to Rules 134, 135, 135c, 168 and 169 under the Securities Act, [270] and the preliminary and final prospectuses, can also be posted on an Internet site. [271]

U.S. restrictions on the distribution of research apply equally to the distribution of research over the Internet. Research reports of the type intended for distribution exclusively outside the United States cannot be posted to a website, unless measures are implemented to ensure that the reports cannot be accessed in the United States. However, research reports complying with the provisions of Rules 138 and 139 under the Securities Act may be placed on the Internet sites of broker-dealers without the research being deemed an "offer" for purposes of § 5 of the Securities Act. These rules, however, do not permit an issuer to publish or distribute the same information on its website. [272]

[4] Global Offerings and Interaction with U.S. Public Offering Requirements

p. 3-86

p. 3-87

U.S. rules and regulations have imposed a standard pattern on registered public offerings in the United States, and much of the complexity of global offerings involving U.S.-registered offerings is generated by the way in which foreign regulatory regimes impose conflicting patterns. In many cases, the non-U.S. component of a global offering is made in a way that is exempt from the application of the regulations that would apply to an offer to the public in the foreign countries in which the global offering is made. The exemption typically relied on in many countries is the so-called "professionals" exemption, which in certain circumstances permits offers and sales of securities to be made to institutions and other market professionals with few regulatory requirements. If the international offering includes a public offering in one or more national markets, however, various registration and regulatory requirements of that country may apply, and these requirements will have to be integrated with the U.S. rules. In such a situation, complex issues are likely to arise that will have to be identified and resolved at an early stage in the offering process.

[a] The U.S. Registration of Securities Offered and Sold Outside the United States

When a global offering involves a U.S. public offering and the issuer is a foreign issuer, the issuer and the underwriters must decide whether any of the shares to be offered and sold outside the United States should be registered under the Securities Act. So long as the offerings outside the United States are made in accordance with Regulation S under the Securities Act, there is generally no need to register the securities that are offered and sold abroad. [273] However, because regional demand often cannot be anticipated completely accurately at the time of registration, underwriters typically will register more securities than they expect to place in the United States. Moreover, the registration of some of the shares

p. 3-87

p. 3-88

offered and sold abroad would permit resales into the U.S. market that are required to be registered, for example, by dealers that purchase the securities in the offering outside the United States and wish to sell them immediately in the United States during the prospectus delivery period mandated by § 4(a)(3) of the Securities Act. For offerings of securities expected to trade primarily in a market outside the United States, the amount of additional securities registered is typically about 10% to 15% of the tranche of securities being offered outside the United States. Foreign issuers whose securities are expected to be traded primarily in the United States should register a significantly higher percentage (and perhaps all) of the offering.

The number of shares that will be offered in the United States generally is estimated at the time the registration statement is initially filed and that number (together with a percentage of the shares offered outside the United States to take account of possible resales of shares into the United States when securities dealers are required to deliver a prospectus by § 4(a)(3) of the Securities Act) is registered under that registration statement. [274] The number of shares to be registered may be increased by an amendment to the registration statement prior to its effectiveness, but, except for automatic shelf registration statements and certain registration statements filed by investment companies, once a registration statement is effective, additional securities (including securities of the same class) can only be registered by filing a new registration statement. [275]

p. 3-88

p. 3-89

Regardless of whether any or all of the international shares are to be registered, the registration statement in a global offering need not contain the prospectus to be used abroad because the initial offers and sales outside the United States are not required to be registered, [276] and, accordingly, the obligation to use a prospectus that complies with the requirements of the Securities Act does not apply to them. The registration statement should state clearly in these circumstances that it only covers offers and sales initially made in the United States and, if international shares are being registered, resales into the U.S. market when a registration statement is required to be in effect or a U.S. prospectus delivered. [277]

[b] Offering Documentation in a Global Offering with a U.S.-Registered Component

p. 3-89
p. 3-90

In the case of a U.S.-registered offering, the offering documentation consists of the relevant registration statement and prospectus and any free writing prospectuses. Preparation of the prospectuses or other offering documentation to be used in the various countries in which a global offering will be conducted can take a great deal of time. A global offering, in particular one with multiple listings, will often involve at least two prospectuses, one for the home market of the issuer, typically prepared in connection with a retail offering or listing pursuant to home market rules and in the local language, and a second, international prospectus, usually prepared in English for institutional investors outside the home market. [278] There are many variations on this theme: multiple prospectuses for public offerings in various countries outside the home market (*e.g.*, Japan and the United States) prepared in accordance with public offering rules in those countries; a separate international version of the prospectus prepared for use in the U.S. public offering component of the offering; a single "global" prospectus used in every jurisdiction, and so on. [279]

While offering participants generally make an effort to make the contents of each prospectus substantively consistent, the judgment in that regard needs to take into account the incremental risks that that will entail as further described below. If home-market rules require particular information that is not required in the United States, should it be included, even if unusual, in a U.S. prospectus? What if the information required abroad seems too risky to include from a liability standpoint in a U.S. prospectus (such as financial projections)? The answers to these questions can vary depending on the circumstances. The typical approach is to include all information required in the home-market prospectus in the U.S. and international prospectuses if it does not raise U.S. liability concerns, and to exclude immaterial or irrelevant information and, in some cases,

p. 3-90
p. 3-91

information that raises U.S. liability concerns. An example of frequently excluded immaterial or irrelevant information is home-country GAAP financial information required in the home market but not in the United States or elsewhere (*e.g.*, parent company (unconsolidated) financial statements are required in many jurisdictions but not in the United States). [280] Such information is often excluded from the U.S. and international prospectuses on the grounds that it adds little, if anything, to a U.S. or international investor's understanding of the issuer, and it sometimes can be confusing (especially if the local GAAP information is very different from U.S. GAAP or IFRS). In some instances, such additional financial or other information has been included as an annex to the prospectus, headed by a legend that it is being included to comply with home-market statutory or regulatory requirements or home-market practice.

Financial projections required in some markets are a much trickier proposition. Although U.S. rules require discussion of known material trends and uncertainties in respect of financial results and performance, they do not require projections. Accordingly, there is a risk that if projections are published by the company elsewhere and not included in the U.S. prospectus, the U.S. prospectus will then be viewed as having omitted a material fact necessary to make the statements therein not misleading, giving rise to potential liability. [281] If projections are more negative than an investor would otherwise expect from the historical financial information included in the prospectus, then inclusion of those projections would appear necessary to comply with the trend requirement. Where, however, the projections are either consistent with or more favorable than historical information would suggest, including them may subject the issuer to liability under § 11 of the Securities Act and a duty to update. [282] The typical approach in order to avoid this dilemma is to attempt to convince the local regulators that financial projections should not be included given the global nature of the offering and the fact that they would not customarily be included in the prospectuses

p. 3-91

p. 3-92

for other parts of the world. This argument is often accepted by regulators, although it may be necessary to include, in lieu of projections, an "outlook" or similar section in which the issuer's prospects are presented in a narrative form, without specific financial projections. Where financial projections cannot be avoided in the home market, consideration should be given to potential liability concerns, on the one hand, and whether omission of the information would cause any required information or any other information in the prospectus to be misleading. [283]

An important logistical question is which prospectus will be the "master" document from which other versions will be copied or translated. The local market prospectus is sometimes chosen as the lead document. If the international and U.S. markets are expected to play a very substantial role in the offering, the international or U.S. offering prospectus may be the primary focus, with translations into other languages prepared when the English draft has matured to an appropriate stage. This approach is especially common where a U.S. public offering prospectus is being prepared.

The timing issues can be quite complex when multiple public offerings are involved and regulators in more than one country each must review a prospectus prepared in accordance with their rules. Much advance planning is needed to ensure that all preliminary filings are done in time, that comments by each regulator can be addressed effectively in each prospectus before it is finalized and that any necessary approvals can be obtained in order to facilitate commencement of the offering on a global basis at the same time. [284]

Special attention also must be paid to the regulatory process in the home market insofar as it relates to whether there will be a final prospectus, or only the original one circulated to investors. In U.S. public offerings, the preliminary prospectus circulated to potential investors in an IPO would contain an indicative price range, the final price would be conveyed to investors either orally or through a free writing prospectus following the effectiveness of a registration statement but prior to the time of sale, and a final prospectus, including all pricing information, would be filed with the SEC in accordance with Rule 424 under the Securities Act. [285] This is not true in many other jurisdictions, where there is

p. 3-92

p. 3-93

only one prospectus circulated in connection with the bookbuilding, subscription or other marketing process. If changes need to be made to update information provided in the U.S. preliminary prospectus through a free writing prospectus or otherwise, conflicts can arise between jurisdictions because there is no mechanism for amending or updating the prospectus in certain markets.

The amount of time needed to translate a prospectus into another language should not be underestimated. If an outside translation service is used, for example, a considerable amount of time and effort might be necessary to refine the translation, such as in relation to descriptions of technical aspects of a business. Agreement should be reached early in a transaction as to which party will take responsibility for the accuracy of any translations.

Finally, the due diligence and verification procedures customary in each jurisdiction are likely to be different in certain respects. [286]

[c] Publicity Considerations in the Context of a Global Offering

It may be useful to contrast the U.S. and U.K. rules on publicity in order to highlight some of the difficulties that arise in global offerings. The United Kingdom, like many other jurisdictions, permits much more publicity about an initial public offering outside the offering document than does the United States. Large global equity offerings in the United Kingdom and elsewhere in Europe sometimes have been preceded by full-scale media advertising campaigns and distributions of brochures describing the issuer and the offering process. Such advertising is permitted if certain procedural requirements are followed. English law also permits unlimited communications that are invitations or inducements to subscribe for securities that do not comply with such procedural requirements so long as they are addressed only to persons falling within certain exemptions, the most commonly used of which are for communications made to or directed at investment professionals and high net worth individuals. These sorts of communications could in fact be widely available—on publicly available web pages, for example—but because they are expressly addressed only to investment professionals and high net worth individuals (by way of a legend), and because any

subsequent offer and actual sales of the securities would only be made to qualified investors under the United Kingdom's Prospectus Rules, widely available communications that would not be permissible under U.S. rules are permissible in the United Kingdom. Conflicts between the U.S. and other systems can arise in global offerings, especially by non-reporting issuers, because, except in limited circumstances, [287] the U.S. securities laws require that publicity efforts by non-reporting issuers be restricted to jurisdictions outside the United States. Difficulties can develop, for example, if advertisements are placed in publications that are also distributed in the United States. For these publications, steps must be taken to prevent the publication in their U.S. editions of advertising materials that could constitute an offer. In some transactions, offering participants have sought to document their efforts to avoid U.S. publicity by getting certain publications to agree in writing not to publish advertisements in specified jurisdictions. [288]

The SEC is particularly sensitive about such matters. In a global equity offering involving a U.K. issuer, where advertisements prepared for publication outside the United States inadvertently appeared in the U.S. edition of *The Financial Times*, the SEC expressed concern and requested an explanation from the offering participants. Despite the liberalization of publicity rules that resulted from the Securities Offering Reforms, the U.S. prohibition against pre-offering publicity for unseasoned issuers and non-reporting issuers will continue to prevent offering participants from placing paid advertisements in U.S. publications or U.S. editions of non-U.S. publications.

As discussed above, SEC rules provide a number of exceptions to the restrictions on publicity related to an offering, especially with respect to activities conducted outside the United States by foreign issuers. Rule 135 under the Securities Act permits an issuer to disclose certain limited information in advance of the filing of a registration statement, while Rule 134 under the Securities Act permits certain limited communications by any party after the filing of a registration statement. [289] In contrast to limitations on information about the offer, routine corporate communications for purposes other than inducing the purchase or sale of the securities being distributed that are consistent with past practice are generally permissible under either Rule 168 or Rule 169 under the Securities Act, subject to certain conditions. [290] Thus, press releases published

with reasonable regularity regarding financial results or the occurrence of material events with respect to an issuer can generally be issued in the ordinary course of business.

In the case of large, high-profile offerings, restrictions on publicity may become prudent far in advance of the actual offering, especially where there is intense market interest in the offering. In these circumstances, the broad ambit of § 5 of the Securities Act will always create some uncertainty as to whether even "normal" publicity activities could be viewed as offering activities or efforts to condition the market, even following the adoption of certain provisions of the Securities Offering Reforms intended to facilitate greater availability of information to investors and the market. This in turn may lead the issuer to modify its behavior in a way that is detrimental to the flow of information to the market (*i.e.*, by withholding information that in the ordinary course it would otherwise make public), an unintended result of the U.S. restrictions.

As a technical matter, the U.S. restrictions regarding publicity and the other restrictions resulting from § 5 of the Securities Act do not apply to activities abroad with respect to concurrent offerings outside the United States by non-U.S. issuers, so long as those offerings are being made in reliance on the exemption from the registration requirements of § 5 provided by Regulation S under the Securities Act. Regulation S permits advertisements in connection with offerings outside the United States so long as they are not contained in a publication with a "general circulation" in the United States. [291] Moreover, Preliminary Note 9 of Regulation S states expressly that nothing in it "precludes access by journalists for publications with a general circulation in the United States to offshore press conferences, press releases and meetings with company press spokespersons in which an offshore offering is discussed, provided that the information is made available to the foreign and United States press generally and is not intended to induce purchases of securities by persons in the United States." [292] Customary practices in foreign markets, such as the preparation and distribution of research reports in connection with an offering, full-scale television and press advertising campaigns or the use of offering incentives, as occurred in several of the U.K. privatizations, [293] are not intended to be affected by Regulation S.

Notwithstanding these provisions of Regulation S, prior to 1997, significant uncertainty surrounded the question of whether and when representatives of publications with a general circulation in the United States could participate in offshore press activities, especially one-on-one interviews. Offering participants had been uncertain about what activities might be construed as being "intended to induce purchases … by persons in the United States." [294] Partly in response to this uncertainty, in 1997 the SEC adopted Rule 135e, which contains a safe harbor for foreign private issuers and foreign governments that invite journalists to participate in such activities so long as:

- the relevant activity is conducted offshore; [295]
- at least part of the offering is conducted outside the United States; [296]
- access to the offshore press activities is provided to members of the U.S. and foreign press; and
- any offering-related materials provided to the press that may be of significant interest to U.S. investors contain a prescribed cautionary legend. [297]

p. 3-96

p. 3-97

In connection with the general access requirement, the SEC's adopting release clarified that this requirement does *not* prohibit one-on-one meetings with representatives of U.S. publications, or of publications with a general circulation in the United States, so long as prior or subsequent thereto the issuer or its representatives conduct offshore a press conference to which both the U.S. and foreign press are provided access. [298]

Rule 135e has had a beneficial effect on market practice regarding the limitations on publicity imposed on foreign issuers outside the United States, clarifying the scope of permissible press communications and substantially liberalizing the ability of foreign issuers to conduct one-on-one interviews with members of the U.S. and non-U.S. press. Precisely because Rule 135e has had a liberalizing effect, however, foreign issuers and underwriters must continue to pay careful attention to the content of any permitted publicity. Even if statements abroad are exempt from the prohibitions of § 5 of the Securities Act by virtue of Regulation S, Rule 135e or another applicable rule, the SEC may require them to be reflected in a U.S. registration statement if the SEC staff deems them material, they have not yet been reflected in the U.S. disclosure document and the Regulation S offering is in conjunction with a registered offering in the United States; this risk is particularly significant in the case of public statements involving forward-looking information. The SEC staff has been vigilant in this regard and carefully scrutinizes offshore press activities by monitoring the Internet and otherwise in connection with registered offerings to detect the offshore release of information during an offering that is not contained in the registration statement. [299] Also, to the extent that communications by issuers or underwriters

p. 3-97

p. 3-98

permitted by Regulation S or Rule 135e are reported in the United States, transaction participants may find themselves liable under U.S. law for material misstatements or omissions in the communication. [300] Because of the SEC's vigilance in this area, U.S. legal advisers generally caution issuers and their underwriters that statements made under Rule 135e should be limited to those they are prepared to have included in the statutory prospectus or a free writing prospectus and warn that strict measures should be adopted to ensure that

p. 3-98

p. 3-99

research reports prepared in connection with the offering outside the United States do not find their way into the United States, including by way of the Internet.

The declining importance of U.S.-registered portions of global offerings and the substitution of, for example, Rule 144A offerings to large U.S. institutional investors have reduced the influence of the SEC and the risk to global offerings in respect of these concerns. In addition, the 2012 change to Rule 144A to eliminate the prohibition on offers to non-QIBs allows for publicity in the United States in offerings made in reliance on both Rule 144A and Regulation S. While market participants have not significantly changed offering practices as a result of this liberalization, the concern about non-U.S. communications potentially violating Rule 144A no longer exists. Offering participants that use the flexibility to publicize the 144A portion of the offering in the United States also need not worry about violating Regulation S's prohibition on directed selling efforts so long as the publicity efforts are not directly or exclusively targeted at non-QIB U.S. persons who could not otherwise participate in the offering.

U.S. and non-U.S. underwriters will often coordinate publicity efforts and agree to restrictions on the timing and nature of offering-related publicity efforts across jurisdictions to ensure compliance with U.S. and foreign laws and practices. The global coordinator for the offering is likely to take steps to ensure a unified presentation of the offering to the market. Such steps often include insisting that the underwriters in all syndicates conduct their marketing efforts on the same schedule and that all syndicates follow rules imposed by the global coordinator to preclude any syndicate or group of underwriters from gaining a marketing advantage; however, in a number of cases the syndicates will agree that marketing or premarketing efforts permitted in one jurisdiction can begin prior to the global marketing effort.

Publicity guidelines prepared by U.S. legal advisors in a global offering by a non-U.S. issuer will typically seek to isolate publicity conducted outside the United States. In the case of corporate communications, the isolation is generally accomplished by imposing limitations on contacts by an issuer with members of the press and investment analysts located in the United States, by imposing procedures to ensure that contacts with the press and investment analysts outside the United States do not give rise to publicity in the United States and by limiting the contents of commercial announcements in the United States and communications with U.S. shareholders and employees to certain factual information. [301]

p. 3-99

p. 3-100

One issue that sometimes arises in connection with an initial U.S. listing by a foreign issuer is the desire of company management to conduct interviews in New York with members of the media at or near the time of the listing ceremony. Unless any publication of such interview or the information provided therein does not constitute an offer of securities [302] or qualifies under Rule 134, such publication may violate the publicity restrictions of § 5 of the Securities Act unless it can be treated as a media free writing prospectus under Rule 433 under the Securities Act. For a non-reporting issuer, such a free writing prospectus would be permissible if, among other things, (i) the issuer has not paid or given other consideration for the independently prepared media communication and (ii) the issuer's statutory prospectus has previously been filed with the SEC. [303]

In addition, although as a legal matter management of a non-reporting company may, in appropriate circumstances, be able to conduct an interview in connection with the company's listing, practical considerations must also be taken into account. Indeed, a significant concern that can arise in connection with a listing interview is that information not be given to the market that was not contained in the registration statement or otherwise conveyed to investors. Prior to the adoption of the Securities Offering Reforms that permitted the use of media free writing prospectuses, the disclosure of such information was in fact the concern most frequently raised about such interviews by the SEC staff. The disclosure of new or different information in a listing interview that was not previously provided to investors is still a relevant consideration under Rule 159, which focuses for liability purposes on the information conveyed to investors at or prior to the time of sale. [304] Advisors generally seek to ensure that such interviews, if conducted, do not go beyond factual information contained in the registration statement or already otherwise conveyed to investors.

Furthermore, in concurrent U.S. and international offerings, U.S. securities counsel have traditionally permitted foreign issuers to post prospectuses and other offering information relating to the international offering on a website, provided, prior to filing of the registration statement with the SEC, that:

p. 3-100

p. 3-101

- such information is not in English;
- the information can be viewed only after confirmation by the person seeking access to such information that he or she resides outside the United States; [305]
- the first page encountered on the website displays a prominent legend in English, stating that the offering information on the website is intended to be available only to residents of countries other than the United States; [306] and
- subsequent pages of the website bear a legend in English indicating that the information contained is not for distribution in the United States.

Securities counsel have also permitted foreign issuers to post English-language prospectuses and other offering information relating to the international offering prior to filing of the registration statement, but only where access can be gained solely by persons holding passwords allocated to non-U.S. residents. Counsel generally advise that offering information not be communicated via electronic mail (unless it cannot be forwarded or copied), unless it is limited to information contained in a press release or notice complying with Rule 134 or Rule 135 under the Securities Act, the communication is being treated as a free writing prospectus or, in the case of a global offering with an unregistered international tranche, procedures are in place to ensure that each of the recipients of the electronic mail is resident outside the United States. Dissemination that is not controlled to specifically identified addressees should be prohibited.

[5] Structure of Underwriting Arrangements

p. 3-101

p. 3-102

Public offerings of securities in the United States are generally made through a syndicate of underwriters led by one or more "book runners" or managing (or "lead") underwriters (some or all of whom are sometimes referred to as "representatives"). The underwriting agreement, which defines the relationship between the issuer and the underwriters, is generally prepared in preliminary form by counsel for the underwriters and is required to be filed as an exhibit to the registration statement (in the case of an offering pursuant to a shelf registration statement, through a filing following execution of the underwriting agreement that is incorporated in the registration statement by reference). It is not finalized until the "pricing" of the offering, when the issue price, underwriters' compensation and other final terms are fixed. At that time, the agreement is generally signed by the representative or representatives on behalf of the underwriting group.

In the underwriting agreement, the underwriters agree, subject to specified conditions, to purchase the offered securities on a set future closing date. Each underwriter of a U.S. offering is responsible to the issuer only for its individual underwriting commitment. [307] The underwriting agreement typically includes representations and warranties by the issuer regarding the material accuracy of the registration statement and the prospectus and the issuer's legal status and financial condition. The agreement also describes in detail the conditions to be fulfilled by the issuer prior to the closing, including delivery of legal opinions, officers' certificates and other documents.

Global distributions often are made by a single underwriting syndicate, which may comprise U.S. and non-U.S. underwriters, though on occasion they may be conducted by two or more regional underwriting syndicates. [308] When a

p. 3-102
p. 3-103

multiple syndicate structure is used, one syndicate customarily will cover the issuer's home market, while another syndicate will cover the rest of the world. Separate syndicates also may be formed to cover public offerings or significant private placements in particular countries, such as the United States. [309] Syndicate activities generally are overseen by one or more banks acting as global coordinators, whose responsibilities include negotiating the underwriting agreement with the issuer and/or selling shareholders, carrying out due diligence, managing stabilization activities and overseeing offering publicity. [310]

When a multiple syndicate structure is used, the syndicates usually enter into an intersyndicate agreement providing for coordination and allocation of geographic markets among them. [311] Lead managers are generally appointed to oversee each syndicate, while the global coordinators oversee all the syndicates, often maintaining a position through an affiliate in each syndicate in order to be able to monitor more closely their respective levels of demand and bookbuilding activities.

[a] Settlement

p. 3-103
p. 3-104

In U.S. underwriting agreements, the closing date is generally the third (in the case of debt offerings) or fourth (in the case of equity offerings) business day after pricing. [312] The SEC has proposed an amendment to the Exchange Act rule governing standard settlement cycles [313] that, if adopted, would shorten the standard settlement cycle in the United States for certain securities transactions, including underwritten offerings of debt securities that price on a customary timetable, from third business day settlement to second business day settlement. [314]

[b] *Force Majeure* Clauses

Termination provisions (sometimes known as "*force majeure* clauses") included in underwriting agreements for domestic offerings in the United States have generally limited underwriters' grounds for termination to a fairly narrow scope. [315] One reason has been the position of the SEC staff that a *force majeure* clause permitting an underwriter to terminate its obligations upon (i) the occurrence of immaterial events affecting the issuer or the securities markets in general or (ii) an inability to market the securities would cause the offering to be characterized as a "best efforts" or contingent offering. [316] As a result, in contrast to firm commitment underwritings, such offering would become subject to the requirement that customer funds be escrowed and to certain other restrictions. [317]

p. 3-104
p. 3-105

Underwriters have also been willing to accept limited *force majeure* clauses for U.S. domestic offerings because they are at risk only during the limited period [318] between the signing of the underwriting agreement and the closing. In contrast, the length of time between the signing of the underwriting agreement and the closing of an offering outside the United States varies depending on the jurisdiction and the type of securities offered. [319] The period of underwriting risk in global offerings following the U.S. pattern is now generally limited to a three- to five-business day period between pricing and closing. However, significant differences in the nature of the risk accepted by underwriters continue to exist. In a standard offering by a private issuer, the underwriting agreement typically contains a *force majeure* clause that permits an underwriter to terminate its obligations in the event of significant market upheaval, suspension of trading of the issuer's shares or acts of war and the like. [320] Thus, if there is a sharp downturn in market conditions between the signing of the underwriting agreement and the closing as a result of any of the events specified in the *force majeure* clause, the underwriters have the ability to walk away from the transaction. [321] Underwriters tend to view the unilateral right to declare a *force majeure* event and to terminate the transaction as a fundamental part of the protections provided them by the underwriting agreement. [322]

In some markets where a local retail offering accompanies the international offering, the closing of the retail offering may occur before the closing of the international offering. In such instances, it may not be possible to terminate the offering once the retail offering has closed, and underwriters have, at least in markets where this result is unavoidable, accepted the result that there is no right of termination between the closing of the retail offering and the closing of the international offering. To mitigate this risk, underwriters would seek to shorten this gap.

[c] Indemnity Provisions

Generally speaking, indemnity provisions do not vary markedly between different types of offerings. [323] Where shares are being offered only by one or more of the issuer's shareholders or by both the issuer and one or more of its

p. 3-106
p. 3-107

shareholders, there is frequently considerable negotiation as to which party should indemnify the underwriters (or if both parties will do so, the level of their respective obligations). [324] As a general rule, most underwriters will seek a full

p. 3-107
p. 3-108

indemnity from both the issuer and the selling shareholders in such circumstances, although they may, depending on the relative bargaining strengths of the relevant parties, ultimately accept indemnities from the selling shareholders up to the gross proceeds to be received by them. A selling shareholder that is not involved in day-to-day management of the company— *e.g.*, a financial investor who does not exercise a significant degree of control over the company—can often limit the indemnity it provides to cover only information about itself that is included in the prospectus. Another possibility is to require the underwriters to pursue an indemnity claim against the issuer first, and then to proceed against the selling shareholder only if the indemnity claim is not satisfied by the issuer after a certain period.

[d] Lock-up Provisions

Lock-up provisions in underwriting agreements restrict the issuer and any selling shareholders from selling or announcing the intention to sell (without the prior written consent of the underwriters and subject to certain limited exceptions) any of the securities being offered or securities convertible into those securities, for a specified period. In equity offerings, directors, officers and major shareholders of the issuer typically enter into similar lock-up arrangements pursuant to individual agreements signed at the time the underwriting agreement is executed. There will often be some negotiation regarding which of the shareholders, directors and officers of the issuer will enter into a lock-up agreement and what carve-outs to the lock-up agreements will be granted in advance. The exceptions that permit the sale of locked-up securities before the termination of the lock-up period are often highly negotiated and tailored to the specific characteristics of the issuer and the type of securities being offered (although certain exceptions, such as the settlement of existing warrants or convertible securities by the issuer, or the transfer of securities as *bona fide* gifts from an officer or director, provided the recipient agrees to be bound by the lock-up terms, are relatively standard).

There are two main reasons for lock-up arrangements. The primary rationale is to prevent overhang and provide for an orderly market by limiting sales into the market while an offering is being absorbed. A second reason for the use of lock-up arrangements relates to the market's perception of the confidence in the issuer of the shareholders, directors and officers that are subject to the lock-up. A key to an offering's success is the market's belief that the share price will rise, and a perception that well-informed investors such as the issuer's management, directors or major shareholders are "cashing out" could significantly harm the price.

The lock-up period in equity offerings is usually 30-180 days (with IPOs tending toward the longer period) after pricing. Because overhang and market

p. 3-108
p. 3-109

perception are greater concerns in the context of equity offerings, the lock-up period in debt offerings is usually significantly shorter than in an equity offering and often limited to the time between pricing and closing. Some debt offerings are executed with no lock up at all, and lock-ups in debt offerings do not customarily apply to directors, officers or major securityholders.

Lock-up provisions used in the context of a public offering in the United States must be disclosed in the registration statement. FINRA also imposes certain obligations in respect of lock-up agreements. [325]

[e] Choice of Law

Generally speaking, the underwriting arrangements for a U.S.-registered offering by a foreign private issuer have almost always been governed by the laws of the State of New York (although in relatively rare instances, English law has governed). In global offerings with more than one syndicate, underwriters increasingly accept an underwriting agreement, especially for the home market, governed by the local law of the jurisdiction of the issuer or selling shareholder.

[f] Overallotment Options and Syndicate Short Sales

It is customary for offerings, especially of equity securities, to be accompanied by "overallotment," whereby the managing underwriter is given the authority by the underwriting syndicate to offer and sell more shares than the underwriters have contracted to purchase from the issuer on a "firm" basis. By overallotting shares, the managing underwriter can create a short position that allows the underwriters to purchase shares in the market in the period immediately following the offering as part of their after-market stabilization activities. In order to protect the underwriters in circumstances in which the shares purchased in the aftermarket are not sufficient to cover the short position created through overallotments, particularly where the price of the offered shares increases in aftermarket trading, the issuer typically will grant the underwriters a so-called "overallotment option" (also called a "green shoe option"). [326] The option generally allows the underwriters, for a period beginning with the execution of the underwriting agreement and ending 30 days later, [327] to elect to purchase from the issuer, at the public offering price less the commissions provided

p. 3-109
p. 3-110

for in the underwriting agreement, an additional number of shares equal to up to 15% of the number of shares the underwriters have committed to purchase. The option is often limited to use solely for the purpose of covering any overallotments made on behalf of the syndicate by the managing underwriter. [328]

If the offering is a success and the stock performs well in the immediate aftermarket, and there are therefore no post-offering syndicate purchases in the

p. 3-110
p. 3-111

market, the managing underwriter will exercise the option on behalf of the syndicate for the number of shares that have been overallotted, and the syndicate will earn the same commissions on the additional shares as it earned on the so-called "firm shares." [329] If, however, the syndicate has purchased shares in the market, the overallotment option will generally be exercised only to cover the syndicate's short position that remains after the shares purchased in the market by the syndicate have first been applied for that purpose. When the number of shares overallotted exceeds the shares underlying the option, the syndicate must cover the amount of the excess—a so-called "naked" short position—solely through purchases in the market. [330] Of course, when shares purchased in the market are used to cover overallotments, the commissions associated with the exercise of the overallotment option are foregone. Any profits or losses arising out of syndicate activities in the market are typically allocated among the underwriters *pro rata* to their underwriting commitments, subject to agreed limits. [331]

p. 3-111

p. 3-112

Where the underwriters have not yet decided to exercise the overallotment option at the time of closing, in order to be able to deliver securities to the initial investors in settlement of all allotments, including overallotments (which are indistinguishable from the rest of the allocation), they may need to borrow securities. [332] The borrowing may be arranged with securities lenders if there is an existing market for the class of securities being offered or with preexisting shareholders of the company if there is no such existing market, such as in an IPO. [333] The borrowed securities must be freely tradable and, therefore, cannot be borrowed from an affiliate of the issuer without SEC registration (which, however, should be easy to accommodate in the context of registering the overall offering).

Another issue to consider in relation to short sales is that the restrictions of Regulation M will be deemed to continue through the exercise of the overallotment option unless the overallotment option is only exercised to cover the net syndicate short position at the time of exercise. [334] Accordingly, closing out and then re-establishing a short position prior to exercise of the overallotment option (referred to as "refreshing the shoe") would bar the underwriters from purchasing shares in the market until the option is exercised or terminated, unless the

p. 3-112

p. 3-113

ADTV exemption were available [335] (which will not be the case, for example, in a U.S. initial public offering by an issuer that does not have an existing established market for its stock outside the United States). The underwriters' ability to refresh the shoe also must be consistent with the underwriting agreement and the prospectus, as well as with restrictions on underwriting compensation (since the aftermarket sales price when the short position is re-established may exceed the public offering price of the shares in the offering). [336]

[g] Characterization of Underwriters as a Fiduciary

In its 2005 "eToys" decision, the New York Court of Appeals sustained, at the pleading stage, an issuer's claim for breach of fiduciary duty against the lead underwriter in an IPO based on the allegation that the underwriter assumed an additional "advisory relationship that was independent of the underwriting agreement." [337] Specifically, the complaint alleged that the lead underwriter intentionally underpriced the IPO of what was then eToys, Inc., and then allocated shares to customers obligated to return to the underwriter a portion of their profit on reselling the shares. Until this decision, courts rarely had permitted an issuer to pursue fiduciary duty claims against an underwriter, other than with respect to improper use of confidential information. The court accepted that a fiduciary relationship typically involves a higher level of trust than is present in arm's-length business transactions, as well as the well-established proposition that where there is a contract, it determines the parties' relationship. Nonetheless, the court found that the fiduciary relationship claim was based not on the underwriter's role as such, but rather on an allegedly independent advisory relationship it had established with the issuer, particularly with respect to setting the price for the offered shares. [338] A subsequent case in the Appellate Division of the New

p. 3-113

p. 3-114

York Supreme Court considering the question of an underwriter's duty to its client in a different context emphasized the narrow scope of the eToys decision. [339] Nevertheless, in light of the holding in the eToys decision, it has become customary to include so-called "eToys" language in underwriting agreements to clarify that the transaction in question is of an arm's-length nature, that the underwriters are not acting as agents or fiduciaries of the issuer and that the issuer has relied on its own legal and financial advisors in making relevant business determinations.

[h] Success Fees

Section 11(e) of the Securities Act limits the liability of an underwriter under § 11 of the Securities Act to the total price at which the securities underwritten by it and distributed to the public were offered to the public unless "such underwriter shall have knowingly received from the issuer for acting as an underwriter some benefit, directly or indirectly, in which all other underwriters similarly situated did not share in proportion to their respective interests in the underwriting." [340] Issuers and sellers outside the United States sometimes provide a "success fee" that may only be for the benefit of the global coordinators or lead managers of the offering in order to give them an additional incentive to ensure a successful transaction. In the context of a U.S.-registered offering, an underwriter's limitation of liability under § 11(e) might be lost if the underwriter receives a benefit from the issuer in which all other underwriters similarly situated did not share on a *pro rata* basis. Because of the serious consequences, practitioners generally advise that the success fee be structured in a way that avoids the risk of losing this limit on liability. For example, if the desire is to reward the global coordinators or lead managers for their special efforts, the syndicate could itself agree on an allocation of commissions that disproportionately rewards the lead managers, such as by increasing the *praecipium* percentage. Such a reallocation of commissions among syndicate members is generally thought to be consistent with § 11(e) because § 11(e) addresses disproportionate benefits from the issuer but does not preclude disproportionate allocations of the commissions by

and among the underwriters themselves. [341] Another possible approach, if there is more than one syndicate, is to provide the success fee to certain members of the non-U.S. syndicate but not to members of the U.S. syndicate (provided there is no understanding through which a portion of the success fee is to be shared with members of the U.S. syndicate).

[6] Directed Share Programs

Issuers sometimes elect to implement directed share programs, or so-called "friends and family" programs, in connection with IPOs of equity. These programs became particularly popular for IPOs in the technology area in the late 1990s until 2001, but their popularity has waned since then. [342] A directed share program allows an issuer to set aside a portion of the shares to be offered, typically between 2% and 10% of the total offering, for sale by the underwriters to directors, officers and employees of the issuer, their friends and family, and other specified investors.

In general, there are no restrictions under the Securities Act on the types of persons or entities that can participate in directed share programs or on the size of these programs. However, the SEC expressed concern that the implementation of directed share programs might lead to premature and illegal offers of securities that would constitute "gun-jumping" violations of § 5 of the Securities Act. [343] In the registration process, the SEC staff routinely requested that issuers provide supplemental information on the mechanics of offers and sales of shares to investors in directed share programs, including copies of all written communications with prospective investors under these programs. The SEC staff also stated that underwriters should not require purchasers in directed share programs to open and make deposits in brokerage accounts—or otherwise effectively commit to purchase shares—prior to effectiveness of the registration statement. Rule 134 and the Securities Offering Reforms facilitated communications in directed share programs, particularly by liberalizing the contents of communications of offering timing, mechanics and similar matters that are not offers. [344]

FINRA's rules, however, which apply to the underwriters and other broker-dealers participating in these offerings, [345] do effectively limit the types of persons or entities that can be allocated shares in directed share programs in certain circumstances. For example, FINRA's Rule 5130 prohibits FINRA members from selling "new issues" of equity securities to any account in which certain types of "restricted persons" (including, among others, broker-dealers and most of their employees, owners and affiliates and their immediate family members) have a beneficial interest. [346] Although Rule 5130 contains an exemption from this general prohibition for securities that "are specifically directed by the issuer," this exemption is not applicable to securities directed by the issuer to certain categories of restricted persons (including broker-dealer personnel, finders and fiduciaries) unless these persons or their immediate family members are employees or directors of the issuer, the issuer's parent or a subsidiary of the issuer or the issuer's parent. [347] Because FINRA's rules govern the conduct of its broker-dealer members and not the conduct of the issuer, the question of whether a specific person or entity can participate in a directed share program is ultimately one for underwriters' counsel.

Certain provisions of FINRA Rule 5131 further affect the conduct of directed share programs. Among other things, FINRA Rule 5131 requires officer and director lock-up agreements in IPOs, or other restrictions on the transfer of an issuer's shares in such offerings, to apply equally to securities obtained by officers and directors in directed share programs. [348] FINRA Rule 5131 also requires the managing underwriters to notify the issuer and ensure public

p. 3-116

p. 3-117

announcement is made of any impending release or waiver of any lock-up agreement or other restriction on the transfer of the issuer's shares. [349]

[7] Due Diligence Investigation

Underwriters of U.S. public offerings must (with the assistance of their counsel) conduct a due diligence investigation of the company if they are going to assert the benefit of certain defenses to civil liability under the Securities Act in the event of material misstatements in the registration statement or material omissions of statements required to be made therein or that make the statements contained therein misleading. Under § 11 of the Securities Act, issuers have strict liability for any such material misstatements or omissions. Underwriters, as well as directors and certain officers, are also liable unless they "had, after reasonable investigation, reasonable ground to believe and did believe … that the statements therein were true and that there was no omission to state a material fact required to be stated therein or necessary to make the statements therein not misleading." [350] If statements in a registration statement are made by experts, then directors, officers and underwriters can rely on those statements without independent investigation as long as they have no reason to believe (and do not in fact believe) that the statements include any material misstatement or omission. Accountants are experts, and therefore their opinions on the audited financials may be so relied upon. [351]

Section 12(a)(2) of the Securities Act applies corresponding liability, with a corresponding diligence-based defense, for material misstatements or omissions in a prospectus. A seller has an affirmative defense to § 12(a)(2) liability if

p. 3-117

p. 3-118

he or she can prove that he or she "did not know, and in the exercise of reasonable care could not have known," of the untrue statement or omission. For a discussion comparing "reasonable care" to due diligence, including whether reasonable care requires investigation, *see* § 11.03[2][b].

Given the importance of these defenses, underwriters have developed procedures designed to enable them to show they exercised the requisite level of diligence. As discussed below, the intensity of these procedures usually varies with the type of offering, with initial public offerings at the more intensive end of the spectrum and offerings of investment grade debt by frequent issuers at the less intensive end. They generally include discussion by underwriters and their counsel with various parties, supplemented by a review of key documents. Typically, discussions will include a review of operations with the company's chief operating officer, a review of financial condition, accounting standards and controls with the chief financial officer and the issuer's accountants, [352] and a review of existing and potential litigation or governmental proceedings with the issuer's internal counsel. Additional discussions may be held with important customers, suppliers or lenders, external counsel to the issuer for significant litigation or regulatory matters, controlling shareholders or other third parties with a special relationship with the issuer, particularly in the context of initial public offerings.

Certain documents effective or prepared during the periods for which financial information is furnished (typically three to five years) will be reviewed. These documents may include research reports and significant press releases; SEC and stock exchange filings; the issuer's constituent documents; minutes of relevant shareholders', board of directors' and committee meetings (and in many cases materials prepared for those meetings); material contracts, agreements, licenses and franchises; documents relating to regulatory issues, insurance and intellectual property; the accountants' reports to the company about the adequacy of its accounting procedures and controls; and reports of counsel regarding ongoing litigation. [353]

The accountants will be asked to deliver a "comfort" letter to the underwriters at the time the underwriting agreement is signed and a "bring down" letter reaffirming the accuracy of the comfort letter at closing. The letter gives comfort with respect to certain financial information contained in the prospectus and describes certain procedures the accountants have followed for the period subsequent to the date of the latest financial statements (whether annual or interim) included in the prospectus—the comfort, in effect, is that the accountants have compared certain financial information in the prospectus to the books

p. 3-118

p. 3-119

and records of the company and the numbers agree, and that the procedures have not uncovered any undisclosed specified events since the date of the last published financial statements (so-called "negative comfort" or "negative assurance") such as incurrence of material new debt or material losses or other events affecting stockholders' equity. [354] The underwriters also receive opinions from

p. 3-119

p. 3-120

their counsel and from the company's counsel on various matters, as well as assurances, in so-called 10b-5 letters, that neither counsel is aware of any material misstatement or omission in the prospectus.

Sections 11 and 12 make no distinction between lead and other participating underwriters. As a result, passively participating underwriters that rely on the lead underwriter's due diligence are potentially liable for the lead's investigative failures. [355] While §§ 11 and 12 are silent on the role of participants in the due diligence process, the SEC staff has noted that to succeed on a separate affirmative defense, nonmanaging underwriters must at least take active steps to assure themselves that the manager made a reasonable investigation. [356]

As referenced above, § 12(a)(2) of the Securities Act imposes civil liability on a seller of securities (such as an underwriter) in the case of material misstatements in a prospectus or material omissions that make the statements contained therein misleading. [357] In connection with the Securities Offering Reforms, the SEC promulgated Rule 159 under the Securities Act, which interprets § 12(a)(2) as requiring an assessment of whether there are material misstatements or omissions in a prospectus at the time of sale (including the time of a contract of sale), [358] without taking into account information conveyed after that time. As a result, underwriters have significantly modified their procedures to ensure that information is conveyed to investors no later than the time of the investors' agreement to purchase in the offering. Such information is being conveyed through filing and access to, or electronic or other delivery of, prospectuses or preliminary prospectuses, free writing prospectuses consisting of term sheets or other updating information and, in some cases, oral communications. Electronic communications, including hyperlinks to documents, have become an important element in the conveyance of information. In connection with this new emphasis on conveyance at time of sale (including contract of sale), underwriters have adopted procedures that extend the comfort they receive regarding the material accuracy and completeness of information to specified information available at the time of sale. Conveyance of that information remains the

p. 3-120

p. 3-121

responsibility of the seller (and thus issuers must satisfy themselves that underwriters have properly conveyed any such information).

Appropriate processes for performing the due diligence exercise are generally straightforward to integrate with disclosure preparation when the issuer is engaged in an initial public offering. Because a comprehensive disclosure document corresponding to Securities Act requirements is being prepared for the first time, the underwriters will have access to the information and personnel they require for diligence in connection with the drafting process and time to perform a thorough investigation.

Diligence may be more challenging, however, in an offering by an issuer that files reports under the Exchange Act and that qualifies to use a short-form registration statement (Form F-3). An offering using that form is often accomplished on an expedited basis, particularly if the issuer has a shelf registration statement in effect or is eligible to file an automatic shelf registration statement (which becomes effective immediately upon filing, without delay for review). [359] As a result, the underwriters often may have limited time to complete their due diligence exercise. Moreover, in such offerings, a significant amount of disclosure is incorporated by reference from the issuer's annual report on Form 20-F and other Exchange Act filings. [360] The underwriters are unlikely to have participated in the preparation of those filings, but are nonetheless liable for material misstatements or omissions contained in them that are incorporated into the registration statement and prospectus and not corrected.

To address this issue, some issuers using the shelf registration process appoint a law firm as "designated underwriters' counsel" for all offerings conducted using the shelf facility. That firm will likely be involved in the initial preparation of the registration statement and will have an opportunity to conduct further diligence during the life of the shelf registration. This practice potentially allows much of the diligence for offerings under the shelf to be completed in advance, in order to accommodate the rapid offering execution that shelf registration makes possible, and provides continuity (which is particularly important when the underwriters included in the syndicate change from offering to offering).

Rule 176 under the Securities Act, which was promulgated at the time shelf registration was first introduced, specifies certain circumstances that are relevant in determining whether due diligence has been demonstrated, including the type of issuer and security, and whether there was reasonable reliance on officers, employees and others whose duties should give them knowledge of the facts in

p. 3-121
p. 3-122

question and responsibility for documents incorporated by reference at the time such documents were filed.

A 1992 report prepared by a task force of the American Bar Association (the "Due Diligence Report") acknowledged that the methods for conducting securities offerings have changed substantially since the liability provisions of the Securities Act were drafted and suggested that additional factors be considered in determining whether the due diligence standard was satisfied. [361] The report took the position that the factors specified by the SEC in Rule 176 were not sufficient to protect underwriters and suggested that factors including the following be taken into account: the likelihood that an investigation will turn up material changes in the existing disclosure; the extent to which potential investors rely on a credit rating; the extent to which potential investors have access to information comparable to that available to the underwriters; and the time available to conduct due diligence.

No action has been taken by the SEC (or Congress) since the adoption of Rule 176 to adopt the suggestions of the Due Diligence Report or otherwise address due diligence standards. Indeed in the *WorldCom* decision, where the motion of defendant underwriters for summary judgment was denied in a case involving an offering off a shelf registration statement of what was at the time investment grade debt, the court pointed out that governmental inaction in the face of requests for modification such as those contained in the Due Diligence Report suggested that the law had not evolved with changing offering practices. [362]

The passage of the Sarbanes-Oxley Act and related rules and SEC initiatives have sharpened the focus during the diligence process on issuers' internal controls, including heightened scrutiny of auditor communications and audit committee proceedings, and on issuer's disclosure controls, including due diligence relating to certification procedures for public disclosure and disclosure committee actions. [363] Underwriters and their counsel also review management's required report on internal control over financial reporting and related

p. 3-122
p. 3-123

independent auditor attestation regarding the effectiveness of the issuer's internal control over financial reporting. [364] Additionally, following the *WorldCom* decision, underwriters and their counsel have developed more formalized due diligence procedures (*e.g.*, preparation of a written summary of due diligence activities) for offerings off shelf registration statements.

[8] State Securities Laws

In addition to complying with the federal securities laws, a foreign issuer offering securities in the United States, including to its U.S. employees, must consider the securities laws of the various states where the securities are offered and sold although federal legislation has greatly reduced the significance of such state laws in the case of companies that file reports under the Exchange Act. [365]

[a] State "Blue Sky" Requirements

Nearly every state of the United States requires that securities be registered under its laws prior to sale to the public in that state or be exempt from state registration. The National Securities Markets Improvement Act of 1996 (the "NSMIA") [366] amended the Securities Act to provide for federal preemption of state laws and regulations requiring registration of securities or securities transactions in many cases. As a result, the need to register securities at the state level has been eliminated in connection with most significant securities offerings in the United States, including those by foreign issuers.

As amended by the NSMIA, § 18 of the Securities Act provides exemptions for certain categories of "covered security" (or any security that will be a "covered security" upon completion of a transaction), including:

- securities that are listed, or approved for listing, on the NYSE, Nasdaq or any national securities exchange that the SEC determines has substantially similar listing standards and securities of the same issuer that rank equally with or senior to such listed securities;
- securities issued by an investment company registered under the Investment Company Act;

p. 3-123
p. 3-124

- securities offered or sold to "qualified purchasers" as defined by rule by the SEC; [367] and
- securities offered or sold in certain transactions exempt from registration under the Securities Act, including ordinary secondary market transactions (provided the issuer of the security is a reporting issuer under the Exchange Act), [368] certain transactions exempt from registration under § 3(a) of the Securities Act, private offerings under Rule 506 of Regulation D under the Securities Act, private offerings under § 3(b)(2) of the Securities Act, "crowdfunded securities" under § 4(a)(6) of the Securities Act and certain accredited investor transactions pursuant to § 4(a)(7) of the Securities Act. [369]

Such a "covered security" is exempt from all state requirements with respect to (i) registration and qualification of securities or securities transactions, (ii) prohibitions, limits or conditions on the use of any offering document "prepared by or on behalf of the issuer" of the security [370] and (iii) in the case of an

p. 3-124
p. 3-125

exchange-listed security, prohibitions, limits or conditions on offers or sales of the security based on the merits of the offering or the issuer. The NSMIA does, however, preserve the states' authority to maintain and enforce their own antifraud laws and to require certain notice filings for "covered securities" that are not listed on an exchange. [371]

In circumstances where the NSMIA does not apply and there is no applicable state law exemption, U.S. legal counsel for the underwriters is typically responsible for arranging compliance with the necessary state securities registration requirements, and the issuer is responsible for paying the fees of such counsel for blue sky work and any state filing fees and for executing individual state registration forms. Generally, the application for registration in any state includes a uniform state application form, a copy of any related Securities Act registration statement and exhibits thereto, a consent to service of process and a check in payment of a fee based on the aggregate dollar amount of securities registered in the state. [372]

The extent of the state regulators' review of the registration or filing materials submitted varies widely. Many states have adopted a standard of review involving the merits of the offering ("merit review") that differs from the SEC's "full disclosure" requirements. In these states, the securities commissioner may deny registration if the offering is determined to be unfair, unjust or inequitable. Generally, these states have adopted regulations and policies that establish standards that an issuer must meet if its offering is to be considered "fair" and appropriate as an investment for the state's residents. These standards include: (i) a prohibition against offering a class of equity securities with no voting rights or rights unequal to other classes of outstanding shares, (ii) limitations on the maximum underwriting commissions and other selling expenses that may be incurred by the issuer in connection with the offering, (iii) limitations on the amount of securities that may be covered by options issued or to be issued to management and underwriters, and (iv) limitations on the price-earnings ratio of the securities offered.

p. 3-125
p. 3-126

There do not appear to be merit or fairness standards of special relevance to foreign issuers, other than the requirement of a number of states, including Texas, that the foreign issuer be able to show that it has substantial assets in the United States. This reflects a concern about the unenforceability in the United States of any judgment against the foreign issuer obtained by a U.S. investor.

[b] State "Legal Investment" Laws

There are also state statutory provisions (often called "legal investment" laws) that govern the various types of investments that are permissible for state-regulated financial institutions. These institutions generally include state commercial and savings banks, savings and loan associations, life and casualty insurance companies and public sector pension and retirement systems.

Typically, these provisions list permissible portfolio investments for these institutions, such as government obligations, corporate bonds, preferred stock and common stock, real estate mortgages and notes and similar types of investments. Most states impose quality standards on such investments, *e.g.*, the security may be required to have an investment grade rating. In addition to specified legal investments, most states also permit regulated institutions to invest, under so-called "basket" provisions, a limited portion of funds in any type of security, including those that do not meet the required standards. The legality of investments in securities issued by corporations and governments varies both from state to state and as among different types of regulated financial institutions. However, those states with the largest base of financial institutions usually permit the purchase of foreign securities, subject to certain quantitative limitations and provided the securities meet the same quality standards as those imposed on similar U.S. investment securities. [373] Some legal investment provisions do not specially list foreign securities among those investments that are legal for institutional investors. In those instances, regulated institutional investors may only purchase foreign securities under the basket provisions referred to above.

[c] Global Blue Sky Developments

p. 3-126
p. 3-127

Global offerings, in which offers and sales are made both in the United States and into numerous jurisdictions outside the United States, are occasionally undertaken by issuers offering large amounts of securities. [374] Securities offerings made in jurisdictions outside the United States must also be conducted pursuant to such jurisdiction's securities regulations. The U.S. offering documentation, which will take the form of a prospectus in an SEC-registered offering and an offering memorandum in an exempt offering, will include a section that summarizes the selling restrictions of each foreign jurisdiction into which offers or sales will be made (each referred to as a "selling legend"). [375] Ensuring compliance with a jurisdiction's requirements and notifying investors of those requirements in a selling legend may require consultation with counsel in that jurisdiction. [376]

Both the form [377] and the substance of a selling legend depend on the specific requirements of a given jurisdiction's securities regime, and the legend often includes a statement that the securities will not be offered or sold into such jurisdiction except through transactions that do not constitute a public offering within the meaning of such jurisdiction's securities laws. [378]

[9] Market Manipulation and Stabilization

In U.S. public offerings the activities of the underwriters, including any underwriters engaged in a distribution of securities outside the United States,

p. 3-127
p. 3-128

and, in certain respects, the issuer (as well as their respective affiliates), are subject to a number of U.S. rules relating to market manipulation and stabilization. These rules are typically implemented through the agreement among underwriters (and, if there are multiple syndicates, also through the intersyndicate agreement) and, with respect to the issuer, through the underwriting agreement. Since 1997, the U.S. rules relating to market manipulation and stabilization in connection with securities offerings have been contained in Regulation M. [379]

[a] Market Manipulation Under Regulation M

Rule 101 and Rule 102 of Regulation M are designed to prevent interested parties from engaging in activities that could artificially raise the price of a security that is the subject of a "distribution" [380] in the United States. Rule 101 regulates bids and purchases by underwriters, prospective underwriters and other distribution participants, and certain affiliates of such persons. Rule 102 regulates bids and purchases by issuers, selling securityholders and certain of their affiliates.

[i] *Rule 101*

Rule 101 applies to "distribution participants," a category that includes underwriters, prospective underwriters, [381] brokers, dealers and others who are participating or have agreed to participate in a distribution of securities. [382] Rule 101 also applies to affiliated purchasers of distribution participants. [383]

Regulation M exempts from the definition of "affiliated purchaser" a separately identifiable department or division of a distribution participant, issuer or

p. 3-128
p. 3-129

selling securityholder that regularly purchases securities, whether for its own account or the account of others, or who recommends or exercises investment discretion with respect to the purchase or sale of securities so long as certain conditions are met. [384]

Rule 101 of Regulation M generally prohibits distribution participants and affiliated purchasers from bidding for, purchasing or attempting to induce any person to bid for or purchase (i) any security that is the subject of a distribution (the "subject security") [385] and (ii) any security into which a subject security may be converted, exchanged or exercised (whether immediately or not), or which, under the terms of the subject security, may in whole or significant part determine the value of the subject security (a "reference security"). Thus, during the distribution of an equity-linked security, the underlying security will be subject to Regulation M even if the terms of the equity-linked security provide for cash

p. 3-129
p. 3-130

settlement only (assuming that the value of such equity-linked security is determined in significant part by the price of the underlying security, as would generally be the case). [386]

Unless an exemption is applicable, the restrictions contained in Rule 101 apply to distribution participants and affiliated purchasers during a period that commences either one or five business days [387] prior to pricing [388] (or, if later, the time at which such person becomes a distribution participant) and ends upon the completion of such person's participation in the distribution. [389]

Under Regulation M, when a "distribution" occurs in the United States, the restrictions of Rule 101 apply globally, even to activities conducted entirely outside United States by non-U.S. persons. A "distribution" is any offering of securities in the United States that is distinguished from ordinary trading transactions

p. 3-130

p. 3-131

by the magnitude of the offering and the presence of special selling efforts and selling methods. [390]

Rule 101 contains a number of exemptions. Securities with a worldwide reported ADTV [391] value [392] of at least $1 million whose issuer has common equity securities with a public float value [393] of at least $150 million are exempt from Rule 101. [394] Rule 101 also includes an exemption for nonconvertible debt securities, nonconvertible preferred securities and asset-backed securities [395] that are rated investment grade by at least one nationally recognized statistical rating organization. [396] This exemption is based on the premise that such securities are

p. 3-131

p. 3-132

traded on the basis of their yields and credit ratings as opposed to the identity of the issuer and, therefore, are less likely to be subject to manipulation. [397]

Rule 144A-eligible securities [398] are exempt from Rule 101 if such securities are sold in the United States only to QIBs or persons reasonably believed to be QIBs in transactions exempt from registration under § 4(a)(2) of, or Rule 144A or Regulation D under, the Securities Act. [399] The exemption also applies if the distribution includes certain persons in the United States not deemed to be "U.S. persons" for the purposes of Regulation S under the Securities Act. [400]

Unsolicited brokerage transactions are exempt from Rule 101, as are unsolicited purchases that are not effected from or through a broker or dealer, on a securities exchange or through an inter-dealer quotation system or electronic communications network. [401]

p. 3-132

p. 3-133

Rule 101 contains an exemption for the dissemination of research where such research satisfies the conditions of Rule 138 or 139 under the Securities Act. [402] Rule 101 also contains exemptions for certain basket transactions [403] and inadvertent *de minimis* purchases, [404] among others. [405]

p. 3-133

p. 3-134

In addition, Rule 103 of Regulation M provides an exemption from Rule 101 to allow "passive market making" during the Rule 101 restricted period in connection with a distribution of securities listed on Nasdaq. The rule is designed to maintain liquidity in situations where a market maker otherwise may be required to withdraw from the market pursuant to Rule 101. Rule 103 limits a passive market maker's bids to the highest current independent bid (unless necessary to comply with an SEC or FINRA rule relating to the handling of customer orders), limits the amount of net daily purchases each passive market maker can make to the greater of 30% of ADTV or 200 shares and contains requirements relating to identification, notification and disclosure of activity pursuant to the rule. [406]

Over the years, the staff of the SEC recognized the intrusive effects of the extraterritorial application of the market manipulation and stabilization rules in effect prior to the adoption of Regulation M and granted relief, principally on a case-by-case basis, from certain of their restrictions. [407] The Regulation M Release noted that, in response to a request from the London Stock Exchange, this relief would be modified and restated under Regulation M. [408] Other exchanges also had obtained similar relief, which could be modified and restated,

p. 3-134

p. 3-135

upon request, under Regulation M. [409] To date, however, no other securities exchange has sought the modification and restatement of such relief.

[ii] *Rule 102*

Under Rule 102, it is unlawful for issuers, selling securityholders and their affiliated purchasers [410] to bid for, purchase, or attempt to induce any person to

p. 3-135
p. 3-136

bid for or purchase, any covered security during the applicable restricted period. Rule 102 repeats many of the same provisions set forth in Rule 101 and uses many of the same definitions. Accordingly, many of the subjects discussed above, including, for instance, the duration of the restricted periods, the definitions of distribution and affiliated purchaser and the global applicability of the restrictions, if they apply, will apply to both rules. However, certain of the exemptions included in Rule 101 are omitted from Rule 102. [411]

Rule 102 does not include a general exemption for actively-traded securities similar to that set forth in Rule 101. However, in order to allow an issuer of equity-linked securities to hedge the underlying reference security, Rule 102 contains a limited exemption for actively-traded reference securities that are not issued by the issuer of the security in distribution or by any affiliate of the issuer. The exemption covers reference securities with an ADTV value of at least $1 million that are issued by an issuer whose common equity securities have a public float value of at least $150 million. Rule 102 also does not include the exemptions for *de minimis* or basket transactions included in Rule 101.

Rule 102 includes an exemption that permits an affiliated purchaser of an issuer or a selling securityholder to purchase the securities being distributed. [412] Sales of a significant portion of the securities in distribution to affiliates may require disclosure in the prospectus because of the inability of such purchasers to resell such securities freely.

Rule 102 also includes an exemption for two types of plans in respect of an issuer's securities. First, with respect to plans that are available only to employees and shareholders, Rule 102 exempts any distribution pursuant to a plan by or on behalf of an issuer or a subsidiary of the issuer when the distribution is made solely to employees or shareholders or a trustee acting on behalf of such persons. Second, Rule 102 exempts distributions to persons other than employees or securityholders of the issuer, if bids for and purchases of securities pursuant to such plan are effected solely by an agent independent of the issuer and the securities are obtained from a source other than the issuer (*e.g*, from market purchases by the agent). [413] However, a direct issuance plan (*i.e.*, a plan that

p. 3-136
p. 3-137

is open to persons other than employees and securityholders and pursuant to which shares are purchased from the issuer or an affiliated purchaser) is not exempt from the provisions of the rule. [414]

Any affiliate of an issuer or a selling securityholder that is acting as a distribution participant has the option of being subject to the less-restrictive Rule 101 rather than Rule 102. [415] The ADTV exemption in Rule 101 is not available, however, in the case of securities issued by the distribution participant or an affiliate of the distribution participant. [416]

[b] Stabilization Under Regulation M

p. 3-137
p. 3-138

Rule 104 of Regulation M establishes a flexible framework for stabilization activities conducted in connection with an offering. [417] Rule 104 provides that no person may effect, either alone or with others, any independent transaction to facilitate an offering other than in conformity with the rule's provisions. [418]

In general, under Rule 104, persons stabilizing the price of a security may initiate a stabilizing bid in any market with reference to the independent prices in the principal market for the security wherever located, and maintain, reduce or increase the stabilizing bid to follow the independent bid in the principal market so long as the stabilizing bid does not exceed either the independent bid in the principal market or the offering price of the security.

Under Rule 104, when the principal market for the security is open, the permissible initial stabilizing bid in any market is limited to a price no higher than the last independent transaction price for the security in its principal market, if (i) the security has traded in its principal market on the day stabilizing is initiated or on the preceding business day and (ii) the current asked price in the principal market is equal to or greater than the last independent transaction price. If either of these conditions is not satisfied, stabilizing may be commenced at a price no higher than the highest current independent bid in the principal market.

Generally, if the principal market is closed, but quotations have opened in the market where stabilizing will be initiated, the initial stabilizing bid may not be made at a price in excess of the lower of (i) the price at which stabilizing could have been effected in the principal market for the security at its close or (ii) the last independent transaction price where stabilizing is being initiated. However, if the last independent transaction did not occur on the day stabilizing

p. 3-138

p. 3-139

was initiated or on the preceding business day and the current asked price in such market is equal to or greater than the independent transaction price, the price in clause (ii) will be the highest current independent bid price in the market where stabilizing is being initiated.

If the principal market is closed and quotations have not opened in the market where stabilizing will be initiated, stabilizing may be initiated at the lower of (i) the price at which stabilizing could have been effected in the principal market for the security at its close or (ii) the most recent price at which an independent transaction in the offered security has been effected in any market, if the person knows or has reason to know of such transaction.

If no *bona fide* market exists for the security, stabilizing may be initiated at the offering price. If stabilizing is initiated before the offering price is determined, then stabilizing may be continued after the determination of the offering price at the price at which stabilizing could then be initiated.

The maximum caps on the stabilizing price level under Rule 104 are the offering price and the stabilizing bid in the principal market. Once stabilization has been initiated, Rule 104 permits an increase in the stabilizing bid at any time to the highest independent bid price for the security in its principal market, or if the principal market is closed, the highest independent bid in that market at the previous close, so long as the stabilizing bid does not exceed the maximum caps. Rule 104 also provides for adjustment of the stabilizing bid in an amount equal to the value of a dividend, right or distribution when the security being stabilized goes ex-dividend, ex-right or ex-distribution, respectively. If the price of the security is expressed in a currency other than the currency of the principal market, Rule 104 allows adjustments of the stabilizing bid to reflect current exchange rates. [419]

Rule 104 exempts all distributions of Rule 144A-eligible securities to QIBs made in transactions exempt from registration under § 4(a)(2) of, or Rule 144A or Regulation D under, the Securities Act. The exemption also applies if the distribution includes certain persons in the United States not deemed to be "U.S. persons" for the purposes of Regulation S under the Securities Act. Unlike Rules 101 and 102 that exempt both the subject security and the reference security, the Rule 104 exemption is only applicable to the subject security.

Rule 104 permits stabilizing outside the United States during an offering in the United States without compliance with Rule 104, subject to the following conditions: (i) no stabilization is conducted in the United States, (ii) the stabilizing price is not above the U.S. offering price, and (iii) stabilization is conducted only in jurisdictions with regulation of stabilization comparable to that set

p. 3-139

p. 3-140

out in Rule 104. [420] For the purpose of this exemption, the Regulation M Release recognized the pre-Market Abuse Directive [421] stabilization regulations of the United Kingdom as comparable to Rule 104 and invited requests for recognition of additional markets having comparable regulations for purposes of the rule. [422] In a no-action letter granted in connection with the 1998 privatization of shares of Nippon Telegraph and Telephone Corporation ("NTT"), [423] the SEC staff clarified its view that Rule 104 permitted stabilization in the United Kingdom under then-applicable U.K. regulations provided that any stabilization in the United States had been terminated, whether or not stabilization had been effected in the United States previously or the U.S. distribution has been completed. The no-action letter also permitted the Japanese underwriters in the NTT offering to conduct stabilizing activities in Japan in accordance with Japanese regulations, even though this involved stabilizing above the U.S. offer price in contravention of Rule 104(f). This relief was required due to the Japanese practice of setting the offering price at a slight discount to the prevailing market price in a secondary offering, and was conditioned on, among other things, the U.S. distribution being complete before Japanese stabilization could begin. The SEC has since granted a class exemption that provides relief similar to the NTT relief described above in connection with all U.S. and Japanese offerings of equity securities by Japanese issuers provided that certain conditions are satisfied. [424] To date, the SEC has granted relief from the application of Rule 104 only in respect of pre-Market Abuse Directive stabilization activities in the United Kingdom (or otherwise in accordance with the U.K. rules) and on the AEX Stock Exchange in Amsterdam, in addition to stabilization activities in Japan, although it did not

p. 3-140

p. 3-141

expressly declare The Netherlands' or Japan's stabilization rules to be equivalent to Rule 104 as it had done in the case of the United Kingdom. [425]

Rule 104 requires any person entering a stabilizing bid to notify the market on which the bid is placed. Furthermore, when a person subject to Rule 104 conducts a transaction in securities and the price of those securities may be or has been stabilized, that person is required to notify the purchaser (in a prospectus or confirmation, for example) of that fact. Rule 17a-2 under the Exchange Act also requires managing underwriters to maintain records of syndicate covering transactions and penalty bids (which permit the initial purchasers to reclaim a selling concession from a dealer when the initial purchasers, in covering syndicate short positions or making stabilizing purchases, repurchase securities sold by that dealer), as well as stabilizing activity, [426] and Rule 104 of Regulation M prohibits the imposition of penalty bids in connection with the offering of any security in contravention of such rule. Rule 104 also imposes disclosure and record keeping requirements for certain syndicate aftermarket activities that occur even after stabilization, as such term is used in Rule 104, has ended. Rule 104 requires any person effecting a syndicate covering transaction or placing or transmitting a penalty bid to disclose [427] that fact to the self-regulatory organization that has direct oversight authority over the principal market in the United States for the security for which the syndicate covering transaction is effected or the penalty bid imposed (although public disclosure of such activity is not required). [428]

For a discussion of two customary underwriting practices related to stabilization activities, "overallotment" (whereby the managing underwriter of an

p. 3-141

p. 3-142

offering is given the authority by the underwriting syndicate to offer and sell more shares than the underwriters have contracted to purchase from the issuer on a "firm" basis) and the granting of an "overallotment option," *see* § 3.02[5][f].

[c] Prohibited Solicitations and “Tie-in” Agreements for Aftermarket Purchases

The SEC staff has expressed its view that underwriters, broker-dealers and any other distribution participants are prohibited from soliciting or requiring their customers to make aftermarket purchases until the distribution is completed. [429] The staff also described the practice by some underwriters of requiring their customers to agree to buy additional shares in the aftermarket as a condition to being allocated shares in a distribution (so-called "tie-in" arrangements). The staff views these practices as being prohibited by Rules 101 and 102 of Regulation M and possibly violative of other antifraud and antimanipulation provisions of the U.S. securities laws. [430]

[d] Short Selling by Investors in Connection with a Public Offering

Following revisions implemented partly in response to enforcement actions, [431] Rule 105 of Regulation M makes it unlawful, in connection with an

p. 3-142

p. 3-143

offering of equity securities for cash pursuant to a registration statement, for any person to sell short a security that is the subject of an offering and to purchase offered securities [432] from an underwriter, broker or dealer participating in the offering if such short sale occurred during the shorter of: (i) the period beginning five business days before the pricing of the offered securities and ending with such pricing, and (ii) the period beginning with the initial filing of such registration statement and ending with the pricing (such period, the "Pre-Pricing Period"). [433]

Rule 105 contains certain exceptions to its prohibition on purchases of offered securities by persons that sold subject securities short during the Pre-Pricing Period. In particular, subject to the requirements detailed in Rule 105 and as further explained in the August 2007 adopting release, exceptions are available to permit purchases of offered securities by (i) persons that offset short positions in subject securities entered into during the Pre-Pricing Period with *bona fide* purchases of such securities made no later than the business day prior to pricing of the relevant offering, (ii) an independent trading unit of a broker-dealer or other separate account of a person where another separately managed trading unit or account had sold the subject securities short during the Pre-Pricing Period, and (iii) an investment company (including a separate fund or fund series) where an affiliated investment company (or another separate fund or fund series) had sold

p. 3-143

p. 3-144

the subject securities short during the Pre-Pricing Period. [434] Rule 105 also does not apply to offerings that are conducted on a best-efforts basis, [435] although the SEC has indicated that it may re-evaluate this exception if it becomes aware of potentially manipulative short selling or other concerns in connection with such offerings. [436]

Footnotes

39 § 15(d)(1) of the Exchange Act.

40 § 12(b) of the Exchange Act.

41 The procedures for listing and registering under the Exchange Act securities issued in a public offering are the same as the procedures applicable to listing and registering outstanding securities, as described in § 3.03 and § 4.02. In the case of a public offering of securities to be listed on an exchange, Exchange Act registration proceeds in tandem with Securities Act registration and is accomplished by using Form 8-A, which incorporates the relevant information from the Securities Act registration statement.

42 While under § 5 of the Securities Act sales cannot be made until a registration statement is declared effective, the SEC has permitted, through no-action relief, certain structures whereby conditional offers to buy shares made before the effective date of a registration statement could be accepted following the effective date, and would not be considered preeffective sales violating § 5 of the Securities Act, without the need for investors to reconfirm their preeffective conditional offers to buy. *See*, *e.g.*, *Morgan Stanley Smith Barney LLC* (avail. Nov. 22, 2016) (granting relief under certain circumstances to permit a broker-dealer to accept after the effective date a customer's preeffective conditional offer to buy shares in an IPO if such customer has not withdrawn its offer to purchase prior to the later of one hour after such broker-dealer provides an email notice of effectiveness to such customer and the time of effectiveness, assuming such shares price within 20% of the price range included in the preliminary prospectus delivered to such customer prior to such offer); *Wit Capital Corp.* (avail. July 14, 1999) (granting relief under certain circumstances if the broker-dealer accepts after effectiveness a customer's pre-effective conditional offer to buy shares without affirmatively seeking such customer's reconfirmation of such offer following post-effective pricing, assuming such customer has been given a final opportunity to withdraw prior to

acceptance and has reconfirmed its offer on a pre-effective or post-effective basis).

43 § 2(a)(3) of the Securities Act.

44 The rules contained in Regulation C under the Securities Act govern the preparation of registration statements under the Securities Act, subject to the provisions of any applicable form or any item of Regulation S-K referred to in such form. Rule 400 under the Securities Act. Registration statement forms used by foreign private issuers generally incorporate by cross-reference specific disclosure requirements set forth in Form 20-F (which itself functions as both an Exchange Act registration statement form and the form for annual reports of foreign private issuers). Alternatively, for domestic issuers, including foreign companies that do not qualify as "foreign private issuers," registration statement forms under the Securities Act generally incorporate by cross-reference specific disclosure requirements set forth in Regulation S-K. *See* Regulation S-K, Item 10.

45 § 23 of the Securities Act.

46 Foreign companies that guaranty securities of or co-issue securities with wholly-owned subsidiaries that are not themselves foreign companies are permitted to use an F-series registration statement if the parent and subsidiary are eligible to present condensed consolidated financial information in the parent company's filings. *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Forms, Questions 110.03 and 110.04 (Dec. 8, 2016). *See also* § 3.05[1] regarding special rules for foreign governmental and supranational issuers.

47 The Securities Offering Reforms eliminated Form F-2.

48 Under Regulation S-T, all documents filed with or furnished to the SEC by U.S. and, with certain exceptions, foreign issuers must be submitted electronically, using EDGAR. EDGAR filings are accessible by the public through the SEC's website, www.sec.gov. For a description of the documents that foreign issuers may submit by paper, *see* Rule 101(b) of Regulation S-T and Chapter 4, Note 39.

49 *See* the discussion of Exchange Act registration on Form 20-F in §§ 4.04[1] and 4.11.

50 The public offer and sale in the United States of new shares in the form of ADRs technically involve the registration of two securities: the underlying shares and the ADRs. The underlying shares are registered on Form F-1 or Form F-3 registration statements. The ADRs are concurrently registered, as for any ADR program, by filing a Securities Act registration statement on Form F-6, which, as discussed in § 3.04[3], is a simple registration statement describing the depositary arrangements.

51 *See* Form F-1, General Instruction VI.

52 *See* Form F-3, Item 6.

53 *See* § 3.02[2] for a discussion of shelf registration.

54 An offering of securities by a finance subsidiary of a foreign company may, in certain circumstances, be effected on Form F-3 on the basis of the parent's status and reporting history, even if the subsidiary itself would not qualify. The subsidiary must be purely a financing vehicle with no independent operations and the securities being registered (which will generally be debt securities) must be fully and unconditionally guaranteed by the parent. In such instances, the SEC has authorized the filing of a registration statement containing no financial information regarding the subsidiary and has also exempted the subsidiary from the ongoing reporting requirements of the Exchange Act. *See*, *e.g.*, *The Rank Group plc* (avail. Feb. 2, 1998); *CANTV Finance Ltd. and Compañia Anónima Nacional Teléfonos de Venezuela* (avail. Apr. 4, 1997); *WMC Limited and WMC Finance (USA) Limited* (avail. Dec. 17, 1996); *CSR Limited, CSR America, Inc. and CSR Finance Limited, Inc.* (avail. Oct. 25, 1995); *Quebecor Printing Inc., Quebecor Printing Capital Corporation and Quebecor Printing Capital GP* (avail. Mar. 12, 2000). The Securities Offering Reforms expanded majority-owned subsidiary eligibility in Form F-3 to allow majority-owned subsidiaries to use Form F-3 under the same circumstances in which majority-owned subsidiaries may be WKSIs. *See infra* Note 147. For a discussion of other circumstances in which financial statements of guarantors are required to be included in a registration statement, *see* § 4.05[5][c].

55 Form F-3, General Instruction I; SEC Release No. 33-7053 (Apr. 19, 1994). In determining whether a

company meets the public float requirement, nonvoting common stock held by nonaffiliates may be counted along with voting common stock. SEC Release No. 33-7419 (May 8, 1997). Under certain circumstances, nonvoting preferred stock also may be taken into account to satisfy this public float requirement. *See infra* Note 144.

56 Form F-3, General Instruction I.B.5; SEC Release No. 33-8878 (Dec. 19, 2007).

57 Nonconvertible securities, other than common equity, of a majority-owned subsidiary of a WKSI also may be registered if the parent registrant provides a full and unconditional guarantee of the payment obligations on such nonconvertible securities. Form F-3, General Instruction I.C.1.(c)(ii).

58 Form F-3, General Instruction I.B.2; SEC Release No. 33-7053 (Apr. 19, 1994). The Standards used to determine whether the $1 billion threshold is met would be the same as those used in the similar current test for WKSI status. *See* § 3.02[3][a][ii]

59 *See* SEC Release No. 33-7053 (Apr. 19, 1994).

60 Form F-3, Item 5(a) and Form F-1, Item 4A, as applicable if the issuer is eligible to incorporate by reference under General Instruction IV. Such disclosure also may be made by incorporating by reference any form 6-Ks submitted to the SEC by the issuer after its most recent Form 20-F. *See* § 4.02[3][c].

61 Form F-3, Item 5(b)(1). Form F-1, Item 4A(b)(1).

62 *See* § 4.05[2] for a discussion of the timeliness of financial statements. Form F-3, Item 5(b)(2). Although Form F-3 does not technically require an MD&A to accompany the financial statements required by Item 5(b)(2), market practice is to include or incorporate by reference such an MD&A in registration statements on Form F-3.

63 Effective October 1, 2016, the filing fee for Securities Act registration statements is $115.90 per $1 million of securities. *See* Fee Rate Advisory #1 for Fiscal Year 2017 (Aug. 31, 2016). In the case of ADRs, the fee is payable on the registration statement for the securities underlying the ADRs, together with an additional fee on the registration statement for the ADRs. The minimum registration fee applies separately to the registration of the ADRs and the underlying securities.

64 For a further discussion of the "pay-as-you-go" filing fee approach, *see* § 3.02[2][c].

65 Eligible foreign issuers, for their first year of reporting under IFRS, are permitted to file two years rather than three years of income statements, cash flow statements and statements of changes in equity. *See* SEC Release No. 33-8567 (Apr. 12, 2005); *see also* § 4.05[1]].

Form 20-F generally requires that registration statements include audited financial statements no more than 15 months old (and in some cases 12 months old), and that six-month financial statements (which may be unaudited) and U.S. GAAP information, where necessary, be included if the audited financial statements are more than nine months old. In addition, if the issuer has published interim financial information that covers a more current period than is otherwise required, that more current financial information must be included in the filing. *See* Form 20-F, Item 8.A.5; *see also* § 4.02[3][c][i] .

66 *See* § 4.05[1] and § 4.02[3][b][i], Note 40 for a discussion of U.S. GAAP reconciliation requirements. In 2007, the SEC decided to accept financial statements of foreign companies prepared in accordance with IFRS as issued by the IASB without requiring a reconciliation to U.S. GAAP. SEC Release No. 33-8879 (Dec. 21, 2007).

67 Form 20-F Item 3.A. The income statement and balance sheet items required ("selected financial data") include: net sales or operating revenues, income (loss) from operations, income (loss) from continuing operations, net income (loss), net income (loss) from operations per share, income (loss) from continuing operations per share, total assets, net assets, capital stock (excluding long-term debt and redeemable preferred stock), number of outstanding shares, dividends declared per share and diluted net income per share. *See* § 4.05 for a discussion of other financial statement requirements in registration statements.

68 Similarly, the JOBS Act permits an EGC to cover only two years of financial information in the MD&A section of its IPO registration statement. While the JOBS Act provision modifying § 7(a) of the Securities Act to permit the inclusion of only two years of audited financial statements is limited to registration statements for

the initial public offering of the common equity securities of a company and does not extend to registration statements for other or subsequent securities offerings, the SEC has stated that it will not object if in other registration statements an EGC does not present audited financial statements for any period prior to the earliest audited period presented in connection with its initial public offering of common equity securities. *See* Division of Corporation Finance, Jumpstart Our Business Startups Act Frequently Asked Questions, Question 12 (Dec. 21, 2015 (revised)).

69 The SEC has two offices that may be able to assist foreign companies in resolving conflicting accounting requirements and other procedural matters involved in the registration process. The SEC Office of Chief Accountant, while not concerned exclusively with foreign companies, has considerable experience in assisting foreign companies with the accounting requirements of Forms F-1 and F-3. It provides relevant information concerning submissions in its Protocol for Submissions to the Office of the Chief Accountant, which is available on the SEC's website. *See* SEC, Division of Corporation Finance, International Reporting and Disclosure Issues, Part IV(A) (Nov. 1, 2004).

A special staff section for foreign companies, the SEC Office of International Corporate Finance, also often provides guidance to foreign companies and their counsel and investment bankers during the course of public offerings. It is sometimes desirable for a company contemplating a U.S. public offering (particularly if the company has not previously issued securities in the United States) to schedule a preliminary meeting with the SEC staff in advance of filing the registration statement. The company's counsel ordinarily assists the company in scheduling the meeting and usually accompanies the company to the SEC.

70 Shell companies, blank check companies and issuers with no or substantially no business operations are not permitted to use the nonpublic submission procedure.

71 Because staff members are assigned registration statements based on their industry background, it is advisable for issuers to review carefully recent registration statements and comment letters of companies in the same industry sector in order to anticipate and minimize staff comments. In addition to review by the SEC, offering participants that are FINRA members may not participate in an offering absent prior review by FINRA of certain offering documentation addressing underwriting compensation and arrangements (unless an exemption from review applies), pursuant to FINRA rules. *See* § 3.06[4][b]. Registration statements filed by WKSIs are automatically effective upon filing and not subject to SEC review. *See* § 3.02[3][a][ii] for a discussion of WKSIs.

72 The SEC makes staff comment and issuer response letters publicly available via EDGAR. Both foreign and U.S. companies may continue to use the SEC's confidential review procedure for portions of their written responses to staff comments by submitting to the SEC both (i) a complete response letter containing both confidential and nonconfidential information (filed by hand and requesting confidential treatment pursuant to the SEC's FOIA rules) and (ii) a response letter redacted to eliminate all confidential information (filed by EDGAR). *See* SEC, Division of Corporation Finance, Staff Legal Bulletin No. 1 (with Addendum) (Feb. 28, 1997) (setting out the procedures for the SEC staff's handling of confidential treatment requests). With respect to requests for confidential treatment generally, the SEC cautions issuers that they should not be overly broad in their requests and that there must be an appropriate basis for a request for confidential treatment. *See* Press Release, SEC, Staff to Publicly Release Comment Letters and Responses (June 24, 2004).

73 In addition, the SEC attempts to review all registration statements of foreign private issuers engaging in material business transactions with entities subject to OFAC Sanctions, as discussed in greater detail in § 9.08. The SEC's Office of Global Security Risk will likely be involved in staff review of registration statements of issuers with ties to countries that sponsor terrorism and countries linked to human rights violations. The SEC has stated that the office "will function within the traditional disclosure mission of the Commission" including with the objective of obtaining "appropriate disclosure." *See* § 9.08.

74 The length of the comment period can be affected by the volume of capital markets activity at the time of filing.

75 Section 8(a) of the Securities Act provides that the effective date of a registration statement shall be the

twentieth day after the filing. However, in accordance with Rule 473 under the Securities Act issuers include an express provision on the cover of the registration statement delaying effectiveness until such time as the SEC is prepared to declare the registration statement effective.

After responses to comments have been cleared with the SEC staff, the issuer and the managing or principal underwriters may request acceleration of effectiveness of the registration statement pursuant to Rule 461 under the Securities Act. Rule 461 permits such persons to request a date of effectiveness and, upon two business days' notice to the SEC, an hour of effectiveness. Requests must generally be made in writing, but may be oral if certain conditions are met. *See* Rule 461 under the Securities Act. In generally responding to such requests, Rule 460 under the Securities Act provides that the SEC shall have due regard to whether the registration statement has been distributed to underwriters and dealers reasonably anticipated to be invited to participate in the distribution of the subject security. Accordingly, the managing or principal underwriter typically accompanies its request for acceleration with a letter setting out, or the request itself sets out, prospectus distribution details, including breakdowns of recipients and numbers of copies distributed.

76 *See* § 3.02[1][d] discussing the requirement to include the price range and offering size in an IPO preliminary prospectus before distribution.

77 Rule 433 under the Securities Act. *See* § 3.02(3)(c)(iv) for a discussion of free writing prospectuses and § 3.02[3][c][iii][B] for a discussion of electronic road shows.

78 *See* § 3.02[1][e][i] for a discussion of requirement to deliver a preliminary prospectus prior to confirmation of sales.

79 The ability to make up-to-the-minute demand assessments resulting from the bookbuilding process, and the resultant decrease in underwriting risk, has led to a de-emphasis of underwriting commissions in favor of compensation based significantly on selling efforts. *See* 3.02[5][f]. Bookbuilding also facilitates precise allocation of the securities to particular regions and therefore also to the corresponding banks within the underwriting syndicate or syndicates.

In addition to allocations being determined by indications of market interest, it is also shaped by issuers, as they are increasingly playing a part in the allocation process. *See*, *e.g.*, § 3.06[2][b], which describes the FINRA rule that requires a FINRA member acting as the book-running lead manager of an initial public offering to disclose indications of interest and final allocations to an issuer's pricing committee (or board of directors, if no pricing committee has been appointed).

80 Certain websites use transparent order books or auction systems that permit potential investors to view the bookbuilding process. This mechanism raises questions as to whether the information about the order book or about the nature of the auction process must be disclosed in the prospectus and whether information on the computer screen is itself part of the prospectus, or whether such information constitutes a free writing prospectus. Prior to the Securities Offering Reforms, the SEC granted no-action relief whereby auctions of securities by reporting companies were deemed by the staff not to be in violation of § 5(b)(1) of the Securities Act if either a post-effective amendment or final prospectus supplement describing the auction system was filed. *See In Bear Stearns & Co., Inc.* (avail. July 20, 2000) and *Wit Capital Corp.* (avail. July 20, 2000). *See also W.R. Hambrecht & Co.* (avail. July 12, 2000) (delivery of prospectus for debt securities through Hambrecht's website containing a hyperlink to its auction system would comply with § 5(b)(1) and Rule 424 under the Securities Act where the issuer of the debt securities filed material as in *Wit Capital Corp.*). After the Securities Offering Reforms, free writing prospectuses presumably may be used where permitted to provide investors with the auction-related information. Few companies have gone public through Dutch auctions.

In the initial public offering of Google Inc. in 2004, the SEC permitted an electronic auction offering structure to determine the initial public offering price and share allocations. Participants were required to: (i) obtain bidder IDs electronically by registering on an offering website (and, when registering, consent to electronic delivery of communications related to the offering, including amendments to the preliminary prospectus and the final prospectus and notices concerning the effectiveness of the registration statement and acceptance of bids), (ii) submit a bid by one or more of the Internet, telephone, facsimile or in person, depending upon underwriter requirements, setting forth an amount and bid price for shares, which bid could be withdrawn until underwriter electronic notification of acceptance at the time the initial offering price was set and (iii) reconfirm bids upon electronic notification of the occurrence of certain events (including a prospectus recirculation). As in the case of Wit Capital Corp., offers to buy shares made before the effective date of the registration statement could be accepted, if the bid price were at or above the initial offering price, following the effective date of the registration statement without being considered a pre-effective sale in violation of § 5 of the Securities Act and without the need for investors to reconfirm the bid. *See supra* Note 42. In addition, the offering structure provided that, in the instance where the initial public offering price was less than the bottom of the price range or more than 20% above the top of the price range, Google and the underwriters could provide notice on the offering website of the final offering price, issue a press release announcing the final offering price and send an electronic notice to participants who had received a bidder ID notifying them of the final offering price. Under those circumstances, the underwriters would not require bidders to reconfirm bids unless the prospectus were required to be recirculated. If reconfirmation were not required, the underwriters could accept successful bids by sending electronic notices of acceptance in as little as one hour after the final price was set, with withdrawal rights terminating once a bid was accepted.

81 The amount of securities to be offered may be increased by an amendment to the registration statement prior to its effectiveness, but once a registration statement is effective, additional securities (including securities of the same class) can generally be registered only by filing a new registration statement. Pursuant to Rule 462 under the Securities Act, however, a new registration statement may be declared effective immediately upon filing if it relates to no more than 20% of the amount of securities registered on the initial registration statement. *See infra* Note 83 and accompanying text. Other exceptions include the addition of certain securities offered under automatic shelf registration statements. *See* Rule 413 under the Securities Act; § 3.02[2][c].

82 *See* § 3.02[2].

83 Rule 430A under the Securities Act. The omitted information must be included in a final prospectus, which is required to be filed with the SEC within two business days following the earlier of the date of determination of the offering price and the date the final prospectus is first used in connection with the public offering. If, however, the final prospectus is not filed with the SEC within 15 business days after effectiveness, a post-effective amendment must be filed and declared effective before sales are made, and another 15 business-day period will begin to run from the date of effectiveness of the post-effective amendment. Alternatively, the post-effective amendment could contain the pricing information and be declared effective in the manner of a traditional pricing amendment. Rule 430A is available to any issuer, but is limited to offerings of securities for cash.

Although the preliminary prospectus included in the registration statement when it becomes effective must include an estimate of the amount of securities to be offered and the expected price range, any deviations with respect to volume or price will require the filing of a post-effective amended registration statement only if either (i) the aggregate offering price of the offered securities exceeds the specified maximum or (ii) the aggregate offering price of the offered securities is more than 20% lower than the specified maximum and the reductions in volume and/or price giving rise to such lower aggregate offering price would result in a material change in the disclosure contained in the registration statement previously declared effective. *See* General Instructions of Forms S-1, S-3, S-11, F-1 and F-3; Instruction to Rule 430A(a) and Rule 457(o) under the Securities Act. Moreover, if the aggregate offering price of the securities offered exceeds the specified maximum by less than 20%, the required amendment to increase the size of the offering may be accomplished by means of a short-form registration statement that will be effective immediately upon filing. *See* General Instructions to Forms S-1, S-3, S-11, F-1 and F-3; Rule 462(b) under the Securities Act.

84 Rule 159 under the Securities Act, which focuses for liability purposes under §12(a)(2) of the Securities Act on the information conveyed to investors at or prior to the time of an investment decision. Whereas in the past updated disclosure about the issuer and any corrections to the preliminary prospectus would typically have been included in the final prospectus, such an approach is no longer sufficient as a result of adoption

of Rule 159 as part of the Securities Offering Reforms. The adoption of free writing prospectus procedures pursuant to the Securities Offering Reforms has greatly facilitated the ability of issuers and underwriters to address the disclosure liability structure provided by Rule 159, by simplifying the dissemination of updating information to investors prior to an investment decision to purchase the subject securities. *See* discussion of free writing prospectuses in § 3.02[3][c][iv].

85 *See* Rule 10b-10 under the Exchange Act.

86 For a further discussion of settlement in U.S. public offerings, *see infra* Note 489.

87 At a February 2011 conference, a member of the staff of the SEC Division of Corporation Finance stated that the staff understands that economic conditions have created challenges with pricing, and reviewers are trying to be sensitive and flexible. If a registrant wants extra flexibility in the range, it should provide an analysis of the economic conditions that support extra flexibility. It was stated that the staff has granted these requests when it has seen market trends to support them. SEC Filings Insight (CCH, Feb. 24, 2011).

88 A placeholder offering size, often $50 or $100 million, is typically included on the cover page of the registration statement in initial filings since an offering size is required to be included for the payment of fees. That offering size is typically revised in the amendment filed when a price range is added and any additional fees owed are then paid. Press coverage of initial filings sometimes mistakenly identifies the placeholder amount as the expected IPO offering size, although the market generally disregards such reports. First-time registrants had in the past sometimes been permitted to circulate a form of preliminary prospectus that contained information about the issuer, but did not indicate offering size or an estimated price range. The SEC staff, however, subsequently objected to the circulation of preliminary prospectuses that omit price ranges and they are no longer used in initial public offerings.

89 Rule 15c2-8(b) under the Exchange Act.

90 Section 5(b)(2) of the Securities Act.

91 Rule 424 under the Securities Act sets forth time periods for filing prospectuses that disclose information previously omitted or that constitutes a substantive change from or addition to information set forth in a prospectus. In general, Rule 424 provides that a form of prospectus that discloses information previously omitted from the prospectus filed as part of an effective registration statement in reliance on Rule 430A under the Securities Act shall be filed no later than the second business day following the earlier of the date of determination of the price and the date it is first used after effectiveness. Pursuant to Rule 430A, the form of prospectus filed as part of a registration statement for securities offered for cash that is declared effective may omit information with respect to the public offering price, underwriting (including underwriting terms and syndicate composition), underwriting discounts or commissions, amount of proceeds, conversion rates, call prices and other items dependent upon the offering price, delivery dates, and terms of the securities dependent upon the offering date. Pursuant to Rule 430A information omitted but timely filed under Rule 424 is deemed to be part of the registration statement as of the time it was declared effective.

92 Rule 172 under the Securities Act. The prior actual delivery requirement provided only illusory protection for investors because an investment decision had invariably been made, and settlement might have occurred, before the final prospectus reached the investor. Rule 159 is intended to ensure consideration of disclosure liability based on the disclosure record conveyed to the investor at the time of the investment decision. On the other hand, the need to prepare, print and deliver final prospectuses caused inordinate timing and logistical difficulties for issuers and underwriters. Moreover, the sanction for failing to deliver a final prospectus in accordance with the § 5 requirements is draconian and disproportionate—a strict liability right of rescission under § 12(a)(1) of the Securities Act as a result of the § 5 violation.

Rule 173 under the Securities Act requires that for each transaction involving a sale of securities that requires delivery of a final prospectus, each underwriter, broker or dealer participating in such offering (or if the sale is effected by the issuer and not an underwriter, broker or dealer, then the issuer) send to each purchaser, not later than two business days after the completion of the sale (*i.e.*, the closing of an offering), a copy of the final prospectus or, in lieu of the final prospectus, a notice providing that the sale was made pursuant to a registration statement. This notice typically is included in the confirmation of sale required by

Rule 10b-10 under the Exchange Act to be sent to each investor. Rule 173 also permits purchasers to request a physical copy of the final prospectus. Compliance with Rule 173 is not a condition to the exemption from final prospectus delivery under Rule 172, and thus noncompliance with Rule 173 will not result in a violation of § 5 of the Securities Act.

93 Allotment securities include securities acquired in stabilization activities or in an uninterrupted chain of transactions between dealers (as well as securities acquired directly from the issuer or any selling securityholder).

94 As is the case with underwriters, dealers with a prospectus delivery requirement are required to comply with the notice provisions of Rule 173. *See supra* Note 92.

95 *See* April 2000 Release; SEC Release No. 33-7289 (May 9, 1996); SEC Release No. 33-7233 (Oct. 6, 1995) (the "October 1995 Release"). The SEC continues to express concerns as to whether Internet access is sufficiently universal that delivery should be deemed accomplished solely by an issuer's posting a document on the issuer's or a third party's website.

96 The SEC has adopted an "access-equals-delivery" model for delivery of final prospectuses and adopted a "notice-and-access" model for delivery of proxy material; *see supra* Note 92 and accompanying text and § 4.02[3][c][v]; *see also* SEC Release No. 34-55146 (Jan. 22, 2007).

97 Evidence of actual receipt of documents in electronic form can be shown, for example, by an investor's obtaining a different document through a hyperlink from the required document, by an investor's use of forms or other material available only by viewing the required document or by records generated by a system with the capacity to track which users accessed, printed or downloaded those documents.

98 It should be emphasized that general consent to delivery, discussed below, which may be given in advance, does not obviate the need to meet the notice requirement, which requires specific notice of the availability of the required document.

99 For example, documents may be delivered to investors in portable document format ("PDF"), provided investors are informed of the hardware requirements necessary to download PDF files at the time consent to electronic delivery is obtained and are furnished with the required software and technical assistance at no additional cost. PDF is a graphic representation of text provided in a form that cannot be manipulated with word-processing programs. While the SEC has allowed the use of hypertext markup language ("HTML") for EDGAR filings, issuers are still not permitted to file through EDGAR in PDF format, although they may accompany required filings with unofficial copies in PDF format. April 2000 Release.

100 October 1995 Release.

101 October 1995 Release. In the case of a continuous offering, the prospectus should remain available for as long as the issuer will rely on its delivery through the electronic system.

102 October 1995 Release.

103 *See* April 2000 Release. Issuers and broker-dealers may rely on householding (delivery of one document where multiple investors share an address) for prospectus delivery where investors share an electronic address. *See* Rule 154(d) under the Securities Act. However, issuers cannot rely on householding for electronic delivery of proxy material, because Rule 14a-3(e)(1)(ii)(B)(4) under the Exchange Act requires delivery of the relevant document to a post office box or residential street address.

104 Provision of the consent should not be a condition for opening a brokerage account, except in the case of an online-only brokerage firm.

105 SEC Release No. 33-8027 (Oct. 25, 2001) (order declaring registration statement effective); *see also* SEC Release No. 33-8028 (Oct. 25, 2001) (statements of the SEC Commissioners). The importance of this development is highlighted by the fact that the SEC itself, rather than the staff of the SEC, declared the registration statement effective. The staff would normally take this action.

106 The decision was split two to one with a strong dissent filed by then-Commissioner Hunt. Then-Commissioner Hunt expressed concern that American Life would not be providing separate advance notice to investors in connection with website postings. He argued that this SEC decision was "not consistent with

the protection of investors" and exposed investors to significant losses from fraudulent transactions or material changes in the terms of their annuity contracts.

He concluded his dissent by urging the SEC to seek public comment before expanding its decision with respect to this offering.

107 Issuers of annuities and mutual funds are required to update and deliver prospectuses on a more frequent basis than would be required of issuers of other securities as a result of the frequency of changes to the securities underlying these instruments and the ongoing nature of the sales of these instruments by the issuers thereof. This makes the possibility of electronic delivery of required materials particularly relevant to issuers of annuities and mutual funds.

108 Electronic Signatures in Global and National Commerce Act, Pub. L. No. 106-229, 114 Stat. 464 (1999) (codified at 15 U.S.C. §§ 7001–31). This act seeks to promote electronic commerce by providing a consistent national framework for the validity and enforceability of electronic signatures and transactions. With respect to information regarding a transaction that, pursuant to applicable laws or regulations, must be provided to a consumer in writing, the act sets forth conditions that must be satisfied in order for electronic delivery of such information to satisfy the delivery requirements of the applicable law or regulation. The act, for example, sets forth requirements regarding consumer consent to electronic delivery, the right of a consumer to withdraw such consent, the right of a consumer to receive paper copies of electronic records and a consumer's ability to access and retain records that have been delivered electronically.

109 *See* § 3.02[3][c][iv].

110 *But see* § 4.05[2] for a discussion of Item 8 of Form 20-F, which requires that financial statements not be older than a specified period prior to the commencement of an offering and thus effectively imposes certain limitations on when offers may be made off the shelves of foreign companies.

111 Rule 415(1)(a)(x) under the Securities Act. For a discussion of the eligibility requirements of Form F-3, *see* § 3.02[1][b]. Shelf registration is also permitted for continuous offerings by issuers not eligible to use Form F-3 and might therefore be used in connection with continuous offerings such as medium-term note programs by such issuers. Rule 415(a)(1)(ix) under the Securities Act. Such offerings must be "continuous" and not merely "delayed." The updating requirements for registration statements and prospectuses of issuers filing on Form F-1, however, make such an approach cumbersome and difficult.

112 *See* Rule 415(a)(i) under the Securities Act.

113 For seasoned issuers that are not WKSIs, the SEC will permit offers and sales of securities from the old registration statement to be made up to six months after the third anniversary of effectiveness, if a replacement registration statement has been filed but not yet become effective. Rule 415(a)(5)(ii) under the Securities Act. For WKSIs, when an existing shelf registration statement is replaced by a new automatic shelf registration statement, there is no extension of the effectiveness of the registration statement that is being replaced because there is no delay in effectiveness of the replacement registration statement.

114 *See* Rule 457(p) under the Securities Act.

115 Excluding offerings by the registrant's parent or subsidiaries. *See* Rule 415(a)(x) under the Securities Act.

116 *See* Rule 415(a)(5) under the Securities Act. Automatic shelf registration is discussed in § 3.02[2][c].

117 Unallocated shelf procedures have been available to foreign issuers since 1994 (SEC Release No. 33-7053 (Apr. 19, 1994)) but were first made available to U.S. issuers in 1992 (SEC Release No. 33-6964 (Oct. 22, 1992)). Prior to the adoption of unallocated shelf procedures, the shelf registration rules required registration of a specified amount of securities of a given class.

118 *See* § 3.02[4] (discussing the portion of a global offering that includes a U.S. public component that must be registered with the SEC).

119 *See* § 3.02[2][c].

120 *See* § 3.05[4].

121 If omitted information that relates to the terms of the offering, the securities, the plan of distribution or any selling securityholders (as opposed to issuer-related information) is included in an Exchange Act filing, a

prospectus supplement must nonetheless be filed disclosing the specific Exchange Act report or reports in which the information is contained.

122 The Securities Offering Reform Release makes clear that the date of first use is not the date the prospectus supplement is given to a purchaser in connection with a sale, but instead the date the prospectus is first available to an underwriter or any prospective purchaser. *See* Securities Offering Reform Release, 70 Fed. Reg. 44,722, 44,773 (Aug. 3, 2005).

123 Supplements as to which this provision applies include those filed in connection with delayed primary offerings and those containing information regarding selling securityholders omitted from the registration statement. Rule 430B(f)(1) under the Securities Act.

124 Establishing a new effective date will not affect the information that was in the registration statement at the time of any prior sale, and the rights of an investor in a prior sale (with a previous effective date) will remain unaffected by subsequently filed prospectus supplements or Exchange Act reports. The new effective date of the registration statement would not be considered the filing of a new registration statement for purposes of form eligibility.

125 Instead, the effective date would be the date of the issuer's most recent annual report (which updates the prospectus for purposes of § 10(a)(3)) of the Securities Act or, if later, the date that the relevant shelf registration statement initially became effective.

126 For an MTN program, incorporation by reference can be particularly useful as a means of avoiding the cost of preparing and printing a new prospectus supplement each time there is a need to disclose recent developments.

127 Rule 424(b)(2) requires that in any shelf takedown under Rule 415(a)(1)(x), any "information previously omitted" from the prospectus filed with the registration statement under Rule 430B—including MTN final pricing information—must be filed no later than two business days after pricing.

128 *See* § 3.05[1].

129 SEC Release No. 33-6240 (Sept. 10, 1980); SEC Release No. 33-6424 (Sept. 2, 1982). Certain aspects of shelf registration applicable to a Schedule B issuer differ from those applicable to a foreign private issuer, but the procedures are generally the same. *See* Edward F. Greene & Ronald Adee, *The Securities of Foreign Governments, Political Subdivisions and Multinational Organizations*, 10 N.C. J. INT'L L. & COM. REG. 1 (1985); Guy P. Lander, U.S. Securities Law for International Financial Transactions and Capital Markets, 114 U.S. Sec. Law for Financial Trans. § 4:18 (2d ed.) (updated Dec. 2015).

130 *See New South Wales* (avail. Sept. 15, 2009).

131 *See* § 3.02[3][a][ii] for a discussion of WKSIs.

132 Automatic shelf registration cannot be used in connection with business combination transactions or exchange offers on Form S-4 or F-4.

133 Issuers may still avail themselves of the SEC's "novel and unique" process providing for review, upon request and prior to offering, of new securities that may raise substantial regulatory issues. *See* Securities Offering Reform, 70 Fed. Reg. 44,722, 44,781 n.538 (Aug. 3, 2005).

The automatic shelf registration procedures do not allow a WKSI to delay the effectiveness of its automatic shelf registration statement. Instead, the WKSI may use any registration statement form for which it is eligible and, if it uses Form S-3 or F-3, can indicate that it is not an automatic shelf registration statement in order not to go effective immediately. If a WKSI does not use an automatic shelf registration, however, it will not be able to avail itself of the liberalized rules applicable to automatic shelf registration.

134 If the SEC later notifies a WKSI that the use of the automatic shelf registration statement was improper, securities sold prior to such notification will not be deemed to have been sold in violation of § 5 of the Securities Act, and ongoing offerings may continue pending effectiveness of a post-effective amendment or a new registration statement, provided that such offering is permitted by the post-effective amendment or new registration statement. *See* Rule 401(g)(2) under Securities Act.

If an issuer that was a WKSI at the time of initial filing of an automatic shelf registration statement is no longer a WKSI eligible to use an automatic shelf registration statement at the time of the filing of its most recent annual report on Form 10-K or 20-F, it will have to either post-effectively amend its registration statement onto the form it is eligible to use or file a new registration statement. An offering that is ongoing at such time can continue until a post-effective amendment is filed, or where appropriate a new registration statement is timely filed and declared effective, provided that such offering is permitted by the post-effective amendment or new registration statement. To be considered timely, the post-effective amendment or new registration statement would have to be filed within 120 days after the issuer's most recent fiscal year-end.

135 As discussed in § 3.02[2][b], if information that relates to the terms of the offering, the securities, the plan of distribution or any selling securityholders (as opposed to issuer-related information) omitted from the base prospectus is included in an Exchange Act filing, a prospectus supplement must be prepared and filed under Rule 424 under the Securities Act identifying the specific Exchange Act report or reports containing such information.

136 An issuer may include in its registration statement securities to be issued by certain of its majority-owned subsidiaries, including securities (i) that are issued by subsidiaries that are themselves WKSIs, (ii) that are nonconvertible securities, other than common equity, that the parent has fully guaranteed, (iii) that are guarantees of nonconvertible securities, other than common equity, of the parent or another majority-owned subsidiary that is guaranteed by the parent, and (iv) that are nonconvertible securities, other than common equity, of a wholly-owned subsidiary. An issuer may also include in its registration statement securities to be sold by selling securityholders. *See* Form F-3, Instruction I.C.

137 This flexibility is unique to automatic shelf registration statements. Requiring post-effective amendments for these additions is intended to ensure that new issuers and their officers and directors become signatories to the registration statement and that all information, opinions and consents are provided in the registration statement, and for purposes of qualification of any debt securities being added to the registration statement for purposes of the Trust Indenture Act. The Securities Offering Reform Release notes that for automatic shelf registration statements the SEC will permit qualification of a trust indenture at the time of filing of a post-effective amendment adding the related debt securities to the registration statement, whereas for other shelf registration statements the SEC staff will continue to take the view that an indenture must be qualified when the related registration statement first becomes effective.

138 *See* clause (1)(B)(2) of the definition of "Well-known seasoned issuer" in Rule 405 under the Securities Act.

139 Fees deposited in the SEC's "lockbox account" to be withdrawn on a pay-as-you-go basis, as opposed to fees paid in advance in connection with the filing of a registration statement, will be applied based on the fee schedule in effect at the time they are used in connection with a takedown.

140 *See* § 3.02[1][a].

141 *See supra* Note 43 and related text for the definition of "offer."

142 For example, the SEC observes in the Securities Offering Reform Release that the current regulatory system has led to the practice of marketing securities through road show presentations that have not been open to retail investors generally. As a result, small investors generally have not had the same access to information as larger investors.

143 Under the Securities Offering Reforms, limitations on communications disseminated at any time during the offering process have been eliminated for WKSIs, although written communications that qualify as a "free writing prospectus" are in some cases required to be filed. *See* the discussion of free writing prospectuses in § 3.02[3][c][iv].

144 The public float test applies to "voting and nonvoting common equity." In the context of Form F-3 eligibility, this language has in the past presented a problem for some foreign private issuers whose most liquid class of equity is preferred stock. For example, for many Brazilian companies the most widely held and traded equity is a nonvoting preferred stock, which has historically been issued because local corporate law does not contemplate nonvoting common stock. The SEC staff has in the past informally taken the view that such securities could not be used in determining public float for purposes of Form F-3 eligibility. *See* SEC Release No. 33-7419 (May 8, 1997), 62 Fed. Reg. 26,386, 26,387 n.11 (May 14, 1997). In discussing how

public float is calculated, the Securities Offering Reform Release states that, for purposes of both WKSI status and Form F-3 eligibility, the SEC interprets "common equity" to include "a class of participating voting or nonvoting preferred stock of a foreign issuer where the issuance of the preferred stock results from requirements of the applicable foreign jurisdiction or market and where the class of preferred stock has liquidation or dividend preferences and other terms that cause it to be the substantial economic equivalent of a class of common stock." This language allows some foreign registrants to include a class of preferred stock in calculating public float, because (i) the original reason for issuing preferred stock rather than common stock was compliance with a limitation under foreign law, and (ii) the company can reasonably conclude that the preferences are immaterial to the market value of the stock.

145 The Securities Offering Reform Release makes clear that issuers may not include for purposes of the $1 billion test the principal amount of securities that were offered in registered exchange offers (principally as so-called "A/B exchange offers") because a "substantial portion of these offerings involve registered exchange offers of substantially identical securities for securities that were sold in private offerings." Securities Offering Reform, 70 Fed. Reg. 44,722, 44,728 (Aug. 3, 2005).

146 In calculating the $1 billion amount, an issuer generally may include the principal amount of any debt and the greater of the liquidation preference and par value of any nonconvertible preferred stock.

147 A parent issuer may include the aggregate principal amount of such securities issued by its majority-owned subsidiaries that the parent has fully guaranteed. A majority-owned subsidiary of a WKSI may also qualify as a WKSI if the subsidiary satisfies the WKSI criteria. Certain securities of a majority-owned subsidiary of a WKSI that is not itself a WKSI may also be included in a WKSI shelf registration statement. *See supra* Note 136.

148 The Securities Offering Reform Release provides that a seasoned issuer is an issuer that is eligible to use Form S-3 or Form F-3 to register primary offerings of securities pursuant to General Instruction I.B.1 of such Forms or is registering securities in reliance on General Instruction I.B.2, I.B.5, or I.C. of Form S-3 or General Instruction I.A.5 or I.B.2 of Form F-3. The Securities Offering Reforms expanded the majority-owned subsidiary eligibility provisions in Forms S-3 and F-3 to allow majority-owned subsidiaries to use these forms under the same circumstances in which majority-owned subsidiaries may be WKSIs. Asset-backed securities issuers offering securities registered on Form S-3 are also considered seasoned issuers but cannot qualify for WKSI status.

149 Foreign governments (or political subdivisions of foreign governments) that register securities on Schedule B are ineligible to use Form S-3 or F-3. As a result, Schedule B issuers cannot satisfy the WKSI criteria and do not benefit from the communications reforms for WKSIs. While the reforms applicable to seasoned issuers do not by their terms apply to foreign governmental issuers filing on Schedule B under the Securities Act, the original shelf registration rules also did not apply to these issuers. A shelf registration process was later extended to such foreign governmental issuers by interpretation by the SEC's Division of Corporation Finance. Steps to extend the benefits of the communication reforms applicable to WKSIs have yet to be taken by the SEC or the Division.

150 *See* Rule 164 under the Securities Act. In addition, Rule 164 excludes investment companies and business development companies, which are subject to a separate framework governing communications, from using free writing prospectuses. *See* Securities Offering Reform Release.

151 Failure to timely file will not by itself result in an issuer being ineligible to use a free writing prospectus, if the issuer is current at the time of determination of ineligible issuer status.

152 *See* Form S-3, General Instruction I.A.3(b)

153 Ineligibility due to bankruptcy proceedings will terminate once the issuer has filed an annual report with audited financial statements subsequent to its emergence from such proceedings.

154 The "was at the time a subsidiary of an issuer" provision is intended to address concerns about a subsidiary that had been convicted of a felony or misdemeanor described in § 15(b)(4)(B) of the Exchange Act prior to its acquisition disqualifying the acquiring issuer from WKSI eligibility.

155 There is a waiver provision that enables the SEC to waive an issuer's ineligibility if the SEC determines,

upon the "showing of good cause," that it is not necessary to categorize such issuer as an ineligible issuer. Rule 405 under the Securities Act. This authority has been delegated to the Division of Corporation Finance. *See*, *e.g.*, *In the Matter of Tenet Healthcare Corporation* (avail. Apr. 19, 2007) (granting relief from being considered an "ineligible issuer" in connection with a consent decree entered for alleged violations of antifraud provisions of the federal securities laws). In July 2011, the Division of Corporation Finance issued guidance regarding the factors it would consider when granting a waiver and, in March 2014, it updated this guidance. SEC, Division of Corporation Finance, Statement on Well-Known Seasoned Issuer Waivers (July 8, 2011), Revised Statement on Well-Known Seasoned Issuer Waivers (Mar. 12, 2014). Waivers will only be granted if a finding is made that such waiver is consistent with the public interest and the protection of investors. The Division of Corporation Finance's inquiry focuses on whether the conduct involved a criminal conviction or scienter-based violation and whether the violation relates to the issuer's own disclosure about itself or calls into question the issuer's current and future disclosure. If the violation does not involve the issuer's own disclosure, a waiver request is more likely to be granted, even if the violation was intentional or reckless. If the antifraud violation involves the issuer's own disclosure but is not intentional or reckless, the following additional factors will be considered: (i) any remedial steps taken by the issuer, (ii) the pervasiveness and timing of the misconduct, and (iii) the impact on the issuer (and the market as a whole) if the waiver request is denied. A waiver may include conditions or undertakings.

In 2009, the SEC released a Compliance & Disclosure Interpretation ("C&DI") in which it explained how an issuer may continue to offer securities off an automatic shelf registration statement if the issuer will no longer be a WKSI at the time of filing its next annual report on Form 10-K. *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 198.06 (Jan. 26, 2009). In order to continue to offer and sell securities using its automatic shelf registration statement, the issuer must, prior to filing its next annual report on Form 10-K, amend the automatic shelf registration statement so that it conforms to the requirements that apply to a nonautomatic Form S-3. Specifically, (i) the issuer must file a post-effective amendment to the automatic shelf registration statement prior to filing the Form 10-K to register a specific amount of securities and to pay the associated filing fee, (ii) the prospectus included in the post-effective amendment to the automatic shelf registration statement may not omit information in reliance on provisions of Rule 430B that are available only to automatic shelf registration statements and instead must contain all information required to be included in a Form S-3, and (iii) the issuer must remain eligible to use Form S-3 at the time of the filing of the Form 10-K. Promptly after filing the Form 10-K, the issuer must file either a post-effective amendment or a new Form S-3 registration statement to convert the prior automatic Form S-3 to a nonautomatic shelf registration statement, which must be declared effective by the SEC staff. Pending effectiveness, the issuer may continue to offer and sell securities using the amended automatic shelf registration statement. Similar procedures apply for foreign private issuers with respect to their Form 20-F and F-3 filings.

156 Rule 164(h) under the Securities Act. Rule 164 also provides that an offering participant other than the issuer benefits from the issuer's status if it has a reasonable belief that the issuer is not an ineligible issuer.

157 Information is released or disseminated by or on behalf of an issuer if the issuer or an agent or representative, other than an offering participant who is an underwriter or dealer, authorizes the communication or approves the release or dissemination before it is made. Rule 168(b)(3) under the Securities Act.

158 *See* Securities Offering Reform Release, 70 Fed. Reg. 44,722, 44,735 n.122 (Aug. 3, 2005).

159 In recognition that foreign issuers that are public companies in other markets though not in the United States regularly disclose factual business information in those other markets, the SEC provided that, for this purpose, reporting issuers include foreign private issuers that (i) meet all of the requirements for eligibility to use Form F-3 other than the reporting history provisions, (ii) satisfy the public float threshold of Form F-3, and (iii) either have had their equity securities traded on a designated offshore securities market for at least 12 months or have a worldwide market value of their outstanding common equity held by nonaffiliates of at least $700 million. The public float requirement is not applicable if at least one class of the issuer's common equity is listed on a national securities exchange and it does not sell more than one third of its public float

over the 12-month period to the date the registrant seeks to rely on the Rule 168 safe harbor.

160 Factual business information that reporting issuers release or disseminate is subject to the applicable requirements of Regulation FD, Regulation G, Item 10 of Regulation S-K and Item 2.02 of Form 8-K. *See* § 4.10[6].

161 The Securities Offering Reform Release clarifies that a customer also may be a potential investor and that the information may be received by other people without affecting the availability of the safe harbor so long as the other conditions of the safe harbor are satisfied.

162 The Securities Offering Reform Release states that releasing a new type of financial information shortly before a registered offering might well be outside the safe harbor. Similarly, if an issuer consistently released certain factual business information on a quarterly basis through ordinary course press releases, it could not satisfy the condition if it instituted an accelerated media campaign right before or during an offering to release that type of factual business information on a different basis or with different timing. Nonetheless, the Securities Offering Reform Release makes clear that "regularly released" does not necessarily pertain only to scheduled releases of information but can also pertain to episodic communications, such as a change in earnings guidance, so long as the issuer has previously provided these communications in that manner. In these situations, the nature of the event triggering the communication will be taken into account.

Issuers also look to apply the safe harbor in Rule 168 when speaking or otherwise publicly participating in industry conferences, where similar level executives have participated in the same or similar conferences in prior periods and that the scope of the discussion will be of similar factual business information. Similarly, the safe harbor in Rule 168 is sometimes relied on to permit certain nondeal road shows, meetings by an issuer with an institutional investor outside an offering context. However, in cases where an offering is planned immediately after participation at a conference or a nondeal road show meeting, careful analysis is necessary to determine whether the safe harbor applies or whether the presentation may be an offer (which may itself be a permissible offer).

163 For example, although an issuer would be able to rely on the safe harbor for an earnings release published consistent with past practice, the Rule 168 safe harbor does not apply to the use of an earnings release by an offering participant as part of the marketing materials to potential investors in the registered offering.

164 *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 256.25 (Aug. 6, 2015).

165 In order to take advantage of the safe harbor for offshore offerings under Regulation S under the Securities Act, an issuer must avoid "directed selling efforts," including the publication of certain advertisements regarding the offering in a publication with a general circulation in the United States. *See* the discussion of directed selling efforts under Regulation S in § 8.02[1][b]. By analogy, if a foreign company avoids "directed selling efforts" in connection with a registered offering, the SEC should not consider the company's activities in its home market to be acts of gun-jumping.

166 The EU prospectus regime, which aims to bring greater regulatory uniformity in Europe to the levels of publicity in the context of offerings and listings of securities, permits an advertisement of a public offering, or admission to trading on a regulated market, of securities within the EU if the advertisement (i) states that a prospectus has been or will be published (and indicates where investors are or will be able to obtain it) and (ii) is clearly recognizable as such, and not inaccurate, misleading or inconsistent with the prospectus.

167 *See* § 11.03[2]. In certain offerings in the United Kingdom, issuers have also sought to encourage investors to purchase shares by offering them bonus shares or vouchers for free services in connection with purchases of minimum numbers of shares. Although U.S. issuers have not generally offered such premiums, similar incentives could be utilized in public offerings in the United States. In a U.S. offering, the Securities Act registration statement would have to disclose the incentives' terms and effect on the share offering and net proceeds. Under § 10(b) of the Exchange Act and § 17 of the Securities Act, it would be unlawful to use such incentives in a fraudulent or deceptive manner. *See* § 11.04[2] and [3].

168 *See*, *e.g.*, § 27A of the Securities Act (providing a safe harbor for certain forward-looking statements) and

Item 303 of Regulation S-K under the Securities Act (requiring forward-looking disclosure about known material trends and uncertainties).

169 In recognition that foreign issuers that are not public in the United States may be public companies in other markets, this safe harbor also is available for certain non-reporting foreign private issuers as described in *supra* Note 159. It is otherwise not available to non-reporting issuers.

170 Regulation FD, Regulation G, Item 10 of Regulation S-K and Item 2.02 of Form 8-K apply to this dissemination of forward-looking information. *See* § 4.10[6].

171 *See* § 3.02[3][b][iv].

172 In 1995, the SEC proposed a rule under which eligible issuers would have been permitted to "test the waters" for a U.S.-registered IPO—that is, to solicit indications of interest from potential investors prior to the filing of any Securities Act registration statement—without being deemed to have "offered" securities for sale in violation of § 5 of the Securities Act. SEC Release No. 33-7188 (June 27, 1995). This would have allowed companies to gauge investor interest before incurring the significant expense of preparing the disclosure documents required for a registered IPO. This proposal was superseded (and substantially narrowed) by an SEC proposal in the Aircraft Carrier Release, SEC Release No. 33-7606 (Nov. 3, 1998), as amended by SEC Release No. 33-7606A (Nov. 13, 1998), that, after some modification, was adopted in 2001 as Rule 155(b) under the Securities Act and permits an issuer to switch from a private placement to a public offering in certain circumstances and provided that certain requirements are satisfied. *See* § 7.02[6].

173 Rule 163A defines "by or on behalf of" an issuer as any communication authorized or approved by an agent or representative of the issuer (other than an offering participant who is an underwriter or a dealer) before the communication is made.

174 For example, the SEC indicates in the Securities Offering Reform Release that if an issuer or its representative gave an interview to the press prior to the 30-day period, the issuer may not be able to rely on the safe harbor if the interview was published during the 30-day period.

The safe harbor is not available to communications relating to certain business combination transactions; offerings registered on Form S-8 (unless the issuer is a WKSI); offerings by issuers that are or were during the past three years blank check, shell or penny stock companies; or communications by issuers that are investment companies or business development companies. Communications falling within the safe harbor are subject to Regulation FD, other disclosure requirements and the antifraud provisions of the federal securities laws.

Communications made outside the 30-day period would not be an "offer" for purposes of § 5(c) of the Securities Act, but such communications are not excluded from the definition of offer for other purposes under the Securities Act, including the definition of "prospectus" in § 2(a)(10) of the Securities Act. Accordingly, while not "offers," communications made outside the 30-day period are subject to disclosure liability under § 12(a)(2) of the Securities Act, which could give purchasers a right to rescind their purchases. A private action under Rule 10b-5 under the Exchange Act would also entitle the plaintiff to recover damages, but a successful action would require the plaintiff to prove the communication contained a false statement or omission made with scienter (that is, an intent to deceive, manipulate or defraud). *See* §§ 11.03[2] and 11.04[2].

175 Rule 135 under the Securities Act. Only the issuer or a selling securityholder (and any person acting on behalf of either of them) may make such an announcement. Rule 135 permits the disclosure of certain additional information in the context of rights offerings, offerings to employees, exchange offers and offerings made under Rule 145(a) under the Securities Act.

176 In the case of an international offering by a foreign issuer, Rule 135e under the Securities Act permits the names of the underwriters (and other information) to be included in a press release outside the United States, and thus as a practical matter the market is informed of the identity of the underwriters. For a discussion of Rule 135e, *see* § 3.02[3][e][vii].

177 *See* Rule 163(c) under the Securities Act. In December 2009, the SEC proposed amendments to Rule 163(c) that would have broadened this exemption. Under the proposed changes, communications made by

underwriters and dealers, and not just those made by issuers, would be covered by the exemption so long as certain conditions were met. The proposal was not adopted.

178 In light of the "automatic shelf registration" process for WKSIs, it was expected that in most cases WKSIs would take advantage of Securities Offering Reforms by having a registration statement on file and would rarely make such offers prior to filing a registration statement. In fact, however, a substantial percentage of WKSIs do not have automatic shelf registration statements on file or do not register common stock on them. WKSIs are permitted to distribute free writing prospectuses before filing a registration statement relating to the securities as long as the free writing prospectus contains a legend prescribed by the SEC regarding the issuer and information about where documents relating to the offering may be obtained upon filing of a registration statement. Such a free writing prospectus need only be filed when and if a registration statement or amendment covering the offered securities is filed. *See* § 3.02[3][c][iv][A] for a discussion of free writing prospectuses.

179 These pre-filing communications will also continue to be subject to the requirements of Regulation FD, since they will not qualify for Regulation FD's exemption for communications made in connection with a registered securities offering by the issuer. *See* § 4.10[6] for a discussion of Regulation FD.

180 *See* § 3.02[3][c][ii] for a discussion of nonbinding indications of interest in connection with "test the waters" communications.

181 SEC, Division of Corporation Finance, Generally Applicable Questions on Title I of the JOBS Act (Apr. 16, 2012), FAQ 3.

182 For a discussion on EGCs' ability to "test the waters" before and after filing of the registration statement, *see* §§ 3.02[3][b][iv] and [c][ii]. For a discussion on pre-deal research *see* § 3.02[3][e]. Deal road shows are considered part of the marketing, not premarketing stage, *see* § 3.02[3][c][iii][B].

183 Investor education initiatives are often supported by sales force presentations given by research analysts to sales personnel in anticipation of investor education, typically a day before investor education meetings begin.

184 *See* § 7.02[4] for a discussion of pilot fishing in the context of exempt private offerings.

185 *See* § 3.02[3][e][i] for a discussion of the use of pre-deal research outside the United States in the context of U.S. registered IPOs that are part of a global offering.

186 *See* § 7.02[6] for a discussion of concerns related to integration of private and public offerings and of Rule 155 under the Securities Act, which provides a nonexclusive safe harbor for a registered offering following an abandoned private offering and for a private offering following an abandoned registered offering.

187 The filing of a registration statement typically is viewed as a solicitation that would foreclose the availability of the exemption for private offerings under § 4(a)(2) of the Securities Act, except insofar as the issuer or its agent approaches prospective investors with which either has a substantive pre-existing relationship. *See* § 7.02[6].

188 EGCs may commence discussions with QIBs and institutional accredited investors prior to the filing or effectiveness of the registration statement and may deliver freely-tradable shares to them if they do not commit to purchase the securities prior to effectiveness of the registration statement.

189 Although the securities offered to cornerstone investors are generally not part of the registered offering, disclosure of a cornerstone investor should be considered in light of the policy underlying Item 9.B.3. of Form 20-F, which requires an issuer to identify any group of targeted potential investors to whom the securities are offered. *See also* Form F-1, Item 7, which requires disclosure of recent sales of unregistered securities.

190 Offering participants might conclude that an anchor investor should be identified because its ownership position will be material to investors following the offering. Absent such a determination, we do not believe the requirement in Item 9.B.2 of Form 20-F to disclose that a prospective investor intends to purchase more than 5% of the offering should dictate disclosure, since such disclosure is not required of a domestic issuer.

191 The term "oral" is not defined in the Securities Act or the SEC's rules, but the term "written" is defined very

broadly in § 2(a)(9) of the Securities Act to include, among other modes of communication, "graphic communication," which in turn is defined in Rule 405 under the Securities Act. Essentially, any communication other than an in-person or telephonic communication (not in any way preserved for retransmission) will be treated as a written communication. Materials, including slide presentations, that accompany a nonrecorded, in person or telephonic communication are not considered written communications as long as they are not retained by investors or otherwise able to be printed or saved after the time of the communication.

192 A WKSI that communicated information that constituted an offer (*i.e.*, a free writing prospectus) prior to filing a registration statement would rely on Rule 163 under the Securities Act rather than Rule 134 to avoid a gun-jumping violation.

193 Rule 134 is available without regard to whether the statutory prospectus includes a price range, except in the case, such as an IPO, where a price range is required in a statutory prospectus circulated to investors, and where the Rule 134 communication includes pricing or related information. *See* Securities Offering Reform Release.

194 In July 2011, pursuant to § 939A of the Dodd-Frank Act, the SEC amended Rule 134 to remove the safe harbor for credit ratings assigned or expected to be assigned by a nationally recognized statistical rating organization ("NRSRO") to the applicable securities. *See* SEC Release No. 33-9245 (July 27, 2011). The SEC noted that removing credit rating references from the Rule 134 safe harbor "would not necessarily result in a communication that included this information being deemed to be a prospectus or a free writing prospectus." *See* Securities Ratings, 76 Fed. Reg. 46,603, 46,612 (Aug. 3, 2011). However, the result would be that if the credit rating information were included, the entire communication would lose the safe harbor's protection and need to be evaluated under more uncertain facts-and-circumstances criteria. Given the risks of such an exercise, especially in light of the relatively extensive and detailed offering-related information that a Rule 134 communication could otherwise contain, issuers and underwriters typically exclude rating information from deal-related press releases.

195 *See* § 3.02[3][e].

196 SEC, Division of Trading and Markets, Jumpstart Our Business Startup Act—Frequently Asked Questions About Research Analysts and Underwriters (Aug. 22, 2012), FAQ 1.

197 *See* § 3.02[3][b][v][A] for a discussion of premarketing during the quiet period and, more generally, of certain types of activities that constitute premarketing.

198 *See* § 3.02[3][c][iii][B] for a discussion of road shows, the principal type of marketing activity following launch.

199 *See* § 3.02[3][b][v][A] for a discussion of investor education generally and investor education meetings during the quiet period.

200 *See* § 3.02[3][b][v][A] for a discussion of pilot fishing generally and, in particular, to the limited extent permitted during the quiet period.

201 *See* § 3.02[3][e][vi] for a discussion of pre-deal research in respect of EGCs. *See* 3.02[3][e][ii], more generally, for a discussion of research reports in the context of U.S. registered offerings by U.S. reporting companies or seasoned foreign private issuers.

202 *See* § 3.02[3][e][i] for a discussion of the use of pre-deal research outside the United States in the context of U.S. registered IPOs that are part of a global offering.

203 Rule 433(h)(4) under the Securities Act defines a road show as "an offer (other than a statutory prospectus or a portion of a statutory prospectus filed as part of a registration statement) that contains a presentation regarding an offering by one or more members of the issuer's management … and includes discussion of one or more of the issuer, such management, and the securities being offered."

204 Rule 433(d)(8) under the Securities Act and Rule 405 under the Securities Act (excluding certain forms of communication from the definition of "graphic communication" and thus from the definition of "written communication").

205 Rule 433(d)(8)(i) under the Securities Act.

206 Rule 405 under the Securities Act.

207 Rule 405 under the Securities Act.

208 A *bona fide* electronic road show is a road show transmitted by graphic means that is a written communication and contains a presentation by some members of management and includes discussion of the issuer, management or securities being offered, and, if more than one road show that is a written communication is used, covers the same general areas as in the other versions. The *bona fide* electronic road show need not: (i) cover the exact same material as in the other versions; (ii) have the same management present; (iii) include all projections contained in the other versions; or (iv) provide for Q&As. If there is more than one version of the road show that is a written communication, the *bona fide* electronic road show must be made available no later than the other versions. Rule 433(d)(8)(ii) under the Securities Act.

209 *See* § 11.03[2] discussing liability under § 12(a)(2) of the Securities Act and § 11.04[2] discussing liability under Rule 10b-5 under the Exchange Act. Liability under § 11 of the Securities Act does not apply to a road show, unless it is explicitly incorporated by reference into the registration statement, which would be very unusual.

210 However, liability concerns have substantially limited the use of free writing prospectuses that could be construed as having a marketing purpose, and free writing prospectuses have been used most often to describe the terms of offered securities and the offering and occasionally to communicate late-breaking developments.

211 A written communication constituting an offer circulated at the same time as or after delivery of a final prospectus (such as sales confirms)—a so-called “free writing—does not constitute a prospectus under the Securities Act. These communications would not be subject to the rules governing free writing prospectuses. In addition, Rule 134 notices, Rule 135 communications, regularly released factual business information and forward-looking information falling within Rules 168 and 169, and research reports satisfying the requirements of Rule 137, Rule 138 or Rule 139 under the Securities Act, do not constitute free writing prospectuses because they are by rule not offers or prospectuses for purposes of the gun-jumping provisions.

212 Rule 433(h)(3) under the Securities Act defines a written communication or information as prepared or provided "by or on behalf of" a person if the person or agent or representative of the person authorizes the communication or information or approves the communication or information before it is used. Rule 433(h)(3) also makes clear that an offering participant will not be an agent or representative of the issuer solely by virtue of its acting as an offering participant.

213 For a discussion of "ineligible" issuers, *see* § 3.02[3][a][ii]. In addition, Rule 164 excludes investment companies and business development companies, which are subject to a separate framework governing communications, from using free writing prospectuses.

214 WKSIs are permitted to use free writing prospectuses prior to the filing of a registration statement pursuant to Rule 163 under the Securities Act. *See* § 3.02[3][b][iv].

215 Rule 164(e)(ii) under the Securities Act.

216 The required legend indicates how to obtain a prospectus and recommends that potential investors read the prospectus (including Exchange Act documents incorporated by reference). The legend also advises investors that they can obtain the registration statement, including the prospectus and any incorporated Exchange Act documents, through the SEC's website, and that they may request the prospectus from the issuer or any underwriter or dealer by calling a toll-free number. The legend may be a generic one with a toll-free number of the underwriter (or the issuer) for an investor to call to obtain the prospectus.

Disclaimers of responsibility or liability that would be impermissible in a statutory prospectus or registration statement would also be impermissible in free writing prospectuses (*e.g.*, disclaimers regarding accuracy or completeness or that the communication is not a prospectus).

217 Rule 433 requires issuers and offering participants to retain for three years any free writing prospectus used from the date of the initial *bona fide* offering of the securities, but only if the free writing prospectus was not filed with the SEC.

In order to ensure sufficient oversight of the content and usage of a free writing prospectus, Rule 418(a)(8) gives the SEC authority to request production of any free writing prospectus used in connection with an offering.

218 Rule 164 provides, under certain circumstances, a cure provision for failures to file a free writing prospectus, to include the required legend or to comply with the record retention requirements. *See* § 3.02[3][c][iv][C].

219 *See* §§ 11.03[2], 11.04[1] and 11.04[2] for a discussion of the liability standards under § 12(a)(2) of the Securities Act and Rule 10b-5 under the Exchange Act.

220 Rule 433(c)(2)(i) under the Securities Act.

221 As a result, in practice, a free writing prospectus could be used in an offering by a non-reporting or unseasoned issuer without prior or concurrent delivery of a statutory prospectus only in the case of a free writing prospectus published or disseminated by the media as to which neither the issuer nor an offering participant provided consideration for such publication or dissemination. The delivery or availability condition also applies if consideration has been or will be given by the issuer or an offering participant for the dissemination (in any format) of the free writing prospectus or § 17(b) of the Securities Act requires disclosure that consideration has been or will be given by the issuer or any offering participant in connection with the free writing prospectus. Section 17(b) requires disclosure of consideration received or to be received from an issuer, underwriter or dealer for the circulation or publication of a communication describing a security, even if the communication purports not to offer a security for sale.

222 *See* SEC Release No. 33-7856 (Apr. 28, 2000) for the prior guidance.

223 The date of "first use" is the date the free writing prospectus is available to the managing underwriter, syndicate member or any prospective purchaser—not when an underwriter first delivers it to investors.

224 This condition only requires that the issuer information contained in the free writing prospectus be filed and not necessarily the free writing prospectus itself.

225 Most issuers, even if they are ineligible issuers, are permitted to use free writing prospectuses that consist solely of descriptions of the terms of the securities or the offering pursuant to Rule 164. Although a free writing prospectus that contains the final terms of an offering benefits from a later filing deadline, a free writing prospectus that also contains other information that if distributed separately from the final terms would be required to be filed no later than the date of its first use will not benefit from the later filing deadline— *i.e.*, it cannot "piggyback" on the later filing deadline for a free writing prospectus containing only the final terms.

226 The conditions to be met in Rule 433 are (i) the free writing prospectus is filed in accordance with Rule 425 (including the filing timeframe), (ii) the material filed pursuant to Rule 425 indicates on the cover page that it is also being filed pursuant to Rule 433 and (iii) the material filed pursuant to Rule 425 includes the legend required by Rule 433.

227 For example, this filing condition would be triggered where an underwriter included a free writing prospectus on an unrestricted website or sent out a press release regarding the issuer or the offering that would constitute a free writing prospectus. On the other hand, the Securities Offering Reform Release states that a free writing prospectus on a website with access restricted to an underwriter's investors or an e-mail by an underwriter to its customers that are potential investors, regardless of the number of such customers, will not require filing. If an issuer distributes a free writing prospectus prepared by an offering participant, however, the free writing prospectus would become an issuer free writing prospectus as a result of this distribution and require filing by the issuer.

228 Rule 164 does not provide a cure mechanism for failure to include a hyperlink to the statutory prospectus in an electronic free writing prospectus of an unseasoned or nonreporting issuer. Similarly, a free writing

prospectus that includes a hyperlink to a prospectus that does not contain a price range when required would constitute a § 5 violation.

229 There may be situations where it will not be clear how to communicate the proper legend to the same prospective purchasers because information as to recipients of the original unlegended communication is not available, in which case it will be necessary to err on the side of overinclusiveness.

230 Pursuant to Rule 433(f) under the Securities Act, an independently prepared media publication would be considered a free writing prospectus prepared on behalf of an issuer or any other offering participant if the issuer or any other offering participant (or any person acting on its behalf) provided, authorized or approved the information that is prepared and published or disseminated by a person that is in the business of publishing, radio or television broadcasting and is unaffiliated with the issuer or any other offering participant.

231 Rule 433(f) also provides that such a free writing prospectus (i) does not need to be filed if the substance of the free writing prospectus has previously been filed, and (ii) may include information that the issuer or offering participant reasonably believes is necessary or appropriate to correct information in the communication, and that the issuer or offering participant may file a copy of the materials provided to the media (so long as it contains all the information provided to the media) in lieu of filing the actual written communication as published or disseminated.

In cases where an issuer or other offering participant prepared, paid for or gave consideration for the preparation, publication or dissemination of or uses or refers to a published article, television or radio broadcast or advertisement, the issuer or other offering participant would have to satisfy the general conditions for use of the free writing prospectus at the time of publication. In other words, for non-reporting issuers and unseasoned issuers, a statutory prospectus would have to accompany or precede the communication, which would have the practical effect of prohibiting such issuers from publishing or broadcasting written advertisements, "infomercials" or broadcast spots that included information beyond that permitted by other safe harbors (*e.g.*, Rule 134). For seasoned issuers, the most recent statutory prospectus would have to be on file with the SEC and the issuer or offering participant would have to file the free writing prospectus no later than the date of first use.

Rule 433 also allows an issuer that is in the media business to be able to rely on the media condition if the issuer (i) is the publisher of a *bona fide* newspaper, magazine or business or financial publication of general and regular circulation, or a *bona fide* broadcaster of news, including business and financial news, (ii) has established policies and procedures for the independence of the content of the publications or broadcasts from the offering activities of the issuer, and (iii) publishes or broadcasts the communication in the ordinary course.

232 As a result, issuers and underwriters that use a free writing prospectus to convey the final terms of an offering to investors for Securities Act § 12(a)(2) purposes typically file both the free writing prospectus and a prospectus supplement that includes the same description of the final terms as the free writing prospectus (as well as any terms omitted from the free writing prospectus).

233 *See* § 4.10[6] for a discussion of Regulation FD.

234 Regulation FD provides that secondary offerings will be excluded from the regulation's requirements if the offering also includes a registered capital formation transaction for the account of the issuer. Regulation FD makes clear, however, that inclusion of a capital formation transaction for the account of the issuer as part of the offering for the purpose of evading the requirements of Regulation FD will not exclude the secondary portion from its requirements. The exclusion for registered business combination transactions remains available.

235 *See* § 4.10[6] for a discussion of Regulation FD.

236 *See* SEC Release No. 33-5180 (Aug. 16, 1971).

237 *See* § 3.02[1][e] for a discussion of the prospectus delivery requirement.

238 While arguably "publicity," so-called "bell ringing" ceremonies at the NYSE or Nasdaq are generally thought

to be permitted.

239 *See* discussion of Rules 168 and 169 under the Securities Act, which provide a nonexclusive safe harbor for certain factual and forward-looking information in § 3.02[3]a][iii].

240 For a discussion of a reporting issuer's ongoing communications with financial analysts and related disclosure issues, including the duty to correct or update previous communications, Regulation FD, selective disclosure to analysts and management participation in the preparation of analysts' reports, *see* § 4.10.

241 *See* § 14.07[5][b], which discusses limitations that both European and U.S. underwriters may impose on the distribution of pre-deal research in certain circumstances in light of the Global Research Settlement, as well as certain FINRA rules.

242 *See* § 3.01.

243 *See* § 3.02[3][b] and [c] for discussions of impermissible offers during the quiet period and waiting period, respectively. *See* § 3.02[3][e][vi] for a discussion of liability concerns in connection with the preparation and distribution of research reports.

244 If the lead managers of an offering determine that research should not be distributed in the United States, even in accordance with Rule 139 (as discussed below), this prohibition generally is imposed on all members of the syndicate to level the playing field and avoid any concern about imputed liability among the members. If an underwriter nonetheless distributes research in violation of the prohibition, the underwriter could well be expelled from the syndicate.

245 The 25-day period generally coincides with the 25-day period following an IPO registration statement effective date set forth in Rule 174(d) under the Securities Act during which broker-dealers must deliver a prospectus in connection with transactions in the IPO security. *See* § 3.02[1][e][i]

246 *See* § 3.02[3][e][vii] for a discussion on the distribution of research reports outside the United States in the context of global offerings. *See also infra* Note 266 for discussion of blackout periods with respect to research distributed other than in the context of IPOs.

247 Special difficulties may arise in connection with spin-offs and similar transactions involving the disposition by a parent company of some or all of the shares in a subsidiary or investee company. There will likely be some flexibility for the publishers of research reports about the parent (but not initiators of such coverage) to continue to reflect information about the subsidiary or investee in such research reports to the same degree as in the past, although special care will need to be taken with respect to potentially sensitive or material information about the subsidiary or investee or information about the spin-off or similar transaction.

248 Rule 139 under the Securities Act defines a research report as "a written communication, as defined in Rule 405 under the Securities Act, that includes information, opinions, or recommendations with respect to securities of an issuer or an analysis of a security or an issuer, whether or not it provides information reasonably sufficient upon which to base an investment decision." Rule 139(d) under the Securities Act.

249 The issuer (or any of its its predecessors) must not be or have been during the preceding three years a shell company (other than a business combination related shell company), blank check company or penny stock issuer. Rule 139(a)(1)(ii).

250 *See* Rule 139(a)(1)(i)(B) under the Securities Act.

251 *See* Rule 139(a)(1)(iii) under the Securities Act. Rule 139 permits a broker or dealer participating in a distribution of securities to initiate coverage on a new class of an issuer's securities as long as research reports about the issuer or its securities, including a different class of securities, have been published or distributed previously or at least one such report has been distributed or published following the discontinuation of coverage.

252 The issuer (or any of its predecessors) must not be or have been during the preceding three years a shell company (other than a business combination related shell company), blank check company or penny stock issuer. Rule 139(a)(1)(iii) under the Securities Act.

253 Rule 139(a)(2) under the Securities Act. Rule 139(a)(2) also requires that any projections must:

- have been published previously on a regular basis;
- be included with respect to either a substantial number of companies in the issuer's industry or subindustry or substantially all companies covered in the report; and
- cover the same periods with respect to such other companies.

The industry research report may include a more favorable recommendation than the one included in the last report, provided the report contains "similar types of information about the issuer or its securities as contained in prior reports."

254 The issuer (or any of its predecessors) must not be or have been during the preceding three years a shell company (other than a business combination related shell company), blank check company or penny stock issuer. Rule 138(a)(4) under the Securities Act.

255 As with Rule 139 under the Securities Act, Rule 138 under the Securities Act defines a research report as "a written communication, as defined in Rule 405 under the Securities Act, that includes information, opinions, or recommendations with respect to securities of an issuer or an analysis of a security or an issuer, whether or not it provides information reasonably sufficient upon which to base an investment decision." Rule 138(d) under the Securities Act.

256 Rule 138 under the Securities Act. Rule 138 is applied on an offer-by-offer basis for issuers that use the SEC's shelf registration procedures. Thus, having an effective shelf registration statement in place that covers both debt and equity (either allocated or unallocated) will not, in itself, preclude the availability of the rule. *See* SEC Release No. 33-7132 (Feb. 1, 1995).

257 Rule 138(a)(3) under the Securities Act. *See* § 3.02[3][e][iii].

258 Rule 137 under the Securities Act. As with Rules 138 and 139, Rule 137 defines a research report as "a written communication, as defined in Rule 405 under the Securities Act, that includes information, opinions, or recommendations with respect to securities of an issuer or an analysis of a security or an issuer, whether or not it provides information reasonably sufficient upon which to base an investment decision." Rule 137(e) under the Securities Act.

259 In addition, the issuer (or any of its predecessors) of the securities being offered must not be (or have been during the preceding three years) a blank check company, a shell company (other than a business combination related shell company) or a penny stock issuer. Rule 137 under the Securities Act.

260 JOBS Act § 105.

261 Although distribution of research outside the United States in connection with an offering by a non-U.S. issuer should not raise issues under § 5 of the Securities Act, it does raise certain issues under Regulation M under the Exchange Act, which, as described in § 3.02[9][a], generally prohibits, both inside and outside the United States, the solicitation, commencing with a one- or five-business day restricted period before the offering price is determined, of offers to buy securities of the same class as the securities that will be distributed in the offering, in order to avoid manipulation of the price of such securities. Rule 101 of Regulation M provides certain exemptions for research distribution, principally where the research satisfies the conditions of Rules 138 or 139 under the Securities Act or where it relates to certain actively traded securities. The exemption for certain actively traded securities, the relatively brief period during which distribution of research would be affected and the current practice of many issuers to adhere to a blackout period that would, in any event, exceed the Regulation M restricted period have resulted in Regulation M having minimal impact on most global offerings by non-U.S. issuers.

An additional concern is that information, particularly forward-looking information, not required to be included in a registration statement under Securities Act requirements but included in research reports, may be required by the SEC to be included in the registration statement if that information is published in the United States, including in media reports based on research reports obtained outside the United States, notwithstanding that neither the issuer nor any underwriter had any involvement in those media reports. *See infra* Note 299. In an offering by a Chinese company in 2000, for example, information derived from a research report, including financial projections, was published in various U.S. newspapers. The research report was distributed only outside the United States, and the information was published without the consent of the company or of the underwriter that had prepared the report. The issuer nevertheless was required to include a risk factor in its prospectus that stated the assumptions on which the projections were based and urged investors not to rely on the projections. *See* PetroChina Company Limited, Prospectus (Mar. 30, 2000); *see also* LG. Philips LCD Co., Ltd., Prospectus (July 15, 2004). As a result of the SEC's focus on this area, some underwriters consider avoiding the inclusion of projections or forecasts in pre-deal research in SEC-registered offerings, even though published exclusively outside the United States.

262 The legend could read as follows: "Neither this document nor any copy of it may be taken or transmitted into the United States or distributed in the United States or to any U.S. person (within the meaning of *Regulation S* under the Securities Act)." While it is not strictly necessary for the legend to refer to U.S. persons in the case of most offerings that fall into Category 1 of Regulation S, a restriction on distribution to U.S. persons is often included regardless of the Regulation S category of the issuer in order to decrease the likelihood that research reports will make their way inappropriately into the United States (*e.g.*, through distribution by a U.S. person resident abroad to an affiliate in the United States). For a discussion of the different Regulation S categories, *see* § 8.02[1][c].

263 If a research report satisfies the requirements of Rule 138 or Rule 139 under the Securities Act, its distribution, even in the United States, will not constitute directed selling efforts under Regulation S and will not be inconsistent with the offshore transaction requirement for the Regulation S offering. As a result, such research report need not be isolated from the United States. Rules 138(c) and 139(c) under the Securities Act.

264 *See* § 11.04.

265 Concern that issuers may be held liable for the contents of research reports that they participate in preparing was heightened by a 1997 SEC enforcement action, *In the Matter of Presstek, Inc.*, SEC Release No. 34-39472 (Dec. 22, 1997). *See* § 4.10[1], which discusses concerns arising from issuer involvement in the preparation of research reports, including a discussion of *Presstek*.

In addition to these liability concerns, issuer involvement in reviewing research reports may be further constrained by FINRA rules. Pursuant to these rules, U.S. broker-dealers may not submit a research report to an issuer prior to publication, except to review certain sections of the draft report (not including those sections that contain the research summary, research rating or price target) for factual accuracy. *See* FINRA Rule 2241(b)(2)(N) and Supplementary Material .05. We understand that many firms have extended this prohibition globally so that it applies also to non-U.S. broker-dealer affiliates within the same holding company structure. However, NASD Rule 1050(f) allows a foreign research analyst employed by a foreign affiliate of the FINRA member to contribute to a "globally branded" research report without having to be registered with FINRA. The research report must prominently disclose (i) each affiliate that contributed to the report, (ii) the names of any foreign research analysts employed by any contributing affiliate, (iii) that such research analysts are not registered or qualified as research analysts with FINRA, and (iv) that such research analyst may not be an associated person of the FINRA member and therefore may not be subject to FINRA restrictions on communications with a subject company, public appearances and trading securities held by a research analyst's account.

266 Blackout periods, during which the dissemination of research by syndicate members is prohibited, were developed by European banks as a way of reducing these liability concerns. Their imposition subsequently became routine in global offerings. In the past, blackout periods typically ran four weeks or longer. However, in recent years, many offerings have imposed a blackout period shorter than this, or in some cases even eliminated it altogether, on the theory that it may not in fact be very useful in protecting against liability for research reports.

Lead managers typically interpret the blackout periods they impose on the syndicate to apply even to research reports previously published by underwriters and included on electronic systems operated by third parties. Agreements with third parties sometimes do not permit authors to have such reports deleted upon request. A syndicate member may therefore need to seek permission from the global coordinator to allow a corresponding departure from the blackout restrictions for the offering in question.

In addition to self-imposed blackout periods, FINRA rules may impose research quiet periods following U.S. public offerings for non-EGCs. *See* § 14.07[5].

267 Changes to the U.S. securities laws, intended to encourage issuers to include such forward-looking information in offering documents, have not met with great success. *See* § 4.06[1][a].

268 *See* § 3.02[1][e] for a discussion of aftermarket prospectus delivery requirements.

269 Information on an issuer's website should be regularly and frequently updated, not only during a public offering and in the immediate run-up and aftermath, but outside the offering context as well. Generally, material should be checked to ensure its accuracy and currency. The SEC has cautioned that "[i]n effect, a statement may be considered to be 'republished' each time that it is accessed by an investor or … each day that it appears on the website." April 2000 Release, Use of Electronic Media, 65 Fed. Reg. 25,843, 25,855 (May 4, 2000). During an offering, material other than the prospectus also should be vetted to ensure conformity with the prospectus.

270 *See* § 3.02[3] for a discussion of press releases issued pursuant to Rules 134, 135, 168 and 169.

271 The prospectus should be in the form most recently filed with the SEC and should be removed or properly archived at the end of the prospectus delivery period.

272 SEC Release No. 33-7856 (Apr. 28, 2000) (the "April 2000 Release"); *see* § 3.02[3].

273 In the past, the securities of both U.S. and non-U.S. issuers sold outside the United States were registered only to cover the possible flowback of such securities into the United States, not the initial sales themselves. However, following amendments in 1998 to Regulation S, it is generally necessary as a practical matter to register both U.S. and non-U.S. sales of equity securities of a U.S. issuer in the initial distribution, rather than attempt to rely on Regulation S with respect to the non-U.S. sales of such securities. Such registration is generally required because Rule 905 of Regulation S under the Securities Act provides that equity securities of U.S. issuers acquired from the issuer, a distributor or any of their respective affiliates in a transaction in compliance with Regulation S are deemed to be "restricted securities" as defined in Rule 144 under the Securities Act, meaning that such securities may not be freely traded in the United States unless they are registered under the Securities Act, satisfy the requirements of Rule 144 or are sold under another exemption from the registration requirements of the Securities Act. *See* § 8.02[2].

274 The number of shares to be registered must also include those subject to the underwriters' "overallotment option," which is discussed in § 3.02[5][f].

275 WKSIs may file a post-effective amendment to an effective automatic shelf registration statement to increase the number or add a class of securities not previously included in the relevant registration statement or to add securities of a majority-owned subsidiary otherwise permitted to be included in an automatic shelf registration statement. *See* Rule 413 under the Securities Act. WKSIs may also register an indeterminate number of securities of any class on an automatic shelf registration statement without specifying whether the securities are being sold in primary offerings or secondary offerings on behalf of selling securityholders. Classes of securities registered also do not need to be allocated between the issuer, its eligible subsidiaries or selling securityholders. Registration fees may be paid on a pay-as-you-go basis and additional information with respect to any particular offering may generally be provided by a prospectus supplement. An issuer that is a WKSI based only on its registered nonconvertible securities may only register nonconvertible securities (other than common equity) on an automatic shelf registration statement unless it is eligible to use either Form S-3 or F-3 for a primary offering because it has a public float of $75 million or more. *See* § 3.02[2][c] (discussing automatic shelf registration statements).

For issuers not eligible to use automatic shelf registration statements, a new registration statement must be filed to increase the number or add a new class of securities being offered. Under Rule 462 under the Securities Act, a new registration statement may be declared effective immediately upon filing if it relates to no more than 20% of the amount of securities registered on the initial registration statement, provided that certain conditions are satisfied. *See* Rule 462 under the Securities Act. In addition, Rule 416 under the

Securities Act permits certain additional securities arising from stock splits, stock dividends and related occurrences to be offered under effective registration statements under certain circumstances. *See* Rule 416 under the Securities Act.

276 *But see supra* Note 273, noting the possible need to register non-U.S. sales of equity securities of a U.S. issuer. U.S. issuers offering equity securities outside the United States using a prospectus that is different from that used in the United States will need to consider whether that prospectus will be required to be filed with the SEC as a free writing prospectus (and whether the prospectus used in the United States will need to be delivered to the recipients of any such free writing prospectus prior to or with the delivery of the free writing prospectus), or whether the same prospectus should be used in all jurisdictions, with any different or alternative pages used outside the United States filed as part of the U.S. registration statement with the SEC. *See* also Rule 433(d) under the Securities Act; § 3.02[3][b]iv].

277 The reason for making this clear is to reduce the risk that the issuer and the underwriters of the international offering will be exposed to liability, mainly under § 11 or § 12(a)(2) of the Securities Act, in respect of the international offering (a risk that may also be mitigated by the limitations on the extraterritorial application of the U.S. securities laws as a result of the Supreme Court's decision in *Morrison v. National Australia Bank*, 130 S. Ct. 2869 (2010), as discussed in § 11.10[3]). The statement, which should be added to the cover page of the registration statement, could read as follows: "The shares being registered include [insert number] shares that are to be offered outside the United States but that may be resold from time to time in the United States while a registration statement is required to be in effect or a prospectus is required to be delivered." It would also be advisable to add the following sentence to the underwriting section of the U.S. prospectus (or to the single prospectus when only one is being used in and outside the United States): "This Prospectus may be used in connection with [securities] initially offered outside the United States in the [international offering] insofar as such [securities] are resold from time to time in the United States in transactions that require registration under the Securities Act."

In order to buttress the argument that these liability provisions do not apply to purchases outside the United States, additional text along the following lines should also be included in the prospectus used outside the United States (or in the single prospectus when only one is being used in and outside the United States):

> The [securities] being offered outside the United States pursuant to the [international offering] have not been registered under the Securities Act for offer or sale as part of their initial distribution. Each [international underwriter] has represented and agreed that it has not offered or sold and will not offer or sell such [securities] as part of its initial distribution within the United States. The [securities] being offered outside the United States have been registered under the Securities Act for resale from time to time in the United States in transactions that require registration under the Securities Act. Terms used in this paragraph have the meanings given to them by Regulation S under the Securities Act.

If a separate prospectus is being used for the offering outside the United States, it would also be advisable not to include in the international prospectus any paragraph in the U.S. prospectus relating to the enforceability of judgments by U.S. persons and the section of the U.S. prospectus that typically refers to the SEC registration statement and the exhibits thereto.

278 In global offerings where the only public offering is in the United States, typically one prospectus can cover the whole global offering.

279 U.S. issuers in U.S. public offerings will need to consider whether a prospectus used outside the United States will be required to be filed with the SEC as a free writing prospectus (and whether the prospectus used in the United States will need to be delivered to the recipients of any such free writing prospectus prior

to or with the delivery of the free writing prospectus). *See* Rule 433(d) under the Securities Act; § 3.02[3][c][iv]. Alternatively, offering participants may seek to use a single prospectus that meets the requirements of all relevant regulators and file as part of the U.S. registration statement any different or alternative pages that may be necessitated by the requirements of the non-U.S. regulators.

280 In certain cases, a company may prepare both home-country GAAP financial statements and U.S. GAAP or IFRS financial statements, such as where it is required by outstanding bond covenants to do so or because home-country GAAP is not familiar to the international community. In such instances, the issuer may choose to use the U.S. GAAP or IFRS financial information in its international offering documents and its local GAAP financial information only in its home-market retail offering.

281 The SEC staff has insisted, in certain circumstances, that projections and other information released offshore be included in the prospectus. *See infra* Note 299.

282 Information included in a prospectus in a U.S. registered offering could give rise to liability under, among other provisions, § 11 of the Securities Act. *See* § 11.03[1]. Regarding the duty to update, *see* § 4.10[4]. Domestic issuers similarly seek to avoid liability under § 11 through incorporation by reference of earnings releases that include earnings guidance by electing to submit the earnings guidance information pursuant to Item 7.01 of Form 8-K. Unlike information filed pursuant to Item 8.01, information in a report furnished pursuant to Item 7.01 is not automatically incorporated by reference into a filing under the Securities Act. *See* § 4.10[8] Note 621.

283 If included, steps can be taken in the United States to attempt to minimize the potential liability associated with the forward-looking information in prospectuses. *See* § 11.03[5]. Offering participants may be more willing to include this type of information in offering memoranda in Rule 144A offerings, where liability under § 11 of the Securities Act is not an issue, but even in Rule 144A offerings, consideration should be given to the impact of including the projections on a potential claim under Rule 10b-5 under the Exchange Act.

284 If sales are made in one market before they can be made in another, premature secondary market trading in that market, and uncontrolled resales into other markets, could adversely affect the distribution as a whole.

285 *See* Rule 159 under the Securities Act.

A written confirmation of sale may be delivered to investors as long as the final prospectus is filed with the SEC by the required filing date or the issuer has made a good faith and reasonable effort to file such a prospectus within the required time under Rule 424 and, if the issuer has not timely filed the prospectus, the issuer files the prospectus as soon as practicable thereafter. Rule 172 under the Securities Act; *see also supra*, Note 92 and accompanying text.

286 For example, U.S.-style diligence typically includes interviews with key officers of the issuer and access to the issuer's significant documents, including minutes of the meetings of the board of directors and all material contracts. In the United Kingdom, a similar "verification" process is conducted in connection with disclosure in the relevant offering documents; moreover, extensive "verification notes," identifying the basis for each disclosure in the prospectus, are often produced particularly in the context of a premium listing in the United Kingdom.

287 *See* Rule 433 under the Securities Act for the limited circumstances under which a non-reporting issuer may use a free writing prospectus. For a discussion of free writing prospectuses, *see* § 3.02[3][c][iv].

288 Although it may be possible to get such publications to agree not to publish advertisements in specified jurisdictions, they generally will not agree to restrict ordinary articles to certain editions, and these too can raise questions under the U.S. rules against publicity.

289 *See* §§ 3.02[3][b][ii] and 3.02[3][c][i].

290 *See* § 3.02[3][a][iii].

291 *See* the definitions of "directed selling efforts" and publication "with a general circulation in the United States" in Regulation S, both of which are discussed in § 8.02[1][b].

292 SEC Release No. 33-7356 (Oct. 10, 1996), 61 Fed. Reg. 54,518, 54,518 n.9 (Oct. 18, 1996).

293 In the privatization of the electricity distribution companies of England and Wales, for example, rebates on electricity bills were offered to individuals who purchased shares.

294 Preliminary Note 9 to Regulation S under the Securities Act.

295 We understand that some issuers have taken the view, which we believe is reasonable, that the Rule 135e safe harbor should be available even though some of the issuer's officers participating in the press conference are physically located in the United States, provided certain conditions, such as the following, are met: (i) the members of the press all are physically present outside the United States, (ii) the officers participate through a video- or audio-conference facility set up at a closed location in the United States, (iii) the conference facility is linked for transmission only to the press conference offshore and not to any other location or person, and (iv) U.S. journalists are invited to participate offshore, but no journalist is allowed to participate while physically located in the United States.

296 In proposing the safe harbor, the SEC indicated that the safe harbor would not be available in connection with offerings conducted solely in the United States because there would be no "apparent reason for conducting offshore press activities." *See* SEC Release No. 33-7356 (Oct. 10, 1996), 61 Fed. Reg. 54,518, 54,522 (Oct. 18, 1996). This limitation may create difficulties for offerings by non-U.S. issuers wishing to conduct offers exclusively in the United States while also conducting press activities in their home jurisdictions or elsewhere outside the United States. Such circumstances may arise where the issuer's home market is not large enough to accommodate a sizeable offering or does not have a sufficiently liquid

securities market for trading purposes. The adoption of Rules 168 and 169 under the Securities Act as part of the Securities Offering Reforms, however, has eased this tension for ordinary course business communications consistent with past practice. *See* § 3.02[3][a][iii][A].

297 In general, the legend must include statements to the effect that (i) the materials are not an offer for sale of the securities in the United States and (ii) the securities may not be sold in the United States absent registration or an exemption from registration and that any public offering will be made by means of a prospectus containing detailed information regarding the company and its management, as well as financial statements. The materials also must not include any purchase order or coupon that could be returned indicating interest in the offering. In addition, if the issuer or selling securityholder intends to register any part of the offering in the United States, the legend must include a statement to that effect.

Under Rule 135e under the Securities Act, research reports can form part of a press package distributed to members of the U.S. press in reliance on the safe harbor. SEC Release No. 33-7470 (Oct. 10, 1997). Generally, however, offering participants have elected not to take advantage of this option.

In circumstances in which Rule 135e is not available (*e.g .*, with respect to press contacts in the United States), the relief granted by the SEC staff in the 1996 Deutsche Telekom offering (which predated Rule 135e) may be helpful in understanding the publicity activities that the SEC has deemed permissible in exceptional circumstances. The 1996 Deutsche Telekom offering, which ultimately yielded proceeds of over $12 billion, attracted intense public interest in both the general and financial press. To ensure that the company was able to maintain an appropriate flow of information to the marketplace during the months leading up to the offering, the company sought and was granted no-action relief that allowed certain press activities in the United States in the period up until one month before the first filing of the U.S. registration statement with the SEC, and set forth certain guidelines for publicity activities during the remainder of the offering process. *See Deutsche Telekom AG* (avail. June 13, 1995 *)*. Following the implementation of the Securities Offering Reforms, entities that qualify as WKSIs may release communications that reference a securities offering at any time, although those communications would likely be classified as free writing prospectuses that would need to be filed with the SEC. *See* Rule 163 under the Securities Act; § 3.02[3][b][iii].

298 *See* SEC Release No. 33-7470 (Oct. 10, 1997). In 2000, the SEC staff tightened its standards with respect to the availability of press-related materials on the Internet (*see* SEC Release No. 34-42728 (Apr. 28, 2000), though it has indicated some flexibility in the context of Regulation S-only offerings. *See* § 8.02[1][d].

299 In a number of U.S.-registered transactions, members of the SEC staff questioned the availability of Rule 135e, even when all its conditions appear to have been met. In these transactions, press articles found their way into the United States, including by way of the Internet. The staff seriously considered delaying at least one of these offerings, but stepped back from this draconian measure. The staff has, however, required the inclusion in the prospectus of statements made at press conferences or in other communications protected by Rule 135e. For example, in a public offering of an Italian issuer involving a registered offering in the United States, the issuer's chairman conducted an interview during the offering on CNN International in which the offering was discussed, and the issuer disclosed certain projections to the Italian press that were not included in the issuer's preliminary U.S. prospectus. Although the SEC staff ultimately accepted that the interview was permissible under Rule 135e, the issuer was required to amend its final U.S. prospectus to include the projections released to the Italian press, expressly subjecting the issuer to Securities Act liability for them. In a subsequent U.S. public offering by a Korean bank, the SEC staff required the inclusion in the U.S. prospectus of statements, including projections made during the offering, by the bank's senior officers abroad and reported by various news services.

Although the SEC rules for registration statements do not require the inclusion of all "material" information unless the registration form in question otherwise requires it or the omission of material information would make the information contained therein misleading, the staff has nonetheless insisted on inclusion of information it deems material based on the policy that all investors should have equivalent information when making investment decisions, a concern that goes beyond SEC rules and appears to run counter to the safe harbor from the registration requirements that Rule 135e expressly affords. By requiring the prospectus to contain Rule 135e communications, the staff has sought to put U.S. investors on the same footing as those outside the United States. The staff has even pressed these views where third parties, including members of the media, have improperly or without authorization from the issuer published in the United States information derived from research reports or other information regarding the issuer distributed outside the United States. *See supra* Note 261. It seems less defensible in such circumstances to force the issuer to include in its prospectus information prepared and circulated improperly by third parties. Following implementation of the Securities Offering Reforms, such research reports could potentially be made to fit into the free writing prospectus rules in order to resolve potential publicity questions arising under § 5 of the Securities Act, although offering participants may not be willing to accept prospectus liability on such reports. *See* § 3.02[3][c][v].

Because the staff has the power to accelerate the effectiveness of a registration statement, it essentially has the ability as a practical matter to force the inclusion in a prospectus of any information released abroad, whether or not the staff has a legitimate basis in the SEC's rules for its demands. Where, however, the registrant is prepared to include the Rule 135e statements in its statutory prospectus or as a separate free writing prospectus if the staff insists, threats to delay the offering, in order to allow for a "cooling-off" period, are particularly unwarranted and inconsistent with the safe harbor Rule 135e purports to grant.

300 If the information is included in the prospectus after being reported in the United States, or is released as a free writing prospectus, ordinary prospectus liability would attach to such information. Otherwise, only the general U.S. antifraud rules would apply.

301 *See* § 7.02[4] for a discussion of publicity in private offerings in the United States. Following the 2012 change to Rule 144A under the Securities Act to eliminate the prohibition on offers to nonQIBs, there has been some limited relaxation related to publicity in the United States in the context of private offerings in the United States. While issuers and underwriters remain cautious because of Rule 10b-5 liability concerns, they have been willing to include underwriters' names and other limited factual information that is outside the scope of the Rule 135c under the Securities Act nonexclusive safe harbor.

302 The issuer could argue that there is no offer of securities being distributed if the offering is "all sold."

303 For purposes of an independently prepared media free writing prospectus for which no payment or other consideration has been made by the issuer or another offering participant, the statutory prospectus included in the registration statement would not be required to include a price range otherwise required by rule. *See* Rule 433(b)(2)(ii) under the Securities Act. *See* § 3.02[3][c][v][A].

304 *See* § 3.02[1][a]; *see also supra* Note 84 (discussing Rule 159).

305 Access is generally limited through electronic "gateposts." Gateposts vary in the degree of restriction they impose. At the most restrictive end are password-protected mechanisms, through which only those established to be non-U.S. persons are granted passwords in advance permitting access to the site. The party dispensing passwords typically uses the same means of self-certification and independent verification as to residence as have historically been used in the nonelectronic context. Somewhat less restrictive are gateposts requiring the entry of a post code or other address indicator, which is electronically compared to an existing database of post codes or addresses outside the United States (typically in one or a handful of countries in which the offering is concentrated), and restricts access where the information does not provide assurance that the user resides outside the United States. The least restrictive gateposts ask the user to certify that he or she is not a U.S. person by clicking "yes" or "no" in response to a question to this effect, and only permits access to those users who certify that they are not U.S. persons. Such gateposts involve no independent verification by the party posting the materials on the website.

306 The legend should be similar to the one required by Rule 135e under the Securities Act, although the relief from publicity restrictions provided by Rule 135e is not available for information posted on a website (even if posted on a server located outside the United States), except for press-related materials of foreign issuers where access to the website is limited as described above.

307 The several liability of underwriters in a U.S. offering contrasts with the joint and several liability of underwriters that sometimes applies in offerings outside the United States. The U.S. practice is that if one

or more underwriters default with respect to less than a specified portion (typically either 1/10th or 1/11th) of the underwritten securities, the remaining underwriters will assume the obligations of the defaulters *pro rata*. If, however, the amount exceeds the specified percentage, the agreement may be terminated by the other underwriters.

308 In the multiple syndicate context, allowing the foreign syndicate to proceed on a joint and several liability basis (as is sometimes done outside the United States) while the U.S. syndicate proceeds in the customary manner (*i.e.*, several liability only) is generally not desirable because it is invariably the case that the closing of each offering is conditioned on the closing of the other: if the obligations of the U.S. underwriters are several, and the obligations of the underwriters in the other syndicate are joint and several, a default by a single U.S. underwriter that releases the other U.S. underwriters from their obligations to carry out the U.S. offering could, in effect, vitiate the joint and several character of the obligations of the underwriters in the other syndicate. One solution to this problem is to allow the U.S. underwriters to agree severally, and the other underwriters to agree jointly and severally, and to condition the closing of each offering on the closing of the other, but not to allow the underwriters outside the United States to escape from their obligations if the U.S. offering fails to close solely by reason of a default by one or more U.S. underwriters. Another approach is to require the U.S. offering to go forward on a reduced basis (*i.e.*, without the shares that had been allocated to the defaulting U.S. underwriter) in cases in which the default relates to an agreed percentage of the offering, typically between 10% and 15%.

On the related question of contribution, U.S. and non-U.S. underwriters, particularly in the context of multiple syndicates, sometimes negotiate regarding the contribution to be made by foreign underwriters to losses suffered by U.S. underwriters in connection with claims by U.S. investors, as the U.S. market is the most prone to litigation and the most likely to result in claims against underwriters. Non-U.S. underwriters not offering securities in the United States may therefore seek to obtain a limitation on their contribution liability to losses arising out of claims made by investors who purchased securities from their syndicate (or in the case of single syndicate offerings, their selling region).

309 Regardless of whether a single international syndicate or multiple syndicates are used, any sales in the United States by a non-U.S. syndicate member generally must be effected through an SEC-registered broker-dealer (which often is an affiliate of the non-U.S. syndicate member). *See* § 15 of the Exchange Act and Rule 15a-6 thereunder. Although the SEC proposed amendments to Rule 15a-6 that would have permitted foreign broker-dealers not registered with the SEC to effect transactions with qualified investors in the United States, subject to the terms and conditions specified in Rule 15a-6, as proposed to be amended, those amendments have not been adopted. SEC Release No. 34-58047 (June 27, 2008). All other applicable local rules would also have to be observed by the relevant syndicate. For example, a single syndicate in a distribution that includes U.S. sales must comply with FINRA requirements. *See* § 3.06.

310 An agreement among underwriters governing these and other matters is also typically entered into by the underwriters in each syndicate.

311 In some cases, the underwriters in the non-U.S. tranche may agree to allocate among themselves the responsibility for making offers and sales in particular countries.

312 In offerings by foreign issuers conducted wholly or primarily outside the United States, the period between signing and closing is more variable.

313 SEC Release No. 34-78962 (Sept. 28, 2016), proposing an amendment to Rule 15c6-1(a).

314 The SEC has not proposed any change to the standard settlement cycle for underwritten offerings of equity securities that price on a customary timetable, but has requested comment as to whether a change should be made. SEC Release No. 34-78962 (Sept. 28, 2016).

315 A typical provision reads as follows:

> This Agreement shall be subject to termination in the absolute discretion of the

> Representatives … if prior to such time (i) trading in the Company's Common Stock shall have been suspended … or trading in securities generally on the New York Stock Exchange shall have been suspended or limited or minimum prices shall have been established on such Exchange, (ii) a material disruption in securities settlement, payment or clearance services in the United States shall have occurred, (iii) a banking moratorium shall have been declared either by Federal or New York State authorities or (iv) there shall have occurred any outbreak or escalation of hostilities, declaration by the United States of a national emergency or war or other calamity or crisis the effect of which on financial markets is such as to make it, in the judgment of the Representatives, impracticable to market the Securities.

316 *First Boston Corp.* (avail. Sept. 3, 1985).

317 Rules 15c2-4 and 10b-9 under the Exchange Act.

318 *Force majeure* clauses have increasingly less significance as settlement periods continue to shorten. *See* SEC Release No. 34-78962 (Sept. 28, 2016) (proposing a shortened standard settlement cycle as described above).

319 In certain privatizations, the right to terminate by reason of *force majeure* was eliminated, or could only have been invoked by the sellers and the underwriters jointly, marking a major departure from U.S. practice.

320 Following the terrorist attacks in the United States on September 11, 2001, many investment banks expanded their *force majeure* provisions to include references to (i) material disruptions in commercial banking, securities settlement and clearance services and (ii) the occurrence of any other calamity or crisis.

321 The International Capital Markets Association recommends the following *force majeure* provision, which is widely used and representative of such provisions in Euromarket underwriting agreements generally:

> Notwithstanding anything contained in this Agreement, … the [Joint] Lead Manager[s]… on behalf of the Managers may by notice to the Issuer … terminate this Agreement at any time before the time on the Closing Date when payment would otherwise be due under this Agreement to the Issuer in respect of the Securities if, in the opinion of the Lead Manager, there shall have been such a change in national or international financial, political or economic conditions or currency exchange rates or exchange controls as would in their view be likely to prejudice materially the success of the offering and distribution of the Securities or dealings in the Securities in the secondary market …
>
> ICMA PRIMARY MARKET HANDBOOK at A9-3, International Capital Market Association (2016).

This provision grants much more discretion than its counterpart in a typical underwriting agreement for a U.S. transaction. If there is a U.S. syndicate as part of a dual-or multi-syndicate global offering, and if it is a condition that each tranche must close for any to close, and if the *force majeure* clause in the underwriting agreement follows the IPMA recommendation, then, in practice, the scope of the U.S. *force majeure* clause is much less important, even if narrower, because if the international tranche fails to close, so will the U.S. tranche.

322 Certain private issuers have been able to moderate, although not eliminate, *force majeure* clauses in the context of offerings of their securities. Changes to *force majeure* clauses in this context have generally taken three forms, though all of them are unusual. First, some private issuers have been successful in requiring underwriters to consult them before terminating the offering. Second, some private issuers have

been able to eliminate one or more of the conditions that may constitute *force majeure .* Finally, some private issuers have required underwriters to exercise reasonable judgment before terminating the offering, as opposed to leaving the termination decision to the underwriters' sole discretion. (If reference is made simply to the underwriters' judgment or discretion, without qualification as to whether it must be reasonable, a reasonableness qualification would be implied in any event if the underwriting agreement is governed by New York law.)

In addition, in the context of privatizations, sovereigns have been successful in resisting *force majeure* provisions in underwriting agreements. This result has been due both to the large size of most privatizations and to their high profile in the public eye; underwriters have apparently been willing to accept this additional risk in light of the potential rewards.

While practice in the United States varies, some agreements provide that the issuer must pay the underwriters' out-of-pocket expenses if the *force majeure* clause is invoked. In Europe, it is typical for the issuer to agree to pay all the underwriters' expenses (sometimes subject to a cap), whether the offering proceeds to completion or not.

323 Because underwriters of an offering in the United States may be subject to civil liabilities under federal or state law, they will customarily require indemnification by the issuer with respect to all liabilities arising out of material misstatements or omissions in the registration statement (including the prospectus, any preliminary prospectus, any road show and certain free writing prospectuses), excluding certain minor portions for which the underwriters assume responsibility.

For decades, however, the SEC has stated that it believes indemnification for liabilities arising under the Securities Act is against public policy and thus may be unenforceable. If such indemnification is sought for officers, directors or controlling persons of an issuer, the SEC has long required issuers (as a condition to acceleration of the effectiveness of a Securities Act registration statement) to agree to submit to a court the issue of enforceability of such indemnities and to be governed by such court's decision. Item 512(h) of Regulation S-K under the Securities Act.

While this undertaking does not apply to undertakings to indemnify underwriters, the policy considerations are the same (*see*, *e.g.*, *Globus v. Law Research Serv., Inc.*, 418 F.2d 1276 (2d Cir. 1969), *cert. denied*, 397 U.S. 913 (1970)), and underwriting agreements for offerings in the United States usually provide that if indemnification is held by a court to be unavailable, the issuer and the underwriters will share aggregate losses (through a procedure known as "contribution") in such proportions that the issuer will pay a much greater share of such losses than the underwriters as a group.

It is also customary for an issuer to agree in the underwriting agreement for a U.S.-registered offering to make generally available to its securityholders an earnings statement covering a period of at least 12 months beginning after the effective date of the registration statement. Section 11(a) of the Securities Act provides that a person who purchases securities after such an earnings statement has been made available must prove that he or she acquired the securities in reliance on a materially false or misleading statement in the registration statement in order to have a right to recovery under § 11. Before that time, he or she need only show that the security was included in a registration statement that contained an untrue statement of a material fact or made a material omission. The filing of an annual report on Form 20-F is one method of satisfying the requirements of § 11(a) of the Securities Act. *See* Rule 158 under the Securities Act; *see also* § 11.03[1][a].

324 This issue frequently arises where local corporate law limits the ability of the issuer to give financial benefits or assistance to shareholders. In Germany, for example, stock corporations are prohibited from granting any benefit to a shareholder other than on the basis of arm's-length commercial dealings, the distribution of a validly declared dividend or distributions in a liquidation proceeding. Outside these circumstances, payments or other transfers of benefits to shareholders constitute an unlawful repayment of capital by the issuer. In its so-called "DT 3" decision of May 31, 2011, the highest German court in civil matters (Bundesgerichtshof, the "BGH"), held that the assumption of prospectus liability by an already public issuer in connection with a pure secondary offering constitutes an unlawful repayment of capital to the selling

shareholder(s), unless the issuer receives compensation for the assumption of prospectus liability in the form of a specific, measurable benefit reflected in the issuer's balance sheet. BGH, II ZR 141/09, *available at* http://openjur.de/u/168086.html. According to the BGH, absent such compensation, an issuer may only assume prospectus liability in such an offering if the selling shareholders fully indemnify the issuer for any losses it may incur as a result of the assumption of prospectus liability. The BGH did not address the question of whether the indemnification of the underwriters by the issuer in a pure secondary offering raises similar issues. Neither did it deal with the question of whether the analysis is different if an issuer assumes prospectus liability in connection with an initial public offering and first-time listing of its shares where no new shares are offered, although there are strong arguments that the principles of the "DT3" decision apply *mutatis mutandis* in such a scenario. If the selling shareholders indemnify the issuer for any losses it may incur in connection with the assumption of prospectus liability in the context of a pure secondary offering, including losses arising from the indemnification of the underwriters by the issuer, the issuer should be permitted to indemnify the underwriters for prospectus liability. If the selling shareholders do not so indemnify the issuer, the underwriters should make sure that they get full indemnification from the selling shareholders. Where there are no such local law constraints, the indemnity is typically provided by the issuer, as well as by the selling shareholders.

325 *See* § 3.06[1] (discussing the obligation of FINRA members to include certain mandatory provisions in lock-up arrangements) and § 3.06[4][b] (discussing the lock-up of securities received by members of the underwriting group as underwriting compensation or otherwise).

326 The term "green shoe option" arises from an offering in 1963 by the Green Shoe Manufacturing Company, the first offering to include an overallotment option.

327 In March 2005, Ernst & Young (since renamed "EY") circulated an accounting alert taking the position that, among other things, an overallotment option exercisable after the closing date of an offering should be treated as a call option that "will likely meet the definition of a derivative under FASB Statement No. 133, Accounting for Derivative Instruments and Hedging Activities." EY's On Call Advisory Services Accounting Alert: Overallotment (Greenshoe) Provisions Evolve into FAS 133 Derivatives (Mar. 23, 2005). Although the alert speaks generally about overallotment options, we understand that EY's interpretation is not intended to relate to overallotment options on the issuer's own stock, but does include options over its debt securities, including convertible debt securities. The alert was not predicated on any recent change in the interpretation of the accounting statement by the SEC or otherwise, and we understand that certain firms may not share EY's views. Moreover, subsequent to the alert, EY clarified that its position regarding FAS 133 treatment is limited to so-called "free" options—namely, those options that may be used for any purpose, and not solely to cover overallotments.

328 Historically, the option granted to underwriters in U.S.-registered offerings to acquire additional securities at the offering price could be exercised solely to cover overallotments, if any. As a result of the 1997 implementation of Regulation M, however, the option granted to the underwriters need not be restricted to covering overallotments in transactions to which Regulation M does not apply (*e.g.*, U.S.-registered offerings benefiting from the ADTV exemption or Rule 144A offerings). Thus, technically, underwriters may now receive "free" options in connection with offerings in which the underwriters are not subject to Regulation M, allowing them to exercise the option at any time, whether or not to cover a short position. However, to the extent underwriters continue to sell securities throughout the period during which such an option could be exercised, the issuer, any selling shareholders and their affiliated purchasers would be subject to the longer Regulation M restricted period because they cannot benefit from the ADTV exemption.

Free options also raise other regulatory considerations. To the extent the distribution of securities is ongoing in the United States, the underwriters will continue to have prospectus delivery obligations with respect to those sales. The underwriters also, as a practical matter, may be deterred from selling the shares acquired on exercise of a free option at more than the issue price, as doing so would require amendment of the underwriting compensation disclosure in the prospectus. *See* Items 501 and 508 of Regulation S-K. The additional underwriting compensation resulting from sales of such shares at prices above the original issue price also could implicate FINRA review requirements and rules relating to underwriting compensation. *See* § 3.06[4] (describing FINRA's Corporate Financing Rule).

FINRA rules also affect the structure of the overallotment option in a U.S.-registered offering. *See* § 3.06[4][a] (discussing FINRA constraints on the size of such an option in a U.S.-registered offering). In addition, overallotment options in offerings subject to EU regulations are subject to certain limitations pursuant to the EU Market Abuse Regulation and its implementing measures. These limitations constrain the green shoe option in a number of ways, including by restricting it to 15% of the number of shares initially offered, capping a naked short position resulting from overallotment not covered by a green shoe option at 5% of the original offering size and providing that the exercise of the option be used solely to cover overallotments. *See* Commission Delegated Regulation (EU) 2016/1052 with regard to regulatory technical standards for the conditions applicable to buy-back programs and stabilization measures.

329 One issue that issuers occasionally raise is whether the commissions payable on shares obtained through exercise of the overallotment option should be the same as the commissions paid on underwritten securities. Because shares obtained on exercise of the overallotment option are not underwritten, a few issuers have successfully argued that only the selling, and not the underwriting, component of the commissions should be paid. It is very unusual, however, for underwriters to accept this.

330 A syndicate's short position is created at the time the securities are priced and allocated (following effectiveness of the registration statement in an offering registered with the SEC). The short position is typically at least as large as the number of securities available to the underwriters through the overallotment option. The lead manager's decision as to the size of the short position at any given time during the typical period during which the overallotment option can be exercised (30 days) primarily depends upon its perception of the aftermarket trading of the securities in question. In the case of an offering that trades at a significant premium in the immediate aftermarket, the overallotment option may be exercised immediately and the short position closed out at the same time. A lead manager might not establish a naked short position unless it is concerned about the potential for supply to exceed demand in the aftermarket, with the consequent negative pressure on price. It will assess the situation based on, among other factors, market conditions and the level of interest expressed in the securities being offered during the marketing process. *See* SEC, Division of Corporation Finance, Current Issues and Rulemaking Projects (Nov. 14, 2000) (setting out the views of the SEC staff on certain issues relating to syndicate short sales).

The SEC staff takes the view that securities sold in any naked short sales must be registered with the SEC together with the securities registered for sale on a firm-commitment basis or pursuant to the exercise of the overallotment option. A specific number of shares to cover naked short sales does not, however, need to be included on the cover of the registration statement in order to register such sales. The registration statement is deemed by the SEC staff to include an indeterminate number of naked short securities. *See* SEC, Division of Corporation Finance, Current Issues and Rulemaking Projects (Nov. 14, 2000). The effect of this staff position is to impose §§ 11 and 12(a)(2) liability with respect to naked short sales, but no additional registration fee is required.

331 The SEC staff takes the view that the underwriters must disclose in the prospectus the possibility that they will make short sales and engage in short covering transactions. It has stated that the disclosure should also describe what short sales are, distinguishing between covered and naked short sales, explain how short positions may be covered and how underwriters determine the method for closing out such sales, explain when a naked short position may be created and outline the potential effects (*e.g.*, raising or maintaining the market price of the securities in question or preventing or retarding a decline in their market price) of such transactions). The staff provided model language that may be used verbatim, or adapted, to address the required points. *See* SEC, Division of Corporation Finance, Current Issues and Rulemaking Projects (Nov. 14, 2000). Private offerings under Rule 144A typically include similar disclosure. The SEC has also promulgated Rule 10b-21 under the Exchange Act, an antifraud rule aimed at abusive naked short selling by sellers that deceive broker-dealers or other specified persons regarding the ability of the sellers to deliver securities in time for settlement and that in fact fail to deliver securities by settlement. *See* SEC Release No. 34-58774 (Oct. 18, 2008).

332 If the overallotment option is to be exercised and settled after the closing of the offering of the underwritten

securities, the issuer is generally expected to "bring down" its representations, warranties and officers' certificates to the time of the overallotment closing, and bring-down 10b-5 letters regarding the absence of material misstatements or omissions in the offering materials, as well as bring-down accountants' comfort letters on the financial information contained in such materials, are generally required. Where the overallotment option is limited to covering short positions generated in connection with the initial placement of securities in an offering, the overallotment securities were actually sold to investors at the time of the closing for the firm securities. Notwithstanding the view of practitioners that a bring-down of diligence documentation is not necessary from a legal standpoint under such circumstances, underwriters generally insist on the receipt of bring-down 10b-5 letters and comfort letters at the option closing for commercial reasons.

333 As an alternative to formally borrowing securities, the underwriters may arrange with a portion of the initial investors to delay delivery of the securities. In connection with making these arrangements, the underwriters should consider the restrictions on the regulation of credit in connection with distributions in § 11(d) of the Exchange Act, as well as Regulation T (discussed in § 9.05[11]).

334 *See infra* Note 389.

335 As noted in *infra* Note 417, Regulation M should not be deemed to restrict non-U.S. purchases or inducements to purchase the subject securities after the U.S. distribution is completed (even if the ADTV exemption is not applicable). This view is consistent with the views expressed in a no-action letter under Rule 10b-6 under the Exchange Act, one of the predecessor rules to Regulation M. *See Williams, William J., Jr.* (avail. Nov. 27, 1996). That letter was granted in the context of a request by the syndicate to increase the number of shares for which the overallotment option could be exercised to cover syndicate short sales in excess of the syndicate short position at the time of completion of the initial distribution. The staff confirmed that so long as the further sales by the syndicate occurred outside the United States, the U.S. distribution would not be deemed to continue for purposes of Rule 10b-6.

336 *See supra* Note 327.

337 *EBC I, Inc. v. Goldman Sachs & Co.*, 832 N.E.2d 26 (N.Y. 2005).

338 *See EBC I, Inc. v. Goldman Sachs & Co.*, 832 N.E.2d 26 (N.Y. 2005).

339 *See HF Mgmt. Services LLC v. Pistone*, 818 N.Y.S.2d 40, 42, 43 (N.Y. App. Div. 2006) (noting that the decision in EBC I was "the exception that proves the rule" and that "a fiduciary aspect [is] absent from the majority of underwriting relationships").

340 Notwithstanding the apparently clear limitation on liability in § 11(e), the U.S. District Court for the Southern District of New York has suggested in *dictum* that, in light of the broad definition of "underwriter" under the Securities Act, the amount of securities "underwritten" by a lead underwriter in an offering may be greater than the amount formally allocated to it. *In re WorldCom, Inc. Securities Litigation*, Fed. Sec. Rep. (CCH) ¶93,139 (S.D.N.Y. Mar. 14, 2005); *see* § 11.03[1][b], Note 39.

341 This solution may not work if the issuer wishes to reserve to itself the discretion to direct the underwriters how to allocate the commissions among themselves, rather than having fixed arrangements set out in the agreement among underwriters.

342 *See* Telis Demos, Alibaba IPO Will Have 'Friends and Family' Share Program, WALL ST. J. Sept. 5, 2014, noting that while use of directed share programs has declined, several large IPOs in recent years, including that of Alibaba Group Holding Ltd., have implemented such programs. Separately, in recent years the idea of selling to "friends and family" has expanded some as issuers that want to include marketing to specific investor groups have sold a small portion of shares in an IPO to groups of fans, customers and other constituencies of investors through electronic platforms, like Loyal3.

343 *See* § 3.02[1] for a discussion of "gun-jumping."

344 *See* Rule 134 under the Securities Act. *See* § 3.02[3][c][i] for a discussion of Rule 134.

345 Although FINRA's rules are applicable only to its members, which generally will include all the U.S. broker-dealer participants in the offering, the rules require those participants in certain circumstances to obtain the

agreement of foreign members of the underwriting syndicate and selling group to comply with the rules as well. *See* § 3.06[2].

346 FINRA Rule 5130 defines a "new issue," in general, as any IPO of an equity security as defined in § 3(a)(11) of the Exchange Act made pursuant to a registration statement or offering circular (regardless of whether the securities are so-called "hot issues" that immediately trade at a premium in the secondary market). FINRA Rules, Rule 5130(i)(9), FINRA MANUAL.

347 In order to establish a parent-subsidiary relationship, the parent must have either (i) the right to vote 50% or more of a class of voting security of the subsidiary or (ii) the power to sell or direct 50% or more of a class of voting security of the subsidiary. FINRA Rules, Rule 5130(d)(1)(B), FINRA MANUAL.

348 FINRA Rules, Rule 5131(d)(2)(A) FINRA MANUAL. The NASD and NYSE initially proposed these rules in response to concerns raised by a special advisory committee convened in 2002 by the NYSE and NASD at the request of the SEC in the wake of concerns regarding IPO allocation abuses by certain investment firms. Notably, the special advisory committee recommended that the SEC and self-regulatory organizations adopt restrictions regarding directed share programs beyond those set forth in the NASD's and NYSE's proposed rules on the topic. Specifically, the committee recommended that directed share programs be limited to 5% of an IPO. In addition, the committee recommended that issuers include more detailed disclosure on directed share programs in prospectuses by including, for example, disclosure on total size of programs, number and nature of participating individuals or institutions, amounts purchased, minimum percentages of shares allocated to employees and allocations to participants exceeding a specified threshold. The committee further recommended that each listed company be required to include, in its code of business conduct and ethics, a policy regarding receipt of shares in a company's IPO by directors and executive officers. *See NYSE/NASD IPO Advisory Committee Report and Recommendations* (May 2003); *see also* SEC Release No. 33-8565 (Apr. 7, 2005) (providing guidance on activities that are prohibited in connection with IPO allocations); *cf*. Press Release, SEC, Voluntary Initiative Regarding Allocations of Securities in "Hot" Initial Public Offerings to Corporate Executives and Directors (Apr. 28, 2003) (stating that directed share programs would be exempt from the voluntary initiative regarding IPO allocations agreed to by several large investment banking firms in connection with the global research settlement entered into among such firms and the SEC, NYSE, NASD and other regulators); *see also* § 14.07[5][b].

349 FINRA Rules, Rule 5131(d)(2)(B), FINRA MANUAL.

350 § 11(b)(3) of the Securities Act.

351 *But see* Note 53 in § 11.03[1][c] for a discussion of litigation concerning, among other matters, underwriter reliance on WorldCom, Inc.'s audited (and therefore expertized) financial statements, where the court held that the existence of "red flags" regarding the accuracy of expertized information, including audited financial statements, can create a duty to investigate.

352 While historically meetings with accountants were sometimes conducted without management present, accountants have generally instituted policies requiring the attendance of company management at diligence sessions with accountants.

353 Privilege issues sometimes play a role in determining which counsel communications are made available in connection with due diligence.

354 The guidelines for accountants' comfort letters are set forth in Auditing Standard ("AS") 6101 (Letters for Underwriters and Certain Other Requesting Parties) ("AS 6101"). AS 6101 became effective December 31, 2016, succeeding AU 634 (Letters for Underwriters and Certain Other Requesting Parties), which in turn had succeeded Statement on Auditing Standards ("SAS") No. 72 (Letters for Underwriters and Certain Other Requesting Parties) (1998), and comfort letters are still sometimes referred to as SAS 72 letters. AS 6101 states that accountants may provide negative assurance in a comfort letter with respect to changes during a period subsequent to the date of the latest financial statements included in the prospectus, but may only provide such assurance as of a date that is less than 135 days from the end of the last period for which the accountants have performed an audit or an interim review in accordance with AS 4105 ("AS

4105") (Reviews of Interim Financial Information). AS 4105 succeeded AU 722 (Interim Financial Information, which in turn had succeeded SAS No. 100 (Interim Financial Information) and a review of interim financial information for comfort letter purposes is still sometimes referred to as a SAS 100 review. As a result of this 135-day rule, and depending on the timing of preparation and review of its interim financial statements, an issuer effectively may be precluded from making an offering during certain periods of the year. "Negative assurance" in this context generally refers to the language in a comfort letter to the effect that nothing came to the attention of the auditor that would cause it to believe that (i) any material modifications should be made to the relevant financial statements for them to be in conformity with GAAP, (ii) unaudited interim financial statements contained in the prospectus were not prepared on a basis substantially consistent with the audited financial statements contained in the prospectus, or (iii) there were certain changes in specified financial statement line items after the date of the financial statements included in the prospectus as compared to the comparable prior-year period (in the case of line items in the income or cash flow statement) or to the most recent balance sheet contained in the prospectus (in the case of balance sheet line items) from what is stated in the prospectus except for changes that the prospectus discloses have occurred or may occur (so-called "stub period comfort"). In addition, in U.S. registered transactions, negative assurance would typically also include language to the effect that nothing came to the attention of the auditor that would cause it to believe the financial statements contained in the registration statement do not comply as to form in all material respects with the applicable accounting requirements of the Securities Act and the rules and regulations thereunder.

Initially, review under AS 4105's predecessor provision was only applicable to the interim financial statements of SEC registrants and companies making regulatory filings with certain other U.S. government agencies. Effective for reviews of financial information for interim periods beginning after December 15, 2009, such review has also been permitted for interim financial statements of an entity (i) that meets certain conditions related to the auditor and financial reporting framework applicable to the interim financial information as compared to the audited annual financial statements, and (ii) when the interim financial information is condensed information, such condensed interim financial information purports to comport with an appropriate reporting framework and other content and financial information availability conditions are met. Appropriate reporting frameworks may include FASB ASC 720 and Article 10 of Regulation S-X with respect to U.S. GAAP or IAS 34 with respect to IFRS issued by the IASB. Comfort letters delivered in Rule 144A/Regulation S offerings regularly include customary negative assurance in respect of interim periods where the financial statements for such interim periods are included in the offering memorandum.

355 *See*, *e.g.*, *Escott v. BarChris Constr. Corp.*, 283 F. Supp. 643, 697 (S.D.N.Y. 1968) (Participating underwriters "who did nothing and relied solely on [lead underwriter]" were bound by their failure to conduct a reasonable investigation).

356 *See* "New High Risk Ventures," Exchange Act Release No. 34, 9671 (July 26, 1972), 1972 WL 125474, at *6 (July 27, 1972) ("[The participant] must satisfy himself that the managing underwriter makes the kind of investigation the participant would have performed if he were the manager.").

357 Section 12(a)(2) also applies to oral statements. *See* § 11.03[2] for a general discussion of § 12(a)(2).

358 Oral contracts of sale of securities are generally valid and binding under state law. Therefore, a contract of sale is commonly entered into in a phone call with a customer immediately following pricing of an offering.

359 With shelf registration, certain qualifying issuers can register securities that may then be offered in a single transaction or a series of transactions. *See* the discussion of shelf registration, including automatic shelf registration, in § 3.02[2][c].

360 *See* § 3.02[2][c].

361 Report of Task Force on Sellers' Due Diligence and Similar Defenses Under the Federal Securities Laws, as submitted to the A.B.A., Section of Business Law, Committee on Federal Regulation of Securities (July 10, 1992).

362 *See In re WorldCom, Inc. Securities Litigation*, 346 F. Supp. 2d 628, 671 (S.D.N.Y. 2004). In the Aircraft Carrier Release, SEC Release No. 33-7606 (Nov. 3, 1998), as amended by SEC Release No. 33-7606A

(Nov. 13, 1998), the SEC proposed amendments to Rule 176 under the Securities Act to clarify further factors to be considered by underwriters in the determination of whether a reasonable investigation had been conducted. The proposed rules, which were seen as largely codifying current practice by major underwriters, were never adopted. For a discussion of the impact of the WorldCom on diligence standards, *see* § 11.03[1][c].

363 *See generally* Chapters 4 and 5 for a discussion of the Sarbanes-Oxley Act.

364 *See* § 5.04.

365 *See* § 7.09.

366 National Securities Markets Improvement Act of 1996, Pub. L. No. 104-290, 110 Stat. 3416 (1996).

367 While the SEC proposed a definition of "qualified purchaser" that is the same as the definition of "large accredited investor" included in its 2007 proposal to revise Regulation D, the proposal has not been adopted. However, all states have laws or regulations in place under which offers and sales of securities to certain classes of institutional investors are exempt from state registration requirements. Although the breadth of the exemption varies from state to state, in most cases it covers financial institutions generally, including broker-dealers and other institutional purchasers of securities. *See* § 7.09. In connection with amendments to Regulation A adopted in 2015, the SEC adopted a limited definition of "qualified purchaser" that includes purchasers and offerees of securities in Tier 2 Regulation A offerings. *See* Rule 256 of the Securities Act.

368 The practical result of this provision of the NSMIA is to preempt blue sky laws with respect to secondary trading in securities issued by an SEC-reporting issuer (in addition to all transactions in NYSE or similarly listed securities). This preemption would not extend to secondary trades in all types of securities; for example, state registration requirements with respect to unlisted securities of a foreign issuer that furnishes information pursuant to Rule 12g3-2(b) under the Exchange Act are not preempted under this provision of the NSMIA.

369 The NSMIA provides preemption for all transactions exempt from registration pursuant to regulations promulgated by the SEC under § 4(a)(2) of the Securities Act (but not for transactions exempt under Rule 144A). Transactions meeting the requirements of Rule 506 of Regulation D accordingly qualify for preemption; transactions under Rules 504 and 505 of Regulation D do not. *See* § 7.02, Note 31. The preemptive treatment accorded to Rule 506 transactions pursuant to the NSMIA is of no practical significance with respect to large underwritten private placements to institutional investors in the United States, both because such placements are generally not made in technical reliance on Rule 506, *see* § 7.02[2], Note 40 and accompanying text, and because Rule 506 provides a registration exemption only to the issuer of the security (and not the underwriters of the placement), *see* § 7.02[2], Note 32 and accompanying text. These private placements are often conducted under state law self-executing exemptions for offers and sales to specified types of institutional investors. *See* § 7.09, Note 309.

370 An offering document is deemed "prepared by or on behalf of the issuer" if "the issuer or its agent or representative" (i) authorizes the document's production and (ii) approves the document before its use. SEC Release No. 33-7418 (Apr. 30, 1997), Definition of "Prepared By or On Behalf of the Issuer" for Purposes of Determining if an Offering Document is Subject to State Regulation, 62 Fed. Reg. 24,572, 24,573 (May 6, 1997).

371 In addition, the NSMIA would not preempt state legislation adopted in response to accounting scandals and corporate governance abuses. The California Corporate Disclosure Act, for example, requires a publicly traded corporation incorporated or qualified to do business in California to include additional information in its annual information statement including disclosure of, among other things, the company's independent auditor, annual compensation of each member of the board of directors and executive officers, and any loans made to a member of the board of directors or any executive officer at preferential rates. CAL. CORP. CODE §§ 1502.1, 2117.1 (West 1990 & Supp. 2008). Although additional states may be considering adopting similar provisions, none to date has passed equivalent legislation.

372 Certain state disclosure and other requirements may also need to be satisfied.

373 For example, California insurers may to a limited extent make investments in foreign securities that are substantially of the same type and investment grade as eligible domestic investments, subject to concentration limits both on total foreign investments and total investments from a single foreign jurisdiction. CAL. INS. CODE § 1241 (West 2011). Similarly, New York life insurers are permitted to invest up to 10% of their "admitted assets" in Canadian investments and up to 20% of their "admitted assets" in foreign investments that are of the same types as eligible domestic investments including, among others, government obligations, corporate bonds, real estate mortgages and corporate stock. N.Y. INS. LAW § 1405(a)(7)(A) and (C) (McKinney's 2015). Certain other restrictions generally apply and vary with the type of investment, including concentration limits on total investments from a single foreign jurisdiction and ratings and exchange listing requirements. Similar provisions also govern foreign investments of New York property and casualty insurers. N.Y. INS. LAW § 1404 (McKinney's 2015).

374 The first equity offerings made by General Motors and AIG following their receipt of funds under the Troubled Asset Relief Program ("TARP") were examples of such global offerings.

375 It is common for offerings to include selling legends relating to "professional" exemptions in the countries that are most commonly marketed in (including Canada, EEA countries, Switzerland, the UK, Japan, Hong Kong, Singapore, the Dubai International Financial Centre, and Australia). These more regularly used selling restrictions are commonly provided by counsel to the underwriters based on forms kept by the underwriters internal legal departments. Global Blue Sky typically refers to inclusion of additional jurisdictions; for example, in the AIG offering mentioned in the note above, selling legends were included for 40 jurisdictions.

376 In most cases, foreign counsel will provide the selling legend that will be included in a U.S. issuer's offering document. Generally, counsel to the underwriters reviews such information because it is the underwriters that are responsible for offers and sales of securities to investors. Underwriters' U.S. counsel should be sure to review such disclosure with foreign counsel to ensure, among other things, not only the restrictions, but also the exemption under which the offers and sales will be made, is included in such disclosure.

377 Counsel in some jurisdictions advise that portions of a legend be in bold text or capitalized due to the requirement that such information be prominently placed.

378 Such statements generally also include a reference to the fact that the offer and sale of securities will be made pursuant to an exemption from such jurisdiction's filing and registration requirements.

379 SEC Release No. 34-38067 (Dec. 20, 1996) (the "Regulation M Release"); *see* § 7.10 for further discussion of Regulation M (in the context of private placements).

380 In the case of securities registered on a shelf, Rules 101 and 102 require each takedown off the shelf to be analyzed independently to determine whether it constitutes a distribution and, if it does, as of when the relevant rule applies to that takedown. *See* SEC, Division of Market Regulation, Staff Legal Bulletin No. 9, Frequently Asked Questions About Regulation M (Oct. 27, 1999) (revised Sept. 10, 2010), Fed. Sec. L. Rep. (CCH) ¶60,009 ("Staff Bulletin No. 9").

381 The term "prospective underwriter" includes any person who (i) submits a bid to participate in a distribution and knows or is "reasonably certain" that such bid will be accepted or (ii) has reached, or is "reasonably certain" to reach, an understanding with an issuer, selling securityholder or managing underwriter that such person will become an underwriter. In either case, such person will be considered a prospective underwriter regardless of whether the terms of the underwriting have been agreed upon. Rule 100 of Regulation M.

382 A broker-dealer that performs only ministerial duties and receives a fixed fee consistent with its limited role (*i.e.*, its compensation is not based on the success of the offering and is a customary amount) will not be deemed a distribution participant. *See* Staff Bulletin No. 9.

383 For purposes of Regulation M, "affiliated purchaser" includes an affiliate of a distribution participant, issuer or selling securityholder that, directly or indirectly, controls "the purchases of any covered security by a distribution participant, issuer or selling securityholder, whose purchases are controlled by any such person, or whose purchases are under common control with any such person." Rule 100 of Regulation M.

384 Such persons will not be considered "affiliated purchasers" if: (i) the distribution participant, issuer or selling

securityholder maintains and enforces written policies and procedures reasonably designed to prevent the flow of information to or from the affiliate that might result in a violation of Rule 101, 102 or 104 of Regulation M, (ii) the distribution participant, issuer or selling securityholder obtains an annual independent assessment of the operation of such policies and procedures, (iii) the affiliate has no officers (or persons performing similar functions) or employees (other than clerical, ministerial or support personnel) in common with the distribution participant, issuer or selling securityholder that direct, effect or recommend transactions in securities, and (iv) the affiliate does not, during the applicable restricted period, act as a market maker (other than as a specialist in compliance with the rules of a national securities exchange) or engage, as a broker or dealer, in solicited transactions or proprietary trading, in covered securities. *See* Rule 100 of Regulation M.

Certain aspects of the "affiliated purchaser" definition are derived from and intended to codify various exemptive and no-action positions taken by the staff of the SEC under the market manipulation and stabilization rules in effect prior to the adoption of Regulation M.

385 The Regulation M Release clarifies that, in the case of debt securities, an issuer's outstanding securities will not be deemed to be the same as the security in distribution unless they are identical (*i.e.*, feature the same coupon rate, maturity date and other terms). By contrast, outstanding shares that differ only in voting rights from the shares being distributed are deemed to be the same security as the shares in distribution.

The SEC staff has also clarified that where a company is concurrently making a distribution of the same securities in two different offerings, an inducement to purchase securities in one offering should not constitute an impermissible inducement with respect to the second offering. For example, where a company offers its shares to the public for cash while concurrently offering its shares to shareholders of an acquisition target in connection with a merger, *bona fide* offers to sell or the solicitation of offers to buy shares distributed in one distribution would not be impermissible inducements with respect to the concurrent distribution of the same securities. However, sales efforts that go beyond *bona fide* offers to sell or the solicitation of offers to buy securities may result in a finding of impermissible inducements to purchase. *See* Staff Bulletin No. 9.

386 Conversely, activities in respect of a derivative security (*e.g.*, a convertible bond, warrant or option (including a short position in a put option)) related to a security in distribution (*e.g.*, the underlying common stock) will not be subject to the rule, so long as the price of the derivative security is not used to determine the price of the security in distribution under the terms thereof.

387 The restricted period commences one business day prior to pricing if the subject security has an average daily trading volume ("ADTV") value of at least $100,000, and the issuer has a public float value of at least $25 million. *See infra* Note 391 (explaining the calculation of ADTV value). In all other cases, the restricted period commences five business days prior to pricing. As used in Regulation M, the term "business day" is defined as a 24-hour period that includes an entire trading session for the security in the principal market for the security being distributed. Thus, for example, if pricing occurs at the close of trading in the principal market on Tuesday and a one-business day restricted period applies, the restricted period will begin at the close of trading in the principal market on Monday. If, however, pricing occurs prior to the close of trading on Tuesday, the restricted period would begin prior to the opening of trading in the principal market on Monday. *See* Staff Bulletin No. 9; *see also* Rule 100 of Regulation M.

388 Pricing occurs when the parties agree on the price, regardless of whether the agreement has yet been (or will ever be) memorialized in writing. *See* Staff Bulletin No. 9.

389 An underwriter will be deemed to have completed its participation in a distribution when its participation has been distributed and after any stabilization arrangements and trading restrictions in connection with the distribution have been terminated. *See* Rule 100 of Regulation M. For a selling group member that is not part of the underwriting syndicate, its participation in a distribution is completed when the selling group member has sold its entire allotment. *See* Staff Bulletin No. 9. A distribution participant's participation in a distribution will not be deemed completed if a syndicate overallotment option is exercised in an amount that exceeds the net syndicate short position at the time of exercise. *See* Staff Bulletin No. 9. In this case, any

purchases made prior to the exercise of the option would constitute a violation of Regulation M. *See* § 3.02[5][f] for a discussion of overallotment options and syndicate short sales. Securities acquired by a distribution participant for investment purposes, that is, securities placed in an underwriter's investment account, will be considered distributed for purposes of Regulation M. *See* Regulation M Release. It is prudent for securities placed in such an investment account to be retained for a reasonable period of time. In addition, pursuant to FINRA requirements, any FINRA member acting as a manager (or in a similar capacity) of a distribution of a subject security, reference security or actively-traded security under Rule 101 must send a notice to FINRA, generally required no later than the close of business the next business day following the pricing of the distribution, providing the date and time of the pricing of the offering and the offering price. *See* FINRA Rules, Rule 5190(d), FINRA MANUAL.

390 Rule 100 of Regulation M. Neither the existence of exercisable warrants (or convertible securities) nor the approaching expiration date of such securities would itself cause the issuer of the warrants or convertible securities to be deemed to be in distribution. *See* Staff Bulletin No. 9. Special selling efforts, such as the solicitation of warrant exercises or conversions, a temporary reduction of the warrant exercise or conversion price or the payment of a soliciting dealer's fee, might cause a distribution to be deemed to be present. *See* Staff Bulletin No. 9.

391 ADTV may be calculated based on the two calendar months preceding the offering or on a 60-day rolling period ending within ten days of the filing of the related registration statement or, if there is no registration statement or the offering is being made pursuant to a shelf registration statement, ending within ten days of the pricing.

In the context of a security convertible into an actively-traded security, the SEC staff has clarified that the ADTV of the reference security does not affect the restricted period of the subject security; rather, the ADTV of the subject security (*i.e.*, the convertible security) determines the restricted period. *See* Staff Bulletin No. 9.

ADTV is calculated based on "worldwide" trading volume of common equity securities (per the definition found in Rule 100) and the SEC staff has clarified (in Staff Bulletin No. 9) that "[t]he phrase 'common equity securities' includes the equivalent type of stock of a foreign issuer. As a result, a foreign issuer with an existing exchange listing outside the United States may already have ADTV for purposes of Regulation M at the time of its U.S. initial public offering.

392 According to the Regulation M Release (text at note 42), "a distribution participant should have flexibility in determining a security's ADTV value from information that is publicly available, if such participant has a reasonable basis for believing that the information is reliable. [Footnote omitted.] Furthermore, in calculating the dollar value of ADTV, any reasonable and verifiable method may be used. For example, it may be derived from multiplying the number of shares by the price in each trade, or from multiplying each day's total volume of shares by the closing price on that day."

393 Public float value is defined as the aggregate amount of common equity securities held by nonaffiliates and is disclosed, in the case of U.S. issuers, in annual reports on Form 10-K filed with the SEC under the Exchange Act. *See* Rule 100 of Regulation M.

394 The SEC staff has granted exemptions to underwriters to engage in market making where the actively traded security exemption was not met, particularly in the context of noninvestment-grade sovereign debt issuances.

395 Regulation M's definition of "asset-backed security" comes from Item 1101 of Regulation AB, and is used to describe a security that is primarily serviced by the cash flows of a discrete pool of receivables or other financial assets, either fixed or revolving, that by their terms convert into cash within a finite time period, plus any rights or other assets designed to assure the servicing or timely distribution of proceeds to the securityholders.

396 Pursuant to § 939A of the Dodd-Frank Act, the SEC was charged with removing from SEC regulations all references to or requirements of reliance on credit ratings. Accordingly, the SEC has attempted to identify the characteristics of securities that make the markets for investment grade securities difficult to manipulate

and has indicated that its goal is to implement the requirements of the Dodd-Frank Act without necessarily changing the substantive results under the various rules and forms or imposing undue additional burdens on market participants. SEC Release No. 34-64352 (Apr. 27, 2011). The proposed approach would remove the references to credit ratings in Rules 101(c)(2) and 102(d)(2) and would instead exempt nonconvertible debt and preferred stock and asset-backed securities from Regulation M if they (i) are liquid relative to the market for that asset class (as indicated by the daily trading volume and number of market makers, among other things), (ii) trade in relation to general market interest rates and yield spreads (rather than in relation to issuer-specific factors), and (iii) are relatively fungible with securities of similar characteristics and interest rate yield spreads (for trading purposes). The determination of whether these factors are met would be required to be made using reasonable factors of evaluation and then verified by an independent third party, which could not be counsel to the underwriter or issuer or an affiliate of theirs. The SEC requested comment on what the qualifications of such a third party should be, and whether for example an entity eligible to be a "qualified independent underwriter" in the distribution should be required. Although the SEC, in the context of eliminating credit rating references in other rules in 2013, indicated it would address the proposed removal of such references from Rules 101 and 102 separately at a later time, it has not yet done so. *See* SEC Release No. 34-71194 (Dec. 27, 2013).

397 Rule 101 also includes exemptions for "exempted securities," as defined in § 3(a)(12) of the Exchange Act (including certain government and municipal securities), face-amount certificates issued by a face-amount certificate company and redeemable securities issued by an open-end management investment company or a unit investment trust.

398 For a discussion of the requirements of Rule 144A, *see* § 7.02[3].

399 This exemption does not cover private placements of Rule 144A-eligible securities to accredited investors that are not QIBs.

400 For a discussion of the requirements of Regulation S, *see* Chapter 8.

401 The staff of the SEC has clarified that market transactions would be deemed solicited where an indication of interest has been solicited by a syndicate member from a client to purchase in the distribution, but the client instead wishes to buy immediately in the market. *See* Staff Bulletin No. 9.

In connection with Rule 10b-6 under the Exchange Act, one of the predecessor rules to Regulation M, the SEC indicated that the dissemination of research to particular customers by sales personnel (in contrast to the dissemination of research continuously through the use of routine distribution systems such as mailing lists) would render a transaction solicited, and thus outside the scope of permissible transactions under Rule 10b-6. The SEC also noted that research transmitted orally must be evaluated in the context of the entire oral presentation, including whether the broker-dealer or the customer initiated the contact, the sophistication of the customer and the normal course of dealings with the customer, and further noted that, in most cases, the oral transmission of positive research by sales personnel on their own initiative would constitute a solicitation and an inducement to purchase. *See* SEC Release No. 33-6550 (Sept. 19, 1984); *see also supra* Note 261 (discussing certain exceptions to Regulation M for the distribution of research that is in compliance with Rule 138 or 139 under the Securities Act). Although Rule 10b-6 is no longer in force, the SEC has indicated that interpretations under the rules in effect prior to the adoption of Regulation M remain relevant to interpretations of similar terms and concepts used in Regulation M. *See* the Regulation M Release.

402 For a discussion of Rules 138 and 139 under the Securities Act and the dissemination of research in connection with a global offering, *see* §§ 3.02[3][e][iii] and [iv].

In the case of research reports not meeting the conditions of Rule 138 or 139, the SEC declined to codify an exemption based on existing market practice, which often involved the distribution of such noncomplying research reports outside the United States in a manner consistent with local market practice when the securities being offered were those of a non-U.S. issuer. *See* SEC Release No. 33-7375 (Dec. 20, 1996). The SEC noted, however, that there might be circumstances in which the distribution outside the United States of such noncomplying research reports might be appropriate during a global offering.

The issue has become less important since the adoption of Regulation M because of the frequent availability of exemptions under Regulation M (in particular, the actively-traded securities exemption) and the relatively brief restricted periods under Regulation M (which are shorter than the typical research blackout periods imposed by lead managers). Many practitioners are of the view that prohibiting the distribution outside the United States of noncomplying research reports in the context of global offerings by non-U.S. issuers would be an inappropriate extra-territorial exercise of U.S. authority.

403 This exemption codifies certain no-action relief granted by the staff of the SEC under Rule 10b-6 under the Exchange Act (which was, as mentioned above, one of the predecessor rules to Regulation M). *See Basket Trading During Distributions* (avail. Aug. 6, 1991). Rule 101 exempts *bona fide* basket transactions in covered securities in the ordinary course of business if (i) the security being distributed constitutes 5% or less of the value of the basket being purchased and (ii) the basket contains at least 20 securities. The exemption also permits the adjustment of an existing basket position related to a standardized index if such adjustment is made in the ordinary course of business as a result of a change in the composition of the relevant index.

404 The de minimis exemption exempts purchases that in the aggregate total less than 2% of the security's reported ADTV and unaccepted bids. The de minimis exemption is limited to persons who maintain and enforce written policies and procedures reasonably designed to achieve compliance with Rule 101. Once inadvertent transactions are discovered, subsequent transactions are not covered by the exemption. In addition, even if a trade subsequently is broken, it must be considered a purchase for the purpose of the exemption.

405 Rule 101 exempts from its coverage transactions among distribution participants in connection with a distribution, and purchases of securities from an issuer or selling securityholder in connection with a distribution, in either case that are not effected through an exchange, as well as transactions complying with the passive market making and stabilization provisions contained elsewhere in Regulation M and bids and purchases of odd-lots. In addition, Rule 101 exempts the exercise of any option, warrant, right or conversion privilege set forth in the instrument governing a security, as well as offers to sell or the solicitation of offers to buy the securities being distributed (including securities acquired in stabilizing) or securities offered as principal by the person making such offer or solicitation. *See* Regulation M Release, Anti-Manipulation Rules Concerning Securities Offerings, 62 Fed. Reg 520, 532 n. 95 (Jan. 3, 1997); *see also* Staff Bulletin No. 9.

406 A Nasdaq market maker that is affiliated with the issuer or selling securityholder but is not acting as a distribution participant may not rely on Rule 103. *See* Staff Bulletin No. 9.

407 *See Distributions of Certain United Kingdom Securities and of Certain Securities Traded on SEAQ International* (avail. Jan. 10, 1995). This letter restated and expanded similar relief first granted in the late 1980s and permitted passive market making in connection with offerings by certain issuers listed on the London Stock Exchange's Stock Exchange Automated Quotation System ("SEAQ") or quoted on the London Stock Exchange's Stock Exchange Automated Quotation International system ("SEAQI").

The SEC staff recognized that Rule 10b-6, one of the predecessor rules to Regulation M, would have interfered with the London Stock Exchange rules intended to preserve the integrity of London's trading market. These rules were designed to prohibit "fair-weather" market making by effectively preventing a member firm from resuming market making activities in a security for three months after the firm ceased to make a market in that security. Market makers in London thus do not withdraw from the market when they or their affiliates participate in an offering, as they would be required to do, absent an exemption, by Rule 10b-6 (as well as by Rule 101 of Regulation M). *See* L. E. Bergmann, *Selected Trading Practices Developments*—1987, ALI-ABA Course of Study—Broker Dealer Regulation (Jan. 21–22, 1988).

408 *See London Stock Exchange* (avail. Aug. 5, 1997). The London Stock Exchange's revised relief under Regulation M permits broker-dealers that are members of the London Stock Exchange to engage in "passive" market making activities in connection with offerings by certain issuers when such broker-dealers would otherwise be prevented from making a market by Regulation M. "Passive" market making refers to

the ability of the U.K. firms to provide depth and liquidity in the U.K. securities market by continuing to act as market makers without leading the market in price or size of quotations. Without the relief granted by the SEC, the London Stock Exchange was concerned that, in the case of securities that did not qualify for the actively-traded securities exemption of Rule 101, Regulation M would impede the normal functioning of the U.K. securities market when members of the London Stock Exchange (or their affiliates) participated in a distribution of covered securities while making a market in such securities on the London Stock Exchange.

In substance, the SEC relief permits members of the London Stock Exchange and certain affiliates to bid for, purchase, or solicit the purchase of securities that are the subject of a U.S. distribution (or a reference security), notwithstanding the application of Rule 101, when such securities are listed on SEAQ or, in certain cases, SEAQI. This relief is applicable during the period commencing (i) one business day before the determination of the offering price and ending upon completion of participation in the distribution in the United States in the case of securities with an ADTV value of $100,000 or more that are issued by an issuer whose common equity securities have a public float value of $25 million or more or (ii) five business days before the determination of the offering price and ending upon completion of participation in the distribution in the United States in the case of all other securities. The relief is subject to a number of conditions, including that members of the London Stock Exchange not enter any bids for or make any purchases of covered securities at a price higher than the highest bid, and that no bids be made for a quantity of covered securities greater than the largest quoted bid size currently displayed on SEAQ or SEAQI by an independent member of the London Stock Exchange not participating in the distribution. These restrictions do not apply to purchases following unsolicited inquiries or unsolicited brokerage transactions.

Under the relief, London Stock Exchange members are also required to reduce their bids if such bids subsequently become higher in price or larger in size than any independent bid. Disclosure of the passive market making activities must also be included in the prospectus filed under the Securities Act in connection with the U.S. distribution.

409 *See*, *e.g.*, *Rhone-Poulenc S.A.* (avail. Jan. 25, 1993) (SEAQI and Marché des Options Négociables de Paris ("MONEP"), which also included exemptions for concurrent exchange offers by the French government (the selling shareholder) and the company); *TOTAL* (avail. June 23, 1992) (SEAQI and MONEP, which also covered a concurrent exchange offer); *TOTAL* (avail. Oct. 18, 1991) (SEAQI and MONEP); *Novo Nordisk A/S* (avail. June 18, 1991) (Copenhagen Stock Exchange); *Société Nationale Elf Aquitaine* (avail. June 10, 1991) (SEAQI and MONEP); *Trans Canada Pipelines Limited Equity Offering* (avail. June 10, 1991) (Montreal Stock Exchange); *Norsk Hydro a.s.* (avail. May 6, 1988) (Oslo Bors).

410 An affiliated purchaser of an issuer or selling securityholder that is acting as a distribution participant may, however, comply with the provisions of Rule 101 rather than Rule 102 if the affiliated purchaser is not itself the issuer or selling securityholder (although the ADTV exemption in Rule 101 will not be available to an affiliated purchaser, as that exemption is unavailable for securities issued by an affiliate of a distribution participant). *See also infra* Note 414 (examining certain no-action relief that has been granted under Regulation M to affiliated purchasers of issuers and certain other parties that are not acting as distribution participants).

411 According to the Regulation M Release, these exemptions are omitted because issuers and selling securityholders have a direct stake in the proceeds of the offering and thus may have a greater incentive to manipulate the price of covered securities. The release also notes that transactions by issuers and selling securityholders generally are not monitored by self-regulatory organizations and that issuers and selling securityholders generally do not engage in the same type of market activities as part of their business as those persons subject to Rule 101. *See* Regulation M Release.

412 *See* the Regulation M Release, Anti-Manipulation Rules Concerning Securities Offerings, 62 Fed. Reg. 520, 522 n.95 (Jan. 3, 1997); *see also* Staff Bulletin No. 9.

413 An agent will not be considered independent of the issuer in cases where the issuer exercises any direct or indirect control or influence over the timing, manner, price or amounts of purchases or selects the broker or dealer through which purchases may be exercised. Such control or influence will be deemed not to exist if

the issuer, not more than once in any three-month period, revises the basis for determining its contributions to a plan or the frequency of its allocations to a plan, or revises the formula that determines the amount or timing of purchases by the agent.

414 The SEC staff has granted no-action relief from Rule 102 to an open-end investment fund that, by its nature, engaged in continuous offers to sell and repurchase securities. *See Popular High Grade Fixed-Income Fund* (avail. Sept. 10, 2002); *see also ING Senior Income Fund* (avail. Oct. 17, 2002) (granting relief from Rule 102 to an investment fund for purposes of a rescission offer to purchase its securities while engaged in a distribution of shares subject to Rule 102); *accord Oppenheimer Senior Floating Rate Fund* (avail. Aug. 31, 2005).

415 An affiliated purchaser of an issuer or selling securityholder that is not acting as a distribution participant would be subject to the more restrictive Rule 102. However, the SEC staff has granted no-action relief to affiliated purchasers of the issuer of the securities being distributed that were not, themselves, acting as distribution participants to allow the affiliated purchasers to conduct certain market making and other transactions in the subject securities. *See*, *e.g.*, *UBS AG* (avail. Sept. 22, 2000). Relief has been granted subject to compliance with certain conditions, and has been premised on certain factors, including that the subject securities would have qualified as actively-traded securities under Rule 101(c)(1) of Regulation M, that the relevant activities were being undertaken in the ordinary course of business and that the withdrawal of the affiliated purchasers from the market could have had possible "serious harmful effects" both in the home market and in the United States or create disruptions for customers or conflict with fiduciary duties of the affiliated purchasers. *See Deutsche Bank Aktiengesellschaft* (avail. Sept. 16, 2010); *see also Bank of Montreal* (avail. Apr. 8, 2011); *Shinhan Financial Group Co., Ltd.* (avail. Mar. 5, 2009); *ABN AMRO Holding N.V.* (avail. Aug. 7, 2007); *Allianz SE* (avail. Mar. 23, 2007); *Banca Intesa S.p.A.* (avail. Nov. 1, 2006); *Sanpaolo IMI S.p.A.* (avail. Nov. 1, 2006); *Allianz AG* (avail. Apr. 10, 2003); *UBS AG* (avail. Sept. 22, 2000). The SEC staff has also granted no-action relief under Rule 102 to permit an issuer to engage in a share repurchase program while engaged in a distribution of its securities, subject to numerous conditions. *See Barclays Bank PLC* (avail. Aug. 2, 2007).

416 The issuer's ADTV will still be significant under such circumstances because it is used to determine whether the restricted period relating to the issuer's or its affiliate's market activities will begin one business day or five business days prior to pricing. For example, a distribution participant that is an investment banking subsidiary of a global investment bank that is the issuer of securities in an offering will be subject to the restrictions of Regulation M and therefore must be out of the market one business day before the pricing date in that offering.

417 It is worth noting that the term "stabilization" has different meanings within and outside the United States. Rule 104(a) of Regulation M refers to stabilization "in connection with an offering" and applies to market interventions that precede the completion of a distribution (but generally do not extend beyond such completion). *See infra* Note 420. Outside the United States, stabilization is a more general term, often referring to market activities of underwriters occurring during a specified period following the closing of an offering. Non-U.S. jurisdictions may require that a global offering of securities also comply with the stabilization rules of that jurisdiction. Interesting issues therefore arise in trying to apply Regulation M in the context of aftermarket activities called "stabilization" abroad. For example, stabilization in accordance with European Union rules is permitted for a limited period after an offering. Regulation M should not be deemed to restrict non-U.S. purchases or inducements to purchase the subject securities after the U.S. distribution is completed. The Rule 104 restrictions also would not need to be followed because the offering in the United States has been completed. This view is consistent with the views expressed in a no-action letter under Rule 10b-6, one of the predecessor rules to Regulation M. *See Williams, William J., Jr.* (avail. Nov. 27, 1996), which is discussed in *supra* Note 335.

418 Rule 104, unlike Rules 101, 102 and 103, applies to all "offerings" and not merely to "distributions" within the meaning of Rule 100. *See* Staff Bulletin No. 9.

419 The term "current exchange rate" is defined as the current rate of exchange between two currencies, which is obtained from at least one independent entity that provides or disseminates foreign exchange quotations

in the ordinary course of its business. Rule 100 of Regulation M.

420 Rule 104 regulates stabilization activities only so long as the U.S. component of a global offering is continuing or if the stabilization activities "facilitate the offerings in the United States" even though the U.S. distribution is completed. *See Nippon Telegraph and Telephone Corp.* (avail. Nov. 8, 1999). It should thus be the case that in general, once the U.S. distribution is completed, and assuming no U.S. purchases or sales are being made in connection with syndicate stabilization activities, Rule 104 is no longer applicable and only local regulations apply. *See supra* Note 417.

421 The Market Abuse Directive was the predecessor to the current Market Abuse Regulation.

422 The staff of the SEC has approved reliance on the pre-Market Abuse Directive U.K. stabilization regulations even outside the United Kingdom provided that: (i) the stabilization activities are conducted subject to and in compliance with the U.K. stabilization regulations, (ii) at least a portion of the international offering is or will be conducted in the United Kingdom, (iii) the stabilization activities will be conducted by or under the management of an "authorized person" (any underwriter or other financial services firm that is an authorized person under the U.K. Financial Services Act 1986 (or any successor law) as in effect from time to time, whether the firm is acting for its own account or for the accounts of others (*e.g.*, as an agent of an underwriting or other selling group)), and (iv) the stabilization activities will occur at a time when no stabilization is being conducted in the United States. *See Nippon Telegraph and Telephone Corp.* (avail. July 28, 2000).

423 *Nippon Telegraph and Telephone Corp.* (avail. Dec. 11, 1998).

424 *See Nippon Telegraph and Telephone Corp.* (avail. Nov. 8, 1999).

425 *See supra* Note 422 and accompanying text; *ING Group N.V.* (avail. June 10, 1997). The SEC has not determined that the post-Market Abuse Directive (or post-Market Abuse Regulation) stabilization rules of the United Kingdom, The Netherlands or any other member of the European Economic Area are equivalent to Rule 104. Such a determination may in any case be of limited utility, because Rule 104 relates to stabilization activities during a distribution, whereas stabilization safe harbors and related activities in jurisdictions outside the United States often apply only during a specified period following the closing of an offering. *See supra* Notes 417 and 420.

426 *See also* Items 508 of Regulation S-K under the Securities Act (requiring that the "plan of distribution" section describe any prospective stabilizing and aftermarket activity, including syndicate covering transactions and penalty bids).

427 The SEC has granted an exemption from this notification requirement for nonconvertible debt securities, nonconvertible preferred securities and asset-backed securities that in each case are rated investment grade. *See The Bond Market Association* (avail. Dec. 10, 1997). *But see infra* Note 546 for a discussion of the removal from SEC regulations of all references to or requirements of reliance on credit ratings.

428 Notice of a penalty bid should be submitted to FINRA when the penalty bid will be assessed. If notice of a penalty bid is given at the time of pricing because the agreement among underwriters contains a penalty bid provision but no penalty bid is in fact imposed, the staff of the SEC has stated that an amended notice should be filed to reflect that no such assessments were made. *See* Staff Bulletin No. 9. As a practical matter, penalty bids are rarely used.

429 SEC, Division of Market Regulation, Staff Legal Bulletin No. 10, Prohibited Solicitations and "Tie-in" Agreements for Aftermarket Purchases (Aug. 25, 2000), Fed. Sec. L. Rep. (CCH) ¶60,010.

430 In January 2005, the SEC announced the filing of settled civil injunctive actions in federal court against Morgan Stanley & Co. Incorporated and Goldman, Sachs & Co. The actions related to the firms' allocations of stock in initial public offerings they underwrote in 1999 and 2000, where it is alleged, among other things, that they attempted to induce certain customers who received allocations to place purchase orders for additional shares in the aftermarket. In settlement of this matter, both banks consented, without admitting or denying the allegations of the complaint, to final judgments that permanently enjoined them from violating Rule 101 of Regulation M, and ordered each of them to pay a $40 million civil penalty. *See SEC v. Morgan Stanley & Co. Incorporated*, SEC Litigation Release No. 19050 (Jan. 25, 2005); *SEC v. Goldman, Sachs &*

Co., SEC Litigation Release No. 19051 (Jan. 25, 2005). Similar cases were also brought against other investment banks, including J.P. Morgan Securities, Inc. and Credit Suisse First Boston Corporation, alleging allocation abuses in initial public offerings carried out during the same period. *See SEC v. J.P. Morgan Securities, Inc.*, SEC Litigation Release No. 18385 (Oct. 1, 2003); *SEC v. Credit Suisse First Boston Corporation*, SEC Litigation Release No. 17327 (Jan. 22, 2002).

FINRA has adopted rules that, among other things, prohibit its members from engaging in certain "*quid pro quo*" allocation arrangements in connection with initial public offerings. *See* § 3.06[2][b] for a discussion of FINRA Rule 5131.

431 Prior to revisions adopted in August 2007, Rule 105 had only prohibited covering short sales of securities made during the Pre-Pricing Period (as defined below) with offered securities purchased from an underwriter, broker or dealer participating in the offering. Under the prior rule, however, the SEC had brought a number of enforcement actions for violations of Rule 105. *See*, *e.g.*, *In re GLG Partners, LP*, SEC Release No. 34-55956 (June 26, 2007); *Amaranth Advisors L.L.C.*, SEC Release No. IA-2601 (May 9, 2007); *In re Goldman Sachs Execution & Clearing L.P.*, SEC Release No. 34-55465 (Mar. 14, 2007); *SEC v. Solar Group S.A.* (S.D.N.Y. Nov. 6, 2006), SEC Litigation Release No. 19899 (Nov. 6, 2006); *SEC v. Compania Internacional Financiera S.A.* (S.D.N.Y. Dec. 20, 2005), SEC Litigation Release No. 19501 (Dec. 20, 2005). Certain of these enforcement actions involved trading activities intended to conceal the fact that shares acquired in offerings were being allocated to cover short sales entered into during the Rule 105 Pre-Pricing Period. *See* SEC Release No. 34-54888 (Dec. 6, 2006). As a result, the SEC has amended Rule 105 of Regulation M to prohibit, subject to certain exceptions, all purchases of offered securities by persons making short sales of the securities that are the subject of the offering during the Rule 105 Pre-Pricing Period, irrespective of whether the acquired securities were used to cover the short position.

432 In connection with offerings of convertible or exchangeable securities, the underlying security is not deemed to be an offered security for purposes of Rule 105. As a result, Rule 105 does not prohibit a person that shorted common stock in the Pre-Pricing Period from purchasing securities that are convertible into or exchangeable for such common stock. The SEC has noted, however, that it would continue to monitor the convertible offering market and may re-evaluate the treatment of these offerings under Rule 105. *See* SEC Release No. 34-56206 (Aug. 6, 2007).

433 The prohibition is based on the price distortion that can result when pre-pricing short sales are covered with shares sold in the offering, thereby undermining the market's ability to work as an independent pricing mechanism and thus the integrity of the offering price. Short sales by traders aware of their ability to cover short sales with offering shares do not involve the same market risk as short sales that are intended to be covered with open market shares, and this can upset price discovery and the efficiency of the pricing process. *See* SEC Release No. 34-56206 (Aug. 6, 2007).

434 Rule 105(b) of Regulation M. The SEC has indicated that it will also consider on a case-by-case basis specific requests for exemptive relief from entities that may not otherwise qualify for the separate account exception of Rule 105. *See* SEC Release No. 34-56206 (Aug. 6, 2007).

435 The prohibition originally did not apply to offerings filed under Rule 415 under the Securities Act on the grounds that shelf offerings of equity securities were not common when Regulation M was adopted, and it was the SEC's understanding at that time that potential investors generally were not aware of shelf takedowns until just before they took place, meaning that pre-pricing short sales were arguably not focused on any prospective offering. However, in light of the evolution of shelf offering techniques to include many of the features of nonshelf offerings, *e.g.*, road shows and other special selling efforts, thereby giving investors advance notice of the offering before it occurs, and because shelf offerings of equity securities have become commonplace, in 2004 the SEC amended Rule 105 of Regulation M to extend the prohibition to shelf takedowns. *See* SEC Release No. 34-50103 (July 28, 2004); *see also supra* Note 433, which describes the pricing disruption concerns pre-pricing short sales can raise.

436 The SEC has also indicated that it will continue to monitor whether trading patterns in debt securities raise manipulative concerns in connection with debt offerings. In addition, the SEC has stated that it will continue

to monitor the use of derivative strategies that may replicate the economic effect of the activity that Rule 105 is designed to prevent. *See* SEC Release No. 34-56206 (Aug. 6, 2007).

U.S. Regulation of the International Securities and Derivatives Markets, § 3.03, LISTING EQUITY SECURITIES IN THE UNITED STATES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 3.03 (11th and 12th Editions 2014-2017)
11th and 12th Editions

A foreign company that lists securities on a U.S. exchange must register under the Exchange Act the class of securities to be listed. As a consequence, the issuer will become subject to the periodic reporting and other requirements of the Exchange Act, including the corporate governance, accountability, auditor independence and other requirements of the Sarbanes-Oxley Act and the Dodd-Frank Act. [437] In addition, listing on the NYSE or Nasdaq will subject the issuer to the ongoing rules of the exchange including various corporate governance, notice and other requirements. [438]

[1] Registration Under § 12 of the Exchange Act

p. 3-145

[a] Section 12(b)

As discussed in § 4.02, a class of securities, whether newly issued or already outstanding, that is listed on a national securities exchange (such as the NYSE or the Nasdaq [439]) must be registered under § 12(b) of the Exchange Act. [440] The SEC must declare the registration statement effective before such securities may be listed. [441]

[b] Core Disclosure Document—Form 20-F

The statutory disclosure requirements set out in the Securities Act and the Exchange Act are substantially identical. Over time, beginning in the early 1980s, the SEC developed the view that the information necessary for investors purchasing in a distribution should be the same as the information necessary for investors to make informed secondary market trading decisions (which was the primary rationale for imposing periodic reporting in the Exchange Act).

This recognition led to two important developments. First, the accounting and disclosure requirements for a registered public offering were made substantially identical to the accounting and disclosure requirements for registration of

p. 3-145

p. 3-146

a class of securities under the Exchange Act or for periodic reporting thereunder. [442] Second, an integrated disclosure system was developed, important consequences of which were shelf registration and later automatic shelf registration. [443] Under that system, for many issuers, information filed under the Exchange Act need not be repeated in prospectuses prepared subsequent to the Exchange Act filing, but may simply be incorporated by reference, thus reducing the size of the prospectus and the time necessary for its preparation.

Under the integrated disclosure system, the accounting and disclosure requirements for foreign issuers under the Securities Act and the Exchange Act now derive from the same form: Form 20-F. Form 20-F is used both for original registration and for annual reports subsequently filed under the Exchange Act, and is the source of requirements for company disclosure to be included in registration statements under the Securities Act. [444]

In 1999, the SEC adopted a complete revision of Form 20-F that replaced most of its issuer-related disclosure requirements, other than financial statement requirements, with international disclosure standards adopted by the International Organization of Securities Commissions ("IOSCO"). [445] The adoption of Form 20-F based on the IOSCO standards did not change the requirement that financial statements be prepared in accordance with, or reconciled to, U.S. GAAP, which can be a significant obstacle for foreign issuers seeking access to U.S. markets. In 2007, however, the SEC adopted amendments to Form 20-F that now allow foreign private issuers to file financial statements prepared in accordance with IFRS, as issued by the IASB, without reconciliation to U.S. GAAP. [446]

p. 3-146
p. 3-147

The changes to Form 20-F based on IOSCO standards also did not affect the supplementary disclosure requirements provided for in the SEC's industry guides, which can be another significant obstacle for foreign banks, insurance companies and mining companies in particular. [447] In addition, although much in the IOSCO standards was clearly inspired by the previous Form 20-F and by U.S. disclosure practices, there are extensive differences in wording between the IOSCO standards and previous Form 20-F. The SEC staff is likely to interpret the IOSCO standards, where the wording differs but is ambiguous, in light of analogous provisions of Regulation S-K.

Substantial revisions were also made to Form 20-F pursuant to the Sarbanes-Oxley Act and the rules adopted by the SEC thereunder. In particular, new disclosure requirements were established with respect to off-balance sheet transactions, contractual obligations, non-GAAP financial measures, conclusions on the effectiveness of an issuer's disclosure controls and procedures and internal control over financial reporting, management's responsibility for establishing and maintaining internal control over financial reporting and the related accountants' attestation report, audit committee financial experts, codes of ethics and auditor fees and services. [448] Certain of the rules implementing the Sarbanes-Oxley Act mandate disclosures in periodic reports filed under the Exchange Act, but do not impose those requirements in Securities Act registration statements. [449]

p. 3-147
p. 3-148

Substantial changes have also been made to Form 20-F since the passage of the Sarbanes-Oxley Act, including additional disclosure requirements relating to corporate governance practices; [450] ADR fees; [451] changes in auditors; [452] and a shortening of the reporting deadline, with annual reports on Form 20-F required within four months of the issuer's fiscal year end. [453]

Most recently, changes have been made to the Form 20-F disclosure requirements as a result of implementation of the disclosure mandates of the Dodd-Frank Act, including the following:

- the requirement that every reporting company that is an operator or has a subsidiary that is an operator of coal or other mines in the United States make certain health- and safety-related disclosures. These provisions apply to foreign issuers that operate or have subsidiaries that operate mines in the United States. [454]
- the requirement that any reporting company, including a foreign issuer, that manufactures or contracts to manufacture products for which conflict minerals are necessary to those products' functionality or production disclose whether or not its conflict minerals originate in the Democratic Republic of the Congo and adjoining countries (collectively, the "DRC Countries"). If a

p. 3-148
p. 3-149

  company is unable to conclude that its conflict minerals did not originate in any DRC country (or the minerals came from recycled or scrap sources), it is required to file a "Conflict Minerals Report" as an exhibit to the annual report that provides, among other things, detailed disclosure regarding measures taken by the company to exercise due diligence with respect to its supply chain, including an independent private sector audit. [455]
- the requirement that any reporting company, including a foreign issuer, that engages in the commercial

development of oil, natural gas, or minerals disclose payments made to governments for such development.

- the commercial development of oil, natural gas or minerals. [456]

[2] Obtaining a Listing in the United States

[a] Application for Listing

In selecting a market on which to list their securities, issuers should consider not only fees and applicable rules for listed companies, but also the different market structures and types of trading in each market. For example, the NYSE is a hybrid market combining features of auction markets and automated trading. Historically, the NYSE operated principally as an auction market— *i.e.*, a market in which the prices at which securities are bought and sold are generally established and trades executed in electronic or face-to-face contacts at a single electronic or physical location between floorbrokers of buyers and sellers. In addition, a member of the exchange (a "designated market maker," formerly called "specialists") is selected for each listed security and is responsible for maintaining a fair and orderly market in that security, even if it must to a limited extent trade for its own account in order to meet public demand. The NYSE has expanded its automated trading platform in response to technological advances and regulatory demand. [457] Nasdaq markets are "dealer markets"— *i.e.*, markets in which market-makers agree to quote bid and offered prices for standard small transactions in particular securities and to execute trades at those prices. Executions can be placed at a multiplicity of market-makers and electronic market centers.

p. 3-149

p. 3-150

In each of these exchanges, immediate reporting of transactions provides real-time price information. Proponents of each of these markets claim particular advantages of their trading and market-making procedures (*e.g.*, cost of trading, price improvement, liquidity, *etc.*), as well as the prestige of a listing on that market. [458]

Once a decision to list on the NYSE or Nasdaq has been made, an application must be submitted to the exchange. In connection with an IPO, the exchanges typically request two months to complete work on the application, whereas secondary listings of equity or debt securities typically can be accomplished more quickly. Trading will commence on a date chosen by the issuer in consultation with the exchange and after the related registration statement has been declared effective. The listing application contains various certifications and undertakings from the issuer and upon listing the issuer will become subject to numerous continued listing requirements. Key NYSE and Nasdaq listing standards are set out in the next two sections.

[b] New York Stock Exchange Listing Standards

In order to make the U.S. equity markets more accessible to foreign companies, the NYSE has special standards and procedures for listing shares [459] or ADRs [460] of foreign companies where there is a broad, liquid market for a company's shares in its home country. [461] The principal criteria include distribution and size standards that require the foreign issuer to have, worldwide, a minimum of 5,000 holders of 100 or more shares (determined on the basis of beneficial ownership, if known, in addition to holders of record), and a minimum of 2.5 million publicly held shares [462] having a market value of at least $100 million. [463]

p. 3-150

p. 3-151

The alternate listing standards for foreign companies also require the issuer to meet one of the following three alternative financial standards (determined under U.S. GAAP or IFRS) based on earnings, operating cash flow or global market capitalization: [464]

- to have pre-tax earnings from continuing operations, after minority interest, amortization and equity in the earnings or losses of investees and as adjusted for certain specified items, of at least $100 million in the aggregate for the last three years (with a minimum of $25 million in each of the most recent two years); [465] , [466]

- for companies with a total worldwide market capitalization of not less than $500 million and revenues (in the most recent 12-month period) of $100 million to have aggregate operating cash flow (calculated in accordance with NYSE specifications) for the last three years of at least $100 million in the aggregate (with a minimum of $25 million, as adjusted for certain specified items, in each of the two most recent years); [467]
- to have not less than $750 million in total worldwide market capitalization (with not less than $75 million in revenues in the most recent fiscal year). [468]

p. 3-151
p. 3-152

Foreign companies may also rely on the "affiliated company" standard, the principal criteria for which are (i) global market capitalization of at least $500 million, (ii) minimum of 12 months of operations (although there is no requirement to have been a separate corporate entity for such period), (iii) a parent or affiliated company being a listed company on the NYSE in good standing and (iv) such parent or affiliated company retaining control over the foreign company or being under common control with the foreign company (with control presumed to exist when the parent or affiliate holds directly or indirectly 20% or more of the foreign company's voting stock). The affiliated company must have a market value of publicly held shares worldwide of at least $60 million. [469]

NYSE MKT, formerly NYSE Amex Equities, has a focus on small-cap companies and less stringent listing standards. A foreign issuer can qualify for listing under the NYSE MKT domestic listing standards [470] or the more relaxed

p. 3-152
p. 3-153

foreign company standards: distribution and size standards that require the foreign company to have, worldwide, a minimum (i) 800 round-lot holders, (ii) 1,000,000 publicly held shares [471] and (iii) market value of publicly held shares of $3,000,000. [472] The NYSE also operates NYSE Arca, an all-electronic exchange that primarily lists exchange-traded notes, funds and other products.

Prior to submitting an application for listing, a company must undergo a confidential eligibility review in which the NYSE will consider whether the company satisfies the listing standards. [473] The NYSE charges companies listing fees at the time their shares are listed and on an ongoing basis annually. The initial listing fee and the annual listing fee are charged on a per-share basis. [474] The issuer may list any additional shares issued after the initial listing by filing with the NYSE a subsequent listing application and required opinions of counsel and paying all necessary listing fees. [475] Upon listing, the issuer is required to enter into a listing agreement with the NYSE, which sets out the continuing obligations of the issuer to implement certain NYSE policies. [476] The NYSE permits foreign private issuers to follow home country practice in lieu of certain corporate governance provisions and may, on a case-by-case basis, waive or modify obligations that relate to financial reporting or certain other corporate governance matters, other than corporate governance obligations imposed by the Sarbanes-Oxley Act and related NYSE rules. [477]

[c] Nasdaq Listing Standards

Effective July 2006, Nasdaq [478] created a new listing tier—the Nasdaq Global Select Market ("Nasdaq/GSM"), with financial and liquidity requirements higher than those of the NYSE or other Nasdaq markets (the Nasdaq Global

p. 3-153
p. 3-154

Market and the Nasdaq Capital Market). [479] The current listing requirements for the inclusion of securities in all three markets are based on the distribution of the issuer's stock and the size of the issuer. [480] The requirements to list on the Nasdaq Global Market and Nasdaq Capital Market are considerably less difficult to meet than current NYSE requirements, especially with respect to the requirements for inclusion of shares of common stock (or ADRs representing such shares) of foreign issuers in the Nasdaq Capital Market.

For shares of common stock (or ADRs representing such shares) of an issuer to be eligible for initial inclusion in Nasdaq Capital Market, the issuer must satisfy one of three alternative sets of criteria ("entry standards"). Under each of these, the issuer must meet the following criteria: (i) at least one million publicly held shares or ADRs worldwide, [481] (ii) 300 round lot holders of record of the shares or ADRs, (iii) three registered market-makers for the shares or ADRs, and (iv) the initial Nasdaq bid price must be at least $4 per share. In addition to such criteria:

- under the first entry standard, the issuer must have (i) stockholders' equity of at least $5 million, (ii) a market value of publicly held shares or ADRs of $15 million, and (iii) an operating history of at least two years;
- under the second entry standard, the issuer must have (i) stockholders' equity of at least $4 million, (ii) a market value of listed securities [482] of $50 million, and (iii) a market value of publicly held shares or ADRs of $15 million; and
- under the third entry standard, the issuer must have (i) stockholders' equity of at least $4 million, (ii) net income from continuing operations of $750,000 in the most recently completed fiscal year (or in two of the last three fiscal

p. 3-154
p. 3-155

years), and (iii) a market value of publicly held shares or ADRs of $5 million. [483]

The requirements for initial inclusion of securities in Nasdaq Global Market are similar to but more stringent than those for Nasdaq Capital Market. There are three entry standards that may be satisfied as a basis for inclusion of common stock (or ADRs representing such stock) in Nasdaq Global Market. Under each of these, there must be at least 1.1 million publicly held shares or ADRs worldwide and 400 round lot holders of record of the shares or ADRs, and the initial Nasdaq Global Market bid price must be at least $5 per share. In addition to such criteria:

- under the first entry standard, (i) the market value of publicly held shares or ADRs must be at least $8 million, (ii) there must be at least three registered market-makers for the security and (iii) the issuer must have stockholders' equity of at least $15 million and pre-tax income of at least $1 million in its most recently completed fiscal year (or in two of three of its most recently completed fiscal years);
- under the second entry standard, (i) the market value of publicly held shares or ADRs must be at least $18 million and (ii) the issuer must have stockholders' equity of at least $30 million and a two-year operating history; and
- under the third entry standard, (i) the market value of publicly held shares or ADRs must be at least $20 million, (ii) there must be at least four registered market-makers for the security and (iii) the issuer must have either a market capitalization of $75 million or total assets and total revenues of at least $75 million each in its most recently completed fiscal year (or in two of the last three fiscal years). [484]

Nasdaq/GSM has three entry standards that may be satisfied as a basis for inclusion of common stock (or ADRs representing such stock) in it. Under each of these, there must be at least three registered market-makers for the security and the initial Nasdaq/GSM bid price must be at least $5 per share. In addition to such criteria:

p. 3-155
p. 3-156

- under the first entry standard, the issuer must have pre-tax income of at least $11 million in the prior three fiscal years (in the aggregate) and pre-tax income of at least $2.2 million in each of the two most recent fiscal years and positive pre-tax income in each of the prior three fiscal years. If the issuer does not have three years of publicly reported financial data, it may qualify under the first entry standard if it has reported aggregate pre-tax income of at least $11 million and positive pre-tax income in each reported fiscal year;

- under the second entry standard, the issuer must have (i) cash flows of at least $27.5 million in the prior three fiscal years (in the aggregate) and positive cash flows in each of the prior three fiscal years, (ii) an average market capitalization of at least $550 million over the prior 12 months (in the case of an initial public offering, compliance with the market capitalization requirement will be based on the issuer's market capitalization at the time of listing) and (iii) revenue in the previous fiscal year of at least $110 million; and
- under the third entry standard, the issuer must have an average market capitalization of at least $850 million over the prior 12 months (in the case of an IPO, compliance with the market capitalization requirement will be based on the issuer's market capitalization at the time of listing) and revenue of at least $90 million in the previous fiscal year.

Additionally, issuers must meet each of the liquidity requirements, or the applicable alternatives, in their specific category. The categories fall into the following groups: new company listings, seasoned companies, closed-end management investment funds and business development companies. Each category is required to have at least 1.25 million publicly held shares or ADRs worldwide. The required number of beneficial holders ranges from 450 to 2,200 depending on the category of issuer, and the market value of publicly held shares or ADRs ranges from $35 million to $110 million depending on the category of issuer. [485]

Issuers with securities listed on any of the three markets must comply with maintenance listing standards in order to retain their listing. [486] The maintenance standards are similar to, but less stringent than, the initial listing standards.

p. 3-156

p. 3-157

Upon listing, the issuer is required to enter into a listing agreement with Nasdaq, which sets out the continuing obligations of the issuer to implement certain Nasdaq policies. [487] Nasdaq allows a foreign issuer to choose to follow home-country practice in lieu of certain corporate governance provisions and may, on a case-by-case basis, waive or modify obligations that relate to financial reporting or certain other corporate governance matters, other than corporate governance obligations imposed by the Sarbanes-Oxley Act and related Nasdaq rules. [488]

Footnotes

437 This section specifically addresses the listing of foreign companies' equity securities. *See* § 3.05 regarding special issues relating to the issuance of debt securities.

438 *See* § 5.02[1] regarding listed company audit committee requirements and § 5.05 discussing corporate governance requirements applicable to listed companies.

439 Prior to becoming a national securities exchange, Nasdaq rules required registration under § 12(g) of the Exchange Act for the quotation of securities, even though § 12(g) itself would only require registration if the total assets and number of shareholders of the issuer exceeded the thresholds specified in § 12(g). *See* § 12(g) of the Exchange Act and Rule 12g-1 thereunder. As a result of Nasdaq's transition to a national securities exchange, the Nasdaq-listed securities previously registered under § 12(g) of the Exchange Act have become registered under § 12(b) of the Exchange Act. *See* SEC Release No. 34-54240 (July 31, 2006). OTC Bulletin Board rules generally require the issuer to be subject to the reporting requirements of the Exchange Act. *See* FINRA Rules, Rule 6530, FINRA MANUAL. *See supra* Note 33 (discussing OTC markets).

440 The exemption from Exchange Act registration provided by Rule 12g3-2(b) is not available for listed securities.

441 The relevant exchange must, as a condition to the SEC's making the related Exchange Act registration statement effective, certify its approval and request that the SEC accelerate the effective date of the registration statement. *See* § 12(d) of the Exchange Act. In circumstances where exchange listing is

concurrent with a registered equity offering, the effectiveness of the Securities Act registration and the Exchange Act registration is coordinated.

Rule 12g-3 under the Exchange Act provides a limited exception to the requirement that the registration statement be declared effective where securities of an issuer not already registered pursuant to § 12 of the Exchange Act are issued, in connection with a succession by merger, consolidation, exchange of securities, acquisition of assets or otherwise, to the holders of any class of securities of another issuer registered pursuant to either § 12(b) or § 12(g) of the Exchange Act. *See* § 4.02[3][a][iii].

442 *See* SEC Release No. 33-6437 (Nov. 19, 1982).

443 *See* SEC Release No. 33-6499 (Nov. 17, 1983); SEC Release No. 33-6459 (Mar. 18, 1983); SEC Release No. 33-6383 (Mar. 3, 1982); SEC Release No. 33-6423 (Sept. 2, 1982); Securities Offering Reform Release. Shelf registration is discussed in § 3.02[2][c].

444 Previously, because of certain compromises made at the time the integrated disclosure system was adopted for foreign issuers, *see* SEC Release No. 33-6437 (Nov. 19, 1982), certain accounting requirements for financial statements prepared for most Securities Act registration statements were more rigorous than the accounting requirements for financial statements prepared for an Exchange Act filing. The SEC has now eliminated this differentiated treatment, and the more complete financial statements are required for foreign issuers in both Securities Act and Exchange Act filings. *See* SEC Release No. 33-7745 (Sept. 28, 1999); *see also* SEC Release No. 33-8959 (Sept. 23, 2008). For fiscal years ending on or after December 15, 2011, all financial statements included in annual reports on Form 20-F or in Securities Act registration statements must comply with Item 18 of Form 20-F, other than for Canadian Multi-Jurisdictional Disclosure System ("MJDS") filers. SEC Release No. 33-8959 (Sept. 23, 2008).

445 *See* SEC Release No. 33-7745 (Sept. 28, 1999) (the "20-F Release"). Corresponding changes were also made to the forms for the registration of offerings under the Securities Act.

446 Foreign issuers using U.S. GAAP or IFRS are required to provide their financial statements to the SEC in Extensible Business Reporting Language ("XBRL"), an interactive data format, when they file annual reports on Form 20-F. SEC Release No. 33-9002 (Jan. 30, 2009). Interactive data files are filed as exhibits that supplement, but do not replace, the financial statements otherwise required to be filed under Form 20-F. Foreign issuers are not required to include an interactive data file when using Forms 20-F to register securities under the Exchange Act, but are required to present financial statements in this format in connection with their first annual report on Form 20-F. Rule 405(g) of Regulation S-T requires that a foreign issuer subject to the interactive data requirement provide the same information on its corporate website, if it has one. Interim financial data reported on Form 6-K is not subject to the interactive data requirements, although revisions of annual financial statements do require interactive data exhibits, even if filed on Form 6-K. *See* Form 6-K, General Instruction C.6.

447 An industry guide had been in effect for oil and gas companies. However, on or after January 1, 2010 and for Exchange Act annual reports for years ending on or after December 31, 2009, a detailed set of substantially revised disclosure rules replaced the industry guide but remain applicable to foreign oil and gas companies. In a 2016 concept release, the SEC requested public comment on whether the industry guides improve disclosure or should be revised and whether industry guide requirements should be codified in Regulation S-K. *See* SEC Release No. 33-10064 (Apr. 13, 2016). Additionally, the SEC has proposed certain changes to Industry Guide 7 relating to mining companies. *See* SEC Release No. 33-10098 (June 16, 2016).

448 *See generally* Chapters 4 and 5.

449 *See generally* Chapters 4 and 5. For example, certifications by principal executive officers and principal financial officers and disclosure regarding internal controls, codes of ethics and audit committee financial experts, required by §§ 302, 404, 406 and 407 of the Sarbanes-Oxley Act, respectively, and the rules issued by the SEC thereunder, are required to be included in annual reports filed under the Exchange Act but not in Securities Act registration statements. This distinction may well be based on the greater liability under Securities Act registration statements to which issuers, their directors and those members of senior

management required to sign the registration statement are subject. It may also be based on an SEC conclusion that it was appropriate in some cases not to impose additional requirements in connection with initial public offerings registered under the Securities Act.

450 *See* Form 20-F, Item 16G; SEC Release No. 33-8959 (Sept. 23, 2008). Such disclosure became required by the SEC in December 2008 and was already required under NYSE and Nasdaq rules.

451 ADR disclosure, including (i) the fees and charges that holders of ADRs pay for general depositary services (particularly those that must be paid on an annual basis), (ii) whether the depositary has the right to collect fees and other charges by offsetting them against dividends or against deposited securities and (iii) information concerning any payments made from the depositary to the issuer; *see* Form 20-F, Item 12D.3 and Item 12D.4. Additionally, disclosure of the fees and charges that holders of ADRs may have to pay must now be included in an annual report, not only in registration statements as previously required.

452 *See* Form 20-F, Item 16F. This disclosure must include any indication that the auditor will not stand for reelection and any change in any subsidiary auditor on which the principal auditor has expressed reliance in its report. Because part of the purpose of Item 16F is to require disclosure of opinion shopping, this item requires disclosure of adverse, disclaimed or qualified opinions; disagreements with the prior auditor; specified types of audit-related problems of which the prior auditor had advised the issuer; and certain kinds of pre-engagement consultations with the new auditor. Item 16F also requires that the prior auditor provide a letter to the SEC stating whether it agrees with the disclosure in Item 16F, which must be filed as an exhibit to the annual report or registration statement containing such disclosures.

453 *See* SEC Release No. 33-8959 (Sept. 23, 2008).

454 *See* SEC Release No. 34-63549 (Dec. 15, 2010) (the "Mine Safety Release"). *See also* § 4.07[4].

455 *See* SEC Release No. 34-67716 (Aug. 22, 2012). *See also* § 4.08.

456 *See* SEC Release No. 34-78167 (June 27, 2016). *See also* § 4.08.

457 The SEC adopted Regulation NMS under the Exchange Act. Regulation NMS addresses four main topics: (i) order protection (or prohibitions on "trade-through"), (ii) aftermarket access, (iii) sub-penny pricing, and (iv) market data. *See* SEC Release No. 34-51808 (June 9, 2005). The Order Protection Rule (Rule 611) requires market centers to establish, maintain and enforce written policies and procedures that are reasonably designed to ensure the market centers do not execute trades at lower prices than the best automated quotations received.

458 In spite of these advantages, many trades do not occur on the NYSE, Nasdaq, or any other exchange. A substantial percentage of trading in securities occurs off-exchange, in dark pools, alternative trading systems, and high-frequency trading platforms.

459 *See* § 3.04, Note 498 for a discussion of the global share programs for the listing of ordinary shares.

460 A company is also required to list the shares underlying listed ADRs, although the share listing is not for trading purposes.

461 *See* NYSE LISTED COMPANY MANUAL § 103.00. A company's ADRs must be sponsored in order to qualify for listing. NYSE LISTED COMPANY MANUAL § 103.04. Where a foreign issuer does not have a broad liquid market for its shares in its home country, it may nevertheless list ADRs on the NYSE if it satisfies the NYSE's domestic listing standards, which call for a minimum distribution of ADRs in the United States. *See infra* Note 468.

462 In calculating publicly held shares, shares held by directors, officers or their immediate families and concentrated holdings of 10% or more are excluded. NYSE LISTED COMPANY MANUAL § 103.01.

463 For initial public offerings, if necessary, the NYSE may accept a written commitment from an underwriter with respect to the estimated value of the company's offering to determine compliance with the listing standards. If an issuer has a significant concentration of shares or an issuer's public market value has been adversely affected by market forces and would otherwise qualify for a listing, the NYSE will consider stockholders' equity of at least $100 million as an alternate measure of size, if the issuer's public market value is at least $90 million. *See* NYSE LISTED COMPANY MANUAL § 103.01.

464 For initial public offerings, an underwriter must provide a written representation that demonstrates the issuer's ability to meet any applicable market capitalization requirement. NYSE LISTED COMPANY MANUAL § 103.01.

465 A foreign issuer that qualifies as an EGC and avails itself of the provisions permitting EGCs to report only two years of audited financial statements may qualify with pre-tax earnings from continuing operations after minority interest, amortization and equity in the earnings or losses of investees, and as adjusted for certain specified items, of at least $100 million in the aggregate for the last two fiscal years with a minimum of $25 million in each year. NYSE LISTED COMPANY MANUAL § 103.01.

466 Reconciliation to U.S. GAAP for the third year would only be required if the NYSE determines it is necessary to demonstrate that the $100 million threshold is satisfied. NYSE LISTED COMPANY MANUAL § 103.01.

467 Reconciliation to U.S. GAAP for the third year would only be required if the NYSE determines it is necessary to demonstrate that the $100 million threshold is satisfied. NYSE LISTED COMPANY MANUAL § 103.01.

468 NYSE LISTED COMPANY MANUAL § 103.01. A foreign issuer can also elect to qualify under the NYSE's domestic listing standards, which impose substantially less stringent financial tests but require a minimum of (i) 400 U.S. holders of a unit of trading, generally 100 shares ("round lot holders"), or (ii) 2,200 total U.S. stockholders and average monthly U.S. trading volume of 100,000 shares during the most recent six months, or (iii) 500 total U.S. stockholders and average monthly U.S. trading volume of one million shares during the most recent 12 months and a minimum of 1.1 million shares publicly held in the United States, with a market value of at least $40 million in the case of companies that list at the time of their initial public offerings or as a result of spin-offs or under the affiliated company standard, or $100 million for other companies, excluding shares held by directors, officers, their immediate families or 10% or greater shareholders. A per share closing price of at least $4 at the time of an initial public offering is also required. *See* NYSE LISTED COMPANY MANUAL § 102.01. (If an issuer has a significant concentration of shares or an issuer's public market value has been adversely affected by market forces and would otherwise qualify for a listing, the NYSE will consider stockholders' equity of at least $40 million or $100 million, as applicable, as an alternate measure of size, if the issuer's public market value is no more than 10% below the minimum of $40 million or $100 million, as applicable.) For initial public offerings, if necessary, the NYSE may accept a written commitment from an underwriter with respect to the estimated value of the company's offering to determine compliance with the listing standards. *See* NYSE LISTED COMPANY MANUAL § 103.01.

Under the domestic listing standards, the NYSE also requires companies to meet one of three alternative financial standards (determined under U.S. GAAP) based on earnings, operating cash flow or global market capitalization, as follows: (i) to have aggregate pre-tax earnings from continuing operations, after minority interest, amortization and equity in the earnings or losses of investees, and as adjusted for certain specified items, of $10 million in the aggregate for the last three fiscal years, together with a minimum $2 million in each of the preceding two fiscal years and positive amounts in all three years, or (ii) to have aggregate pre-tax earnings from continuing operations, after minority interest, amortization and equity in the earnings or losses of investees and as adjusted for certain specified items, of $12 million in the aggregate for the last three fiscal years, with a minimum of $5 million in the most recent fiscal year and $2 million in the next most recent fiscal year (with an underwriter providing a written representation that demonstrates the company's ability to meet the market capitalization requirement upon completion of the offering), or (iii) a global market capitalization of at least $200 million. A company that qualifies as an EGC and avails itself of the provisions permitting EGCs to report only two years of audited financial statements can qualify under a separate test with pre-tax earnings from continuing operations after minority interest, amortization and equity in the earnings or losses of investees, and as adjusted for certain specified items, of at least $10 million in the aggregate for the last two fiscal years with a minimum of $2 million in each year. *See* NYSE LISTED COMPANY MANUAL § 102.01.

469 *See* NYSE LISTED COMPANY MANUAL § 103.01.

470 *See* NYSE MARKET COMPANY GUIDE § 101 for the domestic standards.

471 In calculating publicly held shares, shares held by directors, officers or their immediate families and concentrated holdings of 10% or more are excluded. NYSE LISTED COMPANY MANUAL § 102.

472 *See* NYSE COMPANY GUIDE § 110.

473 *See* NYSE LISTED COMPANY MANUAL § 104.00.

474 The total fees that may be billed to an issuer in a calendar year are capped at $500,000. NYSE LISTED COMPANY MANUAL § 902.02. In the case of a listing of ADRs, the NYSE fees are determined on the basis of the number of ADRs outstanding rather than the number of shares.

475 *See* NYSE LISTED COMPANY MANUAL § 703.00.

476 For a discussion of the NYSE policies applicable to listed foreign issuers, *see* §§ 5.02[1] and 5.05.

477 *See generally* Chapter 5 for a detailed discussion of the corporate governance requirements applicable to NYSE-listed foreign issuers.

478 In February 2008, Nasdaq acquired the OMX Group to become The Nasdaq OMX Group, Inc.

479 Nasdaq/GSM has higher initial listing standards than Nasdaq Global Market, while the continued listing standards are the same for both. The principal difference between Nasdaq Global Market and Nasdaq Capital Market is that the former presents the last sale prices of a security on an immediate basis, while the latter reports only current bid and offered quotations. Nasdaq and the AMEX merged in 1998. In January 2005, the members of the AMEX repurchased the exchange from Nasdaq, as a result of which Nasdaq and the American Stock Exchange re-separated. *See* Press Release, The American Stock Exchange, Transaction Closes Transferring Control of AMEX to Members (Jan. 3, 2005). On October 1, 2008, the NYSE Euronext completed its purchase of the AMEX, which is now known as NYSE MKT.

480 *See generally* NASDAQ Marketplace Rules, Rules 5300, 5300 and 5400, NASDAQ Manual .

481 For this purpose, any shares held by officers and directors of the issuer or by holders of more than 10% of such shares are deemed not to be publicly held.

482 Under NASDAQ Marketplace Rule 5000(a)(21), "listed securities" is defined as "securities listed on Nasdaq or another national securities exchange."

483 NASDAQ Marketplace Rules, Rules 5500, 5215(a), NASDAQ MANUAL. Rule 5500 is applicable to U.S. domestic and Canadian issuers, and Rule 5215(a) is applicable to non-Canadian foreign issuers. Both rules provide for essentially the same requirements. In the case of ADRs, however, the underlying shares will be considered when determining the ADR's qualification for listing on Nasdaq.

484 NASDAQ Marketplace Rules, Rule 5000 and 5700, NASDAQ MANUAL.

485 NASDAQ Marketplace Rules, Rule 5315, NASDAQ MANUAL.

486 NASDAQ Marketplace Rules, Rules 5225, 5300, 5400, 5500, NASDAQ MANUAL. The maintenance listing standards for the Nasdaq/GSM and the Nasdaq Global Market are the same. Under Rule 5215(a), non-Canadian foreign issuers listed on the Nasdaq Capital Market are subject to the same minimum $1 bid price and $1 million market value of publicly held shares requirements for continued listing as are applicable to U.S. domestic and Canadian issuers. *See* SEC Release No. 34-51221 (Feb. 17, 2005).

487 For a discussion of the Nasdaq policies applicable to listed foreign issuers, *see* §§ 5.02[1] and 5.05.

488 *See generally* Chapter 5 for a detailed discussion of the corporate governance requirements applicable to Nasdaq-listed foreign issuers.

U.S. Regulation of the International Securities and Derivatives Markets, § 3.04, AMERICAN DEPOSITARY RECEIPT PROGRAMS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 3.04 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

ADR programs permit U.S. investors to invest in foreign securities in a form that trades in dollars with standard settlement timing [489] in the United

p. 3-158

States. [490] They also make available services such as conversion of dividend payments into dollars and distributions of proxy materials. [491] The SEC permits foreign companies, with the assistance of U.S. depositary banks, to create OTC ADR programs for shares already outstanding if the foreign company, among other things, makes available certain information in English on its website that it makes publicly available in its home country. As long as the issuer makes such information available, does not offer or sell its securities publicly in the United States or list its securities on a U.S. exchange and maintains a listing of the relevant class of its equity securities on one or more non-U.S. exchanges that are, in the aggregate, the primary trading market for that class of securities, it is exempt from the requirement that it register its equity securities under the Exchange Act by reason of the number of U.S. holders. [492] If an issuer offers or sells its ADRs publicly in the United States, or lists its ADRs on a U.S. exchange, the ADRs and the underlying securities must, as in the case of other public offerings or exchange listings, be registered under the Securities Act and the

p. 3-158

p. 3-159

Exchange Act, respectively, as a result of which the issuer of the underlying securities becomes subject to SEC reporting and disclosure requirements, including the requirements of the Sarbanes-Oxley Act and the Dodd-Frank Act. [493]

Many applications for ADRs exist. ADRs have been used in connection with mergers and acquisitions, [494] restructurings, [495] privatizations [496] and employee benefit and compensation plans. [497] In addition, many offerings of ADRs have been made under Rule 144A under the Securities Act.

As an alternative to establishing an ADR program, a foreign issuer that is making arrangements for a U.S. listing may list its ordinary shares directly, including through a "global registered share" (or "global share") program (under which ownership of shares is recorded in a single global register regardless of whether the particular shares are acquired on a U.S. exchange or a foreign exchange) [498] or in a form adapted to the needs of U.S. investors (for instance "shares of New York Registry," such as those issued by Koninklijke Philips N.V. and ArcelorMittal). For a variety of reasons, issuers have generally preferred establishing ADR programs rather than listing their shares directly, and ADR listings are far more common than direct listing of foreign issuers' shares on U.S. exchanges.

[1] Principal Features of ADRs

p. 3-159

p. 3-160

ADRs are instruments issued in registered form that evidence interests in securities of a foreign issuer. ADRs are usually issued by a U.S. commercial bank (the "Depositary") with whose foreign correspondent (the "Custodian") the underlying shares have been deposited. An ADR holder generally can exchange ADRs for the underlying shares at any time, and similarly, additional shares generally can be deposited against issuance of additional ADRs. [499]

Each ADR can represent, at the option of those creating the ADR program, one foreign share or a greater or lesser number of foreign shares, including fractions. The principal consideration in fixing the ratio of ADRs to shares is to arrive at a price per ADR that is believed to be attractive to U.S. investors.

The ADR mechanism was developed to overcome certain practical difficulties confronting residents of the United States who invest in shares of foreign companies. Some of these difficulties arise when these shares are available only in bearer form. Bearer shares are generally ineligible for a direct U.S. listing. [500] Additionally, dividends and other payments in respect of bearer shares are usually announced in foreign financial newspapers, and U.S. shareholders thus may not know when dividends are payable or how to obtain payment. ADR Depositaries collect the dividends paid on the shares on deposit with the Custodian, convert them into dollars if they are paid in a foreign currency and make payments to the holders of the ADRs. [501] ADRs also appeal to certain institutional investors whose investment restrictions limit them to securities that trade and settle in dollars.

The Depositary customarily informs ADR holders of important developments announced by the issuer of the underlying shares, such as recapitalization plans, exchange offers and subscription rights. In most cases, the Depositary

p. 3-160

p. 3-161

informs ADR holders of matters submitted for the vote of shareholders. Depositaries will vote the shares they hold in accordance with instructions from ADR holders, and are often willing, subject to certain conditions, to vote shares for which no instruction is given in accordance with management's direction or in the same proportion that all other outstanding shares are voted. [502]

ADRs also facilitate the transfer of ownership. Whereas a holder of registered shares of a foreign company may be required to follow burdensome transfer procedures (including sending the certificates abroad for transfer and paying transfer taxes), ADRs may be transferred on the books of the Depositary in the United States in the same manner as shares of U.S. issuers. [503]

The Depositary ordinarily assists ADR holders with filings necessary for any reduction in foreign withholding tax on dividend payments that may be available under a tax treaty. The United States has entered into tax treaties with most of its major trading partners under which the rate of withholding tax imposed on dividends is generally limited to 15% for portfolio investors (*i.e.*, shareholders that do not hold substantial positions in the stock of the company paying the dividend). [504] The marketability of ADRs in the United States can be enhanced to the extent that the issuer makes arrangements with the Depositary for expedited procedures for claiming a reduced withholding rate and any other benefits to which a U.S. holder is entitled under a tax treaty. [505]

[2] Sponsorship

p. 3-161

p. 3-162

A foreign company that wishes to "sponsor" an ADR program enters into a deposit agreement with the Depositary. The deposit agreement sets out the rights and obligations of the company, the Depositary and the ADR holders with respect to the creation and maintenance of the deposit facility. It covers such matters as the issuance of ADRs upon deposit of underlying shares (and the withdrawal of underlying shares upon presentation of ADRs), the treatment of dividends and other distributions, the procedure for voting the underlying shares and how the deposit agreement can be amended or terminated. Generally, the company agrees to indemnify the Depositary for liabilities arising in connection with the program. The deposit agreement also specifies the fees the Depositary will charge ADR holders, which are typically limited to charges for issuing and canceling ADRs.

An ADR program may also be "unsponsored," meaning that it is set up by a Depositary without the company's participation or even its consent. A Depositary will typically establish an unsponsored ADR program only if it believes that there is sufficient interest in the company's shares to generate adequate fee income, or if a broker-dealer has requested such a program and agreed to assist with the expense. While unsponsored ADRs are issued without the foreign issuer's cooperation, the foreign issuer must be a reporting company under the Exchange Act or exempt under Rule 12g3-2(b) [506] from the reporting requirements of that Act. Typically, the Depositary will request a letter of nonobjection from the issuer before establishing the program. Furthermore, the SEC staff takes the position that an SEC-registered unsponsored program may not coexist with an SEC-registered sponsored program for the same securities because of the potential for resulting market disorder. [507]

p. 3-162
p. 3-163

In the case of a sponsored ADR program, the deposit agreement will specify the Depositary's fees for its services. Although the Depositary may seek reimbursement from the issuer for all or part of its expenses in establishing the program and payment of an administrative fee covering many of its ongoing services, additional fees for certain other services and reimbursement of its ongoing out-of-pocket expenses (postage, for example, in connection with mailing reports to ADR holders), in many cases depositaries will waive these fees and expenses and provide additional services or cash payments to the issuer in order to secure the opportunity to administer an ADR program. The details of the agreement between the issuer and the Depositary regarding fees, expenses and services are usually documented in a separate fee letter. [508] Depositaries for unsponsored ADRs generally charge fees to holders for the issuance and cancellation of ADRs and for services of the Depositary principally for the distribution of dividends.

[3] Registration

The creation of an ADR program where ADRs, whether sponsored or unsponsored, are newly issued and sold to the public, requires the registration of the ADRs under the Securities Act, since the SEC views the ADRs as newly issued securities separate from the underlying shares. [509] The establishment of an ADR program for underlying shares that are already outstanding and freely tradeable does not, however, require registration of the underlying shares under the Securities Act. [510]

The registration statement form for ADRs (which is separate from the registration statement for the shares to be deposited, if required as discussed below),

p. 3-163
p. 3-164

Form F-6, is simple. [511] It requires certain information concerning the depositary arrangements and consists of little more than the deposit agreement (if the program is sponsored) and a sample ADR certificate (which constitutes the prospectus for purposes of the Securities Act). [512]

Use of Form F-6 is subject to three conditions. First, holders of the ADRs must generally be entitled to withdraw the underlying securities at any time. This right of withdrawal may be subject to (i) temporary delays caused by closing the transfer books of the Depositary or the issuer of the underlying shares in connection with voting at a shareholders' meeting or the payment of dividends, (ii) the payment of fees, taxes and similar charges and (iii) compliance with any laws or governmental regulations relating to ADRs or to the withdrawal of deposited shares. While this condition is intended to assure fungibility between the ADRs and the underlying securities, the third exception permits the creation of ADRs where the local law of the country of the issuer of the underlying shares restricts foreign ownership of the shares themselves. Second, the shares to be deposited must either be registered under the Securities Act or be freely tradeable by the depositors. Finally, the issuer of the underlying shares must (i) be a reporting company under the Exchange Act or (ii) be exempt from such reporting pursuant to Rule 12g3-2(b) thereunder. [513]

An issuer should consider the advantages and disadvantages of a Rule 12g3-2(b) exemption where it is not otherwise required. On the one hand, for example, apart from permitting the establishment of an ADR facility, a Rule 12g3-2(b) exemption can also be useful in facilitating access to the U.S. capital

p. 3-164
p. 3-165

markets through Rule 144A placements. [514] On the other hand, if an issuer has a Rule 12g3-2(b) exemption but does not have a sponsored ADR program, Depositaries will be able to establish their own unsponsored ADR facilities without the issuer's consent, even though typically Depositaries request a letter of nonobjection from the issuer prior to establishment of their ADR facilities. The existence of unsponsored ADR facilities may become an obstacle to an issuer's registering a sponsored ADR facility later on, since it is the SEC's position that a sponsored ADR facility may not be registered unless all registered unsponsored ADR facilities relating to the same underlying securities are terminated. In such case, negotiated fees for cancellation of the unsponsored ADRs must be paid to their Depositaries; these fees can be significant and are typically borne by the issuer or by the Depositary of the new sponsored facility. According to the SEC, "[s]ometimes these fees have been disputed and the processing of withdrawal requests and establishment of the sponsored facility are delayed until negotiations are concluded." [515]

[4] Pre-Release

When a broker or other purchaser buys shares of a foreign corporation, its receipt of the shares may be delayed as a result of settlement procedures in the foreign country. Depositaries often reserve the right to "pre-release" ADRs, *i.e.*, to issue ADRs in respect of shares that have not yet been deposited with the Custodian, to enable these purchasers to sell ADRs representing the shares in the United States prior to the settlement date for the shares. Depositaries may also reserve the right to pre-release shares underlying the ADRs to allow purchasers of ADRs to sell the underlying shares prior to the settlement date for the ADRs. In the ADR Concept Release, the SEC noted the following with respect to pre-releases:

> Certain depositaries have established guidelines as to the amount of pre-release lending they will undertake, *e.g.*, 15% to 20% of the total amount of ADRs outstanding in the facility, although such limitations are not absolute. At least some depositaries undertake pre-release lending only upon the deposit of collateral that is marked to
>
> p. 3-165
>
> p. 3-166
>
> market daily and after certification from the borrower that it has purchased the securities and will deposit them upon settlement. While some depositaries provide the right to demand the return of an ADR issued in a pre-release lending situation (either after a pre-determined period or after notice), few appear to prevent the borrower from transferring the pre-released ADR or withdrawing the not yet deposited security before it has been deposited. Withdrawal requests in that case presumably are satisfied by delivery of a security deposited by another ADR holder. [516]

Since no regulatory limitations are imposed on the amount of ADRs that may be issued on a pre-released basis, pre-release can reach levels far in excess of the self-imposed guidelines described above.

Pre-release agreements should contain provisions that ensure pre-released ADRs will be treated the same as the underlying shares for U.S. and foreign tax purposes. If pre-released ADRs are not treated the same as the underlying shares for such purposes, because, for example, the Custodian is not the owner of the shares while the pre-release is outstanding, ADR holders may not be eligible for the U.S. and foreign tax benefits associated with the ADRs, and in particular may not be able to claim the reduced tax rate applicable to some dividends earned by U.S. individuals, tax treaty benefits (such as a reduced rate of withholding tax, and the additional payments available under some treaties) or U.S. tax credits for foreign taxes withheld from dividend distributions. [517] If, however, the person obtaining the pre-released ADRs in fact owns the underlying shares and agrees to transfer its ownership interest in the shares to the Depositary pursuant to the pre-release transaction, the Depositary should be treated as the owner of the underlying shares for U.S. tax purposes even if it is not the registered holder of the shares. As described above, ADR programs typically incorporate provisions that are intended to ensure this result. [518]

Footnotes

489 Rule 15c6-1 under the Exchange Act makes three business days (T+3) the standard settlement time for securities trades that involve broker-dealers, subject to specified exceptions. SEC Release No. 34-35705 (May 11, 1995) (the "T+3 Release"). The SEC has proposed an amendment to Rule 15c6-1(a) under the Exchange Act that would shorten this standard settlement cycle from three business days after the trade date to two business days (T+2). SEC Release No. 34-78962 (Sept. 28, 2016) (the "T+2 Proposing Release"). Among other exceptions to T+3 settlement, Rule 15c6-1 makes four business days (T+4) the standard settlement time in the case of sales for cash of securities that are sold by an issuer to an underwriter on a firm commitment basis in an offering registered under the Securities Act, or sold to an initial investor by a broker-dealer participating in such an offering, if the securities are priced after 4:30 P.M. Eastern time. The T+2 Proposing Release does not include any proposed change to the T+4 settlement cycle applicable to such transactions (but does solicit comment on whether any adjustment should be made). Rule 15c6-1 under the Exchange Act allows broker-dealers and their customers to agree to a different settlement cycle if the agreement is express and is reached at the time of the transaction. The rule states that such an express agreement will be deemed to have been made by all parties contracting for the sale of securities that are sold for cash pursuant to a firm commitment offering if the managing underwriter and the issuer have agreed upon an alternate settlement cycle for the securities sold pursuant to the offering and the parties do not agree otherwise between themselves.

The SEC recognized that using a standard U.S. settlement cycle could create difficulties for broker-dealers that purchase and sell securities in non-U.S. markets because the purchase or sale executed in the non-U.S. market will settle in accordance with the local settlement cycle. SEC Release No. 33-7170 (May 22, 1995) (the "Non-U.S. Securities Release"). Where the local settlement cycle is longer than the standard U.S. settlement cycle, the broker-dealer will be unable to meet its obligations to its U.S. customers. In the Non-U.S. Securities Release, the SEC accordingly provided limited exemptions from Rule 15c6-1 for (i) securities of foreign issuers for which there is no transfer agent in the United States and that are not eligible for deposit at a registered clearing agency, (ii) securities of foreign issuers for which transfer or delivery facilities exist both inside and outside the United States, if the annual trading in such securities in the United States constitutes less than 10% of the aggregate worldwide trading volume, and (iii) contracts for the purchase and sale of securities of foreign issuers that are executed by a U.S. broker-dealer outside the United States and that provide for delivery or payment outside the United States. For purposes of these exemptions, an ADR is considered a separate security from the underlying instrument. This may have a number of implications. For example, if there are transfer facilities in the United States for an issue of ADRs, but not for the underlying instrument, transactions in the underlying instrument will be exempt from the rule pursuant to the exemption described in (i) above, but transactions in the ADRs would not be. If none of the exemptions set forth in the Non-U.S. Securities Release is available, a broker-dealer engaged in a foreign securities transaction may still agree with its customer on a settlement period longer than three business days, pursuant to the provisions of Rule 15c6-1 itself described above. The T+2 Proposing Release notes the relief granted in the Non-U.S. Securities Release without proposing any changes to that relief.

490 The SEC's regulations make a distinction between ADRs and American Depositary Shares ("ADSs"). According to the SEC, "under this distinction, an ADR is the physical certificate that evidences ADSs (in much the same way a stock certificate evidences shares of stock), and an ADS is the security that represents an ownership interest in deposited securities (in much the same way a share of stock represents an ownership interest in a corporation). Although conceptually accurate, some confusion has resulted from this distinction, and it appears that ADR market participants largely do not differentiate between ADRs and ADSs." SEC Release No. 33-6894 (May 23, 1991) (the "ADR Concept Release"). This book follows the approach of the ADR Concept Release. The term "ADS" is not used, and the term "ADR" may, depending

on its context, refer to either the physical certificate or the security evidenced by such certificate.

Since ADRs are rarely issued to represent debt securities, the following discussion assumes that the securities underlying ADRs are equity securities. The mechanics of an ADR program for debt securities are, nevertheless, basically the same as those described in the text.

491 Foreign issuers are exempt from the proxy solicitation rules under § 14 of the Exchange Act. *See* § 4.02[3][c][v].

492 *See* Rule 12g3-2(b) under the Exchange Act and the discussion in § 4.02[3][a][iv].

493 *See* Chapters 4 and 5. To obtain a quotation on the OTC Bulletin Board for their equity securities, issuers must generally be subject to the periodic reporting requirements of the Exchange Act, which, among other things, also subjects them to the Sarbanes-Oxley Act and the Dodd-Frank Act. *See supra* Note 31 for discussion of the OTC Bulletin Board. An issuer would not become subject to the reporting requirements of the Exchange Act or to the Sarbanes-Oxley or Dodd-Frank Acts by sponsoring an ADR program that is not accompanied by an exchange listing or quotation on the OTC Bulletin Board.

494 Two significant examples of an acquisition involving the issuance of ADRs are the 1998 acquisition by The British Petroleum Company p.l.c. of Amoco Corporation and the 2000 acquisition of Seagram by Vivendi. Other examples of mergers and acquisitions involving the issuance of ADRs are set out in the ADR Concept Release.

495 Racal Electronics spun off its cellular telephone subsidiary, Racal Telecom, in a 4.5 million ADR issue valued at $150 million. *See* Beth McGoldrick, *For ADRs, It Pays to Get Into Debt*, EUROMONEY 103, 104 (Dec. 1988) (cited in the ADR Concept Release).

496 For example, in 1996 the Italian government, in connection with the privatization of its state-owned insurance company INA, issued notes that were exchangeable for INA shares or for ADRs representing such shares.

497 For example, an ADR-funded benefit plan was said to help British Airways maintain favorable relations with U.S. employees by ensuring equal treatment with U.K. employees. Barbara Loos, *Deflecting the Raging Bull*, EUROMONEY SPECIAL SUPPLEMENT 21, 5, 25 (Feb. 1988) (cited in the ADR Concept Release).

498 DaimlerChrysler AG (now Daimler AG) was the first to issue global shares, in November 1998, though its shares no longer trade in that form. Only a small number of global share programs have ever been established, and half of those no longer exist (although shares of UBS Group AG, initially listed as UBS AG, and Deutsche Bank Aktiengesellschaft continue to trade in the form of global shares).

499 In certain foreign jurisdictions, however, laws or local practice relating to foreign ownership of domestic companies may limit ADR program sizes by prohibiting the deposit of additional shares and the resulting creation of additional ADRs. Form F-6 requires ADR holders to be permitted to withdraw deposited securities at any time, subject to limitations imposed for procedural reasons or to comply with local law. Form F-6, General Instruction I.A.1.

500 Shares in bearer form are generally ineligible for listing on the principal U.S. securities exchanges because of the difficulty of demonstrating that there are a sufficient number of U.S. shareholders to satisfy the exchange's listing requirements. The ADR mechanism allows the issuer of shares available only in bearer form to overcome the difficulty of demonstrating that it has sufficient U.S. shareholders to qualify for a listing in the United States. In addition, the requirements of the NYSE and Nasdaq with respect to registrars and transfer agents are such that only registered shares can be listed. *See* NYSE LISTED COMPANY MANUAL § 601.01.

501 The NYSE and Nasdaq permit charging ADR depositary dividend and servicing fees to investors. *See* SEC Release No. 34-53978 (June 13, 2006). Nonetheless, the ability of the Depositary to charge these fees to ADR holders is governed by the terms of the relevant deposit agreement.

502 On July 1, 2009, the SEC approved NYSE amendment number four to NYSE Rule 452, which took effect on January 1, 2010 and eliminated a practice known as broker discretionary voting with respect to director elections. *See* SEC Release No. 34-60215 (July 1, 2009). Rule 452 applies to all NYSE member

organizations, including with regard to the securities of foreign issuers. As such, NYSE member brokers voting shares in an election of a director at any public company (except for companies registered under the Investment Company Act of 1940) may not vote the shares held in their clients' accounts without having first received voting instructions from the beneficial holders of such shares. *See* SEC Release No. 34-60215 (July 1, 2009). The Dodd-Frank Act also imposed a prohibition on broker discretionary voting for matters relating to executive compensation and for other significant matters. *See* § 957 of the Dodd-Frank Act (prohibiting member organizations from voting shares on executive compensation matters without specific client instructions). However, neither NYSE Rule 452 nor § 957 of the Dodd-Frank Act affects the ability of the Depositary to vote or grant proxies pursuant to the ADR deposit agreement, since neither NYSE Rule 452 nor § 957 of the Dodd-Frank Act extends beyond NYSE members and the Depositary generally is not a NYSE member.

503 In order to be eligible for listing on the principal U.S. securities exchanges, the shares of a foreign company must be able to trade "regular-way" (*i.e.*, with settlement in three days under current rules or two days if the amendment proposed in the T+2 Proposing Release is adopted). If the home market of a foreign company does not have three-day settlement, the company can meet this requirement by establishing a share register in New York City or, alternatively, by creating an ADR program. *See supra* Note 489 for a discussion of the securities trade settlement schedule.

504 The 15% rate applies, for example, under the U.S. income tax treaties with France, Germany and Japan.

505 For example, certain tax treaties allow U.S. shareholders to claim a payment in respect of certain taxes paid by the company in its home jurisdiction (generally corresponding to tax credits that are available to local shareholders). The process of claiming such payments, as well as the process of obtaining a reduction of withholding taxes to the designated treaty rate, may in some cases be somewhat complex. In such cases, the Depositary may be able to facilitate ADR holders' ability to obtain such relief, for example by submitting the requisite documentation directly to the local tax authorities on behalf of all eligible U.S. holders.

506 Prior to August 2008, foreign companies were required to affirmatively seek an exemption under Rule 12g3-2(b) by making certain filings with the SEC. Since then, a foreign company is automatically exempt from registering a class of securities under § 12(g) of the Exchange Act if it (i) has no active reporting obligations under § 13(a) or § 15(d) of the Exchange Act (this means essentially that the foreign company has not listed or publicly offered securities in the United States), (ii) maintains a listing of such shares on one or more non-U.S. exchanges that are, in the aggregate, its primary trading market and (iii) publishes on its website, in English, the material information that it makes public in its home country, files with the principal exchange(s) in its primary trading market or distributes to its securityholders. *See* SEC Release No. 34-58465 (Sept. 5, 2008).

507 ADR Concept Release. Programs that are not SEC-registered, whether or not sponsored, may coexist. Unregistered programs generally consist of Rule 144A or Regulation S facilities. *See* §§ 7.02[3] for a discussion of Rule 144A, 8.02 for a discussion of Regulation S and 8.02[1][e] for a discussion of the interaction between Regulation S and Rule 144A.

508 Issuers must disclose in registration statements and annual reports on Form 20-F information concerning any payments made from the Depositary to the issuer. *See* Form 20-F, Item 12D.4.

509 When U.S. commercial banks first issued ADRs, they took the position that the ADRs were securities issued by U.S. banks and thus exempt from registration under § 3(a)(2) of the Securities Act (which exempts from registration securities issued or guaranteed by banks, as discussed in § 3.05[2]). However, the SEC rejected this position (because the security did not represent any interest in the bank but rather an interest in a third party or its obligation) and began to seek registration of ADRs. The commercial banks objected to the attempt to make them subject to the civil disclosure liability provisions of the Securities Act and the Exchange Act with respect to the ADRs and the underlying shares. As a compromise, the SEC decided to permit Depositaries to register ADRs on behalf of the ADR program itself, which is considered the issuer of the ADRs. As a result, the banks have no such liability with respect to the registration

statement; the liability is that of the program itself. *See* the ADR Concept Release.

510 *See* the discussion of registration under the Securities Act in § 3.04[3]. Unregistered ADR facilities can be created for the issuance of restricted ADRs in private placements under the Securities Act (*e.g.*, in accordance with Rule 144A). The establishment of such unregistered, restricted facilities in connection with private placements that are conducted in conjunction with Euro-offerings, followed by the filing of registration statements on Form F-6 for public U.S. ADR programs, has given rise to concerns on the part of the SEC regarding "leakage" of securities from the restricted to the public program.

511 A filing fee is collected by the SEC in connection with registration under the Securities Act. For registration statements on Form F-6, the fee is calculated on the maximum aggregate charges to be imposed in connection with the issuance of the ADRs. Rule 457(k) under the Securities Act. For a discussion of Securities Act filing fees, *see supra* Note 63.

512 If the deposit agreement to be used contains terms identical to those in effect for a program the Depositary has already registered, the Depositary may generally designate a date and time for the registration statement on Form F-6 to become effective. Rule 466 under the Securities Act. However, because the SEC applies this rule quite strictly, Depositaries derive little benefit from it. Notably, although § 15(d) of the Exchange Act generally imposes periodic reporting obligations on an issuer that has filed a registration statement that has become effective under the Securities Act, periodic reports are not required with respect to ADRs registered on Form F-6. Rule 15d-3 under the Exchange Act. The Depositary must, however, furnish semi-annually to the SEC information about the number of ADRs issued and canceled during the period, and make available at its principal office for inspection all reports and communications received by the Depositary as record owner of the underlying shares (if the underlying shares are issued in registered form).

513 Form F-6, General Instruction I.A.3. *See* § 4.02[3][a] for a discussion of the Exchange Act registration requirements, including the related Rule 12g3-2(b) exemption.

514 *See* Rule 144A(d)(4)(i) under the Securities Act.

515 ADR Concept Release, American Depositary Receipts, 56 Fed. Reg. 24,420, 24,425 (May 30, 1991). The SEC has considered the functioning and characteristics of the ADR marketplace and its regulation under the federal securities laws, including the issue of whether sponsored and unsponsored ADR facilities relating to the same underlying securities should be allowed to coexist. The ADR Concept Release contains a full discussion of the differences between sponsored and unsponsored programs. The SEC did not propose or adopt any rules as a result of the ADR Concept Release. *See* SEC Release No. 33-8287 (Sept. 11, 2003).

516 ADR Concept Release, American Depositary Receipts, 56 Fed. Reg. 24,420, 24,426 (May 30, 1991).

517 *See supra* Note 505 and accompanying text.

518 A typical provision in a deposit agreement limiting pre-release provides as follows:

> Neither the Depositary nor the Custodian will lend Deposited Securities. The Depositary may issue Receipts against rights to receive Shares from the Company, or any registrar, transfer agent, clearing agency or other agent of the Company recording Share ownership or transactions. The Depositary will not issue Receipts against other rights to receive Shares unless (i) such Receipts are fully collateralized (marked to market daily) with cash or U.S. government securities until such Shares are deposited, (ii) the applicant for such Receipts represents in writing that it was the beneficial owner of such Shares before the issuance of such Receipts, and has assigned all beneficial right, title and interest in such Shares to the Depositary for the benefit of the Holders and will hold them for the account of the Depositary until delivery upon the Depositary's request and (iii) all such Receipts represent not more than 20% of the Shares actually deposited. Such collateral, but not the earnings thereon, will be

> held for the benefit of the Holders. The Depositary may retain for its own account any compensation for the issuance of Receipts against such other rights to receive Shares, including without limitation earnings on the collateral securing such rights.

While this provision limits pre-release to 20% of the shares outstanding, many agreements do not have a firm percentage limitation. In addition, there are often further limitations on pre-release contained in a pre-release side letter (which, in SEC-registered ADR programs, generally is filed as an exhibit to the Form F-6 registration statement pursuant to Item 3(b)).

U.S. Regulation of the International Securities and Derivatives Markets, § 3.05, DEBT OFFERINGS IN THE UNITED STATES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 3.05 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

p. 3-167

The requirements discussed in § 3.02 regarding registration of equity securities are also generally applicable to registration of public offerings of debt securities in the United States. However, there are certain special considerations relating to registration of debt offerings.

[1] Foreign Sovereign Issuers, Supranational Issuers, Issuers of Foreign Government-Backed Securities

Foreign sovereign issuers, certain supranational issuers and certain issuers of foreign government-guaranteed securities are permitted to provide less (and different) information than foreign private issuers. The applicable requirements are set out in Schedule B to the Securities Act. [519]

The Securities Act provides that Schedule B applies to "a security issued by a foreign government or political subdivision thereof," [520] which has been read to include national governments and governments of states, provinces and

p. 3-167

p. 3-168

municipalities. The SEC staff has also interpreted this provision to permit certain supranational organizations [521] and certain issuers of foreign government-guaranteed securities to use Schedule B for the registration of their securities. [522]

The SEC staff has also historically viewed certain issuers as political subdivisions of, or as agencies or instrumentalities of, their nation's governments and thus eligible to employ Schedule B because investments in such issuers are secure from default to a degree equivalent to that of a sovereign credit. [523] In taking this position, the staff has generally given primary consideration to the interplay of three criteria: (i) guarantees or support of the issuer's securities by the sovereign credit, (ii) government ownership of the issuer, and (iii) government control of the issuer. With respect to the government guarantee, the SEC staff has accepted express guarantees, statutory guarantees and statutory provisions or legal requirements to provide the issuer with sufficient funds to enable the issuer to meet its obligations, which in the last case do not necessarily confer on the securityholders a direct right against the government. Whatever the mechanism for the government backing, the SEC has generally taken the position that the support of the foreign government for the issuing entity must carry with it the "full faith and credit" of the foreign government, and the SEC has looked to the legal opinion of local counsel as authority for the foreign government's guarantee or other necessary support. However, under certain circumstances (and always on a case-by-case basis), the SEC has granted Schedule B status where

p. 3-168

p. 3-169

the foreign government's (or governments') support took the form of a "keepwell" arrangement, which unlike a guarantee cannot be enforced by the beneficiary. [524] Such "keepwell" arrangements are generally evidenced by statutes, general principles of administrative law and international agreements, such as an undertaking by member countries party to an international agreement establishing the issuer to make payment on callable capital. [525]

While Schedule B issuers have generally been wholly or substantially wholly owned by the related government, the SEC staff has permitted a few widely held, publicly listed issuers to use Schedule B. The staff has generally accepted as sufficient various combinations of general supervision, budgetary control and appointment of directors, officers or examiners by the related government. In determining whether an issuer should be treated as a part of a foreign government, the SEC staff has applied these criteria of government support, ownership and control as a whole on the basis of all the relevant facts and circumstances. Out of concerns for comity, the staff has historically avoided deciding an issuer's eligibility for Schedule B on the basis of the nature of its operations.

Where an instrumentality of a foreign government has been permitted to register under Schedule B, both the instrumentality as issuer and the government as guarantor or provider of other support have been required to register under Schedule B and sign the registration statement. [526] The issuer's authorized representative in the United States must also sign the registration statement. In these cases, as discussed below, the issuer is not required to meet all of the requirements of the detailed SEC rules applicable to disclosure by foreign private issuers.

There is no specific SEC form for disclosure for offerings falling within Schedule B. However, over the years the disclosure format for a sovereign issuer

p. 3-169

p. 3-170

has become highly standardized, and includes substantial information not specifically called for by Schedule B about the country concerned, its form of government and general political situation, the principal features of its economy, its natural resources, population, trade, balance of payments, public sector finances and indebtedness, other factors affecting the availability of the currency in which the proposed U.S. public offering is to be made, the terms of the securities, risk factors, where appropriate, and any other information that would be considered material by investors in deciding whether to invest in the securities being offered or that is needed to ensure that the statements made in the prospectus are not misleading. Although Schedule B expressly requires as exhibits to the registration statement only the underwriting agreement and opinions as to the legality of the securities, customary practice includes filing fiscal agency agreements, indentures and certain other documents.

In the case of securities that are guaranteed by a foreign government, essentially the same disclosure requirements apply to the government. [527] Disclosure is also required about the issuer of the securities, [528] the sovereign and the issuer's relationship to its government, [529] but the specific requirements of Form 20-F (applicable to foreign private issuers) do not apply to an issuer that the SEC staff views as eligible to use Schedule B, although such requirements may provide useful guidelines as to information that would be considered material to investors. In particular, Regulations S-K and S-X do not generally apply to Schedule B filers, although some provisions are generally followed by analogy, and debt securities issued or guaranteed by a Schedule B filer are exempted from the provisions of the Trust Indenture Act. Schedule B filers are also exempt from Sarbanes-Oxley Act certification and auditor attestation requirements. The financial statements of such a foreign issuer are not required to be reconciled to U.S. GAAP, but instead such an issuer may provide its most recent available financial statements in the form in which they are ordinarily prepared and presented (translated into English), with no independent audit requirement. The SEC has accepted filings with financial statements prepared in accordance with IFRS as

p. 3-170

p. 3-171

adopted by the EU, which it does not accept for private issuers that use IFRS (they are required to use the version of IFRS published by the IASB). Moreover, a considerable amount of other disclosure mandated by Form 20-F is in practice not included, or is provided only in reduced form, on the theory that the most important disclosure in connection with the offering pertains to the related government.

[2] Securities Issued or Guaranteed by Banks

Section 3(a)(2) of the Securities Act exempts from registration all securities issued or guaranteed by a bank organized under the laws of the United States or any state. [530] This exemption is not available to securities issued or guaranteed by a bank holding company that is not itself a bank; those securities must be registered with the SEC if issued to the public.

The SEC, implementing its policy of national treatment, has determined that U.S. federal or state branches or agencies of foreign banks should have the same right to issue or guarantee securities as their U.S. counterparts. [531] Thus, many U.S. branches and agencies of foreign banks have publicly offered and sold notes in the United States, in some cases with all or a portion of the proceeds remitted to the home office, without being required to register such offer and sale under the Securities Act. [532] The foreign bank itself, issuing from its home office, would not be entitled to the exemption under § 3(a)(2) of the Securities Act, although it is generally possible for a home office issuance of debt obligations to be eligible for the § 3(a)(2) exemption by having a U.S. branch or agency of the bank issue a letter of credit or some other form of guarantee of the home office's obligations. [533]

p. 3-171
p. 3-172

In addition, many U.S. branches of foreign banks have issued letters of credit with respect to the obligations of U.S. commercial and municipal borrowers. Since a letter of credit is treated as a bank guarantee for the purposes of § 3(a)(2), neither the letter of credit nor the underlying "guaranteed" obligation need be registered. To date, obligations issued by U.S. branches of foreign banks have been debt. It is probably not possible for equity securities, including preferred stock, to be issued or guaranteed by a U.S. branch relying on the § 3(a)(2) exemption, since conceptually such instruments are not obligations of the U.S. branch, but rather represent ownership interests in the issuing entity as a whole. [534]

Although securities issued or guaranteed by a bank are exempt from registration, a disclosure document is generally prepared, in part for marketing reasons. It is, however, typically much less comprehensive than the prospectus for a registered offering. Because detailed SEC rules for registration statements do not apply, the amount of disclosure depends upon the circumstances of the individual offering, the concerns of the issuer and the underwriters and the requirements of the bank regulators. While liability pursuant to Rule 10b-5 under the Exchange Act attaches with respect to misstatements or omissions in any such disclosure document, the liability is not absolute or predicated on negligence, but based on actual fraud or reckless disregard for the truth. [535]

The SEC has submitted legislation to the U.S. Congress on various occasions to eliminate the § 3(a)(2) exemption, but to date it remains. If the exemption were eliminated, then all securities issued or guaranteed by a bank or its holding company would have to be registered (unless sold in transactions exempt from registration). [536]

The Office of the Comptroller of the Currency (the "Comptroller"), which regulates disclosure in connection with offers and sales of securities by national banks and federally licensed U.S. branches and agencies of foreign banks, [537] adopted regulations in 1994 that in many cases effectively require such issuers to comply with the registration requirements of the Securities Act. [538] Under these

p. 3-172
p. 3-173

regulations, national banks and federal branches and agencies of foreign banks (but not state-licensed branches or agencies) conducting public offerings of securities are required to register the securities with the Comptroller, using the same form and providing the same information that they would use to register securities under the Securities Act if they were not exempt from such registration. Because the Comptroller's regulations in effect incorporate the SEC rules by reference rather than restate them, as in the past, they automatically remain current as the SEC adopts amendments to its rules. [539]

The regulations also contain a definition of "security," which cross-references the definition of that term in the Securities Act. Although the definition does not specifically exclude traditional bank products such as insured and uninsured deposits, letters of credit, banker's acceptances or repurchase agreements, the Comptroller explained in the related adopting release that it does not intend that the definition cover such products. The

Comptroller added that judicial precedents have generally found these products not to be securities. [540] Thus, letters of credit, and third-party securities backed by letters of credit, do not fall within the Comptroller's requirements so long as they qualify for the exemption from Securities Act registration provided by § 3(a)(2) (discussed above).

The regulations provide an exemption from the registration requirements if the securities would be exempt from registration under the Securities Act other than by reason of §§ 3(a)(2) or 3(a)(11) [541] thereof, or the securities are offered in transactions that satisfy certain exemptions under the Securities Act, such as Regulation D, Rule 144, Rule 144A or Regulation S. Although securities that are exempt from registration under § 3(a)(2) of the Securities Act are not generally exempt from the Comptroller's regulations, those regulations do contain an exemption for offers and sales of nonconvertible debt securities if a number of conditions are met, [542] including that:

- the issuer or its parent bank holding company has a class of securities registered under § 15(d) of the Exchange Act, [543] or, in the case of issuances by a federal branch or agency of a foreign bank, such federal branch or agency files with the Comptroller the information specified in Rule 12g3-2(b) under

p. 3-173

p. 3-174

  the Exchange Act [544] and provides investors with the information specified in Rule 144A(d)(4)(i) under the Securities Act; [545]
- all offers and sales are to "accredited investors," as defined in Rule 501 under the Securities Act;
- the securities are investment grade; [546]
- the securities are sold in a minimum denomination of $250,000 and are legended to provide that they cannot be exchanged for securities in smaller denominations;
- prior to or simultaneously with the sale of the securities, the purchaser receives an offering document that contains a description of the terms of the securities, the use of proceeds and the method of distribution, and incorporates certain financial reports or reports filed under the Exchange Act; and
- the offering document and any amendments are filed with the Comptroller no later than the fifth business day after they are first used. [547]

The regulations also incorporate the periodic reporting requirements of the Exchange Act. Thus, a bank that is required to register its securities with the Comptroller will be subject to the same requirements as a company with a class of securities registered under § 15(d) of the Exchange Act. As a result, a federal branch or agency of a foreign bank required to register its securities with the Comptroller will be obliged to file with the Comptroller a Form 20-F and present financial statements prepared in accordance with, or reconciled to, U.S. GAAP, to the extent and as required for other foreign private issuers, on an ongoing basis. [548] However, these periodic reporting requirements do not apply if the bank is a subsidiary of a one-bank holding company, the financial statements of the bank and the parent bank holding company are substantially the same and

p. 3-174

p. 3-175

the parent bank holding company complies with reporting requirements under the Exchange Act.

Another important feature of the regulations is the extension of shelf registration procedures to national banks and federal branches and agencies of foreign banks.

The regulations effectively eliminate the § 3(a)(2) exemption for public offerings by federally regulated banks, including federal branches and agencies of foreign banks, with respect to all but the most traditional banking products such as deposit instruments and letters of credit. Since the Comptroller's regulations have been in place, though, there has been no noticeable trend by the various state banking authorities to implement comparable measures that would affect banks regulated under state laws (including state-licensed branches and agencies). For example, New York State does not impose any specific securities offering disclosure rules for issuances by New York State-chartered banks or New York State-licensed branches and agencies of foreign banks.

[3] Commercial Paper

Commercial paper is a term that, although not defined in the securities laws, generally describes promissory notes with a maturity of nine months or less, and typically of 30 days or less. It is generally unsecured, issued in large denominations and sold in bearer (or book entry) form at a discount from face value. Commercial paper is normally issued pursuant to a commercial paper "program" established by the issuer, one or more commercial paper dealers and an issuing and paying agent. Under such a program, commercial paper is issued from time to time depending on a variety of factors, including the issuer's funding needs and customer demand. The documentation has become quite standard, and the costs of establishing a program are not substantial, except in cases where commercial paper is used in connection with a complex financing such as a structured receivables program. The process was further simplified by the introduction in the early 1990s of a book-entry system for the issuance and payment of commercial paper administered by The Depository Trust Company, under which practically all commercial paper is now issued. Commercial paper programs are not registered with the SEC under the Securities Act because of the availability of three exemptions: § 3(a)(3) of the Securities Act, § 4(a)(2) of the Securities Act and Regulation S under the Securities Act.

Commercial paper that satisfies certain criteria is exempt from the registration requirements pursuant to § 3(a)(3) of the Securities Act. Section 3(a)(3) itself is brief and does not provide much guidance as to its scope. It exempts any note, draft, bill of exchange, or banker's acceptance which arises out of a current transaction or the proceeds of which have been or are to be used for current transactions, and which has a maturity at the time of issuance of not exceeding nine

p. 3-175

p. 3-176

months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited.

The SEC's basic discussion of the scope of the § 3(a)(3) exemption was initially set forth in a 1961 interpretive release. [549] That release, together with subsequent no-action letters issued by the Office of the Chief Counsel of the SEC's Division of Corporation Finance (the "Division"), have established the criteria for exemption under § 3(a)(3). To qualify, commercial paper must:

- be of prime quality and negotiable;
- be of a type not ordinarily purchased by the general public;
- have a maturity not exceeding nine months; and
- be issued to facilitate current transactions.

Although the term "prime quality" has not been formally defined, issuers have customarily satisfied the prime quality requirement on the basis of ratings of their commercial paper by the nationally recognized rating services; such ratings depend on the creditworthiness of the issuer or the guarantor, if any. There are a few examples of no-action letters issued by the Office of the Chief Counsel of the Division for unrated commercial paper (including commercial paper of issuers with long-term ratings less than investment grade) on the basis of back-up bank facilities, but there is doubt whether the Division would currently issue such a letter. An alternative in a situation in which the commercial paper is not rated is for one of the sponsoring dealers to indicate, in a letter to counsel for the issuer (or the dealers), that in such dealer's view the paper would, if rated, be given a rating recognized as "prime" and for counsel to use such letter as a basis for opining that the paper is entitled to the § 3(a)(3) exemption. [550]

The important factors relevant to the requirement that the commercial paper be of a "type not ordinarily purchased by the general public" are denomination, purchasers and manner of sale. A minimum denomination of $100,000 is typical in transactions described in no-action letters, although the denominations of commercial paper are ordinarily substantially higher. To qualify for the § 3(a)(3) exemption, the purchasers of commercial paper should be institutions

p. 3-176
p. 3-177

or sophisticated individuals who could qualify as purchasers in a private placement. No-action letters often refer to sales to "institutions or individuals who normally purchase commercial paper." The marketing of exempt commercial paper should be clearly aimed at such purchasers and, for example, should avoid advertising in publications of general circulation. [551]

Commercial paper programs are easily structured to satisfy the requirement of a "maturity not exceeding nine months" by limiting the permitted maturity to 270 days in the documentation establishing the program. [552]

The "current transactions" test has been the focus of most of the requests by issuers for no-action letters pertaining to § 3(a)(3). For corporate issuers, it is often relatively clear that the proceeds of commercial paper will be used for "current transactions" (*e.g.*, inventory or accounts receivable finance or recurring operating expenses). In many cases, however, issuers have explained that it is not possible to trace particular proceeds to particular uses. Utility companies, and subsequently other companies, have addressed this concern by representing that they would limit the amount of commercial paper issued according to formulas based on various categories of current transactions, and this approach has been accepted by the Division in a long line of no-action letters. The more expansive of the formulas favorably received by the Division include limiting the amount of commercial paper outstanding at any one time to not more than the aggregate amount utilized by the issuer for specified current transactions. [553] The principal

p. 3-177
p. 3-178

use of proceeds that clearly does not qualify for "current transaction" status is to finance the purchase of securities, whether in connection with a takeover, for investment purposes or as issuer repurchases. [554]

Commercial paper is also sold in the United States without registration under the Securities Act in reliance on the exemption provided by § 4(a)(2) and, to some extent, the resale exemption provided by Rule 144A thereunder. Commercial paper sold pursuant to such exemptions is not required to satisfy the "current transactions" or nine-month maturity requirements of § 3(a)(3), although the term of such paper almost never exceeds one year. Some issuers have simultaneously maintained § 3(a)(3) commercial paper programs and § 4(a)(2) commercial paper programs in the United States and have issued commercial paper under the § 4(a)(2) commercial paper program, for example, when raising money for the purchase of a fixed asset (*e.g.*, for takeover financing). [555]

Finally, issuers that are unable to issue commercial paper on the basis of their own credit sometimes obtain bank letters of credit to assure payment of their commercial paper. In these circumstances, both the letter of credit (if it is deemed a security) and the commercial paper will (as discussed in § 3.05[2]) be exempt from registration under the Securities Act on the basis of § 3(a)(2) without regard to the use of proceeds.

[4] The Trust Indenture Act of 1939

Debt securities that must be registered under the Securities Act (except for foreign government securities registered on Schedule B to the Securities Act) must also be issued under a trust indenture that has been qualified in accordance with the Trust Indenture Act. In order to protect the rights of holders of debt, the Trust Indenture Act imposes standards of independence and responsibility upon the trustee and incorporates certain minimum protections into the related indentures. Trustees must meet certain financial and other qualifications and may not have certain interests that might conflict with the exercise of their duties. [556] The Trust Indenture Act also guarantees certain rights of securityholders, including

p. 3-178
p. 3-179

rights to receive certain reports, to have access to trustees' lists of holders for correspondence and to sue individually for nonpayment of principal or interest.

Foreign issuers offering their debt securities to the public in the United States should be able to comply without difficulty with the Trust Indenture Act provided they govern the debt securities and the indenture under a body of U.S. law, such as New York law. If they wish to make a global offering of fungible securities that includes their home jurisdiction, however, they will have to choose generally between a U.S. body of governing law and their local law. [557] Although the Trust Indenture Act permits debt securities issued under a qualifying indenture, and the indenture itself (subject to the mandatory incorporation of certain provisions of the Act required by § 318), to be governed by foreign law, there are jurisdictions in which local law is not compatible with one or more of the mandatory provisions of the Act. [558]

Even where foreign law is not incompatible with the Trust Indenture Act, issuers and underwriters may conclude that a U.S.-style indenture is not consistent with market practice in the home jurisdiction. Two major European issuers, Daimler Benz (in 1997) and Ericsson (in 1993), have used a structure involving the creation of a U.S. depositary facility to permit an entire issue of debt securities to be governed by local law without a qualifying indenture while at the same time subjecting the depositary securities sold in the United States (representing these debt securities) to an indenture governed by New York law

p. 3-179

p. 3-180

complying with the Trust Indenture Act. In each case, an exemptive order from the SEC pursuant to § 304(d) of the Trust Indenture Act was obtained. [559]

Following its amendment by the Trust Indenture Reform Act of 1990, [560] it was thought that the Trust Indenture Act might better accommodate issues by foreign companies. First, as amended the Trust Indenture Act allows the SEC, pursuant to such rules or regulations as it may prescribe or by order on application, to permit a foreign financial institution to act as sole trustee under an indenture qualified pursuant to the Trust Indenture Act if such entity (i) is authorized under the laws of the jurisdiction where it is organized to exercise corporate trust powers and (ii) pursuant to such laws, is subject to supervision or examination that is substantially equivalent to the supervision or examination applicable to U.S. institutional trustees. [561] One of the factors to be considered by the SEC when promulgating any such rules or regulations or making any such order is whether the relevant foreign jurisdiction would allow a U.S. entity to act as sole trustee under an indenture relating to securities sold in that jurisdiction. [562]

Second, an indenture trustee (for issues by either a domestic or a foreign issuer) is now considerably less likely to have a disqualifying conflicting interest. A trustee is deemed to have a conflicting interest with respect to an issuer's indenture if the trustee has one of ten prohibited relationships with the issuer or an underwriter of the issuer. [563] Those prohibited relationships generally arise when the relevant indenture securities are in default and (i) the trustee is a trustee for two or more classes of the issuer's securities that rank differently in seniority, (ii) the trustee has a specified direct or indirect affiliation (*e.g.*, through a control relationship, interlocking management or personnel, or securities holdings) with the issuer or an underwriter [564] of the issuer or (iii) the trustee is otherwise a creditor of the issuer. If a trustee has or acquires a conflicting interest, it must generally, within 90 days after ascertaining that it has such conflicting interest,

p. 3-180

p. 3-181

either eliminate such conflicting interest or resign. If, however, the default giving rise to the conflict of interest is not a payment default, the trustee will not be required to resign if it can satisfy the SEC that (i) the default may be cured or waived within a reasonable period and (ii) a stay of the trustee's duty to resign will not be inconsistent with the interests of holders of the indenture securities. [565] Additionally, the Trust Indenture Act prohibits an obligor on the indenture securities or a person directly or indirectly controlling, controlled by or under common control with such an obligor from acting as trustee under a qualified indenture regardless of whether the indenture securities are in default. [566]

To provide flexibility in administration and allow the SEC to adapt to future developments, the Trust Indenture Act also gives the SEC broad authority to provide, upon its own motion or by order on application by an interested person, conditional and unconditional exemptions from any or all of the provisions of the Trust

Indenture Act. [567]

[5] Credit Ratings

Ratings assigned by credit rating agencies such as Moody's Investors Service, Standard & Poor's and Fitch Ratings play a key role in the pricing of debt securities, particularly investment grade debt securities. While such ratings have historically also figured prominently in the regulatory treatment of debt securities, their use is being phased out in response to public policy considerations.

In 2003, in response to the mandate contained within § 702 of the Sarbanes-Oxley Act, the SEC submitted to Congress a detailed report on credit rating agencies. The report addressed the topics identified for study in § 702, including the role of rating agencies and their importance to the securities markets, impediments faced by rating agencies in performing that role, measures to improve information flow to the market from rating agencies, barriers to entry into the ratings business and conflicts of interest faced by rating agencies. The report also addressed certain issues regarding rating agencies, such as allegations of anticompetitive or unfair practices, the level of diligence of rating agencies and the extent and manner of SEC oversight, that went beyond those specifically required by the Sarbanes-Oxley Act. The SEC followed up on issues raised by the report by issuing a concept release on the topic. [568]

In 2006, Congress responded by enacting the Credit Rating Agency Reform Act of 2006, Pub. L. No. 109-291, 120 Stat. 1327 (2006) (the "Rating Agency Act"), and in 2007 the SEC adopted new rules to implement it. The Rating Agency Act and the SEC rules established a program for NRSRO registration and oversight by the SEC. Under these provisions, a credit rating agency seeking to be treated as an NRSRO must apply for, and be granted, registration with the SEC, make public in its application certain information to help persons assess its credibility, and implement procedures to manage the handling of material nonpublic information and conflicts of interest. [569]

As a result of the subprime mortgage crisis and ensuing credit crunch that began in mid-2007, the SEC in 2008 proposed a number of reforms relating to the regulation of NRSROs. The rules were adopted in 2014. Among other things, the rules are designed to address conflicts in the ratings process; mandate public disclosure of ratings-related information; require differentiation of structured product ratings from corporate debt ratings; and avoid encouraging "undue reliance" on ratings. [570]

Pursuant to § 939A of the Dodd-Frank Act, the SEC was charged with removing from SEC regulations all references to or requirements of reliance on credit ratings. In rules proposed in February 2011 and adopted in July 2011, the SEC replaced each of the qualifications in Forms S-3, F-3, S-4 and F-4 and Rules 138, 139 and 168 under the Securities Act that required an investment grade rating with a qualification that is met if the registrant has issued at least $1 billion of nonconvertible, SEC-registered securities (other than common equity) for cash during the prior three years when the registrant seeks to rely on the safe harbor of any such rules.

The Dodd-Frank Act also eliminated former Rule 436(g) under the Securities Act. Under that rule, an issuer that referred to credit ratings in a Securities Act registration statement or a prospectus for a registered offering did not need to file the consent of the rating agency. This allowed the rating agencies to avoid expert liability under § 11 of the Securities Act. The effect of the elimination of Rule 436(g) is, with certain exceptions outlined below, to require NRSROs to file consents to be named as experts each time their ratings are used in a prospectus or registration statement. Prior to the passage of the Dodd-Frank Act, the rating agencies consistently took the position that the ratings they provided were not expertized information as described in §§ 7 and 11 of the Securities Act. They argued that ratings are inherently forward-looking in nature and are based on assumptions and predictions that by their very nature cannot be verified. [571] In response to the passage of the Dodd-Frank Act and the concurrent repeal of Rule 436(g), the major rating agencies reiterated this stance and stated that they would

p. 3-182
p. 3-183

not consent to the inclusion of their ratings in prospectuses and registration statements. [572]

One important exception to the requirement that NRSROs file consents is that a company that is not subject to Regulation AB disclosure requirements is not required to seek NRSRO consent for ratings-related information included in a registration statement or prospectus if such information is included to satisfy certain general disclosure requirements (such information being referred to as "issuer disclosure-related information"). [573] Issuer disclosure-related information is comprised of changes to a credit rating, the liquidity of the registrant, the cost of funds for a registrant or the terms of agreements that refer to credit ratings. Registrants should therefore not have to alter their practices regarding ratings disclosure in, for example, a risk factor that outlines the adverse effect that a hypothetical downgrade would have, in the liquidity portion of the MD&A and in descriptions of debt covenants tied to credit ratings.

Footnotes

519 For this reason, such issuers are often referred to as "Schedule B issuers." Schedule B requires disclosure of the following:

- the estimated net amount and proposed use of the proceeds of the offering;
- the amount and the principal terms of the sovereign's "funded" (long-term) and "floating" (short-term) debt (both foreign and domestic);
- any defaults on external securities during the preceding 20 years;
- the registrant's revenues and expenditures (including deficits) during the three most recent fiscal years;
- the name(s) of any authorized agent(s) in the United States;
- the name(s) of counsel who pass upon the legality of the issue;
- the terms of the distribution, including the underwriting arrangements, if any, and the names of the underwriters;
- the price at which the securities are to be offered (or the method by which the price is to be determined);
- the commissions or other compensation to be paid to underwriters; and
- other expenses of the offering.

520 § 7 of the Securities Act.

521 The rationale for permitting supranational organizations to use Schedule B has generally been that these organizations have sovereign nations as their members, serve a governmental function and have the right to make capital calls on their member countries in the event that the organizations cannot meet their obligations under their debt securities. *See*, *e.g.*, *Nordiska Investeringsbanken* (avail. Feb. 1, 1982); and *European Economic Community* (avail. June 21, 1976), allowing the European Economic Community ("EEC") to register using Schedule B, "without deciding whether the EEC [was] a 'foreign government or political subdivision thereof' within the meaning of Section 7 of the Securities Act"). Securities offerings of certain supranational organizations, including the African Development Bank, the Asian Development Bank, the European Bank for Reconstruction and Development, the Inter-American Development Bank, the Council of Europe Development Bank ("CEB") and the International Bank for Reconstruction and Development (known as the World Bank), are governed by specific statutes enacted by Congress and regulations that exempt their securities from SEC registration and are thus even more favorable than Schedule B. *See*, *e.g.*, General Rules and Regulations Pursuant to § 9(A) of the European Bank for Reconstruction and Development Act, 17 C.F.R. §§ 290.1 *et seq*.

522 As discussed above, *see supra* Note 519 and accompanying text, the SEC staff has permitted the registration under Schedule B of securities that are supported by statutory "keepwell" arrangements, as well as those backed by an express or statutory guarantee.

523 Certain foreign banks that are eligible to use Schedule B may also be able to take advantage of the exemption in § 3(a)(2) of the Securities Act, if they issue their securities through a U.S. federal or state branch. *See* § 3.05[2].

524 A number of central banks have been permitted to register debt securities on Schedule B even though such obligations did not carry the full faith and credit of the sovereign or benefit from a formal sovereign guarantee or "keepwell" arrangement. In *Bank of Greece* (avail. June 2, 1993), the only no-action letter in which this issue has been addressed, the staff stated that it would raise no objection to that central bank's use of Schedule B, but noted particularly (i) the bank's status as the central bank of Greece and (ii) that the Republic of Greece would sign the registration statement. The SEC permitted a Schedule B filing under similar circumstances by Bangko Sentral ng Pilipinas, the central bank of the Philippines, in 1997.

525 In the case of the CEB, an international organization established by member states of the Council of Europe, the Schedule B filing specifically states that neither the Council of Europe nor the CEB's member states guarantee the securities being issued. Furthermore, the CEB may make calls upon subscribed and unpaid capital in order to enable the CEB to meet its obligations, but member states are not required to subscribe to capital increases.

526 Where the issuer is not an instrumentality of a specific foreign government but rather has been established under international agreements among various sovereigns, the issuer alone (along with its authorized U.S. representative) may sign the registration statement.

527 As a technical matter, whether the government's support for the securities represents a guarantee of the securities that is itself a separate security that must be registered under the Securities Act may depend on the nature of the support. In any case, the registration statement will include the above disclosure and the government will be required to co-sign the registration statement and to provide legal opinions with respect to its support for the securities or the issuer.

528 Although foreign governments are subject to essentially the same requirements as foreign private issuers, foreign governments are not eligible for a number of the safe harbors relating to publicity and research reports that are available to foreign private issuers. Accordingly, special considerations apply in these areas in the context of an offering by a foreign sovereign.

529 A shelf issuer may incorporate by reference annual reports filed voluntarily on Form 18-K and amendments filed on Form 18-K/A instead of including country disclosure in the prospectus (included in the registration statement) or in a prospectus supplement, if the SEC issues a no-action letter allowing it to do so. *See*, *e.g.*, *Republic of Chile* (avail. April 27, 2015).

530 However, a class of § 3(a)(2) exempt securities that is listed on a national securities exchange must nevertheless be registered under the Exchange Act. *See* § 3.03[1][a].

531 SEC Release No. 33-6661 (Sept. 23, 1986). The release stipulates that in order for the § 3(a)(2) exemption to be available, the nature and extent of federal or state regulation and supervision of the issuing branch or agency must be "substantially equivalent" to that applicable to federal or state chartered domestic banks in the same jurisdiction. *See also* § Part IV.A.2.c of Robert L. Tortoriello, Derek M. Bush and Hugh C. Conroy, Jr., GUIDE TO BANK UNDERWRITING, DEALING AND BROKERAGE ACTIVITIES (21st ed. Thomson 2016).

532 A public offering of securities by a U.S. or foreign issuer that is exempt from federal securities registration requirements under § 3(a)(2) may nevertheless remain subject to review under FINRA Rule 5110. If the securities are not nonconvertible debt securities or nonconvertible preferred securities with an investment-grade rating or if an affiliate of the issuer is a FINRA member participating in the distribution of the securities, a filing must generally be made with and approval received from FINRA prior to proceeding with the offering. However, if an offering of securities issued by a U.S. or foreign bank (whether or not exempt from registration under § 3(a)(2)) is structured as a private placement under the Securities Act, such offering would not be subject to FINRA review.

533 *See*, *e.g.*, *Sumitomo Bank* (avail. Oct. 29, 1984).

534 However, equity-, index- and credit-linked "hybrid" securities, *see* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, §§ 2.03[5], 2.04[3], and

2.05[4], may generally be issued or guaranteed by a U.S. branch or agency of a foreign bank in reliance on the § 3(a)(2) exemption because they are generally classified as direct or contingent debt obligations of the branch or agency issuer or guarantor.

535 Securities issued or guaranteed by a bank are exempt from the liability provisions of § 12(a)(2) of the Securities Act.

536 Certain bank obligations (including, for example, certain certificates of deposit) are not "securities" within the meaning of the Securities Act and thus would not need to be registered even if the § 3(a)(2) exemption were eliminated. *See* § 12.01[2][c].

537 *See* Robert L. Tortoriello, Derek M. Bush and Hugh C. Conroy, Jr., GUIDE TO BANK UNDERWRITING, DEALING AND BROKERAGE ACTIVITIES (21st ed. Thomson 2016) for a fuller discussion of the regulation of securities activities of banks.

538 12 C.F.R. Part 16.

539 *But see* 12 C.F.R. Parts 11 and 16, as amended, to reflect those provisions of the Sarbanes-Oxley Act that the Comptroller is required to administer and enforce with respect to registered national banks.

540 Securities Offering Disclosure Rules, 59 Fed. Reg. 54,789, 54,791 (Nov. 2, 1994).

541 Section 3(a)(11) of the Securities Act exempts from registration offerings conducted entirely within a single state.

542 12 C.F.R. § 16.6.

543 *See* § 4.02[2].

544 *See* § 4.02[3][a][iv].

545 *See* § 7.02[3][d].

546 Pursuant to § 939A of the Dodd-Frank Act, the Comptroller has removed all references to or requirements of reliance on credit ratings. *See* Alternatives to the Use of External Credit Ratings in the Regulations of the Comptroller, 77 Fed. Reg. 35,253 (June 13, 2012) (to be codified at 12 C.F.R. Parts 1, 5, 16, 28, and 160). "Investment grade" for this purpose means the issuer of the security has an adequate capacity to meet financial commitments under the security for the projected life of the asset or exposure. An issuer has an adequate capacity to meet financial commitments if the risk of default by the issuer is low and the full and timely repayment of principal and interest is expected. 12 C.F.R. § 16.2(g). *See* § 3.05[5].

547 Although the Comptroller has clarified that amendments that contain only pricing information relating to a particular transaction, updated financial information concerning the issuer or nonmaterial information relating to the issuance program need not be filed with the Comptroller. Comptroller Interpretive Letter No. 662 (May 31, 1995) Fed. Banking L. Rept. (CCH) ¶ 83,610.

548 *See* §§ 3.03[1][b], 4.02[3][c][i] and 4.05.

549 SEC Release No. 33-4412 (Sept. 20, 1961).

550 Pursuant to § 939A of the Dodd-Frank Act, the SEC was charged with removing from SEC regulations all references to or requirements of reliance on credit ratings. *See* § 3.05[5]. No action has yet been taken by the SEC regarding the "prime" requirement of the § 3(a)(3) exemption. The SEC has, however, amended Rule 2a-7 under the Investment Company Act to eliminate the requirement that money market funds, which have traditionally been major purchasers of commercial paper, invest only in securities in the two highest rating credit categories. Instead, a money market fund must rely on its own determination that the security has "minimal credit risks" after analyzing certain prescribed factors when investing. *See* SEC Release No. IC-31828 (Sept. 16, 2015) (effective Oct. 26, 2015).

551 The SEC staff has not objected to tombstone advertisements that announce the establishment of § 3(a)(3) programs.

The SEC staff also issued a no-action letter in July 1994 that provided it would not recommend any enforcement action by the SEC if GE Capital and certain of its affiliates publish limited advertisements about their commercial paper in publications with a general circulation so long as certain steps are followed.

General Electric Capital Corporation; General Electric Company; General Electric Capital Services, Inc. (avail. July 13, 1994). The letter outlined a number of steps that would be taken to ensure that individuals and unsophisticated institutions do not actually purchase the paper.

552 Debt instruments with maturities of one year or less are not required by TEFRA to be in registered form and thus technically are not subject to the TEFRA rules governing the offer and sale of bearer debt discussed in § 8.04[2]. However, in the case of a debt instrument with a term of more than 183 days, the "portfolio interest exception" from US withholding tax is available only for debt issued in registered form. Furthermore, even though debt instruments with terms of 183 days or less generally are not subject to US withholding tax, they are nonetheless subject to information reporting and backup withholding requirements. *See generally* § 8.04[2] for a discussion of rules imposed on offers of bearer debt.

553 For various reasons, non-U.S. companies often issue commercial paper in the United States through a finance subsidiary. Such commercial paper is generally guaranteed by, or benefits from, "keepwell" arrangements from the parent because the subsidiary on its own would not be sufficiently creditworthy to make its commercial paper marketable or to satisfy the "prime quality" test of the § 3(a)(3) exemption. In such a structure, the Division has issued a no-action response where the proceeds of the commercial paper were loaned or advanced to the guarantor (or its subsidiaries) and the guarantor represented that the aggregate amount of outstanding commercial paper would be less than various listed "current transactions" of the guarantor and its subsidiaries even though such proceeds would not be segregated or traceable to specific current transactions. *Meridian Bancorp, Inc., Meridian Funding Corp.* (avail. Sept. 21, 1984).

554 Other nonqualifying uses include: discharging existing indebtedness unless such indebtedness is itself exempt under § 3(a)(3); purchasing or constructing a plant; purchasing durable machinery or equipment; funding commercial real estate development or financing; purchasing real estate mortgages; financing mobile homes or home improvements; or purchasing or establishing a business enterprise. SEC Release No. 33-4412 (Sept. 20, 1961).

555 The SEC staff has issued letters to the effect that enforcement action on the basis of the integration doctrine would not be taken so long as the purpose and use of proceeds of the two programs are distinct. *See*, *e.g.*, *Security Pacific Corp.* (avail. Oct. 14, 1976). *See* § 7.02[6] for a discussion of the integration doctrine.

556 § 310 of the Trust Indenture Act.

557 This choice will not be available to all foreign issuers because there are jurisdictions, such as France, that restrict the issuance of debt securities within the jurisdiction governed otherwise than by local law.

558 Conflicts arising from "collective action clauses," pursuant to which debt security payment terms may be amended with the consent of the holders of a majority or supermajority of the outstanding principal amount (to be contrasted with the unanimous bondholder approval requirements of the Trust Indenture Act), are particularly prevalent in Europe and elsewhere overseas. French law, for example, confers upon the majority of the bondholders, acting through their representative, the right to consent to amendments to the terms of the securities governing payment of principal and interest. French law also requires that if a legal entity is to act as the bondholders' representative, such legal entity be incorporated in France. The Trust Indenture Act, as discussed below, permits foreign entities to act as sole trustee under a qualified indenture in limited circumstances (although to date no foreign entity has actually been granted an order allowing it to so act). In the event of a Trust Indenture Act conflict, the SEC may issue rulings allowing securities issuances to proceed. § 304(d) of the Trust Indenture Act; *see* SEC Release No. 2430 (Oct. 13, 2004) (order granting application for exemption from § 316(b) of the Trust Indenture Act to Petroleos Mexicanos and the Pemex Project Funding Master Trust to permit the inclusion of "collective action clauses" in certain indentures to be qualified under the Trust Indenture Act). Many foreign governmental issuers, which as Schedule B registrants are not required to have qualified indentures and generally issue their debt securities under fiscal agency agreements, have collective action clauses. Since 2013, sovereign issuers within the Eurozone have been required to include collective action clauses in bonds they issue with maturities exceeding one year. *See* Conclusions of the Heads of State or Government of the Euro Area of

Mar. 11, 2011.

559 *See* Daimler-Benz Aktiengesellschaft, SEC Release No. 39-2353 (Apr. 25, 1997) (Order) and LM Ericsson Telephone Company, SEC Release No. 39-2312 (June 1, 1993) (Order), which include a description of the deposit arrangements.

560 Trust Indenture Reform Act of 1990, Pub. L. No. 101-550, 104 Stat. 2713 (1990).

561 No foreign financial institution has, however, yet been permitted to act as sole trustee. In at least one instance, the staff of the SEC has not been satisfied that the proposed foreign trustee was subject to supervision or examination that is substantially equivalent to the supervision or examination applicable to U.S. institutional trustees. This was attributable to the fact that U.S. trustees are typically commercial banks, while the proposed foreign trustee, like many other foreign trustees, was not a commercial bank.

562 § 310(a)(1) of the Trust Indenture Act.

563 § 310(b) of the Trust Indenture Act.

564 The term "underwriter," when used with reference to an obligor on indenture securities, is defined to mean every person who, within one year of the date of determination, was an underwriter of any security of such obligor outstanding at such date. § 310(b) of the Trust Indenture Act.

565 § 310(b) of the Trust Indenture Act.

566 § 310(a)(5) of the Trust Indenture Act.

567 § 304(d) of the Trust Indenture Act.

Click to open document in a browser

Several rules of the Financial Industry Regulatory Authority, Inc., or FINRA, [574] a U.S. securities industry self-regulatory organization that is charged with overseeing the activities of essentially all SEC-registered broker-dealers, have an impact on the conduct of public offerings in the United States and outside the United States to the extent a member of FINRA participates in the offering. Some of the more important FINRA provisions that may affect a public offering are summarized below.

[1] Conflicts of Interest

Special FINRA rules must be observed for U.S. public offerings in which a FINRA member affiliated with the issuer participates or in which a FINRA

p. 3-184

member otherwise is deemed to have a conflict of interest. [575] A FINRA member participating in a public offering has a conflict of interest under FINRA Rule 5121 if, among other things, (i) the securities are to be issued by the FINRA member or its affiliate, (ii) at least 5% of the offering proceeds, not including underwriting compensation, is intended to be directed to the FINRA member or certain of its related persons, or (iii) the issuer is controlled by or under common control with a FINRA member participating in the offering or certain related persons. [576]

When a conflict exists as a result of a FINRA member's interest in the securities being offered publicly, the nature of the conflict must be prominently disclosed in specific sections of the prospectus or other offering document and either (i) a qualified independent underwriter ("QIU") must participate in the due diligence process and preparation of the prospectus or other offering document or (ii) an exemption from the QIU requirement must apply. No QIU is required to participate in a public offering if (i) the FINRA member principally responsible for managing the offering does not have a conflict of interest and can meet certain other requirements, (ii) the securities being offered have a "bona fide public market" (as defined in FINRA Rule 5121), or (iii) the securities being offered are investment-grade rated or are in the same series as, or rank *pari passu* with, investment-grade rated securities that have equal rights and obligations. [577] Disclosure documents for all offerings requiring the participation of a QIU must be filed with FINRA for review, even if the offering would otherwise be exempt from filing under FINRA Rule 5110(b)(7). [578]

[2] Initial Public Offerings of Equity Securities

p. 3-184
p. 3-185

[a] IPO Purchase and Sale Restrictions

FINRA Rule 5130 prohibits FINRA members from selling "new issues" of equity securities to certain "restricted persons." [579] Like its predecessors—NASD Conduct Rule 2790 and the NASD's interpretation on "free-riding and withholding" of "hot issues" (*i.e.*, where secondary trading commences at a premium relative to the offering price) (the "Interpretation")—FINRA Rule 5130 is designed to ensure that FINRA members: (i) make *bona fide* public offerings of new issues of equity securities at the offering price, (ii) do not withhold securities in a public offering for their own benefit or use the securities being offered to reward those who are in a position to direct future business to them, and (iii) do not exploit their insider position to purchase new issues at the expense of public customers. [580]

However, in contrast to the Interpretation, which applied to all "hot issues" (and, therefore, was potentially applicable to all securities offerings, since it was often impossible to know in advance with absolute certainty whether a particular securities offering would begin to trade at a premium in the secondary market), FINRA Rule 5130 applies only to IPOs of equity securities. [581] More specifically, FINRA Rule 5130 prohibits, subject to certain exceptions, a FINRA member (or

p. 3-185
p. 3-186

an associated person thereof) [582] from: (i) selling a new issue to an account in which a restricted person has a beneficial interest, [583] (ii) purchasing a new issue for any account in which such member or associated person has a beneficial interest, and (iii) continuing to hold new issues acquired as an underwriter, selling group member or otherwise, in each case, except as expressly permitted by the rule. [584] For purposes of the rule, "restricted persons" include, among others, FINRA members and other broker-dealers, certain owners and associated persons of broker-dealers, finders, portfolio managers and certain immediate family members of the foregoing. [585]

In addition to these prohibitions, the rule imposes an affirmative obligation on FINRA members to comply with specified preconditions before selling a new issue. Specifically, within the 12 months prior to any such sale, a FINRA member must have obtained in good faith: (i) a representation from the holder of any account to which an offer will be made (or a person authorized to represent the beneficial owner of such an account) stating that the account holder is eligible to purchase new issues in compliance with FINRA Rule 5130, [586] and (ii) a representation from any U.S. or non-U.S bank, broker-dealer or investment adviser or other conduit that all purchases of new issues will be in compliance with FINRA Rule 5130. [587]

p. 3-186
p. 3-187

Offerings excluded from the definition of "new issue," and thus excluded from the restrictions of FINRA Rule 5130, include:

- securities offered in private placements, including pursuant to Rule 144A under the Securities Act; [588]
- securities offered in rights offerings, exchange offers or offerings made pursuant to a merger or acquisition;
- offerings of debt securities;
- offerings of convertible securities;
- offerings of preferred securities;
- offerings of securities (in the form of ordinary shares or ADRs registered on Form F-6 under the Securities Act) that have a preexisting market outside the United States;
- offerings of investment-grade asset-backed securities;
- offerings of securities of an investment company registered under the Investment Company Act;
- offerings of exempted securities under § 3(a)(12) of the Exchange Act and the rules promulgated thereunder; and

p. 3-187
p. 3-188

- offerings of securities of a commodity pool operated by a commodity pool operator as defined under § 1a(5) of the Commodity Exchange Act. [589]

In addition to the foregoing exclusions, FINRA Rule 5130 contains certain exemptions applicable to particular accounts or entities with large numbers of beneficial owners based on the premise that these types of accounts are likely to have only a small percentage of restricted persons as beneficial owners and thus are not the sort of accounts sales to which the rule should prohibit. [590] These exemptions include sales to, and purchases by, the following accounts or persons, whether directly or indirectly through accounts in which they have a beneficial interest:

- publicly traded entities (other than certain broker-dealers and broker-dealer affiliates) that are listed on a national securities exchange in the United States or that are foreign issuers whose securities meet the quantitative designation criteria for listing on such an exchange;
- an account in which the beneficial interests of restricted persons do not exceed 10% in the aggregate;
- investment companies registered under the Investment Company Act;
- subject to certain conditions, non-U.S. investment companies; [591]
- charitable organizations with tax-exempt status under § 501(c)(3) of the Internal Revenue Code;
- certain ERISA plans qualified under § 401(a) of the Internal Revenue Code;
- subject to certain conditions, common trust funds or similar funds, as defined in § 3(a)(12)(A)(iii) of the Exchange Act; and

p. 3-188
p. 3-189

- subject to certain conditions, insurance company accounts. [592]

Certain restricted persons may also be able to acquire equity securities otherwise subject to FINRA Rule 5130, among other circumstances, (i) pursuant to detailed exemptions from the rule applicable to issuer-directed share programs (sometimes referred to as "friends and family" programs), (ii) where securities are directed by the issuer in offerings where, among other things, there is no underwriting, solicitation or sale by any broker-dealer, (iii) in certain purchases designed to prevent the dilution of equity stakes held for more than one year prior to an offering, (iv) pursuant to stand-by underwriting arrangements, or (v) by underwriters for their investment account in under-subscribed offerings. [593]

[b] Restrictions on New Issue Allocations

For more than a decade, the NASD, NYSE, FINRA and SEC often have expressed concern regarding IPO allocation abuses and their effects on public confidence in the capital markets. [594] In November 2010, FINRA Rule 5131—

p. 3-189
p. 3-190

specifically prohibiting certain abuses in the allocation, pricing, distribution and trading of IPO securities—was approved. [595]

FINRA Rule 5131 prohibits FINRA members and associated persons from engaging in the following activities in connection with new issues [596] of equity securities:

- granting or threatening to withhold allocations of IPO shares as consideration or inducement for the receipt of excessive compensation for services; [597]
- allocating IPO shares to any account in which an executive officer or director of a public company or a covered nonpublic company (as defined in FINRA Rule 5131), or a member of the household of such officer or director, has a beneficial interest (i) if the company is a current investment banking client of the FINRA member or if the FINRA member has received compensation for investment banking services from the company within the 12 months preceding the allocation, (ii) if the person allocating the IPO shares knows or has reason to know that the FINRA member expects to receive investment banking business from, or intends to provide investment banking business to, the company in the next three

months, or (iii) on the express or implied condition that such executive officer or director, on behalf of the company, direct future investment banking business to the FINRA member (known as "spinning"). [598] The spinning prohibitions do not apply to (i) certain accounts that

p. 3-190

p. 3-191

are also exempt from FINRA Rule 5130 pursuant to FINRA Rule 5130(c), [599] (ii) any account in which the beneficial interests of the officers and directors of a company do not, in the aggregate, exceed 25% of such account, [600] or (iii) issuer-directed shares, provided the FINRA member has no direct or indirect influence or other involvement in such allocation by the issuer; [601]

- imposing penalties to recoup sales commissions or credits from representatives who have sold shares to a customer who resold the shares within 30 days of the offering's effective date (known as "flipping"), unless the managing underwriter has imposed the penalties on the entire syndicate; [602] or
- accepting market orders (but not limit orders) for IPO shares prior to the commencement of secondary market trading following the IPO. [603]

In addition to prohibiting the activities described above, FINRA Rule 5131 places the following affirmative obligations on FINRA members in connection with IPO pricing and trading practices:

p. 3-191

p. 3-192

- reports by the book-running lead manager to the issuer's pricing committee (or board of directors, if no pricing committee has been appointed) providing indications of interest and final allocations of IPO shares sold in the offering; [604]
- inclusion in any lock-up agreement relating to the offering of (i) a requirement that the lock-up apply to any issuer-directed shares to be received by the officer or director subject to the lock-up and (ii) an agreement by the book-running lead manager to notify the issuer and the public at least two business days in advance of any waiver of a lock-up, except when the waiver is only to permit transfer of the shares as a *bona fide* gift and the recipient agrees to be bound by the same lock-up terms; [605] and
- inclusion in the agreement among underwriters of certain procedures for handling shares that are returned to a syndicate member after secondary market trading commences when such shares are trading at a premium in the secondary market (such procedures are aimed at ensuring that reneged IPO shares are not used to benefit favored clients of the underwriters). [606]

Both FINRA Rule 5130 and Rule 5131 are applicable to FINRA members, which, in general, would not include a non-U.S. broker-dealer not registered with the SEC. Accordingly, these rules should have little effect on a non-U.S. underwriter acting as a lead manager or on other non-U.S. underwriters, unless any such non-U.S. broker-dealer is acting as a "conduit" for a FINRA member or determines to adhere voluntarily to the principles set forth in the rules. However, both FINRA rules do apply to a FINRA member (or a non-FINRA member acting as a "conduit" for a FINRA member) participating in an IPO of equity securities conducted outside the United States pursuant to Regulation S. [607]

[3] Maintaining a Fixed-Price Offering

p. 3-192

p. 3-193

FINRA Rule 5141 is intended to ensure that securities in a U.S. public offering (including those comprising part of a global offering) are sold at the specified (or "fixed") public offering price, without granting direct or indirect discounts, selling concessions or other allowances except to members of the selling syndicate or selling group (including foreign broker-dealer members of the syndicate or group). [608] The rule replaced a number of NASD rules and related interpretations commonly referred to as the "Papilsky Rules." [609] Notably, while the Papilsky Rules required that any FINRA member granting a selling concession, discount or other allowance in a U.S.

public offering to a foreign broker-dealer obtain a written agreement that such foreign broker-dealer would comply with the same pricing requirements and related matters as applied to FINRA members when they distributed securities, FINRA Rule 5141 contains no such requirement. [610] However, the standard form of Master Agreement Among Underwriters requires a foreign broker-dealer to comply with FINRA Rule 5141 as though it were a member of FINRA to the extent it acts as a "conduit" for, or receives any selling commissions, discounts, allowances or other compensation from, or is otherwise being directed with respect to allocations or disposition by, a FINRA member. Additionally, unlike NASD Rule 2750, which prevented NASD members from allocating securities in a fixed-price offering to related persons of the member, FINRA Rule 5141 explicitly permits sales of securities in a fixed-price offering to affiliates of a member of the selling syndicate or selling group provided that such sale is made at the fixed public offering price and not a "reduced price" (as defined in the rule) and otherwise complies with FINRA Rule 5130 where applicable. [611]

It is important to note that FINRA Rule 5141 does not require that securities offerings be conducted on a fixed-price basis, nor does it prohibit multiple-price offerings. Such multiple-price offerings, however, generally should not be structured in a manner that discriminates among classes of investors; they may,

p. 3-193

p. 3-194

for example, provide for volume-related discounts applicable to all participating investors. The rule also allows a reduction in the public offering price of securities in an under-subscribed offering and allows placement of the remaining securities in such "sticky deal" in a FINRA member's investment account or the account of an affiliate. [612] By its express terms, FINRA Rule 5141 only applies until the offering is terminated or can no longer be sold at the stated public offering price. [613]

[4] “Fair and Reasonable” Compensation

Pursuant to FINRA Rule 5110 (the "Corporate Financing Rule"), FINRA members may not participate in a public offering if the underwriting compensation received or to be received in connection therewith is considered excessive. In addition, the underwriting arrangements and compensation for certain public offerings must be reviewed and approved by FINRA's Corporate Finance Department before sales can be made. [614] Although there are certain exemptions from the review requirement, [615] there is no exemption from the substantive terms

p. 3-194

p. 3-195

of the Corporate Financing Rule in the context of a U.S. public offering. [616] In general, the Corporate Financing Rule is intended to ensure that the underwriting terms and arrangements in connection with a public offering in which a FINRA member participates are "fair and reasonable." [617] Some of the more significant issues presented by the Corporate Financing Rule are set forth below.

[a] Overallotment Options

p. 3-195

p. 3-196

The Corporate Financing Rule has a direct impact on the size of overallotment options that may be granted to the underwriters in connection with U.S. public offerings conducted on a firm commitment basis. FINRA Rule 5110(f)(2)(J) prohibits the receipt of an overallotment option of more than 15% of the securities being offered (the "firm securities"), without taking into account the securities offered pursuant to the overallotment option. [618] Thus, while the underwriting syndicate can overallot more than 15% of the firm securities being offered, it can only receive an option from the issuer or selling securityholders to purchase up to an aggregate of 15% of the firm securities. If the syndicate overallotted more than 15%, it would be "naked" short the balance and would need to satisfy this excess short position through other means such as open-market purchases. [619]

In the past, there had been some question whether the 15% limitation applied on an aggregate or syndicate-by-syndicate basis in a global offering. In response, FINRA staff provided guidance that permits FINRA members participating in a global offering to be allocated overallotment option securities of up to an aggregate of 15% of the securities registered with the SEC in the global offering, so long as FINRA members are subject to a firm commitment underwriting agreement and regardless of the number of securities eventually sold by such members (including securities offered by such members outside the United States).

[b] Limits on Compensation

The Corporate Financing Rule places certain limitations on the total amount of underwriting compensation that underwriters and certain "related persons" may receive in connection with a public offering. [620] The rule also prohibits participation in the offering if the underwriting compensation received or to

p. 3-196
p. 3-197

be received in connection with the offering is considered "unfair or unreasonable." [621]

Underwriting compensation consists not only of cash compensation in the form of the underwriting discount, but also any other "item of value" received by the underwriting group from any source within the period beginning 180 days prior to the filing date of the registration statement with FINRA and ending on the day the offering commences (the "compensation review period"), unless such item falls within a specific exemption. [622] In addition, items of value received within 90 days after the commencement of the offering are subject to FINRA review to determine whether they should be deemed "underwriting compensation" in connection with the offering. [623]

Items of value include, among other things, underwriting commissions and discounts, expense reimbursements (including reimbursement of fees and expenses of underwriters' counsel), [624] finder's fees and financial and consulting and advisory fees. Securities of the issuer, even if not acquired from the issuer or if received in connection with another offering or for providing other services,

p. 3-197
p. 3-198

are also items of value. Cash compensation received for acting as a private placement agent, providing a loan or credit facility or for providing services in connection with a merger or acquisition are not considered items of value. [625]

In addition to the exclusion of specified items from the category of items of value, the Corporate Financing Rule contains five exceptions that are intended to distinguish items of value received as consideration for underwriting services from those received as consideration for other financial services, such as venture capital services. [626] The transactions covered by the five categories include acquisitions of securities:

- in private placements or as compensation for a loan or credit facility by certain entities that routinely make investments in, or provide loans or credit facilities to, other companies, and meet a "capital under management" test or that are banking or insurance companies;
- in issuers that have significant institutional investor involvement in their corporate governance before the required filing date of the public offering;
- in private placements that have significant institutional investor participation;
- made to prevent dilution of an investor's position, including as a result of preemptive right exercises, stock splits or *pro rata* rights offerings or the conversion of securities not deemed to be underwriting compensation; and
- made to prevent dilution before the effective date of a public offering where the purchaser has a prior investment history. [627]

Regardless of whether securities received by a member of an underwriting group are deemed underwriting compensation, if such securities are unregistered and received within the 180-day period prior to the filing date of the registration statement with FINRA, the Corporate Financing Rule imposes a lock-up on their

p. 3-198
p. 3-199

sale (actual or through derivatives transactions) for 180 days following the commencement of the offering. Unregistered equity securities received after the filing are also subject to the lock-up, but only if they are deemed underwriting compensation in connection with the offering. [628] The imposition of a lock-up reflects FINRA's concern that "underwriters holding significant amounts of unregistered equity could dilute or manipulate the market for an issuer's equity securities immediately following the public offering, especially in the case of thinly traded issuers." [629]

Footnotes

574 FINRA was created in July 2007 through combination of the National Association of Securities Dealers ("NASD") and the member regulation operations of the NYSE. The current FINRA rulebook includes (i) FINRA rules and legacy NASD rules applicable to all member firms, unless more limited application is specified in such rule, and (ii) legacy NYSE rules applicable only to FINRA members that are also members of the NYSE. Helpful rule conversion charts can be found on FINRA's website: www.finra.org.

575 *See* FINRA Rules, Rules 5121, 5110(b)(1) and 5110(b)(7), FINRA MANUAL.

576 Control is presumed at 10% or more beneficial ownership of common or preferred equity, 10% or more interest in a partnership's profits or losses or the power to direct the management or policies of the relevant entity. Under this definition of control, ownership of nonvoting securities could fall within the definition if the ownership is substantial enough to influence management. Additionally, the criteria for control under FINRA Rule 5121 is not limited to securities beneficially owned by a participating FINRA member but also includes any such securities the FINRA member has the right to acquire within 60 days of its participation in the public offering. *See* FINRA Rules, Rule 5121(f)(6), FINRA MANUAL.

577 *See* FINRA Rules, Rule 5121(a), FINRA MANUAL.

578 FINRA Rule 5122 applies similar investor protections to certain private offerings made by a FINRA member or an entity that controls, is controlled by or is under common control with a FINRA member (as "control" is defined in the rule). Investors must receive written disclosure of the intended use of proceeds, the amount of offering expenses and the amount of compensation to be paid to the FINRA member in connection with the private offering, and such disclosure must be filed with FINRA on or before the date it is distributed to investors. FINRA Rule 5122 also places a 15% cap on the amount of offering proceeds the participating FINRA member can receive for costs, discounts, commissions or other sales incentives. Many types of private offerings are exempt from the requirements and limitations of FINRA Rule 5122, including offerings made under Rule 144A or Regulation S, offerings of investment-grade rated debt or preferred securities, as well as sales to employees and affiliates of the issuer, qualified purchasers under the Investment Company Act and qualified institutional buyers as defined in Rule 144A. Notably, however, FINRA Rule 5122 does apply to private offerings by FINRA members made in reliance on § 4(a)(2) of the Securities Act or Regulation D thereunder.

FINRA Rule 5123 generally requires FINRA members and associated persons to file with FINRA any private placement memorandum or term sheet used in connection with certain private offerings no later than 15 days after the document is provided to investors. Such disclosure must include a description of the anticipated use of offering proceeds and the amount and type of offering expenses and offering compensation. Because of its numerous exemptions—which include most offerings to institutional investors (including offerings made pursuant to Rule 144A) and offerings pursuant to Regulation S, as well as offerings of nonconvertible debt or preferred securities by issuers that meet the eligibility criteria for use of Form S-3 and F-3 for primary offerings—from a practical perspective the rule mainly applies to private placements by smaller issuers of securities to individual investors. *See* FINRA Rules, Rule 5123, FINRA MANUAL.

579 *See* FINRA Rule 5130, FINRA MANUAL.

580 *See* FINRA Rules, Notice to Members No. 03-79 (Dec. 2003); SEC Release No. 34-48701 (Oct. 24, 2003);

NASD Conduct Rules, IM-2110-1, FINRA MANUAL.

581 The term "equity security" is defined in FINRA Rule 5130 by reference to § 3(a)(11) of the Exchange Act.

Although FINRA Rule 5130 applies to IPOs of equity securities, as noted below, it exempts from its scope offerings of securities (whether in the form of ordinary shares or ADRs registered on Form F-6 under the Securities Act) that have a preexisting market outside the United States.

582 For this purpose, the term "associated person of a member" includes natural persons registered under FINRA rules, sole proprietors, partners, officers, directors and branch managers of a FINRA member or other natural persons occupying a similar status or performing similar functions, and natural persons engaged in the investment banking or securities business who are directly or indirectly controlling or controlled by a FINRA member. *See* FINRA By-Laws of the Corporation, Article I, Paragraph (rr), FINRA MANUAL.

583 "Beneficial interest" is broadly defined in FINRA Rule 5130(i)(1) to mean "any economic interest, such as the right to share in gains or losses," but does not include fees received by an entity for acting in a fiduciary capacity or managing or operating a collective investment account.

584 *See* FINRA Rules, Rule 5130(a), FINRA MANUAL.

585 *See* FINRA Rules, Rule 5130(i)(10), FINRA MANUAL.

586 The Securities Industry and Financial Markets Association has developed a standard form of representation letter that may be sent to prospective investors for this purpose and for purposes of obtaining representations under FINRA Rule 5131. In addition, certain third-party providers, such as Dealogic, offer a service whereby they will collect and maintain representation letters from prospective investors on behalf of FINRA member clients. *See* FINRA Interpretive Letter to Tom Fleming of Dealogic (Feb. 17, 2004).

587 FINRA Rules, Rule 5130(b), FINRA MANUAL. In single syndicate transactions that include both U.S. and non-U.S. underwriters, and in dual syndicate transactions in which there may be transfers of allocated securities between the U.S. and non-U.S. syndicates, there may be some question as to whether the non-U.S. underwriters are acting as "conduits" for the U.S. underwriters and thus would need to comply with the restrictions of FINRA Rule 5130 in connection with sales made to non-U.S. persons. In general, however, we are of the view that where a non-U.S. broker-dealer is selling securities to non-U.S. investors for which it bears the underwriting risk (where those non-U.S. investors have not been selected by a FINRA member), the non-U.S. broker-dealer should not need to comply with FINRA Rule 5130. On the other hand, if a FINRA member engages a non-U.S. broker-dealer to sell securities in the offering to non-U.S. investors for which the FINRA member bears the underwriting risk or with respect to which the FINRA member grants a selling concession, discount or other allowance to the non-U.S. broker-dealer, the non-U.S. broker-dealer may be viewed as a "conduit" for the FINRA member and should take steps to reasonably ensure that the non-U.S. offerees are not "restricted persons" under the rule. One such step required by standard U.S. master agreements among underwriters ("MAAUs") is for the FINRA member to ensure that any non-U.S. broker-dealer complies with FINRA Rule 5130 as if such non-U.S. broker-dealer were a member of FINRA.

Additionally, under the prior Interpretation, certain firms established barriers designed to prevent transfers of securities between the U.S. and non-U.S. syndicates (or between U.S. and non-U.S. underwriters in a single syndicate structure) in order to establish that non-U.S. underwriters would not receive selling compensation from the U.S. underwriters and thus that such non-U.S. underwriters were not subject to the Interpretation's prohibitions. Although FINRA Rule 5130 does not mandate such procedure, it might nonetheless continue to be useful as a means of establishing that the non-U.S. underwriters were not acting as "conduits" for the U.S. underwriters, particularly in U.S.-led offerings.

588 Although private placements are exempted from the rule, FINRA Rule 5130 does apply to IPOs of equity securities conducted outside the United States pursuant to Regulation S if the sales are made by a FINRA member or an entity (including, *e.g.*, a foreign broker-dealer or bank) acting as a "conduit" for a FINRA member. *See supra* Note 581.

589 FINRA Rules, Rule 5130(i)(9), FINRA MANUAL.

590 *See* FINRA Notice to Members No. 03-79 (Dec. 2003).

591 *See* FINRA Rules, Rule 5130(c)(6), FINRA MANUAL. Non-U.S. investment companies are eligible for this exemption only if (i) they are listed on a foreign exchange for sale to the public or authorized for sale to the public by a non-U.S. regulatory authority and (ii) no person owning more than 5% of its shares is a restricted person. A number of non-U.S. investment company trade associations submitted comment letters in connection with original NASD Rule 2790 objecting to the way in which this exemption was crafted. These letters contend that the exemption effectively precludes non-U.S. investment companies from participating in IPOs subject to the rule because non-U.S. funds frequently do not know who their ultimate beneficial owners are. (The same problem also precludes non-U.S. funds from relying on the exemption described above allowing sales to accounts in which the beneficial interests of restricted persons do not exceed 10% in the aggregate.) This remains an issue for non-U.S. investment companies as the exemptions did not substantively change when NASD Rule 2790 was redesignated as FINRA Rule 5130.

592 FINRA Rules, Rule 5130(c), FINRA MANUAL.

593 *See* FINRA Rules, Rule 5130(d)-(g), FINRA MANUAL.

594 In August 2002, the NASD first proposed rulemaking to prohibit certain allocation abuses. *See* NASD Notice to Members No. 02-55 (Aug. 2002). Then, in May 2003, the NASD and NYSE issued a joint task force report containing proposals for additional rulemaking regarding IPO allocation practices. *See* NYSE/NASD IPO Advisory Committee Report and Recommendations of a committee convened by the New York Stock Exchange, Inc. and the NASD at the request of the SEC (May 2003). The report articulated four general themes from which its recommendations were derived: (i) promoting transparency and avoiding aftermarket distortions, (ii) eliminating abusive allocation practices, (iii) improving access to information regarding IPOs, and (iv) encouraging underwriters to maintain high standards of conduct and promote education related to IPOs. Following the report, in November 2003, the NASD supplemented its existing rule proposal to reflect several of the report's recommendations, and in February 2004, the NYSE submitted its own rule proposal with respect to IPO allocations that largely mirrored the NASD proposed rule. *See* NASD Notice to Members No. 03-72 (Nov. 2003); SEC Release No. 34-50896 (Dec. 20, 2004).

The issue of abusive allocations of IPO shares was also addressed in connection with the April 2003 Global Research Settlement among the SEC, NYSE, NASD and various other securities regulators, on the one hand, and several of the largest investment banks, on the other. *See* § 14.07[5][b] for a discussion of the Global Research Settlement. In conjunction with the Global Research Settlement, the settling firms entered into a voluntary initiative pursuant to which they each agreed to implement policies and procedures reasonably designed to prevent the allocation of securities in "hot" IPOs (*i.e.*, those IPOs where the securities begin trading at a premium in the secondary market) to executive officers and directors of U.S. public companies and non-U.S. public companies with a principal equity trading market in the United States. *See* Press Release, SEC, Voluntary Initiative Regarding Allocations of Securities in "Hot" Initial Public Offerings to Corporate Executives and Directors (Apr. 28, 2003).

In addition, the SEC deemed it appropriate in April 2005 (especially following settlements regarding hot IPO allocations with certain investment banks earlier in the year) to issue an interpretive release reminding investment banks that attempts to induce aftermarket bids or purchases during a Regulation M restricted period violate the regulation (and indeed always have violated Regulation M). The release focuses, in particular, on the application of Regulation M to the book-building process, emphasizing the impermissibility of arrangements such as tie-ins (*i.e.*, agreements to purchase shares in the aftermarket in exchange for receiving an allocation), laddering (*i.e.*, allocating IPO shares based on a commitment to purchase shares at specified prices in the aftermarket) and certain other forms of soliciting aftermarket bids or purchases. SEC Release No. 33-8565 (Apr. 7, 2005). In addition to describing a number of examples of impermissible conduct during the restricted period, the release notes that certain conduct occurring after the restricted period, though not itself violative of Regulation M, could be evidence of an attempt at impermissible inducement. Citing several enforcement cases, the release specifically mentions: (i) carrying out follow-up solicitations for immediate aftermarket orders with customers who earlier indicated aftermarket interest; and (ii) tracking or monitoring customer purchases to determine if customers have purchased in accordance with their earlier indications of aftermarket interest (although the release recognizes that there may be legitimate reasons to monitor customer activity).

595 *See* FINRA Regulatory Notice 10-60 (Nov. 2010); SEC Release No. 34-63016 (Sept. 29, 2010).

596 FINRA Rules, Rule 5131 adopts the same definitions of "new issue" and "beneficial interest" found in FINRA Rule 5130. *See supra* Notes 579 and 583 and accompanying text.

597 *See* FINRA Rules, Rule 5131(a), FINRA MANUAL.

598 *See* FINRA Rules, Rule 5131(b)(1)(A)–(C), FINRA MANUAL.

599 *See* FINRA Rules, Rule 5131(b)(2), FINRA MANUAL; *supra* Notes 586–588 and accompanying text.

600 *See* FINRA Rules, Rule 5131(b)(2), FINRA MANUAL.

601 *See* FINRA Rules, Rule 5131, Supplemental Material.01, FINRA MANUAL. In making an IPO allocation in compliance with FINRA Rule 5131, FINRA members may rely on written representations provided by the beneficial owner of an account within the prior 12 months, provided such FINRA member does not believe, or have reason to believe, such representations are inaccurate. FINRA Rules, Rule 5131, Supplemental Material.02, FINRA MANUAL.

Additionally, effective February 3, 2014, FINRA adopted new supplemental guidance for FINRA Rule 5131, making it easier for certain "fund of funds" or similarly structured entities to receive IPO allocations. Under Supplemental Material.02(b), FINRA members are permitted to allocate IPO shares to an account that has provided a written representation that

- it does not look through to the beneficial owners of any "unaffiliated private fund" (as defined below) that has invested in the account (except for beneficial owners that are control persons of the investment adviser to such unaffiliated private fund); and
- any "unaffiliated private fund" that has invested in the account (a) is managed by an investment adviser; (b) has assets greater than $50 million; (c) owns less than 25% of the account receiving the IPO shares and no single investor in the "unaffiliated private fund" has an economic interest of 25% or greater; and (d) was not formed for the specific purpose of investing in the account to receive the IPO shares. *See* FINRA Rules, Rule 5131, Supplemental Material.02(b), FINRA MANUAL.

An "unaffiliated private fund" is defined as a private fund (as defined in the Investment Advisers Act) whose investment adviser does not have a "control person" in common with the investment adviser of the account to receive the IPO shares. A "control person" means a person with direct or indirect control over the investment adviser, as the term control is defined in Form ADV.

602 FINRA members are also obligated to promptly record and maintain information regarding any penalties assessed by such member on a representative in connection with a penalty bid. *See* FINRA Rules, Rule 5131(c)(2), FINRA MANUAL.

603 *See* FINRA Rule 5131(d)(4), FINRA MANUAL.

604 *See* FINRA Rule 5131(d)(1), FINRA MANUAL.

605 *See* FINRA Rules, Rule 5131(d)(2), FINRA MANUAL. As a practical matter, most IPO underwriting agreements now will include (i) an agreement by the book-running lead manager to notify the issuer of an impending lock-up waiver at least three business days prior to the effective date of the waiver and (ii) an agreement by the issuer to make public announcement of the waiver through a major news service at least two business days prior to the effective date of the waiver. Placing the obligation of public announcement on the issuer is permitted by Supplemental Material.03 to FINRA Rule 5131. To facilitate compliance with FINRA Rule 5131, forms of a lock-up waiver letter and an issuer press release announcing a waiver are often included as exhibits to IPO underwriting agreements.

606 *See* FINRA Rules, Rule 5131(d)(3), FINRA MANUAL.

607 *See supra* Notes 581 and 587.

608 FINRA Rules, Rule 5141, FINRA MANUAL. The rule does not apply to "at-the-market" offerings or to global

securities offerings where the U.S. portion is conducted on a private placement basis.

609 FINRA Rule 5141 replaced NASD Rules 2730, 2740 and 2750, as well as NASD IM-2730, IM-2740 and IM-2750. *See* FINRA Regulatory Notice No. 10-47, Note 5 (Oct. 2010).

610 Indeed, the SEC release proposing FINRA Rule 5141 specifically acknowledged that "[u]nderwriting terms in foreign jurisdictions vary considerably, as do applicable regulatory requirements" and that "[t]he relationships between foreign nonmembers and their customers are beyond the scope of the proposed rule change." Self-Regulatory Organizations; Financial Industry Regulatory Authority, Inc., Notice of Filing of Proposed Rule Change To Adopt FINRA Rule 5141 (Sale of Securities in a Fixed Price Offering) in the Consolidated FINRA Rulebook, SEC Release No. 34-62299 (June 16, 2010), 75 Fed. Reg. 35,105, 35,108 & n.31 (June 21, 2010).

611 FINRA Rules, Rule 5141(a) and Supplemental Material.01, FINRA MANUAL.

612 *See* SEC Release No. 34-62299 (June 16, 2010).

613 Securities that immediately trade in the secondary market at or above their public offering price are presumed to have been salable at the fixed public offering price, and, therefore, to have not been eligible for price reduction. *See* FINRA Rules, Rule 5141(a), FINRA MANUAL.

614 *See* FINRA Rules, Rule 5110(c)(1), FINRA MANUAL. Generally, in its reviews of public offerings subject to the provisions of FINRA Rule 5110 and/or the conflict of interest provisions of FINRA Rule 5121, FINRA examines copies of the relevant registration statement and offering document, the underwriting agreement and the engagement letter, if any, among other information, all of which must be filed with FINRA. FINRA staff has issued an interpretive letter pursuant to which it has concluded that free writing prospectuses prepared by any party are excluded from these filing requirements. FINRA Interpretive Letter to Eileen Ryan of the Securities Industry Association and Sarah Starkweather of The Bond Market Association (Aug. 1, 2006).

615 One notable exemption from the review requirements is for securities both (i) registered on Forms S-3 or F-3 pursuant to the standards for those forms in effect prior to October 21, 1992 and (ii) offered pursuant to Rule 415 under the Securities Act (the "Seasoned Issuer Exemption"). FINRA Rules, Rule 5110(b)(7)(C)(i), FINRA MANUAL. There have been significant changes in the eligibility standards for those forms since 1992, so an offering on one of those forms today may not, in fact, fit within this exemption. For example, prior to October 21, 1992, Form F-3 had a 36-month reporting history requirement and a public float requirement of $150 million (or $300 million for F-3 issuers). The reporting history requirement has since been reduced to 12 months for corporate issuers, and the public float test has been reduced to $75 million. *See* § 3.04[6]. Offerings of nonconvertible, investment-grade debt or preferred securities are also exempt from the FINRA review process. FINRA Rules, Rule 5110(b)(7)(B), FINRA MANUAL, unless participation of a QIU is required due to a FINRA "conflict of interest," *see supra* text accompanying Note 577 .

While there is no blanket FINRA filing exemption for WKSI shelf registration statements, in September 2013, FINRA implemented an immediate clearance process through which WKSI and certain other shelf filings can be automatically and immediately issued 24-hours a day, seven days a week. To be eligible for immediate clearance, (i) the submitter must represent that any additional information required to complete the FINRA filing will be submitted within three business days and (2) the FINRA filing fee must have been paid prior to the shelf having been filed with FINRA and wire transfer details must be provided. Prospectus supplements relating to offerings off a WKSI shelf generally will not need to be filed with FINRA for the three-year life of the WKSI shelf. No filing of a WKSI shelf is required if a general filing exemption under FINRA Rule 5110(c) is satisfied , unless participation of a QIU is required due to a FINRA "conflict of interest." *See supra* text accompanying Note 577. A same-day clearance process is also available for registered primary offerings conducted under Rule 415 under the Securities Act, subject to certain conditions. For shelf offerings that must be reviewed, there is generally "Life of Shelf" clearance, pursuant to which a FINRA member would be granted clearance for any offering based on the same shelf registration statement after the initial filing of the shelf documents with FINRA and receipt of a FINRA no-objections opinion covering that FINRA member (assuming certain other requirements are met).

Along with the shelf immediate clearance process, in September 2013, FINRA introduced two additional, streamlined clearance processes for nonshelf registration statements: limited review and expedited review. For the majority of IPOs, limited review generally is available and, because of its simplified filing process, is preferable for timely deal clearance. Because full review remains the default when submitting a transaction for review in FINRA's Public Offering System, counsel to the underwriters must select an alternative review process and make certain representations to FINRA regarding the terms of the underwriting compensation arrangements, including that all relevant documentation will be submitted to FINRA no later than five business days prior to the member's participation in the offering. FINRA staff then will consider counsel's request for an expedited or limited review in light of several factors, including the complexity of the underwriting arrangements and the timing of the transaction. For further information on the FINRA review options, please *see* FINRA's Public Offering Review Programs Guide, http://www.finra.org/sites/default/files/p353162.pdf (May 2016).

616 *See* FINRA Rules, Rules 5110(b)(7) and 5110(b)(8), FINRA MANUAL.

617 Certain underwriting arrangements have been determined by FINRA to be *per se* unreasonable and specifically forbidden by FINRA Rule 5110(f)(2). Such prohibited arrangements include the underwriter's receipt of a nonaccountable expense allowance in an amount greater than 3% of the offering proceeds and any right of first refusal ("ROFR") with a duration of more than three years or that provides more than one opportunity to waive the refusal right for a fee. As of May 2014, FINRA no longer considers certain agreements to pay an underwriter a termination fee or grant a ROFR in a terminated transaction *per se* unreasonable. Such agreements are permissible, provided that (i) the agreement specifies that the issuer has a right of "termination for cause" that eliminates its obligation to pay the termination fee or grant the ROFR; (ii) the fees to be paid under the agreement are not excessive, but reasonable and customary; and (iii) the agreement is void two years from the date of termination.

618 *See* FINRA Rules, Rule 5110(f)(2)(J), FINRA MANUAL.

619 *See* § 3.02[9][d] for a discussion of syndicate short sales.

620 Parties subject to the Corporate Financing Rule include all FINRA members participating in the public offering (whether in an underwriting or other capacity), affiliates (including non-U.S. affiliates) of the participating FINRA members, associated persons of the participating FINRA members (and their immediate family members), financial consultants and advisers, finders and underwriters' counsel. *See* FINRA Rules, Rules 5110(a)(4) and 5110(a)(6), FINRA MANUAL. These parties are collectively referred to herein as the "underwriting group."

Underwriters occasionally enter into agreements under which they agree to compensate out of their own pockets a finder or consultant in connection with an offering. In these circumstances, even though the aggregate amount of compensation paid by the issuer to the underwriting group is unaffected, the fee paid to the finder or consultant by the underwriters may be viewed as "underwriting compensation" by FINRA since it is technically an "item of value" received by an entity falling within the scope of the underwriting group. FINRA has indicated that it should be informed of such arrangements so that it can make a determination as to whether the payment should be viewed as "underwriting compensation" and disclosed in the prospectus as such. Note that both the Corporate Financing Rule and SEC Regulation S-K require disclosure in the prospectus of all items considered by FINRA to constitute underwriting compensation. *See* FINRA Rules, Rule 5110(c)(2)(C), FINRA MANUAL; Item 508(e) of Regulation S-K. *See also supra* Note 328 for a discussion of the treatment of overallotment options that are structured as "free options" as underwriters' compensation.

621 *See* FINRA Rules, Rule 5110(c)(1), FINRA MANUAL. FINRA Rule 5110(c)(2)(E) states that the amount of underwriting compensation considered "fair and reasonable" varies directly with the amount of risk assumed by the underwriting group and inversely with the aggregate amount of offering proceeds. In addition, although no stated maximum amount of underwriting compensation is set forth in the Corporate Financing Rule, historically, FINRA staff has informally indicated its view that such compensation should generally not exceed 8% or 9% of the offering proceeds. (Shelf offerings are no longer required to include a

representation in the disclosure document that the maximum underwriting compensation in connection with any offering under the shelf will not exceed 8%.) If the maximum compensation threshold is exceeded due to the receipt of items of value other than the underwriting discount itself (*see* discussion below regarding the broad definition of "items of value"), in certain circumstances, one or more FINRA members may need to be expelled from the underwriting group in order to bring the aggregate amount of underwriting compensation below the acceptable limit.

622 *See* FINRA Rules, Rule 5510(d)(1), FINRA MANUAL.

623 *See* FINRA Rules, Rule 5510(d)(2), FINRA MANUAL.

624 Because FINRA's Corporate Finance Department must be able to determine that the maximum amount of underwriting compensation to be paid by the issuer to the underwriting group in connection with a public offering is not "unfair and unreasonable," they often require expense reimbursement sections in underwriting or other deal-related agreements to include a cap on the overall amount to be reimbursed by the issuer. This capped amount, representing the maximum possible reimbursement to the underwriter group, is then factored into the overall underwriting compensation analysis.

625 FINRA Rules, Rule 5110(c)(3)(B)(ii), FINRA MANUAL. The rule also provides that nonconvertible and nonexchangeable debt securities and derivative instruments acquired or entered into during the compensation review period (*i.e.*, the period beginning 180 days prior to the filing of the registration statement with FINRA and ending 90 days after the commencement of the offering) are not considered items of value so long as they are at a "fair price" (as such term is defined in the rule) and acquired or entered into in the ordinary course of business in transactions unrelated to the public offering. *See* FINRA Rules, Rule 5110(c)(3)(B)(vi) and (vii), FINRA MANUAL. If such securities are acquired or derivatives entered into in connection with the public offering, they will be deemed items of value and will count as underwriting compensation, but if entered into at a fair price, will have zero compensation value for purposes of determining the overall compensation limit. *See* FINRA Rule 5110(e)(5), FINRA MANUAL.

626 *See* SEC Release No. 34-48989 (Dec. 23, 2003).

627 Qualification for each of the five excepted transaction categories requires satisfaction of further detailed requirements. *See* FINRA Rules, Rule 5110(d)(5), FINRA MANUAL.

628 In addition to exceptions to the lock-up covering certain transfers, such as transfers by operation of law or in connection with the reorganization of the issuer, the Corporate Financing Rule excepts from the lock-up requirements securities acquired subsequent to the issuer's IPO pursuant to a sale under Rule 144A under the Securities Act, as well as securities held by the underwriter or a related person that equal less than 1% of the total securities being offered in the IPO. *See* FINRA Rules, Rule 5110(g)(2), FINRA MANUAL. Acquisitions of securities to prevent dilution of an investor's position, including as a result of preemptive right exercises, stock splits or *pro rata* rights offerings or the conversion of securities not deemed to be underwriting compensation are also not subject to the lock-up requirement. *See* FINRA Rules, Rule 5110(g)(1), FINRA MANUAL.

629 *See* NASD Notice to Members No. 04-13 (Feb. 2004).

U.S. Regulation of the International Securities and Derivatives Markets, § 4.01, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 4.01 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

p. 4-7

This chapter describes the circumstances requiring the registration of securities in the United States under the Securities Act and the Exchange Act, disclosure requirements applicable to foreign issuers that have registered their securities under the Securities Act or the Exchange Act and considerations for such public companies communicating with their investors and financial analysts in the United States. The Securities Act provides a statutory framework for the disclosures an issuer must make to conduct a public offering in the United States, while the Exchange Act provides a framework for the disclosures an issuer must make in connection with both (i) an initial registration of securities that are listed on a national (U.S.) securities exchange or of equity securities that are otherwise publicly held, [1] and (ii) periodic reports following initial registration. After discussing registration and the disclosure regime for a public company, the final section of this chapter summarizes the process for subsequently delisting and deregistering securities in the United States.

Both acts provide that the SEC specify the detailed disclosure requirements through its rules. In fact, the disclosure requirements set out in those rules under the Securities Act and the Exchange Act are currently largely identical. [2]

p. 4-7

p. 4-8

Foreign issuers file Form 20-F, which contains detailed disclosure requirements for foreign companies, with the SEC both for an initial registration of a class of securities under the Exchange Act and for annual reports filed under the Exchange Act. Form 20-F is also the source of disclosure requirements for registration statements filed by foreign issuers under the Securities Act to register public offerings of securities. Following an issuer's initial registration, an issuer can generally conduct a public offering of securities with a Securities Act registration statement that "incorporates by reference" the required information from previously filed Exchange Act reports. [3] This feature of the integrated disclosure regime reduces the size of the prospectus in a registration statement under the Securities Act and the time necessary for its preparation.

Footnotes

1 Section 12(b) of the Exchange Act requires registration of securities listed on a national (U.S.) securities exchange. Under § 12(g) of the Exchange Act, foreign issuers must register a class of equity securities if the issuer has total assets exceeding $10,000,000 and that class of securities is held of record by (i) 2,000 or more worldwide holders (or, for an issuer that is not a bank, a bank holding company or a savings and loan holding company, 500 or more worldwide holders who are not "accredited investors") and (ii) 300 or more U.S. holders. *See* Rule 12g3-2(a) under the Exchange Act (exempting from registration foreign issuers with fewer than 300 U.S. holders, based on the exemptive authority granted to the SEC under § 12(g)(3) of the Exchange Act); *see also* Rule 12g5-1 under the Exchange Act (defining securities "held of record" for purposes of § 12(g) of the Exchange Act); Rule 501(a) under the Securities Act (defining "accredited investors" as used in Regulation D).

2 Originally, the disclosure required under the Securities Act was not the same as the disclosure required under the Exchange Act, and the two regimes were administered separately. Beginning in the early 1980s,

however, the SEC developed the view that the information necessary for investors purchasing in a distribution should be the same as the information necessary for investors to make informed secondary market trading decisions (which was the primary rationale for imposing periodic reporting in the Exchange Act). This recognition led to two important developments. First, the accounting and disclosure requirements for a public offering were made substantially identical to the accounting and disclosure requirements for registration of a class of securities under the Exchange Act or for periodic reporting thereunder. *See* SEC Release No. 33-6437 (Nov.19, 1982). In 2008, the SEC eliminated one lingering inconsistency in the accounting requirements for financial statements, as described in § 4.05[3]. Second, an integrated disclosure system was developed, an important consequence of which was shelf registration and later automatic shelf registration.

Although registration and periodic reporting under the Exchange Act now require disclosures similar to those required under the Securities Act, some differences remain. For example, the requirements in § 404 of the Sarbanes-Oxley Act— *i.e.*, to maintain internal control over financial reporting and for management to provide an annual assessment of the effectiveness of internal control over financial reporting—are only required in annual reports. *See* § 5.03[5]. Certain other disclosure requirements under the Sarbanes-Oxley Act—the auditor attestation requirement, disclosures on audit committee financial experts, codes of ethics, etc.—also are only required in annual reports. *See* § 5.03[5] for discussion of these requirements.

Another example is the conflict minerals and mine safety disclosures required under the Dodd-Frank Act, which are only required in periodic reports. *See* § 4.08.

3 §§ 13(a) and 15(d) of the Exchange Act. *See* § 3.02[1][b] for a discussion of the Securities Act registration statement forms.

U.S. Regulation of the International Securities and Derivatives Markets, § 4.02, EVENTS REQUIRING REGISTRATION, AND THE RESULTING PUBLIC DISCLOSURE OBLIGATIONS

U.S. Regulation of the International Securities and Derivatives Markets

[1] Public Offering in the United States

Any foreign issuer conducting a public offering in the United States must register the securities being offered under the Securities Act, unless an exemption from registration is available. If the securities will also be listed on an exchange or, in the case of equity securities, if the issuer meets certain size and shareholder levels, the issuer must also register those securities under the Exchange Act pursuant to §§ 12(b) and 12(g) thereof. If the securities are registered under § 12 of the Exchange Act or offered pursuant to a registration statement that became effective under the Securities Act, the issuer generally becomes subject to periodic and supplementary reporting obligations under the Exchange Act.

[2] Securities Act Registration Statements and Resulting 15(d) Registration

Although securities sold in a public offering in the United States would need to be registered under the Securities Act, they would not necessarily need to be registered under the Exchange Act. For example, if an issuer (whether U.S.

p. 4-9

or foreign) publicly offers debt securities in the United States without a U.S. listing, or a foreign issuer publicly offers equity securities in the United States without a listing or quotation on the OTC Bulletin Board and after the offering there are fewer than 300 U.S. holders, no Exchange Act registration is necessary. [4] However, as a result of having a registration statement (for debt or equity securities) declared effective under the Securities Act, § 15(d) of the Exchange Act requires an issuer to file with the SEC the same periodic reports under the Exchange Act for the fiscal year in which the Securities Act registration statement became effective (assuming securities were sold thereunder) and for any subsequent year in which there are 300 or more U.S. holders of record [5] of the class of securities as it would have had to file if the class had been registered under the Exchange Act. [6] If the securities are held of record by less than 300 persons on a worldwide basis or less than 300 persons resident in the United States

p. 4-9

p. 4-10

(for debt or equity securities), or if the trading volume in the United States is 5% or less of its worldwide trading volume during a recent 12-month period (for equity securities), then a foreign private issuer may terminate its Exchange Act periodic reporting obligations by filing a certification on Form 15F with the SEC and satisfying all the other conditions under Rule 12h-6, which include a one-year reporting history and the filing of at least one annual report. [7]

[3] Exchange Act Registration

[a] Requirements

[i] *Listed Securities*

Any issuer (either U.S. or foreign) that has a class of securities listed on a U.S. securities exchange must register that class under the Exchange Act. [8] This requirement applies whether or not there has been a public offering of the securities in the United States. Thus, a foreign issuer wishing to diversify its shareholder base by listing a class of its outstanding securities on the NYSE or Nasdaq must register that class of securities under the Exchange Act.

The registration requirement for securities listed on an exchange applies to both debt and equity. Thus, U.S.-listed bonds issued by a foreign government, as well as U.S.-listed shares or debt securities issued by a foreign company, are all required to be registered. Listing ADRs on an exchange requires registration of the underlying ordinary shares or other underlying securities. Since Exchange Act registration is necessary before the securities begin trading, registration is coordinated with the approval of listing by the pertinent exchange and, in the case of a U.S. public offering, with the registration process under the Securities Act.

A registration statement filed under the Exchange Act in connection with a listing becomes effective 30 days after the SEC receives the exchange's certification of its approval, but the SEC staff can and generally will accelerate the effective date if there are no unusual disclosure issues. [9] There is no material difference between the disclosure about the company and its affairs required in an

p. 4-10
p. 4-11

Exchange Act registration statement for debt securities and that required for equity securities.

[ii] *A Class of Widely Held Equity Securities*

Registration under the Exchange Act may also be required, regardless of whether the issuer seeks an exchange listing, if the issuer meets certain size and shareholder levels. If a U.S. company other than a bank, a bank holding company or a savings and loan holding company has $10 million or more in assets on the last day of its most recent fiscal year, it must register any class of equity securities if it is held of record by either 2,000 or more persons or by 500 or more persons that are not accredited investors. [10] An issuer that is required to register a widely held class of unlisted equity securities must file an Exchange Act registration statement within 120 days after the end of the fiscal year in which it exceeded the thresholds for the number of shareholders and total assets. The registration statement becomes effective 60 days after filing unless the SEC accelerates the effective date. [11]

The rules for foreign private issuers are somewhat different. As a general rule, a foreign issuer meeting the minimum asset requirement must register any class of equity securities if it is held of record by 2,000 or more persons worldwide, including 300 or more persons resident in the United States. [12] However, the securities are exempt from registration if the issuer is eligible for an exemption pursuant to Rule 12g3-2(b) under the Exchange Act. [13]

[iii] *Succession*

Subject to certain exceptions, under Rule 12g-3 under the Exchange Act, if a class of securities of an issuer that is not already registered pursuant to § 12 of

p. 4-11
p. 4-12

the Exchange Act is issued, in connection with a succession [14] by merger, consolidation, exchange of securities, acquisition of assets or otherwise, to the holders of any class of securities of another issuer that is so registered, then the class of securities of the successor issuer will be deemed to be registered under the Exchange Act. [15] Such securities will not be deemed to be registered, however, if, upon consummation of the succession (i) the class of securities issued by the successor issuer is exempt from Exchange Act registration requirements other than by Rule 12g3-2, (ii) all securities of such class are held of record by fewer than 300 persons worldwide or (iii) the successor issuer is a Canadian corporation meeting certain additional requirements.

Unless one of the exceptions applies, the successor issuer must file with the SEC an annual report on behalf of the acquired company, covering the acquired company's last full fiscal year before the succession occurred, containing information that would have been required if filed by the acquired company, unless that annual report has already been filed. The filing must take place, in the case of a foreign issuer, within four months of the end of the fiscal year for which it is required. [16] In addition, the successor issuer will be required to file with the SEC annual reports in respect of its own business "for each fiscal year beginning on or after the date as of which the succession occurred." [17] In the interim, before filing its first annual report on Form 20-F, the issuer's shares can

p. 4-12

p. 4-13

be listed and traded on a national securities exchange or traded on the OTC Bulletin Board. A previously non-reporting acquiror may avail itself of the successor provisions to start a trading market for its securities in the United States even if there is a lapse of time before it must file its first annual report.

Rule 12h-6(d) under the Exchange Act, adopted in 2007, enabled a non-Exchange Act reporting foreign private issuer that acquires a reporting foreign private issuer in a transaction exempt under the Securities Act, for example, under Rule 802 [18] or § 3(a)(10) of the Securities Act, to qualify immediately for termination of its Exchange Act reporting obligations under Rule 12h-6, without having to file an Exchange Act annual report, as long as the successor issuer meets the Rule's foreign listing, dormancy and quantitative benchmark conditions, and the acquired company's reporting history fulfills Rule 12h-6's prior reporting condition. [19] However, if a previously non-Exchange Act reporting foreign private issuer acquires an Exchange Act reporting company by consummating an exchange offer, merger or other business combination registered under the Securities Act, most likely through use of a Form F-4 registration statement, the acquiror would have to fulfill Rule 12h-6's prior reporting condition without reference to the acquired company's reporting history. [20]

[iv] *Rule 12g3-2(b) Exemption*

As discussed in § 3.04, a foreign issuer that has sponsored an American Depositary Receipt ("ADR") program with respect to its outstanding shares but has not obtained a U.S. exchange listing can qualify for an exemption under Rule 12g3-2(b). [21] Since in such a case the issuer has taken steps to promote trading of its securities in the United States, it seems reasonable to require the issuer either to register the securities or to have an exemption. But what many foreign issuers fail to realize is that, as discussed in § 4.02[3][a][ii], the registration provisions of the Exchange Act apply by their terms whether or not a foreign issuer has taken any action to cause or increase the trading of its securities in the United States. Thus, if there are 300 or more holders of record in the United States of any class of equity securities that is issued by any foreign issuer and held of

p. 4-13

p. 4-14

record worldwide by at least 2,000 persons, and the issuer otherwise meets the asset test described above, it technically must either register that class or be eligible for the exemption provided by Rule 12g3-2(b). [22] If required to register, it must file an Exchange Act registration statement within 120 days after the end of the fiscal year in which it exceeded the thresholds for assets and numbers of shareholders described above. [23]

Under Rule 12g3-2(b), as amended in 2008, a foreign company is automatically exempt from the registration requirement of § 12(g) if:

- it has no active Exchange Act reporting obligations under § 13(a) or § 15(d) (this means essentially that the foreign issuer has not listed or publicly offered securities in the United States);
- it maintains a listing of its shares [24] on one or more non-U.S. exchanges that are its "primary trading market"; [25] and
- it publishes on its website, [26] in English, the material information [27] that it makes public in its home

country, files with the principal exchange(s) in its

p. 4-14
p. 4-15

primary trading market or distributes to its securityholders. [28] To be eligible for the exemption initially, the foreign company must have already electronically published on its website in English all of the relevant documents [29] that it has published, filed or distributed since the beginning of its most recent fiscal year. Thereafter, the English documents must be published promptly [30] after publication or distribution in the home market.

Information electronically published by a foreign issuer on its website pursuant to Rule 12g3-2(b) is not considered to be filed with the SEC for the purposes of § 18 of the Exchange Act and is not otherwise subject to the liabilities imposed by that section. [31] Furthermore, obtaining an exemption and publishing information on a website pursuant to Rule 12g3-2(b) does not cause a foreign company to become an issuer subject to the Sarbanes-Oxley Act.

The SEC's rules only allow a depositary bank to establish an unrestricted ADR facility for a foreign issuer if either the issuer of the underlying shares is a reporting company under the Exchange Act, or the shares are exempt from registration under Rule 12g3-2(b). [32] The 2008 amendments to Rule 12g3-2(b) eliminated requirements for issuers to apply for the exemption and to submit documents to the SEC. This extended the exemption to vast numbers of foreign companies, increasing the number of foreign companies whose shares would be eligible for ADR facilities. While this made it easier for foreign companies to establish "sponsored" ADR facilities pursuant to an agreement between a foreign company and a depositary bank, it also made it easier for banks to establish "unsponsored" ADR facilities without such an agreement, because foreign companies' consent or cooperation is no longer necessary to allow banks to establish

p. 4-15
p. 4-16

unsponsored ADR facilities. Such depositary banks can simply establish an unsponsored ADR facility based on their reasonable, good faith belief, after exercising reasonable diligence, that a foreign company complies with Rule 12g3-2(b). [33] Many new unsponsored ADR facilities have been set up since the effectiveness of the amendments.

Foreign companies also may seek to ensure that they benefit from the Rule 12g3-2(b) exemption to avoid the information-furnishing requirements of Rule 144A under the Securities Act. [34]

The exemption under Rule 12g3-2(b) is available to a foreign company until it either (i) fails to make required publications, (ii) fails to maintain a listing of its shares on its primary trading market or (iii) registers a class of securities under § 12 or otherwise incurs reporting obligations under § 15(d) of the Exchange Act. [35] The SEC has not provided any cure period for foreign companies that fail to make required publications in order to maintain their eligibility for the exemption. Difficulties with the SEC arose in the past where a foreign issuer that exceeded the registration threshold allowed the exemption to lapse and then sought to requalify for the exemption. However, in the release accompanying the final rule amendments, the SEC indicated that a foreign company must either re-establish compliance "in a reasonably prompt manner" or else register under the Exchange Act. [36] A foreign issuer seeking to ensure that it can avail itself of the exemption should therefore develop internal procedures to ensure ongoing publication on its website of required documentation.

[b] Classes of Issuers

[i] *Foreign Private Issuers*

Registration under the Exchange Act of a class of securities of a foreign issuer is made on Form 20-F. [37] Selected financial data for the past five years

p. 4-16
p. 4-17

must be provided, including audited financial statements for the three most recent financial years, [38] together with a complete business description, an MD&A, [39] risk factors and a description of the terms of the class of securities being registered. [40]

[ii] *Foreign Government Issuers*

Foreign government issuers and certain other issuers eligible to register public debt offerings on Schedule B to the Securities Act must register securities that are listed on a U.S. exchange and file annual reports on Forms 18 and 18-K, respectively, under the Exchange Act. The requirements of these forms are comparable to the requirements of Schedule B and call for disclosure appropriate for such issuers. [41] Some large government issuers voluntarily register and file periodic reports in order to provide updated information that is incorporated by

p. 4-17

p. 4-18

reference in their Securities Act shelf registration statements in order to facilitate rapid access to the market. [42]

[c] Periodic Reporting

[i] *Annual Reports on Form 20-F*

All foreign private issuers with a class of securities registered under the Exchange Act or subject to Exchange Act reporting requirements under § 15(d) [43] are required to file annual reports on Form 20-F within four months after the end of a fiscal year. [44]

In accordance with § 408 of the Sarbanes-Oxley Act, the SEC conducts regular and systematic reviews of annual reports on Form 20-F of every foreign issuer at least once every three years, although it provides no indication of when a review is underway or when comments might be forthcoming. The scope of the review covers all of the disclosure in the filing, including financial statements, and is often followed by a comment letter requiring the issuer's responses and, as necessary, revisions to the disclosure in the Form 20-F. However, SEC reviews do not necessarily cover the entire document. The SEC typically requests that the company respond to the comments within 10 business days, although companies requiring more time to respond have often been able to obtain extensions. In most cases, the SEC requests that companies make changes to their disclosure in

p. 4-18

p. 4-19

subsequent fiscal years, although if the SEC considers that an issue merits more immediate attention, it can request that the current year Form 20-F be amended.

Foreign issuers that have filed annual reports on Form 20-F are not necessarily required to accept the SEC's comments or recommendations, although the SEC has the discretion to seek enforcement action against the company or its management. In addition, if a foreign issuer with unresolved comments on its Form 20-F seeks to register a securities offering on a registration statement that is not automatically effective, the SEC could refuse to declare the registration statement effective until the company resolves the SEC's comments. Item 4A of Form 20-F requires a company that is an accelerated filer, a large accelerated filer or a well-known seasoned issuer to disclose in its annual report any material SEC comments that were received 180 days or more before the end of the fiscal year to which the annual report relates and remain unresolved. [45]

While all foreign private issuers filing annual reports can expect regular reviews, under § 408 of the Sarbanes-Oxley Act, the frequency of the SEC's review may be increased for: (i) issuers that have issued material restatements of financial statements, (ii) issuers that experience significant volatility in their stock price as compared with other issuers, (iii) issuers with the largest market capitalization, (iv) emerging companies with disparities in price to earnings ratios and (v) issuers whose operations significantly affect any material sector of the economy. [46] Recent experience and SEC guidance suggest that the Form 20-F annual reports of large foreign issuers will continue to be subject to review on a more frequent basis than the three-year minimum.

[ii] *Interim Reports*

SEC rules require U.S. issuers to file quarterly reports on Form 10-Q as well as annual reports on Form 10-K. [47] Foreign issuers are only required by the SEC to file annual reports on Form 20-F. However, if foreign issuers make interim reports available for legal reasons (*e.g.*, if required by another country having jurisdiction over a foreign issuer) or as a matter of practice, these reports would be filed on Form 6-K as discussed below. [48] Both the NYSE and Nasdaq

p. 4-19

p. 4-20

require at least semi-annual financial reporting as a condition of listing, including by foreign issuers, and any such reports would then be filed with the SEC. [49]

[iii] *Current Reports on Form 6-K*

Form 6-K requires that a foreign private issuer promptly provide to the SEC and to each U.S. stock exchange on which its securities are listed material information about the issuer or its subsidiaries that the issuer (i) made public in its country of domicile or incorporation pursuant to the law of that country, (ii) filed with any foreign stock exchange on which its securities are listed and that was made public by such exchange or (iii) distributed to its securityholders. [50] This information would include periodic financial reports in the home jurisdiction or to foreign exchanges and could also concern changes in management or control, acquisitions or dispositions of a material amount of assets, changes in the company's certifying accountants, financial condition or results of operations, material legal proceedings, changes in the constituent documents governing the terms of any class of securities registered with the SEC, material increases or decreases in the outstanding amount of the company's securities or indebtedness, the results of the submission of matters to a vote of the company's securityholders or any other information that the company deems of material importance. [51]

With respect to acquisitions or dispositions of material amounts of assets, foreign companies are generally subject to less rigorous reporting requirements

p. 4-20

p. 4-21

than U.S. companies subject to the Exchange Act's periodic reporting requirements. U.S. companies must file on Form 8-K detailed information about any material acquisition or disposition of assets, including historical and/or *pro forma* financial statements presented in accordance with U.S. GAAP. [52] In contrast, a foreign company is not required to file additional information with the SEC, but if the information is material and is otherwise made public, it must then be filed "promptly" on Form 6-K. Such information may be much more limited in scope. [53]

When information is made public by press release, distributed directly to securityholders or contains annual audited or interim consolidated financial information, a full English translation is required if the information is not already in English. [54] In most other cases, including generally with respect to reports required to be furnished and made public under the laws of a foreign issuer's home country or the rules of any foreign stock exchange, English summaries meeting the requirements of Rule 403(c)(3)(ii) under the Securities Act and Rule 12b-12(d)(3)(ii) under the Exchange Act may be used. [55]

p. 4-21

p. 4-22

The obligation to file current reports is not procedurally burdensome because Form 6-K consists simply of cover and signature pages, signed by a duly authorized officer, to which the relevant information is attached. [56] Copies of the original documents are not required, and the documents included in a report on Form 6-K are not considered to be filed for the purposes of § 18 of the Exchange Act or otherwise subject to the liabilities imposed by that Section. [57] However, disclosures in the documents are subject to Rule 10b-5 under the Exchange Act and general antifraud provisions, and the SEC may also bring an administrative proceeding if the Form 6-K contains materially misleading information. [58]

[iv] *Notification Requirements*

Rule 10b-17 under the Exchange Act imposes, in certain circumstances, an affirmative notification requirement on issuers of securities that are publicly traded in the United States. For example, issuers with securities listed on the NYSE must provide notification, either to FINRA or in accordance with the relevant exchange procedures, of specified dividends, stock splits, reverse splits, rights or other subscription offerings no later than ten days prior to the record date involved or, in case of a rights subscription (or other offering if advance

p. 4-22

p. 4-23

notice is not practical), on or before the record date. [59] FINRA also requires compliance with Rule 10b-17 as a condition to trading on over-the-counter markets. [60]

[v] *Proxy Materials and Reports to Shareholders*

The Exchange Act and rules thereunder also set forth requirements with respect to the solicitation of proxies (written authorizations permitting other individuals to vote securities on behalf of securityholders) from holders of securities registered under the Exchange Act. [61] These provisions specify the information required to be disclosed to securityholders prior to or at the time of a proxy solicitation, the presentation of such information, the form of proxies and the treatment of proposals made by securityholders. They also prohibit certain proxy solicitations and false or misleading statements in proxy materials and require an annual report (containing financial statements and an MD&A largely equivalent to that required in a Securities Act registration statement) to be furnished to securityholders prior to or at the time of a proxy solicitation. [62]

Foreign companies are generally exempt from these provisions. [63] However, foreign companies that have securities listed on a national securities exchange are required by the relevant exchange to make annual reports that are required to be filed with the SEC available to U.S. holders of their listed securities. [64] The NYSE also has established rules requiring an "actively operating"

p. 4-23

p. 4-24

company to solicit proxies from its shareholders for all shareholder meetings, [65] although the NYSE may grant, in very limited circumstances, an exemption from this rule when applicable law precludes or makes virtually impossible the solicitation of proxies in the United States. [66] Foreign companies whose securities are not so listed are not subject to any requirement to provide reports or notices to securityholders in the United States. They nevertheless may choose to do so in accordance with their home-country laws and practices. Often, this will mean that notices will be given through publication in newspapers in an issuer's home country. If a foreign company has a sponsored ADR program, however, it will usually agree to make the notices or reports available to the depositary, which will agree in turn to forward them to the ADR holders. [67]

[vi] *Annual Special Disclosures on Conflict Minerals*

In order to comply with the Dodd-Frank Act, in 2012, the SEC adopted rules on specialized disclosure relating to the use of conflict minerals from

p. 4-24

p. 4-25

covered countries. [68] [69] These rules set forth additional requirements for periodic reporting. Section 4.08 discusses the framework and current status of these required disclosures.

Footnotes

4 *See* §§ 12(b) and 12(g) of the Exchange Act and Rules 12g-1 and 12g3-2(a) thereunder. *See also supra* Note 1 (describing conditions under which an Exchange Act registration statement is not required).

5 In general, a security is deemed to be held of record by each person identified as such in records of

securityholders maintained by or on behalf of the issuer. Rules 12g3-2(a) and 12g5-1 under the Exchange Act. There is no general duty of inquiry placed on issuers, and issuers may rely on such records, except when securities are held of record by a broker-dealer, securities depository (such as DTC), bank (including an ADR depositary) or a nominee for any of them. Rules 12g3-2(a) and 12g5-1 under the Exchange Act; SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Rules, Question 152.01 (Sept. 30, 2008). In such a case, the issuer must inquire of such financial intermediaries as to the ownership of such securities, and the securities are counted as held in the United States by the number of separate U.S. resident customer accounts for which the securities are held. Rule 12g3-2(a) under the Exchange Act. In addition, if the issuer is aware of the existence of an ADR facility for its bearer equity securities (whether sponsored or unsponsored), the issuer must contact the depositary for the ADR facility, request the number of U.S. holders on the depositary's records, and include this figure in its total number of U.S. securityholders. Rule 12g5-1(b)(1) under the Exchange Act. An issuer may rely in good faith on information about the residence of (i) the beneficial owner of securities held in "street name" that is furnished by the broker, dealer, bank or nominee that is the record holder of securities and (ii) the record holder of ADRs evidencing bearer securities that is furnished by the depositary for the ADR program. Rules 12g3-2(a) and 12g5-1(b)(1) under the Exchange Act.

6 *See* § 15(d) of the Exchange Act; *see also* SEC, Division of Corporation Finance, Staff Legal Bulletin No. 18 (Mar. 15, 2010), Fed. Sec. L. Rep. (CCH) ¶60,018 (confirming that reporting requirements are not triggered by an abandoned offering). Section 15(d) does not in fact provide that an exemption from registration is available for a foreign issuer if such foreign issuer has fewer than 300 U.S. holders, but instead provides for such exemption if the subject securities "are held of record by less than 300 persons or, in the case of a bank, a savings and loan holding company (as defined in § 10 of the Home Owners' Loan Act), or a bank holding company, as such term is defined in § 2 of the Bank Holding Company Act of 1956 (12 U.S.C. 1841), 1,200 persons" without distinguishing the type of issuer or where the holders are located. While the SEC staff interprets § 15(d) technically to refer to the number of holders worldwide, it has provided no-action relief to foreign issuers whose worldwide holders exceeded 300 in number but whose U.S. holders did not. *See*, *e.g.*, *Suncor Inc*. (avail. Mar. 11, 1982); *Super-Sol Ltd*. (avail. Jan. 4, 1982). The requirement to file periodic reports for the first fiscal year or for any subsequent year when there are 300 or more U.S. holders, even if not registered under the Exchange Act, does not apply to foreign government issuers.

7 Rule 12h-6 under the Exchange Act. *See* § 4.03[a][iii] for a discussion of the conditions required under Rule 12h-6.

8 §§ 12(a) and 12(b) of the Exchange Act. Prior to Nasdaq's transition to a national securities exchange on August 1, 2006, securities quoted on Nasdaq had to be registered under § 12(g) of the Exchange Act. *See* § 2.01, Note 2 for discussion of Nasdaq's transition to a national securities exchange.

9 § 12(d) of the Exchange Act.

10 § 12(g) of the Exchange Act and Rule 12g-1 thereunder; *see* s *upra* Note 6. The Jumpstart Our Business Startups Act, Pub. L. No. 112-106, 126 Stat. 306 (the "JOBS Act"), which was signed into law on April 5, 2012, amended § 12(g) of the Exchange Act to increase the holder of record threshold from 500 persons to 2,000 persons. The JOBS Act also created a separate holder of record threshold for banks, bank holding companies and savings and loan holding companies, which is 2,000 persons with no limit on the number of investors that are not accredited investors. For all companies, the holder of record threshold was amended to exclude securities held by persons who received the securities pursuant to employee compensation plans in transactions exempt from Securities Act registration, but in adopting these changes into the Exchange Act rules, the SEC also amended Exchange Act Rule 3b-4 to clarify that employees must continue to be counted for purposes of determining a company's foreign private issuer status. *See* SEC Release No. 33-10075 (May 10, 2016); *see also* § 3.01, Note 1 for a definition of "foreign private issuer."

11 § 12(g) of the Exchange Act.

12 § 12(g) of the Exchange Act and Rules 12g-1 and 12g3-2(a) thereunder.

13 *See* § 4.02[3][a][iv] for a discussion of Rule 12g3-2(b) under the Exchange Act.

14 Although "succession" is defined for certain Exchange Act purposes to exclude the acquisition of control of a business not followed by the direct acquisition of its assets, *see* Rule 12b-2 under the Exchange Act, the SEC has found Rule 12g-3 to apply in cases where the successor entity ultimately holds all shares of the predecessor entity. *See*, *e.g.*, *Transocean Inc*. (avail. Sept. 26, 2007); *China Light & Power Company Limited* (avail. Jan. 2, 1998); *Grand Metropolitan Public Limited Company* (avail. Dec. 16, 1997).

15 Rule 12g-3 under the Exchange Act. *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Rules, Question 150.01 (Sept. 30, 2008).

16 *See* § 4.02[3][c][i] for a discussion of the shortening in the required filing period from six months to four months.

17 Rule 12g-3(g) under the Exchange Act. In connection with a U.K. business combination, the SEC found Rule 12g-3 to apply to the entity, Diageo plc, formed by the merger of Grand Metropolitan Public Limited Company and Guinness PLC by way of a scheme of arrangement. The scheme of arrangement involved an exchange of shares of Diageo for shares of Grand Metropolitan. Before the succession, shares of Diageo were not registered pursuant to the Exchange Act, but shares of Grand Metropolitan were so registered. The SEC found the merger to be a succession for purposes of Rule 12g-3, and shares of Diageo were deemed registered pursuant to the Exchange Act following the merger. Registration under the Securities Act was not necessary because shares issued in a scheme of arrangement are exempt from the registration requirements under § 3(a)(10) of the Securities Act, provided certain conditions are met (*see* § 9.05[4][a], Note 164 for a discussion of the § 3(a)(10) exemption as applied to schemes of arrangement in the United Kingdom and similar mechanisms in other countries). As a successor registrant, Diageo was required to file an annual report with the SEC on Form 20-F following the effectiveness of the scheme. *See Grand Metropolitan Public Limited Company* (avail. Dec. 16, 1997).

18 Foreign bidders that do not have a class of equity securities registered under the Exchange Act sometimes exclude U.S. holders because of the necessity to register shares to be issued in the United States under the Securities Act. Rule 802 under the Securities Act, however, provides an exemption from Securities Act registration for the issuance of securities in connection with the acquisition of non-U.S. companies with limited U.S. share ownership. *See* § 9.03[9][c].

19 *See* Rule 12h-6(d) under the Exchange Act; SEC Release No. 34-55540 (Mar. 27, 2007); *see also* § 4.11[2] for a discussion of various conditions required under Rule 12h-6.

20 *See* SEC Release No. 34-55540 (Mar. 27, 2007); SEC Release No. 34-55005 (Dec. 22, 2006).

21 An issuer that has obtained an OTC Bulletin Board quotation would not be able to rely on the Rule 12g3-2(b) exemption.

22 *See supra* Note 5.

23 § 12(g) of the Exchange Act; *see* text accompanying *supra* Note 10; *see also* text accompanying *infra* Note 647.

24 Section 12(g) applies to any class of equity securities, so that a company with both ordinary shares and preference shares would need to have a separate exemption for each class to avoid registration. In an instruction to amended Rule 12g3-2(b), the SEC has said that compensatory stock options are automatically exempt if the underlying shares are exempt, even if the options would otherwise constitute a separate class.

25 Rule 12h-6(a)(3) under the Exchange Act defines the "primary trading market" for a class of securities to mean one or two foreign jurisdiction(s) in which at least 55% of the trading in such securities took place in, on or through the facilities of a securities market or markets during a recent 12-month period. If trading in two foreign jurisdictions is aggregated for the purpose of satisfying the 55% test, the trading market for the issuer's securities in at least one of the two foreign jurisdictions must be larger than the U.S. trading market for the same class of securities.

26 The amended rule also allows an issuer to publish the information through a freely accessible electronic delivery system established by a securities regulator in the issuer's primary trading market. The SEC's release cited the Canadian SEDAR system as an example of such a system.

27 The amended rule continues to provide that only "material" information must be published. Under the U.S. securities laws, information is generally considered "material" if it changes the overall mix of information available to the market, and if a reasonable investor would consider it important in making an investment decision. The amended rule provides a non-exhaustive list of information that would ordinarily be material, including information concerning: (i) results of operations or financial condition, (ii) changes in business, (iii) acquisitions or dispositions of assets, (iv) issuance, redemption or acquisition of securities, (v) changes in management or control, (vi) granting of options or payment of other remuneration to directors or officers and (vii) transactions with directors, officers or principal securityholders. *See* Rule 12g3-2(b)(3)(i) under the Exchange Act. *See also infra* Note 51.

28 The SEC staff views press releases, articles and advertisements (although not standard product advertisements) published in newspapers and magazines as information a company "distributes to its shareholders," even if they are not sent directly to the shareholders. Likewise, information that a company posts on an Internet website is considered to be information that the issuer has made public for purposes of Rule 12g3-2(b). *See* SEC, Division of Corporation Finance, Manual of Publicly Available Telephone Interpretations, Supplement, Exchange Act Rule 12g3-2(b), Question 9S (Mar. 1999).

29 At a minimum, an issuer is required to publish English translations of (i) its annual report, including or accompanied by annual financial statements, (ii) interim reports that include financial statements, (iii) press releases and (iv) all other communications and documents distributed directly to securityholders. *See* Rule 12g3-2(b)(3)(ii) under the Exchange Act.

30 The SEC did not define the term "promptly," but stated in the release accompanying the final rule that this will depend on the type of document and the amount of time required to prepare an English translation. It said that a foreign issuer must publish a material press release "on or around" the same business day on which the original language document is published. *See* SEC Release No. 34-58465 (Sept. 5, 2008).

31 *See infra* Note 57 and accompanying text. Such information is, however, subject to the antifraud provisions of § 10(b) of the Exchange Act and Rule 10b-5 thereunder.

32 *See* the discussion of registration of ADRs on Form F-6 in § 3.04[7][c].

33 SEC Release No. 34-58465 (Sept. 5, 2008). A foreign company with an unsponsored ADR program does not set the terms or conditions of the ADRs, nor does it have the ability to terminate the program directly. Moreover, if a company were to seek the establishment of a sponsored ADR program, it would require the termination of any existing unsponsored ADR program and, therefore, the cooperation of that unsponsored program's depositary bank.

34 *See* § 7.02[4][b].

35 *See* Rule 12g3-2(c) under the Exchange Act.

36 SEC Release No. 34-58465 (Sept. 5, 2008).

37 *See* § 4.04 for a discussion of Form 20-F. If registration under the Exchange Act is undertaken in connection with a public offering, a short-form registration statement on Form 8-A is used, which incorporates information from the prospectus contained in the corresponding Securities Act registration statement, the disclosure in which is derived primarily from the requirements of Form 20-F.

Under Regulation S-T, all documents filed with or furnished to the SEC by U.S. and, with certain exceptions, foreign issuers must be submitted electronically, using EDGAR. EDGAR filings are accessible by the public through the SEC's website, www.sec.gov. For a description of the documents that foreign issuers may continue to submit by paper, *see* Rule 101(b) of Regulation S-T and *infra* Note 55.

38 Unless such financial statements are prepared in accordance with U.S. GAAP or in accordance with IFRS as issued by the IASB, they must include a "U.S. GAAP reconciliation" (*i.e.*, a factual discussion and numerical indication of the material differences between U.S. GAAP and the accounting principles upon which the statements are based). *See* §§ 4.05[1] and [2] for a discussion of U.S. GAAP reconciliation and the SEC rule change to eliminate the U.S. GAAP reconciliation requirement for foreign issuers that prepare their financial statements in accordance with IFRS as issued by the IASB. Additionally, financial statement

requirements for foreign issuers that are considered emerging growth companies ("EGCs") under the JOBS Act are less burdensome. *See generally* Chapter 3 for a discussion of EGC requirements.

39 The section is titled "Operating and Financial Review and Prospects" in Form 20-F but, consistent with market practice, is referred to in this chapter as MD&A.

40 *See* § 4.04[2]. The SEC adopted a rule in 2008 that eliminated a distinction in financial statement requirements between Exchange Act and certain Securities Act filings, and instead requires all mandated U.S. GAAP reconciliations to be prepared under Item 18 of Form 20-F for the registrant's financial statements for fiscal years ending on or after December 15, 2011. This requires inclusion of full industry and geographical segment disclosure pursuant to SFAS 131, as well as other information required to be included by the relevant SFAS in an appropriate footnote (*e.g.*, with respect to the values of securities, funding of pension plans, accounting for derivatives and fair market values at risk). *See* SEC Release No. 33-8959 (Sept. 23, 2008). Despite this amendment, Item 17 is still available for separate financial statements of a non-reporting company other than the issuer (*e.g.*, an acquired company or an equity-method investee, for which financial statements may be required under Rule 3-05 or Rule 3-09 of Regulation S-X) and for pro forma information pursuant to Regulation S-X Article 11. *See* Item 18(b) of Form 20-F; SEC Release No. 33-8959; SEC, Division of Corporation Finance, FINANCIAL REPORTING MANUAL, Topic 6410.1.

41 *See* § 3.05[1] for a discussion of the disclosure requirements for securities issued or guaranteed by foreign government issuers.

42 §§ 12(b) and 15(d) of the Exchange Act. As noted above, the requirement to file periodic reports under § 15(d) of the Exchange Act as a result of registering securities for a public offering under the Securities Act does not apply to foreign government issuers.

43 *See* § 4.02[2].

44 *See* § 4.04 for a discussion of the disclosure requirements of Form 20-F. Foreign private issuers unable to file Form 20-F within the prescribed period are required to file a Form 12b-25 explaining the reasons for the delay in filing Form 20-F. Rule 12b-25 under the Exchange Act. The SEC has taken enforcement action in the past against issuers who have failed to file a Form 12b-25 explaining a late filing under the Exchange Act. *See*, *e.g.*, *SEC v. Learning Annex, Inc.*, SEC Litigation Release No. 12481 (May 21, 1990). In addition, the SEC has taken enforcement action against an issuer as a result of allegedly false and misleading statements contained in the issuer's Form 12b-25 filings. *See*, *e.g.*, *In re FFP Marketing Co., Inc.*, SEC Admin. Proc. File No. 3-11826 (Feb. 14, 2005).

The four-month deadline may be particularly challenging for a foreign company that must reconcile its financial statements to U.S. GAAP. However, an issuer that prepares financial statements under IFRS as issued by the IASB is not subject to this reconciliation requirement. *See* SEC Release No. 33-8879 (Dec. 21, 2007). The filing deadline thus provides an additional reason for a foreign issuer to switch from home-country GAAP to IFRS, especially if IFRS financial statements are acceptable for home-country reporting. The SEC in fact cited a desire to allow time for foreign issuers and foreign regulators to adopt IFRS as a reason for delaying the effectiveness of its amendment of Form 20-F in September 2008 to shorten the filing deadline from six months after the end of a fiscal year to four months.

As discussed in § 4.02[3][b][ii], to the extent required, foreign government issuers and guarantors use Form 18-K to file their annual reports under the Exchange Act's periodic reporting requirements.

45 *See* Rule 12b-2 under the Exchange Act for the definitions of an "accelerated filer" (generally, a company with a public float of at least $75 million but less than $700 million that has been publicly reporting for at least one year) and a "large accelerated filer" (generally, a company with a public float of at least $700 million that has been publicly reporting for at least one year); *see* Rule 405 under the Securities Act for the definition of a "well-known seasoned issuer." *See* § 3.02[3][a][ii] for a discussion of well-known seasoned issuer status.

46 *See* § 408 of the Sarbanes-Oxley Act.

47 Rule 13a-13 under the Exchange Act.

48 Rule 13a-16 under the Exchange Act.

49 *See* NYSE Listed Company Manual § 203.03; NASDAQ Marketplace Rules, Rule 5250(c)(2), NASDAQ Manual.

50 *See* Note 27 (discussing the interpretation of "material" information under the U.S. securities laws and the guidance with respect thereto contained in Rule 12g3-2(b)(3)(i) under the Exchange Act). In 2004, the SEC significantly expanded the list of items that U.S. issuers must disclose on Form 8-K. The expanded list requires disclosure of, among other things, the entry into or termination of material agreements not made in the ordinary course of business, the creation of, and events triggering, material direct or contingent financial obligations, material costs associated with exit or disposal activities, material impairments and determinations that an issuer's financial statements should not be relied upon because they must be restated as a result of an error. In addition, the SEC generally shortened the length of time during which U.S. issuers are required to file reports on Form 8-K to four business days after the occurrence of the events requiring disclosure. *See* SEC Release No. 33-8400 (Mar. 16, 2004). When the SEC amended Form 8-K in 2004, it did not amend Form 6-K to require new disclosures by foreign private issuers or to change the illustrative list of disclosure items in the instructions to Form 6-K. However, at a minimum, foreign private issuers should consider the expanded list of items in Form 8-K in deciding whether particular press releases or home-country filings are material (and thus covered by Form 6-K) and which Form 6-K reports should be incorporated into their Securities Act registration statements.

51 Form 6-K, General Instruction B. The information required by Form 6-K is comparable to that required under Rule 12g3-2(b) under the Exchange Act. For a discussion of the SEC's interpretation of information "distributed" to securityholders in the context of Rule 12g3-2(b), *see supra* Note 28.

52 Form 8-K, Items 2.01, 9.01. This information must generally be filed within four business days after the consummation of the acquisition or disposition, although the required financial statements may, under certain circumstances, be filed up to 71 days later.

53 Form 6-K, General Instruction B. However, if a foreign private issuer files a registration statement in connection with a public offering, it will be required to include financial statements with respect to any acquired business with a defined level of materiality (or with respect to a very substantial business whose acquisition is probable), as well as related *pro forma* financial information. *See* § 4.05[5][a] for a discussion of when the inclusion of such financial statements is required and how they must be prepared. Significant dispositions by foreign companies may trigger the requirement to include certain *pro forma* financial information. The SEC rarely waives these requirements. *See* § 9.05[4] for a discussion of certain limited exceptions to these disclosure requirements. As a general matter, foreign issuers that may wish to register a public offering in the United States should ascertain whether the financial statements of any significant company they propose to acquire are suitable for inclusion in a U.S. registration statement.

54 Form 6-K, General Instruction D(1). The SEC staff has informally indicated, however, that where the translation requirement would result solely from inclusion of consolidated financial information, full translation is not required if the consolidated financial information has been previously filed with or submitted to the SEC electronically *via* EDGAR. If, however, such consolidated financial information has not been so previously filed or submitted, the SEC staff has noted that an English summary of the document would be permissible so long as the summary contained a full translation of the portion of the document including the consolidated financial information.

55 Form 6-K, General Instruction D(2). Reports required to be furnished and made public under the laws of a foreign issuer's home country or the rules of any foreign stock exchange (other than press releases or documents that have been distributed directly to a foreign issuer's securityholders) may also be submitted in paper format, rather than electronically by EDGAR, to the extent any "material event" discussed in such report has already been the subject of a Form 6-K or other submission on EDGAR. Rule 101(b)(6) of Regulation S-T.

See Rule 12b-12(d)(2) under the Exchange Act for a list of those documents for which full translation is nevertheless required (including articles of incorporation, by-laws, instruments defining the rights of securityholders, voting agreements and certain contracts and financial information).

56 Filings on Form 6-K must be covered, however, by an issuer's disclosure controls and procedures under the Sarbanes-Oxley Act. *See* § 5.03[7][a].

57 If the information on Form 6-K is subsequently incorporated by reference into a registration statement on Form F-3, the information so incorporated would be subject to the liability provisions of the Securities Act. *See* the discussion of Form F-3 in § 3.02[1][b]. The required disclosure in current reports on Form 8-K by U.S. issuers should be considered by foreign issuers in deciding which filings on Form 6-K to incorporate into Securities Act filings.

58 In 1998, the SEC brought proceedings against Sony Corporation in which the SEC found that Sony and an officer of Sony responsible for disclosure matters had violated SEC reporting requirements by failing to describe, in Sony's annual report on Form 20-F and in its periodic earnings reports on Form 6-K, losses suffered by one of its subsidiaries, Sony Pictures. *In re Sony Corporation*, SEC Release No. 34-40305 (Aug. 5, 1998). The SEC found that Sony failed to identify greater than anticipated losses at Sony Pictures and to discuss a "known trend" involving cumulative losses of more than $1 billion. The SEC applied Exchange Act Rule 12b-20 to Sony's Form 6-K filing, which requires that Exchange Act periodic reports include any additional information "as may be necessary to make the required statements, in light of the circumstances under which they were made, not misleading." Rule 12b-20 under the Exchange Act. The SEC did not bring the proceedings under the antifraud provisions of Rule 10b-5 under the Exchange Act and has made it clear that, without alleging fraud or recklessness tantamount to fraud, it can bring an administrative proceeding, which could result in the imposition of substantial fines, if either a Form 20-F or a Form 6-K contains materially misleading information. Sony consented, among other things, to the payment of a fine of $1 million and to procedural changes in responsibility within the company for the preparation of its SEC periodic reports. The SEC also pursued claims against the individual Sony officer responsible for the disclosure. *SEC v. Sony Corp.*, SEC Litigation Release No. 15832 (Aug. 5, 1998).

59 *See*, *e.g.*, NYSE LISTED COMPANY MANUAL § 204.12.

60 *See* FINRA Regulatory Notice 10-38 (Aug. 2010). In the Level 1 ADR context, in which there is over-the-counter trading in the United Sates but no listing on a U.S. exchange, a foreign issuer does not have to comply with this requirement because the foreign issuer is not the issuer of the ADRs. The ADR program's depositary bank, on the other hand, needs to comply with this requirement because it sets the record dates for dividends and determines other related events as they apply to the traded ADRs. In the case of sponsored Level 1 ADRs, the foreign issuer may agree to comply with this requirement to facilitate the depositary bank's compliance with it. *See* § 3.04[1] for a general discussion of ADR programs. If a foreign issuer's ordinary shares or other securities underlying the ADRs were to trade on over-the-counter markets, compliance with this requirement would be a condition to such trading.

61 § 14(a) of the Exchange Act and Regulation 14A thereunder.

62 § 14(a) of the Exchange Act and Regulation 14A thereunder. *See* § 4.06 for a discussion of the requirements relating to MD&A.

63 Rule 3a12-3 under the Exchange Act; *see Schiller v. Tower Semiconductor Ltd*., 449 F.3d 286 (2d Cir. 2006) (reaffirming the SEC's authority to create exemptions to proxy statement requirements under § 14(a) of the Exchange Act and upholding the exemptions for foreign private issuers under Rule 3a12-3).

64 A foreign private issuer is required to issue a press release announcing the filing of its annual report with the SEC, to make such annual report available on or through its website and to provide hard copies of its audited financial statements, in the case of NYSE-listed companies, and the full annual report, in the case of Nasdaq-listed companies, upon request to all shareholders. Foreign issuers do not need to satisfy these requirements if, with respect to NYSE-listed companies, they are subject to the U.S. proxy rules or provide the required information to shareholders in a way that is consistent with the physical or electronic delivery requirements set forth in Rules 14a-3 and 14a-16 of the U.S. proxy rules, or with respect to Nasdaq-listed companies, they mail the required information to shareholders or provide such information in a way that is consistent with the electronic delivery requirements set forth in Rule 14a-16 of the U.S. proxy rules. *See*

NYSE LISTED COMPANY MANUAL § 203.01; NASDAQ Marketplace Rules, Rule 5250(d)(1), NASDAQ MANUAL.

65 *See* NYSE LISTED COMPANY MANUAL § 402.04. The NYSE rules require proxy materials to be formatted and distributed as permitted or required by applicable law and regulations. *See* NYSE LISTED COMPANY MANUAL § 402.04(b). Given that the SEC's rules governing proxy solicitations are not applicable to foreign private issuers, foreign private issuers required to solicit proxies pursuant to the NYSE rules may follow their home country practices with respect to procedures.

66 The NYSE listing agreement for foreign private issuers requires the issuer to "solicit proxies for all meetings of stockholders," and the NYSE listing rules provide that "actively operating" companies are required to solicit proxies except where "applicable law precludes or makes virtually impossible the solicitation of proxies in the United States." NYSE LISTING AGREEMENT FOR FOREIGN PRIVATE ISSUER EQUITY SECURITIES; NYSE LISTED COMPANY MANUAL §402.04(A). Certain ADR depositaries take the view that the proxy solicitation requirement is satisfied by mailing voting instruction cards to registered holders (rather than beneficial owners) of the underlying securities; these registered holders typically pass along the voting instruction cards to beneficial owners. Other depositaries believe the NYSE requirement is only met if an issuer solicits proxies directly from beneficial owners, which is generally accomplished by sending owners a voting instruction card through a proxy solicitation firm, who then coordinates the delivery of the voting instruction card with The Depository Trust Company. *See also* NASDAQ Marketplace Rules, Rules 5615(a)(3) and 5620(b), NASDAQ MANUAL (requiring each company that is not a limited partnership to solicit proxies and provide proxy statements for all meetings of shareholders, but allowing foreign private issuers to follow home country practice in lieu of the Nasdaq's corporate governance rules).

67 While not subject to U.S. proxy requirements under the Exchange Act, foreign issuers are still subject to the antifraud provisions of § 10(b) of the Exchange Act. *See also* § 3.04[1][a], Note 502 for discussion as to the elimination of broker discretionary voting in uncontested director elections.

The requirements for disclosure in U.S. public offerings by foreign sovereign issuers, certain supranational issuers and certain issuers of foreign government-guaranteed securities are set out in Schedule B to the Securities Act.

Section 3.05[1] discusses Schedule B and the types of disclosures provided by foreign government filers.

U.S. Regulation of the International Securities and Derivatives Markets, § 4.04, CONTENT OF FORM 20-F

U.S. Regulation of the International Securities and Derivatives Markets

[1] Overview

Foreign private issuers file Form 20-F with the SEC for an initial registration of a class of securities under the Exchange Act and for annual reports under the Exchange Act. Form 20-F also is the basis for the disclosures required when a foreign private issuer registers a U.S. public offering under the Securities Act. Form 20-F consists of three parts. All three parts are required in annual reports, whereas only two parts are required when Form 20-F is used as a registration statement under the Exchange Act in connection with the listing of securities. [70] While Form 20-F elicits disclosures "as equal as practicable" to those provided by U.S. domestic issuers in Form 10-K reports or in their registration statements under the Securities Act and Exchange Act, certain accommodations have been made in Form 20-F to improve the accessibility of the U.S. capital markets to foreign issuers in light of the different national laws and accounting regulations to which such issuers are subject. [71] This section provides an overview of each part of Form 20-F. [72]

[2] Part I

p. 4-26

Part I calls for, among other items, a detailed description of the issuer's financial condition, risk factors, business operations and principal activities, organizational structure, properties, information regarding the company's management, information regarding major shareholders and related-party transactions, and the market risk exposure of the company. [73] Shareholders owning 5% or more of any class of voting securities must be identified if known, selected

p. 4-26

p. 4-27

financial data for five years must be furnished, [74] and all taxes, including withholding provisions to which U.S. securityholders are subject under the laws of the country where the company is organized, must be described.

Perhaps the most important requirement of Part I is the requirement in Item 5 that the filing contain an MD&A section, for the period covered by the financial statements included in the filing pursuant to Part III. The MD&A requires a discussion of liquidity, capital resources, results of operations and other information necessary for an understanding of the company's financial condition, changes in financial condition and results of operations. It is taken very seriously by the staff of the SEC, and if not prepared adequately, extensive comments may be received and revision required. Extensive guidance provided by the SEC and the adoption of disclosure rules under the Sarbanes-Oxley Act are evidence of the importance of this section. More information about the disclosure required in this section is described in § 4.06.

When Form 20-F is used as a registration statement, Part I also calls for a detailed description of the securities being registered, including ADRs. While not required by the form, in the case of registering equity securities, a practice has developed of describing the principal features of the foreign corporate law applicable to the issuer. Particular attention is given to the process by which directors are elected and the matters that must be submitted to a vote of the shareholders, as well as the rules applicable to the conduct of shareholder meetings.

[3] Part II

The requirements of Part II apply to annual reports filed on Form 20-F but do not apply in the case of a Form 20-F filed to register securities. [75] Part II requires an issuer to identify any of its indebtedness or indebtedness of a significant subsidiary with respect to which there has been, during the year, default in the payment of a principal, interest or sinking fund obligation or in the performance of any other material term not cured within 30 days if the amount of the indebtedness exceeds 5% of the total assets of the registrant and its consolidated subsidiaries. In addition, if the constituent instruments defining the rights of holders of any class of registered securities have been materially modified during the year, the modification and its effect must be described. Part II also requires disclosure, in the annual report on Form 20-F immediately following the first Securities Act registration statement filed by the issuer, regarding the use of

p. 4-27

p. 4-28

proceeds of the offering pursuant to that registration statement. Finally, Part II contains disclosure requirements adopted for reporting companies under the Sarbanes-Oxley Act, such as disclosure regarding audit committee financial experts and an issuer's code of ethics, as well as more recent disclosure requirements regarding the amount of fees paid to independent auditors for specified services and corporate governance matters.

A foreign issuer with securities listed on a national securities exchange must also include in Part II of its annual report on Form 20-F (but not on a Form 20-F used to register securities) a concise summary of any significant ways in which the issuer's corporate governance practices differ from those followed by U.S. domestic issuers under the listing standards of that exchange. [76] This requirement is similar to that imposed on listed foreign issuers by the New York Stock Exchange and Nasdaq. [77]

[4] Part III

Part III sets out the financial statement requirements. The basic provisions require audited income statements, cash flow statements and statements of changes in equity for the three most recent fiscal years, and audited balance sheets as of the three most recent fiscal year-ends generally must be included, in each case on a consolidated basis and otherwise in accordance with U.S. GAAP or IFRS as issued by the International Accounting Standards Board (the "IASB"), or reconciled to U.S. GAAP. [78] For first-time registrants, reconciliation to U.S. GAAP need only be for the two most recently completed fiscal years and any required interim periods. [79] These requirements, and limited exceptions thereto, are discussed below. [80]

Part III has two items that govern financial statement disclosure requirements—Item 17 and Item 18. Historically, Item 17 of Form 20-F was a less demanding alternative that omitted business segment data and permitted

p. 4-28

p. 4-29

limited reconciliation to U.S. GAAP. Modifications to Form 20-F in 2009 largely eliminated the relaxations that had been afforded by Item 17. [81]

Certain documents must be filed as exhibits to Form 20-F, including material contracts and instruments defining the rights of securityholders of the class being registered. [82] These exhibits are available to the public. Therefore, if any material contract contains sensitive information, confidential treatment that would allow the redaction of that information should be requested. [83]

Footnotes

70 *See* Form 20-F, General Instruction E. As a general matter, Parts I, II and III must be included in an annual report, but the specific instructions to sections included in those Parts may limit the information required in the case of annual reports. Only Parts I and III are required for registration statements filed under the Exchange Act. Registration statement forms under the Securities Act direct issuers to the disclosure requirements in Items of Form 20-F.

71 *See* § 3.03[1][b] for a discussion of the integrated disclosure system and Form 20-F. *See also* SEC Release No. 33-8959 (Sept. 23, 2008), 73 Fed. Reg. 58,300, 58,301 (Oct. 6, 2008) (the "2008 Form 20-F Reporting Enhancement Release").

72 On December 20, 2013, the SEC issued a staff report to Congress titled the "Report on Review of Disclosure Requirements in Regulation S-K " (the "Disclosure Report"), which was mandated by the JOBS Act. The purpose of the Disclosure Report was to analyze Regulation S-K, which provides the disclosure requirements for domestic companies for non-financial statement portions of registration statements and periodic reports, to find additional ways to modernize and simplify the SEC's disclosure requirements. After a detailed overview of the history and the structure of the SEC disclosure regime, the staff concluded in the Disclosure Report that it needs to develop a plan for systematic review of the SEC's disclosure requirements, including those under Regulation S-K and Regulation S-K, which provides the form and content requirements for financial statements included in registration statements and periodic reports, and that, after gathering sufficient information after such review, it would recommend any proposals for revisions of the disclosure rules to the SEC. In addition to the JOBS Act, the Fixing America's Surface Transportation Act (the "FAST Act"), which was signed into law on December 4, 2015, also directed the SEC to conduct a study on modernization and simplification of Regulation S-K and submit a report to Congress within 365 days. H.R. Rep. No. 114-279 (2015). As part of the initiative, on September 25, 2015, the SEC issued a request for comments on the effectiveness of financial disclosure requirements in Regulation S-K. SEC Release No. 33-9929 (Sept. 25, 2015). In 2016, the SEC issued a series of releases under the initiative, starting with a concept release on business and financial disclosure items in Regulation S-K in April 2016 (the "Concept Release"), followed by a June 2016 proposal to replace the disclosure requirements for SEC-registered mining companies, a July 2016 proposal to amend certain disclosure requirements that became "redundant, duplicative, overlapping, outdated, or superseded," an August 2016 request for comments on Subpart 400 of Regulation S-K (the "Subpart 400 Release") and an August 2016 proposed rule requiring hyperlinks to each exhibit filed under Item 601 of Regulation S-K. SEC Release Nos. 33-10064 (Apr. 13, 2016), 33-10098 (June 16, 2016), 33-10110 (July 13, 2016), 33-10198 (Aug. 26, 2016) and 33-10201 (Aug. 31, 2016). On November 28, 2016, the SEC issued the report required by the FAST Act, titled "Report on Modernization and Simplification of Regulation S-K " (the "Fast Act Report"). The Fast Act Report presented the SEC staff's recommendations on a number of items of Regulation S-K and reflected the staff's work on the Concept Release and the Subpart 400 Release. The Disclosure Report and the Fast Act Report do not provide a timeline for effecting any changes to the existing disclosure requirements. Generally, the review and comment process for such proposals, concept releases and requests for comments take considerable time and it is unclear what specific changes, if any, will result under the initiative or whether any such changes will affect foreign private issuers.

73 Item 11 of Form 20-F requires the issuer to provide, in its reporting currency, quantitative information about market risk-sensitive instruments (*e.g.*, derivatives, outstanding floating rate debt, fixed rate investments or investments or debt denominated in a currency other than its reporting currency) as of the end of the latest fiscal year. The issuer must also provide qualitative information concerning the issuer's primary market risk exposures (*e.g.*, interest rate and foreign currency exposure) and how those exposures are managed. *See* § 4.07[11] for a more complete discussion of derivatives disclosure requirements.

74 Selected financial data for one or more of the earliest three years of the relevant five-year period may be omitted in certain circumstances. *See* § 4.05[2].

75 Even if not strictly required by Form 20-F, issuers filing Form 20-F to register securities need to consider in any event whether this or any other information not strictly called for by the applicable form might need to be included to satisfy the general antifraud provisions of § 10(b) of the Exchange Act and Rule 10b-5 thereunder.

76 Form 20-F, Item 16G.

77 *See* NYSE LISTED COMPANY MANUAL § 303A.11; NASDAQ Stock Market Rules, IM-5615-3. Both the instructions to Item 16G and to the NYSE LISTED COMPANY MANUAL emphasize that the discussion should be brief and general, not a detailed, item-by-item analysis. Nasdaq requires disclosure of each corporate

governance requirement from which a company is exempted by Nasdaq and a description of the home country practice, if any, followed by the issuer in lieu of the requirements that would otherwise be applicable.

78 A balance sheet as of the end of the earliest of the three years is not required, however, if that balance sheet is not required by the registrant's home jurisdiction (or any other jurisdiction whose rules are applicable to the registrant outside the United States).

79 *See* SEC Release No. 33-7053 (Apr. 19, 1994). In each subsequent reporting year, an additional year of required financial statement data would need to be provided in accordance with U.S. GAAP or IFRS or reconciled to U.S. GAAP.

80 *See* § 4.05[1].

81 *See* § 4.05[1], [2] and [3].

82 A full English translation is required for exhibits in a foreign language, as set out in Rule 403(c)(2) under the Securities Act and Rule 12b-12(d)(2) under the Exchange Act. These exhibits include articles of incorporation, by-laws, instruments defining the rights of securities holders, voting agreements and certain contracts and financial information.

83 Public filings, if required, are made in redacted form while the confidential treatment process plays out. *See* Rule 406 under the Securities Act and Rule 24b-2 under the Exchange Act; SEC, Division of Corporation Finance, Staff Legal Bulletin No. 1A (Feb. 28, 1997), Fed. Sec. L. Rep. (CCH) ¶60,001 (Addendum included: July 11, 2001) (setting out the procedures for the SEC staff's handling of confidential treatment requests). In recent years, the SEC staff has questioned issuers on the amount of text redacted, requiring issuers to narrow their confidential treatment requests to very specific information.

U.S. Regulation of the International Securities and Derivatives Markets, § 4.05, FINANCIAL STATEMENTS IN SEC REGISTRATION STATEMENTS AND OTHER FILINGS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 4.05 (11th and 12th Editions 2014-2017)
11th and 12th Editions

[1] Basis of Presentation (U.S. GAAP, IFRS and U.S. GAAP Reconciliation)

Financial statements of foreign companies may be prepared in accordance with U.S. GAAP, [84] IFRS as issued by the IASB, [85] or another comprehensive

p. 4-30

body of accounting principles, but in the last case a reconciliation of the financial statements to U.S. GAAP generally must be provided.

In 2007, the SEC decided to accept financial statements of foreign companies prepared in accordance with IFRS as issued by the IASB without requiring a reconciliation to U.S. GAAP. [86] The rules took effect with respect to fiscal years ending after November 15, 2007. This significant relaxation is only available to foreign companies that prepare financial statements in accordance with IFRS as issued by the IASB. For example, the reconciliation requirement still applies in the case of financial statements prepared in accordance with IFRS as adopted by the EU (but not in compliance with IFRS as issued by the IASB), which provide for certain departures from IASB-approved IFRS, including in the area of accounting for derivatives. [87]

p. 4-30

p. 4-31

The FASB and IASB continue to work together on convergence projects to harmonize the accounting standards under U.S. GAAP and IFRS as issued by the IASB. In addition, the SEC had taken various steps to consider the adoption of IFRS as an option for presentation of financial statements for U.S. issuers. [88] Despite the efforts, in a May 2015 speech, then-SEC Chief Accountant James Schnurr acknowledged that feedback from various U.S. constituents revealed "virtually no support" for an SEC-mandated IFRS for all U.S. registrants and "little support" for an option to prepare financial statements under IFRS for U.S. registrants. [89] However, he continued to encourage IASB and FASB to work towards converging the financial accounting standards, viewing "continued collaboration [as] the only realistic path to further the objective of a single set of high-quality, global accounting standards." [90] In terms of adopting IFRS as an option for presentation of financial statements for U.S. issuers, SEC Chief Accountant Wesley R. Bricker noted in a December 2016 speech that "for at least the foreseeable future," financial reporting by U.S. issuers will continue to be based on U.S. GAAP, although he expressed an interest in continuing to consider whether to allow U.S. issuers to provide financial information based on IFRS as issued by the IASB as a supplement to their financial statements provided under U.S. GAAP. [91]

If a reconciliation of the financial statements to U.S. GAAP is required, the reconciliation must include an explanation of the principal differences between the accounting principles used and U.S. GAAP, a numerical reconciliation (except in limited circumstances in which a foreign issuer is permitted to elect Item 17 of Form 20-F [92]) of the differences in financial results and principal balance sheet items as reported under its accounting practices and under U.S. GAAP, and an explanation of the reasons for the differences. [93]

First-time foreign registrants are required to reconcile only the last two complete fiscal years of financial statements and the financial statements for any required interim periods. [94] For each subsequent reporting year, an additional year of reconciliation is required. Foreign companies are allowed to use a cash flow statement prepared in accordance with International Accounting Standard No. 7, Cash Flow Statements, as amended ("IAS 7"), without reconciliation to U.S. GAAP. [95]

p. 4-32

p. 4-33

Foreign companies also are required to reconcile to U.S. GAAP selected financial data in their Securities Act and Exchange Act registration statements and Exchange Act annual reports, but only for those periods for which they are required to reconcile the primary annual financial statements and any interim financial statements included in those registration statements or reports. [96]

[2] Required Financial Statements Under Item 8 of Form 20-F and Stale Financial Statements

Under the Item 8 requirements of Form 20-F, financial statements contained or incorporated in a filing generally must include audited balance sheets as of the end of each of the three most recent fiscal years and audited statements of income and cash flows for each of the three most recent fiscal years. [97] Form 20-F generally requires that a registration statement of a foreign issuer (whether under the Exchange Act, for an initial listing, or under the Securities Act, for an offering of securities) include audited financial statements no more than 15 months old (and in the case of an initial public offering ("IPO"), 12 months old). [98] Issuers generally must also include in a filing five years of selected financial data. [99]

Accommodations from the audited financial statement and selected financial data requirements described above are available in certain limited circumstances. Foreign emerging growth companies ("EGCs") are permitted to

p. 4-33

p. 4-34

provide only two years of audited financial statements, and only those two years (rather than five) of selected financial data in IPO registration statements. [100]

The SEC also permits first-time foreign issuer registrants that prepare their primary financial statements in accordance with U.S. GAAP to include financial statements for the two most recent fiscal years, rather than three years. Selected financial data for five fiscal years is still required, although SEC staff guidance permits one or more of the oldest three years to be presented in home country GAAP if U.S. GAAP financial data is not available for those years. [101]

Lastly, foreign issuers that adopt IFRS as issued by the IASB, in their first year after adoption, are permitted to file two years rather than three years of audited financial statements, with appropriate related disclosure. [102] In their second year of reporting under IFRS as issued by the IASB and thereafter, three years of audited financial statements must be provided. [103] This accommodation does not apply to issuers that transition to IFRS as issued by the IASB from a different IFRS accounting body. [104] Foreign private issuers relying on the

p. 4-34

p. 4-35

first-time IFRS adopter exception need include only the two years of selected financial data and may omit the prior three years of selected financial data. [105]

As for interim financial statements, Item 8 of Form 20-F requires that if a registration statement becomes effective more than nine months after the end of the last audited fiscal year, it must contain interim financial statements covering at least the first six months of the following year. The interim financial statements may be unaudited, but they must include a U.S. GAAP reconciliation if they are presented in accordance with home-country GAAP other than IFRS as issued by the IASB. [106] Accordingly, the last effective date for a calendar-year issuer to avoid including interim financial statements is September 30.

As a result of these requirements, a foreign issuer can find itself "blacked out," *i.e.*, unable to have a registration statement become effective, beginning on April 1, for example, for an issuer reporting on a calendar fiscal year, if it is not yet prepared to provide audited financial statements for all or part of the previous year and to be blacked out beginning on October 1 if it is not yet prepared to provide financial statements, which may be unaudited, for an interim period. This is similar to the requirements applicable in most cases to a U.S. domestic issuer. [107] Furthermore, as noted above, if a foreign issuer is making its IPO (meaning that before the offering the foreign issuer is public in neither the United States nor its home country), the last audited financial statements must be no older than 12 months prior to the filing of the registration statement, although the instructions to Item 8 specify that the SEC will consider waiving this requirement in particular cases. [108] This is stricter than the requirements applicable to a U.S. issuer. [109]

p. 4-35

p. 4-36

The principal difficulty with providing interim financial statements and thereby avoiding the "black-out" caused by financial statements that are outdated under the SEC's rules has been with preparing interim reconciliations to U.S. GAAP. As a result of the SEC's 2007 adoption of the amendments to eliminate U.S. GAAP reconciliation requirements for financial statements prepared under IFRS as issued by the IASB, issuers that no longer need to reconcile to U.S. GAAP should generally be able to avoid all or almost all of the obstacles that impede preparation of timely interim financial statements needed to satisfy SEC requirements. The acceleration of the 20-F annual report filing deadline to four months after the end of an issuer's fiscal year has also reduced the potential impact of these issues.

Finally, if a foreign issuer prepares and discloses to its shareholders or otherwise makes public interim financial information that is more current than the interim financial statement requirements described in this section, the registrant is required to include the more current interim financial information in its registration statement (but not in an annual report on Form 20-F). [110] This requirement covers any publication of financial information that includes, at a minimum, revenue and income information. Unless the foreign issuer prepares its financial statements in accordance with IFRS as issued by the IASB, this information must be accompanied by: (i) a description of any ways in which the accounting principles, practices and methods used in preparing the interim financial information vary materially from the principles, practices and methods accepted in the United States, and (ii) a quantification of any material variations, unless they are already quantified because they appear elsewhere in other financial statements included in the registration statement. [111]

For certain continuous offerings in which the effects of a "black-out" period as described above could be especially adverse, there is an instruction

p. 4-36

p. 4-37

extending the periods from 15 months to 18 months for audited financial statements and from 9 months to 12 months for interim financial statements. [112] The offerings covered are (i) rights offerings, (ii) offerings pursuant to dividend or interest reinvestment plans and (iii) offerings pursuant to convertible securities or warrants issued by the issuer or an affiliate. The extension beyond 16 months for audited financial statements is no longer meaningful in light of the accelerated Form 20-F annual report deadline.

[3] Segment Information

Both U.S. and foreign issuers are required to include in their financial statements segment financial information. For issuers reporting under, or reconciling to, U.S. GAAP, the accounting standards on this topic are set forth in Accounting Standards Codification 280, Segment Reporting ("ASC 280") (formerly Statement of Financial Accounting Standards ("SFAS") No. 131). [113] For foreign issuers following IFRS as issued by the IASB, IFRS 8 applies.

A reportable operating segment is defined as (i) a component of a business enterprise the operating results of which are regularly reviewed by the enterprise's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance, (ii) for which discrete financial information is available and (iii) that accounts for (a) 10% or more of the combined revenue of the enterprise (including both sales to external customers and inter-segment sales), (b) 10% or more of the operating profit or loss of all of the enterprise's operating segments or (c) 10% or more of the combined assets of all of the enterprise's operating segments. The definition under IFRS as issued by the IASB is substantially consistent. [114] For each reportable segment there must be provided a measure of segment profit or loss, certain specific revenue and expense items and segment assets. The following are the specific revenue and expense items that must be disclosed for each reportable segment if management includes them in measuring profit or loss: revenues from external customers; revenues from other operating segments; depreciation, depletion and amortization; and significant noncash items other than depreciation, depletion and amortization. [115]

[4] Currency in Which Financial Statements Are Reported

p. 4-37

p. 4-38

Special rules applicable to foreign issuers govern the currency in which their financial statements must be presented. [116] Rule 3-20 of Regulation S-K permits a foreign issuer to state the amounts in its primary financial statements using any currency that it deems appropriate. [117] The reporting currency must be prominently disclosed on the face of the financial statements. [118] The rule requires specific disclosure in the financial statements if the currency in which the company expects to declare dividends is different from the reporting currency or there are material exchange restrictions or controls affecting the reporting currency, the currency of the issuer's domicile or the currency in which dividends are paid. [119]

[5] Required Financial Statements of Other Entities Under Regulation S-K

[a] Financial Statements Relating to Acquired Businesses

A registrant may be required to include in a Securities Act registration statement certain audited financial statements in connection with any "significant" business acquisition by the registrant. [120] The "significance" of an acquired business is evaluated based on (i) the amount of the registrant's investment in the acquired business, (ii) the total assets of the acquired business and (iii) the pre-tax income of the acquired business. Each of these is compared with the comparable item in the registrant's most recent audited financial statements. [121] In the case of an acquisition consummated within the preceding 75-day period or whose acquisition is probable at the time the final prospectus or prospectus supplement relating to the offering is completed, financial statements will be required only if the acquired business is "significant" at a 50% level—that is, if the issuer's investment in, or the assets or pre-tax income of, the acquired

p. 4-38

p. 4-39

business equals at least 50% of the registrant's assets or income. [122] Beyond the 75-day period, the registrant must include one, two or three years of financial statements for an acquired business at 20%, 40% and 50% significance levels, respectively, and financial statements for any interim periods required under Rules 3-01 and 3-02 of Regulation S-K. [123] In addition, *pro forma* financial information is required by Article 11 of Regulation S-K to depict the effect of a business acquisition if the financial statements of the acquired business are required to be furnished under these standards. [124]

For purposes of applying the rules described above, the acquisition of "related businesses" (those under common ownership or management or whose acquisitions are conditional on each other or on a single common condition) are treated as a single business combination. [125] In addition, if the registrant has, since the date of its latest audited balance sheet, acquired businesses which, although unrelated and individually insignificant, are significant in the aggregate

p. 4-39

p. 4-40

at a level exceeding 50%, one year of audited financial statements covering the substantial majority of such businesses must be included in the registration statement. [126]

[b] Financial Statements of Certain Unconsolidated Subsidiaries and Equity-

Method Investees

A registrant is required to file separate financial statements of any "significant" majority-owned subsidiary that is not consolidated with the registrant. [127] The "significance" of an unconsolidated subsidiary is evaluated based on (i) the amount of the registrant's investment in the subsidiary, (ii) the total assets of the subsidiary and (iii) the pre-tax income of the subsidiary. If any of these items exceeds a 20% significance level when compared with the comparable item in the registrant's most recent audited financial statements, the registrant must file separate financial statements of the subsidiary. [128]

Similarly, a registrant must file separate financial statements of any "significant" 50%-or-less owned investee that is accounted for by the equity method. [129] An investee will be deemed "significant" if either the first or third condition of the test above is met at the 20% significance level. [130]

p. 4-40

p. 4-41

Where practicable, the financial statements of the subsidiary or investee required by these rules must be as of the same dates and for the same periods as the audited financial statements of the registrant. [131] However, the separate financial statements need only be audited for those fiscal years in which the relevant 20% significance test was met.

Where financial statements of two or more unconsolidated subsidiaries or two or more 50%-or-less owned investees are required, combined or consolidated financial statements of such persons may be included, subject to principles of inclusion or exclusion that clearly exhibit the financial position, cash flows and results of operations of the combined or consolidated group. [132]

[c] Financial Statements of Guarantors and Issuers of Guaranteed Securities

A Securities Act registration statement for an offering of guaranteed debt securities generally must include audited financial statements of both the issuer and the guarantor of the securities. [133] Rule 3-10 of Regulation S-K provides certain exceptions to this general rule where (i) the issuer is a parent company issuing securities guaranteed by one or more wholly owned subsidiaries, (ii) the issuer is a wholly owned subsidiary issuing securities guaranteed by its parent, or (iii) the issuer is a wholly owned subsidiary issuing securities guaranteed by its parent and one or more other wholly owned subsidiaries. [134] The exceptions allow the inclusion of condensed consolidating financial information in lieu of separate financial statements of a subsidiary issuer or subsidiary guarantor and, in certain cases, allow the omission altogether of separate financial information with respect to the relevant subsidiary.

The threshold requirements for each of the exceptions in Rule 3-10 [135] are that (i) the subsidiary issuer or subsidiary guarantor must be 100%-owned by its parent company (*i.e.*, all of its outstanding voting shares are owned, either

p. 4-41

p. 4-42

directly or indirectly, by its parent company) [136] and (ii) the guarantee or guarantees must be full and unconditional. [137] Where these requirements are satisfied, the following exceptions are applicable.

Where the issuer is a finance subsidiary [138] issuing securities guaranteed only by its parent company, separate financial statements of the finance subsidiary are not required if the parent company's financial statements are filed and include a footnote stating that the issuer is a 100%-owned finance subsidiary and the parent company has fully and unconditionally guaranteed the securities. [139]

Where the issuer is an operating subsidiary [140] issuing securities guaranteed only by its parent company, separate financial statements of the operating subsidiary are not required if the parent company's financial statements are filed and include, in a footnote, condensed consolidating information for the parent company and the subsidiary issuer. [141] Condensed consolidating information may be omitted if the financial statements include a footnote stating that the parent company has no independent assets or operations, the guarantee is full and

p. 4-42
p. 4-43

unconditional and any assets of subsidiaries other than the subsidiary issuer are minor. [142]

Where the issuer is a subsidiary issuing securities guaranteed, jointly and severally, by its parent company and one or more other subsidiaries of its parent company, separate financial statements of the subsidiaries are not required if the parent company's financial statements are filed and include, in a footnote, condensed consolidating information for the parent company, the subsidiary issuer and the subsidiary guarantors. [143] Condensed consolidating information may be omitted if the financial statements include a footnote stating that the parent company has no independent assets or operations, the subsidiary issuer is a 100%-owned finance company, the parent company and all of the parent company's other subsidiaries have guaranteed the securities jointly and severally and all of the guarantees are full and unconditional. [144]

Where the issuer is a parent company issuing securities guaranteed by a single subsidiary guarantor, separate financial statements of the subsidiary guarantor are not required if the parent company's financial statements are filed and include, in a footnote, condensed consolidating information for the parent company and the subsidiary guarantor. [145] Condensed consolidating information may be omitted if the financial statements include a footnote stating that the parent company has no independent assets or operations, the guarantee is full and unconditional and any subsidiaries other than the subsidiary guarantor are minor. [146]

p. 4-43
p. 4-44

Where the issuer is a parent company issuing securities guaranteed, jointly and severally, by multiple subsidiary guarantors, separate financial statements of the subsidiary guarantors are not required if the parent company's financial statements are filed and include, in a footnote, condensed consolidating information for the parent company and the subsidiary guarantors. [147] Condensed consolidating information may be omitted if the financial statements include a footnote stating that the parent company has no independent assets or operations, the guarantees are full and unconditional and joint and several and any subsidiaries other than the subsidiary guarantors are minor. [148]

The SEC has adopted a special rule for recently acquired subsidiary issuers or subsidiary guarantors that would otherwise meet the conditions for omission of separate financial statements pursuant to one of the exceptions described above. [149] Where such a subsidiary (i) has not been included in the audited consolidated results of its parent company for at least nine months of the most recent fiscal year and (ii) has a net book value [150] or purchase price, whichever is greater, of 20% or more of the principal amount of the securities being registered, then separate audited financial statements of the subsidiary must be filed for the subsidiary's most recent fiscal year preceding the acquisition. In addition, unaudited interim financial statements must be filed for any interim period specified by Rules 3-01 and 3-02 of Regulation S-K.

In connection with the amendments to Rule 3-10 described above, the SEC has exempted from Exchange Act reporting requirements subsidiary issuers or subsidiary guarantors that (i) are permitted to omit separate financial statements by Rule 3-10 of Regulation S-K or (ii) would be permitted to omit financial statements under Rule 3-10 but are required to file pre-acquisition financial statements under Rule 3-10(g). [151]

[d] Financial Statements of Affiliates Whose Securities Collateralize Registered Securities and Financial Statements of Other Persons Where Material to an Investment Decision

p. 4-44
p. 4-45

A registrant is required to file separate financial statements of any affiliate whose securities constitute a "substantial portion" of the collateral for any securities being registered. [152] For purposes of this rule, securities of an affiliate constitute a "substantial portion" of collateral if the aggregate principal amount, par value, book value or market value of such securities, whichever is greater, is equivalent to 20% or more of the principal amount of the secured class of securities. [153]

In addition, the SEC may require the inclusion of financial statements of other persons in any case where they are "necessary or appropriate for an adequate presentation of the financial condition of any person whose financial statements are required." [154] Regulation AB provides a special registration and disclosure regime for asset-backed securities, including disclosure requirements for assets meeting 10% and 20% concentration levels. [155]

The SEC also has required parent bank financial statements, prepared in accordance with IFRS as issued by the IASB or in accordance with or reconciled to U.S. GAAP, to be included in registration statements for offerings by special purpose subsidiaries of the bank intended to strengthen the bank's capital (and therefore not guaranteed by the bank) where payments on the securities depend exclusively on the income generated from assets acquired from the bank with the proceeds of the offering and bank regulators may require the bank to "claw back" those assets if certain financial regulatory events occur with respect to the bank. [156]

Under certain circumstances, the credit of a third party is so significant that the SEC has required the third party to become a co-registrant with the issuer and therefore to provide the complete business and financial information required by the applicable registration form. For example, where an issuer's business (typically a special purpose issuer) consists principally of purchasing securities from a third party (or affiliated third parties) with the proceeds from the sale of the securities to be registered under the Securities Act, the issuer will be deemed to

p. 4-45

p. 4-46

be an underwriter of the securities of the third party, which in turn would be required to become a co-registrant with the issuer. [157]

[6] Accounting Topics

[a] Convenience Translations and Historical Exchange Rates

Financial statements in registration statements may include "convenience" translations of the issuer's home currency to U.S. dollars for the most recent fiscal year and any subsequent interim period, using for this purpose an exchange rate as of the date of the most recent balance sheet included in the filing or, if materially different, as of the most recent practicable date. [158] The filing must include the historical exchange rates between the financial reporting currency and U.S. dollars, including (i) the exchange rate at the latest practicable date, (ii) the high and low exchange rates during the previous six months and (iii) the average exchange rates for each of the five most recent fiscal years and any subsequent interim period. [159] If the filing relates to equity securities, it must also contain a five-year history of dividends declared per share in both the financial

p. 4-46

p. 4-47

reporting currency and U.S. dollars (based on exchange rates in effect on the payment dates). [160]

[b] Accounting for Inflation Under Rule 3-20 of Regulation S-K

If the financial statements of a foreign company (i) are denominated in a currency of a country that has experienced cumulative inflationary effects exceeding 100% over the most recent three-year period and (ii) have not been recast or otherwise supplemented to include information on a historical cost/constant currency or current cost basis prescribed or permitted by generally accepted accounting principles, the issuer must present supplementary information to quantify the effects of changing prices upon its financial condition and results of operations. [161]

[c] Accounting for Operations in a Hyperinflationary Environment

Under U.S. GAAP, financial results of operations conducted in the currency of a country with a hyperinflationary environment must be measured in the issuer's reporting currency. [162] By contrast, most other accounting principles permit measurement in the local currency restated to reflect changing prices; that measurement is then translated into the reporting currency.

A "hyperinflationary environment" is defined as one that had cumulative inflation of approximately 100% or more over the most recent three-year period. [163] Under Items 17 and 18 of Form 20-F, the SEC does not require that an issuer in a hyperinflationary environment include a reconciliation that quantifies the effects on its financial statements under U.S. GAAP that result from its use of the restate-translate method so long as the methodology used is consistently applied and is in conformity with International Accounting Standard No. 21, The Effects of Changes in Foreign Exchange Rates, as amended in 1993 ("IAS 21"), using the historical cost/constant currency method. IAS 21 requires restatement of measurements in local currency to account for changing prices in accordance with International Accounting Standard No. 29, Financial Reporting in Hyperinflationary Economies, as amended in 2008, and then translation of such adjusted measurements to the reporting currency.

[d] Revenue Recognition

p. 4-47

p. 4-48

SEC Staff Accounting Bulletin No. 104—Revenue Recognition ("SAB 104") (updating SEC Staff Accounting Bulletin No. 101—Revenue Recognition in Financial Statements ("SAB 101")) provides specific guidelines on revenue recognition, presentation and disclosure that registrants should follow in preparing their financial statements. [164] In SAB 104, the SEC staff indicated that "revenue should not be recognized until it is realized or realizable and earned." According to SAB 104, revenue generally is realized or realizable and earned when all of the following criteria are met: (i) persuasive evidence of an arrangement exists, (ii) delivery has occurred or services have been rendered, (iii) the seller's price to the buyer is fixed or determinable, and (iv) collection is reasonably assured. [165]

The specific guidelines provided in SAB 104 are aimed at limiting the discretion companies have in deciding when to recognize and report revenue in their financial statements. [166] SAB 101 was initially adopted in large part due to the SEC staff's concern that companies were prematurely and improperly recognizing revenue in an attempt to improve earnings reported in financial statements. [167] SAB 104 is one of three staff accounting bulletins aimed at addressing earnings management problems. [168]

Revenue recognition has also been an important area of focus in the IFRS and U.S. GAAP convergence efforts. The objective of the FASB and IASB revenue recognition joint project was to develop a common revenue standard for both U.S. GAAP and IFRS. On May 28, 2014, the IASB and FASB jointly issued a converged standard on the recognition of revenue from contracts with

p. 4-48

p. 4-49

customers. [169] Although the general principles of revenue recognition were similar between IFRS and U.S. GAAP, the previous U.S. accounting standards contained significant detailed industry-specific requirements that previous IFRS standards did not have. [170] The new converged standard eliminates the industry-specific requirements under U.S. GAAP. In a joint press release, the IASB and FASB noted that the new converged standard will provide "substantial enhancements to the quality and consistency of how revenue is reported while also improving comparability in the financial statements of companies reporting using IFRS and U.S. GAAP." [171] As the new revenue recognition standard becomes effective for public companies, issuers should expect continued SEC scrutiny of their revenue recognition accounting and related disclosure. [172]

[e] Lease Accounting

p. 4-49

p. 4-50

In 2016, both the IASB and the FASB issued new lease accounting standards to align lessor accounting with certain changes in the lessee model and the new revenue recognition standard. [173] In January 2016, the IASB issued IFRS 16, Leases, and in February 2016, the FASB issued Accounting Standards Update No. 2016-02, Leases ("ASU 2016-02"). Both standards require entities to reflect practically all leases on their balance sheet, but there are some differences. The IASB requires companies to present all leases (other than short-term leases or "small ticket" leases) in a way that is similar to prior accounting for financing leases, such that more of the lessee's expenses would be reflected up front. The FASB instead retained a dual model, including financing leases, similar to the prior standard's capital leases, and operating leases, with expenses recognized on a straight-line basis. Lessees will need to classify their leases under the FASB approach based on guidance similar to the classification model under current U.S. GAAP. [174]

ASU 2016-02 will become effective for public companies, certain not-for-profits and benefit plans for interim and annual reporting periods beginning after December 15, 2018. [175] IFRS 16 will become effective for annual reporting periods beginning on or after January 1, 2019. [176]

[f] Cheap Stock

Common stock or options or warrants relating to such stock are often issued as compensation for services or otherwise. Issuances of such securities proximate to a company's IPO may raise questions as to whether the securities were issued at a price below their fair value. If the securities were issued at a price below their fair value, the SEC staff will require the issuer to charge the difference between fair value and issuance price to its income statement under compensation expense and include the shares issued or, in the case of options or warrants, assumable in calculating earnings per share. The SEC staff has long focused, and has continued to focus, on this issue. A number of factors will be relevant in considering whether a company has such a "cheap stock" problem, perhaps the most important of which are the amount of time between the issuance and the company's IPO and the extent of the difference between the issuance price and the IPO price of the company's common stock. Issuances within one year prior to the IPO are presumed to raise this question. Historical financial

p. 4-50

p. 4-51

statements prepared without recognition of this additional compensation expense and increase in outstanding shares will need to be revised if the SEC staff concludes that there is a "cheap stock" problem, possibly delaying the offering process and, in any event, reducing the company's operating and net income (or increasing its operating or net loss) and reducing earnings per share. Also, if vested stock were purchased for less than fair market value, the discount would be taxable income to the employee under U.S. tax law.

[g] Loss Contingencies

Under U.S. GAAP, Accounting Standards Codification 450, Contingencies ("ASC 450") (formerly SFAS No. 5) requires disclosure of contingent liabilities arising out of litigation, arbitration or regulatory actions if there is a "reasonable possibility" of a material loss with respect to such contingency. An accrual of an estimated loss is required if it is both "probable" that a material liability will be incurred and the amount of loss can be "reasonably estimated." [177] The required disclosures include a description of the nature of the loss contingency, an estimate of the loss or range of loss if reasonably estimable, and a statement that an estimate of the loss cannot be made if it is not reasonably estimable.

Under IFRS as issued by the IASB, International Accounting Standards, Provisions, Contingent Liabilities and Contingent Assets ("IAS 37") requires disclosure of contingent liabilities arising out of litigation, arbitration or regulatory actions if the obligation is possible and the likelihood of an outflow of resources is more than remote. [178] Like ASC 450, accrual is required under IAS 37 when payment is "probable" and a "reliable estimate can be made of the amount of the obligation," [179] but the definitions of probable differ. IAS 37 defines probable as "more likely than not to occur," [180] whereas, ASC 450 defines probable as "likely to occur." [181] Given that "likely" under U.S. GAAP is generally considered a higher threshold (*i.e.*, approximately 80%) than "more likely than not" under IFRS, which is typically considered to represent a greater than 50% probability, accrual of contingent liabilities is more likely under IAS 37. [182]

p. 4-51

p. 4-52

The SEC staff remains focused on the adequate disclosure and accrual of loss contingencies and the Division of Corporation Finance has been issuing comment letters to both U.S. and foreign issuers seeking adequate disclosure of estimates of reasonably possible losses or ranges of reasonably possible losses under current ASC 450 or International Accounting Standard No. 37, Provisions, Contingent Liabilities and Contingent Assets, respectively. [183]

Footnotes

84 In response to § 108 of the Sarbanes-Oxley Act, which requires the SEC to recognize accounting principles established by a standard setting body as "generally accepted" accounting principles, the SEC designated the U.S. Financial Accounting Standards Board (the "FASB") as a standard setting body and confirmed that the FASB's financial accounting and reporting standards are "generally accepted" for purposes of the U.S. federal securities laws. *See* SEC Release No. 33-8879 (Dec. 21, 2007). The Sarbanes-Oxley Act requires the standard setting body to be organized as a private entity and to have a board of trustees, the majority of whom are not and have not been associated persons at a registered public accounting firm during the prior two years. It also requires the standard setting body to adopt procedures to ensure prompt consideration of necessary changes to accounting principles by a majority vote and to consider the need to keep standards current. *See* SEC Release No. 33-8221 (Apr. 25, 2003).

85 In reviewing the financial statements of registrants, the SEC staff will comment not only on the adequacy of U.S. GAAP reconciliation matters, but also on whether it believes that home-country principles or IFRS have been applied correctly. *See* Lynn E. Turner, Chief Accountant, SEC, Office of the Chief Accountant, Financial Reporting Issues Critical to European SEC Registrants/Users of U.S. GAAP (Apr. 8, 1999).

86 SEC Release No. 33-8879 (Dec. 21, 2007). This decision followed several years of coordinated efforts by the SEC and the FASB with the International Accounting Standards Committee (the "IASC") and its successor, the IASB, including through the International Organization of Securities Commissions (IOSCO), to develop a core set of international accounting standards for cross-border capital raising and listing purposes in all global markets. In 2000, the SEC issued a concept release, International Accounting Standards, SEC Release No. 33-7801 (Feb. 16, 2000), that sought, *inter alia*, to identify the important issues that would be raised by an acceptance of the IASC "core standards" program. The SEC expressed support for the core standards project, but indicated that there were three key elements that must be present if financial statements prepared under such standards were to be accepted in Securities Act registration statements without U.S. GAAP reconciliation: (i) they must include a core set of accounting pronouncements that constitutes a comprehensive, generally accepted basis of accounting, (ii) they must be of a high quality, resulting in comparability and transparency, and they must provide for "full disclosure," and (iii) they must be rigorously interpreted and applied. These elements have continued to be relevant to the SEC in its consideration of IFRS. Subsequently, in 2002 the IASB and the FASB agreed to a Memorandum of Understanding on convergence between their respective accounting standards and thereafter published a roadmap for developing common accounting standards and developed plans and milestone targets for completing the major Memorandum of Understanding projects in 2011. FASB and IASB Reaffirm Commitment to Memorandum of Understanding—A Joint Statement of the FASB and IASB (Nov. 5, 2009). On May 28, 2014, the IASB and FASB issued a converged standard of revenue recognition. *See* § 4.05[8][d]; *see also* News Release, IASB and FASB, IASB and FASB Seek to Reduce Differences in Classification and Measurement Models for Financial Instruments (Jan. 27, 2012).

87 EU companies listed on a regulated market have been required since 2005 to prepare their consolidated accounts in accordance with IFRS. As of December 2007 when the rules were adopted, the only difference

between IFRS as issued by the IASB and IFRS as adopted by the EU relates to International Accounting Standard No. 39, Financial Instruments: Recognition and Measurement ("IAS 39"), whereby IFRS as adopted by the EU offers greater flexibility with respect to hedge accounting for certain financial instruments than does IFRS as issued by the IASB. As a practical matter, this difference applies only to foreign financial institutions, and the vast majority of EU issuers listed in the United States do not make use of this carve-out available under the EU-endorsed IFRS. There are concerns, however, that EU issuers may not be able to establish compliance in the future if the timing of the EU's endorsement of new standards, or an EU decision not to endorse a standard, were to create differences between EU IFRS and IFRS as issued by the IASB such that compliance with EU IFRS necessarily precluded compliance with IFRS as issued by the IASB. *See* SEC Release No. 33-8879 (Dec. 21, 2007), 73 Fed. Reg. 986, 993 n.75 (Jan. 4, 2008). IAS 39 will be superseded by IFRS 9, Financial Instruments. IFRS 9 includes requirements for recognition and measurement, derecognition and hedge accounting. The final version of IFRS 9 was issued on July 24, 2014. The IASB has assigned a mandatory effective date of January 1, 2018, but the EU has not yet assigned a mandatory effective date.

The SEC made available temporary transition relief to European issuers that had already utilized the IAS 39 carve-out in financial statements previously filed with the SEC. These issuers were permitted to file financial statements for their first two fiscal years that ended after November 15, 2007 without U.S. GAAP reconciliation if their financial statements otherwise complied with IFRS as issued by the IASB and an audited reconciliation to IFRS as issued by the IASB was provided. European issuers were required to include reconciliations to U.S. GAAP or otherwise comply with the requirements in Item 18(a) for fiscal years after the transition period. *See* Form 20-F, Instructions to Item 18; *see also* SEC Release No. 33-8879 (Dec. 21, 2007).

88 In 2008, following issuance of a concept release seeking input as to whether U.S. issuers should be permitted to elect to prepare their financial statements in accordance with IFRS, the SEC proposed a roadmap for the potential use of financial statements prepared in accordance with IFRS as issued by the IASB by U.S. issuers for purposes of their filings with the SEC. *See* SEC Release Nos. 33-8831 (Aug. 7, 2007) and 33-8982 (Nov. 14, 2008). In February 2010, the SEC directed its staff to develop and execute a work plan related to the proposed roadmap and in May 2011, the SEC's Office of the Chief Accountant published a staff paper outlining a possible approach for incorporation of IFRS into the U.S. financial reporting system. On July 13, 2012, the SEC's Office of the Chief Accountant published its Final Staff Report on the work plan (the "Final Staff Report"), which included no decision or time frame regarding whether to allow U.S. companies to present financial statements according to IFRS. *See* SEC, Office of the Chief Accountant, Work Plan for the Consideration of Incorporating International Financial Reporting Standards into the Financial Reporting System for U.S. Issuers: Exploring a Possible Method of Incorporation (May 26, 2011); Final Staff Report (July 13, 2012). The Final Staff Report summarized the staff's key findings regarding the potential incorporation of IFRS into U.S. financial reporting, but did not make any recommendation to the SEC. The issues discussed in the report included the diversity in how accounting standards are interpreted and applied in various jurisdictions, the potential cost to U.S. issuers of adopting IFRS, investor education and governance.

89 James Schnurr, Chief Accountant (2014-2016), SEC, Remarks before the 2015 Baruch College Financial Reporting Conference (May 7, 2015).

90 James Schnurr, Chief Accountant (2014-2016), SEC, Remarks Before the 2015 AICPA National Conference on Current SEC and PCAOB Developments (Dec. 9, 2015).

91 Wesley R. Bricker, Chief Accountant, SEC, Keynote Address before the 2016 AICPA Conference on Current SEC and PCAOB Developments (Dec. 5, 2016).

92 *See* Notes 41, 124, 131.

93 Form 20-F, Item 18 (Item 18 requires disclosure of all information in Item 17 as well as certain additional information. *See* Item 17(c) for a description of the information referenced here).

94 SEC, Division of Corporation Finance, FINANCIAL REPORTING MANUAL, Topic 6410.2. If a foreign registrant's

financial statements are prepared in accordance with U.S. GAAP, audited statements of income and cash flows need only be provided for the last two complete fiscal years and not for the last three complete fiscal years required if the financial statements were prepared in accordance with home-country (or IFRS) accounting principles.

95 Form 20-F, Item 17(c)(2)(iii). Although there are differences between a cash flow statement prepared in accordance with IAS No. 7 and one prepared in accordance with U.S. GAAP, the SEC concluded that most of the differences involve classification and are readily apparent, and that the remaining differences should not significantly detract from an investor's understanding of the company's cash flows. Two other International Accounting Standards have been adopted by the SEC: (i) portions of International Accounting Standard No. 22, Business Combinations (as amended in 1993) (superseded by IFRS 3, *Business Combinations*, as amended by Annual Improvements to IFRSs 2010-2012 Cycle, which became effective on July 1, 2014), regarding the method of accounting for a business combination and the determination of the amortization period for goodwill and negative goodwill, and (ii) portions of International Accounting Standard No. 21, The Effects of Changes in Foreign Exchange Rates (as amended in 1993), regarding translation of amounts stated in a currency of an entity in a hyperinflationary economy.

96 *See* Form 20-F, Instruction 2 to Item 3.A.

97 A balance sheet as of the end of the earliest of the three years is not required, however, if that balance sheet is not required by a jurisdiction outside the United States. Form 20-F, Instruction 1 to Item 8.A.2.

98 Form 20-F, Item 8.A.4. In 2001, the SEC issued a release adopting a technical amendment to Item 8.A.4 of Form 20-F clarifying that the last audited financial statements must be annual financial statements and that an issuer cannot satisfy this requirement by filing interim audited financial statements. The amendment deletes language in Instruction 1 of Item 8.A.4 that incorrectly implied that audited financials for a period of less than a full year could be used to satisfy the 15-month rule. *See* SEC Release No. 34-44406 (June 11, 2001).

99 *See* Form 20-F, Item 3.A. Issuers may present the five years of selected financial data (or fewer than five years if an accommodation is available) required in the registration statement on the basis of their home-country GAAP rather than five years of U.S. GAAP selected financial data. *See* Form 20-F, Instruction 2 to Item 3.A. However, if the issuer uses a basis of accounting other than IFRS as issued by the IASB, it must include a reconciliation of the selected financial data to U.S. GAAP for (i) those periods for which the issuer is required to reconcile the primary annual financial statements in a filing under the Securities Act or the Exchange Act, and (ii) any interim periods. *See* Form 20-F, Instruction 2 to Item 3.A. The SEC will entertain a waiver for the earliest two years of the five-year period if an issuer is unable to provide such selected financial data. An issuer seeking a waiver must submit a required representation to the SEC before or at the time the form omitting such information is filed and disclose in the document that data for the earliest two years have been omitted and explain the reasons for the omission. Form 20-F, Instruction 2 to Item 3.A.

100 Similarly, the JOBS Act permits an EGC to cover only two years of financial information in the MD&A section of its IPO registration statement. *See* Chapter 3 for discussion of the JOBS Act, pursuant to which this accommodation was adopted, and other accommodations available to EGCs. However, underwriters may sometimes advise EGCs not to take advantage of certain aspects of the further disclosure relief given the potential usefulness of the additional financial information and data for marketing purposes. The JOBS Act's provisions modifying the selected financial data and MD&A disclosure requirements do not on their face apply directly to a foreign private issuer using Form 20-F or the Securities Act forms that refer to Form 20-F for their content; however, the SEC has indicated that a foreign private issuer that qualifies as an EGC may comply with the scaled disclosure provisions available to EGCs to the extent relevant to the form requirements for foreign private issuers. SEC, Division of Corporation Finance, Generally Applicable Questions on Title I of the JOBS Act (Sept. 28, 2012, May 3, 2012 and Apr. 16, 2012) ("SEC EGC FAQs") 8.

101 Form 20-F, Instruction 3 to Item 8.A.2; *see also* SEC Release No. 33-8567 (Apr. 12, 2005); *supra* Note 94 and accompanying text. *See also* SEC, Division of Corporation Finance, FINANCIAL REPORTING MANUAL,

Topic 6410.2(c).

102 *See* Form 20-F, General Instruction G. First-time adopters of IFRS must present (i) the note required by IFRS 1, First-Time Adoption of International Financial Reporting Standards, containing a reconciliation from the company's previous GAAP to IFRS, in a form and content sufficient to explain all material adjustments to the balance sheet and income statement and, if presented under the company's previous GAAP, the cash flow statement and (ii) to the extent the primary financial statements reflect the use of exceptions permitted or required by IFRS 1, identification of each exception used, including an indication of the items or class of items to which the exception was applied and a description of what accounting principle was used and how it was applied.

Management should not include in the MD&A any discussion relating to financial statements prepared in accordance with the company's previous GAAP unless the company has elected to include or incorporate by reference such previous GAAP financial information as permitted by the SEC's rules. Form 20-F, General Instruction G.

103 *See* SEC Release No. 33-8567 (Apr. 12, 2005); SEC Release No. 33-8879 (Dec. 21, 2007).

104 *See* SEC Release No. 33-8879 (Dec. 21, 2007) ("We believe that an issuer may rely on the provisions of General Instruction G if and only if that issuer has not previously stated its reliance on IFRS 1. Further, an issuer may only rely on the provisions of General Instruction G once.")

105 *See* Center for Audit Quality International Practices Task Force, Highlights (Nov. 24, 2009), at 11, https://www.iasplus.com/en/binary/usa/caq/0911caqinternational.pdf.

106 Form 20-F, Item 8.A.5. In a meeting with the AICPA SEC Regulations Committee's International Practices Task Force, the SEC staff has noted that when financial statements are updated in order to comply with the age of financial statements requirements set forth in Item 8 of Form 20-F, an issuer must also update other "financial" information, including MD&A, Quantitative and Qualitative Disclosure of Market Risk, financial statements required under Rule 3-10 of Regulation S-K and Selected Financial Data. *See* AICPA, SEC Regulations Committee's International Practices Task Force, Highlights, Item 2 (Mar. 9, 2004).

107 U.S. registrants generally are "blacked-out" earlier than foreign issuers, except in the case of IPOs, in which case the foreign issuer requirements are stricter, as described below.

108 To obtain such a waiver, the issuer must be able to represent adequately to the SEC that it is not required to comply with the 12-month requirement in any other jurisdiction outside the United States and that compliance is impracticable or involves undue hardship. The representation must be filed as an exhibit to the registration statement. If the SEC waives the 12-month requirement, the company must comply with the 15-month requirement instead. *See* Form 20-F, Instruction 2 to Item 8.A.4.

109 U.S. registrants must include audited financial statements no older than one year and 45 days at the date the registration statement becomes effective for registration statements filed under the Securities Act or filed on Form 10. *See* Rule 3-12 of Regulation S-K.

110 Form 20-F, Item 8.A.5.

111 If the published financial information is reconciled to U.S. GAAP, the SEC will generally require comparative prior period information to be included in the registration statement (even if the issuer provides the U.S. GAAP reconciliation voluntarily). Notably, if a foreign issuer prepares primary financial statements in accordance with U.S. GAAP and releases information in its local market based on local GAAP, the SEC will require such issuer to reconcile such information to U.S. GAAP unless the issuer provides a reverse reconciliation (from U.S. GAAP to local GAAP) for at least the most recent fiscal year. The SEC has noted that once a foreign issuer reconciles published financial information to U.S. GAAP, an MD&A is required with respect to both the current and comparative periods as well as, to the extent applicable, *pro forma* financial statements pursuant to Rule 11-02 of Regulation S-K. *See* SEC, Division of Corporation Finance, International Reporting and Disclosure Issues, Part III(C) (Nov. 1, 2004). Companies preparing their financial statements in accordance with IFRS as issued by the IASB need not provide either descriptive or quantified U.S. GAAP reconciling information under Item 8.A.5 of Form 20-F. *See* Form 20-F, Instructions to Item 8.A.5; *see also* SEC Release No. 33-8879 (Dec. 21, 2007); *supra* Note 86 and accompanying text.

112 *See* Form 20-F, Instruction 2 to Item 8.

113 *See infra* § 4.09, Note 492 and accompanying text for a discussion of non-GAAP financial measures and presentation of segment information.

114 *See* PwC, A PRACTICAL GUIDE TO SEGMENT REPORTING 5, 9 (Sept. 2008).

115 *See* ASC 280. If an issuer changes its segments after a given year end but before filing its annual report on Form 10-K or Form 20-F with respect to such year, the Form 10-K or Form 20-F segment disclosures should be based on the segments in place at the year end. However, if after changing segments the issuer were to conduct a registered offering, it would be required to include in the registration statement for the offering (or file on a Form 8-K, in the case of a U.S. issuer, or Form 6-K, in the case of a foreign issuer, and incorporate by reference) annual audited financial statements with a revised segment footnote to reflect the new reportable segments, together with business and MD&A disclosure reflecting the change (but no prior SEC filings would need to be amended).

116 Rule 3-20 of Regulation S-K.

117 Rule 3-20(a) of Regulation S-K. Rule 3-20 also provides that changes in reporting currency require the financial statements of periods prior to the change to be recast comprehensively as if the new reporting currency had been used. Rule 3-20(e) of Regulation S-K. The decision to make such a change and the reason for the change must be disclosed in a note to the financial statements. *See* § 4.05[8][c] for a discussion of the requirements relevant in hyperinflationary environments.

118 Rule 3-20(b) of Regulation S-K.

119 Rule 3-20(b) of Regulation S-K.

120 Rule 3-05 of Regulation S-K.

121 Rule 1-02(w) of Regulation S-K.

122 Rule 3-05(b)(2)(iv) and Rule 3-05(b)(4)(i) of Regulation S-K. If an issuer, other than a foreign issuer permitted to furnish reports on Form 6-K, omits the financial statements of an acquired business from the prospectus or prospectus supplement because the "significance" of the acquired business is less than 50%, the omitted financial statements and any *pro forma* financial information required by Article 11 of Regulation S-K must be furnished under cover of Form 8-K no later than 75 days after the consummation of the acquisition. Rule 3-05(b)(4)(ii) of Regulation S-K. *See also* Form 8-K, Item 9.01(a).

123 Rule 3-05(b)(2) of Regulation S-K. The annual financial statements must be audited in accordance with U.S. auditing standards. The financial statements must be presented in accordance with U.S. GAAP or, when the acquired business is a foreign private issuer, reconciled to U.S. GAAP. The financial statements of an acquired business need not, however, contain a reconciliation to U.S. GAAP if those financial statements are prepared using IFRS as issued by the IASB or if the business does not exceed the 30% significance level. *See* Form 20-F, Item 17(c)(2)(v); § 4.05[1].

124 *Pro forma* financial information may be required by Article 11 in connection with certain transactions other than acquisitions or business combinations, even if separate financial statements are not required under Rule 3-05. *See* Rule 11-01(a) of Regulation S-K.

The financial statement requirements of Rule 3-05 and the *pro forma* requirements of Article 11 of Regulation S-K do not apply to annual reports on Form 20-F or Form 10-K under the Exchange Act. *See* Form 20-F, Items 17(a) and 18; Form 10-K, Item 8. Both requirements do, however, apply to Securities Act registration statements and to Exchange Act registration statements, such as registration statements on Form 20-F, when being used to register securities under the Exchange Act in connection with a listing that does not involve a public offering. *See* Form F-1, Items 4 and 4A(b); Form F-3, Item 5(b); Form 20-F, Items 17(a) and 18; Form 10, Item 13.

In 2005, the SEC adopted rules that, subject to certain exceptions in the context of business combinations and change-of-domicile transactions, require the filing of a report on Form 20-F by an Exchange Act-reporting foreign issuer shell company in connection with entering into a transaction that causes it to cease being a shell company. The report is required to be filed within four business days of the completion of the transaction and must contain the same information (including financial information) that would be required in a registration statement on Form 20-F covering all classes of the registrant's securities that are subject to Exchange Act reporting obligations. *See* SEC Release No. 33-8587 (July 15, 2005); Form 20-F, General Instruction A(d).

125 Rule 3-05(a)(3) of Regulation S-K.

126 Rule 3-05(b)(2)(i) of Regulation S-K.

127 Rule 3-09(a) of Regulation S-K. The financial statement requirements of Rule 3-09 apply both to registration statements under the Securities Act and the Exchange Act and to annual reports under the Exchange Act.

128 For a registrant that has experienced a pre-tax loss in a given year, the foregoing "significance" test may have the effect of causing a subsidiary to be deemed "significant" despite its relative financial unimportance to the registrant. This is because the registrant would not be entitled to employ an income figure based on the average of its preceding five fiscal years when performing the "significance" calculations (in contrast to issuers with pre-tax income, as set out in the computational notes to Rule 1-02(w) of Regulation S-K), causing the "significance" test to be measured against the given year's pre-tax loss only, as measured in absolute terms and on a U.S. GAAP basis or, for issuers that report in accordance with IFRS as issued by the IASB, on that basis. Thus, a registrant that has pre-tax income of $100 in each of its four earliest fiscal years, followed by a pre-tax loss of $5 in the most recent fiscal year, would measure significance by reference to $5. If, on the other hand, the registrant had pre-tax income of $5 in the most recent fiscal year, significance would be measured by reference to $81 (the five-year income average). *See* Rule 1-02(w) of Regulation S-K, Computational Note 2.

129 Rule 3-09(a) of Regulation S-K.

130 For the purposes of making the calculations required in the significance tests, issuers that report their financial statements using U.S. GAAP or reconcile to U.S. GAAP must make calculations under the test using U.S. GAAP. Issuers that report using IFRS as issued by the IASB should make calculations under IFRS. *See* Note to paragraph (w) of Rule 1-02(w) of Regulation S-K. The financial statements of a 50%-or-less owned investee need not contain a reconciliation to U.S. GAAP if the registrant prepares its financial statements using IFRS as issued by the IASB or if the first and third conditions of the significance test do not exceed 30%. *See* Form 20-F, Item 17(c)(2)(vi).

131 *See* Rule 3-09(b) of Regulation S-K. Thus, interim financial statements of the subsidiary or investee are not required under Rule 3-09. Instead, under Rule 10-01(b)(1) of Regulation S-K, an issuer's interim financial statements should include summarized income statement information relating to each significant subsidiary or investee. However, such summarized information need not be furnished for a subsidiary or investee that would have qualified as a foreign issuer if it were a registrant.

132 Rule 3-09(c) of Regulation S-K.

133 Rule 3-10(a) of Regulation S-K ; *see also* SEC Release No. 33-7878 (Aug. 4, 2000). Under the Securities Act, guarantees of securities are themselves securities and in connection with an offering of guaranteed securities both the securities and the guarantees must be either registered or exempt from registration.

134 Rule 3-10(b), (c), (d), (e) and (f) of Regulation S-K ; *see* SEC Release No. 33-7878 (Aug. 4, 2000).

135 Rule 3-10(b), (c), (d), (e) and (f) of Regulation S-K.

136 The SEC declined to include an exception to this rule for companies organized in jurisdictions that require directors to own shares or that prescribe a minimum number of shareholders. The SEC has, however, granted no-action relief in a case in which the non-parent company ownership was at the minimum level required by law. *See Crown Cork & Seal Company, Inc*. (avail. Mar. 10, 1997). The SEC has indicated its intention to continue to recognize the exception presented in *Crown Cork & Seal Company, Inc.* and to consider future no-action requests based on substantially similar facts. SEC Release No. 33-7878 (Aug. 4, 2000); *see*, *e.g.*, *Melco Crown Entertainment Ltd.* (avail. Oct. 18, 2010); *Axtel, S.A. de C.V.* (avail. July 21, 2004); *Maxcom Telecommunicaciones, S.A. de C.V.* (avail. Oct. 31, 2001).

137 A guarantee is "full and unconditional" if, "when an issuer of a guaranteed security has failed to make a scheduled payment, the guarantor is obligated to make the scheduled payment immediately and, if it does [not], any holder of the guaranteed security may immediately bring suit directly against the guarantor for payment of all amounts due and payable." Rule 3-10(h)(2) of Regulation S-K. A guarantee can be full and unconditional even if it includes a "savings" clause to prevent the guarantee from being considered a fraudulent conveyance under U.S. law. SEC Release No. 33-7878 (Aug. 4, 2000), 65 Fed. Reg. 51,692, 51,696 (Aug. 24, 2000). A guarantee will be considered full and unconditional if the savings clause limits the guarantee to the highest amount that would not render it a fraudulent conveyance, but not if the guarantee is limited to a specified dollar amount or percentage of the guarantor's assets.

138 A subsidiary is a "finance subsidiary" if it has no assets, operations, revenues or cash flows other than those related to the issuance, administration and repayment of the security being registered and any other securities guaranteed by its parent company. Rule 3-10(h)(7) of Regulation S-K.

139 Rule 3-10(b)(4) of Regulation S-K. The footnote must also include certain narrative disclosures prescribed by Rule 3-10(i)(9) and (10) of Regulation S-K.

140 A subsidiary is an "operating subsidiary" if it is not a "finance subsidiary." Rule 3-10(h)(8) of Regulation S-K.

141 Rule 3-10(c)(4) of Regulation S-K. The condensed consolidating information must cover the same periods as the parent's financial statements with separate columns for (i) the parent company, (ii) the subsidiary issuer, (iii) any other subsidiaries of the parent on a combined basis, (iv) consolidating adjustments and (v) the total consolidated amounts.

142 Note 1 to Paragraph (c) of Rule 3-10 of Regulation S-K. The footnote must also include certain narrative disclosures prescribed by Rule 3-10(i)(9) and (10) of Regulation S-K.

143 Rule 3-10(d)(4) of Regulation S-K. The condensed consolidating information must cover the same periods as the parent's financial statements with separate columns for (i) the parent company, (ii) the subsidiary issuer, (iii) the guarantor subsidiaries of the parent company on a combined basis, (iv) any other subsidiaries of the parent on a combined basis, (v) consolidating adjustments and (vi) the total consolidated amounts.

If any of the subsidiary guarantees is not joint and several with the guarantees of the other subsidiaries, then each subsidiary guarantor whose guarantee is not joint and several need not include separate financial statements, but the condensed consolidating financial information must include a separate column for each subsidiary guarantor whose guarantee is not joint and several. Rule 3-10(i) of Regulation S-K ; *see* SEC Release No. 33-7878 (Aug. 4, 2000), 65 Fed. Reg. 51,692, 51,699 (Aug. 24, 2000).

144 Note 5 to Paragraph (d) of Rule 3-10 of Regulation S-K. The footnote must also include certain narrative disclosures prescribed by Rule 3-10(i)(9) and (10) of Regulation S-K.

145 Rule 3-10(e) of Regulation S-K. The condensed consolidating information must cover the same periods as the parent's financial statements with separate columns for (i) the parent company, (ii) the subsidiary guarantor, (iii) any other subsidiaries of the parent on a combined basis, (iv) consolidating adjustments and (v) the total consolidated amounts.

146 The footnote must also include certain narrative disclosures prescribed by Rule 3-10(i)(9) and (10) of Regulation S-K.

147 Rule 3-10(f) of Regulation S-K. The condensed consolidating information must cover the same periods as the parent's financial statements with separate columns for (i) the parent company, (ii) the subsidiary guarantors on a combined basis, (iii) any other subsidiaries of the parent on a combined basis, (iv) consolidating adjustments and (v) the total consolidated amounts.

If any of the subsidiary guarantees is not joint and several with the guarantees of the other subsidiaries, then each subsidiary guarantor whose guarantee is not joint and several need not include separate financial statements, but the condensed consolidating financial information must include a separate column for each subsidiary guarantor whose guarantee is not joint and several. Rule 3-10(i) of Regulation S-K ; *see* SEC Release No. 33-7878 (Aug. 4, 2000), 65 Fed. Reg. 51,692, 51,699 (Aug. 24, 2000).

148 Note 1 to Paragraph (f) of Rule 3-10 of Regulation S-K. The footnote must also include certain narrative disclosures prescribed by Rule 3-10(i)(9) and (10) of Regulation S-K.

149 Rule 3-10(g) of Regulation S-K.

150 The significance test should be computed using the net book value of the subsidiary as of the most recent fiscal year preceding the acquisition. Rule 3-10(g)(3)(i) of Regulation S-K.

151 Rule 12h-5 under the Exchange Act. In the absence of this relief, the issuer and the guarantor would generally be required to file separate periodic reports under the Exchange Act pursuant to § 12 or § 15(d) thereof. 65 Fed. Reg. 51,692, 51,703–04 (Aug. 24, 2000).

152 Rule 3-16(a) of Regulation S-K. A parent registrant must continue to provide such financial statements in its subsequent annual reports on Form 10-K or Form 20-F, as applicable, together with all material changes to such financial statements in any subsequent registration statement filed by the parent registrant.

153 Rule 3-16(b) of Regulation S-K.

154 Rule 3-13 of Regulation S-K.

155 Subpart 1100 of Regulation S-K ; SEC Release No. 33-8518 (Dec. 22, 2004).

156 SEC, Division of Corporation Finance, Current Issues and Rulemaking Projects, at 73 (Nov. 14, 2000).

157 Rule 140 under the Securities Act; *see also* SEC, Division of Corporation Finance, Current Issues and Rulemaking Projects, at 73 (Nov. 14, 2000) (stating that under certain circumstances the SEC staff may require co-registration in the context of structured financings to strengthen bank capital).

158 Rule 3-20(b) of Regulation S-K. In response to concerns that the literal application of Rule 3-20(b) could result in potentially misleading presentations when a currency has declined significantly after the most recent balance sheet date (for example, convenience translations could depict an issuer's debt level at a much lower U.S. dollar amount than the debt service requirements), the SEC staff will not object if an issuer uses the exchange rate at the date of the most recent balance sheet in preparing a convenience translation for inclusion in an annual report on Form 20-F or a registration statement, or if it omits a convenience translation. *See* SEC, Division of Corporation Finance, International Reporting and Disclosure Issues, Part VIII(D) (Nov. 1, 2004). The SEC staff has further stated that if convenience translations are presented in a registration statement that includes all required financial statements, such as Form F-1, the same exchange rate should be used for the most recent fiscal year presented and any subsequent interim period. If an issuer files a registration statement that incorporates by reference financial statements previously filed on Form 20-F, the staff will not require amendment of the previously filed financial statements to reflect a convenience translation based on a more current exchange rate. *See* SEC, Division of Corporation Finance, International Reporting and Disclosure Issues, Part VIII(D) (Nov. 1, 2004).

159 Form 20-F, Item 3.A.3. An issuer is permitted to use any reliable source for the exchange rates as long as it identifies the source. One example the SEC provides is the noon buying rate in New York City for cable transfers in foreign currencies as certified for customs purposes by the Federal Reserve Bank of New York, which is published on the Board of Governors of the Federal Reserve website weekly. *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Forms, Question 110.01.

160 Form 20-F, Item 3.A.2.

161 Rule 3-20(c) of Regulation S-K.

162 This is an exception to the general rule that the results of operations be measured in the currency of the "primary economic environment" in which business is conducted, with gain or loss then measured in the translation of that currency to the reporting currency. Rule 3-20(d) of Regulation S-K.

163 Rule 3-20(d) of Regulation S-K.

164 *See* SEC, Staff Accounting Bulletin No. 104 (Dec. 17, 2003), Fed. Sec. L. Rep. (CCH) ¶75,571; *see also* SEC, Staff Accounting Bulletin No. 101 (Dec. 3, 1999), Fed. Sec. L. Rep. (CCH) ¶75,565. SAB 104 (i) integrates the staff's interpretive guidance previously provided with respect to SAB 101, including as set forth in SEC, Office of the Chief Accountant, Frequently Asked Questions and Answers about Staff Accounting Bulletin No. 101—Revenue Recognition in Financial Statements (Oct. 12, 2000), Fed. Sec. L.

Rep. (CCH) ¶75,568 and (ii) recognizes the role of the Emerging Issues Task Force consensus on Issue 00-21, Accounting for Revenue Arrangements with Multiple Deliverables.

165 SAB 104.

166 *See* SAB 104.

167 In a fact sheet discussing the background to SAB 101, the SEC noted its concern that a substantial portion of financial reporting fraud cases brought by the SEC have involved improper revenue recognition. *See* SEC, Fact Sheet: Staff Accounting Bulletin No. 101—Revenue Recognition (Dec. 3, 1999); *see also infra* Note 180 (noting the staff's continued concern with revenue recognition policies).

168 The other two are Staff Accounting Bulletin No. 99 (Aug. 12, 1999), Fed. Sec. L. Rep. (CCH) ¶75,563, discussed in § 11.04[2][a], and Staff Accounting Bulletin No. 100 (Nov. 24, 1999), Fed. Sec. L. Rep. (CCH) ¶75,564.

169 *See* FASB, Project Updates: Revenue Recognition—Joint Project of the FASB and IASB (last updated June 3, 2014); *see also* FASB, ASU No. 2015-14 (Aug. 12, 2015) and IASB, "Effective Date of IFRS 15" (Sept. 11, 2015), deferring the effective dates of the new revenue recognition standard. For U.S. GAAP public companies, Accounting Standards Update No. 2014-09, Revenue from Contracts with Customers (Topic 606), will become effective for annual periods beginning after December 15, 2017, including interim reporting periods therein, with early adoption permitted for annual reporting periods beginning after December 15, 2016. For U.S. GAAP non-public companies, the new standard will become available for annual periods beginning after December 15, 2018, with earlier adoption permitted for annual reporting periods beginning after December 15, 2016. For IFRS companies, the new standard will become effective for annual periods beginning on or after January 1, 2018, and early adoption is permitted. The new standards require U.S. and foreign public companies to adopt either a "full retrospective" or "modified retrospective" approach upon adoption. Under the full retrospective approach, companies will be required to apply the new standards retrospectively to each prior reporting period. If a company selects the modified retrospective approach, it will be required to apply the new standards only to the current period, but it will need to recognize the cumulative effect of initially applying the new standards as an adjustment to the opening balance of retained earnings. Given the scale of the required restatement, companies will need to determine their retrospective presentation well in advance of issuing their first set of financials after adopting these new standards. *See* AICPA, *New Revenue Recognition Accounting Standard—Learning and Implementation Plan*, Financial Reporting Center (Sept. 2016); Ernst & Young, A CLOSER LOOK AT THE NEW REVENUE RECOGNITION STANDARD (updated Sept. 2016).

Click to open document in a browser

Each registration statement and Form 20-F filing is required to contain an MD&A for the periods covered by the financial statements included in the filing, including interim periods. [184] The MD&A is a discussion of results of operations, liquidity, capital resources and other information necessary to an understanding of a company's financial condition, changes in financial condition and operating results. The MD&A requirements are intentionally general, reflecting the SEC's view that a flexible approach elicits more meaningful disclosure and avoids boilerplate discussions.

The MD&A is intended to provide, in one section of the filing, narrative disclosure of material historical and prospective information that enables investors to assess the financial condition and results of operations of the issuer, with particular emphasis on its future prospects. The SEC requires a narrative explanation of the financial statements, because it believes the numerical presentation and accompanying footnotes contained in financial statements may be insufficient for an investor to judge the quality of an issuer's earnings and the likelihood that past performance is indicative of future performance.

The SEC has designed the MD&A requirement to give investors an opportunity to look at the company through the eyes of management. For that reason, management is required to identify and analyze qualitative and quantitative factors necessary for an understanding and evaluation of an issuer's history and prospects, in both the short term and long term. Since the SEC considers the MD&A requirement one of the most significant disclosure requirements, it

p. 4-53

reviews a company's response carefully and often issues comments seeking clarification or further explanation. [185]

[1] General SEC Interpretive Guidance on MD&A—Presentation and Content

Because of the flexible and general nature of the MD&A disclosure requirement, the SEC has provided continued guidance on what information

p. 4-53
p. 4-54

should be disclosed and how to present such information to most effectively convey material items to investors. In particular, the SEC interpretive releases from May 1989 and December 2003 provided guidance on the presentation, content and form of MD&A disclosures the SEC requires. A focus of each release was how issuers should incorporate disclosures about prospective information, the reasonably likely material results of trends, and how to disclose when current results are not indicative of expected future results.

[a] 1989 Interpretive Guidance

In 1988, the SEC commenced a review of certain filings to evaluate compliance with the MD&A requirements. In 1989, the SEC published a release summarizing the results of the project and explaining its views on several areas of

p. 4-54
p. 4-55

disclosure required in the MD&A. [186] In particular, the SEC determined that interpretive guidance was needed regarding treatment in the MD&A of prospective information, analysis of long- and short-term liquidity and capital resources, material changes in financial statement line items, required interim period disclosure, analysis of what constitutes a segment, participation in high yield financings, highly leveraged transactions or noninvestment grade loans and investments, the effects of U.S. federal financial assistance upon the operations of financial institutions and preliminary merger negotiations. With respect to prospective information, the SEC distinguished between (i) "currently known trends, events, and uncertainties that are reasonably expected to have material effects" [187] and (ii) "future trend[s] or event[s] or … less predictable impact[s] of a known event, trend or uncertainty." [188] If an issuer's management cannot determine that a currently known trend, event or uncertainty will not materialize, the management must assume that the trend, event or uncertainty will eventuate and must disclose its reasonably likely and material effects on the issuer's financial condition or operations. An issuer need not, but may, disclose other forward-looking information, such as future trends and events. [189]

Statements in filings with the SEC that (i) project an issuer's revenues or other financial items, (ii) delineate management's plans and objectives for future operations, (iii) contain statements about an issuer's future economic performance in the MD&A discussion or (iv) disclose the assumptions underlying or relating to any statement in categories (i) through (iii) will generally fall within a safe-harbor exemption for forward-looking information in the SEC's rules from the civil liability provisions of the Securities Act and the Exchange Act. In order to qualify for the exemption, such statements must be made with a reasonable basis and disclosed in good faith. [190] This safe harbor applies to both prospective information the SEC requires and prospective information an issuer voluntarily discloses.

The Private Securities Litigation Reform Act of 1995 [191] created a statutory safe harbor for any forward-looking statement that is identified as such and accompanied by "meaningful cautionary statements identifying important factors that could cause actual results to differ materially from those in the forward-looking statement." [192] In part because of an absence of guidance as to what

p. 4-55

p. 4-56

would constitute "meaningful cautionary statements" and certain other difficulties with respect to the interpretation and application of the safe harbor, [193] the willingness of registrants to include forward-looking disclosure in SEC filings, which generally has been limited to filings in connection with mergers and acquisitions, remains limited. The statutory safe harbor also does not apply to certain transactions, including, in particular, IPOs or tender offers. Further, it does not apply to information contained in financial statements prepared in accordance with generally accepted accounting principles.

As noted, however, certain forward-looking information may be required, especially in MD&A. The SEC, through the comment process and otherwise, has encouraged the inclusion of forward-looking information or suggested it is required as part of MD&A.

[b] 2003 Interpretive Guidance

[i] *Presentation of MD&A*

The SEC's 2003 MD&A Interpretive Guidance provided new guidance on the presentation, content and focus of MD&A disclosure. [194] In the 2003 MD&A Interpretive Guidance, the SEC stated that MD&A is often unnecessarily lengthy, difficult to understand and confusing. In order to make the MD&A more clear and understandable, the SEC recommends the following:

p. 4-56

p. 4-57

- tabular presentations of relevant financial or other information; [195]
- headings to assist its flow and understanding;
- introductory sections or overviews; [196] and

- a "layered" approach to emphasize the most important information and analysis. [197]

The SEC favors an introduction or overview that provides a balanced, executive-level discussion identifying the most important themes or other significant matters that management is concerned with when evaluating a company's financial condition and operating results. According to the 2003 MD&A Interpretive Guidance, a good introduction or overview would:

- include economic or industry-wide factors relevant to the company;
- serve to inform investors about how the company earns revenues and income and generates cash;
- to the extent necessary or useful to convey this information, discuss the company's lines of business, locations of operations and principal products and services; and
- provide insight into material opportunities, challenges and risks, such as those presented by known material trends and uncertainties, on which the company's executives are most focused for both the short and long term, as well as the actions they are taking to address these opportunities, challenges and risks. [198]

p. 4-57
p. 4-58

Because these matters do not generally remain static from period to period, the SEC expects the introduction to change over time to remain current. As with all sections of the MD&A, the SEC does not consider boilerplate disclaimers and other generic language generally to be helpful in providing useful information or achieving balance, and stated in the 2003 MD&A Interpretive Guidance that such disclosure detracts from the purpose of an introduction or overview. [199] The SEC also expects an introduction's discussion and analysis of financial condition and operating performance to address both past and prospective matters. [200]

[ii] *Content of MD&A*

The SEC reaffirmed general disclosure principles in the 2003 MD&A Interpretive Guidance by stating that companies could improve MD&A disclosure by focusing on their most important information. Disclosure should emphasize material information that is required, or promotes understanding, and de-emphasize (or, if appropriate, delete) immaterial information that is not required and does not promote understanding. [201] Although any particular MD&A will turn upon company-specific facts and circumstances, the 2003 MD&A Interpretive Guidance presents the SEC's view of generally applicable MD&A practice.

A theme of the 2003 MD&A Interpretive Guidance is that the MD&A should not be limited to financial information given that non-financial measures may be key indicators of a company's financial condition and operating performance. Examples of relevant non-financial measures could include interest rates or economic growth rates and their anticipated trends, and may include company or common industry specific measures. Importantly, non-financial key measures may be contained outside a company's SEC filings— *e.g.*, in earnings releases or

p. 4-58
p. 4-59

financial analysts' calls—and, accordingly, companies should consider all their communications to determine what information is material. The SEC also encouraged companies to consider non-financial measures when determining whether disclosable material trends or uncertainties have developed. [202]

Following on from the SEC's earlier guidance, a further theme of the 2003 MD&A Interpretive Guidance is prospective disclosure. Companies are required to disclose known material events and uncertainties that could cause reported financial information not to be necessarily indicative of future operating performance or future financial condition. [203] The 2003 MD&A Interpretive Guidance encourages disclosure of forward-looking information where it "will provide useful material information for investors that promotes understanding." [204] Importantly, the 2003 MD&A Interpretive Guidance appears to recommend quantitative prospective disclosure, stating that such disclosure "can promote understanding" and "should be considered and may be required to the extent material if … reasonably available." [205]

The SEC paid particular attention in the 2003 MD&A Interpretive Guidance to intermediate effects of trends, events, demands, commitments and uncertainties in terms of the MD&A's required "analysis." The SEC cites as an example company financial statements that reflect materially lower revenues resulting from a decline in the volume of products sold when compared to a prior period. In this instance, the SEC stated that the MD&A should not only identify the decline in sales volume, but should also analyze the reasons for the decline when the reasons are material and determinable (such as difficulties in manufacturing processes, declines in product quality, loss of competitive position and market share, or a combination of factors). [206]

The 2003 MD&A Interpretive Guidance further cautioned companies to consider MD&A disclosure in light of any reasonable likelihood that reported financial information is not indicative of future financial condition or future operating performance due, for example, to the levels of subjectivity and judgment necessary to account for highly uncertain matters and the susceptibility of such matters to change. [207] For example, if a change in an estimate has a materially favorable impact on earnings, the change and the underlying reasons should be disclosed so that investors do not incorrectly attribute the effect to operational improvements. In addition, if events and transactions reported in the financial statements reflect material unusual or non-recurring items, aberrations

p. 4-59

p. 4-60

or other significant fluctuations, the SEC directed companies to consider the extent of variability in earnings and cash flow, and provide disclosure where necessary for investors to ascertain whether past performance is indicative of future performance. Companies also should consider whether the economic characteristics of any of their business arrangements, or the methods used to account for them, materially impact their results of operations or liquidity in a structured or unusual fashion, where disclosure would be necessary to understand the amounts depicted in their financial statements. [208]

[2] Critical Accounting Policies

Generally speaking, with respect to critical accounting policy disclosures, the SEC expects issuers to disclose the role of subjectivity and importance of judgment in the preparation of financial statements. In particular, the SEC has noted that although financial reports may appear to be precise and objective, and to suggest continuity from one period to the next, in reality they turn on judgments and estimates that may be subject to significant uncertainty and rapid change. As a result of such factors, reports representing a correct application of GAAP may nonetheless fail to communicate important information unless accompanied by disclosure about the company's financial status and the possibility, likelihood and implication of changes to the company's financial and operating status. [209]

To remedy this deficiency, the SEC has cautioned issuers to provide full, plain English explanations [210] of their critical accounting policies, the judgments

p. 4-60

p. 4-61

and uncertainties affecting the application of those policies and the likelihood that if different conditions or different assumptions were applicable to the reports, materially different results would be reported. [211] The SEC understands critical accounting policies to be those policies that are the most important to the portrayal of a company's results and financial condition and those that require management's "most difficult, subjective or complex judgments." [212]

In 2001, the SEC cautioned management, auditors, audit committees and advisers to provide investors with full transparency of critical accounting policies and their effects and, in 2002, proposed rules to require companies to make extensive disclosures in filings about the application of critical accounting policies. [213] While the 2002 proposed rules were never adopted, the cautionary advice, together with later interpretive guidance issued by the SEC, [214] provides insight into the SEC's expectations with respect to critical accounting policy disclosure. [215]

In addition, it is clear from the proposals that the SEC's attention on critical accounting policies focused at least in part on those policies that involved critical estimates. The SEC believes estimates are critical if (i) they require the company to make assumptions about highly uncertain matters and (ii) the financial statements would be materially affected by different estimates the company reasonably could have used, or by changes in the estimates that are reasonably likely to occur. [216] Furthermore, it is clear from the proposed rules that the SEC

p. 4-61

p. 4-62

was concerned, in particular, about newly adopted and recently changed accounting policies, to the extent such policies have a material impact on the company's financial statements. The SEC has also emphasized selectivity by companies in making this disclosure (suggesting that the vast majority of companies would have somewhere in the range of three to five critical accounting estimates). [217]

In December 2003, the SEC provided interpretive guidance that reaffirmed its prior statements on critical accounting policy disclosure, stating that companies should consider enhanced discussion and analysis of critical accounting estimates and assumptions that (i) supplements, but does not duplicate, the description of accounting policies in the notes to the financial statements and (ii) provides greater insight into the quality and variability of information regarding financial condition and operating performance. With respect to the former, the SEC stated that while the notes to the financial statements generally describe the method used to apply an accounting principle, the MD&A disclosure should present a company's analysis of the uncertainties involved in applying a principle at a given time or the variability that is reasonably likely to result from its application over time. With respect to the latter, the SEC stated that a company should address specifically the risk that its accounting estimates or assumptions may change (*e.g.*, because there is an uncertainty attached to the estimate or assumption or simply because the estimate or assumption is difficult to measure). [218]

The SEC expects the evaluation of critical accounting policies to be the subject of particular focus by each company's management and auditors, with auditors gaining an understanding of the judgments management has made in selecting and applying accounting principles and methods, and management being able to defend the quality and reasonableness of such policies. Auditors, in turn, must be assured of the selection, application and disclosure of such policies. [219]

[3] Liquidity, Capital Resources, Debt, Funding and Short-Term Borrowings

The bulk of MD&A for most companies addresses results of operations. The SEC has consistently sought to obtain enhanced disclosures about liquidity,

p. 4-62

p. 4-63

capital resources and debt in MD&A disclosures. The SEC has been particularly focused on these disclosures during and following market downturns over the past decade, as disclosures about liquidity and related matters are of heightened importance during such periods, particularly in the event of a sudden liquidity crisis, as occurred during the most recent financial crisis.

In 2002, following a petition by major accounting firms for interpretive guidance regarding disclosure areas of particular concern brought to light by the collapse of Enron Corp., the SEC issued a statement calling for better quality disclosure in several areas of the MD&A (the "2002 MD&A Statement"). [220] In the 2002 MD&A Statement, the SEC suggested that MD&A should, among other things, contain enhanced disclosure with respect to liquidity and capital resources (including off-balance sheet arrangements and contractual obligations). [221] Although the 2002 MD&A Statement did not establish new legal requirements, it clarified the SEC's views regarding existing disclosure obligations, and suggested specific formats for disclosing certain kinds of information. The SEC's 2003 MD&A Interpretive Guidance provided additional clarification concerning liquidity and capital resources disclosure. In September 2010, the SEC proposed rules and provided interpretive guidance relating to disclosures of short-term borrowings after concern that, during the preceding financial crisis, issuers had failed to disclose short-term borrowing obligations sufficiently and, at times, used financing structures to mask their financial condition. [222] All of these actions evidence the SEC's ongoing concern with disclosures relating to liquidity and related risks.

[a] SEC 2002 Statement Regarding Better Quality MD&A and the 2003 Interpretive Guidance

p. 4-63
p. 4-64

[i] *Sources of Liquidity and Related Risks*

With respect to sources of liquidity and related risks, the 2002 MD&A Statement cautioned issuers against MD&A disclosure that is "overly general." The SEC noted, for example, that it is not enough for an issuer to merely state that it "has sufficient short-term funding to meet its liquidity needs for the next year." Instead, issuers should describe their sources of short-term funding and disclose the circumstances that are reasonably likely to affect those sources of liquidity. Similarly, issuers were encouraged to provide informative disclosure concerning matters that could affect the extent of funds needed over the short and long term. [223]

In the 2002 MD&A Statement, the SEC cited three examples to illustrate factors that issuers should consider in evaluating risks that could impair access to sources of liquidity:

- issuers that rely on operating cash flows as their principal source of liquidity should consider the extent to which declines or fluctuations in demand for their products could reduce liquidity;
- issuers that rely on commercial paper as a principal source of liquidity should consider disclosing how such facilities could be affected by ratings downgrades or declines in financial ratios or other measures of financial performance; and
- if an issuer's liquidity is dependent on off-balance sheet arrangements, such as securitization of receivables or obtaining access to assets through special purpose entities, the MD&A should include a discussion of factors that are reasonably likely to affect the company's ability to continue to use this source of financing. [224]

The 2003 MD&A Interpretive Guidance further directed issuers to provide disclosure on historical financing arrangements and their importance to cash flows, including material information not included in the financial statements. The SEC stated that such disclosure could consist of a discussion and analysis of:

p. 4-64
p. 4-65

- external debt financing arrangements;
- off-balance sheet arrangements;
- issuances or purchases of derivative instruments linked to a company's stock;
- the use of stock as a form of liquidity; and
- the potential impact of known or reasonably likely changes in credit ratings or ratings outlook (or the inability to achieve changes). [225]

In addition to these historical items, the SEC stated in the 2003 MD&A Interpretive Guidance that discussion and analysis of the types of financing that are, or that are reasonably likely to be, available (or that a company would want to use but that are, or are reasonably likely to be, unavailable), and the impact on the company's cash position and liquidity, should be considered and may be required. For example, where a company has decided to raise material equity or debt financing, or if it is reasonably likely to do so in the future, discussion and analysis of the amounts involved, the nature and terms of the financing and the impact on the company's cash position and liquidity (as well as on results of operations in the case of factors such as interest payments) should be considered and may be required. [226]

The SEC has also reminded issuers that they must disclose and objectively evaluate the consequences of any known trend, demand, commitment, event or uncertainty that could materially affect liquidity, unless management can determine that such circumstances are not reasonably likely to occur. [227] This determination must be objectively reasonable, as viewed at the time when made. In particular, the SEC called upon issuers in the 2002 MD&A Statement to evaluate

p. 4-65
p. 4-66

carefully the terms of their financing and other contracts to identify circumstances that could adversely impact liquidity. The SEC singled out the following factors as matters requiring close scrutiny:

- provisions in financial guarantees or commitments, debt or lease agreements or other arrangements that could trigger a requirement for an early payment, additional collateral support, changes in terms, acceleration of maturity or the creation of an additional financial obligation (triggers could include adverse changes in the issuer's credit rating, financial ratios, earnings, cash flows or stock price, or changes in the value of underlying, linked or indexed assets);
- circumstances that could impair the issuer's ability to continue to engage in transactions that have been integral to historical operations or are financially or operationally essential, or that could render that activity commercially impracticable (these may include the inability to maintain a specified investment grade credit rating, level of earnings, earnings per share, financial ratios or collateral);
- factors specific to the issuer and its markets that it expects to be given significant weight in the determination of its credit rating or will otherwise affect the issuer's ability to raise short- and long-term financing;
- guarantees of debt or other commitments to third parties; and
- written options on non-financial assets (for example, real estate puts). [228]

[ii] *Cash Requirements and Uses of Cash*

The 2003 MD&A Interpretive Guidance also emphasized the need for attention to disclosure of cash requirements. In order to identify and disclose known material cash requirements, the SEC directed companies to consider whether the following information would have a material impact on liquidity (cautioning that discussion of immaterial matters, and especially generic or boilerplate disclosure, should be avoided):

- funds necessary to maintain current operations, complete projects underway and achieve stated objectives or plans;
- commitments for capital or other expenditures; and

p. 4-66
p. 4-67

- the reasonably likely exposure to future cash requirements associated with known trends or uncertainties, and an indication of the time periods in which resolution of the uncertainties is anticipated. [229]

For example, if a company has incurred debt in material amounts, it should explain the reasons for incurring that debt and the use of the proceeds, and analyze how the incurrence of that debt fits into its overall business plan, in each case to the extent material. [230] Where debt has been incurred for general working capital purposes, the anticipated amount and timing of working capital needs should be discussed, to the extent material. [231]

The SEC does not intend for a company's discussion and analysis of its cash flows to be a mere recitation of changes and other information evident from its cash flow statement. To that end, the SEC recommended in the 2003 MD&A Interpretive Guidance a discussion of operating cash flows that goes beyond the face of the statement of cash flows and addresses material changes in underlying drivers (for example, cash receipts from the sale of goods and services and cash payments to acquire materials for manufacture or goods for resale). In this regard, an appropriately detailed MD&A would contain more than a mere description of reconciling items, in the case of the indirect method of presenting cash flows, by additionally presenting primary drivers and other material factors necessary to an understanding of a company's cash flows and the indicative value of historical cash flows. The SEC directed companies to consider further whether the MD&A should be expanded to address the cash requirements of, and the cash provided by, reportable segments and other subdivisions of a company's business, including issues related to foreign subsidiaries, as well as the indicative nature of those results. [232]

[iii] *Debt Instruments, Guarantees and Related Covenants*

The 2003 MD&A Interpretive Guidance provided two scenarios for companies to consider whether discussion and analysis of material covenants related

p. 4-67

p. 4-68

to outstanding debt (or guarantees or other contingent obligations) may be required. [233]

First, companies that are, or are reasonably likely to be, in breach of such covenants must disclose material information about that breach and analyze the impact on the company if material. That analysis should include, as applicable and to the extent material:

- the steps the company is taking to avoid the breach;
- the steps the company intends to take to cure, obtain a waiver of or otherwise address the breach;
- the impact or reasonably likely impact of the breach (including the effects of any cross-default or cross-acceleration or similar provisions) on the company's financial condition or operating performance; and
- alternate sources of funding to pay off resulting obligations or replace funding. [234]

Second, the 2003 MD&A Interpretive Guidance directed companies to consider the impact of debt covenants on their ability to undertake additional debt or equity financing. Examples of these covenants include, but are not limited to, debt incurrence restrictions, limitations on interest payments, restrictions on dividend payments and various debt ratio limits. If these covenants limit, or are reasonably likely to limit, a company's ability to undertake financing to an extent that has a material impact, a company would be required to discuss the covenants in question and the consequences of the limitation on the company's financial condition and operating performance. Disclosure of alternate sources of funding and, to the extent material, the consequences (including but not limited to the cost) of accessing such sources should also be considered and may be required. [235]

[b] Short-Term Borrowings: “Dear CFO” Letters, the 2010 Interpretive Guidance and the September 2010 Proposed Rules

p. 4-68

p. 4-69

During the recent financial crisis, the SEC increasingly employed a new tool — "Dear CFO" Letters — to comment on disclosure practices, remind CFOs of specific disclosure obligations and elicit information from company CFOs. [236] "Dear CFO" Letters differ from prior SEC practice as they are neither formal interpretive guidance—a tool the SEC has often used in the past to comment on disclosure practices of concern—nor comments on the specific disclosures of any particular company (as an issuer might receive in a comment letter), but instead provide, in a publicly available format, more informal guidance about disclosure practices of concern to the SEC staff. Nonetheless, despite their more informal nature, "Dear CFO" letters alert companies to the SEC's expectations as to what is required in the disclosures under existing standards and highlight specific

p. 4-69

p. 4-70

aspects of certain disclosures upon which a company should focus. The SEC has also used "Dear CFO" Letters to elicit information about disclosure practices in certain areas and used the information to inform its rulemaking efforts. [237]

One of the "Dear CFO" letters published in March 2010 focused on disclosures of short-term borrowing practices. Following the release of the Lehman Brothers' Examiner report that described Lehman Brothers' use of "Repo 105" transactions to reduce the assets and liabilities on its balance sheet by as much as $50 billion at a time in 2007 and 2008, [238] the SEC sent a "Dear CFO" Letter to certain public companies seeking information regarding how those companies treated repurchase agreements, securities lending transactions and other similar transactions involving transfers of assets with an obligation to repurchase. The letter particularly sought information on the accounting treatment for such transactions, and asked for a detailed analysis of such transactions that were accounted for as sales. [239]

Following the collection of information provided from responses to the Repo Dear CFO Letter, on September 17, 2010, the SEC proposed new disclosure rules regarding short-term borrowing practices ("Short-Term Borrowing Proposed Rules") and published interpretive guidance (the "2010 MD&A Interpretive Guidance") on the SEC's current MD&A disclosure requirements related to liquidity and capital resources. [240] The purpose of these actions was in part to prevent undisclosed "window dressing" of balance sheets by companies, which

p. 4-70

p. 4-71

might otherwise have incentives to decrease the amount of their short-term borrowings at each quarter's end in order to present a better liquidity picture to investors.

The 2010 MD&A Interpretive Guidance is designed to emphasize and implement the SEC's position that companies may not use financing structures to mask their financial condition. The guidance notes that, for example, if a company's borrowings during the reporting period were materially different than the period-end amounts recorded in the financial statements, disclosure about the intra-period variations would be required. [241] It also clarifies the appropriate manner of presentation of leverage and other financial ratios [242] and reminds registrants of existing obligations regarding disclosure of known trends and uncertainties. For example, the release highlighted examples of trends relating to liquidity companies might consider discussing in their MD&A, including difficulties accessing the debt markets, reliance on commercial paper or other short-term financing arrangements, maturity mismatches between borrowing sources and the assets funded by those sources, changes in terms requested by counterparties, changes in the valuation of collateral and counterparty risk. [243]

Short-term borrowings are used by many companies as a regular part of their financing activities and may include borrowing from the Federal Reserve or commercial banks, commercial paper or repurchase agreements. Currently, bank holding companies must annually disclose the daily average amount outstanding, the month-end maximum amounts outstanding and the average weighted interest rates of their short-term borrowings, according to the terms of SEC Industry Guide 3. [244] The SEC proposed additional rules regarding short-term borrowing in 2010 that would have required public reporting companies to provide increased quantitative and qualitative disclosure of their short-term borrowings on a quarterly basis and would have expanded the universe of companies required to provide disclosure regarding their short-term borrowings, which is currently limited to bank holding companies. The SEC withdrew the Short-Term Borrowing Proposed Rules from its agenda in July 2013, however, because the SEC did not consider it likely that it would consider the proposed rules in the following 12 months, although it may do so in the future. [245]

[4] Fair Value MD&A Disclosure

p. 4-71

p. 4-72

SFAS No. 157, Fair Value Measurements ("SFAS No. 157") (which was later codified in Accounting Standards Codification 820 ("ASC 820"), Fair Value Measurements and Disclosures), became effective for financial statements issued for fiscal years beginning after November 15, 2007. [246] SFAS No. 157 introduced a single definition of fair value for GAAP purposes (to replace the various definitions that preceded SFAS No. 157), established a framework for measuring fair value and expanded required disclosures about fair value measurements. The statement created a three-level fair value hierarchy that prioritizes the use of market-based data obtained from sources independent of the issuer (so-called "observable inputs") over the use of the issuer's own assumptions about market participant assumptions based on the best information available in the circumstances (so-called "unobservable inputs"). As a result, SFAS No. 157 required issuers in certain circumstances to switch from using valuations based on internal models to valuations based on market data, generating substantial accounting losses in some cases, particularly during the recent financial crisis.

Because of the difficulty of estimating fair value in periods of market stress and the potential importance of fair value disclosures and related losses by certain financial institutions during the recent financial crisis, the SEC paid particular attention to such disclosures during that period. In particular, during 2008, the Division of Corporation Finance made public two "Dear CFO" letters it sent to a number of public companies identifying various disclosure issues associated with SFAS No. 157 for the issuers to consider in connection with preparing MD&A for their then-upcoming quarterly reports. [247] The first, sent in March 2008, among other things, reminded issuers that actual market prices (*i.e.*, observable inputs) should be used in making fair value measurements, even when the market for the relevant asset or liability was less liquid than it had been historically and that unobservable inputs should be relied upon only in the absence of observable inputs. In light of the credit crisis then prevailing, the letter noted that current market conditions could well require the use of significant unobservable inputs. The Division emphasized the need for detailed disclosure in connection with fair value measurements, including in respect of values based on unobservable inputs. The second letter, sent in September 2008, followed a review conducted by the SEC of fair value disclosures. The letter focused on disclosures of how credit risk affected fair value measurements, explanations of how market illiquidity was factored into fair value determinations and the use of brokers or pricing services in developing fair value measurements.

p. 4-72

p. 4-73

The virtues of the fair value accounting standards under SFAS No. 157 have been a continuing subject of debate. [248] During the financial crisis, some critics asserted that these standards contributed to the instability of financial markets and to the failure of certain financial institutions. Partially in response to such critiques but also to provide practical guidance, the SEC and FASB took various steps in late September and early October of 2008 to clarify how SFAS No. 157 should be applied to the fair value measurement of financial instruments when there is no active market for a security. [249]

As part of the Emergency Economic Stabilization Act of 2008, the SEC was mandated to conduct a study of mark-to-market accounting standards under SFAS No. 157. [250] In its December 30, 2008 report, the SEC concluded that fair value accounting standards should be improved but not suspended. [251] The study recommended reconsidering the accounting for impairments under fair value standards and developing additional guidance for determining fair value of investments in inactive markets, including situations where market prices are not readily available. [252]

The 2002 MD&A Statement called for greater transparency regarding trading in OTC commodity contracts accounted for at fair value, especially with respect to methods used to determine fair value. In the absence of market quotations for such contracts, companies often have significant discretion in determining their value using fair value estimation methods. The SEC suggested that

p. 4-73

p. 4-74

issuers consider furnishing information, quantified to the extent practicable, which does the following:

- disaggregates realized and unrealized changes in fair value;
- identifies changes in fair value attributable to changes in valuation techniques;
- disaggregates estimated fair values at the latest balance sheet date based on whether fair values are determined directly from quoted market prices or are estimated; and

- indicates the maturities of contracts at the latest balance sheet date (*e.g.*, within one year, within years one through three, within years four and five and after five years). [253]

[5] Off-Balance Sheet Arrangements and Contractual Obligations

In 2003, the SEC adopted rules to implement § 401(a) of the Sarbanes-Oxley Act that require each U.S. and non-U.S. reporting company, with limited exceptions, [254] to include specified MD&A disclosures on off-balance sheet arrangements and contractual obligations in registration statements, annual reports and proxy or information statements. [255]

[a] Disclosure of Off-Balance Sheet Arrangements

p. 4-74
p. 4-75

An off-balance sheet arrangement is any transaction, agreement or other contractual arrangement [256] to which an entity unconsolidated with the issuer is a party, under which the issuer has:

- any obligation under a guarantee contract that meets certain criteria specified in FIN 45; [257]
- a retained or contingent interest in assets transferred to an unconsolidated entity or similar arrangement that serves as credit, liquidity or market risk support to that entity for those assets;
- any obligation, including a contingent obligation, under a contract that would be accounted for as a derivative instrument but for the fact that it is both indexed to the issuer's own stock and classified as stockholders' equity in the issuer's balance sheet; [258] or

p. 4-75
p. 4-76

- any obligation, including a contingent obligation, arising out of a "variable interest" in an unconsolidated entity that is held by, and material to, the issuer, where that entity provides financing, liquidity, market risk or credit risk support to, or engages in leasing, hedging or research and development services with, the issuer. [259]

Contingent liabilities arising out of litigation, arbitration or regulatory actions are excluded from the definition of off-balance sheet arrangements for purposes of the rules. [260]

In 2009, FASB issued statements No. 166 (Accounting for Transfers of Financial Assets) and No. 167 (Amendments to FASB Interpretation No. 46(R)), [261] which substantially changed the standards under U.S. GAAP for determining whether entities are consolidated and assets and liabilities are carried on- or off-balance sheet. These standards became effective for fiscal years beginning after November 15, 2009 (or January 1, 2010 for companies with calendar year-ends) and are particularly relevant with regard to accounting for securitizations and special-purpose entities.

Statement No. 166 requires greater transparency about transfers of financial assets and a company's continuing involvement in transferred financial assets. Under Statement No. 167, the quantitative approach previously used to determine the primary beneficiary of a variable interest entity based on receipt of a majority of an entity's expected residual returns was replaced with a qualitative analysis that identifies the primary beneficiary based on a qualitative analysis of the entities that have the power to direct the activities of a variable interest entity and the obligation to absorb losses or the right to receive benefits from a variable interest entity. Statement No. 167 requires ongoing reassessments of whether an enterprise is the primary beneficiary of a variable interest entity, while historically reconsideration of whether an enterprise is the primary beneficiary of a variable interest entity was only required when specific events occurred.

p. 4-76
p. 4-77

The terms "guarantee contract" and "variable interest" are defined in the rules by reference to U.S. GAAP, and the SEC has emphasized that foreign issuers whose primary financial statements are prepared in accordance with home-country GAAP are required to refer to U.S. GAAP for the purpose of determining which guarantee contracts and variable interests are required to be disclosed. [262] On the other hand, the rules permit such foreign issuers to apply home-country GAAP for the purpose of determining which obligations indexed to the issuer's own stock are classified as stockholders' equity and therefore must be disclosed as off-balance sheet arrangements under the new rules. The SEC has reminded foreign issuers that their MD&As, while generally permitted to focus on the primary financial statements, also are required to include a discussion of U.S. GAAP-reconciled information (if U.S. GAAP reconciliation is required) to the extent necessary to an understanding of the financial statements as a whole. [263] The SEC has further called attention to the fact that this general requirement must be considered in connection with off-balance sheet arrangements disclosed on the basis of determinations made under non-U.S. GAAP. [264]

[i] *Disclosure Threshold*

The rules require a discussion of any off-balance sheet arrangements of an issuer that have or are reasonably likely to have a current or future effect on the issuer's financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources that is material to investors. [265] When it adopted the rules, the SEC reiterated its long-standing positions that (i) a determination by management of an issuer as to whether an arrangement is reasonably likely to have a material effect must be

p. 4-77

p. 4-78

objectively reasonable, viewed as of the time the determination is made and (ii) "reasonably likely" is a lower threshold than "more likely than not." [266]

[ii] *Specific Disclosure Requirements*

With respect to any arrangements that fall within the definition of "off-balance sheet arrangement" and cross the "reasonably likely" disclosure threshold, the rules require disclosure of the following items to the extent necessary to an understanding of the arrangements and their effect on the specified financial statement-related matters:

- the nature and business purpose to the issuer of the arrangement (*e.g.*, reduction of the liabilities recognized on the face of the balance sheet); [267]
- the importance to the issuer of the arrangements in respect of its liquidity, capital resources, market risk support, credit risk support or other benefits (*e.g.*, how often it securitizes financial assets, whether it has materially increased or decreased securitizations from past periods and, if so, why);
- the amounts of revenues, expenses and cash flows of the issuer arising from the arrangements; the nature and amounts of any interests retained, securities issued and other indebtedness incurred by the issuer (*e.g.*, the amount of securities issued by the issuer to the off-balance sheet entity or the amounts of guarantees, lines of credit or similar arrangements); and the nature and amounts of any other obligations or liabilities (including contingent obligations or liabilities) of the issuer arising from the arrangements that are or are reasonably likely to become material and the triggering events or circumstances that could cause them to arise; [268]
- any known event, demand, commitment, trend or uncertainty that will result or is reasonably likely to result in the termination, or material reduction in availability to the issuer, of its off-balance sheet arrangements that provide

  p. 4-78

  p. 4-79

  material benefits to it, and the course of action that the issuer has taken or proposes to take in response to any such circumstances; [269] and

- such other information as the issuer believes is necessary to an understanding of the arrangements and their effect on the specified financial statement-related matters. [270]

[iii] *Presentation*

The rules require issuers to aggregate off-balance sheet arrangements in groups or categories that provide material information in an efficient and understandable manner, with repetition or disclosure of immaterial information avoided. Effects that are common or similar with respect to a number of off-balance sheet arrangements must be analyzed in the aggregate to the extent aggregation increases understanding. Distinctions in arrangements and their effects must be discussed to the extent the information is material, but the discussion should avoid repetition and disclosure of immaterial information. [271] Repetition in the MD&A of information contained in the notes to the financial statements is not required, so long as the MD&A includes a cross-reference to that information and integrates the substance of the notes into the discussion in a manner designed to inform readers of the significance of that information. [272]

The SEC has cautioned issuers, however, to ensure that the quality of the discussion of off-balance sheet arrangements is not diminished as a result of cross-referencing to the financial statements. [273]

The disclosure in annual reports required by the rules generally must cover the most recent fiscal year, but it also should discuss changes from the previous year where such a discussion is necessary to an understanding of the disclosure. [274]

[b] Tabular Disclosure of Known Contractual Obligations

The SEC's rules with respect to contractual obligations require tabular disclosure in the MD&A with respect to the issuer's known contractual obligations as of the latest balance sheet date. [275] The rules mandate certain disclosure categories but permit issuers to disaggregate the specified categories, so long as all obligations of the issuer that fall within the specified categories are included in the tabular presentation. Appropriate footnote disclosure about provisions that create, increase or accelerate obligations, or other pertinent data, may accompany the table to the extent necessary to an understanding of the timing and amount of the specified contractual obligations. [276]

The rules define "long-term debt," "capital lease obligations," "operating leases" and "other long-term liabilities" by reference to U.S. GAAP for U.S. domestic issuers, while foreign issuers are instructed to base their disclosures about these categories of contractual obligations on the classifications used in the GAAP under which they have prepared their primary financial statements. [277] For

both U.S. domestic and foreign issuers, the term "purchase obligations" is defined directly in the rules rather than by reference to accounting standards. [278]

The 2010 MD&A Interpretive Guidance addressed discrepancies in the way public companies satisfied requirements regarding the presentation of contractual obligations, contingent liabilities and commitments by reminding them of the purpose of the table. [279] The SEC noted it has not issued general guidance on the disclosures in this area as questions tend to be fact-specific and closely related to a registrant's particular business and circumstances. [280]

[c] Applicability of Statutory Safe Harbor for Forward-Looking Statements

The rules governing disclosure of off-balance sheet arrangements and contractual obligations provide that all forward-looking statements made in such disclosures will have the benefit of the statutory safe harbor exemptions from the civil liability provisions of the Securities Act and Exchange Act to the same extent as other forward-looking statements, and that all information provided in response to the rules, except for historical facts, will be deemed to constitute "forward-looking statements" within the meaning of the safe harbor. [281] In addition, the rules provide that disclosure about off-balance sheet transactions is deemed to satisfy the "meaningful cautionary statements" element of the safe harbor if it satisfies all of the requirements of the rules. On the other hand,

p. 4-81

p. 4-82

forward-looking statements made in required disclosures about contractual obligations are not automatically deemed to satisfy the "meaningful cautionary statements" element of the safe harbor solely by reason of compliance with the requirements of the rules. Issuers, therefore, must ensure that those disclosures otherwise contain such "meaningful cautionary statements" as are necessary in the circumstances. [282]

Footnotes

184 According to published highlights of a meeting of the AICPA SEC Regulations Committee's International Practices Task Force, the SEC staff has noted that when financial statements are updated in order to comply with the age of financial statements requirements applicable to registration statements as set forth in Item 8 of Form 20-F, an issuer must also update other "financial" information, including its MD&A. *See* AICPA, SEC Regulations Committee's International Practices Task Force, Highlights, Item 2 (Mar. 9, 2004).

185 The SEC has initiated proceedings against issuers with respect to their MD&A disclosure. In 1998, the SEC brought proceedings against Sony Corporation in which the SEC found that Sony and an officer of Sony responsible for disclosure matters had violated SEC reporting requirements by failing to describe, in Sony's annual report on Form 20-F and in its periodic earnings reports on Form 6-K, losses suffered by one of its subsidiaries, Sony Pictures. *In the Matter of Sony Corporation*, SEC Release No. 34-40305 (Aug. 5, 1998). The SEC found that Sony failed to identify greater-than-anticipated losses at Sony Pictures, which Sony had acquired in late 1989. Although it is unclear whether Sony was technically required under SFAS No. 14 to report the results of Sony Pictures as a separate business segment, the SEC found that Sony failed to discuss a "known trend" involving cumulative losses of more than $1 billion through June 30, 1994 attributable to Sony Pictures. These losses led Sony to announce in November 1994 the write-off of $2.7 billion of goodwill associated with the acquisition of Sony Pictures. No mention of a possible write-off had been included in the 6-K reports regarding earnings filed in June and early September 1994 or in the Form 20-F filed in late September 1994. In fact, according to the SEC, these filings included conspicuously positive statements about various aspects of Sony Pictures' performance. Pursuant to an SEC order and the settlement of a related civil action brought by the SEC, Sony agreed, among other things, to provide an independent auditor's report on the MD&A included in its Form 20-F for the fiscal year ending March 31, 1999, to ensure that its chief financial officer would be primarily responsible for the accuracy of Sony's public financial disclosures and its compliance with applicable legal and accounting requirements, and to pay a fine of $1 million. *SEC v. Sony Corp.*, SEC Litigation Release No. 15832 (Aug. 5, 1998).

In 1992, the SEC brought proceedings against Caterpillar, Inc., finding Caterpillar to have presented an inadequate MD&A discussion in its 1989 annual report on Form 10-K and its quarterly report on Form 10-Q for the first quarter of 1990. Caterpillar gained an unusually large percentage of its 1989 overall profit from its operation in Brazil. The impact of the Brazilian operation on overall results was not evident from the company's financial statements, which were presented on a consolidated basis. Although the fact that the Brazilian operation had a significant impact on 1989 profits and the 1990 forecast was discussed extensively in several meetings of the company's board of directors prior to the filing of the two reports, there was no mention of it in the MD&A section of either report. The SEC found that information about the impact of the company's Brazilian subsidiary was necessary to an understanding of the company's performance in 1989 and its prospects in 1990 and therefore should have been included in the MD&A sections of both the 1989 Form 10-K and the Form 10-Q for the first quarter of 1990. *In the Matter of Caterpillar, Inc.*, SEC Release No. 34-30532 (Mar. 31, 1992).

In 2014, the SEC announced a settled cease-and-desist proceedings against Bank of America Corporation for failing to disclose "known uncertainties" in the MD&A sections of its quarterly reports on Form 10-Q. Between 2004 and the first half of 2008, Bank of America and certain subsidiaries sold approximately $2.1 trillion of mortgage loans and residential mortgage backed securities. Some of the loans were securitized and some of the securitized loans contained credit enhancements provided by monoline insurers. In connection with these securitizations and credit enhancements, Bank of America made representations and warranties regarding the underlying mortgage loans. If a purchaser of securitized loans or a monoline insurer determined that these representations and warranties were breached, the purchaser or the monoline insurer could demand that Bank of America repurchase the related mortgage loan at its outstanding unpaid principal balance. Between the third quarter of 2008 and the third quarter of 2009, there was a significant increase in the amount of claims for repurchase by the Federal National Mortgage Association ("Fannie Mae"), which was one of the primary government-sponsored enterprises that purchased mortgage loans from Bank of America. During the same period, claims for repurchase by the monoline insurers had also steadily increased. As a result, the SEC claimed that, during the second and third quarters of 2009, there was a known uncertainty as to whether Bank of America's increasing obligation to repurchase the mortgage loans from Fannie Mae and the monoline insurers would have a material effect on its future income and continuing operations. According to the SEC, by failing to disclose these known uncertainties in the MD&A sections of its quarterly reports on Form 10-Q for the second and third quarters of 2009, Bank of America violated § 13(a) of the Exchange Act and Rules 12b-20 and 13a-13 thereunder. Bank of America agreed to settle by paying a $20 million penalty and admitting the facts set out by the SEC. *In the Matter of Bank of America Corporation*, SEC Release No. 34-72888 (Aug. 21, 2014).

See also In the Matter of the PNC Financial Services Group, Inc., SEC Release No. 34-46225 (July 18, 2002) (finding violations of, among others, the financial reporting and antifraud provisions of the federal securities laws, including with respect to MD&A disclosure, owing to PNC's failure to account properly for certain transactions with special purpose entities); *In the Matter of The Coca-Cola Company*, SEC Release No. 34-51565 (Apr. 18, 2005) (announcing a settled cease-and-desist proceeding against The Coca-Cola Company relating to its failure to disclose, including in MD&A, certain quarter-end sales practices used to meet earnings expectations).

The SEC can also bring proceedings against individual officers for inadequate MD&A disclosure. In 2005, the SEC filed civil charges against two former top Kmart executives for materially false and misleading disclosures about the company's liquidity and related matters in the MD&A section of Kmart's Form 10-Q, and in an earnings conference call with analysts and investors. *SEC v. Conaway*, SEC Litigation Release No. 19344 (Aug. 23, 2005); *see also In the Matter of Timothy E. Nolan*, SEC Release No. 34-47802 (May 6, 2003) (finding violations of § 13(a) of the Exchange Act and Rules 13a-13 and 12b-20 thereunder, including with respect to inadequate MD&A disclosure).

191 Private Securities Litigation Reform Act of 1995, Pub. L. No. 104-67, 109 Stat. 737 (1995).

192 § 27A(c)(1)(A)(i) of the Securities Act and § 21E(c)(1)(A)(i) of the Exchange Act. Statements included in a financial statement prepared in accordance with generally accepted accounting principles, however, are not covered by the safe harbor. *See* § 27A(b)(2)(A) of the Securities Act and § 21E(b)(2)(A) of the Exchange Act.

193 *See* § 11.03[5] for a discussion of various issues arising in connection with the statutory safe harbor.

194 SEC Release No. 33-8350 (Dec. 19, 2003), 68 Fed. Reg. 75,056 (Dec. 29, 2003) (the "2003 MD&A Interpretive Guidance"). The 2003 MD&A Interpretive Guidance reiterated the SEC's concerns with those issues previously addressed in its 2002 review of the annual reports of Fortune 500 companies. During that review, the SEC noted that it had (i) requested clarification on how such companies recognize revenue, (ii)

asked such companies to justify or explain more fully their accounting for restructuring charges, and to expand their disclosure of such matters in the financial statements and MD&A, (iii) issued a significant number of comments related to impairment charges, focusing on charges related to long-lived assets, securities held for investment and goodwill, (iv) asked such companies to explain the assumptions used to determine their amount of pension income or expense, (v) issued a significant number of comments on determination of operating segments in financial statements and MD&A, (vi) requested greater detail on the use of non-GAAP measures, securitization transactions and off-balance sheet arrangements and (vii) requested expanded disclosure on environmental and product liability issues. SEC, Division of Corporation Finance, Summary by the Division of Corporation Finance of Significant Issues Addressed in the Review of the Periodic Reports of the Fortune 500 Companies (Feb. 27, 2003).

195 This might include a tabular comparison of a company's results in different periods, which could include line items and percentage changes, as well as other information determined by the company to be useful, followed by a narrative discussion and analysis of known changes, events, trends, uncertainties and other matters; or a tabular presentation, in one location, of a company's various material interest and discount rate assumptions to assist in fair value calculations or discounted cash flow figures. 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,059 (Dec. 29, 2003).

196 As a general matter, an introduction or overview would presumably include the most important matters on which a company's executives focus in evaluating financial condition and operating performance and provide the context for the discussion and analysis of the financial statements. Accordingly, the SEC cautions that an introduction or overview should not be a duplicative layer of disclosure that merely repeats the more detailed discussion and analysis that should follow. 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,059 (Dec. 29, 2003).

197 Using an overview or introduction is one example of a layered approach. Another is to begin a section containing detailed analysis, such as an analysis of period-to-period information, with a statement of the principal factors, trends or other matters that are the principal subjects covered in more detail in the section. 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,059 (Dec. 29, 2003).

198 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,059 (Dec. 29, 2003).

199 The SEC further stated that the introduction or overview, by its very nature, cannot disclose everything and should not be considered by itself in determining whether a company has made full disclosure. The SEC further stated that the failure to include disclosure of every material item in an introduction or overview should not trigger automatically the application of the "buried facts" doctrine, in which a court would consider disclosure to be false and misleading if its overall significance is obscured because material is "buried," such as in a footnote or an appendix. 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,059 (Dec. 29, 2003).

200 With respect to prospective matters, Form 20-F, Item 5.D requires disclosure of material trends and uncertainties.

201 In the 2003 MD&A Interpretive Guidance, the SEC asked companies to evaluate whether information in the MD&A is still material and useful, or whether it should be deleted (*e.g.*, when there has been a change in a company's business or the information has become stale). The 2003 MD&A Interpretive Guidance continued by recommending that companies consider the materiality of segment data, avoid excessively duplicative or unnecessary line item disclosure and assess the extent to which materiality standards for annual and quarterly report disclosure may differ. 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,059 (Dec. 29, 2003).

202 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,060 (Dec. 29, 2003).

203 *See* Form 20-F, Item 5.D.

204 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,059 (Dec. 29, 2003).

205 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,062 (Dec. 29, 2003).

206 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,062 (Dec. 29, 2003).

207 The SEC has also addressed this concern in connection with critical accounting policy disclosure. *See* § 4.06[2].

208 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,062 (Dec. 29, 2003).

209 SEC Release No. 33-8040 (Dec. 12, 2001), 66 Fed. Reg. 65,013, 65,013 (Dec. 17, 2001) ("2001 Cautionary Advice"). *See also* 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,064–65 (Dec. 29, 2003).

210 In a 2002 rule proposal discussed further below, the SEC extended its cautionary advice by proposing that a quantitative sensitivity analysis of reasonably possible changes in critical accounting estimates or underlying assumptions be included in MD&A. The sensitivity analysis would require, for each critical accounting estimate, (i) a quantitative discussion of the effect of certain changes on the company's overall financial performance and, to the extent material, individual line items in the financial statements and the company's liquidity or capital resources and (ii) a quantitative and qualitative discussion of any material changes made to each critical accounting estimate in the past three years, including the reasons for the changes and the effect on the company's overall financial performance and on individual line items in the financial statements. SEC Release No. 33-8098 (May 10, 2002). While no specific rules providing for quantitative sensitivity analysis have been adopted, the 2003 MD&A Interpretive Guidance affirmed the SEC's continued interest in quantitative disclosure of critical accounting estimates. In that guidance, the SEC stated that companies should provide quantitative disclosure where the information is reasonably available and will be material to investors. For example, if reasonably likely changes in the long-term rate of return used in accounting for a company's pension plan would have a material effect on the financial condition or operating performance of a company, the impact that could result given the range of reasonably likely outcomes should be disclosed and, because of the nature of estimates of long-term rates of return, quantified. *See* 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,065 (Dec. 29, 2003).

211 The SEC has reminded issuers that, to a certain extent, such disclosure is required by (i) pre-existing accounting standards that require financial statements to include information regarding accounting principles and methods used by the company and the risks and uncertainties inherent in certain estimates and (ii) existing rules governing MD&A requiring disclosure about trends, events or uncertainties known to management that would have a material impact on reported financial information. *See* 2001 Cautionary Advice, 66 Fed. Reg. 65,013, 65,013 (Dec. 17, 2001).

212 2001 Cautionary Advice, 66 Fed. Reg. 65,013, 65,013 (Dec. 17, 2001).

213 2001 Cautionary Advice, 66 Fed. Reg. 65,013, 65,013 (Dec. 17, 2001); SEC Release No. 33-8098 (May 10, 2002). Also in December 2001, the SEC issued cautionary advice on the use of so-called *pro forma* financial measures (or non-GAAP financial measures), which was later superseded by rules implementing § 401(b) of the Sarbanes-Oxley Act. *See* § 4.09.

214 *See* 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,064–65 (Dec. 29, 2003).

215 In addition, following its 2002 review of Form 10-Ks filed by Fortune 500 companies, the SEC noted the need for greater disclosure on critical accounting policies relating to: (i) revenue recognition, (ii) restructuring charges, (iii) impairments, (iv) depreciation and amortization, (v) income tax liabilities, (vi) retirement and post retirement liabilities, (vii) pension income and expense, (viii) environmental liabilities, (ix) repurchase obligations, (x) stock-based compensation, (xi) insurance loss reserves and (xii) inventory reserves and allowances for doubtful accounts. SEC, Division of Corporation Finance, Summary by the Division of Corporation Finance of Significant Issues Addressed in the Review of the Periodic Reports of the Fortune 500 Companies (Feb. 27, 2003).

216 *See* SEC Release No. 33-8098 (May 10, 2002), 67 Fed. Reg. 35,620, 35,621 (May 20, 2002).

217 *See* SEC Release No. 33-8098 (May 10, 2002), 67 Fed. Reg. 35,620, 35,626 (May 20, 2002).

218 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,065 (Dec. 29, 2003).

219 2001 Cautionary Advice, 66 Fed. Reg. 65,013, 65,013 (Dec. 17, 2001). Rules adopted by the SEC to implement the auditor independence and related provisions of the Sarbanes-Oxley Act independently

require public accounting firms to report to audit committees, among other things, all critical accounting policies and practices used by an issuer and all alternative treatments within GAAP for policies and practices related to material items that have been discussed with an issuer's management. *See* § 5.03.

220 SEC Release No. 33-8056 (Jan. 22, 2002), 67 Fed. Reg. 3746, 3751 (Jan. 25, 2002).

221 Rules passed by the SEC to implement § 401(a) of the Sarbanes-Oxley Act thereafter codified and superseded the 2002 MD&A Statement with respect to off-balance sheet arrangements and contractual obligations, and are discussed in § 4.06[5] below. The 2002 MD&A Statement had also called for enhanced disclosure on contingent liabilities and commitments. The SEC stated, however, that meaningful disclosure of such items may not necessarily be accomplished by its previously proposed aggregated disclosure format, and, among other things, rules adopted to implement § 401(a) of the Sarbanes-Oxley Act, together with the implementation of FASB Interpretation No. 45 (Nov. 2002), Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others ("FIN 45"), and FASB Interpretation No. 46 (revised Dec. 2003), Consolidation of Variable Interest Entities ("FIN 46(R)"), could be expected to obviate the need for such disclosure. SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5986–87 (Feb. 5, 2003). Nevertheless, the SEC stated that it would continue to assess the costs and benefits of such a disclosure requirement and suggested that issuers continue to refer to the 2002 MD&A Statement to consider whether it would be beneficial to investors to include the tabular disclosure of contingent liabilities and commitments proposed therein. SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5987 (Feb. 5, 2003). In practice, this tabular disclosure has not been used.

222 SEC Release No. 33-9143 (Sept. 17, 2010). On July 1, 2013, the SEC withdrew the proposal from its agenda of rulemaking actions. SEC, Regulatory Flexibility Agenda, 78 Fed. Reg. 44,408 (July 23, 2013). *See* § 4.06[3][b].

223 2002 MD&A Statement, 67 Fed. Reg. 3746, 3748 (Jan. 25, 2002).

224 2002 MD&A Statement, 67 Fed. Reg. 3746, 3748 (Jan. 25, 2002).

225 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,064 (Dec. 29, 2003). Although the Dodd-Frank Act eliminated former Rule 436(g) under the Securities Act, under which an issuer that referred to a credit rating in a Securities Act registration statement or prospectus for a registered offering did not need to file the consent of the rating agency, an issuer not subject to Regulation AB disclosure requirements may still disclose changes to a credit rating, the liquidity of the registrant, the cost of funds for a registrant or the terms of agreements that refer to credit ratings, and therefore should be able to disclose the adverse effect that a hypothetical downgrade would have, in the liquidity portion of the MD&A. *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 233.04 (July 27, 2010); *see also* § 3.02[7], Note 396.

226 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,064 (Dec. 29, 2003). The SEC noted in the 2003 MD&A Interpretive Guidance that it believes disclosure satisfying its MD&A requirements can be made consistent with the restrictions on gun-jumping in § 5 of the Securities Act. *See*, *e.g.*, Rule 135c under the Securities Act (discussed in § 7.02[3][b]). 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,064 n.54 (Dec. 29, 2003).

227 2002 MD&A Statement, 67 Fed. Reg. 3746, 3748 (Jan. 25, 2002). The SEC has clarified that "reasonably likely" is a lower threshold than "more likely than not."

228 2002 MD&A Statement, 67 Fed. Reg. 3746, 3748 (Jan. 25, 2002).

229 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,063 (Dec. 29, 2003). The SEC recommended its required tabular disclosure of known contractual obligations as a starting point for this disclosure. *See* § 4.06[5][b].

230 As an example, the SEC cites debt issued to fund the construction of a new plant, which will allow a company to expand its operations into a specific geographic area. Understanding that relationship and the expected commencement date of plant operations puts the cash requirement for the debt into an appropriate context to understand the hypothetical company's liquidity. 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,063 n.47 (Dec. 29, 2003).

231 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,063 (Dec. 29, 2003).

233 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,063 (Dec. 29, 2003). *See also In the Matter of America West Airlines, Inc.*, SEC Release No. 34-34047 (May 12, 1994) (holding that a company failed to discuss uncertainties regarding its ability to comply with covenants). Companies also must take a similar approach to discussion and analysis with respect to mandatory prepayment provisions, "put" rights and other similar provisions.

234 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,063–64 (Dec. 29, 2003).

235 2003 MD&A Interpretive Guidance, 68 Fed. Reg. 75,056, 75,063–64 (Dec. 29, 2003).

236 The SEC maintains sample letters on its website, which are available at https://www.sec.gov/divisions/corpfin/cfdisclosure.shtml. *See* SEC, Sample Letter Sent to Public Companies on MD&A Disclosure Regarding the Application of SFAS 157 (Fair Value Measurements) (Mar. 2008) ("Fair Value Dear CFO Letter"); SEC, Sample Letter Sent to Public Companies on MD&A Disclosure Regarding the Application of SFAS 157 (Fair Value Measurements) (Sept. 2008) ("Fair Value Dear CFO Letter Addendum"); SEC, Sample Letter Sent to Public Companies on MD&A Disclosure Regarding Provisions and Allowances for Loan Losses (Aug. 2009) ("Loan Losses Dear CFO Letter"); SEC, Sample Letter Sent to Public Companies Asking for Information Related to Repurchase Agreements, Securities Lending Transactions, or Other Transactions Involving the Transfer of Financial Assets (Mar. 2010) ("Repo Dear CFO Letter"); SEC, Sample Letter Sent to Public Companies on Accounting and Disclosure Issues Related to Potential Risks and Costs Associated with Mortgage and Foreclosure-Related Activities or Exposures (Oct. 2010) ("Foreclosures Dear CFO Letter"); SEC, Sample Letter Sent to Public Companies Regarding XBRL Requirement to Include Calculation Relationships and Staff Observations of Custom Tag (July 2014).

The Fair Value Dear CFO Letter and Fair Value Dear CFO Letter Addendum are discussed in more detail in § 4.06[4].

The Loan Losses Dear CFO Letter focused on the disclosures of certain public companies in MD&A regarding provisions and allowances for loan losses. The letter highlighted that the economic environment at the time might require companies to reassess the accounting and disclosures they made with respect to allowances for loan losses, and noted that additional information about higher-risk loans might be useful to an understanding of the risks associated with the company's loan portfolio and to evaluating any known trends or uncertainties that could have a material impact on results of operations. The letter also gave several examples of the types of information about higher-risk loans that a company might consider disclosing. In addition, the letter reminded CFOs that it would be "inconsistent with GAAP" if a company were to delay recognizing credit losses that could be estimated based on current information and events.

The Foreclosures Dear CFO Letter sent in October 2010 reminded certain public companies of their disclosure obligations in light of continued concerns about potential risks and costs associated with mortgage and foreclosure-related activities or exposures. The letter focused on obligations relating to various representations and warranties made in connection with securitization transactions and whole loan sales, intended in part to address ASC 450 disclosure with respect to any related litigation contingencies.

237 *See* Repo Dear CFO Letter, discussed in § 4.06[3][b].

238 Report of Examiner Anton R. Valukas, *In re Lehman Brothers Holdings, Inc.* at 732 (Mar. 2010). In a "repo" transaction, one party transfers securities to another as collateral for a short-term borrowing of cash, while simultaneously agreeing to repay the cash and take back the securities at a specific time in the future. When the repo matures, the borrower repays the funds it borrowed plus an agreed interest payment and takes back the securities it transferred as collateral. The securities transferred typically represent more than 100% of the value of the cash borrowed, the overcollateralization typically referred to as the "haircut" (the "haircut" providing security to the institution lending cash in the event the value of the collateral declines and the borrowing institution fails to repurchase the securities). In the "Repo 105" transactions, the haircut

employed by Lehman was 5%, higher than typically used in other similar repo transactions. Although more like a collateralized loan, Lehman Brothers treated such arrangements as a sale. In doing so, the securities sold in "Repo 105" transactions were temporarily taken off Lehman's balance sheet and the obligation to repurchase was not recorded as a liability, as would have been the case with a collateralized loan or similar transaction. Lehman would use the cash from the "Repo 105" transaction to pay down liabilities, thereby reducing the leverage it reported on its quarterly reports. A few days after the end of a quarter or year end, Lehman would borrow money again to repurchase the securities and pay interest on the loan of money. Often these "Repo 105" transactions were employed at the end of a reporting period, temporarily removing securities from Lehman's balance sheet, and gave investors a "materially misleading" picture of its financial condition. Report of Examiner Anton R. Valukas, *In re Lehman Brothers Holdings, Inc.* at 747 (Mar. 2010).

239 *See* Repo Dear CFO Letter.

240 *See* SEC Release No. 34-62932 (Sept. 17, 2010); SEC Release No. 34-62934 (Sept. 17, 2010).

244 *See* § 4.07[8].

245 SEC, Regulatory Flexibility Agenda, 78 Fed. Reg. 44,408 (July 23, 2013).

246 SFAS No. 157.

247 Fair Value Dear CFO Letter; Fair Value Dear CFO Letter Addendum.

248 *See*, *e.g.*, Andrew Ross Sorkin, *Are Bean Counters to Blame?*, NY TIMES, July 1, 2008; Louise Story, *A Values Debate (Not the Political Kind)*, N.Y. TIMES, May 16, 2008.

249 On September 30, 2008, the SEC and FASB staffs issued a joint press release clarifying various issues related to fair value measurements. *See* Press Release, SEC, SEC Office of the Chief Accountant and FASB Staff Clarifications on Fair Value Accounting (Sept. 30, 2008). Soon after, on October 10, 2008, the FASB issued guidance on the matter and provided an example that illustrated the key considerations for issuers to consider when determining the fair value of a financial asset that did not have an active market. *See* FASB Staff Position 157-3, Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active (Oct. 10, 2008).

250 *See* § 133(a) of the Emergency Economic Stabilization Act of 2008, Pub. L. No. 110-343, Division A, 122 Stat. 3765, 3798 (2008).

251 SEC, Report and Recommendations Pursuant to § 133 of the Emergency Economic Stabilization Act of 2008: Study on Mark-To-Market Accounting (Dec. 30, 2008).

252 Following the financial crisis, the FASB has continued to implement various amendments to fair value accounting standards. As part of the convergence of U.S. GAAP and IFRS, various revisions to fair value guidance were adopted in May 2011. *See* FASB ASU 2011-04, Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRSs. For many of the requirements, the FASB stated that it does not intend for the amendments to result in a change in the application of the requirements in ASC 820. Areas covered by the guidance include clarification as to how a principal market for a security is determined under U.S. GAAP, addressing the fair value measurement of instruments with offsetting market or counterparty credit risks and the concept of valuation premise and highest and best use, extending the prohibition on blockage factors to all three levels of the fair value hierarchy and requiring additional disclosures.

253 The 2002 MD&A Statement included examples of two tables that could be used together to accomplish this result. The first is a table that reconciles fair value at the beginning of the period to fair value at the end of the period. The table shows changes in fair value according to category depending on the source of the change in fair value and includes a category for changes due to changes in valuation methods. The second

table breaks down contracts by the source of the fair value estimation (prices actively quoted, prices from external sources, prices based on models and other valuation methods) and by maturity period (within one year, within years one through three, within years four and five and after five years). 2002 MD&A Statement, 67 Fed. Reg. 3746, 3750 (Jan. 25, 2002).

254 The rules apply to all reporting companies under the Exchange Act, but do not apply to investment companies registered under § 8 of the Investment Company Act, which are exempt from § 401 of the Sarbanes-Oxley Act. In addition, while the rules do apply to annual reports on Form 40-F filed by eligible Canadian companies under the U.S.-Canadian multijurisdictional disclosure system discussed in Chapter 13, they do not apply to Securities Act registration statements filed under that system. *See* SEC Release No. 33-8182 (Jan. 28, 2003).

255 Items 303(a)(4) and 303(a)(5) of Regulation S-K under the Securities Act; Form 20-F, Items 5.E and 5.F; Form 40-F, General Instructions B.(11) and B.(12). The Sarbanes-Oxley Act applied the off-balance sheet requirements to Exchange Act filings. The Rules adopted by the SEC extend § 401(a)'s mandate to include registration statements filed under the Securities Act.

256 The rules provide that a disclosure obligation would arise in respect of an off-balance sheet transaction only when a definitive agreement that is unconditional or subject only to customary closing conditions exists or, if there is no such agreement, when settlement of the transaction occurs. Form 20-F, Instruction 1 to Item 5.E.

257 Specifically, an "off-balance sheet arrangement" would include any guarantee contract that has any of the characteristics identified in paragraph 3 of FIN 45 and that is not excluded from the initial recognition and measurement provisions of FIN 45 pursuant to paragraph 6 or 7 thereof. The types of contracts that are described in paragraph 3 of FIN 45 are (i) certain contracts that contingently require the guarantor to make payments to the guaranteed party based on changes in an "underlying" (as defined in FIN 45) that is related to an asset, a liability or an equity security of the guaranteed party, (ii) contracts that contingently require the guarantor to make payments to the guaranteed party based on another entity's failure to perform under an obligating agreement, (iii) indemnification agreements (contracts) that contingently require the indemnifying party (guarantor) to make payments to the indemnified party (guaranteed party) based on changes in an "underlying" that is related to an asset, a liability or an equity security of the indemnified party, or (iv) indirect guarantees of the indebtedness of others, which arise under an agreement that obligates one entity to transfer funds to a second entity upon the occurrence of specified events, under certain conditions.

Examples of the types of contracts covered by FIN 45 include financial standby letters of credit, market value guarantees, performance guarantees and keepwell agreements.

Paragraphs 6 and 7 of FIN 45 exclude a number of narrowly defined types of guarantees from the application of FIN 45, including among others product warranties, a parent's guarantee of a subsidiary's debt to a third party and a subsidiary's guarantee of a parent's or affiliated company's debt to a third party.

Although Form 20-F still references FIN 45, FIN 45 is now codified in Accounting Standards Codification 460, Guarantees.

258 Contracts having these characteristics are excluded from the scope of Accounting Standards Codification 815, Derivatives and Hedging ("ASC 815"), and therefore are not necessarily disclosed in the financial statements or notes thereto.

259 Form 20-F, Item 5.E.2. The term "variable interest" is used in the rules as referenced in FIN 46(R).

260 Form 20-F, Instruction 3 to Item 5.E. For a discussion of accounting matters regarding contingent liabilities arising out of litigation, arbitration or regulatory actions, *see* § 4.05[7].

261 FASB Statement No. 166 ("FAS 166") is contained in ASU No. 2009-16, which amends Accounting Standards Codification 860, Accounting for Transfers of Financial Assets. FASB Statement No. 167 ("FAS 167") is contained in ASU No. 2009-17, which amends Accounting Standards Codification 810, Improvements to Financial Reporting by Enterprises Involved with VIEs. FAS 166 and FAS 167 were codified as ASU No. 2009-16 and ASU No. 2009-17, respectively, when FASB reorganized and codified its

existing U.S. accounting and reporting standards issued by the FASB and other related private-sector standard setters in late 2009.

262 SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5992 (Feb. 5, 2003). Foreign issuers whose primary financial statements are prepared in accordance with IFRS as issued by the IASB are not asked to look to U.S. GAAP in the same way, but they are asked in Instruction 5 to Item 5 of Form 20-F to "provide disclosure that satisfies the objective of the Item 5 disclosure requirements" regarding off-balance sheet arrangements when providing information that refers to pronouncements of the FASB.

263 *See*, *e.g.*, Form 20-F, Instruction 2 to Item 5.

264 In addition to affecting the off-balance sheet disclosures, FAS 166 and 167 affect financial statement disclosure regarding off-balance sheet transactions. *See supra* Note 86 and accompanying text for a discussion of the SEC's decision to accept financial statements of foreign companies prepared in accordance with IFRS as issued by the IASB without requiring a reconciliation to U.S. GAAP. As a general matter, issuers filing financial statements that comply with IFRS as issued by the IASB are instructed to, when responding to paragraphs in Item 5 that refer to FASB pronouncements, provide disclosure that satisfies the objective of the Item 5 disclosure requirement and need not repeat information contained in the IFRS financial statements. Form 20-F, Instruction 5 to Item 5.

265 Form 20-F, Item 5.E.1.

266 SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5988 n.99 (Feb. 5, 2003).

267 This disclosure should explain to investors why the issuer engages in off-balance sheet arrangements and provide the information that investors need to understand the business activities advanced through those arrangements. SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5989 (Feb. 5, 2003).

268 While the adopting release with respect to the rules, SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5989 (Feb. 5, 2003), did not mention any specific examples of such "triggering events," the proposing release indicated that adverse changes in the issuer's credit rating or financial ratios or changes in the value of underlying or indexed assets were potential examples. SEC Release No. 33-8144 (Nov. 4, 2002), 67 Fed. Reg. 68,054, 68,061 (Nov. 8, 2002).

269 If, for example, a specified decline in the issuer's credit ratings would give rise to an obligation to purchase assets from, or assume liabilities of, an unconsolidated entity, the adopting release with respect to the rules indicates that they would require the issuer to discuss known circumstances that are reasonably likely to cause the specified decline in ratings and its material consequences. SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5989 (Feb. 5, 2003).

270 SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5989 (Feb. 5, 2003); Form 20-F, Item 5.E.1. In December 2007, the Division of Corporation Finance made public an illustrative letter that it sent to a number of public companies using non-consolidated conduits, structured investment vehicles and off-balance sheet collateralized debt obligation structures for financing purposes. The division highlighted a number of specific items for possible disclosure, including: the categories, ratings and weighted-average life of the off-balance sheet assets; the forms of funding and weighted-average life of the funding held by an off-balance sheet entity; any material difficulties an off-balance sheet entity has experienced in issuing its commercial paper or other financing; any material write-downs or downgrades of assets held by an off-balance sheet entity; the issuer's obligations under liquidity facilities related to the off-balance sheet arrangements; and the potential impact on debt covenants, capital ratios, credit ratings or dividends should the issuer be required to consolidate an off-balance sheet entity or incur significant losses associated with it. SEC, Division of Corporation Finance, Sample Letter Sent to Public Companies That Have Identified Investments in Structured Investment Vehicles, Conduits or Collateralized Debt Obligations (Off-balance Sheet Entities) (Dec. 2007).

271 Form 20-F, Instruction 2 to Item 5.E.

272 Form 20-F, Instruction 5 to Item 5.E.

273 *See* SEC, Office of the Chief Accountant, Office of Economic Analysis and Division of Corporation Finance,

Report and Recommendations Pursuant to Section 401(c) of the Sarbanes-Oxley Act of 2002 on Arrangements with Off-Balance Sheet Implications, Special Purpose Entities, and Transparency of Filings by Issuers at 98 (June 15, 2005). The report noted that a greater proportion of issuers report off-balance sheet arrangements in the notes to the financial statements, as compared to the off-balance sheet section of the MD&A. While recognizing that there may be a good reason for this in the case of FIN 45 guarantees (not all of which are covered by the MD&A line-item requirements), the staff nevertheless observed that issuers may not have identified all of the off-balance sheet arrangements that are required to be discussed in the off-balance sheet section of the MD&A.

274 Form 20-F, Instruction 4 to Item 5.E.

275 Unlike the required disclosures on off-balance sheet arrangements, the required tabular disclosure on contractual obligations is not required to appear in a separately captioned section of the MD&A. Form 20-F, Item 5.F.

276 Form 20-F, Item 5.F.1.

277 *See* Form 20-F, Instruction 2 to Item 5.F. If the GAAP used in the primary financial statements does not distinguish between capital (finance) leases and operating leases, all leases should be presented under a single category.

278 "Purchase obligation" is defined as "an agreement to purchase goods or services that is enforceable and legally binding on the registrant that specifies all significant terms, including: fixed or minimum quantities to be purchased; fixed, minimum or variable price provisions; and the approximate timing of the transaction." Item 303(a)(5)(ii)(D) of Regulation S-K under the Securities Act; Form 20-F, Item 5.F.2. The adopting release with respect to the rules provides that, among other things, if any purchase obligation is subject to variable price provisions, the issuer must provide estimates of payments due and footnote disclosure identifying payments subject to market risk (if material). SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5991 (Feb. 5, 2003).

279 In the 2010 MD&A Interpretive Guidance, the SEC noted that the "obligations table is to provide aggregated information about contractual obligations and contingent liabilities and commitments in a single location so as to improve transparency of a registrant's short-term and long-term liquidity and capital resources needs and to provide context for investors to assess the relative role of off-balance sheet arrangements" and that "registrants should prepare the disclosure consistent with that objective." *See* 2010 MD&A Interpretive Guidance, 75 Fed. Reg. 59,894, 59,896 (Sept. 28, 2010).

280 For U.S. domestic issuers, Item 303(a)(5) of Regulation S-K requires a tabular disclosure of contractual obligation. In the Fast Act Report, the SEC staff recommended replacing such table with a hyperlink to the relevant financial statement notes that provide substantially similar disclosure.

281 Form 20-F, Item 5.G; *see also* § 4.06[1][a] (discussing safe harbor provisions under the Securities Act and the Exchange Act for forward-looking statements contained in MD&A). The statutory safe harbor provisions would not apply in all instances, including with respect to forward-looking statements contained in MD&As for IPOs. *See* SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5993 n.146 (Feb. 5, 2003).

282 SEC Release No. 33-8182 (Jan. 28, 2003), 68 Fed. Reg. 5982, 5993 & n.148 (Feb. 5, 2003).

U.S. Regulation of the International Securities and Derivatives Markets, § 4.07, OTHER SIGNIFICANT DISCLOSURE ISSUES IN SEC FILINGS

U.S. Regulation of the International Securities and Derivatives Markets

[1] Plain English Principles

In 1998, the SEC issued a release (the "Plain English Release") [283] adopting a number of rules and rule amendments intended to reduce the complexity and enhance the clarity of prospectus disclosure. The Plain English Release requires companies to use "Plain English" principles in writing the front and back cover pages, summary and risk factor sections of prospectuses. [284] The Plain English Release identifies six such "Plain English" principles: active voice; short sentences; definite, concrete, everyday language; tabular presentation and "bullet lists" for complex material whenever possible; no legal jargon or highly technical business terms; and no multiple negatives. [285] In addition to these specific requirements, the Plain English Release amended Rule 421(b) under the Securities Act to require the general use of "Plain English" drafting techniques throughout a prospectus. [286] The SEC has since adopted "Plain English" principles for certain other documents. [287]

Many practitioners believe the "Plain English" initiative has improved disclosure. However, in its early years the "Plain English" initiative sometimes led to delays in SEC staff review of registration statements as "Plain English" comments were made and responded to. The number of such comments has declined significantly, and delays attributable to "Plain English" comments have essentially disappeared.

[2] Risk Factors

p. 4-83

Form 20-F requires foreign registrants to include material risk factors that are specific to the company, its industry and, in the case of an offering, the securities being offered. [288] Unlike Item 503(c) of Regulation S-K, which requires disclosure of risk factors for U.S. registrants and is silent on the ordering of risk factors, Form 20-F specifically encourages the companies to list the risk factors according to priority. The illustrative list of factors listed in Form 20-F includes:

- the nature of the business in which it is engaged or proposes to engage;
- factors relating to the countries in which it operates;
- the absence of profitable operations in recent periods;
- the financial position of the company;
- the possible absence of a liquid trading market for the company's securities;
- reliance on the expertise of management;
- potential dilution;
- unusual competitive conditions;
- pending expiration of material patents, trademarks or contracts; or
- dependence on a limited number of customers or suppliers.

The SEC has also encouraged companies to include a risk factor covering cybersecurity, if such risk is material to the investors in the company. [289] Under the Plain English Release, companies are required to draft risk factors in plain English. Although Form 20-F is not explicit on these points, foreign registrants should refer to Item 503(c) of Regulation S-K for guidance, which requires the use of subcaptions to describe the categories of risks factors and cautions against including generic risk factors that apply to any issuer or any offering. Further, the SEC staff has often commented that any language in a risk factor that mitigates the risk it covers should be removed. The SEC staff also often asks registrants to separate different risks into multiple risk factors instead of bundling them into one.

[3] Special Corporate Governance Rules

p. 4-83

p. 4-84

Once companies become public in the United States, they also become subject to various substantive corporate governance requirements. These include the Exchange Act's requirement to maintain an adequate system of internal controls and certain other requirements imposed by the Sarbanes-Oxley Act with respect to corporate governance, management accountability and auditor independence, among others. The Dodd-Frank Act also imposes a number of substantive requirements on reporting companies, especially with respect to executive compensation and compensation committees, although foreign issuers are generally excluded from these requirements. Separately, NYSE and Nasdaq rules impose certain corporate governance requirements on listed companies. A more detailed discussion of these requirements is included in Chapter 5.

[4] Mine Safety Disclosure Requirements

Section 1503 of the Dodd-Frank Act [290] requires every reporting company that is an operator, [291] or has a subsidiary [292] that is an operator, of coal or other mines in the United States to make certain health- and safety-related disclosures in periodic reports and, for domestic companies covered by the rule, in current reports on Form 8-K. [293] These provisions thus apply to foreign issuers that operate or have subsidiaries that operate mines in the United States. The required disclosures include information about certain orders, violations and citations regarding mine safety and health standards under the Mine Act, proposed assessments from the U.S. Labor Department's Mine Safety and Health Administration ("MSHA") under the Mine Act, mining-related fatalities and pending legal actions before MSHA. The SEC's form requirements implementing § 1503 clarify that the disclosure must be provided for each mine and that no aggregation is permitted, and they confirm that all orders, violations or citations received

p. 4-84

p. 4-85

during a period must be disclosed, even if they have subsequently been dismissed, reduced or settled or are contested by the company. [294]

Most of the disclosures must be included as an exhibit to the annual report on Form 10-K, Form 20-F or Form 40-F and to quarterly reports on Form 10-Q. [295] Some disclosures of U.S. issuers must also be made in current reports on Form 8-K within four business days of triggering events, while the Form 8-K requirements do not apply to foreign issuers. [296] In the Mine Safety Adopting Release, the SEC noted that it was "mindful of concerns that the disclosure requirement should be as equal as possible in order to avoid disadvantaging U.S. issuers in comparison to foreign issuers," but the final rule does not require foreign issuers to disclose mine safety information in current reports on Form 6-K that correspond to domestic issuers' requirements for disclosures on Form 8-K. No particular format is required for the disclosures, although the SEC encourages presentation in tabular format. EXtensible Business Reporting Language ("XBRL") format reporting of the disclosures is not currently required. [297]

Unlike the disclosures relating to conflict minerals, mine safety disclosures are automatically incorporated by reference in registration statements on Form S-3 (or F-3) under the Securities Act, but such information is not required in a long-form registration statement on Form S-1 (or F-1). [298]

[5] Oil and Gas Disclosure Requirements

p. 4-85

p. 4-86

Major revisions to the SEC's rules governing disclosures about oil and gas activities took effect for Securities Act registration statements filed on or after January 1, 2010 and annual reports on Forms 10-K or 20-F for fiscal years ending on or after December 31, 2009. [299] The previously applicable special oil and gas disclosure rules for foreign issuers were eliminated, so foreign issuers are now subject to the same disclosure regime as U.S. domestic issuers (though this change does not affect Canadian issuers that file with the SEC pursuant to the Multi-Jurisdictional Disclosure System). [300] The revised rules, together with the oil- and gas-related disclosure requirements previously contained in Industry Guide 2, are now codified in new Subpart 1200 of Regulation S-K. [301]

In adopting the revised rules, the SEC recognized that its prior rules, adopted more than 25 years earlier, had not kept pace with subsequent significant developments in the oil and gas industry. These changes included major advances in the technology used to assess oil and gas reserves, substantially increased volatility in oil and gas prices, the rapidly growing importance of non-traditional sources of oil and gas and the increasingly geographic diversification of the industry (including significant growth both in the number of major non-U.S. oil and gas companies that file reports with the SEC and in the percentage of U.S. and non-U.S. oil and gas companies' reserves that are located outside the United States). [302]

The revised rules changed the pricing methodology used to determine the economic producibility of reserves. The price that is required to be used now is a 12-month average price, calculated based on the first day of each month, whereas a single-day period-end price was previously required. [303] This change addressed criticism that the single-day period-end price is not the preferable price to establish economic producibility of reserves since it is particularly subject to volatility and seasonality. Thus, it is expected that a 12-month average price will result in improved reserves estimates while maintaining comparability. Although the SEC acknowledged that historical prices are less useful than expected future prices in determining the fair value of a company's reserves, it did not permit

p. 4-86

p. 4-87

use of expected future prices as a pricing methodology. The SEC believes reserves estimates are intended to permit comparison of reserves and not the fair value of reserves. [304] In addition, using future prices could require subjective judgments and result in diminished comparability due to differing assumptions. [305] Regardless of the pricing methodology used, price volatility leads to uncertainty and unintended consequences for disclosure and financial statements. This affects not only the value of the reserves but also the existence of economically producible reserves. The revised rules permit, but do not require, companies to provide a sensitivity analysis table to address this issue. [306]

Other changes will also affect determination of reserves. The revised rules permit the determination of reserves to be based on new technologies (other than just actual production or flow tests), so long as such technologies are empirically demonstrated to be reliable indicators of reserves volumes. [307] The revised rules also permit the calculation of reserves estimates using both deterministic and probabilistic methods, as well as the inclusion of analogous reservoirs in reserves calculations. [308]

Prior to the revised rules, disclosure of any reserves estimates other than proven reserves was prohibited. The revised rules permit (but do not require) the disclosure of probable and possible reserves. [309] Under the old rules, oil and gas

p. 4-87

p. 4-88

companies widely disclosed amounts of probable and possible reserves by means other than through filings with the SEC, including through press releases and on their Internet websites. The revised rules recognized this market practice and the fact that investors seem to find this information helpful in assessing a company's reserves position. Many commenters opposed this disclosure and raised the issue of potential liability to the companies that may arise from including such information in SEC filings. [310] Underwriters will also be exposed to heightened liability if a company includes, or incorporates by reference, probable or possible reserves information in Securities Act filings. While liability issues might not be dispositive in the context of necessary or useful communications with investors and the market, in this case issuers have successfully followed the widely established market practice of disseminating this information outside SEC filings.

The revised rules introduced new definitions that are consistent with those used in the Petroleum Resources Management System ("PRMS") developed by the Society of Petroleum Engineers ("SPE") and other major industry organizations. [311] The definition of undeveloped proved reserves changes the "certainty" standard for non-adjacent undeveloped reserves to a "reasonable certainty" standard. The term "reasonable certainty" follows the PRMS definition and provides that for probabilistic methods reasonable certainty requires at least a 90% probability that quantities recovered will equal or exceed the estimate. [312] The definition also contains an "elaboration," which is consistent with the staff's prior position, to the effect that reasonable certainty embodies the concept that estimated ultimate recovery is much more likely to increase or remain constant than to decrease over time. [313] Moreover, in connection with the SEC's abandonment

p. 4-88

p. 4-89

of its long-standing prohibition on disclosure of probable and possible reserves in SEC filings, the terms probable and possible reserves are now defined, consistent with the PRMS definitions.

The revised pricing methodology also applies to the accounting for oil and gas reserves by companies that follow the successful efforts method, as Accounting Standards Codification 932, Extractive Activities—Oil and Gas, as amended, refers to Regulation S-K definitions. This change allows consistency between the new reserves disclosure requirements and the U.S. GAAP accounting presentation of reserves. The SEC clarified that the pricing change should be applied prospectively only and does not require retroactive application. [314]

In response to the SEC's revised disclosure rules about oil and gas activities, in January 2010 FASB issued Accounting Standards Update No. 2010-03, Oil and Gas Reserve Estimation and Disclosures ("ASU 2010-03") to align its requirements for estimation and disclosure of oil and gas reserves under U.S. GAAP with the new SEC rules. ASU 2010-03 became effective for annual reporting periods ending on or after December 31, 2009.

The SEC acknowledged in the Oil and Gas Release the importance of providing consistency of standards and stated that it is communicating with the FASB and the IASB on these matters. [315] However, uncertainties exist in connection with IFRS. The IASB published a discussion paper on extractive activities in April 2010, [316] but it effectively discontinued this project in December 2012, in favor of a broader research project on intangible assets. A new discussion paper is expected to be published. [317]

Under the revised SEC rules, resources such as bitumen from oil sands and oil and gas from coal and shale are required to be disclosed as oil and gas activities instead of mining activities. [318] The SEC indicated that accounting changes as a result of non-traditional resources being accounted for under oil and gas accounting rules and not mining industry rules should be applied prospectively only and do not require retroactive application.

Finally, new Subpart 1200 of Regulation S-K imposed several new disclosure requirements relating to reserves, including principally the following:

p. 4-89

p. 4-90

- more detailed geographic breakdowns of reserves information; [319]
- technologies used in estimation of reserves; [320]
- registrants' internal controls over the reserves estimation process; [321]

- the qualifications of the technical person at each registrant who is primarily responsible for reserves estimation; [322] and
- the filing of third-party reports comprising reserves audits or process reviews, if the issuer represents that a third party prepared or audited the reserves estimates or conducted a process review. [323]

The filed report can be a summary rather than the full report, and it must (in the case of a report on a reserves audit or third-party preparation of a reserves estimate) contain specified information. [324] In addition, where a report is included in or incorporated into a Securities Act registration statement, the third party must file a consent and is an "expert" for Securities Act purposes. [325]

[6] 2010 Interpretive Release on Disclosure of Climate Change Matters

On February 2, 2010, the SEC issued an interpretive release to provide guidance on existing SEC disclosure requirements as they apply to climate change. [326] In issuing the Climate Change Release, the SEC stated that its objective is to provide clarity on disclosure relating to climate change, including in an issuer's risk factors, business description, legal proceedings and MD&A. The SEC emphasized that the Climate Change Release does not impose any new legal requirements or modify existing ones. [327] In particular, the Climate Change

p. 4-90

p. 4-91

Release does not, in and of itself, require an issuer to disclose its carbon footprint or the steps it is taking to reduce emissions. Although the Climate Change Release states that it is not intended to impose new disclosure requirements, the contemplated analyses appear in some cases to go beyond existing norms. For example, the Climate Change Release calls for extensive assessment of the prospects for and possible impacts of potential future climate change requirements, whether resulting from U.S. legislation or regulation or international accords. The SEC also emphasizes that, as this is a rapidly developing area, issuers should regularly assess their disclosure obligations. [328]

After generally summarizing the disclosure requirements of Regulation S-K and Regulation S-K of potential relevance for environmental matters, the Climate Change Release highlights four topics as examples in which climate change may trigger disclosure requirements. The Climate Change Release notes that while disclosure obligations of foreign issuers are governed by Form 20-F and not Regulation S-K, most of the disclosure requirements applicable to domestic issuers under Regulation S-K have parallels under Form 20-F. [329] In particular, the Climate Change Release highlights Item 3.D (material risks), Item 4.B.8 (material effects of government regulation), Item 4.D (environmental issues that may affect company utilization of its assets), Item 5 (MD&A) [330] and Item 8.A.7 (legal proceedings) as those under Form 20-F that might require disclosure concerning climate change matters material to an issuer's business. [331]

[a] Impact of Legislation and Regulation

The Climate Change Release notes that the financial impacts of legislation and regulation regarding climate change may implicate the following disclosure obligations, among others [332]:

p. 4-91

p. 4-92

- Risk factor disclosure. According to the Climate Change Release, a company should consider the specific risks faced by the company or its industry sector and "avoid generic risk factor disclosure that could apply to any company." [333]
- MD&A disclosure. The Climate Change Release sets out a two-step analysis to the effect that a known uncertainty, such as pending climate change legislation or regulation, requires disclosure unless management determines either that the pending legislation or regulation is not reasonably likely to be enacted or that, if enacted, it would not be reasonably likely to have a material effect on the issuer, its financial condition or results of operations. [334]

The Climate Change Release also references various possible consequences of pending legislation and regulation that issuers should assess. [335]

[b] Impact of International Accords

The Climate Change Release states that an issuer should consider, and disclose when material, the risks or effects on its business of international accords and treaties relating to climate change (*e.g.*, the Paris Agreement, the Kyoto Protocol, the European Union Emission Trading Scheme and other international activities) just as it should do for U.S. legislation and regulation. [336]

[c] Indirect Consequences of Regulation or Business Trends

The Climate Change Release notes that indirect consequences or risks relating to climate change may need to be disclosed as risk factors, in MD&A or, if significant enough, in the business description. As examples, the Climate Change Release highlights the following possible indirect consequences or opportunities to be considered:

p. 4-92

p. 4-93

- decreased demand for goods that produce significant greenhouse gas emissions;
- increased demand for goods that result in lower emissions than competing products;
- increased competition to develop innovative new products;
- increased demand for generation and transmission of energy from alternative energy sources;
- decreased demand for services related to carbon-based energy sources, such as drilling services or equipment maintenance services; and
- reputational damage related to the public's perception of any publicly available data relating to an issuer's greenhouse gas emissions. [337]

[d] Physical Impacts of Climate Change

The Climate Change Release states that issuers whose businesses may be vulnerable to severe weather or climate events should consider disclosure of material risks or consequences. Examples include property damage and operational disruptions to facilities in coastal areas; indirect effects from the impact of severe weather on suppliers or customers; for insurance companies, increased claims and liabilities; decreased agricultural production; and increased insurance costs or decrease in the availability of coverage. [338]

[7] Disclosure of Preliminary Merger Negotiations

There is some uncertainty as to the circumstances in which companies must disclose the existence of preliminary merger negotiations. In particular, companies question whether they must make such disclosure when they are filing registration statements or annual reports or at other times. In its release on MD&A disclosure, the SEC noted that its forms for periodic reporting under the Exchange Act generally do not require *pro forma* financial information in connection with material mergers and acquisitions or require disclosure of such transactions, until definitive agreement is reached or upon completion. [339]

p. 4-93

p. 4-94

When a company registers securities under the Securities Act, however, the SEC requires disclosure in the registration statement of probable material acquisitions and dispositions of businesses, including in certain cases the financial statements of each business to be acquired as well as certain *pro forma* financial information. [340] When the proceeds from the sale of the securities being registered are to be used to finance an acquisition of a business, the registration statement must also disclose the intended use of proceeds. Companies are, however, permitted to omit from registration statements disclosure of the identity of the parties and the nature of the business sought, if the acquisition is immaterial or not yet probable and the board of directors determines that including such disclosure would threaten completion of the acquisition. Nevertheless, if financial statements are required to be included under the relevant rules, a more detailed description of the business to be acquired must be included. [341]

When disclosure is not otherwise required by these filing requirements, and has not otherwise been made, the MD&A in a registration statement or an annual report need not contain a discussion of the impact of preliminary merger negotiations if, in the issuer's view, inclusion of such information would threaten completion of the transaction. When disclosure is otherwise required or has otherwise been made by or on behalf of the issuer, the negotiations become subject to the same disclosure standards in the MD&A as any other known trend, commitment, event or uncertainty. [342]

[8] Guide 3 Disclosure Requirements for Bank Holding Companies

SEC Industry Guide 3 provides guidelines for statistical disclosures by foreign banks and bank holding companies in SEC filings. [343] It is intended to elicit information concerning the risks and uncertainties in banking operations to enable prospective investors to assess the issuer's financial condition and to differentiate among issuers in terms of income sources and risk exposure. Guide 3

p. 4-94

p. 4-95

requires detailed disclosures concerning a foreign bank's assets, liabilities and equity accounts, interest rates and interest spreads, investment portfolio, loan portfolio, loan maturities, loan sensitivity to changes in interest rates, problem loans, loan concentrations, loan loss experience, other earning assets, deposits and return on equity and assets.

Because an issuer is required to disclose in a filing not only all required information concerning its operations and financial condition but also all material information necessary to make what is disclosed not misleading, disclosure may in certain circumstances have to go beyond the requirements of Guide 3. Moreover, the SEC has historically permitted some deviation from the specific requirements of the Guide if more meaningful disclosure with respect to a particular issue would thereby be provided. The disclosure requirements of Guide 3 are applicable to foreign companies to the extent the requested information is available. If the information is unavailable and cannot be compiled without unwarranted or undue burden or expense, this situation should be brought to the attention of the SEC staff at an early stage in the process of preparing for registration. If possible, reasonably comparable data should be furnished instead. In addition, while the SEC staff may allow an initial filing by a foreign issuer to be made without full compliance with Guide 3, the staff may condition such relief on more complete compliance in connection with filings for subsequent periods.

[9] Beneficial Ownership of Shares by, and Compensation of, Directors and Officers

A U.S. issuer is required to include in a registration statement or an annual report (or in a proxy statement if the Part III information of Form 10-K is incorporated by reference therefrom) a tabular disclosure of beneficial ownership of each class of equity securities of the issuer or its parents or subsidiaries by each of the directors (including director nominees) and named executive officers [344] and all directors and executive officers as a group. [345] A foreign issuer is subject to a similar requirement to disclose in a registration statement or an annual report information as to share ownership in the company by the directors and members

p. 4-95

p. 4-96

of the administrative, supervisory or management bodies and options granted to them on the foreign issuer's shares. [346] This information must be provided on an individual basis [347] and include disclosure of the number of shares, percentage of shares of such class outstanding, any special voting rights and, with respect to options, the exercise and purchase prices, together with the expiration date(s) of the options. The term "beneficial ownership" for this purpose is defined in Rule 13d-3 under the Exchange Act for U.S. issuers and in General Instruction E of Form 20-F for foreign private issuers.

A U.S. issuer is also required to provide in a registration statement or an annual report (or in a proxy statement as described above) information about the individual compensation of each of its named executive officers and directors. [348] In contrast, foreign issuers may provide information concerning the remuneration of directors and members of its administrative, supervisory or management bodies in an aggregate amount in an SEC filing, unless the issuer is required to provide individual disclosure in its home jurisdiction or has otherwise made such data public. [349] A discussion of certain disclosure requirements related to shareholders that beneficially own 5% or more of an issuer's shares or control an issuer is included in § 6.03[2].

[10] Interested Party Transactions

p. 4-96
p. 4-97

A U.S. issuer is required to describe in a registration statement any transaction between the issuer, on the one hand, and its management or any holder of more than 5% of the issuer's voting securities, on the other hand, involving an amount in excess of $120,000. [350] Foreign companies are also required to provide disclosure regarding interested party transactions, but only those that are material to the company or the interested party (or that are unusual), except that loans by the company to or for the benefit of an interested party must be disclosed regardless of amount. [351] If more detailed information is required to be disclosed by the foreign company's home jurisdiction or a market in which its securities are listed or traded or otherwise made publicly available, it should be disclosed pursuant to Item 404 of Regulation S-K. [352]

In the SEC's 2002 MD&A Statement calling for better-quality disclosure in several areas of the MD&A, the SEC also called for better-quality disclosure regarding related-party and similar transactions, noting that additional disclosure may be required when there are transactions involving parties, whether or not classified as related parties under applicable accounting regulations, that have relationships that enable them to negotiate terms of material transactions that might not be available on an arm's-length basis from clearly independent third parties. [353] Examples of such parties could include entities established by former senior management or by persons who have some other current or former relationship with the issuer.

The SEC has suggested that issuers consider including disclosure regarding all material transactions with such parties, together with a discussion of any terms that differ from those that would be available on an arm's-length basis. In describing these relationships, the SEC cautioned issuers to include information regarding the business purpose, the persons involved, how transaction prices were determined, how the transaction was evaluated for fairness (if such evaluation is stated to have been made) and any ongoing contractual or other commitments resulting from the arrangement.

[11] Derivatives Disclosure

p. 4-97
p. 4-98

In 1997, the SEC adopted amendments to a number of rules and forms that imposed significant disclosure requirements on both domestic and foreign issuers with respect to derivatives and other financial instruments. [354] The amendments came in response to the substantial growth in the use of derivative instruments as a tool for managing market risk and the perceived deficiencies in companies' disclosure about their exposures to such risks, as well as the significant and well publicized losses experienced in recent years by some companies in market risk-sensitive instruments due to changes in, among other things, interest rates, foreign currency exchange rates and commodity prices.

The disclosure required under the 1997 rules is both specific and extensive. First, enhanced descriptions must be supplied in the footnotes to the financial statements with respect to accounting policies for derivative instruments. [355] Seven specified items must be considered, and must be addressed in the footnotes to the extent material. [356] Second, disclosure outside the financial statements must be made of both qualitative and quantitative information about derivative and other financial instruments. With respect to quantitative information about market risk associated with such instruments, registrants are generally required to present information as of the end of the latest fiscal year and to elect one of three alternatives: (i) tabular presentation of fair value information and contract terms relevant to determining future cash flows, categorized by expected maturity dates, (ii) sensitivity analysis expressing the potential loss in future earnings, fair values or cash flows from selected hypothetical changes in market rates and prices, or (iii) value-at-risk disclosures expressing such potential losses over a selected period of time with a selected likelihood of occurrence. [357] In preparing this quantitative information, registrants must group separately those

p. 4-98

p. 4-99

instruments entered into for trading purposes and those entered into for other purposes and must, within each such group, present separate quantitative information for each market risk exposure category (*i.e.*, interest rate risk, foreign currency exchange rate risk, commodity price risk, etc.). [358] Different disclosure alternatives may be used for each of the separate disclosures. With respect to qualitative information, the requirements include a narrative discussion of a registrant's primary market risk exposures and how the registrant manages those exposures, as well as any changes in either of these areas relative to the most recent prior reporting period and what is known or expected in future periods. [359]

These derivatives disclosure provisions apply to a greater or lesser extent to all foreign registrants. Under Item 18 of Form 20-F, foreign issuers are required to provide all information required by Regulation S-K, including the footnote disclosure regarding derivatives accounting policies required by Rule 4-08 of Regulation S-K. Item 11 of Form 20-F, meanwhile, requires disclosure by all foreign issuers of the quantitative and qualitative information about market risk described above. As a practical matter, a foreign company whose portfolio includes significant derivative instruments and other financial instruments will almost certainly require sophisticated internal staff or sophisticated assistance from third parties in order to comply with these disclosure requirements. In addition to the cost of such assistance, the time that may be required to produce the necessary disclosure will need to be considered in planning any U.S.-registered offering. [360]

[12] Disclosure Regarding ADR Fees

Under Item 12D.3 of Form 20-F, an issuer is required to disclose in its annual report the fees and charges holders of ADRs may have to pay. The issuer

p. 4-99

p. 4-100

must also disclose (i) any fees or charges for "general depositary services, particularly those charged on an annual basis" and (ii) whether the depositary has the right to collect fees and other charges by offsetting them against dividends or against deposited securities. [361] Item 12D.4 of Form 20-F also requires disclosure in registration statements and annual reports about payments from the depositary to the issuer. [362]

[13] Global Security Risk Disclosure; OFAC Sanctions; Section 13(r) (Iran)

In 2004, the SEC's Division of Corporation Finance established the Office of Global Security Risk. [363] The stated objectives of the Office of Global Security Risk are to (i) identify companies whose activities raise concern about global security risks that are material to investors, (ii) obtain appropriate disclosure where merited and (iii) share information as necessary and appropriate with other key government agencies responsible for tracking terrorist financing. The Office of Global Security Risk is charged with focusing on "asymmetric risk" by assisting SEC review staff in considering whether a U.S. or foreign company has operations or other exposure in areas of the world that may subject the company and its investors to material risk, trends or uncertainties. This consideration would include whether a company has operations in a country or area of activity where political, economic or other risks exist that are material, or whether the company faces public or government opposition, boycotts, litigation or similar circumstances that are reasonably likely to have a material adverse impact on its financial condition or results of operations. [364] The Office of Global Security Risk is required to provide quarterly reports on its activities to Congress. [365]

In June 2007, the SEC established a website in which it listed reporting companies that, based on disclosure in their annual reports, engaged in business

p. 4-100

p. 4-101

in Cuba, Iran, North Korea, Sudan and Syria. The website also included links to the relevant sections of the companies' annual reports. [366]

Substantial criticism followed that the website did not fulfill its purpose of informing investors as to companies supporting the specified countries. In particular, it was suggested that some of the companies listed had disclosures to the effect that they were engaged in "negligible" activities or had even stopped their activities. The disclosures by the SEC on the website were characterized as "unfair and perhaps counterproductive." [367] The SEC took the website down in July 2007 and issued a concept release seeking comments as to whether and how the SEC should provide easier access to companies' disclosures concerning their business in or with countries designated as state sponsors of terrorism. [368] No further action on this subject followed the concept release. The staff continues to make comments seeking disclosure or additional details regarding issuers' activities that may implicate global security risk issues.

The SEC indicated in May 2001 that the staff would attempt to review all registration statements of foreign issuers engaged in material business activities in or with countries, governments or persons subject to sanctions administered by the U.S. Treasury Department's Office of Foreign Assets Control (the "OFAC Sanctions"). Under the OFAC Sanctions, dealings by U.S. persons (and, in some cases, the non-U.S. subsidiaries of U.S. persons) with such countries, governments and persons are restricted. [369]

Foreign issuers must apply traditional materiality standards when determining whether disclosure of operations or relationships with countries, governments or entities subject to OFAC Sanctions is necessary. If such disclosure is made, the SEC can be expected to review subject registration statements and request detailed explanations of relevant transactions. [370]

On August 10, 2012, President Obama signed the Iran Threat Reduction and Syria Human Rights Act of 2012 ("ITRA") into law. [371] Section 219 of ITRA added § 13(r) to the Exchange Act, under which any issuer of securities that is required to file quarterly or annual reports under § 13(a) of the Exchange Act

p. 4-101

p. 4-102

must make specific disclosure in its public filings if it or an affiliate [372] has knowingly engaged in certain activities listed in § 13(r). [373] Disclosure must include: (i) the nature and extent of the activity; (ii) the gross revenues and net profits attributable to the activity; and (iii) whether the issuer or affiliate intends to continue the activity. The issuer is also obligated to file a separate notification of the disclosures to the SEC concurrently with the report. [374] As a result, while it is not per se illegal for non-U.S. companies listed in the United States to engage in business with U.S.-sanctioned parties linked to Iran, failure to make the disclosures required by § 13(r) will now constitute a violation of U.S. securities law and may result in civil and criminal penalties. [375]

[14] Interactive Data

In January 2009, the SEC adopted rules (the "XBRL Rules") requiring issuers reporting under U.S. GAAP or IFRS as issued by the IASB to provide financial statements to the SEC in XBRL. [376] The XBRL Rules currently apply only to foreign issuers that prepare their financial statements in accordance with U.S. GAAP or IFRS as issued by the IASB. Interactive data files will be filed as exhibits that supplement, but do not replace, the financial statements otherwise required to be filed. XBRL is an interactive data format that makes a company's financial statements machine-readable so they can be analyzed and compared

p. 4-102
p. 4-103

using other software applications. Interactive data filing is designed to improve the usefulness of financial information submitted to the SEC by making it possible to download financial data directly into spreadsheets and other applications. Although many foreign countries have voluntary or pilot XBRL programs, the SEC is among the first to make XBRL filing mandatory. [377] Foreign issuers that file financial statements in accordance with IFRS as issued by the IASB were not required to file XBRL interactive data until the SEC publishes a taxonomy for IFRS on its website, which it did on March 1, 2017. They will now be required to file XBRL interactive data beginning with fiscal periods ending on or after December 15, 2017. [378]

Under the XBRL Rules, an electronic filer is required to submit an interactive data file exhibit with annual reports on Form 20-F and reports on Form 6-K that include updated or revised financial statements. [379] Electronic filers will also be required to submit interactive data files as exhibits to their Securities Act registration statements that include financial statements that are not incorporated by reference. [380] In such cases, the interactive data exhibit will not be required until a price or price range has been determined and will be required for later amendments only if the financial statements have changed. Registration statements for an IPO will not be required to include an interactive data file. Similarly, issuers will not be required to include an interactive data file when using Forms 10, 20-F or 40-F to register under the Exchange Act.

Issuers have incurred additional expenses in connection with filings of interactive data, and the time necessary to prepare interactive data files has put additional time pressure on at least some issuers, who have effectively been required to finalize their filings up to several days before what would otherwise have been the case, in order to accommodate the preparation of interactive data

p. 4-103
p. 4-104

files. It is also not clear whether the utility of interactive data files to investors or regulators has justified burdens to date.

[15] Cybersecurity Disclosure

On October 13, 2011, the SEC's Division of Corporation Finance issued disclosure guidance on cybersecurity. [381] Although this guidance is not a rule or regulation, it provides the Division's view on adequate disclosure relating to cybersecurity risks and cyber incidents in light of recent highly publicized cyber-attacks on companies. The guidance uses the materiality standard to determine whether any cybersecurity disclosure is required. [382] For example, the guidance explains that cybersecurity risks should be disclosed as a risk factor if such risk is one of the "most significant factors that make an investment in the company speculative or risky." The guidance also suggests that a company should disclose cybersecurity risks or cyber incidents in the MD&A section, if such risks or incidents are reasonably likely to have a material impact on the company's financial results and operations. Other specific areas covered by the guidance include description of business, legal proceedings, financial statement disclosure, and disclosure controls and procedures. Lastly, companies are cautioned against providing generic "boilerplate" disclosure related to cybersecurity and are encouraged to provide meaningful disclosure that specifically applies to a particular company or industry.

Act, SEC Release No. 34-55146 (Jan. 22, 2007) and SEC Release No. 34-56135 (July 26, 2007) (requiring the use of plain English in the notice of Internet availability of proxy materials).

288 Form 20-F, Item 3.D.

289 SEC, Division of Corporation Finance, CF Disclosure Guidance: Topic No. 2 (Oct. 13, 2011). *See* § 4.07[15].

290 15 U.S.C. 78m-2. While § 1503 is not a part of and does not add provisions to the Exchange Act, it provides that a violation of § 1503 or any rules therein still be treated in the same manner as violations of the Exchange Act or rules thereunder.

291 The term "operator" has the meaning given to the term in § 3 of the Federal Mine Safety and Health Act of 1977, Pub. L. No. 91-173, 83 Stat. 742 (1969), as amended by Pub. L. No. 95-164, 91 Stat. 1290 (1977) (the "Mine Act"). *See* § 1503(e)(3) of the Dodd-Frank Act; 15 U.S.C. § 78m-2(e)(3).

292 The statute does not define the term "subsidiary," which would mean that the applicable definition would be the one in Item 1-02(x) of Regulation S-K.

293 Only mines subject to the Mine Act are covered. *See* § 1503(e)(2) of the Dodd-Frank Act; 15 U.S.C. § 78m-2(e)(2).

294 Mine Safety Adopting Release, 76 Fed. Reg. 81,762, 81,765, 81,768 (Dec. 28, 2011). Under the final rule, a company may, however, provide additional information to give context. For example, a company could indicate that orders, violations or citations received during the year were subsequently dismissed, reduced or otherwise resolved. Mine Safety Adopting Release, 76 Fed. Reg. 81,762, 81,768 (Dec. 28, 2011).

295 *See* § 1503(a) of the Dodd-Frank Act. Initially, many companies had made such disclosures in the report itself, but the final rule requires that the disclosures be made in an exhibit. Under the final rule, the body of the report includes a brief disclosure and refers to the exhibit with a cross reference. *See* Mine Safety Adopting Release, 76 Fed. Reg. 81,762, 81,766 (Dec. 28, 2011). Of course, issuers should consider whether material information in the exhibits should be covered in other areas of the annual or quarterly report, *e.g.*, Risk Factors, MD&A, Description of Business or Legal Proceedings.

296 Mine Safety Adopting Release, 76 Fed. Reg. 81,762, 81,775 (Dec. 28, 2011). Triggering events for an 8-K filing for a U.S. issuer include (i) an imminent danger order under the Mine Act, (ii) written notice from the MSHA of a pattern of violations of mandatory health or safety standards that are of such nature as could have significantly and substantially contributed to the cause and effect of coal or other mine health or safety hazards under the Mine Act and (iii) written notice from the MSHA of the potential to have a pattern of such violations. The SEC confirmed in the final rule that the untimely filing of required mine safety disclosures on Form 8-K will not result in loss of Form S-3 eligibility. *See* Mine Safety Adopting Release, 76 Fed. Reg. 81,762, 81,776 (Dec. 28, 2011). Items reported on Form 8-Ks must be repeated in a company's next Form 10-Q or 10-K. *See* § 3.02[1][b] for a discussion of the eligibility criteria for an issuer to use Form F-3.

297 *See* Mine Safety Adopting Release, 76 Fed. Reg. 81,762, 81,767 (Dec. 28, 2011).

298 Mine Safety Adopting Release, 76 Fed. Reg. 81,767 (Dec. 28, 2011). *See* § 4.08 for a discussion of conflict minerals.

299 SEC Release No. 33-8995 (Dec. 31, 2008) ("the Oil and Gas Release"); *see also* SEC Release No. 33-8935 (June 26, 2008) (the "Oil and Gas Proposing Release"); SEC Release No. 33-8870 (Dec. 12, 2007) (Concept Release).

300 *See* Chapter 13 for discussion of the Multi-Jurisdictional Disclosure System.

301 *See* Items 1201 to 1208 of Regulation S-K under the Securities Act. The definitions adopted under the Oil and Gas Release are codified in Rule 4-10(a) of Regulation S-K.

302 *See* Oil and Gas Release, 74 Fed. Reg. 2157 (Jan. 14, 2009).

303 Rules 4-10(a)(22) and 4-10(c)(8) of Regulation S-K. In the Oil and Gas Proposing Release, the SEC proposed changing the disclosure rules to a 12-month average price, while maintaining the use of a single-day period-end price in the accounting rules.

304 *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2160–61 (Jan. 14, 2009).

305 The Oil and Gas Release also notes that natural gas is sold through longer-term contracts in many situations and parts of the world where observable market inputs are not widely available. In such situations, comparability among different companies would differ depending on their assumptions, as those assumptions would be inherent in estimating future prices. In these situations, comparability between reserve estimates would be reduced if future prices were used. *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2162 (Jan. 14, 2009).

306 Oil and Gas Release, 74 Fed. Reg. 2157, 2173–74 (Jan. 14, 2009). The SEC also reminded companies in the adopting release that Item 303 of Regulation S-K under the Securities Act for domestic companies (the "MD&A" section) and Item 5 of Form 20-F for foreign companies (the "Operating and Financial Review and Prospects" section) require discussion of known trends and uncertainties, which may include changes in prices and costs. In addition, companies should also consider whether to address price volatility risks in the form of risk factors. To determine the scope of the necessary disclosure, the standard a company should apply is whether the information it provides contains an untrue statement of a material fact or omits to state a material fact necessary to make what is disclosed not misleading. *See* §§ 11 and 12(a)(2) of the Securities Act and Rules 10b-5 and 12b-20 under the Exchange Act.

307 In adopting this standard, the SEC did not adopt provisions from the Oil and Gas Proposing Release that would have required the technology used to (i) be "widely accepted" as that standard would have excluded technologies developed internally that are proven to be reliable or (ii) have been proven empirically to lead to correct conclusions in 90% or more of its applications as such standard would have been difficult to verify and maintain. *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2166 (Jan. 14, 2009).

308 Oil and Gas Release, 74 Fed. Reg. 2157, 2168 (Jan. 14, 2009).

309 *See* Instruction 2 to paragraph (a)(2) of Item 1202 of Regulation S-K under the Securities Act. "Probable reserves" are additional reserves that are less certain to be recovered than proved reserves but are as likely as not to be recovered. *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2167 (Jan. 14, 2009). "Possible reserves" include additional reserves that are less certain to be recovered than probable reserves. *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2167 (Jan. 14, 2009). Nevertheless, disclosures of estimates of oil and gas resources other than reserves are still prohibited in any document publicly filed with the SEC unless the information is required to be disclosed by foreign or state law. Companies may still make this information available outside public filings, and they may still disclose this information publicly in filings related to acquisitions, mergers and other consolidations if the target in such transaction previously made those estimates available to the acquiror. Oil and Gas Release, 74 Fed. Reg. 2157, 2173 (Jan. 14, 2009); *see* Item 102 of Regulation S-K.

310 *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2172–73 (Jan. 14, 2009).

311 PRMS was developed in 2007 by SPE in collaboration with the World Petroleum Council, the American Association of Petroleum Geologists, and the Society of Petroleum Evaluation Engineers. *See* SPE, Petroleum Resources Management System (Mar. 2007); *see also* Oil and Gas Release, 74 Fed. Reg. 2157, 2160, n.15 (Jan. 14, 2009).

312 Oil and Gas Release, 74 Fed. Reg. 2157, 2164 (Jan. 14, 2009).

313 *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2164 (Jan. 14, 2009). In the Oil and Gas Proposing Release, the SEC proposed defining "reasonable certainty" as "much more likely to be achieved than not" but adopted the PRMS standard of "high degree of confidence that the quantities will be recovered." *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2164 (Jan. 14, 2009). The SEC believes these two standards have the same meaning.

314 Oil and Gas Release, 74 Fed. Reg. 2157, 2164 (Jan. 14, 2009).

315 *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2179–80, 2187 (Jan. 14, 2009).

316 For more information, *see* International Accounting Standards Board, DISCUSSION PAPER: EXTRACTIVE ACTIVITIES (Apr. 2010).

317 Deloitte, Extractive activities – Comprehensive project (IASPlus), http://www.iasplus.com/en/projects/completed/assets/extractives.

318 These activities are now included in the definition of "oil and gas producing activities." *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2163 (Jan. 14, 2009); *see also* Rule 4-10(a)(16) of Regulation S-K for the amended definition of "oil and gas producing activities."

319 *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2170–71 (Jan. 14, 2009).

320 Item 1202(a)(6) of Regulation S-K under the Securities Act. Such disclosure is only required when the company has not previously disclosed reserves estimates in a filing with the SEC or is disclosing material additions to its reserves estimates.

321 Item 1202(a)(7) of Regulation S-K under the Securities Act.

322 Item 1202(a)(7) of Regulation S-K under the Securities Act.

323 Item 1202(a)(8) of Regulation S-K under the Securities Act.

324 *See* Oil and Gas Release, 74 Fed. Reg. 2157, 2175–76 (Jan. 14, 2009).

325 *See* § 11.03[1][c] for a discussion of "expertized" portions of disclosure documents and § 11 liability standards with respect to such disclosures.

326 SEC Release No. 34-61469 (Feb. 2, 2010), 75 Fed. Reg. 6290, 6295 (Feb. 8, 2010) (the "Climate Change Release").

327 The Climate Change Release notes that Rule 408 under the Securities Act and Rule 12b-20 under the Exchange Act require a registrant to disclose, in addition to the information expressly required by SEC regulation, "such further material information, if any, as may be necessary to make the required statements, in light of the circumstances under which they are made, not misleading." *See* Rule 408 under the Securities Act and Rule 12b-20 under the Exchange Act.

328 Climate Change Release, 75 Fed. Reg. 6290, 6296 (Feb. 8, 2010).

329 Climate Change Release, 75 Fed. Reg. 6290, 6295 (Feb. 8, 2010).

330 The SEC has indicated that although the wording in Item 5 of Form 20-F and Item 303 of Regulation S-K under the Securities Act (the item requiring MD&A disclosure for U.S. domestic companies) is not identical, the SEC interprets Item 5 as requiring the same disclosure as Item 303. *See* SEC Release No. 34-62932, 75 Fed. Reg. 59,866, 59,875 n.65 (Sept. 28, 2010).

331 Climate Change Release, 75 Fed. Reg. 6290, 6295 (Feb. 8, 2010).

332 The Climate Change Release also cites disclosure obligations under Item 101 of Regulation S-K under the Securities Act on disclosure of material estimated capital expenditures for environmental control facilities. Form 20-F does not include a specific Item requiring this precise disclosure, but, as noted above in Note 327, disclosure of material information is required if its omission would render what is disclosed misleading.

333 Climate Change Release, 75 Fed. Reg. 6290, 6296 (Feb. 8, 2010).

334 Climate Change Release, 75 Fed. Reg. 6290, 6296 (Feb. 8, 2010).

335 These factors include: (i) costs to purchase, or profits from sales of, allowances or credits under a "cap and trade" system, (ii) costs required to improve facilities and equipment to reduce emissions in order to comply with regulatory limits or to mitigate the financial consequences of a "cap and trade" regime, (iii) changes to profit or loss arising from increased or decreased demand for goods and services produced by the registrant arising directly from legislation or regulation, and indirectly from changes in costs of goods sold, and (iv) favorable consequences, including new business opportunities and potential sale of allowances or offset credits. Climate Change Release, 75 Fed. Reg. 6290, 6296 (Feb. 8, 2010).

336 Climate Change Release, 75 Fed. Reg. 6290, 6296 (Feb. 8, 2010).

337 Climate Change Release, 75 Fed. Reg. 6290, 6296 (Feb. 8, 2010).

338 Climate Change Release, 75 Fed. Reg. 6290, 6296–97 (Feb. 8, 2010).

339 U.S. companies that are subject to the reporting requirements of the Exchange Act must file certain

information within four business days after any acquisition or disposition of a significant amount of assets. Foreign companies that are subject to the reporting requirements of the Exchange Act also may be required to furnish such information to the SEC in a report on Form 6-K promptly after the information is otherwise made public. *See* the discussion of periodic reports in § 4.02[3][c]; *cf.* SEC Release No. 33-8400 (Mar. 16, 2004) (adopting rules to expand the events triggering Form 8-K filing requirements applicable to U.S. issuers, including the entry into a definitive material agreement, and shortening the filing deadline generally to four business days after a disclosable event).

340 *See* § 4.05[5][a].

341 1989 MD&A Release, § III.F.4, 54 Fed. Reg. 22,427, 22,435–36 (May 24, 1989).

342 1989 MD&A Release, § III.F.4, 54 Fed. Reg. 22,427, 22,436 (May 24, 1989); *see also Basic Inc. v. Levinson*, 485 U.S. 224 (1988). For a general discussion of the disclosure obligations of an SEC-reporting company under the U.S. securities laws, *see* § 4.02[3][a].

343 As discussed in § 3.05[2], securities issued or guaranteed by U.S. banks or U.S. branches of foreign banks are exempt from registration under § 3(a)(2) of the Securities Act. Thus, this guide applies only to obligations that must be registered, which are typically obligations of the holding company or a nonbank subsidiary or securities issued by a foreign bank (but not its U.S. branch). *But see* § 3.05[2] for a discussion of the Comptroller's securities offering disclosure rules for national banks and federal branches and agencies of foreign banks.

344 Item 402(a)(3) of Regulation S-K defines "named executive officers" as (1) all individuals serving as the registrant's principal executive officer or acting in a similar capacity during the last completed fiscal year, regardless of compensation level; (2) all individuals serving as the registrant's principal financial officer or acting in a similar capacity during the last completed fiscal year, regardless of compensation level; (3) the registrant's three most highly compensated executive officers other than the persons covered by clauses (1) and (2) who were serving as executive officers at the end of the last completed fiscal year; and (4) up to two additional individuals for whom disclosure would have been provided pursuant to clause (3) but for the fact that the individual was not serving as an executive officer of the registrant at the end of the last completed fiscal year.

345 Item 403(b) of Regulation S-K under the Securities Act.

346 Form 20-F, Item 6.E. General Instruction F of Form 20-F notes that for purposes of determining who to include among the group of persons covered by the term "administrative, supervisory or management bodies," an issuer should look to the meaning given to that phrase by such issuer's host country.

347 If any of the directors or members of the administrative, supervisory or management bodies beneficially own less than 1% of the class of shares and the individual ownership of such person has not been previously disclosed publicly, instead of disclosing the individual share ownership for that person, the foreign issuer may include an asterisk and an explanatory footnote that the person beneficially owns less than 1%.

348 Item 402 of Regulation S-K under the Securities Act; *see supra* Note 345.

349 Form 20-F, Item 6.B. Foreign issuers are required to file an employment or compensatory plan with management or directors (or portion of such plan) only when the foreign issuer either is required to publicly file the plan (or portion of it) in its home country or has otherwise publicly disclosed the plan. *See* Form 20-F, Instruction 4(c)(v) as to Exhibits; SEC Release No. 33-8732A (Aug. 29, 2006).

The adequacy of disclosure concerning director and officer compensation and related-party transactions was highlighted in the SEC's cease-and-desist order relating to the Walt Disney Company. The SEC found that, between 1999 and 2001, Disney failed to disclose relationships between the company and its directors that were required to be disclosed in its proxy statements and annual reports filed with the SEC. *See* Press Release, SEC, SEC Charges the Walt Disney Company for Failing to Disclose Relationships Between Disney and Its Directors; Disney Consents to a Cease-and-Desist Order (Dec. 20, 2004). In September 2004, the General Electric Corporation consented to the entry of an order that it cease and desist from violating the proxy solicitation and periodic reporting provisions of the federal securities laws. The SEC found that GE's 1997 to 2002 proxy statements and annual reports failed to fully and accurately disclose substantial retirement benefits provided to GE's former chief executive officer and chairman. *See* Press Release, SEC, General Electric Settles SEC Action for Disclosure Failures in Connection with Its Former CEO's Benefits Under His Employment and Retirement Agreement (Sept. 23, 2004). As indicated by these proceedings and the 2006 rule changes relating to executive compensation disclosure, the adequacy of director and officer compensation is a key regulatory focus of the SEC, and foreign issuers should take special care to ensure that the disclosure requirements concerning director and officer remuneration in Form 20-F are met.

350 Item 404(a) of Regulation S-K under the Securities Act.

351 Form 20-F, Item 7.B; *see also* § 402 of the Sarbanes-Oxley Act (prohibiting both U.S. and foreign issuers from directly or indirectly extending, maintaining, renewing or arranging for an extension of credit in the form of a personal loan to or for any executive officer or director of a subject issuer, as discussed in greater detail in § 5.04[2]).

352 Instruction 2 to Item 404 of Regulation S-K under the Securities Act; *see also* SEC Release No. 33-8732A (Aug. 29, 2006).

353 SEC Release No. 33-8056 (Jan. 22, 2002), 67 Fed. Reg. 3746, 3751 (Jan. 25, 2002).

354 SEC Release No. 33-7386 (Jan. 31, 1997) (the "Derivatives Disclosure Release"). Additional interpretive guidance is provided by the SEC staff's Questions and Answers about the New "Market Risk" Disclosure Rules (July 31, 1997). Rules adopted by the SEC to implement § 401(a) of the Sarbanes-Oxley Act further enhanced derivatives and financial instrument disclosure by requiring off-balance sheet arrangements to be disclosed in periodic reports and registration statements of subject issuers. *See* § 4.06[5][a].

355 Rule 4-08 of Regulation S-K ; ASC 815.

356 Such items include the various methods used to account for derivatives, the types of derivatives accounted for under each method and the criteria required to be met for each such accounting method to be used. When assessing materiality for this purpose, the SEC expects registrants to consider the financial statement effects of all derivatives, including those not recognized in the statement of financial position, and the relative effects of using the accounting method selected as compared to the other methods available. *See* Derivatives Disclosure Release, 62 Fed. Reg. 6044, 6047 (Feb. 10, 1997).

357 Form 20-F, Item 11(a). According to published highlights of a meeting of the AICPA SEC Regulations Committee's International Practices Task Force, the SEC staff has noted that when financial statements are updated in order to comply with the age of financial statements requirements as set forth in Item 8 of Form 20-F applicable to registration statements, an issuer must also update other "financial" information including its Qualitative and Quantitative Disclosure of Market Risk. *See supra* Note 106.

358 Derivatives Disclosure Release, 62 Fed. Reg. 6044, 6048 (Feb. 10, 1997).

359 Derivatives Disclosure Release, 62 Fed. Reg. 6044, 6051 (Feb. 10, 1997); Form 20-F, Item 11(b). Item 11 expressly provides that forward-looking disclosures made pursuant to its requirements are within the statutory safe harbors provided by § 27A of the Securities Act and § 21E of the Exchange Act. *See* §§ 4.06[5][c] and 11.03[5]. Moreover, the item makes clear that the safe harbors are, in this connection, available to all types of issuers and transactions (even though the safe harbors are generally not available to, for example, first-time registrants or in the case of an IPO), and state that the "meaningful cautionary statements" requirement of the safe harbors, which has proved difficult to apply in other contexts, will be deemed to be satisfied in the case of quantitative disclosures under Item 11(a) so long as the registrant satisfies the requirements of those Items.

360 In addition to complying with the derivative disclosures discussed in the text, a foreign issuer will have to take into account, in connection with its U.S. GAAP reconciliation (where such reconciliation is required), the accounting standard for derivatives, ASC 815.

361 *See* 2008 Form 20-F Reporting Enhancement Release, 73 Fed. Reg. 58,300, 58,311–13 (Oct. 6, 2008).

362 Payments from the depositary to the issuer, often but not always formulated as reimbursements of the

issuer's expenses, have been a common practice for many years, and, in our experience, they appear to have increased in recent years, at least for some issuers.

369 *See* § 9.08[1].

370 *See* § 9.08 for a detailed discussion of the OFAC Sanctions and other sanctions.

371 Iran Threat Reduction and Syria Human Rights Act of 2012, Pub. L. No. 112-158, 126 Stat. 1214 (2012) (§ 219 codified at 15 U.S.C. § 78m(r)).

372 On December 4, 2012, the SEC staff published an interpretation stating that the term "affiliate," for purposes of disclosure made pursuant to Exchange Act § 13(r), is used as defined in Exchange Act Rule 12b-2. *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Forms, Question 147.03 (Dec. 4, 2012). *See also* Rule 12b-2 under the Exchange Act.

373 These activities include: (1) sanctionable activities under the 1996 Iran Sanctions Act (as amended), including provisions relating to the Iranian oil and gas industry, financial services, weapons of mass destruction ("WMD") and other activities; (2) sanctionable activities under the provisions of the Comprehensive Iran Sanctions, Accountability, and Divestment Act of 2010 and the Iranian Financial Sanctions Regulations relating to activities by foreign financial institutions; (3) sanctionable activities relating to goods, services or technologies likely to be used for human rights abuses; (4) any transactions or dealings with Specially Designated Nationals ("SDNs"), regardless of nationality, designated for their support of WMD proliferation or terrorist activity (*i.e.*, SDNs designated as "[SDGT]" (Specially Designated Global Terrorist) or "[WMD]"); or (5) any transaction or dealing with the "Government of Iran" as defined in OFAC Sanctions regulations, including the Iranian government, entities it owns or controls directly or indirectly, persons who are, or there is reasonable cause to believe are, acting on behalf of the foregoing, and any SDNs designated as "[IRAN]."

374 The SEC has created a new EDGAR form type, "IRANNOTICE," for filing such notification.

375 15 U.S.C. § 78ff(a). Any person who willfully violates the Exchange Act can be fined up to $5 million and/or imprisoned for up to 20 years. If such person is an entity, the fine may be up to $25 million.

376 *See* SEC Release No. 33-9002 (Jan. 30, 2009) (the "XBRL Release"). The SEC has created a website to provide detailed information about XBRL.

377 The XBRL Release lists Australia, Belgium, Canada, China, Denmark, France, Germany, Ireland, Israel, Japan, Korea, Luxembourg, the Netherlands, New Zealand, Norway, Singapore, Spain, Sweden, Thailand and the United Kingdom as countries with such voluntary or pilot programs.

378 *See* SEC, SEC Posts Notice of Availability of IFRS Taxonomy (Mar. 1, 2017), available at https://www.sec.gov/news/pressrelease/2017-58.html ; *The Center for Audit Quality* (avail. Apr. 8, 2011). A "taxonomy" is an electronic glossary that allows issuers to "tag" information in their financial statements so the information converts into various interactive formats (charts, excel tables, *etc.*). *See* XBRL Glossary.

379 For a foreign issuer, this would apply when it files a Form 6-K with interim financial statements incorporated by reference into a Securities Act registration statement to meet the nine-month updating requirement of Item 8.A.5 of Form 20-F, but would not apply when a foreign issuer files a Form 6-K with interim financial statements that are not otherwise required to be filed. *See* Form 6-K, General Instruction C.6. For U.S. public companies, filings are required with annual reports on Form 10-K, quarterly reports on Form 10-Q and current reports on Form 8-K.

380 Where the financial statements are incorporated by reference, the related interactive data file will be filed as an exhibit to the report containing the incorporated financial statements. XBRL Release, 74 Fed. Reg. 6776, 6780 n.74 (Feb. 10, 2009).

381 SEC, Division of Corporation Finance, CF Disclosure Guidance: Topic No. 2 (Oct. 13, 2011).

382 The guidance notes that "material information regarding cybersecurity risks and cyber incidents is required to be disclosed when necessary in order to make other required disclosures, in light of the circumstances under which they are made, not misleading."

[1] Conflict Minerals

Section 1502 of the Dodd-Frank Act, requiring disclosures regarding "conflict minerals," was intended by Congress to further the humanitarian goal of ending the extremely violent conflict in the Democratic Republic of the Congo (the "DRC"), particularly sexual and gender-based violence, which has been partially financed by the exploitation and trade of conflict minerals originating in specified "covered countries." [383] Section 1502 directed the SEC to adopt new

p. 4-105

disclosure requirements under the securities laws to further this objective. In 2012, to implement this mandate, the SEC adopted Rule 13p-1 under the Exchange Act and Form SD. [384] These require disclosures by any reporting company [385] that manufactures or contracts to manufacture products for which conflict minerals are necessary to those products' functionality or production. Reporting foreign issuers, smaller reporting companies and voluntary filers are all subject to the rule; registered investment companies are not. [386] Suppliers (whether or not reporting companies) are also affected, as a reporting company needs extensive information from its suppliers to be able to prepare the required disclosure. [387] The SEC noted, when it adopted the rule, that "Congress chose to use the securities laws' disclosure requirements to bring greater public awareness of the source of the issuers' conflict minerals and to promote the exercise of due diligence on conflict mineral supply chains." [388]

"Conflict minerals" are defined in the rule as cassiterite, columbite-tantalite (coltan), gold and wolframite, and three derivatives of these minerals: tin, tantalum and tungsten (the "3Ts"). [389] These minerals and their derivatives are widely used in various types of products, including electronics, lighting, electrical and heating applications, and jewelry.

p. 4-105

p. 4-106

Disclosures concerning conflict minerals are filed on Form SD and are subject to the liability provisions of § 18 of the Exchange Act, [390] in addition to the general antifraud provisions of § 10(b) of the Exchange Act and Rule 10b-5 thereunder. [391] Form SD is not deemed incorporated by reference into any Securities Act filing, however, unless the company specifically incorporates it by reference. The conflict minerals disclosure must be filed annually on Form SD no later than May 31 (or, if May 31 is not a business day, on the next business day), [392] covering products manufactured in the prior calendar year by the issuer and its consolidated subsidiaries. If a subsidiary of the issuer also has reporting obligations under the Exchange Act, the issuer may file a single Form SD covering it and its consolidated subsidiaries. Disclosures must also be posted on the company's website and maintained there for at least one year. Notably, the Conflict Minerals FAQs clarified that failure to timely file a Form SD would not affect an issuer's eligibility to use Form F-3. [393]

An issuer that obtains control over a company that manufactures or contracts for the manufacturing of products with necessary conflict minerals, where the acquired company previously was not obligated to file a Form SD with respect to its conflict minerals, may delay reporting on the acquired company's products until the end of the first reporting calendar year that begins no sooner than eight months after the effective date of the acquisition. [394]

The conflict minerals rule adopted by the SEC in 2012 was almost immediately challenged in federal court by industry groups, which argued that the rule should be modified or set aside in whole or in part. [395] After extensive litigation, in April 2014 the petitioners prevailed on appeal in only one of their arguments, contending that the Dodd-Frank Act and the rule violate the First Amendment to the extent that they may require an issuer to report to the SEC and state on its website that any of its products have "not been found to be ‘DRC conflict free.’" [396] As a result of that decision, which was reaffirmed in August 2015, [397] and as discussed more fully below, the SEC provided guidance that an issuer

p. 4-106
p. 4-107

covered by the rule is still required to file its Form SD by the applicable deadline in accordance with the rule in all respects, except that the filer is permitted not to identify any of its products with the descriptors "DRC Conflict Free," "DRC conflict undeterminable" or "not found to be ‘DRC conflict free.’" [398]

[a] Three-Step Process for Determining Scope of Disclosure

A reporting company subject to the conflict minerals disclosure requirements must inquire into the provenance of any conflict minerals necessary to the functionality or production of any product manufactured or contracted to manufacture by the company and its consolidated subsidiaries and disclose the results of that inquiry. This inquiry involves a three-step process: [399]

- *Step One* — The company must determine whether it manufactures or contracts to manufacture any products for which conflict minerals are necessary to the functionality or production of those products. If not, the company is not required to file Form SD or to make any disclosures. If so, it must proceed to Step Two.
- *Step Two* — The company must conduct a "reasonable country of origin inquiry" to determine whether its necessary conflict minerals originated in the covered countries or came from recycled or scrap sources. [400] If the company determines that (i) its necessary conflict minerals did not originate in a covered country or it has no reason to believe otherwise or (ii) its necessary conflict minerals came from recycled or scrap sources or it reasonably believes that to be the case, it must disclose its determination and briefly describe the reasonable country of origin inquiry and the results of the inquiry. The disclosure must be provided on Form SD and on the company's website. If the company determines or has reason to believe that any of its necessary conflict minerals originated in a covered country and are not from recycled or scrap sources, it must proceed to Step Three.
- *Step Three* — The company must conduct due diligence on the source and chain of custody of the conflict minerals. The due diligence must conform to a nationally or internationally recognized due diligence framework, if one is available. If the company's due diligence determines that a product does not

p. 4-107
p. 4-108

contain necessary conflict minerals that directly or indirectly finance or benefit armed groups in a covered country, that product is considered "DRC conflict free." [401] The company must also prepare a detailed "Conflict Minerals Report," file it as an exhibit to Form SD and post it on the company's website. In certain circumstances described below, the company may also be required to obtain an independent private sector audit ("IPSA") of its Conflict Minerals Report. [402]

[b] Conflict Minerals Report

The Conflict Minerals Report, if required, must include a detailed description of the company's due diligence on the source and chain of custody of its conflict minerals (including the IPSA, if required), a statement that the company has obtained the IPSA if one is required, the name of the relevant auditor and the audit report, a description [403] of the products manufactured or contracted to be manufactured by the company that have not been found to be "DRC conflict free," the facilities used to process the conflict minerals used in those products, the country of origin of those minerals and the company's efforts to determine the mine or location of origin with the greatest possible specificity. [404] The company's due diligence measures do not need to be carried out constantly throughout the year; the measures can also begin before or extend beyond the calendar year covered by the Form SD. [405] If the company's due diligence process is relatively consistent throughout the supply chain, the description of the due diligence can be general, but if there are significantly different processes for various aspects of the supply chain (*e.g.*, for different minerals or products), those differences should be described. [406]

p. 4-108

p. 4-109

The conflict minerals rule as originally adopted required certain descriptors to be used in a company's Conflict Minerals Report. [407] As noted above, the D.C. Circuit Court of Appeals decided in 2014 that the conflict minerals rule, and the underlying provision of the Dodd-Frank Act, violate the First Amendment to the extent that they require an issuer to report to the SEC and state on its website that any of its products have "not been found to be ‘DRC conflict free.’" [408] Following the decision, the director of the SEC's Division of Corporation Finance released a statement addressing the effect on the rule of the appeals court's decision. [409] Since the remainder of the rule was upheld and the appeals court had no First Amendment objection to any other aspects of the rule, the statement indicated that the Division expected that issuers required to file a Form SD under the rule would still do so on or before the due date of June 2, 2014, subject to the following guidance:

1. An issuer is not required to identify any of its products with the descriptors "DRC conflict free," "DRC conflict undeterminable" or "not found to be ‘DRC conflict free,’" but may voluntarily elect to do so.
2. An issuer should make all other disclosures called for in the rule, including a description of its reasonable country of origin inquiry and, if required to attach a Conflict Minerals Report, a description of the due diligence it undertook.
3. For any products that an issuer finds to be "DRC conflict undeterminable" or "not found to be ‘DRC conflict free’" in accordance with the rule and Form SD, while disclosures using these terms are not required, the issuer must still disclose the facilities used to produce the

p. 4-109

p. 4-110

   conflict minerals, the country of origin of the minerals and the efforts to determine the mine or location of origin.
4. An IPSA is no longer required unless an issuer voluntarily elects to describe any of its products as "DRC conflict free" in its Conflict Minerals Report.

On May 2, 2014, the SEC issued a partial stay of the rule consistent with this guidance. [410] It has not taken any further action to modify the rule in response to the Court of Appeals decision.

A product is "DRC conflict free" if it does not contain conflict minerals that directly or indirectly finance or benefit armed groups in the covered countries. [411] Under the rule as originally written, after the transition period (now applicable only to smaller reporting companies), [412] if, after conducting due diligence, a company was unable to determine that (i) its conflict minerals did not originate in the covered countries, (ii) its conflict minerals that originated in the covered countries did not directly or indirectly finance or benefit armed groups, or (iii) its conflict minerals came from recycled or scrap sources, those products making use of any such minerals were required to be described as "not having been found to be ‘DRC conflict free,’" and the company had to provide the IPSA with respect to the related minerals in the Conflict Minerals Report. [413] The Conflict Minerals FAQs clarified that products that contain multiple conflict minerals from different sources must be described as "not having been found to be ‘DRC conflict free’" if even one of those minerals did finance or benefit armed

p. 4-110

groups in the covered countries. Similarly, if the company was unable to determine the source of even one of those minerals, it could not describe the product as "DRC conflict free." [414] However, neither the descriptor nor an IPSA are currently required pursuant to the 2014 SEC guidance.

[c] Key Definitions and Guidance

[i] *Definition of "Manufacture" and "Contract to Manufacture"*

The final rule does not define either "manufacture" or "contract to manufacture," but the SEC provided guidance for both terms in the Conflict Minerals Adopting Release.

A company that only services, maintains or repairs a product is not "manufacturing" the product. A company that assembles a product is "manufacturing" the product, however, even if it does not manufacture any of the components. Under the final rule, a mining company is not deemed to manufacture unless it also conducts manufacturing activities. [415] The Conflict Minerals FAQs clarified that "[a]n issuer that only engages in those activities customarily associated with mining, including gold mining of lower grade ore, is not considered to be manufacturing those minerals." [416]

If a company does not actually manufacture the product, it still may be considered to "contract to manufacture" it, and be subject to the rule. Whether a company "contracts to manufacture" depends on the degree of influence the company exercises over the materials, parts, ingredients or components included in the product, based on the individual facts and circumstances surrounding the company's business and industry. The term includes contracting to manufacture components of a product, and it could apply even if an issuer does not have "substantial" influence or control over the manufacturing of a product. A company is not "contracting to manufacture" if it only (1) specifies or negotiates contractual terms with a manufacturer that does not directly relate to the manufacturing of the product, such as training, technical support, price, insurance, indemnity, intellectual property rights or dispute resolution (unless it exercises a degree of influence over the manufacturing of the product that is practically equivalent to doing so); (2) affixes its brand, marks, logo or label to a generic product manufactured by a third party; [417] or (3) services, maintains or repairs a product manufactured

p. 4-111

p. 4-112

by a third party. [418] In practice, the determination of whether a company is "contracting to manufacture" for purposes of the rule is a matter of significant judgment regarding the specific facts and circumstances.

[ii] *Definition of "Necessary"*

The SEC did not define "necessary to the functionality" or "necessary to the production" of a product, indicating that both depend on the company's particular facts and circumstances, but again provided guidance. For a conflict mineral to be considered "necessary," it must be contained in the product and have been intentionally added to the product or a product component rather than being a naturally occurring byproduct. [419] There is no *de minimis* exception; even minute or trace amounts of a conflict mineral in a product or product component could trigger disclosure obligations. [420]

In order to determine whether a conflict mineral is "necessary to the functionality" of a product, a company should consider whether the conflict mineral is necessary to the product's generally expected function, use or purpose. Where a product has multiple functions, a conflict mineral need only be necessary for one function to be considered necessary to the product as a whole. If the conflict mineral is incorporated for purposes of ornamentation, decoration or embellishment, the company should consider whether the primary purpose of the product is ornamentation or decoration. [421] The Conflict Minerals FAQs specifically clarified that the packaging and container for a product are not considered to be part of the product, even if the packaging or container is necessary to preserve the usability of the product up to and following the product's purchase; packaging and containers sold independently of the product are considered products in their own right. [422]

The following are not considered "necessary to the production" of a product: (1) a conflict mineral used as a catalyst or in a similar manner but that is not contained in the product, even in trace amounts; (2) a conflict mineral in a physical tool, machine or other equipment used to manufacture the product; [423] and (3) a conflict mineral included in materials, prototypes and other demonstration

p. 4-112

p. 4-113

devices. [424] The SEC also provided guidance in its Conflict Minerals FAQs that services are not products, and equipment that a company may manufacture or contract to manufacture to allow it to provide a service is not itself a product for purposes of the rule. [425]

[d] Reasonable Country of Origin Inquiry

A company that reaches Step Two in the disclosure process must conduct a reasonable country of origin inquiry, which must be reasonably designed to determine whether the company's conflict minerals originated in a covered country or came from recycled or scrap sources, and which must be performed in good faith. The SEC did not specify what steps are necessary to meet that standard, stating in the Conflict Minerals Adopting Release that it is a facts-and-circumstances determination based on a company's size, products, relationships with suppliers and other factors, as well as the available resources, which will evolve over time. The SEC noted that a "reasonableness standard" is not absolute—certainty is not required, and there is no need for disclosure indicating that the determination is uncertain (although companies may wish to provide it). [426] Many companies preparing their first Form SD in 2014 used the more detailed due diligence procedures described below at § 4.08[1][e] as their Reasonable Country of Origin Inquiry, rather than having two separate sets of procedures, but the SEC Division of Corporation Finance staff later noted that companies should take care to distinguish between the two processes in their Conflict Minerals Reports. [427]

The Conflict Minerals Adopting Release states that a company may rely on supplier and smelter representations regarding the origination of the conflict minerals if the company has reason to believe the representations are true given the facts and circumstances, taking into account any applicable warning signs or other circumstances indicating that the conflict minerals may have originated in the covered countries or did not come from recycled or scrap sources. For example, a company would have reason to believe a smelter representation was true if the processing facility received a "conflict-free" designation by a recognized industry group that requires an IPSA of the smelter, or if the facility itself obtained an IPSA that is made publicly available. A company need not receive representations from all of its suppliers, however, so long as it designs the inquiry reasonably, performs the inquiry in good faith and does not ignore

p. 4-113

p. 4-114

warning signs that some of its conflict minerals may have originated in the covered countries. [428]

[e] Nationally or Internationally Recognized Due Diligence Framework

A company that reaches Step Three in the disclosure process must conduct due diligence on the source and chain of custody of its necessary conflict minerals. The due diligence must conform to a nationally or internationally recognized due diligence framework, if one is available. [429] Currently, the only such framework in place is the OECD's "Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas." [430]

The OECD guidance contains supplements with specific guidance on implementation of the OECD due diligence framework for the supply chains of tin, tantalum, tungsten and gold. [431] It should be noted that the OECD framework generally aims "to help companies respect human rights and avoid contributing to conflict through their sourcing decisions," [432] and includes steps to prevent or mitigate the risk that they may be contributing to conflict; § 1502 of the Dodd-Frank Act and the final rule have the same overall goal, but take a disclosure-based approach and do not explicitly require a company to avoid using conflict minerals.

The OECD's Due Diligence Guidance consists of the following five steps:

1. *Establish strong company management systems*
   - Adopt and commit to a supply chain policy for minerals originating from conflict-affected and high-risk areas.
   - Structure internal management systems to support supply chain due diligence.

p. 4-114
p. 4-115

   - Establish a system of controls and transparency over the mineral supply chain.
   - Strengthen company engagement with suppliers.
   - Establish a company level grievance mechanism.
2. *Identify and assess risks* [433] *in the supply chain*

   For upstream companies:
   - Identify the scope of the risk assessment of the mineral supply chain.
   - Map the factual circumstances of the company's supply chain(s), underway and planned.
   - Assess risks in the supply chain.

   For downstream companies:
   - Identify, to the best of their efforts, the smelters/refiners in their supply chain.
   - Identify the scope of the risk assessment of the mineral supply chain.
   - Assess whether the smelters/refiners have carried out all elements of due diligence for responsible supply chains of minerals from conflict-affected and high-risk areas.
   - Where necessary, carry out, including through participation in industry-driven programs, joint spot checks at the mineral smelter/refiner's own facilities.
3. *Design and implement a strategy to respond to identified risks*
   - Report findings to designated senior management.
   - Devise and adopt a risk management plan.
   - Implement the risk management plan, monitor and track performance of risk mitigation, report back to designated senior

p. 4-115
p. 4-116

     management and consider suspending or discontinuing engagement with a supplier after failed attempts at mitigation.
   - Undertake additional fact and risk assessments for risks requiring mitigation or after a change of circumstances.
4. *Carry out an independent third-party audit of smelter/refiner’s due diligence practices*
   - Plan an independent third-party audit of the smelter/refiner's due diligence for responsible supply chains of minerals from conflict-affected and high-risk areas.
   - Implement the audit in accordance with set out audit scope, criteria, principles and activities.
5. *Report annually on the supply chain due diligence*
   - Annually report or integrate, where practicable, into annual sustainability or corporate

responsibility reports additional information on due diligence for responsible supply chains of minerals from conflict-affected and high-risk areas.

[f] Determination Whether Conflict Minerals "Directly or Indirectly Finance or Benefit Armed Groups"

The SEC has provided only limited guidance regarding how a company should determine whether its conflict minerals directly or indirectly finance or benefit armed groups in the covered countries. The SEC did not clarify what would constitute, for example, an "indirect benefit" to an armed group. Form SD defines the term "armed group" as "an armed group that is identified as a perpetrator of serious human rights abuses in annual Country Reports on Human Rights Practices under §§ 116(d) and 502B(b) of the Foreign Assistance Act of 1961" [434] relating to the covered countries. The SEC noted in the Conflict Minerals Adopting Release that authority to identify those perpetrators is assigned to the U.S. Department of State, and that the SEC lacks "the authority and expertise to provide further guidance or qualify the State Department's conclusions in this area." [435]

p. 4-116
p. 4-117

The SEC suggests in the Conflict Minerals Adopting Release that the due diligence framework used would provide guidance to a company in determining whether its conflict minerals directly or indirectly finance or benefit armed groups in the covered countries. [436] The State Department guidance for commercial entities seeking to exercise due diligence on conflict minerals used in their products and on their suppliers [437] also provides guidance to companies in this determination, although the Conflict Minerals Adopting Release notes that it does not have a direct impact on the rule and a company need not rely solely on it in making the determination. [438]

One specific clarification the Conflict Minerals Adopting Release provides is that products are considered "DRC conflict free" if the conflict minerals contained in those products did not directly or indirectly finance or benefit armed groups in the covered countries at the time they were purchased and transported through the supply chain from the mine to the company even if at some later time an element of that supply chain becomes controlled by an armed group (and even if the money the company paid to purchase the conflict minerals is seized by the armed group and thus in fact benefits the armed group). [439]

[g] Independent Private Sector Audit

The IPSA, if required, must comply with standards established by the Comptroller General of the Government Accountability Office ("GAO"). The SEC indicated that the GAO does not intend to establish new auditing standards for the audit; auditors may use the provisions for either Attestation Engagements or Performance Audits in the generally accepted government auditing standards established by the GAO ("GAGAS," referred to as the Yellow Book). [440]

[i] *Audit Objective*

p. 4-117
p. 4-118

The objective of the audit is to express an opinion or conclusion as to (i) whether the design of the company's due diligence measures as set forth in, and with respect to the period covered by, the Conflict Minerals Report is in conformity with, in all material respects, the criteria set forth in the nationally or internationally recognized due diligence framework used by the company, and (ii) whether the company's description of the due diligence measures in the Conflict Minerals Report is consistent with the due diligence process the company undertook. [441] The SEC has confirmed that the IPSA need not cover any matter beyond that objective, such as the company's reasonable country of origin inquiry. [442]

[ii] *Effect on Auditor Independence*

The Conflict Minerals Adopting Release states that it would not be inconsistent with the auditor independence requirements in Rule 2-01 under Regulation S-K if the independent public accountant also performs the IPSA of the Conflict Minerals Report, but that the engagement to perform the Conflict Minerals Report audit would be considered a "non-audit service" subject to the pre-approval requirements of Rule 2-01(c)(7) under Regulation S-K. [443]

[iii] *Audit Certification*

The statutory provision required the company to provide an "audit certification." The SEC's rule provided that this need not be signed by an officer of the company. Instead, the certification takes the form of a statement in the Conflict Minerals Report that the company obtained an IPSA. [444]

[h] Conflict Minerals from Recycled or Scrap Sources

Conflict minerals from recycled or scrap sources are considered DRC conflict free and do not require the company to prepare a Conflict Minerals Report. [445] However, if as a result of its reasonable country of origin inquiry the

p. 4-118

p. 4-119

company has reason to believe its conflict minerals may not have been from recycled or scrap sources, it must exercise due diligence on the source and chain of custody of the minerals using a nationally or internationally recognized due diligence framework specifically for conflict minerals from recycled or scrap sources, where available. [446] Currently, the only such standard is the OECD standard for recycled gold. [447] There is no such due diligence framework for the 3Ts at this time. Where there is no such framework, the company must describe its due diligence measures in the Conflict Minerals Report, but need not obtain an IPSA regarding those recycled conflict minerals. [448]

The final rule tracks the OECD definition of "recycled metals"—minerals from recycled metals, including reclaimed end-user or post-consumer products and scrap process metals created during product manufacturing, but not minerals that are partially processed or unprocessed, or a byproduct from another ore. [449]

[i] Other Supply Chain Tracking and Reporting Initiatives

A number of other initiatives are focused on facilitating supply chain tracking and reporting. For example:

- In 2010, the Electronic Industry Citizenship Coalition ("EICC") and the Global e-Sustainability Initiative ("GeSI") launched the Conflict-Free Smelter ("CFS") Program, which identifies and validates conflict-free smelters and refiners. [450]
- The Public-Private Alliance for Responsible Minerals Trade ("PPA") established by the U.S. State Department and the U.S. Agency for International Development is working to establish a verifiable traceability scheme for the covered countries for conflict-free minerals. [451]

p. 4-119

p. 4-120

- The International Conference on the Great Lakes Region of central Africa ("ICGLR"), comprised of 12 countries in that region, has established standards for traceability and certification of conflict minerals compliant with the OECD due diligence guidelines. Beginning in December 2012, the government and companies in each member country have had to comply with the standards upon export of the minerals, which is evidenced by a certificate that minerals are "conflict free." Any imports of the minerals from another member country must also be accompanied by such a certificate. [452] The DRC passed legislation in February 2012 requiring adherence to the ICGLR standards.

[j] International Context of Rule

Other jurisdictions and states have passed or are considering legislation or regulation relating to conflict minerals. In 2014, the European Commission proposed an integrated EU approach to stop profits from conflict minerals being used to fund armed conflicts. [453] The proposals included a regulation to increase transparency of the supply practices of importers, smelters and refiners in order to facilitate the responsible sourcing of tin, tantalum, tungsten and gold and encourage legitimate trade (the "Regulation"). The Regulation included a voluntary self-certification system for EU companies that chose to be "responsible importers." Under the proposed regulation, EU importers would need to exercise due diligence and provide audit assurances and disclosure information. The EU would also publish an annual list of EU and global "responsible smelters and refiners." In June 2016, the Council, European Parliament and European Commission reached an informal agreement on the text of the proposed Regulation. [454] However, the text goes beyond the Commission's "self-certification" approach, calling for mandatory due diligence checks, conducted according to OECD due diligence guidelines, for importers of tin, tungsten, tantalum and gold

p. 4-120
p. 4-121

and their ores from certain areas, as well as smelters and refiners. Large EU firms that make or sell goods containing these minerals in their supply chain will also be encouraged to report on their sourcing practices based on a new set of performance indicators developed by the Commission. Final approval of the text of the Regulation is expected to occur in the first quarter of 2017.

[2] Resource Extraction Payments

On June 27, 2016, the SEC adopted a revised final rule, which, as discussed below, has now been disapproved by Congress, on specialized disclosure relating to payments to governments by companies engaged in resource extraction pursuant to § 1504 of the Dodd-Frank Act. [455] The SEC had initially approved a rule on disclosure of resource extraction payments in August 2012 (the "2012 Rule"), but that version of the rule was vacated by the U.S. District Court for the District of Columbia in July 2013. [456] The revised final rule under the Exchange Act (Rule 13q-1) and revised Form SD would have required disclosures by any company that was a "resource extraction issuer," defined as an issuer that is required to file an annual report with the SEC pursuant to § 13 or § 15(d) of the Exchange Act and that engages in the commercial development of oil, natural gas or minerals. [457] Reporting foreign issuers (including government-owned entities) [458] and smaller reporting companies would have been subject to the rule, while registered investment companies would not have been. [459]

As a result of action recently taken by the new U.S. Congress under the Congressional Review Act (the "CRA"), the revised rule adopted by the SEC on

p. 4-121
p. 4-122

June 27, 2016 ceased to have effect as of February 3, 2017. [460] The mandate to the SEC under Dodd-Frank Act § 1504 to adopt a rule on the disclosure of resource extraction payments is still law, however, with a new deadline for the SEC to adopt a final rule by February 2018. [461] Any new rule would have to meet both the detailed prescriptions of § 1504 of the Dodd-Frank Act [462] and the prohibition under the CRA on reissuing a rule after disapproval. This could be difficult, and, separately, the Financial Services Chair of the U.S. House of Representatives has already proposed to repeal § 1504 itself. [463]

In the remainder of this section we discuss (a) how Dodd-Frank Act § 1504 relates to measures taken elsewhere in the world to enhance disclosure relating to resource extraction payments and (b) the legal challenges the SEC faced in adopting its rule. However, because the rule has ceased to have effect, and may not be reissued in the same form, we do not discuss it in any detail.

[a] International Context

The SEC summarized the congressional intention of Dodd-Frank Act § 1504 as being to support global efforts to improve transparency in extractive industries, to help combat corruption and to empower citizens of resource-rich countries to hold their governments accountable. [464]

Section 1504 of the Dodd-Frank Act is broadly derived from the Extractive Industries Transparency Initiative ("EITI"), a global initiative of a voluntary coalition of companies, governments, investor groups and non-governmental organizations that seeks to promote accountability for payments made by resource extraction companies to foreign governments by increasing transparency around these payments. "EITI compliant" countries undergo a reconciliation process in which company payments are matched with government revenues

p. 4-122

p. 4-123

by an independent administrator. [465] The United States completed the process of becoming an EITI candidate country on March 19, 2014 and published its first report, covering calendar year 2013, on December 15, 2015. [466] In order to become fully EITI compliant, the United States must undergo a formal evaluation process conducted by an external, independent validator procured by the EITI International Secretariat. The validation process is scheduled to begin on April 1, 2018 and will assess the United States' progress in complying with the EITI requirements. [467]

The rule as adopted explicitly linked the disclosures it would have required to broader international efforts to better track and disclose resource extraction payments, including but not limited to the work of the EITI, directing that "[t]o the extent practicable, the rules … shall support the commitment of the Federal Government to international transparency promotion efforts relating to the commercial development of oil, natural gas, or minerals." [468]

The European Union has adopted two directives providing for disclosures similar to those under the now vacated Rule 13q-1. [469] Those rules apply to companies in the European Economic Area that are "large undertakings" or "public-interest entities" active in the extractive or logging industries, as well as companies in those industries that are admitted to trading on a European Union regulated market.

Canada has also adopted a federal resource extraction disclosure law, the Extractive Sector Transparency Measures Act ("ESTMA"), which came into force in 2015. [470] These rules apply to entities that engage in commercial development of oil, gas or minerals and are listed on a stock exchange in Canada, as well as entities that have a place of business in Canada, do business in Canada or have assets in Canada and meet certain other criteria. [471]

p. 4-123

p. 4-124

Stock exchanges, such as the London Stock Exchange's Alternative Investment Market [472] and the Hong Kong Stock Exchange, [473] also have rules related to resource extraction payment disclosures for companies listed on those exchanges.

[b] Legal Challenge

As noted above, the mandate for the SEC to adopt a new resource extraction payments disclosure rule under § 1504 of the Dodd-Frank Act is still in effect, and the SEC is now required to issue a new rule by February 2018. [474] Even if § 1504 is not repealed, it is unlikely the SEC under the administration of President Trump will move quickly to propose a new rule unless compelled by a court to do so, as it was in 2015 after the 2012 Rule was vacated and the SEC was sued to implement the statutory mandate. The future of the rule remains unclear, but we provide a summary of the historical legal challenges to it below.

The U.S. Chamber of Commerce and three industry groups (the American Petroleum Institute ("API"), the Independent Petroleum Association of America and the National Foreign Trade Council) [475] challenged the 2012 Rule on October 10, 2012 [476] primarily based on the claims, among others, that (i) the required disclosures of sensitive, confidential information violated rights under the First Amendment to the U.S. Constitution protecting a person's rights against compelled speech and (ii) the SEC failed to adequately perform the cost-benefit analysis required by the Administrative Procedure Act. [477] In connection with the lawsuit, the plaintiffs also filed with the SEC a motion for a stay of the effectiveness of the 2012 Rule and the related amendments to

Form SD pending final

p. 4-124

p. 4-125

resolution of their legal challenges. [478] The SEC denied the stay on November 8, 2012, and the rule and amendments to Form SD became effective on November 13, 2012. [479]

In a decision issued on July 2, 2013, the U.S. District Court for the District of Columbia granted the plaintiffs' motion for summary judgment; the court also issued a separate order vacating the 2012 Rule and remanding the matter to the SEC for further proceedings consistent with the court's Memorandum Opinion. [480] This delayed the implementation of the rule, which would otherwise have required disclosures beginning in 2014. The court found that (1) the SEC wrongly concluded that the statute requires reports of resource extraction payments to be publicly available (citing the statutory language requiring the SEC to make public only "a compilation of the information required to be submitted" to the SEC "to the extent practicable") [481] and (2) the SEC's failure to provide an exemption for payments in countries that prohibit disclosure was arbitrary and capricious. [482]

In September 2014, when the SEC had still not made a new rule proposal following the 2013 court decision vacating the initial version of the rule, Oxfam brought an action in federal court to compel the agency to adopt a rule as required by the Dodd-Frank Act. In September 2015, the court held that the SEC had unlawfully withheld action by not promulgating a final rule. [483]

The SEC adopted a revised final rule on June 27, 2016. The revised final rule was consistent with the 2012 Rule on the two issues that the District Court found problematic with the 2012 Rule: it required the disclosure to be publicly filed and provided no exemption for payments in countries that prohibit disclosure. In 2013, the District Court expressly reserved the constitutional argument that the disclosure of resource extraction payments is a prohibited instance of compelled speech.

Footnotes

383 The "covered countries" are the DRC and the "adjoining countries," which currently consist of Angola, Burundi, Central African Republic, the Republic of the Congo, Rwanda, South Sudan, Tanzania, Uganda and Zambia. On January 31, 2017, acting SEC Chairman Piwowar directed the SEC staff to reconsider its guidance (discussed below) under the conflict minerals rule and whether any additional relief might be appropriate, stating that the disclosure requirements have resulted in a de facto boycott of minerals from parts of Africa and that it is unclear whether the costs associated with the rule have resulted in any of the desired benefits. The SEC is soliciting comments from interested parties on all aspects of the rule and guidance. *See* Michael S. Piwowar, Acting Chairman SEC, Reconsideration of Conflict Minerals Rule Implementation (Jan. 31, 2017).

384 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,352–53 (Sept. 12, 2012).

385 A foreign issuer that has a class of securities exempt from Exchange Act registration pursuant to Rule 12g3-2(b) under the Exchange Act is not required to provide conflict minerals disclosure under the rules as it does not file reports with the SEC under § 13(a) or § 15(d) of the Exchange Act. Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,286 (Sept. 12, 2012).

386 The SEC Division of Corporation Finance has published two sets of guidance setting forth the SEC staff's interpretation of certain provisions of § 13(p) of the Exchange Act, Rule 13p-1 under the Exchange Act and Form SD. SEC, Division of Corporation Finance, Dodd-Frank Wall Street Reform and Consumer Protection Act, Frequently Asked Questions, Conflict Minerals (Apr. 7, 2014 and May 30, 2013) ("SEC CM FAQs"), which we refer to together as the "Conflict Minerals FAQs." *See* SEC CM FAQs 1 and 3.

387 The Conflict Minerals Adopting Release estimated the total number of affected suppliers at approximately 278,000. *See* Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,352–53 (Sept. 12, 2012). A 2015 report by the U.S. Government Accountability Office noted that many company representatives cited difficulties in obtaining information from suppliers as a reason they were unable to determine the country of origin of conflict minerals. *See* UNITED STATES GOVERNMENT ACCOUNTABILITY OFFICE, SEC CONFLICT

MINERALS RULE: INITIAL DISCLOSURES INDICATE MOST COMPANIES WERE UNABLE TO DETERMINE THE SOURCE OF THEIR CONFLICT MINERALS, 14 (Aug. 2015), http://www.gao.gov/assets/680/672051.pdf.

399 *See* Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,279–80 (Sept. 12, 2012) for a more detailed discussion of each of the three steps.

400 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,280 (Sept. 12, 2012).

401 Following the 2014 D.C. Court of Appeals decision and subsequent SEC guidance, an issuer is not required to use the descriptor "DRC conflict free" in its Form SD. *See* § 4.08[1][b] for further discussion of the D.C. Court of Appeals decision and the related SEC guidance.

402 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,281–82, 56,299 (Sept. 12, 2012).

403 The SEC noted in the Conflict Minerals Adopting Release that an issuer may describe its products based on its own facts and circumstances because the issuer is in the best position to know its products and to describe them in terms commonly understood within its industry. Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,323 (Sept. 12, 2012). The Conflict Minerals FAQs clarify that an issuer is not required to describe its products using model numbers. *See* SEC CM FAQ 9.

404 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,320–21 (Sept. 12, 2012).

405 *See* SEC CM FAQ 20.

406 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,326 (Sept. 12, 2012). The Conflict Minerals Report need not include a full description of the design of the issuer's due diligence; however, the due diligence measures actually undertaken must be described in sufficient detail to allow the auditor preparing an IPSA to form an opinion about whether the description is consistent with the issuer's actual process. *See* SEC CM FAQ 21.

407 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,276 (Sept. 12, 2012).

408 On August 18, 2015, the same panel of the D.C. Circuit Court of Appeals reaffirmed its original 2014 judgment despite an intervening *en banc* decision of the full D.C. Circuit Court of Appeals in another case that upheld certain Department of Agriculture requirements for labeling meat products and took a different view of the applicable standard of review for government-compelled commercial speech. *See National Association of Manufacturers. v. SEC*, No. 13-5252 (D.C. Cir. 2015), rehearing *National Association of Manufacturers v. SEC*, 748 F.3d 359 (D.C. Cir. 2014); *American Meat Institute. v. U.S. Dep't of Agriculture*, 760 F.3d 18 (D.C. Cir. 2014), rehearing *en banc American Meat Institute. v. U.S. Dep't of Agriculture*, 746

F.3d 1065 (D.C. Cir. 2014). On March 4, 2016, the Department of Justice notified the Speaker of the House that it would not appeal the decision. *See* Letter from Loretta Lynch, Attorney General to Hon. Paul Ryan, Speaker, U.S. House of Representatives (Mar. 4, 2016), https://www.justice.gov/oip/foia-library/osg-530d-letters/3-4-2016.pdf/download. The district court is now expected to take action in accordance with the appeals court's ruling, and whether and when the SEC may come out with updated guidance is uncertain.

410 *In the Matter of Exchange Act Rule 13p-1 and Form SD: Order Issuing Stay*, SEC Release No. 34-72079 (May 2, 2014).

411 § 13(p)(1)(D) of the Exchange Act.

412 While the initial two-year transition period has now passed for other filers, under the rule as originally written, smaller reporting companies (for which the transition period is four years) may still designate products "DRC conflict undeterminable" if, after conducting due diligence, the company is unable to determine that (i) its conflict minerals did not originate in the covered countries, (ii) its conflict minerals that originated in the covered countries did not directly or indirectly finance or benefit armed groups, or (iii) its conflict minerals came from recycled or scrap sources. Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,322–23, 56,344–45 (Sept. 12, 2012). If a company designates some of its products as "DRC conflict undeterminable," it is also not required to obtain an IPSA regarding the related minerals, but it must include in the Conflict Minerals Report a description of the steps it has taken or will take, if any, since the end of the period covered in its most recent prior Conflict Minerals Report to mitigate the risk that those minerals benefit armed groups, including any steps to improve its due diligence. However, neither the descriptor nor an IPSA are currently required pursuant to the 2014 SEC guidance.

For the definition of a "smaller reporting company" (generally, a company with a public float of at least $75 million), *see* Rule 12b-2 under the Exchange Act.

415 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,290 (Sept. 12, 2012).

416 SEC CM FAQ 2. The specific mining company activities cited to exemplify those customarily associated with mining, and therefore not "manufacturing" for purposes of the rule, include transporting, processing, smelting and refining ores.

417 This point was emphasized in the Conflict Minerals FAQs. *See* SEC CM FAQ 4.

418 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,290–92 (Sept. 12, 2012).

419 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,296–97 (Sept. 12, 2012).

420 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,298 (Sept. 12, 2012).

421 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,297 (Sept. 12, 2012).

422 *See* SEC CM FAQ 6.

423 Even if tools, machines or other equipment were manufactured by an issuer to manufacture its products and subsequently sold by the issuer, the Conflict Minerals FAQs clarified that "the staff will not view their later entry into the stream of commerce as transforming them into products of that issuer." *See* SEC CM FAQ 8.

424 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,297–98 (Sept. 12, 2012).

425 *See* SEC CM FAQ 7.

426 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,314 (Sept. 12, 2012).

427 *See*, *e.g.*, Yin Wilczek, SEC Official Offers Three Pointers on Issuers' Conflict Mineral Disclosures, Bloomberg BNA, Sept. 19, 2014, *available at* http://www.bna.com/sec-official-offers-n17179895108.

428 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,312 (Sept. 12, 2012). The due diligence

guidance developed by the Organisation for Economic Co-operation and Development ("OECD") provides examples of red flags that should trigger increased diligence. *See* OECD DUE DILIGENCE GUIDANCE FOR RESPONSIBLE SUPPLY CHAINS OF MINERALS FROM CONFLICT-AFFECTED AND HIGH-RISK AREAS at 33–34, 79–80, 87–88 (3d ed. 2016) (the "OECD Due Diligence Guidance").

429 Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,281, 56,326 (Sept. 12, 2012). Form SD and the Conflict Minerals Adopting Release provide guidance on how a company should conduct due diligence if there is no framework in place for a conflict mineral. *See* Item 1.01(c)(1)(v) of Form SD; Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,282 (Sept. 12, 2012).

430 *See* OECD Due Diligence Guidance.

431 OECD Due Diligence Guidance at 31, 61.

432 OECD Due Diligence Guidance at 3.

433 Although the OECD due diligence guidance defines "risks" generally to include any potential adverse impacts to the company or others in connection with its operations (including the supply chain), the guidance is focused on the risks that a company may be contributing to conflict, and a "high-risk area" (as opposed to a "conflict-affected area") may include areas of political instability or repression, institutional weakness, insecurity, collapse of civil infrastructure and widespread violence. *See*, *e.g.*, OECD Due Diligence Guidance at 13.

434 *See* Item 1.01(d)(2) of Form SD. *See also* § 1502(e)(3) of the Dodd-Frank Act, which has a similar, but not identical definition; Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,324 (Sept. 12, 2012).

435 *See* Conflict Minerals Adopting Release, 77 Fed. Reg. 56,274, 56,324 (Sept. 12, 2012). *See also* Department of Commerce Reporting Requirements Under Section 1502(d)(3)(C) of the Dodd-Frank Act, World-Wide Conflict Mineral Processing Facilities (stating that Department of Commerce is unable to distinguish which facilities finance conflict in the covered countries).

436 For example, the OECD due diligence guidance notes that it is intended "to help companies respect human rights and avoid contributing to conflict through their sourcing decisions." OECD Due Diligence Guidance at 12. Accordingly, the due diligence framework is designed to allow companies to identify and prevent or mitigate "adverse impacts" associated with those decisions, which include financing or otherwise contributing to conflict.

U.S. Regulation of the International Securities and Derivatives Markets, § 4.09, DISCLOSURE OF NON-GAAP FINANCIAL MEASURES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 4.09 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Rules adopted by the SEC to implement § 401(b) of the Sarbanes-Oxley Act amended Form 20-F to impose more stringent conditions on SEC filings containing non-GAAP financial measures (a term used by the SEC to identify the

p. 4-126

"*pro forma*" information targeted by § 401(b) of the Sarbanes-Oxley Act). These rules are contained in Item 10(e) of Regulation S-K [484] and Regulation G. [485]

[1] Definitions

"Non-GAAP financial measures" are defined as numerical measures of an issuer's historical or future financial performance, financial position or cash flows that (i) exclude amounts, or are subject to adjustments that have the effect of excluding amounts, that are included in the most directly comparable measure calculated and presented in accordance with GAAP in the statement of income, balance sheet or statement of cash flows (or equivalent statements) of the issuer or (ii) include amounts, or are subject to adjustments that have the effect of including amounts, that are excluded from the most directly comparable measure so calculated and presented. [486] Financial measures that an issuer is required to disclose under GAAP, SEC rules or a system of regulation of a government or governmental agency or self-regulatory organization that is applicable to the issuer are, however, exempt. [487] The SEC has indicated that measures of capital or reserves calculated for regulatory purposes would fall within this exclusion. [488]

p. 4-126

p. 4-127

For purposes of the rules, "GAAP" refers to generally accepted accounting principles in the United States, except that (i) in the case of foreign issuers whose primary financial statements are prepared in accordance with non-U.S. GAAP, the term GAAP refers to the principles under which those primary financial statements are prepared and (ii) in the case of foreign issuers that include a non-GAAP financial measure derived from or based on a measure calculated in accordance with U.S. GAAP, GAAP refers to U.S. GAAP for purposes of the application of these rules to the disclosure of that measure. [489]

The SEC has stated that the term "non-GAAP financial measure" is intended to include all measures that have the effect of depicting either a measure of performance that is different from that presented in the financial statements (such as income or loss before taxes or net income or loss as calculated in accordance with GAAP) or a measure of liquidity that is different from cash flow or cash flow from operations calculated in accordance with GAAP. [490] The SEC has provided further guidance as to what items are intended to be excluded from the definition of "non-GAAP financial measure." For example, "non-GAAP financial measure" would not include:

- ratios or measures calculated using only (i) financial measures calculated in accordance with GAAP and (ii) operating measures or other measures that are not non-GAAP financial measures; or
- operating and other statistical measures (such as unit sales, "same store sales," numbers of employees, numbers of subscribers or numbers of advertisers). [491]

In addition, measures of profit or loss and total assets for each segment required to be disclosed in accordance with GAAP are not non-GAAP financial measures. [492]

p. 4-127
p. 4-128

The SEC has confirmed that, notwithstanding the use of the term "*pro forma*" financial information in § 401(b) of the Sarbanes-Oxley Act, *pro forma* financial information presented pursuant to Article 11 of Regulation S-K (*e.g.*, required disclosures relating to certain acquisitions or divestitures) is not subject to these rules.

[2] Requirements under Item 10(e) of Regulation S-K

Under the rule, all subject filings that include a non-GAAP financial measure must also include:

- a presentation, with equal or greater prominence, of the most directly comparable financial measure or measures calculated and presented in accordance with GAAP; [493]
- a reconciliation (by schedule or other clearly understandable method), which must quantify the differences between the non-GAAP financial measure disclosed and the most directly comparable financial measure or measures calculated and presented in accordance with GAAP; [494]
- a statement disclosing the reasons why the registrant's management believes that presentation of the non-GAAP financial measure provides useful

p. 4-128
p. 4-129

information to investors regarding the registrant's financial condition and results of operations; [495] and
- to the extent material, a statement disclosing the additional purposes, if any, for which the registrant's management uses the non-GAAP financial measure that are not disclosed under the preceding bullet point. [496]

p. 4-129
p. 4-130

In addition, subject to a limited exception for foreign issuers discussed below, filings may not:

- exclude charges or liabilities that required, or will require, cash settlement, or would have required cash settlement absent an ability to settle in another manner, from non-GAAP *liquidity* measures, other than EBIT (earnings before interest and taxes) and EBITDA (earnings before interest, taxes, depreciation and amortization); [497]
- present non-GAAP financial measures on the face of the registrant's financial statements prepared in accordance with GAAP or in the accompanying notes;
- present non-GAAP financial measures on the face of any *pro forma* financial information required to be disclosed by Article 11 of Regulation S-K ;
- use titles or descriptions of non-GAAP financial measures that are the same as, or confusingly similar to, titles or descriptions used for GAAP financial measures; [498] or

p. 4-130
p. 4-131

- adjust a non-GAAP *performance* measure to eliminate or smooth items identified as nonrecurring, infrequent or unusual, when the nature of the charge or gain is such that it is reasonably likely to recur within two years or where there was a similar charge or gain within the prior two years. [499]

With respect to the last prohibition, C&DIs state that it is based on the *description* of the item being adjusted, rather than its nature. In other words, the rule does not prohibit adjustment for recurring items. It prohibits characterizing an item as nonrecurring, infrequent or unusual unless it, in fact, meets the specified criteria. This guidance marked a significant change as compared to the SEC's previous guidance in this area, which has been eliminated, under which the SEC had articulated burdens and conditions that, together with staff practices under the guidance, led companies to avoid using non-GAAP performance measures in SEC filings, unless the adjustments were for nonrecurring items only. Instead, the Non-GAAP Measures C&DIs emphasize clear disclosure and explanation surrounding the use of non-GAAP financial measures in accordance with Item 10(e). [500]

These prohibitions will not, however, apply to a non-GAAP financial measure included in a filing of a foreign issuer, provided that the non-GAAP financial measure:

- relates to the GAAP used in the issuer's primary financial statements included in its filings with the SEC;

p. 4-131

p. 4-132

- is required or expressly permitted by the standard-setter that is responsible for establishing the GAAP used in such financial statements; and
- is included in the annual report prepared by the issuer for use in its home jurisdiction or for distribution to its securityholders. [501]

The prohibitions in Item 10(e) of Regulation S-K do not apply to non-GAAP financial measures contained in disclosures subject to the SEC's rules regarding communications in connection with business combinations. [502]

[3] Requirements under Regulation G

Unlike Item 10(e) of Regulation S-K, Regulation G extends beyond SEC filings to all public disclosures of non-GAAP financial measures by issuers. Regulation G thus joins the general antifraud provisions of the federal securities laws and Regulation FD in covering an issuer's public statements generally and not only statements in SEC filings. [503]

p. 4-132

p. 4-133

Under Regulation G, whenever an issuer required to file reports under the Exchange Act publicly discloses (other than disclosure subject to Regulation M-A) material information that includes a non-GAAP financial measure, it must accompany that disclosure with:

- a presentation of the most directly comparable financial measure calculated and presented in accordance with generally accepted accounting principles, [504] and
- a quantitative reconciliation of the differences between the non-GAAP financial measure and the most directly comparable financial measure or measures calculated and presented in accordance with generally accepted accounting principles. [505]

Regulation G permits the public presentation of non-GAAP financial measures orally, telephonically, by webcast or broadcast or by similar means without requiring the additional disclosure, provided that the most directly comparable financial measure using generally accepted accounting principles and the required reconciliation are provided on the issuer's website at the same time, and the location of the website is also included in the public presentation. [506]

p. 4-133

p. 4-134

Regulation G contains an antifraud provision prohibiting the publication of any non-GAAP financial measure that, taken together with the information accompanying that measure and any other accompanying discussion, contains an untrue statement of a material fact or omits to state a material fact necessary in order to make the presentation of the non-GAAP financial measure, in light of the circumstances under which it is presented, not misleading. [507] However, noncompliance with Regulation G does not in itself affect any person's liability in a private cause of action under the antifraud provisions of § 10(b) of the Exchange Act or Rule 10b-5 thereunder. An issuer that fails to comply with Regulation G could be subject to an SEC enforcement action under Regulation G and, if warranted by the facts and circumstances, an enforcement action pursuant to § 10(b) and Rule 10b-5. [508]

Regulation G does not apply to non-GAAP financial measures contained in disclosures specifically subject to the SEC's rules regarding communications in connection with business combinations, [509] although related communications not specifically captured by the business combination communications rules, and related Securities Act registration and proxy or tender offer statements, are subject to Regulation G. Regulation G does not apply to the disclosure of non-GAAP financial measures by foreign issuers if the following conditions are satisfied:

- the securities of the issuer are listed or quoted on a securities exchange or inter-dealer quotation system outside the United States;
- the non-GAAP financial measure is not derived from or based on a measure calculated and presented in accordance with U.S. generally accepted accounting principles; [510] and
- the disclosure is made by or on behalf of the issuer outside the United States, or is included in a written communication that is released by or on behalf of the issuer outside the United States. [511]

p. 4-134

p. 4-135

Provided that these conditions are satisfied, the exemption is available notwithstanding the existence of one or more of the following circumstances:

- a written communication is released in the United States as well as outside the United States, so long as the communication is released in the United States contemporaneously with or after the release outside the United States and is not otherwise targeted at persons located in the United States;
- U.S. journalists have access to the information;
- the information appears on one or more websites maintained by the issuer, so long as the websites, taken together, are not available exclusively to, or targeted at, persons located in the United States; or
- following the disclosure or release of the information outside the United States, the information is included in a submission by the issuer to the SEC made under cover of a Form 6-K. [512]

Footnotes

484 Item 10(e) of Regulation S-K applies to all filings with the SEC. Additionally, Item 10(e)(1)(i) of Regulation S-K applies to financial information furnished under Item 2.02 of Form 8-K. However, Item 10(e) of Regulation S-K does not apply to filings made by investment companies registered under § 8 of the Investment Company Act, which are exempt from § 401 of the Sarbanes-Oxley Act, and eligible Canadian companies under the U.S.-Canadian multijurisdictional disclosure system discussed in Chapter 13.

485 Simultaneously with its adoption of Item 10(e) of Regulation S-K, which governs non-GAAP financial measures in SEC filings, the SEC adopted Regulation G, which governs the public disclosure of non-GAAP financial measures. *See* § 4.09[3]. Under Regulation G, companies are prohibited from disseminating false or misleading non-GAAP financial measures or presenting non-GAAP financial measures in a manner that is misleading or obscures the company's GAAP results.

486 Item 10(e)(2) of Regulation S-K under the Securities Act and Form 20-F, General Instruction C(e).

487 Item 10(e)(5) of Regulation S-K under the Securities Act and Form 20-F, General Instruction C(e).

488 SEC Release No. 33-8176 (Jan. 22, 2003), 68 Fed. Reg. 4820, 4822 (Jan. 30, 2003) (the "Non-GAAP Measures Release"). The SEC has been quite strict in applying this exception. For example, even though U.S. federal banking regulations have increasingly treated common equity and tangible common equity ("TCE") measures as significant, financial institutions have been forced to treat TCE measures as non-GAAP measures. In any event, these financial measures remain subject to § 10(b) of the Exchange Act, Rule 10b-5 thereunder and the SEC's existing guidance on non-GAAP financial measures. *See*, *e.g.*, *In the Matter of Trump Hotels & Casino Resorts, Inc.*, SEC Release No. 34-45287 (Jan. 16, 2002); Cautionary Advice Regarding the Use of "Pro Forma" Financial Information in Earnings Releases, SEC Release No.

33-8039 (Dec. 4, 2001); SEC Accounting Series Release No. 142, SEC Release No. 33-5377 (Mar. 15, 1973). The SEC also has brought enforcement actions under Regulation G. *See SEC v. SafeNet, Inc.*, SEC Litigation Release No. 21290 (Nov. 12, 2009) (The SEC alleged that the defendant violated Regulation G reporting obligations by improperly excluding certain ordinary expenses as non-recurring charges. SafeNet later settled these charges.).

489 Item 10(e)(3) of Regulation S-K under the Securities Act and Form 20-F, General Instruction C(e).

490 Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4822 (Jan. 30, 2003).

491 Item 10(e)(4) of Regulation S-K under the Securities Act; Form 20-F, General Instruction C(e); Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4822 (Jan. 30, 2003).

492 Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4822 (Jan. 30, 2003). To not be a non-GAAP financial measure, the segment information must be presented in conformity with ASC 280. *See* SEC, Division of Corporation Finance, Compliance & Disclosure Interpretations, Non-GAAP Financial Measures ("Non-GAAP Measures C&DIs"), Question 104.01. A segment measure that is adjusted to include amounts excluded from, or exclude amounts included in, the segment measure calculated and presented in accordance with ASC 280 would be a non-GAAP measure. *See* Non-GAAP Measures C&DIs, Question 104.03. If a company includes in its MD&A a discussion of segment profitability that is consistent with ASC 280, which requires that a footnote to the company's consolidated financial statements provide a reconciliation, the company also should include in the segment discussion in the MD&A a complete discussion of the reconciling items that apply to the particular segment being discussed. *See* Non-GAAP Measures C&DIs, Question 104.02. Similar principles would apply to the use of measures in respect of segment disclosure for foreign issuers that prepare their financial statements in accordance with IFRS as issued by the IASB, except that for such issuers, such segment measures would be required to be calculated and presented in accordance with IFRS 8, *Operating Segments*, to be non-GAAP measures.

493 In May 2016, the SEC's Division of Corporation Finance released new and updated Compliance & Disclosure Interpretations ("C&DIs") on the use of non-GAAP financial measures that signaled the SEC's tightening policy. One new C&DI provides an illustrative list of disclosure practices the SEC staff believes improperly make non-GAAP financial measures more prominent than the most directly comparable GAAP measures. For example, the staff would consider a non-GAAP financial measure to be more prominent if it is disclosed or discussed before the most directly comparable GAAP measure. *See* Non-GAAP Measure C&DIs, Question 102.10.

494 The rules provide an exception from the quantitative reconciliation requirement with respect to forward-looking non-GAAP financial measures in situations where a quantitative reconciliation is not available without unreasonable effort. *See* Item 10(e)(1)(i)(B) of Regulation S-K under the Securities Act; Form 20-F, General Instruction C(e). Where this exception applies, the SEC expects the issuer to (i) disclose the fact that the most directly comparable GAAP measure is unavailable, (ii) provide reconciling information that is available without unreasonable effort and (iii) identify information that is unavailable and disclose its probable significance, in a location of equal or greater prominence compared to the forward-looking non-GAAP financial measures in question. Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4823 (Jan. 30, 2003); Non-GAAP Measure C&DIs, Question 102.10.

495 The SEC has indicated that use by, or usefulness to, analysts cannot be the sole support for presenting a non-GAAP financial measure. Rather, the justification for use of the measure must be substantive, although it can be a justification that causes a measure to be used by or useful to analysts. Significantly, the SEC made clear in the adopting release for the rules that the required statement of the utility of the information to investors (i) should not be boilerplate, (ii) must in certain instances discuss why investors would find the non-GAAP financial measure valuable in the context in which it is presented, given the excluded items, and (iii) is intended to "be clear and understandable [and]… specific to the non-GAAP financial measure used, the registrant, the nature of the registrant's business and industry and the manner in which management assesses the non-GAAP financial measure and applies it to management decisions." Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4825 (Jan. 30, 2003). The Non-GAAP Measures C&DIs made clear that a

company is not required to use a non-GAAP financial measure in managing its business or for other purposes as a condition to being able to disclose it. *See* Non-GAAP Measures C&DIs, Question 102.04.

The SEC routinely asks questions on registration statements and periodic reports regarding the explanation given as to why a proposed non-GAAP metric provides useful information to investors, particularly with respect to more unusual or unconventional measures, and at times has pressured issuers to remove references to certain non-GAAP measures. In particular, the new C&DIs introduced in May 2016 emphasize that the SEC staff may view certain types of non-GAAP financial measures as inherently misleading and therefore prohibited from use regardless of their purported usefulness. *See* Non-GAAP Measures C&DIs, Questions 100.01 through 100.04. Under this guidance, non-GAAP performance measures that exclude "normal, recurring, cash operating expenses necessary to conduct the company's business" could be considered inherently misleading. Non-GAAP Measures C&DI, Question 100.01. Although it predates the new C&DIs, Groupon Inc.'s use of a non-GAAP financial measure called adjusted consolidated segment operating income, or adjusted CSOI, in its initial Form S-1 filing for its IPO, is often cited as an example of a non-GAAP performance measure that would be considered misleading under this guidance. The metric presented consolidated segment operating income before subtracting subscriber acquisition costs and certain other non-cash charges. Groupon described the measure as its "operating profitability before marketing costs incurred for long-term growth." Groupon, Inc., Form S-1 (June 2, 2011). According to published reports, after questions and pressure from the SEC staff during the comment process, Groupon removed adjusted COSI from its offering documents. Shayndi Rice and Lynn Cowan, *Groupon Bows to Pressure*, WALL ST. J., Aug. 11, 2011. Furthermore, a new C&DI indicates that a non-GAAP revenue measure that backs out the effect of GAAP revenue recognition and measurement principles applicable to a company's business could be inherently misleading. Specifically, a non-GAAP financial measure that adds back revenue that would have been deferred and recognized ratably under GAAP is considered misleading under this guidance. Similar non-GAAP adjustments to other line items may also be misleading. Non-GAAP Measures C&DIs, Question 100.04.

496 In the case of filings other than annual reports on Form 20-F, the rules do not require a registrant to include information regarding the purpose for which the non-GAAP financial measure is used and the reasons why that financial measure is believed to be useful to investors, so long as (i) that information was included in the registrant's most recent annual report on Form 20-F or a more recent filing and (ii) that information is updated to the extent necessary to meet the applicable requirements at the time of the current filing. The SEC has confirmed that the reference to filings does not include reports on Form 6-K, which are "furnished" to the SEC, except insofar as they are incorporated by reference into a Securities Act registration statement or prospectus or an Exchange Act report filed with the SEC. Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4824 n.39 (Jan. 30, 2003). The SEC has also confirmed that the reference to filings does not include free writing prospectuses, unless the free writing prospectus is included in or incorporated by reference into a registration statement or Exchange Act filing. *See* Non-GAAP Measures C&DIs, Question 102.08.

497 The SEC has stated that, with respect to EBIT and EBITDA, (i) the term "earnings" is intended to mean net income as presented in the statement of operations under GAAP and that, if an issuer is able to justify its use as a performance measure, EBIT or EBITDA should be reconciled to net income and not operating income and (ii) measures that are calculated differently may not be characterized as EBIT or EBITDA and their titles should be distinguished, for example, as "Adjusted EBITDA." *See* Non-GAAP Measures C&DIs, Questions 103.01 and 103.02.

Presentation of "adjusted EBITDA" may nevertheless violate Item 10(e) and therefore continue to be prohibited in filings made with the SEC if adjustments that effect prohibited exclusions are made. The SEC does, however, recognize that credit agreements often require issuers to include an "adjusted EBITDA" measure in periodic reports and, accordingly, has indicated that disclosure of such a measure would be permissible to the extent (i) the credit agreement is a material agreement, (ii) the covenant requiring presentation of the measure is a material term of the credit agreement and (iii) information elicited by the covenant is material to an investor's understanding of the issuer's financial condition and/or liquidity. If this is the case, the SEC has further stated that disclosure regarding the covenant may be misleading absent a discussion of the (i) materiality of the credit agreement and covenant, (ii) amount or limit required for compliance with the covenant and (iii) actual or reasonably likely effects of compliance or non-compliance with the covenant on the issuer's financial condition and liquidity. *See* Non-GAAP Measures C&DIs, Question 102.09.

498 Item 10(e)(1)(ii) of Regulation S-K under the Securities Act; Form 20-F, General Instruction C(e). Notably, although the presentation of per share non-GAAP financial measures in SEC filings is not explicitly prohibited by the rules, the SEC has stated that per share measures that are prohibited specifically under GAAP or SEC rules continue to be prohibited in materials filed with or furnished to the SEC. Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4820 n.11 (Jan. 30, 2003). As an example, the SEC has cited SFAS No. 95, Statement of Cash Flows, paragraph 33 of which provides that "[f]inancial statements shall not report an amount of cash flow per share. Neither cash flow nor any component of it is an alternative to net income as an indicator of an enterprise's performance, as reporting per share amounts might imply." While not expressly cited in the Non-GAAP Measures Release, the SEC's Accounting Series Release No. 142 states that the presentation of cash flow per share "run[s] a high risk of materially misleading investors." SEC Release No. 33-5377 (Mar. 15, 1973), 38 Fed. Reg. 9158, 9159 (Apr. 11, 1973). The SEC does recognize, however, that certain non-GAAP per share measures may be meaningful to investors from an "operating viewpoint," in which case the SEC views accompanying disclosure explaining how such measures are used by management and in what way they provide meaningful information as being critical, together with a reconciliation of the per share measure to the GAAP financial measure of earnings per share. However, non-GAAP liquidity measures, such as cash flow or free cash flow, should not be presented on a per share basis and the SEC staff will focus on the substance of the non-GAAP financial measure in determining whether the measure is a performance or liquidity measure regardless of management's characterization. *See* Non-GAAP Measures C&DIs, Question 102.05. The SEC staff also makes it clear that EBIT or EBITDA cannot be presented on a per share basis, because these measures can be used as a liquidity measure. Non-GAAP Measures C&DIs, Question 103.02.

499 Item 10(e)(1)(ii) of Regulation S-K under the Securities Act.

500 *See* Non-GAAP Measures C&DIs, Question 102.03.

501 Note to paragraph (e) of Item 10 of Regulation S-K under the Securities Act; Form 20-F, General Instruction C(e). The Non-GAAP Measures C&DIs provide more detail on the "expressly permitted" standard. *See* Non-GAAP Measures C&DIs, Question 106.01. In particular, express permission can be demonstrated by the explicit acceptance of the presentation of the non-GAAP financial measure by the securities regulator in the company's home country jurisdiction or market. "Explicit acceptance" includes: (i) the published views of the regulator or members of its staff, or (ii) a letter from the regulator or its staff to the issuer indicating the acceptance of the presentation, which would be provided to the SEC staff on request. This guidance on the definition of "expressly permitted" should make it easier for a foreign issuer to establish that it may use in SEC filings the same measures it presents in home-country filings. However, as the effort to harmonize the rules governing non-GAAP financial measures across different jurisdictions gains support, it would be rare for a non-GAAP financial measure to be prohibited under Item 10(e) of Regulation S-K under the Securities Act but expressly permitted in another local jurisdiction. For example, a Statement on Non-GAAP Financial Measures published by the Board of the International Organization of Securities Commissions (IOSCO) in 2016 and Guidelines on Alternative Performance Measures published by the European Securities and Markets Authority (ESMA) in June 2015 (effective in July 2016) both present guidelines that are largely consistent with Regulation G, Item 10(e) of Regulation S-K and the Non-GAAP Measures C&DIs.

502 Item 10(e)(6) of Regulation S-K under the Securities Act; Form 20-F, General Instruction C(e). This exemption does not extend beyond disclosures contained in communications subject to Rule 425 under the Securities Act or Rules 14a-12, 14d-2(b)(2) and 14d-9(a)(2) under the Exchange Act. If the same non-GAAP financial measure included in a communication under one of those rules is also disclosed in a Securities Act registration statement, proxy statement or tender offer statement, it would not be exempt from Regulation G or Item 10(e) of Regulation S-K in the Securities Act filing. *See* Non-GAAP Measures C&DIs, Question 101.01.

503 The general antifraud provisions, embodied in § 10(b) of the Exchange Act and Rule 10b-5 thereunder, as well as § 17 of the Securities Act, apply to all entities and not just those registered with the SEC, and can also apply to private fraudulent statements as discussed in § 11.04. Regulation FD is discussed in § 4.10[6]. Although Regulation FD by its terms does not apply to foreign issuers, many foreign issuers comply with it or follow its precepts.

504 As general guidance with respect to this requirement, the SEC has stated that "(1) non-GAAP financial measures that measure cash or 'funds' generated from operations (liquidity) should be balanced with disclosure of amounts from the statement of cash flows … and (2) non-GAAP financial measures that depict performance should be balanced with net income, or income from continuing operations, taken from the statement of operations." Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4823 n.26 (Jan. 30, 2003). The SEC has clarified that, (i) with respect to the use of EBITDA as a performance measure, it would require a reconciliation to net income (as opposed to operating income) and (ii) only non-GAAP measures derived from GAAP net income may properly be characterized as EBITDA or EBIT. *See* Non-GAAP Financial Measure C&DIs, Questions 103.01 and 103.02.

505 Rule 100(a) of Regulation G. The required reconciliation must be quantitative for historical non-GAAP financial measures and quantitative, to the extent available without unreasonable efforts, for forward-looking information. Rule 100(a)(2) of Regulation G. With respect to forward-looking non-GAAP financial measures that are not available without unreasonable effort, the SEC expects issuers to (i) disclose the fact that the most directly comparable measure using generally accepted accounting principles is unavailable, (ii) provide reconciling information that is available without unreasonable effort and (iii) identify information that is unavailable and disclose its probable significance. Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4823 (Jan. 30, 2003).

506 Note 1 to Rule 100 of Regulation G. The SEC encourages issuers to provide website access to this information for at least a 12-month period and has suggested that this information may appear on the website or page that the issuer normally uses for its investor relations function. Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4823 n.28 (Jan. 30, 2003).

507 Rule 100(b) of Regulation G. Significantly, the SEC has indicated that a change in the methodology for calculating or presenting a non-GAAP financial measure from one period to another, without a complete description of the change in methodology, can violate this antifraud provision. Non-GAAP Measures C&DIs, Question 100.02; *see also* Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4823 n.23 (Jan. 30, 2003).

508 Non-GAAP Measures Release, 68 Fed. Reg. 4820, 4823 (Jan. 30, 2003).

509 *See* Rule 425 under the Securities Act (regulating communications in connection with a business combination in which stock consideration is being registered under the Securities Act) and Rule 14a-12 under the Exchange Act (regulating solicitations before the furnishing of a proxy statement).

510 By its terms, therefore, this exemption is not available to a foreign issuer that reports under U.S. generally accepted accounting principles and discloses non-GAAP financial measures derived from U.S. generally accepted accounting principles.

511 Rule 100(c) of Regulation G. However, to the extent such disclosure is subsequently incorporated by reference into a Securities Act registration statement, it would need to comply with Item 10(e) of Regulation S-K under the Securities Act. *See* Non-GAAP Financial Measure C&DIs, Question 106.03. Conversely, where a foreign issuer wishes to incorporate by reference into a Securities Act registration statement a portion of an earnings release that does not contain non-GAAP measures, it may do so either by (i) furnishing the entire earnings release on Form 6-K and indicating in the Form 6-K which portion of the release is incorporated by reference or (ii) furnishing two Form 6-K reports, with one containing the full earnings release and another the portions that will be incorporated by reference (which the SEC has indicated may provide more clarity to investors). *See* Non-GAAP Financial Measure C&DIs, Question 106.02. Even when the conditions for exemption from Regulation G are satisfied, foreign issuers often voluntarily comply with the requirements of Regulation G as a matter of good corporate governance practice.

512 Note 2 to Rule 100 of Regulation G.

U.S. Regulation of the International Securities and Derivatives Markets, § 4.10, COMMUNICATIONS WITH INVESTORS AND FINANCIAL ANALYSTS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 4.10 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Securities analysts play a key role in securities markets, and publicly held companies as a matter of market practice regularly brief them to help them understand company results and business trends. Foreign issuers, like U.S. issuers, are expected to meet regularly, through telephone conference or otherwise, with securities analysts once they are SEC reporting companies. There have been some unfortunate instances, however, in which analysts have received nonpublic information and passed the information on to their clients, who have acted on it before the information was disclosed to the general public. In the wake of these cases, as well as Enron and the unanticipated and significant decline in the financial position of other public companies, the role of the securities analyst was scrutinized by Congress, the SEC, state regulators and various self-regulatory

p. 4-136

organizations. [513] The result was a heightened campaign against selective disclosure, facilitated by the SEC's adoption of Regulation FD (Fair Disclosure) in 2000, discussed in detail below. [514] For several years prior to 2009, the SEC brought few cases for violations of Regulation FD, but since September 2009 there has been a marked increase in the number of Regulation FD enforcement actions by the SEC. This increase in enforcement action serves as a reminder that ongoing vigilance in this area is certainly warranted.

The U.S. rules governing disclosure to analysts by issuers originally emerged from case law construing a basic antifraud rule, Rule 10b-5 under the Exchange Act. The rules provided by this case law were not straightforward, at times ambiguous and, in any event, have not been applied, with one known exception, [515] to communications between issuers and analysts. This situation led the SEC to adopt a new disclosure regime, Regulation FD, to prevent material nonpublic information from being given selectively to market professionals (broker-dealers, investment advisers and managers, and investment companies), who could use such information to their own or their clients' advantage. Regulation FD applies to communications on behalf of the issuer with market professionals and with securityholders who may foreseeably trade on the basis of the disclosed information.

Although Regulation FD does not apply to foreign issuers, [516] they too should avoid selective disclosure of material nonpublic information both as a matter of best practice and to avoid potential liability. Ill-considered disclosure

p. 4-136

p. 4-137

can lead to liability both for the company and for its management personally under Rule 10b-5, raise potential issues regarding correcting or updating information and have adverse market consequences. For all of these reasons, rigorous monitoring of company communications with analysts is highly advisable.

[1] General Disclosure Requirements and Rule 10b-5 Liability

The U.S. Supreme Court has established that tipping or trading on the basis of material nonpublic information will not result in a violation of Rule 10b-5 unless there is a breach of a fiduciary duty or other relationship of trust and confidence, or a misappropriation of information received in violation of such a relationship. [517] This has led to three general principles with respect to the disclosure of corporate information to securities analysts and the public. First, Rule 10b-5 by itself does not normally require management to disclose material nonpublic information regarding the company to the investment community, unless there is otherwise a duty to disclose (for example, filing an annual report on Form 20-F, or disclosure in connection with an offering of securities). [518] Subject to certain

p. 4-137
p. 4-138

exceptions discussed below, the timing of such disclosure is ordinarily left to the business judgment of management. Second, if a company does disclose corporate information (whether voluntarily or otherwise), Rule 10b-5 requires that those disclosures neither contain misleading statements of material information nor omit material facts necessary to make the statements made not misleading. [519] Third, when divulging material nonpublic information, company officials may not disclose it selectively— *e.g.*, exclusively to securities analysts—but rather must make the information available to the general public, [520] if those officials could be found to have gained a personal benefit from the selective disclosure. Selective disclosure can lead to liability for the company and for company officials themselves for insider trading by persons receiving the disclosure.

Although Rule 10b-5 might not require dissemination of material information, the NYSE and the Nasdaq require listed companies to disclose material

p. 4-138
p. 4-139

information promptly to the public through any Regulation FD-compliant method of disclosure, [521] except under certain limited circumstances. [522] In addition, listed companies are required to notify the NYSE or Nasdaq of the release of any such information prior to its release to the public. [523] NYSE and Nasdaq rules, however, do not have the force of law and cannot be the basis for an implied private right of action. The Second Circuit held in *State Teachers Retirement Board v. Fluor Corp.* that no private right of action exists for a violation of the NYSE LISTED COMPANY MANUAL'S disclosure rules. [524] The court reasoned

p. 4-139
p. 4-140

that, given the extensive regulation in this area by Congress and the SEC, "a federal claim for violation of the [NYSE's LISTED] COMPANY MANUAL rules regarding disclosure of corporate news cannot be inferred." [525]

Finally, when preparing disclosure responsive to the SEC's Exchange Act reporting requirements, companies should be mindful of Rule 12b-20, which requires inclusion of any information beyond what is expressly required "as may be necessary to make the required statements, in the light of the circumstances under which they are made, not misleading." The SEC has brought enforcement actions for violating Rule 12b-20 even in the context of Form 6-K filings, where there are no express disclosure requirements. [526]

[2] The Nature of "Material" Information

Because the U.S. securities laws, including Rule 10b-5 under the Exchange Act, generally impose liability only when the information disclosed or omitted is "material," it is important, but also exceedingly difficult in many cases, to distinguish "material" from "immaterial" facts. [527] Courts have formulated a number of tests in recent years attempting to define the types of information that would be material for purposes of Rule 10b-5. The Supreme Court held in *Basic Inc. v. Levinson* that information is material if it "would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available." [528] The Second Circuit has enunciated a more specific standard, holding before *Basic Inc. v. Levinson* that a fact is to be considered material if it is "reasonably certain to have a substantial effect on the market price of the security" [529] and holding subsequently that a fact is to be considered material "if there is a substantial likelihood that a reasonable person would consider it important in deciding whether to buy or sell shares." [530] The SEC has consistently stated that materiality is not solely a quantitative determination and that qualitative materiality judgments must be made based on "all the facts and circumstances." [531] The SEC, in Staff Accounting Bulletin No. 99, discussed the necessity and difficulty of making these determinations and provided some examples. [532]

While these judicial standards are imprecise, certain types of information would almost always be considered material. The most obvious example would be earnings reports or earnings projections (whether favorable or unfavorable) because these data usually have an immediate, and often dramatic, impact on a company's stock price. [533] The following list of potentially material information illustrates by way of example other types of facts that may be so important to investment decisions that their selective disclosure to analysts could lead to Rule 10b-5 liability:

- a decrease or increase in dividend rate or a proposed stock split;
- a significant acquisition or disposition of assets or businesses, including pursuant to a joint venture or merger;
- significant labor problems;

p. 4-141
p. 4-142

- the discovery or development of a significant new product;
- the acquisition or loss of an important contract or major change in backlog or other significant development involving customers or suppliers;
- the proposed sale of a significant amount of additional securities or the incurrence of significant new indebtedness or a default under existing indebtedness;
- a change in control or significant change in management;
- a tender offer for another company's shares;
- significant litigation; and
- another event requiring the filing of a current report under the Exchange Act. [534]

Courts, however, have found certain types of statements not to be material as a matter of law. For example, they have held that statements such as "our company is poised to carry the growth and success of the past year well into the future" to be soft, puffing statements that are not material for purposes of Rule 10b-5. [535] Similarly, the Supreme Court has held that a statement of belief and opinion is not subject to Securities Act liability unless (i) the statement was subjectively disbelieved by the defendant at the time it was expressed, (ii) the statement was accompanied by "embedded statements of fact" that are untrue or (iii) the statement omitted material facts concerning the defendant's inquiry or knowledge about the statement if "those facts conflict with what a reasonable investor would take from the statement itself." [536] Courts have also held that an omission is not material where the information omitted is already in the public domain. [537] In adopting Regulation FD, the SEC made clear that an analyst's ability to piece together immaterial information into a mosaic of information

p. 4-142
p. 4-143

that, taken together, is material would not result in a violation of Regulation FD (or, presumably, Rule 10b-5). [538]

Nevertheless, in light of the broad range of information that has been found to be material, [539] management should be cautious when concluding that any factual information is not material and therefore may be selectively disclosed to analysts. Management should do so only when it is confident the information in question is entirely consistent with information that already is publicly available so that the additional disclosure will have no impact on the market price of the company's securities.

[3] Liability for Misleading Statements and Omissions of Material Fact

Rule 10b-5 liability can arise if a communication made to analysts or to the general public contains a misleading material statement or omits a material fact necessary to make the statements made not misleading. [540] Two SEC administrative rulings, *In re Carnation Company* [541] and *In re E.ON AG*, [542] demonstrate the extent to which liability can attach under these circumstances.

In *In re Carnation Company*, a corporate official publicly stated that no company news or corporate developments could account for recent stock activity and that, to the best of his knowledge, the company was not engaged in any acquisition negotiations. The official, however, was unaware that negotiations were actually taking place regarding the acquisition of Carnation by Nestle. The SEC ruled that, despite the official's ignorance of company developments, such comments violated the Rule 10b-5 prohibition against material misstatements. Because an official cannot be expected to know everything that happens in a corporation, officials communicating with analysts or the public should consult with senior executives prior to making a statement about matters of which they are not certain.

In re E.ON AG involved management denials of merger discussions that were in fact occurring. The merger discussions involved two German companies, and the denials were not, according to *E.ON AG*, a violation of German law.

p. 4-143
p. 4-144

While one of the parties was listed on the NYSE, only a small percentage of its shares was held by U.S. investors. Moreover, both companies were persuaded that a no-comment policy would be construed by the German press as a confirmation that talks were going on and that premature disclosure would have jeopardized the ultimate merger. Nevertheless, the SEC ruled that the statements denying the merger discussions were false and a violation of Rule 10b-5. E.ON subsequently adopted a no-comment policy, as have most other German companies publicly traded in the United States.

[4] Duty to Correct or Update Previous Communications

A duty to correct previous communications arises when the issuer of the statement discovers that the statement was inaccurate or misleading when made. [543] Even if a company's statements are accurate when made, a duty to update explicit or implicit forward-looking statements may arise if circumstances change and such statements become inaccurate or misleading. [544] Currently, the circuits are split on whether a duty to update exists. The First, Second and Third Circuits have recognized a duty to update but generally have construed it narrowly (including rejecting its applicability to routine earnings guidance in the Third Circuit and the Southern District of New York), while the Seventh Circuit has held that there is no duty to update forward-looking statements. Other circuits either appear to have approved a duty to update in dicta [545] or have not yet decided whether a duty to update exists. [546]

p. 4-144
p. 4-145

Courts have considered a variety of factors in determining whether a company has a duty to update. Some courts have emphasized that "optimistic, vague projections of future success which prove to be ill-founded are not, without more, sufficiently material to incur Rule 10b-5 liability." [547] Other courts have concluded that a duty to update forward-looking disclosure requires an implicit factual representation that remained "alive" in the minds of investors as a continuing representation. [548] In *McCarthy v. C-COR Electronics, Inc.*, the court suggested certain elements that could be considered in determining whether or not a duty to update exists. [549] For example, the specificity of the predictions was one factor that could weigh in favor of a duty to update. Predictions of corporate success more distant in the future were also believed to be "necessarily less reliable." [550] Finally, the court suggested that courts should also consider the "degree to which the prediction … is inherently [more] difficult or unreliable." [551]

In *Backman v. Polaroid Corp.*, the company released a quarterly report that allegedly misrepresented the prospects for the sales and profitability of a new camera. [552] The plaintiffs argued that although the company had instructed its manufacturers to significantly reduce production, the report expressed the company's continued optimism regarding the product. The First Circuit stated that if a disclosure is misleading when made, the company is under a duty to correct the statement promptly. The court also recognized that "in special circumstances, a statement, correct at the time, may have a forward intent and connotation upon which parties may be expected to rely." [553] In such circumstances, "further disclosure" could be necessary to avoid misleading the investing public. [554]

In *In re Time Warner Inc. Securities Litigation*, corporate officials had previously disclosed that the company was seeking foreign strategic alliances, and plaintiffs alleged that management had a duty to update such disclosure when

p. 4-145

p. 4-146

problems arose concerning negotiations within the proposed alliance. [555] The Second Circuit held that, pursuant to Rule 10b-5, companies have a duty to update prior statements not only if intervening events completely negate such earlier remarks, but also if such events render previously disclosed information materially misleading. [556] However, the court refused to hold the company liable under the facts of this case, emphasizing that company statements were not definitive predictions that such deals would be struck, but rather merely expressed management hopes that negotiations would be successful. For this reason, the court found that the attributed public statements lacked the sort of definitive projections that might require later correction. [557]

The Third Circuit's decision in *Weiner v. Quaker Oats Co.* indicates how courts may analyze differently the broad range of forward-looking statements companies make. [558] On the one hand, the court held that a failure to update a statement could be actionable when the statement related to a specific targeted debt-to-equity ratio guideline that ceased to apply because of a subsequent acquisition. [559] On the other hand, the court refused to find actionable a failure to update an earnings projection rendered inaccurate by that same acquisition,

p. 4-146

p. 4-147

because the projection was presented more vaguely as "earnings growth of at least 7 percent over time." [560]

The Seventh Circuit is the only circuit that has affirmatively taken the position that there is no duty to update. In *Stransky v. Cummins Engine Co.*, the company issued optimistic statements in press releases about its redesigned engines. [561] The engines were later discovered to have design problems that led to higher-than-anticipated warranty costs. The court held that there was no duty to update forward-looking statements that become untrue due to subsequent events. [562]

Regulation FD's prohibition on selective disclosure resulted in the public issuance of earnings guidance becoming more prevalent, making the question whether there is a duty to update earnings guidance more important. [563] The Third Circuit is the only circuit that has both recognized the duty to update and expressly addressed whether it applies to ordinary earnings guidance. In *In re Burlington Coat Factory Securities Litigation*, the Third Circuit declined to impose a duty to update an ordinary earnings projection, noting that "disclosure of a specific earnings forecast does not contain the implication that the forecast will continue to hold good even as circumstances change." [564] This holding arguably is inconsistent with other cases in the Third Circuit, and in other circuits that recognize a duty to update, because it appears to create a per se exception for earnings guidance, whereas the other cases generally exclude only statements that are too vague or optimistic to be treated as ongoing factual representations. [565] Nevertheless, the Third Circuit reaffirmed this decision in *In re Advanta Corp. Securities Litigation*, holding that Advanta had no duty to update a statement made by one of its investor relations officers in a Dow Jones article that "[o]ver the next six months Advanta will experience a large increase in revenues as it converts more than $5 billion in accounts that are now at teaser rates of about 7% to its normal interest rate of about 17%" when Advanta later decided to reprice the accounts at 13% or 14%. [566]

A case decided in the Southern District of New York in 2003 (subsequently affirmed by the Second Circuit in an unreported decision) indicates that the Second Circuit may strike a similar balance between the duty to update and routine earnings guidance. In *In re Duane Reade Inc. Securities Litigation*, the court held that Duane Reade did not have a duty to update quarterly sales projections for its non-prescription products before releasing quarterly results of the products' sales performance that did not meet the projections. [567] The district court held that the non-prescription sales projections were immaterial and therefore not subject to a duty to update. [568] Moreover, quoting the Seventh Circuit's decision in *Stransky*, the court stated that a "‘company has no duty to update forward-looking statements merely because changing circumstances have proven them wrong.’" [569] The district court, however, did not attempt to harmonize its holding with the Second Circuit's decision in *In re Time Warner Inc. Securities Litigation*, which suggested in dicta that a duty to update "definite" projections or opinions may arise if intervening events have rendered them misleading. [570] Nor did the district court address Second Circuit precedent, albeit dated, finding earnings projections material. [571] Nevertheless, the Second Circuit has now affirmed the district court decision in *Duane Reade*, although in a nonprecedential, unpublished summary order, and we believe other courts are likely to follow the Third Circuit trend and reject a duty to update routine earnings guidance.

p. 4-148
p. 4-149

In sum, the case law demonstrates that outside the Seventh Circuit, forward-looking statements may be subject to a duty to update. Generally, this duty applies unless the statements in question are vague or in the nature of puffing, or, as concluded in *Burlington*, *Advanta* and *Duane Reade*, involve routine earnings guidance or similar estimates of future results.

[5] Correcting or Confirming Market Rumors

As described above, under Rule 10b-5 companies generally do not have an obligation to disclose material nonpublic information to either analysts or the public at large. In *State Teachers Retirement Board v. Fluor Corp.*, the Second Circuit held that corporate officials have no duty to correct or verify rumors in the marketplace unless such rumors can be attributed to the company. [572] The test for attribution in the context of market rumors mirrors the test described below in the section on analysts' reports (for example, whether the company has "sufficiently entangled itself" with the disclosure of information giving rise to the rumor). In *Fluor*, the company had been awarded a major contract, and before it publicly released information regarding this contract, its share price and volatility began to increase dramatically. The court held that the company could not be held liable for its decision not to confirm these contract rumors because there had been no evidence linking corporate employees to such rumors and because company officials had refused to respond to inquiries by analysts. [573]

[6] Regulation FD

p. 4-149
p. 4-150

In August 2000, the SEC adopted rules [574] that prohibit U.S. issuers from selectively disclosing material nonpublic information to market professionals and to securityholders under circumstances in which it is reasonably foreseeable that the holders will trade on the basis of the information. Regulation FD (Fair Disclosure) requires that whenever an issuer intentionally discloses material nonpublic information, it must do so through a general public disclosure, and that whenever an issuer learns that it has made a non-intentional selective disclosure, it must make public disclosure of that information promptly. All U.S. issuers filing periodic reports with the SEC under the Exchange Act are subject to the regulation. Although Regulation FD does not apply to foreign issuers, [575] foreign issuers should continue to avoid selective disclosure of material nonpublic information out of concern for potential liability under Rule 10b-5 and should look to Regulation FD for guidance as a matter of best practice. In fact, many foreign issuers have elected to comply with Regulation FD. [576]

The following are the key provisions of Regulation FD:

- The regulation applies to communications with market professionals (broker-dealers, investment advisers and managers, and investment companies), and with securityholders that will reasonably foreseeably trade on the basis of the disclosed information. [577] It focuses on what the SEC believes to be the core problem—selective disclosure to those who will foreseeably trade on that

p. 4-150
p. 4-151

  information or prompt others to do so. [578] The regulation therefore does not apply to communications with, among others, media representatives, advisers in a relationship of trust or confidence with the issuer (such as legal advisers and investment bankers), employees [579] or government officials. [580]
- The regulation applies to communications by senior officials, officers, employees or agents of the issuer

who regularly communicate with market professionals or securityholders. [581]

- The regulation applies to selective disclosures of "material" nonpublic information. [582] "Materiality" is not further defined in Regulation FD and is thus left to the guidance provided by case law and the SEC. [583]

p. 4-151
p. 4-152

- Whenever an issuer makes an "intentional" disclosure of material nonpublic information, simultaneous public disclosure is required. [584] Whenever an issuer learns that it has made a non-intentional selective disclosure, it must make public disclosure of that information "promptly" (in any event, generally within 24 hours).
- Violations of Regulation FD are subject to SEC enforcement actions, but cannot give rise to Rule 10b-5 liability or private causes of action. They also do not result in a loss of short-form registration eligibility or of the Rule 144 resale safe harbor for an issuer's securities.

Public disclosure for purposes of Regulation FD can be made by filing or furnishing a Form 8-K [585] or by disseminating the information through a method or combination of methods that is "reasonably designed to provide broad, non-exclusionary distribution of the information to the public." The most common method is by press release. [586] Posting information to a company website or through social media also may be a sufficient method of public disclosure,

p. 4-152
p. 4-153

depending on the facts and circumstances. [587] If an issuer wishes to make public disclosure of material nonpublic information by means of a conference call, adequate notice must be given, including the date, time, subject matter and dial-in information for the call. [588] Disclosure at a shareholders' meeting, even one that is open to the public, is not sufficient if the meeting is not webcast or broadcast by electronic means, and the mere presence of the press at an otherwise nonpublic meeting does not render the meeting public. [589]

Soon after the adoption of Regulation FD, the Director of the SEC's Division of Enforcement indicated that the SEC would look for egregious violations involving the intentional or reckless disclosure of unquestionably material information, such as those involving earnings, as well as cases against people deliberately attempting to take advantage of the system either by speaking in code or by stepping over the line again and again and therefore diminishing the credibility of any claim that disclosures were non-intentional, noting in particular that "walking the Street up or down is almost certainly prohibited and can no longer be done privately." [590] In 2002, the SEC released its first three enforcement actions [591]

p. 4-153
p. 4-154

and a Section 21(a) investigation report [592] under Regulation FD, and since then has engaged in further enforcement actions from time to time. [593] Since September 2009, the SEC has exhibited a renewed emphasis on enforcement actions. [594]

p. 4-154
p. 4-155

Issuers should take care to monitor their disclosures in all circumstances and use particular care when disseminating information in semi-public or private forums, such as invitation-only conferences, private offering road shows, one-on-one meetings with investors or analysts and even conference calls or webcasts where inadequate or no notice of the event has been given to the public. Moreover, if an issuer believes that analysts require supplemental information about earnings releases or other releases about important business information, that information is probably material and should not be selectively disclosed. The enforcement actions also confirm that the SEC will look to market reaction as an indicator of the materiality of selective disclosure. One significant similarity among the enforcement actions is that visible and in some instances dramatic stock trading price and volume shifts occurred in the aftermath of the selective disclosures, and the SEC has stated that a very significant market reaction to selectively disclosed information requires public disclosure of that information.

These proceedings are also noteworthy because of their varying penalties. Each of Raytheon and Secure submitted an offer of settlement in anticipation of an enforcement proceeding and agreed to a cease-and-desist order barring it from future violations of Regulation FD and § 13(a) of the Exchange Act. Siebel did

p. 4-155

p. 4-156

the same in the 2002 action and also agreed to pay a fine of $250,000 as part of its settlement. Both Schering-Plough and Richard Kogan, its CEO, also agreed to cease-and-desist orders and to pay fines of $1 million and $50,000, respectively. Office Depot, its CEO and former CFO similarly agreed to cease-and-desist orders; the company also agreed to pay a fine of $1 million, and each executive agreed to a fine of $50,000. Flowserve and its CEO agreed to cease-and-desist orders and fines of $350,000 and $50,000, respectively, and Flowserve's Director of Investor Relations agreed to a cease-and-desist order. Senetek agreed to a cease-and-desist order without admitting or denying the SEC's findings, and, according to the order, the SEC took no action against any individual at Senetek and imposed no monetary penalty because of remedial acts promptly taken by Senetek and the cooperation it provided to the staff. [595] The SEC elected not to bring an enforcement action against Motorola or its senior officials because those officials sought in-house counsel's advice, which, although erroneous, was given in good faith. The SEC cautioned, however, that reliance on counsel may not provide a successful defense in future cases, especially in light of the § 21(a) report issued in connection with the Motorola proceeding, and that the availability of this defense will depend on the facts and circumstances of each case. [596]

p. 4-156

p. 4-157

Then-SEC Commissioner Campos dissented as to the lack of a penalty in the Raytheon and Secure proceedings, while then-SEC Commissioners Glassman and Atkins dissented as to the imposition of the $250,000 penalty against Siebel, and then-Commissioner Atkins dissented as to the imposition of the $1 million penalty against Schering-Plough. Although the SEC does not explain the different approaches, one factor that may have contributed to the penalty in the 2002 Siebel case is that the information selectively disclosed by Siebel's CEO was diametrically opposed to the company's recent public disclosure. This contrasts with the Raytheon case, where the information selectively disclosed was broadly consistent with publicly available information, including Raytheon's results from the previous year. In the Secure case, there were extenuating circumstances, such as the need for a third party's consent before the material nonpublic information could be disclosed to the public. In addition, Secure's management, at least with respect to the initial non-intentional disclosure, immediately sought permission to disclose the information in question, but was unable to do so as a result of Secure's existing confidentiality agreement with the supply agreement counterparty and that counterparty's refusal to allow publication. In *Schering-Plough*, although the information selectively disclosed by the company's CEO was consistent with the company's previous public disclosures, it was materially more definite and clearly intended to talk down Wall Street estimates, which is exactly the type of conduct Regulation FD was adopted to prevent. In *Flowserve*, however, a fine was imposed even though the information shared with the small group of analysts merely reaffirmed earnings guidance that had been publicly disclosed less than four weeks before. [597]

p. 4-157

p. 4-158

Another key development in Regulation FD jurisprudence was the unwillingness of a court in the Southern District of New York to find a violation of Regulation FD in the *Siebel II* proceeding. [598] In 2004, the SEC filed a civil action against Siebel charging the company with violating Regulation FD, as well as the prior cease-and-desist order barring it from future violations of Regulation FD. [599] In its complaint, the SEC alleged that Siebel's CFO disclosed material nonpublic information by issuing positive comments in private meetings about the company's business activity that contrasted with negative public statements made during the prior three weeks. [600] The SEC claimed that these comments led to an increase in Siebel's stock price the following day. Siebel filed a motion to dismiss the suit claiming that the remarks were neither material nor nonpublic and that Regulation FD unconstitutionally restricts free-speech rights under the First Amendment of the U.S. Constitution because the scope of the regulation extends beyond "commercial speech." After examining the statements in their context, the court dismissed the charges and chided the SEC for what it clearly viewed as an overzealous approach to the enforcement of Regulation FD, stating that the SEC had placed "an unreasonable burden on a company's management and spokespersons to become linguistic experts, or otherwise live in fear of violating Regulation FD should the words they use later be interpreted by the SEC as connoting even the slightest variance from the company's public statements." [601] Significantly, the court held that private statements could vary from prior public statements so long as they were "equivalent in substance." [602] The court also held that movements in stock prices were relevant but not determinative in establishing whether the disclosed information was material or nonpublic. [603]

[7] Developments in Regulation FD and Social Media

p. 4-158
p. 4-159

Over the last decade, the rising popularity of web-based platforms as a medium for companies to communicate and engage with public audiences has presented new challenges for regulators and companies alike in determining whether such communications comply with Regulation FD.

In 2008, the SEC issued guidance providing non-exclusive factors for companies to consider in evaluating whether disclosure made on a website is compliant with Regulation FD. [604] In particular, an issuer should consider whether: (1) its website is a recognized channel of distribution; (2) posting of information on its website disseminates the information in a manner making it available to the securities marketplace in general; and (3) there is a reasonable waiting period for investors and the market to react to the posted information.

[a] SEC Social Media Guidance

The 2008 guidance did not address the use of social media channels, and in the years following the 2008 guidance, the SEC and its staff stayed largely silent on the implications of Regulation FD on disclosure made through social media. In December 2012, however, Netflix and its CEO, Reed Hastings, each received a notice from the SEC staff indicating the staff's intent to recommend that the SEC institute cease-and-desist proceedings or bring a civil injunctive action against Netflix and Mr. Hastings for violations of Regulation FD. [605] The notice followed a post by Mr. Hastings on his public Facebook page announcing a milestone in Netflix's streaming content, despite the fact that Mr. Hastings' post reached more than 200,000 followers and provided information that was in line with prior guidance.

On April 2, 2013, the SEC announced its decision not to proceed further in the Netflix matter and issued a report of investigation that builds on its 2008 guidance. [606] The new guidance clarifies that a company and its employees may use social media to report material information without violating Regulation FD, so long as two conditions are met. First, a social media channel used for this purpose must be a "recognized channel of distribution" within the meaning of the

p. 4-159
p. 4-160

2008 guidance. [607] Second, the company must alert the market to the channels used and the information it may disclose using them. Since the issuance of the SEC's report of investigation in April 2013, a number of companies have disclosed on their websites and in their press releases and periodic reports that they or their executives may use social media to disseminate material information for Regulation FD compliance, and listed specific social media channels they intend to use.

Companies that wish to use social media channels to communicate material information should consider taking the following steps to ensure compliance with Regulation FD:

[i] *Alert the Market with Specific Details*

Companies should alert the market well in advance of their intention to use specified social media to disseminate company news, through press releases, periodic reports or prominent postings on their company websites. This notice should include specific details of the social media channels that may be used, such as the account name, the URL or the specific webpage. Once the company has identified the specific social media channels it intends to use, it should continue to identify these channels regularly as part of periodic reports and press releases and on its investor relations page. Companies should also disclose the kind of information that will be communicated through the designated channels, including, for example, expectations that a company will tweet its earnings or that its key executives may comment on company developments using the designated channels.

[ii] *Exercise Caution if Personal Social Media Channels Are Used*

p. 4-160
p. 4-161

The SEC report clarifies that personal social media channels, such as the Netflix CEO's Facebook page, are unlikely to qualify as Regulation FD-compliant means of disseminating information absent prior notice. As in the case of its own channels, the company should include a specific identification of the URL, Twitter handle or the like for any personal social media that may be used.

[iii] *Select Appropriate Social Media Channels, and Use Them*

Companies should keep in mind that the SEC's 2008 guidance also addressed the accessibility of information after posting, such as whether it will be picked up by the media. Based on its report in the Netflix matter, the SEC appears to acknowledge Facebook and Twitter as appropriate media for public disclosure under Regulation FD; companies that choose other channels should pay particular attention to whether those channels would be widely followed. In the case of personal social media channels, the company should ensure that the individual applies site settings that permit maximum accessibility to the public. The SEC's 2008 guidance also relied on whether the company has a pattern or practice of using its website for company disclosures, and it is likewise important that companies in fact use the social media channels they establish for these purposes, to create the kind of investor and media following the SEC expects.

[iv] *Consider Whether Other Concurrent Means of Dissemination May Be Appropriate*

In some cases, it may be prudent for companies to couple publication of information via social media channels with more traditional means of communication, such as a press release or current report, to ensure broad public dissemination. Whether this is desirable will depend mainly on the significance of the information, the length of time the company or individual has been using the channel in question and the breadth of exposure the company in fact achieves through that channel. For matters identified as "material information" in applicable listing standards, [608] such as changes in executive leadership and the announcement of quarterly or annual results, we expect most companies will continue to rely on concurrent press releases.

[v] *Review Communications and Social Media Policies and Training Materials*

p. 4-161
p. 4-162

The SEC's new guidance presents a good opportunity to review internal policies on communications and social media. In particular, if personal social media channels may be used, the sanctioned channels should be identified in the company's communications policy. [609] A determination that no designated spokesperson may use personal social media to disclose company information should likewise be memorialized in the communications policy. Companies should also review their existing employee guidance about responsible use of personal social media. [610] Companies should develop rules for re-tweeting, sharing on Facebook or otherwise endorsing external media regarding the company, and develop a contingency plan to mitigate the risk of hacking or information leaks.

[vi] *Comply with Other Communications Rules and Safe Harbors*

Companies should ensure that disclosures made through social media channels comply with other communications rules and safe harbors under the U.S. federal securities laws. Some of those provisions require that dissemination of specific types of information be accompanied by prescribed legends; [611] others provide safe harbors whereby the disseminated information will not violate other rules if appropriately legended. [612] It may be impractical or impossible to meet these requirements using some social media channels that limit the length of

p. 4-162
p. 4-163

postings. Some commenters have suggested using abbreviated legends or links to long-form legends or other required information in these cases, and this currently appears to be the majority approach. It is unclear, however, whether these links would satisfy the relevant rules, and pending further SEC guidance, companies should proceed with caution.

[vii] *Implement Appropriate Disclosure Controls and Procedures*

Finally, companies should continue to ensure that their Exchange Act reports are materially accurate and complete. Companies should have disclosure controls and procedures in place to evaluate whether certain disclosures through social media channels, such as tweets about previously unannounced preliminary quarterly or annual financial results, must also be reflected concurrently in their periodic or current reports. Companies should also be mindful that social media communications remain subject to the antifraud provisions of the federal securities laws. In particular, companies should consider how social media communications may alter the "total mix" of information that is publicly available about them, and educate authorized users of personal social media about the importance of balance and the avoidance of cherry-picking in company communications.

[8] Selective Disclosure to Analysts and Measures to Avoid Rule 10b-5 Liability

Aside from Regulation FD, liability for selective disclosure has been based on the principles of securities fraud, particularly the law of insider trading. Under some early insider trading case law, which appeared to require that traders have equal access to corporate information, selective disclosure of material information to securities analysts could generally give rise to liability.

This understanding changed with the Supreme Court's landmark decisions in *Chiarella v. United States* [613] and *Dirks v. SEC*. [614] In *Chiarella*, the Court rejected the "parity of information" approach, which deemed trading to be fraudulent whenever the trader possessed material information not generally available to the public. The Court instead held that there must be a breach of a fiduciary duty or other relationship of trust and confidence before the law imposes a duty to disclose information or abstain from trading. [615]

p. 4-163
p. 4-164

In *Dirks*, the Supreme Court addressed the disclosure, or "tipping," of material nonpublic information by an insider to an analyst and disclosure by that analyst to its clients. The Court rejected the idea that a person is prohibited from trading whenever he or she knowingly receives material nonpublic information from an insider. Instead, it stated that a recipient of inside information is prohibited from trading only when the information has been made available to him or her "improperly"—that is, in breach of the insider's fiduciary duty to shareholders—and the recipient knew or should have known of that breach. Whether a breach of duty occurs depends on whether the insider receives a direct or indirect "personal benefit" from the disclosure. The Court explained that insiders derive a personal benefit when, for instance, they make a "quid pro quo exchange" for the tip or "gift the confidential information to a trading relative or friend." [616] Because the corporate insider who provided the information to Dirks received no personal benefit (and in fact sought to expose a fraud by disclosing the information), the Court concluded that there was no breach of duty.

The *Dirks* decision was widely construed as providing considerable latitude to insiders who made selective disclosure to analysts, and to the analysts (and their clients) who received selectively disclosed information and acted on it. Commentators interpreted the "personal benefit" requirement to involve primarily a pecuniary gain, and many corporate insiders took comfort in the fact that absent a financial reward, the *Dirks* personal benefit test would seem to insulate them from liability.

There has been surprisingly little testing since *Dirks* of the limits of the personal benefit test in the context of alleged selective disclosure to analysts. [617] In one controversial case, *SEC v. Stevens*, the SEC alleged that a corporate CEO, before making a general release to the public, had disclosed information regarding disappointing revenues to certain analysts and told them that earnings, therefore, might be lower than expected. [618] The SEC further maintained that the CEO had made such disclosures in an effort to enhance his reputation within the investment community. In settling with the SEC, the CEO agreed to pay $126,455, representing the amount of losses avoided by those shareholders who sold the company's stock prior to the eventual public announcement of such financial information. The danger of the SEC's broad interpretation of "reputational benefit" in *Stevens* is that virtually all selective disclosure to the investment community is likely to have been made to some extent on the basis

p. 4-164

p. 4-165

of self-interest. Thus, any executive, even one who believes he or she is mainly serving the corporation's interests, may be charged with deriving a "reputational benefit" when he or she communicates with analysts.

The *Stevens* case has proven to be something of an anomaly. It is the only post- *Dirks* insider trading case ever brought by the SEC based on selective disclosure to, or trading by, securities analysts or their clients. Indeed, the SEC's recognition of the difficulties it faced in proving "personal benefit" led to its decision to adopt Regulation FD and abandon exclusive reliance on Rule 10b-5 to regulate selective disclosure to analysts. Even though Regulation FD does not apply to foreign issuers, inherent uncertainties about the scope of Rule 10b-5 and the *Stevens* case have led many advisers to conclude that whenever material nonpublic information is disclosed to analysts, it should be publicly disclosed at the same time. [619]

Companies can take a number of measures to avoid the selective disclosure of material nonpublic information to analysts. Permitting the public to listen to a call with analysts, whether by a dial-in procedure or a webcast, will make any disclosures made during the call nonselective, provided adequate notice of the call is publicly given. [620] In addition, U.S. companies can make disclosure nonselective by furnishing the relevant information on a Form 8-K pursuant to Item 7.01 of that form, titled "Regulation FD Disclosure." [621] Foreign companies are similarly able to make disclosure nonselective by furnishing the relevant information on a Form 6-K.

Any selective presentations to analysts should be scripted and reviewed prior to the meeting, both by officials personally familiar with the issues to be

p. 4-165

p. 4-166

raised, as well as by counsel, to reduce the likelihood of the disclosure of material information. Furthermore, it generally would be advisable to place responsibility for such presentations upon a limited number of officials within the company, enabling them to develop the sophistication to deal effectively with this matter. Finally, if the company anticipates that a sensitive issue will most likely be raised by an analyst during a meeting, it might be advisable for the corporate official to state diplomatically near the beginning of the presentation that he or she is not at liberty to discuss the issue. Because a company generally does not have a duty to disclose material nonpublic information, a "no comment" position is permissible. The Supreme Court in *Basic Inc. v. Levinson* noted that silence is not misleading under Rule 10b-5 absent a duty to disclose and that "‘[n]o comment’ statements are generally the functional equivalent of silence." [622]

Although the consequences of selective disclosure of material information can be serious, the federal judiciary and the SEC, as well as the NYSE and Nasdaq, have recognized that inadvertent disclosures may arise. In the event of any allegation of intentional selective disclosure, procedures to avoid disclosure of material information (such as those described above) can provide useful support for the position that any such disclosure that did occur was inadvertent. If such an inadvertent disclosure were to occur, the company should immediately prepare and disseminate broadly to the investing public a press release of such information [623] and should request that the analysts to whom the disclosure was made maintain confidentiality pending such release. [624]

p. 4-166

p. 4-167

The preceding discussion regarding potential liability for selective disclosure of material information under Rule 10b-5 produces a corollary principle: management should generally avoid giving favored treatment to particular analysts either in the timing of disclosures or in the frequency of granting interviews. In *SEC v. Geon Industries, Inc.*, a company official was accused of tipping a particular analyst about a planned merger involving the company. [625] The Second Circuit could find no direct evidence that the official had leaked information of the impending merger to the analyst. Nevertheless, the court concluded that such a "tipping" had occurred based on the evidence that the official spoke often with the analyst, "lunched with [him] alone, something [the official] did with no other broker, accepted two bottles of liquor [the analyst] sent him following this lunch, and honored one of the [the analyst's] telephone messages by a return call from home." [626] The court also emphasized that the analyst had made a number of trades in Geon stock following such conversations and meetings. The *Geon* case was decided before *Dirks* and, thus, does not represent a finding of liability on the more limited basis now required by the Supreme Court in *Dirks*.

Footnotes

513 Professional associations representing public companies and analysts also made an effort to shape the parameters of the relationship between these parties. In 2004, the CFA Centre for Financial Market Integrity and the National Investor Relations Institute adopted best-practice guidelines to govern the relationship between corporate issuers and the securities analysts who cover them. *See* CFA Centre for Financial Market Integrity/National Investor Relations Institute, BEST PRACTICE GUIDELINES GOVERNING THE ANALYST/CORPORATE ISSUER RELATIONS (2004). The guidelines address: (i) information flow between analysts and issuers, (ii) analysts' conduct in preparing and publishing research reports and making investment recommendations, (iii) issuers' conduct in providing analysts with access to corporate management, (iv) review of analyst reports by issuers and (v) research that is solicited, paid for or sponsored by the issuer.

514 Selective Disclosure and Insider Trading, SEC Release No. 33-7881 (Aug. 15, 2000); *see* § 4.10[6].

515 *See SEC v. Stevens*, SEC Litigation Release No. 12813 (Mar. 19, 1991), discussed below.

516 Rule 101(b) of Regulation FD provides that both foreign governments and foreign private issuers, as those terms are defined in Rule 405 of the Securities Act, are not considered issuers for the purpose of Regulation FD. Under Rule 405, a foreign private issuer is defined as any foreign issuer, other than a foreign government, except an issuer meeting the following conditions as of the last business day of its most recently completed second quarter: (i) more than 50% of the outstanding voting securities of such issuer are directly or indirectly owned of record by United States residents, and (ii) any of the following: (a) the majority of the executive officers or directors are United States citizens or residents, (b) more than 50% of the assets of the issuer are located in the United States or (c) the business of the issuer is administered principally in the United States.

517 *See United States v. O'Hagan*, 521 U.S. 642, 650–52 (1997); *Dirks v. SEC*, 463 U.S. 646 (1983); *Chiarella v. United States*, 445 U.S. 222 (1980). One recent series of court decisions has created some uncertainty on the precise circumstances in which insider trading liability may be found. The District Court for the Northern District of Texas held that absent a fiduciary (or fiduciary-like) relationship, liability under the misappropriation theory requires not just an agreement not to disclose material nonpublic information, but also an agreement not to trade. *SEC v. Cuban*, 634 F. Supp. 2d 713 (N.D. Tex. 2009). On appeal, the U.S.

Court of Appeals for the Fifth Circuit agreed with the SEC's argument that even in the absence of an express agreement not to trade on material nonpublic information, a party that agrees to keep information confidential may be liable for insider trading where there is an implied understanding that trades will not be made based upon the information. *SEC v. Cuban*, 620 F.3d 551 (5th Cir. 2010). On remand, the District Court denied the defendant's motion for summary judgment, holding that there was sufficient evidence to enable a reasonable jury to find that the defendant implicitly agreed not to disclose material nonpublic information or trade on that information. *SEC v. Cuban*, Civ. Action No. 3:08-CV-2050-D, 2013 WL 791405 (N.D. Tex. 2013). Although a federal jury ultimately found the defendant not liable for insider trading, we believe other courts are likely to look to the arguments made in the *Cuban* line of cases when analyzing liability under the misappropriation theory. *See* SEC Litigation Release No. 22855 (Oct. 23, 2013); *see also* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 101.05 (Aug. 14, 2009) (SEC staff expressing the view that a recipient of material nonpublic information subject to an express confidentiality agreement who trades or advises others to trade could face insider trading liability). In addition, in *SEC v. Dorozhko*, 574 F.3d 42 (2d Cir. 2009), the Second Circuit held that insider trading liability could be found where a hacker traded on the basis of material nonpublic information acquired through electronic theft, even though there was no breach of fiduciary duty. *See also* § 11.10[3]; *Morrison v. National Australian Bank*, 130 S. Ct. 2869 (2010) (where a "transactional test" was introduced to establish whether a foreign claimant could bring a private right of action under § 10(b) of the Exchange Act).

518 *See Cooperman v. Individual, Inc.*, 171 F.3d 43, 49 (1st Cir. 1999); *see also Shaw v. Digital Equipment Corp.*, 82 F.3d 1194, 1202 (1st Cir. 1996) (recognizing that "the mere possession of material nonpublic information does not create a duty to disclose it"). Despite the lack of disclosure obligations generally under Rule 10b-5, the courts have found an obligation to disclose material nonpublic information (i) when the corporation or a corporate insider trades on confidential information, (ii) when a corporation has made inaccurate, incomplete or misleading disclosure or (iii) when a statute or regulation requires disclosure. *See Backman v. Polaroid Corp.*, 910 F.2d 10, 20 (1st Cir. 1990) (*en banc*).

Although a corporation under, for example, Delaware law has a fiduciary duty to holders of its common stock and, under certain circumstances, holders of its preferred stock, it generally has no fiduciary duty to its creditors, which include holders of debt securities, whether they be straight debt or convertible debt, or warrants to purchase equity securities. *See Lorenz v. CSX Corp.*, 1 F.3d 1406, 1417 (3d Cir. 1993); *Page Mill Asset Management. v. Credit Suisse First Boston Corp.*, No. 98 Civ. 6907, 2000 WL 335557, at *11 (S.D.N.Y. Mar. 30, 2000) (citing *Parkinson v. West End Street Railway*, 173 Mass. 446, 53 N.E. 891, 892 (1899) (Holmes, J.)). Thus, as the court found in *Alexandra Global*, "[b]ecause IKON owed no such fiduciary or other analogous duty to its convertible noteholders, it follows that IKON had no duty to disclose its alleged unpublicized intentions to exercise its redemption rights at a date in the future [notwithstanding that IKON's redemption rights were at a premium and IKON was purchasing its debt from a holder at a discount]." *Alexandra Global Master Fund, Ltd. v. IKON Office Solutions, Inc.*, No. 06 Civ. 5383 (JGK), 2007 WL 2077153, at *8 (S.D.N.Y. July 20, 2007).

We note that other countries may require disclosure of material information if such information would be deemed to affect the price of a company's listed securities. *See*, *e.g.*, Entertainment Rights plc, Financial Services Authority Final Notice (Jan.19, 2009) (fining U.K. company for violation of the UK Listing Authority's Disclosure and Transparency Rule 2.2.1, which generally requires disclosure of "any inside information which directly concerns the issuer").

519 Rule 10b-5(b) under the Exchange Act.

520 The SEC staff has made clear, in the context of Regulation FD, that the disclosure of material nonpublic information at a shareholders' meeting does not constitute public disclosure even if the meeting is open to the public, but is not otherwise webcast or broadcast by any electronic means. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 102.05 (June 4, 2010). However, disclosure through an Exchange Act filing may constitute public disclosure so long as the issuer has brought the disclosure to the attention of the readers of the filing. SEC, Division of Corporation Finance,

Compliance and Disclosure Interpretations, Regulation FD, Question 102.02 (June 4, 2010).

521 These methods include, *e.g.*, filing a Form 8-K (or, presumably for foreign issuers, a Form 6-K), distributing a press release through a widely circulated news or wire service, holding a press conference to which the public is granted access or posting the information on a company website or Regulation FD-compliant social media platform. *See* § 4.10[7] for a discussion of developments in Regulation FD and social media.

522 NYSE LISTED COMPANY MANUAL §§ 202.01, 202.05 (stating the general rule that "a listed company is expected to release quickly to the public any news or information which might reasonably be expected to materially affect the market for its securities" but outlining circumstances, such as negotiations leading to mergers and acquisitions or arrangements preparatory to an exchange or tender offer, under which "premature public announcement may properly be avoided"); NASDAQ Marketplace Rules, 5250(b)(1), NASDAQ Manual ("Except in unusual circumstances, a Nasdaq-listed Company shall make prompt disclosure to the public through any Regulation FD compliant method (or combination of methods) of disclosure of any material information that would reasonably be expected to affect the value of its securities or influence investors' decisions."). Although the NYSE amended its immediate release policy in May 2009 to allow an issuer to use any method of disclosure allowed by Regulation FD (an approach that matches Nasdaq's), rather than to require exclusively the use of a press release, the NYSE's amended rule continues to "encourage" issuers to use press releases. SEC Release No. 34-59823 (Apr. 27, 2009); NYSE LISTED COMPANY MANUAL § 202.06. While foreign issuers are not required to comply with Regulation FD, NYSE LISTED COMPANY MANUAL § 202.06 requires foreign issuers listed on the NYSE to comply with the timely alert policy set forth in § 202.05 by any method (or combination of methods) allowed by Regulation FD for a domestic U.S. issuer. NYSE LISTED COMPANY MANUAL § 202.06.

523 The NYSE requires issuers to notify the NYSE in advance if news of a material event or a statement dealing with a rumor is released shortly before the opening of or during market hours. NYSE LISTED COMPANY MANUAL §§ 202.03, 202.05, 202.06. Similarly, Nasdaq requires issuers to notify Nasdaq prior to the public announcement of certain specified information during Nasdaq market hours. For these purposes, the NYSE currently requires at least ten minutes' advance notification of any announcement between the hours of 7:00 A.M. and 4:00 P.M., New York time, and Nasdaq currently requires advance notification of any announcement made between 7:00 A.M. and 8:00 P.M., New York time (with notification required by 6:50 A.M., New York time, on the next trading day if announcements are made after 8:00 P.M. or on days the market is closed). NASDAQ Marketplace Rules, IM-5250-1, NASDAQ MANUAL. Advance notification must be provided to Nasdaq prior to announcing news relating to: (i) company financials, such as earnings announcements, (ii) reorganizations and acquisitions, (iii) developments regarding products, customers or suppliers, (iv) management changes, (v) resignation or termination of auditors, (vi) defaults on securities or securities redemption or repurchase plans, (vii) significant legal or regulatory developments or (viii) events requiring the filing of a Form 8-K. NASDAQ Marketplace Rules 5250(b)(1), IM-5250-1, NASDAQ MANUAL.

524 *State Teachers Retirement Board v. Fluor Corp.*, 654 F.2d 843, 852 (2d Cir. 1981).

525 *State Teachers Retirement Board v. Fluor Corp.*, 654 F.2d 843, 852–53 (2d Cir. 1981); *accord In re Verifone Securities Litigation*, 11 F.3d 865, 870 (9th Cir. 1993) ("We decline to hold that a violation of exchange rules governing disclosure may be imported as a surrogate for straight materiality analysis under § 10(b) and Rule 10b-5.").

526 *See In re Sony Corporation*, SEC Release No. 34-40305 (Aug. 5, 1998) (SEC found that Sony failed to identify greater than anticipated losses at Sony Pictures and to discuss a "known trend" involving cumulative losses of more than $1 billion); *see also SEC v. Sony Corp.*, SEC Litigation Release No. 15832 (Aug. 5, 1998) (proceeding against the individual Sony officer responsible for disclosure matters). *See also SEC v. BP*, SEC Litigation Release No. 22531 (Nov. 15, 2012) (BP fined $525 million for misleading investors by significantly understating oil flow rates during the 2010 oil spill on three separate Forms 6-K; BP stated that the flow rate was estimated to be 5,000 barrels of oil per day despite its own internal data that indicated potential flow rates could be as high as 146,000 barrels of oil per day).

527 *See supra* Note 27.

528 *Basic Inc. v. Levinson*, 485 U.S. 224, 231-32 (1988) (internal quotation omitted).

529 *SEC v. Texas Gulf Sulphur Co.*, 401 F.2d 833, 848 (2d Cir. 1968) (*en banc*), *cert. denied sub nom. Coates v. SEC*, 394 U.S. 976 (1969).

530 *Azrielli v. Cohen Law Offices*, 21 F.3d 512, 518 (2d Cir. 1994).

531 In *Ganino v. Citizens Utilities Co.*, the Second Circuit relied on *Basic Inc. v. Levinson* and SEC Staff Accounting Bulletin No. 99 in declining to hold immaterial as a matter of law misstatements regarding revenue recognition because the revenue in question amounted to only 1.7% of the defendant's total revenue for the year. *Ganino v. Citizens Utilities Co.*, 228 F.3d 154 (2d Cir. 2000). The court rejected a bright-line test for materiality, emphasizing that materiality judgments must be made in the context of all relevant facts and circumstances. *Ganino v. Citizens Utilities Co.*, 228 F.3d 154, 165 (2d Cir. 2000).

532 SEC, Staff Accounting Bulletin No. 99 (Aug. 12, 1999), Fed. Sec. L. Rep. (CCH) ¶75,563. For example, improper revenue recognition designed to ensure earnings do not fall outside the range of analysts' expectations could be material even if the effect were only one or two cents a share.

533 In both *SEC v. Bausch & Lomb, Inc.*, 565 F.2d 8, 14–15 (2d Cir. 1977), and *Elkind v. Liggett & Myers, Inc.*, 635 F.2d 156, 163–67 (2d Cir. 1980), the Second Circuit found earnings projections to be material. The award of a significant supply contract would also most likely constitute material information. In *State Teachers Retirement Board v. Fluor Corp.*, for example, the Second Circuit held that management's selective disclosure to an analyst regarding the "imminence" of being awarded a major contract could generate liability under Rule 10b-5. *State Teachers Retirement Board v. Fluor Corp.*, 654 F.2d 843, 854 (2d Cir. 1981). The court also noted that even the mere decision to bid on this billion dollar project would represent significant information to the reasonable investor. While the court in *Fluor* noted that the award of a major contract and the decision to bid on a large project could constitute material information, the court nevertheless found that the company's actions did not violate Rule 10b-5, as discussed in more detail below. On remand, the district court further held that capital expenditure projections could be considered material. *State Teachers Retirement Board v. Fluor Corp.*, 566 F. Supp. 945, 950 (S.D.N.Y. 1982).

534 The list of additional events the SEC requires issuers to disclose on Form 8-K is also representative of presumptively material events. *See supra* Note 27.

535 *Raab v. General Physics Corp.*, 4 F.3d 286, 289 (4th Cir. 1993); *accord Lasker v. New York State Electric & Gas Corp.*, 85 F.3d 55, 59 (2d Cir. 1996) (per curiam) (observing that "broad, general statements" are "precisely the type of ‘puffery’ that this and other circuits have consistently held to be inactionable"); *San Leandro Emergency Medical Group Profit Sharing Plan v. Philip Morris Cos.*, 75 F.3d 801, 807, 811 (2d Cir. 1996) (holding that company statement that "[w]e expect 1993 to mark another year of strong growth in earnings per share" constituted inactionable puffery); *see also In re K-tel International, Inc. Securities Litigation*, 300 F.3d 881, 897 (8th Cir. 2002) (stating that "[i]mmaterial statements include vague, soft, puffing statements").

536 *Omnicare, Inc. v. Laborers Dist. Council Const. Indus. Pension Fund*, 135 S. Ct. 1318 (2015). *See also Tongue v. Sanofi*, 816 F.3d 199 (2d Cir. 2016). For further discussion of *Omnicare* and *Sanofi*, *see* § 11.03[1][C].

537 *See Longman v. Food Lion, Inc.*, 197 F.3d 675, 685–86 (4th Cir. 1999), *cert. denied*, 529 U.S. 1067 (2000).

538 SEC Release No. 34-43154 (Aug. 15, 2000).

539 The Supreme Court has rejected a bright-line rule for materiality in the securities offering context, observing that the test for materiality required an assessment as to whether there is a substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the "total mix" of information made available. *See Matrixx Initiatives, Inc. v. Siracusano*, 131 S. Ct. 1309 (2011).

540 To prevail under Rule 10b-5 in private causes of action alleging material misrepresentation or omission, the plaintiff must also prove reliance upon such misleading disclosure. *See Basic Inc. v. Levinson*, 485 U.S. 224, 243 (1988) (holding that "reliance is an element of a Rule 10b-5 cause of action.…Reliance provides

the requisite causal connection between a defendant's misrepresentation and a plaintiff's injury"). *See* § 11.04[2].

541 SEC Release No. 34-22214 (July 8, 1985).

542 SEC Release No. 34-43372 (Sept. 28, 2000).

543 *See*, *e.g.*, *Stransky v. Cummins Engine Co.*, 51 F.3d 1329, 1331 (7th Cir. 1995) (stating that the duty to correct is often confused with the duty to update and that the "former applies when a company makes a historical statement that, at the time made, the company believed to be true, but as revealed by subsequently discovered information actually was not. The company then must correct the prior statement within a reasonable time."); *Backman v. Polaroid Corp.*, 910 F.2d 10, 16–17 (1st Cir. 1990). While the duty to correct generally applies only to statements of historical fact, it may also apply to forward-looking statements if they are based on historical facts that a company later discovers were incorrect. *See In re Burlington Coat Factory Securities Litigation*, 114 F.3d 1410, 1431 (3d Cir. 1997).

544 *See In re International Business Machines Corp. Securities Litigation*, 163 F.3d 102, 110 (2d Cir. 1998); *Weiner v. Quaker Oats Co.*, 129 F.3d 310, 316 (3d Cir. 1997); *Backman v. Polaroid Corp.*, 910 F.2d 10, 16–17 (1st Cir. 1990); *Greenfield v. Heublein, Inc.*, 742 F.2d 751, 758 (3d Cir. 1984), *cert. denied*, 469 U.S. 1215 (1985). *But see Gallagher v. Abbott Laboratories*, 269 F.3d 806, 810-11 (7th Cir. 2001) (reasoning duty to update would undermine purpose of periodic reporting regime); *Stransky v. Cummins Engine Co.*, 51 F.3d 1329, 1332 (holding no duty to update forward-looking statements that become untrue because of subsequent events).

545 *See*, *e.g.*, *Hillson Partners Ltd. Partnership v. Adage, Inc.*, 42 F.3d 204, 219 n.13 (4th Cir. 1994); *Rubinstein v. Collins*, 20 F.3d 160, 170 n.41 (5th Cir. 1994).

554 *Backman v. Polaroid Corp.*, 910 F.2d 10, 17 (1st Cir. 1990).

555 *In re Time Warner Inc. Securities Litigation*, 9 F.3d 259 (2d Cir. 1993), *cert. denied*, 511 U.S. 1017 (1994).

556 *In re Time Warner Inc. Securities Litigation*, 9 F.3d 259, 267–68 (2d Cir. 1993), *cert. denied*, 511 U.S. 1017 (1994).

557 In a 2010 nonprecedential summary order, the Second Circuit provided a specific example of an affirmative duty to update. The defendant had stated in a press release and on a conference call that it expected to amend a material agreement with a key customer in order to cure an on-going breach, but it subsequently became clear that the customer would not agree to amend. The company's officials failed to disclose that information to the market and later made misleading public statements about the status of the negotiations.

The Second Circuit determined that although the press release contained sufficient cautionary language to negate liability under the "bespeaks caution" doctrine, the conference call statements were made without adequately alerting investors to the risks involved and were therefore not eligible for protection by that doctrine. Moreover, the court found that the company could not use the defense that its misstatements of fact about the failed negotiations were forward-looking statements, even if they were accompanied by cautionary language. *Illinois State Board of Investment v. Authentidate Holding Corp.*, No. 09 Civ. 1751, 2010 WL 889294 (2d Cir. 2010). *See* § 11.03[1][c] for a discussion of forward-looking statements and the "bespeaks caution" doctrine.

558 *See Weiner v. Quaker Oats Co.*, 129 F.3d 310 (3d Cir. 1997).

559 *Weiner v. Quaker Oats Co.*, 129 F.3d 310, 314–18 (3d Cir. 1997). Although the court in *Weiner* discusses the company's duty to update the forward-looking debt-to-equity ratio guideline when it became unreliable, at other points it suggests that the duty may be limited to not repeating a forward-looking statement that has become unreliable. *Weiner v. Quaker Oats Co.*, 129 F.3d 310, 317, 320 n.11 (3d Cir. 1997). On remand, the district court denied the defendants' motion to dismiss, concluding that the company had a "duty to update" its debt-to-equity ratio guideline. *Weiner v. Quaker Oats Co.*, No. 98 C 3123, 2000 WL 1700136, at *11 (N.D. Ill. Nov. 13, 2000).

560 *Weiner v. Quaker Oats Co.*, 129 F.3d 310, 313 (3d Cir. 1997).

561 *Stransky v. Cummins Engine Co.*, 51 F.3d 1329 (7th Cir. 1995).

562 *Stransky v. Cummins Engine Co*., 51 F.3d 1329, 1332 (7th Cir. 1995); *accord Higginbotham v. Baxter International Inc*., 495 F.3d 753, 760 (7th Cir. 2007); *Gallagher v. Abbott Laboratories*, 269 F.3d 806, 810–11 (7th Cir. 2001); *see also Eisenstadt v. Centel Corp*., 113 F.3d 738, 746 (7th Cir. 1997) (observing that no legal duty exists in the Seventh Circuit to revise predictions that subsequent events prove incorrect).

563 The SEC staff has stated, however, that Regulation FD did not change existing law with respect to any duty to update. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 101.02 (June 4, 2010).

564 *In re Burlington Coat Factory Securities Litigation*, 114 F.3d 1410, 1433 (3d Cir. 1997).

565 The court attempted to distinguish its holding from earlier decisions involving the duty to update, which the court characterized as relating to a potential fundamental change to a company's business. *In re Burlington Coat Factory Securities Litigation*, 114 F.3d 1410, 1433 (3d Cir. 1997).

566 *In re Advanta Corp. Securities Litigation*, 180 F.3d 525, 536 (3d Cir. 1999) (citing *In re Burlington Coat Factory Securities Litigation*, 114 F.3d 1410, 1433 (3d Cir. 1997)) ("[T]he voluntary disclosure of an ordinary earnings forecast does not trigger any duty to update."). *See generally In re Verity, Inc. Securities Litigation*, No. C99-5337CRB, 2000 WL 1175580, at *5 (N.D. Cal. Aug. 11, 2000) (discussing cases regarding duty to update disclosure).

569 *In re Duane Reade Inc. Securities Litigation*, No. 02 Civ. 6478(NRB), 2003 WL 22801416, at *7 (S.D.N.Y. Nov. 25, 2003), *aff'd sub nom. Nardoff v. Duane Reade, Inc.*, 107 F. App'x 250 (2d Cir. 2004) (quoting *Stransky v. Cummins Engine Co.*, 51 F.3d 1329, 1333 n.9 (7th Cir. 1995)).

570 *In re Time Warner Inc. Securities Litigation*, 9 F.3d 259, 267 (2d Cir. 1993) (holding that company's hopeful statements regarding strategic alliances "lack[ed] the sort of definite positive projections that might require later correction").

571 *See Elkind v. Liggett & Myers, Inc.*, 635 F.2d 156, 164 n.12 (2d Cir.1980) ("Liability may follow where management intentionally fosters a mistaken belief concerning a material fact, such as its evaluation of the company's progress and earnings prospects."); *SEC v. Texas Gulf Sulphur Co.*, 401 F.2d 833, 849 (2d Cir. 1968) ("[M]aterial facts include … information disclosing the earnings and distributions of a company.").

572 *State Teachers Retirement Board v. Fluor Corp.*, 654 F.2d 843, 850 (2d Cir. 1981); *accord Electronic Specialty Co. v. International Controls Corp.*, 409 F.2d 937, 949 (2d Cir. 1969) ("While a company may choose to correct a misstatement in the press not attributable to it, … we find nothing in the securities legislation requiring it to do so."); *see also Eisenstadt v. Centel Corp.*, 113 F.3d 738, 744 (7th Cir. 1997) (noting that "a corporation has no duty to correct rumors planted by third parties"). *But cf. In re Sharon Steel*, SEC Release No. 34-18271 (Nov. 19, 1981) (holding that a company must assume a duty to make corrective disclosure where there is either evidence that the rumors originated from within the company or trading by insiders in the company's shares).

573 *State Teachers Retirement Board v. Fluor Corp.*, 654 F.2d 843, 850 (2d Cir. 1981). While courts have required that rumors be attributable to corporate officials before imposing a duty upon companies to either correct or verify them, the NYSE and Nasdaq place more stringent obligations upon management of listed corporations. Section 202.03 of the NYSE LISTED COMPANY MANUAL states that "[i]f rumors or unusual market activity indicate that information on impending developments has leaked out, a frank and explicit announcement is clearly required," and "[i]f rumors are in fact false or inaccurate, they should be promptly denied or clarified." Furthermore, according to the NYSE LISTED COMPANY MANUAL, "if rumors are correct or there are developments, an immediate candid statement to the public as to the state of negotiations or of development of corporate plans in the rumored area must be made directly and openly." NYSE LISTED COMPANY MANUAL § 202.03. Nasdaq guidance is to the same effect. *See* NASDAQ Marketplace Rules, IM-5250-1, NASDAQ MANUAL. It is important to note that, while the NYSE and Nasdaq place more onerous duties upon companies in this regard, violations of their disclosure rules have been held not to give rise to private causes of action, no issuer's shares have been delisted for violation of the policy and many companies adhere to a no-comment policy if there are rumors of unusual market activity.

574 Selective Disclosure and Insider Trading, SEC Release No. 33-7881 (Aug. 15, 2000).

575 *See* § 4.10.

576 Voluntary compliance with Regulation FD became more widespread in response to several high profile enforcement actions brought by the SEC under the regulation, which are discussed below. In addition, a number of jurisdictions have similar regulations. For example, Korea has its own version of Regulation FD, and the EU has implemented legislation relating to insider dealing and market manipulation that also prohibits selective disclosure of inside information, subject to limited exceptions. See Articles 10(1) and 17(8) of Regulation No 596/2014 of the European Parliament and of the Council on market abuse, which came into effect on July 3, 2016, replacing Directive 2003/6/EC of the European Parliament and of the Council on insider dealing and market manipulation (market abuse), which previously dealt with these matters.

577 Effective October 4, 2010, the SEC removed the specific exemption previously provided for communications with nationally recognized statistical rating organizations and credit rating agencies for the purpose of determining or monitoring credit ratings. The removal was carried out to implement § 939B of the Dodd-Frank Act. SEC Release No. 33-9146 (Sept. 29, 2010). An issuer providing material nonpublic information to a rating agency would be well advised to rely on the exemption provided under Regulation FD for confidential disclosures, unless it can conclusively determine that the rating agency does not fall within one of the specified categories of persons to whom disclosure is prohibited. The exemption for disclosures made to persons under a confidentiality obligation does not require that obligation to be in writing. However, we believe it would be prudent for issuers relying on this exemption to obtain written confidentiality agreements where practicable. Following the Dodd-Frank Act, the major credit rating agencies incorporated confidentiality clauses into their standard agreements to facilitate issuers' ability to disclose confidential information to them without violating Regulation FD.

578 Material nonpublic information may be disclosed to a market professional or a securityholder as long as the recipient expressly agrees to maintain confidentiality until the information is public. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Questions 101.04–101.06 (June 4, 2010).

579 SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 101.09 (June 4, 2010).

580 Recently there has been a renewed focus on prohibiting insider trading by government officials, particularly by members of Congress. The Stop Trading on Congressional Knowledge Act, Pub. L. No. 112-105, 126 Stat. 291 (2012), prohibits members of Congress and federal employees from trading securities based on material nonpublic information obtained from their work. Recent Congressional insider trading scandals, including trading of health care stocks by members of Congress with insider knowledge of Medicare developments, continue to draw media and regulatory attention to this issue.

581 Statements made by officials of an issuer not authorized to communicate information to market professionals and securityholders for Regulation FD purposes are made in breach of a duty of trust or confidence to the issuer and are not covered by Regulation FD. Such disclosure may, however, trigger insider trading liability. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 101.10 (June 4, 2010).

582 Selective confirmation of a forecast by an issuer can trigger the public reporting requirements of Regulation FD, depending on, among other things, the amount of time that has elapsed between the original forecast and the confirmation. If asked about a prior forecast, an issuer should be cautious about saying there is "no change" to, or that it is "still comfortable" with, the forecast because this is tantamount to a confirmation. If the issuer does not wish to confirm the forecast, it simply should say "no comment"; the issuer also may refer back to the prior estimate without implicitly confirming it by making clear that the forecast was as of the date it was given and is not then being updated. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 101.01 (June 4, 2010).

583 Regulation FD was controversial particularly for this reason, and concerns were expressed that it would reduce the flow of information to investors. In 2001, a senior member of the SEC's Division of Corporation Finance stated that the following nonexclusive factors increase the likelihood that the SEC will consider information released by an issuer to be material for the purposes of Regulation FD: (i) the issuer is releasing the information late in its earnings cycle, (ii) the issuer has not released information to the public in a relatively long period of time or (iii) major intervening news events affecting the issuer have occurred since the issuer's last public communication. Michael Bologna, *Disclosure: Most Companies Seeking to Comply with Reg FD Disclosure Requirements*, SEC. L. DAILY, Apr. 20, 2001. In *In re Fifth Third Bancorp*, the SEC determined that a redemption notice to the holders of Fifth Third's trust preferred securities was material nonpublic information, principally because of the significant disparity between the trading price of the securities and the redemption price. *In re Fifth Third Bancorp*, SEC Release No. 34-65808 (Nov. 22, 2011).

584 A disclosure is "intentional" when the person making it either knows, or is reckless in not knowing, that the information the person is communicating is both material and nonpublic. For example, if an official of an issuer did not plan on making a disclosure at a meeting but, after hearing the direction of the discussion, decided to make it and knew that the information was material and nonpublic, Regulation FD would be violated without simultaneous public disclosure. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 102.04 (June 4, 2010).

585 In general, any document publicly filed on EDGAR with the SEC within the timeframe required by Regulation FD would satisfy the rule. In considering whether disclosure is sufficient, however, companies must (i) take care to bring the disclosure to the attention of the readers of the document, (ii) not bury the information and (iii) not make the disclosure in a piecemeal fashion throughout the filing. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 102.02 (June 4, 2010).

Once a Form 8-K is publicly available on EDGAR, an issuer need not wait before making disclosure of the information in a nonpublic forum. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 102.03 (June 4, 2010).

586 When issuing a press release to satisfy the NYSE's immediate release policy, the exchange requires listed

companies (domestic and foreign) to contact Dow Jones & Company, Inc., Reuters Economic Services and Bloomberg Business News and suggests that the release also be given to a number of other news services. NYSE LISTED COMPANY MANUAL § 202.06(c).

587 *See* § 4.10[7] for a discussion of developments in Regulation FD and social media.

588 Although several days' notice may be reasonable for a quarterly earnings announcement made by an issuer on a regular basis, the notice period may be shorter when unexpected events occur and the information is critical or time-sensitive. In addition, if a transcript or rebroadcast of the analysts' call will be available, such as through an issuer's website, the SEC staff has encouraged issuers to indicate in the notice how, and for what length of time, such a record will be available to the public. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 102.01 (Aug. 14, 2009).

589 SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Questions 102.05−102.06 (Aug. 14, 2009). Regulation FD does not prohibit a director from speaking privately with a shareholder or group of shareholders. However, where a director speaks on behalf of the company, Regulation FD prohibits the selective disclosure of nonpublic information. Companies should consider implementing Regulation FD compliance procedures, including pre-clearing comments or having counsel participate, if a director is authorized to speak on behalf of the company and plans on speaking privately with investors. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Questions 101.11 (June 4, 2010).

590 Richard H. Walker, Director, SEC Division of Enforcement, Remarks at Compliance and Legal Division of the Securities Industry Association, Regulation FD—An Enforcement Perspective (Nov. 1, 2000).

591 *See In re Raytheon Co.*, SEC Release No. 34-46897 (Nov. 25, 2002) (CFO spoke directly to 11 securities analysts and, based on his knowledge of their earnings estimates, told them that those estimates were "too high," "aggressive" or "very aggressive"); *In re Siebel Systems, Inc.*, SEC Release No. 34-46896 (Nov. 25, 2002) (CEO spoke to a number of individuals at an invitation-only technology conference and disclosed that, contrary to public statements made three weeks earlier, Siebel expected its sales activity levels to be in line with previous years); *In re Secure Computing Corp.*, SEC Release No. 34-46895 (Nov. 25, 2002) (CEO, on calls with two separate portfolio managers (the first of which also involved a representative of a brokerage firm) and in an e-mail to a managing partner of the brokerage firm, disclosed (non-intentionally, and then intentionally) that Secure had entered into a new material supply agreement, and the company failed to publicly release the non-intentionally released information in a timely fashion).

592 *Section 21(a) Report of Investigation: Motorola, Inc.*, SEC Release No. 34-46898 (Nov. 25, 2002) (investor relations director spoke directly to a number of securities analysts and clarified to them that previous guidance that Motorola's sales and orders were experiencing "significant weakness" meant a "25% or more" decline in sales and orders for the quarter, while not making any timely public disclosure of this quantitative information based in part on erroneous advice from in-house counsel).

593 In *In re Schering-Plough Corporation*, the CEO met in separate private meetings with analysts and portfolio managers of four institutional investors, three of which were among Schering's largest investors, and, through a combination of words, tone, emphasis and demeanor, disclosed material nonpublic information, including the fact that analysts' earning estimates were too high and that next year's earnings would decline significantly. The CEO subsequently met with approximately 25 other analysts and portfolio managers and indicated that Schering's 2003 earnings would be "terrible." *In re Schering-Plough Corporation*, SEC Release No. 34-48461 (Sept. 9, 2003).

The charges in *SEC v. Siebel Systems, Inc.* were subsequently dismissed by the court. *SEC v. Siebel Systems, Inc.*, SEC Litigation Release No. 18766 (June 29, 2004); *SEC v. Siebel Systems, Inc.*, 384 F. Supp. 2d 694 (S.D.N.Y. 2005). The significance of the court's ruling is discussed below.

In *In re Senetek PLC*, the CEO and CFO sent nonpublic information on two separate occasions to different research firms that was subsequently included in the firms' research reports on Senetek. *In re Senetek PLC*, SEC Admin. Proc. File No. 3-11668 (Sept. 16, 2004).

In *SEC v. Flowserve Corp.*, the CEO met privately with several analysts and reaffirmed publicly available earnings guidance. The SEC highlighted that the disclosure to the analysts had led to an increase in the price of and trading volume in Flowserve stock and that the director of investor relations waited more than 53 hours after the selective disclosure and nearly 26 hours after the dissemination of the analyst's report before filing a Form 8-K disclosing the information revealed to the analysts. *SEC v. Flowserve Corp.*, SEC Litigation Release No. 119154 (Mar. 24, 2005).

In *In re Electronic Data Systems Incorporated*, company personnel violated Regulation FD in selectively disclosing the cost of settling certain derivative contracts weeks before the amounts were made public in the company's Form 10-Q. *In re Electronic Data Systems Incorporated*, SEC Release No. 34-56519 (Sept. 25, 2007).

594 The SEC settled an enforcement action in September 2009 against the former CFO of American Commercial Lines Inc. after he sent a message to analysts from his personal email account on a Saturday indicating substantially reduced earnings expectations for the quarter. The following Monday, the issuer's stock price decreased nearly 10% on three times the normal trading volume. Notwithstanding his familiarity with Regulation FD, the CFO acted without prior consultation with counsel and without going through the proper investor relations channels for publicly disseminating material information. *SEC v. Black*, SEC Litigation Release No. 21222 (Sept. 24, 2009) (complaint); *In re Black*, SEC Admin. Proc. File No. 3-13625 (Sept. 24, 2009).

In October 2010, the SEC brought and settled enforcement actions against Office Depot, Inc., its CEO and former CFO after investor relations personnel, at the direction of the CEO and CFO, placed unprecedented private calls to analysts in advance of the release of quarterly earnings to signal that the company would not meet consensus earnings estimates. Company personnel did not explicitly state that estimates would not be met, but reminded analysts of prior statements made by company officials and also referred to other companies that had announced lower-than-expected results. Analysts concluded the company would not meet earnings estimates, and between the time calls were initially made and the company's public announcement on Form 8-K six days later that earnings would be negatively impacted by economic conditions, the price of the company's shares fell 7.7%. *SEC v. Office Depot, Inc.*, SEC Litigation Release No. 21703 (Oct. 21, 2010); *In re Office Depot, Inc.*, SEC Admin. Proc. File No. 3-14094 (Oct. 21, 2010); *In re Odland*, SEC Admin. Proc. File No. 3-14095 (Oct. 21, 2010); *In re McKay*, SEC Admin. Proc. File No. 3-14096 (Oct. 21, 2010).

In November 2011, the SEC issued a cease-and-desist order against Fifth Third Bancorp for violation of Regulation FD. In *In re Fifth Third Bancorp*, Fifth Third issued a redemption notice to the holders of a series of its trust preferred securities through DTC, but did not file a Form 8-K or issue a press release to alert the public to the redemption. The redemption price was significantly lower than the price at which the securities were then trading, which resulted in heavy sales of the trust preferred securities by existing holders. Fifth Third filed a Form 8-K announcing the redemption only after it learned of the impact its selective disclosure had on the market. The SEC determined that the redemption notice was material nonpublic information because a reasonable investor would consider it important that a security was to be redeemed at a price lower than the current market price. Without admitting or denying the SEC's findings, Fifth Third consented to the issuance of the cease-and-desist order. *In re Fifth Third Bancorp*, SEC Release No. 34-65808 (Nov. 22, 2011).

In September 2013, the SEC issued a cease-and-desist order against Lawrence D. Polizzotto, former Vice President of Investor Relations of First Solar Inc., for violation of Regulation FD. According to the SEC's order, Polizzotto revealed in phone calls with more than 30 analysts and investors that First Solar was unlikely to receive one of three loan guarantees totaling $4.5 billion from the U.S. Department of Energy for which the company had received conditional commitments, despite knowing the company had not yet publicly disclosed this information. When First Solar disclosed the loss of the loan guarantee the next morning, its stock price dropped by 6%. Without admitting or denying the SEC's findings, Polizzotto consented to the cease-and-desist order. *In the Matter of Lawrence D. Polizzotto*, SEC Admin. Proc. File No. 3-15458 (Sept. 6, 2013).

595 Although the former CFO in the *Black* proceeding agreed to a settlement comprised of a $25,000 civil penalty and a bar against future violations of Regulation FD, the SEC determined not to bring charges against American Commercial Lines itself due in part to its extraordinary cooperation with the SEC. The SEC indicated that it was not bringing charges against the issuer because: (i) prior to the selective disclosure, the issuer had cultivated an environment of compliance by providing Regulation FD training and implementing appropriate policies and controls designed to prevent violations, (ii) the CFO alone was responsible for the violation and he acted outside the control systems established by the issuer, (iii) the issuer acted promptly to correct the selective disclosure once it was discovered, filing a Form 8-K with the SEC on Monday afternoon, (iv) the issuer reported the selective disclosure to the SEC staff the day after it was discovered and provided extraordinary cooperation with the staff's investigation and (v) the issuer took remedial steps to address the improper conduct, including by adopting additional controls to prevent a repetition of similar conduct. *SEC v. Black*, S.D. Ind. Case No. 09-CV-0128 (Sept. 24, 2009); *In re Black*, SEC Admin. Proc. File No. 3-13625 (Sept. 24, 2009); *SEC v. Black*, SEC Litigation Release No. 21222 (Sept. 24, 2009).

In *In the Matter of Lawrence D. Polizzotto*, the SEC determined not to bring an enforcement action against the company, First Solar Inc., because, among other things, (i) the company cultivated an environment of compliance through the use of a disclosure committee that focused on compliance with Regulation FD; (ii) the company promptly issued a press release the morning after discovering Polizzotto's selective disclosure; and (iii) the company quickly self-reported the misconduct to the SEC. SEC Release No. 2013-174 (Sept. 6, 2013).

596 *Section 21(a) Report of Investigation: Motorola, Inc.*, SEC Release No. 34-46898 (Nov. 25, 2002). Recognizing that an officer may better understand the importance of information to investors, the SEC stated that consultation with counsel "will not relieve the officer from responsibility for disclosure of information that he or she personally knows, or is reckless in not knowing, is material and nonpublic." The SEC also noted that if counsel does nothing more than recite the legal standard and then ask the officer in question whether a reasonable investor would consider the information significant, the resulting judgment is the officer's, not counsel's. In addition, the SEC clarified that, although counsel's advice may initially provide an officer with a good faith basis for making a selective disclosure when the advice is received, that officer "may become aware of a very significant market reaction and may learn facts indicating that this reaction was a result of the selective disclosure. At that point, even though the officer's original selective disclosure was not intentional, the issuer has learned that it has made a non-intentional disclosure and must make the prompt public disclosure required by Regulation FD." *Section 21(a) Report of Investigation: Motorola, Inc.*, SEC Release No. 34-46898 (Nov. 25, 2002).

597 The cease-and-desist order to which Flowserve consented referred to the SEC's view that the selective disclosure had been "intentional" in this case. The SEC stated that "selective disclosure is ‘intentional’ when the person making the disclosure knows, or is reckless in not knowing, that the information being communicated is both ‘material’ and ‘nonpublic.’" SEC Release No. 34-51427 (Mar. 24, 2005). On the basis of that definition, the SEC concluded that the CEO's selective disclosure had been intentional. While in hindsight the information may have been material since the stock price and trading volume of Flowserve did in fact increase significantly following the publication of the research analyst report revealing the CEO's remarks, one could argue that the CEO could reasonably have thought that merely reaffirming previously issued publicly available earnings guidance would not be material to investors.

598 *SEC v. Siebel Systems, Inc.*, 384 F. Supp. 2d 694 (S.D.N.Y. 2005).

599 *SEC v. Siebel Systems, Inc.*, SEC Litigation Release No. 18766 (June 29, 2004). Siebel's CFO and investor relations director were also charged with aiding and abetting the Regulation FD violations.

600 The SEC also charged Siebel with violating Rule 13a-15 under the Exchange Act, which requires issuers to maintain disclosure controls and procedures to ensure the proper handling of information required to be disclosed in reports filed or submitted under the Exchange Act and to ensure that management is provided the information necessary to make timely disclosure decisions. The SEC alleged that Siebel's failure to publicly disseminate the information in compliance with Regulation FD was evidence of inadequate

disclosure controls and procedures in violation of Rule 13a-15. This represented the first time the SEC had charged an issuer with a violation of Rule 13a-15, and it bears noting that this claim was made in connection with Regulation FD rather than financial statements or periodic reports. This charge highlights the need for companies to address the disclosure requirements under Form 8-K, because a failure to file, or a late filing of, a required Form 8-K may serve as the basis for allegations that the issuer's disclosure controls and procedures were inadequate.

601 *SEC v. Siebel Systems, Inc.*, 384 F. Supp. 2d 694, 704 (S.D.N.Y. 2005).

602 *SEC v. Siebel Systems, Inc.*, 384 F. Supp. 2d 694, 705 (S.D.N.Y. 2005).

603 The court also dismissed the charge relating to the violation of Rule 13a-15 on the basis that there were no factual allegations providing independent support for this claim absent the alleged violation of Regulation FD. *See supra* Note 601. Because the court ruled that the SEC had failed to state a cause of action, the court did not have an opportunity to consider Siebel's constitutional claims.

604 *Commission Guidance on the Use of Company Websites*, SEC Release No. 34-58288, at Section II.A.2 (Aug. 1, 2008), 73 Fed. Reg. 45,862, 45,868 (Aug. 7, 2008).

605 *See* Netflix 8-K of Dec. 6, 2012 reporting receipt of the Wells Notice.

606 *Report of Investigation Pursuant to Section 21(a) of the Securities Exchange Act of 1934: Netflix, Inc., and Reed Hastings*, SEC Release No. 34-69279 (Apr. 2, 2013).

607 The SEC's 2008 guidance set out several factors for companies to consider when determining whether a social media outlet is a "recognized channel of distribution," including (1) whether and how companies let investors and the markets know that the company has a website that should be looked to for information, (2) whether the company has provided awareness that it will post important information there and whether it has a pattern or practice of doing so, (3) whether the company's website is designed to lead investors and the market efficiently to information about the company, whether the information is prominently disclosed in a location known and routinely used for such disclosures and whether it is presented in a format readily accessible to the general public, (4) the extent to which information posted on the website is regularly picked up by the market and readily available media and reported there or the extent to which the company has advised the media about the information, (5) the steps the company has taken to make its website and the information accessible, (6) whether the company keeps its website current and accurate, (7) whether the company uses other methods to disseminate information and whether and to what extent those other methods are the predominant methods the company uses to disseminate information and (8) the nature of the information. *Commission Guidance on the Use of Company Web Sites*, SEC Release No. 34-58288, 20-22 (Aug. 1, 2008); 73 Fed. Reg. 45,862, 45,867-68 (Aug. 7, 2008).

608 *See* NYSE LISTED COMPANY MANUAL §§ 202.05, 202.06; NASDAQ Stock Market Rule 5250(b), IM-5250-1. Note in this regard that the NYSE continues to encourage the use of press releases when disseminating material information within the meaning of its rules.

609 Under a staff Compliance and Disclosure Interpretation, if a company's policy identified authorized spokespersons, it is not responsible for selective disclosures by others. SEC, *Compliance and Disclosure Interpretations*, Regulation FD, Question 101.10 (Aug. 14, 2009). While the guidance set forth in the SEC report on Netflix did not address its implications for this C&DI, creating a record of authorized social media channels nevertheless seems prudent.

610 Companies should be aware, however, that a policy that flatly prohibits employees from disclosing information through their personal social media is of questionable enforceability, as it could be construed as an unlawful work rule that would tend to chill employees when engaging in protected organizing activity under § 7 of the National Labor Relations Act. *See* Office of General Counsel, National Labor Relations Board, Memorandum OM 11-74 (Aug. 18, 2011), Memorandum OM 12-31 (Jan. 24, 2012) and Memorandum OM 12-59 (May 30, 2012) (finding certain restrictions and prohibitions in social media policies to be overbroad and unlawful under the National Labor Relations Act). Companies should be sure to clarify that social media restrictions are not intended to impinge on § 7 rights, in part by providing examples in their policies of acceptable versus unacceptable uses of social media.

611 *See*, *e.g.*, Rule 165 under the Securities Act (written communications made "in connection with or relating to" a business combination transaction where securities are offered as consideration) and Rule 14a-12 under the Exchange Act (solicitation before furnishing a proxy statement).

612 *See*, *e.g.*, Rule 135 under the Securities Act (press release notice of proposed public offering) and § 21E of the Exchange Act (forward-looking statement).

613 *Chiarella v. United States*, 445 U.S. 222 (1980).

614 *Dirks v. SEC*, 463 U.S. 646 (1983).

615 Although a decision in the district court for the Northern District of Texas cast doubt on whether a breach of a duty of trust and confidence requires an explicit agreement not to trade, in addition to an agreement to keep material nonpublic information confidential, the Fifth Circuit Court of Appeals reaffirmed in September 2010 that no explicit agreement is required if the parties understood that they were not to trade on the information when it was disclosed. *See supra* Note 517.

616 *Dirks v. SEC*, 463 U.S. 664 (1983).

617 *See* § 11.05[2][a][ii] for a discussion of recent cases on the nature of the personal benefit that must be received in the context of alleged selective disclosure to friends or family (rather than to securities analysts) to establish liability under the misappropriation theory.

618 *SEC v. Stevens*, SEC Litigation Release No. 12813 (Mar. 19, 1991).

619 The requirements and scope of Regulation FD are discussed above. *See* §§ 4.10[6] and [7].

620 According to the SEC staff, adequate advance notice under Regulation FD must include the date, time, subject matter and call-in information for the analysts' call. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 102.01 (June 4, 2010). Public notice should be provided a reasonable period of time in advance of the conference call. For example, while several days' notice may be reasonable for a quarterly earnings announcement made by an issuer on a regular basis, the notice period may be shorter when unexpected events occur and the information is critical or time sensitive. In addition, if a transcript or rebroadcast of the analysts' call will be available, such as through an issuer's website, the SEC staff has encouraged issuers to indicate in the notice how, and for what length of time, such a record will be available to the public. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Regulation FD, Question 102.01 (Aug. 14, 2009).

621 A company may elect to submit nonpublic information required to be disclosed by Regulation FD pursuant to Item 8.01 of Form 8-K, providing for disclosure regarding "Other Events," rather than Item 7.01. Unlike information filed pursuant to Item 8.01, however, the information in a report furnished pursuant to Item 7.01 is not automatically incorporated by reference in short-form registration statements under the Securities Act or deemed to be "filed" for purposes of § 18 of the Exchange Act or otherwise subject to the liabilities of that section, unless the registrant specifically states the information is to be considered filed under the Exchange Act or incorporates it by reference into a filing under the Securities Act or the Exchange Act.

622 *Basic Inc. v. Levinson*, 485 U.S. 224, 239 n.17 (1988).

623 A company subject to Regulation FD is required to disclose the information generally within 24 hours pursuant to a Regulation FD-compliant method of disclosure.

624 The NYSE LISTED COMPANY MANUAL requires listed companies promptly and publicly to release material information that has been inadvertently leaked to analysts and offers explicit instructions regarding such press releases. NYSE LISTED COMPANY MANUAL §§ 202.03–202.06. Section 202.06(C) states that such news must be disseminated "by the fastest available means," which ordinarily requires a "release to the public press by telephone, facsimile or hand delivery, or some combination of such methods." Adequate disclosure to the investment community requires companies to release information to the Dow Jones, Reuters and Bloomberg news services. NYSE LISTED COMPANY MANUAL § 202.06(C). The NYSE LISTED COMPANY MANUAL also encourages companies to promptly distribute their releases to the Associated Press and United Press International, as well as to newspapers in New York City and in cities in which the company has its headquarters, plants or other major facilities. Copies of such releases should be sent to

the company's NYSE representative.

A company listed on Nasdaq is obliged to disclose to the Nasdaq MarketWatch Department material information that the company is not otherwise disclosing to the investing public or the financial community. NASDAQ Marketplace Rules, IM-5250-1, NASDAQ MANUAL. Where changes in market activity indicate that information has become known to the investing public, Nasdaq may work with the company to effect a timely public release of such information, subject to the company's views as to the business advisability of disclosing the information and the nature of the event itself.

The importance of keeping the stock exchange on which the company is listed fully informed about inadvertent disclosures of material information was illustrated in *SEC v. Geon Industries, Inc.*, 531 F.2d 39 (2d Cir. 1976), and *State Teachers Retirement Board v. Fluor Corp.*, 654 F.2d 843 (2d Cir. 1981). The Second Circuit ruled in *Geon* that an officer of the company had violated Rule 10b-5 because, when asked by an AMEX representative if there were any developments regarding the previously announced merger of Geon with Burmah Oil Co., Ltd. to account for the imbalance of sell orders in Geon stock, the officer failed to disclose information that would indicate the possible collapse of the merger. *See Geon Industries, Inc.*, 531 F.2d 39, 47 (2d Cir. 1976). On the other hand, in *Fluor*, the Second Circuit's decision that the company was not liable under Rule 10b-5 relied, in part, on the fact that company officials had informed a NYSE representative that the unannounced award of a substantial contract could be the reason for increased trading volume in company securities. *See State Teachers Retirement Board v. Fluor Corp.*, 654 F.2d 843, 851 (2d Cir. 1981). Following an inadvertent disclosure of material information to an individual or group of individuals, the company should also consider contacting the stock exchange on which it is listed to discuss the possible need for a halt in trading of the company's securities pending dissemination of the press release. *In Fluor*, the Second Circuit's decision that the company was not liable under Rule 10b-5 also emphasized that the company had acted in "good faith" by endorsing the NYSE decision to halt trading.

625 *SEC v. Geon Industries, Inc.*, 531 F.2d 39 (2d Cir. 1976).

626 *SEC v. Geon Industries, Inc.*, 531 F.2d 39, 47 (2d Cir. 1976).

U.S. Regulation of the International Securities and Derivatives Markets, § 4.11, DEREGISTRATION AND DELISTING

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 4.11 (11th and 12th Editions 2014-2017)
11th and 12th Editions

[1] Delisting from an Exchange

A foreign private issuer can withdraw a class of securities from listing on a national securities exchange (such as the NYSE or Nasdaq) by filing an

p. 4-168

application on Form 25 with the SEC. [627] The delisting of the security will be effective ten days after a Form 25 is filed with the SEC. [628] The withdrawal from registration under § 12(b) of the Exchange Act will take effect 90 days after the filing of the Form 25, or such shorter period as the SEC may determine. [629]

In addition, Rule 12d2-2(c) under the Exchange Act requires an issuer filing a Form 25 to satisfy the following requirements: (i) comply with the applicable exchange's rules for delisting and applicable state laws, (ii) submit a written notification to the exchange no fewer than ten days before the issuer files a Form 25 of its intent to withdraw its security from listing and/or registration on such exchange, [630] and (iii) contemporaneously with providing a written notice to the exchange, issue a public notice of its intent to delist and/or withdraw its security from § 12(b) registration via a press release, and if it has a publicly accessible website, post such notice on that website. Moreover, the applicable exchange is required to provide notice on its own website of the issuer's intent to delist by the next business day after it receives such notice from the issuer. [631] The notices by the issuer and the exchange on their respective websites must remain posted until the delisting becomes effective. [632]

The NYSE allows a company to delist a security pursuant to Rule 12d2-2(c) upon approval by its board of directors. [633] Nasdaq allows an issuer to voluntarily terminate its listing upon compliance with all requirements of Rule 12d2-2(c). [634]

[2] Termination and Suspension of Periodic Reporting

[a] Termination

The SEC adopted rules in 2007 that make it easier for foreign private issuers to exit the Exchange Act reporting regime. [635] The SEC proposed and adopted

p. 4-168

p. 4-169

these rule amendments out of concern that, due to several trends, including the increased internationalization of the U.S. securities markets in recent decades, it has become difficult for foreign private issuers to exit the Exchange Act reporting system even when there is relatively little U.S. trading interest in its U.S.-registered securities. [636] The rules allow a foreign private issuer to terminate Exchange Act reporting for its equity securities by meeting a quantitative benchmark provision based on its U.S. trading volume relative to its worldwide trading volume, as an alternative to the 300 record holder standard. [637] The rules also enable a foreign private issuer to terminate, rather than merely suspend, its § 15(d) reporting obligations and to claim the benefits of Rule 12g3-2(b) exemption immediately upon the effectiveness of its termination of reporting pursuant to Rule 12h-6. [638]

Under Rule 12h-6, a foreign private issuer is able to terminate its Exchange Act registration and reporting obligations regarding a class of equity securities if it satisfies (i) the quantitative benchmark condition, (ii) the prior reporting condition, (iii) the one-year dormancy condition and (iv) the foreign listing condition, each as described below.

p. 4-169

p. 4-170

The quantitative benchmark condition can be satisfied by meeting either one of the following tests:

- The average daily trading volume (the "ADTV") of the class of equity securities in the United States has been no greater than 5% of the ADTV of that equity security on a worldwide basis during a recent 12-month period; [639] or
- There are less than 300 holders of record on a worldwide basis or less than 300 holders of record resident in the United States. [640]

A foreign private issuer that has delisted a class of equity securities from a U.S. national securities exchange or automated inter-dealer quotation system or that has terminated a sponsored ADR facility will be subject to a one-year waiting period before it may file Form 15F to deregister unless it satisfied this trading volume test on the date of its delisting or termination. [641]

The prior reporting condition requires that the issuer have had SEC reporting obligations for at least one year before deregistration, have filed or furnished all reports required for such period, and have filed at least one annual report. [642]

The one-year dormancy condition prohibits sales of a foreign private issuer's securities in the United States in a registered offering during the 12 months preceding the deregistration, subject to certain exceptions. [643] The primary purpose of this condition is to preclude a foreign private issuer from exiting the

p. 4-170

p. 4-171

Exchange Act reporting system shortly after it has engaged in U.S. capital-raising through a public offering. [644]

The foreign listing condition requires that the foreign private issuer have maintained for at least 12 months a listing of the subject class of equity securities on an exchange in a foreign jurisdiction, which, either singly or together with one other foreign jurisdiction, constitutes the primary trading market for such securities. [645] The purpose of this foreign listing condition is to help assure that there is a non-U.S. jurisdiction that principally regulates and oversees the issuance and trading of the issuer's securities and the issuer's disclosure obligations to investors. [646]

Rule 12h-6 enables a foreign private issuer to terminate its Exchange Act reporting obligations regarding a class of debt securities as long as the issuer has filed or furnished all reports required under § 13(a) or § 15(d) of the Exchange Act, including at least one Exchange Act annual report on Form 20-F, and has its class of debt securities held of record by less than 300 holders either on a worldwide basis or who are U.S. residents. [647]

Under Rule 12h-6, a foreign private issuer has to file a Form 15F with the SEC to certify its compliance with the requirements for termination of its Exchange Act reporting obligations. As with the filing of Form 15 under the previous rules, the filing of Form 15F automatically suspends an issuer's reporting duties. If the SEC has not objected, the suspension would become a permanent termination 90 days after the filing of the Form 15F. If the Form 15F is subsequently withdrawn or denied, the issuer will be required, within 60 days of the date of the denial or withdrawal, to file or submit all reports that would have been required had it not filed the Form 15F. [648] After filing the Form 15F, an issuer has no continuing obligation to make inquiries concerning the information contained in the Form 15F, including its assessment of trading volume or ownership of its securities. However, if, during the 90-day waiting period, the issuer has actual knowledge of information that causes it reasonably to believe that, at the date of filing the Form 15F, it was not qualified to deregister under Rule 12h-6, the issuer must withdraw its Form 15F. [649]

Under Rule 12h-6, a foreign private issuer must publish, either before or on the date that it files its Form 15F, a notice in the United States that discloses its intent to terminate its Exchange Act reporting obligations. The issuer must publish the notice, such as a press release, through a means reasonably designed to provide broad dissemination of the information to the public in the United

p. 4-171
p. 4-172

States. The issuer is also required to submit a copy of the notice, either under cover of a Form 6-K, before or at the time of filing of the Form 15F, or as an exhibit to the Form 15F. [650]

The SEC has indirectly indicated that companies that terminate their reporting obligations under Rule 12h-6 are not issuers for purposes of the Sarbanes-Oxley Act. [651] They should not be considered as such, because they no longer have securities registered under § 12 of the Exchange Act and are not required to file reports under § 15(d) of the Exchange Act. We believe the termination of a company's issuer status in this context should be effective when a certification on Form 15F is filed. These companies would again become subject to the Sarbanes-Oxley Act if and when they have reporting duties at the beginning of any fiscal year or have filed a Securities Act registration statement. [652]

[b] Suspension

[i] *General*

As a consequence of having a registration statement declared effective under the Securities Act, an issuer becomes a reporting company under § 15(d) of the Exchange Act. Section 15(d) provides that an issuer's duty to report is automatically suspended, if at the beginning of any fiscal year (other than the year in which the relevant registration statement became effective), the class of securities covered by the relevant registration statement is held of record by fewer than 300 persons worldwide. In determining the number of record holders, an issuer may treat a custodian as a single record holder and holders of securities pursuant to a deposit agreement or similar arrangement as record holders. [653] It is

p. 4-172
p. 4-173

not necessary to "look through" any securities held by any such holders to ultimate beneficial owners.

Suspension of an issuer's reporting duty on the basis of § 15(d) requires, but is not conditioned on, the filing of a notice on Form 15, within 30 days of the beginning of the first fiscal year in which the duty is suspended, and depends on the number of holders as of the beginning of the issuer's fiscal year. [654] If the limit on the number of holders is exceeded on the first day of a subsequent fiscal year, the issuer's reporting obligations will cease to be suspended as of that day. [655] As noted above, by availing themselves of Rule 12h-6 when they qualify, foreign issuers can terminate, rather than merely suspend, their § 15(d) obligations. For this reason, the availability of Rule 12h-6 should reduce the number and complexity of situations for foreign issuers involving suspension of reporting obligations under § 15(d).

The SEC has stated that a company whose duty to report under § 15(d) is automatically suspended would not be an issuer subject to the Sarbanes-Oxley Act during the time that the duty is suspended, regardless of whether it filed a notice on Form 15. [656] Such a company would, however, again become subject to the Sarbanes-Oxley Act if and when it no longer meets the requirements for suspension of reporting duties at the beginning of any fiscal year (unless it has terminated its Exchange Act registration and reporting obligations pursuant to Rule 12h-6) or if it files a Securities Act registration statement. [657]

[ii] *Issuers Emerging from Bankruptcy*

While companies in bankruptcy are not relieved of their Exchange Act reporting obligations, the SEC will generally accept modified Exchange Act reports from issuers subject to proceedings under the U.S. Bankruptcy Act. [658]

p. 4-173
p. 4-174

Although foreign private issuers have not requested or obtained relief from the SEC in these circumstances, in all likelihood the SEC would apply the same standards to such companies as it applies to U.S. companies, discussed in detail below, as modified to apply to annual reports on Form 20-F and current reports on Form 6-K.

In deciding whether to accept modified Exchange Act reports, the SEC considers (i) how difficult it is for the issuer to obtain the information necessary to complete the reports, (ii) the issuer's financial condition, (iii) the issuer's efforts to advise its securityholders and the public of its financial condition and activities and (iv) the nature and extent of the trading in the issuer's securities. However, generally speaking, as soon as such conditions cease, unless relief is granted, the full requirements of the Exchange Act again apply, including the requirement for audited financial statements for all required periods even though the issuer may have been subject to bankruptcy proceedings during some portion of those periods. The SEC has further indicated that, in deciding whether to grant relief, it looks to (i) the timeliness of an issuer's Form 8-K announcing its bankruptcy filing and (ii) whether an issuer files a Form 8-K announcing that its reorganization plan has become effective, including a "fresh-start" audited balance sheet as of the date of the issuer's release from Chapter 11 under the U.S. Bankruptcy Code. [659]

A limited number of SEC no-action letters have granted relief to particular issuers while still in bankruptcy modifying the requirements for their post-reorganization filings under the Exchange Act. [660] Such relief was granted on the basis that, while still in bankruptcy, the issuer would file its bankruptcy reports under cover of Form 8-K during the time it is required to file reports with the bankruptcy court, with each such Form 8-K filed no later than 15 days after such reports are required to be so filed. In addition, the relief required the issuer, upon release from proceedings under the U.S. Bankruptcy Code, to file the appropriate Form 8-K and its audited balance sheet and comply fully with its reporting obligations under the Exchange Act for all periods commencing after such release, presenting audited financials for such periods. In filings under the Securities Act, however, the SEC will not provide relief from audited financial statement requirements, even if some portion of the periods required to be audited include the period during which an issuer was subject to bankruptcy proceedings.

Footnotes

627 Rule 12d2-2(c) under the Exchange Act. Rule 12d2-2 has been amended in order to simplify the delisting procedure. *See* SEC Release No. 34-52029 (July 15, 2005).

628 Rule 12d2-2(d)(1) under the Exchange Act.

629 Rule 12d2-2(d)(2) under the Exchange Act.

630 The written notice to the exchange must include a description of the security involved together with a statement of all material facts relating to the reasons for filing such application for withdrawal from listing and registration. Because delisting would not become effective until ten days after filing the Form 25, the issuer should provide written notice to the exchange, as well as the public notice, at least 20 days before the planned delisting date. *See* SEC Release No. 34-52029 (July 15, 2005).

631 Rule 12d2-2(c)(3) under the Exchange Act.

632 Rule 12d2-2(c)(2)(iii) and (c)(3) under the Exchange Act.

633 NYSE Listed Company Manual § 806.02.

634 NASDAQ Marketplace Rules, Rule 5840(j), NASDAQ Manual.

635 SEC Release No. 34-55540 (June 4, 2007). The principal changes are set out in Rule 12h-6 under the Exchange Act adopted by the SEC pursuant to its exemptive authority under § 12(h) of the Exchange Act. The SEC also eliminated certain provisions of Rules 12g-4 and 12h-3 under the Exchange Act relating to foreign private issuers. As amended, Rule 12g-4 allows termination of registration of a class of securities under § 12(g) of the Exchange Act, and Rule 12h-3 allows suspension of a reporting obligation under § 15(d) of the Exchange Act, if the class of securities is held of record by less than 300 persons worldwide (or less than 500 persons worldwide where the total assets of the issuer have not exceeded $10 million on the last day of each of the issuer's most recent three fiscal years). Although Rules 12g-4 and 12h-3, as

amended, do not exclude foreign private issuers, few, if any, foreign private issuers are expected to proceed under these rules. As discussed below, while new Rule 12h-6 retains the 300 record holder standard for debt securities and as an alternative test for equity securities, it provides significant advantages to foreign private issuers compared to Rule 12g-4 or 12h-3. These advantages include: (i) an easier method of counting the record holders and (ii) the ability to terminate (rather than merely suspend) § 15(d) reporting obligations.

636 *See* SEC Release No. 34-53020 (Dec. 23, 2005); SEC Release No. 34-55005 (Dec. 22, 2006); SEC Release No. 34-55540 (Mar. 27, 2007). The adoption of Rule 12h-6 was driven in part by renewed interest in the deregistration rules, which arose both because companies with securities listed in the United States had been able to more readily turn to the non-U.S. and Rule 144A markets to raise capital, and because of the real or perceived burdens and risks of U.S. registration, including those associated with complying with the Sarbanes-Oxley Act. Foreign issuers had found that the "look-through" rules previously used to determine whether they had 300 U.S. shareholders were so difficult to implement that they often could not determine whether they qualified to terminate their registration. They had also objected to the previous rules on the basis that the 300 shareholder threshold was very low in a world of internet trading and global markets, and that, even after deregistration, Rule 12g3-2(a) required them to determine annually whether they had to re-register their securities.

637 Rule 12h-6 revised the method of counting record holders for securities issued by foreign private issuers. *See infra* Note 640.

638 *See* § 4.02[3][a][iv] for a discussion of the Rule 12g3-2(b) exemption.

639 Rule 12h-6(a)(4)(i) under the Exchange Act.

640 Rule 12h-6(a)(4)(ii) under the Exchange Act. Instead of having to look through the accounts of brokers, banks and other nominees on a worldwide basis to determine the number of its U.S. resident holders, as is required under Rule 12g3-2(a), a foreign private issuer can limit its inquiry to brokers, banks and other nominees located in the United States, the issuer's jurisdiction of legal formation and, if different, the jurisdiction of its primary trading market. Rule 12h-6(e) under the Exchange Act.

641 *See* Rule 12h-6(b) under the Exchange Act. Foreign issuers have employed a number of different strategies in the past to expedite deregistration, although the introduction of Rule 12h-6 has significantly facilitated the process. Deregistration can still present challenges to foreign issuers looking to satisfy the Rule 12h-6 requirements.

642 Rule 12h-6(a)(1) under the Exchange Act.

643 Rule 12h-6(a)(2) under the Exchange Act. Rule 12h-6(a)(2) excludes from this condition securities issued (i) to the issuer's employees, (ii) by selling securityholders in non-underwritten offerings, (iii) upon the exercise of outstanding rights granted by the issuer if the rights are granted *pro rata* to all existing securityholders of the class of the issuer's securities to which the rights attach, (iv) pursuant to a dividend or interest reinvestment plan, or (v) upon the conversion of outstanding convertible securities or upon the exercise of outstanding transferable warrants issued by the issuer. However, the exceptions under clauses (iii), (iv) and (v) above do not apply to securities issued pursuant to a standby underwritten offering or other similar arrangement in the United States. *See* Note to Rule 12h-6(a)(2) under the Exchange Act.

644 SEC Release No. 34-55540 (Mar. 27, 2007).

645 *See infra* Note 25 for the definition of "primary trading market."

646 SEC Release No. 34-55540 (Mar. 27, 2007).

647 Rule 12h-6(c) under the Exchange Act.

648 Rule 12h-6(g) under the Exchange Act.

649 Form 15F, Item 11.

650 Rule 12h-6(h) under the Exchange Act.

651 *See* SEC Release No. 34-55540 (Mar. 27, 2007) (noting that, as a result of terminating their Exchange Act reporting obligations under Rule 12h-6, foreign firms may save costs required for an investment in an

internal control system in order to comply with the Sarbanes-Oxley Act). A company is an issuer for purposes of the Sarbanes-Oxley Act if it (i) has securities registered under § 12 of the Exchange Act, (ii) is required to file reports under § 15(d) of the Exchange Act or (iii) files or has filed a registration statement under the Securities Act that has not yet become effective and that has not been withdrawn.

652 *See* § 4.07 for a detailed discussion of the Sarbanes-Oxley Act.

653 Rule 12g5-1 under the Exchange Act. The SEC has stated that institutional custodians, such as Cede & Co. acting as nominee holder for The Depository Trust Company, are not single record holders for purposes of the Exchange Act's registration and periodic reporting obligations. Instead, each of the custodian's accounts for which the securities are held is a record holder (meaning, in the case of The Depository Trust Company, that participants are record holders while indirect participants are not). *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Rules, Question 152.01 (Sept. 30, 2008).

654 § 15(d) of the Exchange Act and Rule 15d-6 thereunder.

655 Rule 12h-3(e) under the Exchange Act. An issuer that has had a Securities Act registration statement declared effective by the SEC and has not filed a Form 15F pursuant to Rule 12h-6 would be required to monitor the number of U.S. holders of its securities in order to determine whether registration under § 12 would be required. While it is highly unlikely in this scenario that the SEC would bring an action requiring registration of such securities if the relevant shareholder limits were exceeded, a technical obligation for the issuer to register the securities would nevertheless exist unless such issuer (i) had terminated its obligation pursuant to Rule 12h-6, (ii) had obtained from the SEC an order terminating its § 15(d) obligation or (iii) met the criteria to avail itself of the Rule 12g3-2(b) exemption. *See Sun Healthcare Group, Inc.* (avail. Sept. 29, 2010); *Hungarian Telephone and Cable Corp*. (avail. Feb. 27, 2009); *Trio-Kenwood Corporation* (avail. Mar. 1, 1983) (permitting foreign private issuers with suspended § 15(d) reporting obligations to rely on Rule 12g3-2(b)).

U.S. Regulation of the International Securities and Derivatives Markets, § 5.01, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 5.01 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

p. 5-3

Chapter 4 discusses the continuing disclosure obligations of a foreign private issuer that is a reporting company, meaning that it is required to file reports with the SEC under either § 13(a) or § 15(d) of the Exchange Act. This Chapter 5 discusses other kinds of requirements that apply to a reporting foreign private issuer—those mainly relating to corporate governance. Specifically, it addresses audit committees (§ 5.02), independent auditors (§ 5.03), internal controls and management certifications (§ 5.04) and other governance-related requirements (§ 5.05).

Most of these requirements apply to all reporting foreign private issuers, but one of the most important applies only to a foreign private issuer that has securities listed on a U.S. securities exchange: the audit committee requirements discussed in § 5.02[1]. Similarly, only a foreign private issuer with U.S. listed securities is subject to the requirements arising from other governance rules of the securities exchanges, which are discussed in § 5.05[8]. A reporting foreign private issuer that does not have securities listed on a U.S. exchange is not subject to the audit committee requirements or to these exchange rules.

The requirements discussed in this Chapter 5 also apply to U.S. domestic issuers— *i.e.*, reporting issuers that are not foreign private issuers. Those issuers, however, are also subject to extensive further governance-related requirements that arise principally from three sources: (a) exchange rules, which are an important source of governance requirements but which largely exempt a foreign private issuer if it follows home country practice; [1] (b) the SEC's requirements governing proxy statements and proxy solicitation, which impose extensive disclosure requirements relating to governance and extensive procedural requirements relating to the conduct of shareholder meetings, but which exempt foreign private issuers; [2] and (c) the corporate law of the state of incorporation. Because these requirements do not apply to foreign private issuers, the governance regime for foreign private issuers under U.S. law is less demanding than the rules applicable to a foreign issuer that lists securities in the local market in many jurisdictions outside the United States, and notably on the main listing venues in London and Hong Kong.

Footnotes

1 NYSE Listed Company Manual 303A.00 (exemption from most NYSE governance rules for foreign private issuers following home country practice); NASDAQ Listing Rules 5615(a)(3) (exemption from most Nasdaq governance rules for foreign private issuers following home country practice) and IM-5615-3 (requiring a foreign private issuer to provide an opinion of counsel concerning home country practice).

p. 5-4

[1] Listed Company Audit Committees

[a] General Requirements

A foreign private issuer with securities listed on a U.S. securities exchange is required to meet the audit committee requirements of Rule 10A-3 under the Exchange Act. Rule 10A-3 was adopted in 2003 to implement § 301 of the Sarbanes-Oxley Act, which is codified in § 10A(m) of the Exchange Act. The Rule operates through listing rules: rather than impose requirements directly on issuers, it requires the exchanges to adopt listing rules that impose requirements on listed issuers. The NYSE and Nasdaq, in turn, have adopted listing rules that, in the briefest of terms, require a listed issuer to have an audit committee that complies with Rule 10A-3. [3]

Rule 10A-3 requires that the audit committee have the following attributes:

- Each member of the audit committee must be a member of the board of directors. The rule does not specify the number of members of the audit committee.
- Each member of the audit committee must be independent, as defined in Rule 10A-3. Section 5.02[1][b] below describes the independence requirements and certain exceptions, including exceptions specifically for foreign private issuers. Disclosures relating to whether the audit committee includes an audit committee financial expert are discussed in § 5.02[2] below.
- The audit committee must be directly responsible for supervising the independent auditor. This includes "appointment, compensation, retention and oversight," and it includes resolving disagreements between management and the auditor regarding financial reporting. The auditor must report directly to the audit committee. These provisions of Rule 10A-3 may conflict with provisions of foreign law, as discussed in § 5.02[1][c] below.

p. 5-4
p. 5-5

Separately, the SEC's auditor independence rules also impose requirements for audit committee administration of auditor engagements. These are discussed in § 5.03[1][e] below.

- The audit committee must establish procedures to receive and treat "complaints regarding accounting, internal accounting controls, or auditing matters" and to allow employees to submit confidentially "concerns regarding questionable accounting or auditing matters." The rule does not provide any guidance on the nature of the required procedures.
- The audit committee must have appropriate funding and the authority to engage independent counsel and other advisers.

A foreign private issuer may be exempt from these requirements if it has a similar body established under requirements of its home country law, and that body meets the requirements of paragraph (c)(3) of Rule 10A-3. This exemption is described in § 5.02[1][c] below. [4]

If an issuer relies on one of the exemptions from the independence requirements, or if it relies on the exemption for a foreign private issuer with a similar body under home-country law, it must disclose its reliance on the exemption and disclose an assessment as to whether, and if so how, such reliance would adversely affect the ability of the audit committee to act independently and to comply with other audit committee requirements. This disclosure is required in the annual report on Form 20-F. [5]

The listing rules of NYSE and Nasdaq contain extensive additional requirements for audit committees. [6] These requirements do not apply to a foreign private issuer, but they are a useful reference point for best practices. For example, the applicable NYSE rule requires that an audit committee have at least three members; that each member must be "financially literate"; that the board consider and disclose any instance of an audit committee member who is simultaneously on the audit committees of three or more companies; and that the company have an internal audit function. It also requires that the audit committee have a written charter that includes specific responsibilities listed in detail in the rule.

[b] Independence

p. 5-5
p. 5-6

Rule 10A-3 requires that each audit committee member be independent under the standards set forth in the rule. The standards for independence address two issues: receipt of compensation from the issuer and affiliation with the issuer. There is no requirement, for either element, to "look back" to relationships in existence before the member was appointed to the audit committee. [7]

As to the compensation element, an audit committee member may not accept any consulting, advisory or other compensatory fee from the issuer or any subsidiary of the issuer, other than in his or her capacity as a member of the audit committee, the board of directors or another committee of the board. [8] This prohibition applies to indirect acceptance of fees, which includes compensation to certain family members. Indirect acceptance of fees also includes payments to a law firm, consulting firm, investment bank or financial advisor that provides services to the issuer or any subsidiary, if the audit committee member is a partner, member or officer of the service provider or occupies a similar position. [9]

As to the affiliation element, an audit committee member may not be an affiliated person of the issuer or any of its subsidiaries. [10] For this purpose, affiliation is defined in terms of control: an affiliate is a person that controls the issuer, is controlled by the issuer, or is under common control with the issuer. Under an express provision of the definition, beneficial ownership of 10% or less of an issuer's voting shares is deemed not to be control, as long as the beneficial owner is not an executive officer of the issuer.

Where an entity is an affiliate of the issuer, an individual is also deemed to be an affiliated person of the issuer if the individual is an executive officer, an inside director ("a director who also is an employee"), a general partner or a managing member of that entity. Under this definition, an outside director of an affiliate could be independent, and so could an employee of an affiliate who is not a director or executive officer of the affiliate. However, the SEC cautioned in adopting Rule 10A-3 that "an affiliate could not evade the prohibitions in the rule simply by designating a third party representative or agent that it directs to act in its place." [11]

p. 5-6
p. 5-7

There is an exemption from the independence requirements for a newly-public company, providing for a transition period to achieve a fully independent audit committee. [12] All but one member of the audit committee may be exempt for the first 90 days from effectiveness, and a minority may be exempt for the first year from effectiveness. There is also an exemption that permits a person to be independent with respect to two or more affiliated issuers at the same time. [13]

Rule 10A-3 also provides three exemptions under the independence requirement specifically for foreign private issuers. The first is meant to accommodate the practice of requiring employee or union representation on the board of directors or the audit committee. It exempts a member of the audit committee who is an employee from the independence requirement, if the employee is not an executive officer and is elected or named to the board or audit committee pursuant to the company's governing documents or foreign law, an employee collective bargaining or similar agreement or home country legal or listing requirements. [14] The second exempts a member of the audit committee from the non-affiliation element of the independence requirement if the member has only observer status on the audit committee and is not a voting member or chair of the audit committee. [15] The third exempts a member from the non-affiliation element of the independence requirement if the member (who cannot be an executive officer) is a representative or designee of a foreign government or foreign governmental entity. [16]

[c] Exemption for an Alternative Mechanism

In implementing the audit committee requirement under § 301 of the Sarbanes-Oxley Act, the SEC acknowledged that many jurisdictions outside the United States have legal or listing requirements that contemplate a different mechanism for auditor oversight, separate from the board of directors. It established an exemption from the audit committee requirements for a foreign private issuer that has a board of auditors (or similar body), or that has statutory auditors, if that board or body, or the statutory auditors, meet the requirements listed below. [17] This is a significant example of the SEC accepting compliance with

foreign law to meet a U.S. statutory mandate, and it has been relied on by issuers in several jurisdictions, notably in Brazil.

In order to qualify for the exemption, the body or the statutory auditors must:

- be established and selected pursuant to home-country legal or listing requirements that expressly require or permit such a body;
- be required under home-country legal or listing requirements to be either separate from the board of directors or mixed (composed of one or more board members and one or more non-board members); [18]
- not be elected by management, and not include any executive officers;
- be subject to independence standards under home-country law or listing provisions;
- be responsible for the appointment, retention and oversight of the work of any registered public accounting firm engaged to prepare and issue audit reports or perform an audit, review or attest services for the foreign company, including, to the extent permitted by local law, the resolution of disagreements between management and the auditor regarding financial reporting; and
- to the extent permitted by law, establish complaint procedures, have authority to engage advisers, and have appropriate funding, in each case as an audit committee must do under the general audit committee requirements.

[d] Conflicts Between Audit Committee Attributes and Foreign Law

The general audit committee regime under Rule 10A-3 requires that the audit committee have certain powers with respect to the auditor and accounting matters. Similarly, the exemption for an alternative mechanism requires that the body or the statutory auditors have certain powers. In many jurisdictions, however, those powers may be reserved to the shareholders, or they may be powers of the board of directors that it is not permitted to delegate. In some jurisdictions, those powers may be vested, for some issuers, with a governmental entity or tribunal.

To minimize these conflicts, Rule 10A-3 includes three instructions stating that the requirements that the audit committee have these powers "do not conflict" with requirements under the issuer's home-country law or listing requirements. If the home-country requirement gives power to the shareholders, the applicable instruction states that the requirements of Rule 10A-3 relate to the division of responsibility between the audit committee and management, and any recommendation or nomination to the shareholders should be provided by the audit committee. [19] If the home-country requirement prohibits the full board from delegating, or it recognizes a government entity or tribunal, the instruction states that the audit committee must have such responsibilities, including advisory powers, as are permitted by law. [20]

[2] Audit Committee Financial Expert Disclosure

[a] Disclosure Requirement

A reporting foreign private issuer is required to disclose in its annual report on Form 20-F whether its audit committee includes at least one person who meets the definition of "audit committee financial expert." [21]

The disclosure requirement has led most issuers to identify an audit committee financial expert, but there is no requirement to do so. If there is no audit committee financial expert on the audit committee, the issuer must disclose why not. Such disclosure is not common, but while it can be delicate to prepare it does comply with the rule.

The disclosure requirement applies even if the issuer is not subject to the requirement to have an audit committee—for example, because it has no U.S.-listed securities. If the issuer has a two-tier board of directors, the disclosure requirement applies to the supervisory, or non-management, board. [22] If the issuer is exempt from the requirement to have an audit committee because it has an alternative body that qualifies under Rule 10A-3 under the Exchange Act, then it must disclose whether the alternative body has an audit committee financial expert. [23]

p. 5-9
p. 5-10

If there is an audit committee financial expert, the issuer must disclose that person's name and whether that person is independent, as defined for this purpose. If the issuer has more than one audit committee member who meets the definition, it is only required to identify one, but if it identifies more than one it must disclose whether each is independent. [24] Independence, for the purpose of this disclosure requirement, is as defined in the U.S. listing rules applicable to the issuer. If the issuer is not listed, it must use the independence definition of a U.S. exchange and disclose what definition it uses. [25]

[b] Definition of Audit Committee Financial Expert

The audit committee financial expert is defined in Item 16A based on attributes the person must have and the experience by which such attributes are required. The attributes include: (i) an understanding of generally accepted accounting principles and financial statements; (ii) the ability to assess the general application of such principles in connection with the accounting for estimates, accruals and reserves; (iii) experience in preparing, auditing, analyzing or evaluating financial statements with a breadth and level of complexity in accounting issues that are reasonably expected to be comparable to the company's financial statements (or experience actively supervising a person engaged in the same); (iv) an understanding of internal control over financial reporting; and (v) an understanding of audit committee functions. When the definition refers to "generally accepted accounting principles," it means the accounting principles the issuer uses in its primary financial statements filed with the SEC. [26]

The experience may come from education or experience as a principal financial officer, principal accounting officer, controller, public accountant or auditor, or in similar functions; experience actively supervising any of those positions; or experience overseeing the performance of companies or public accountants with respect to the preparation, auditing or evaluation of financial statements. The experience may also derive from "other relevant experience," but if so the disclosure must describe that experience. The experience may not come solely from previous audit committee experience. [27]

p. 5-10

p. 5-11

Item 16A includes several additional instructions, collectively designated "Safe Harbor," which are intended to ensure that the designation of an audit committee financial expert does not affect other legal liabilities or responsibilities. They provide that the designation does not make the designee an "expert" for liability purposes under the Securities Act, or increase the duties of the designee, or affect the duties of the other members of the audit committee or the board of directors. [28]

Footnotes

3 NYSE LISTED COMPANY MANUAL 303A.06; NASDAQ LISTING RULES 5605(c). The SEC stated in adopting Rule 10A-3 that it did not intend to consider requests for exemptions, waivers or no-action letters. SEC Release No. 33-8220 (Apr. 9, 2003). Rule 10A-3(b)(1)(iv)(F) provides that in addition to the enumerated exemptions, the SEC may exempt a particular relationship from the independence requirements, discussed below, as the SEC determines appropriate in light of the circumstances. This provision implements the exemptive authority granted to the SEC in § 301 of the Sarbanes-Oxley Act.

4 Rule 10A-3 also provides other exemptions, including: an exemption for listing securities of a foreign government (paragraph (c)(6)(iii)); an exemption for a subsequent listing by an issuer that is already subject to Rule 10A-3 (paragraph (c)(1)); and an exemption for the listing of debt securities by a subsidiary of an issuer that is already subject to Rule 10A-3 (paragraph (c)(2)).

5 Item 16D of Form 20-F; Rule 10A-3(d)(2) under the Exchange Act. For a domestic issuer, this disclosure would also be required in any proxy or information statement.

6 NYSE LISTED COMPANY MANUAL 303A-07; NASDAQ LISTING RULES 5605(c).

7 By contrast, the independence standards for domestic issuers impose a three-year "look-back." NYSE LISTED COMPANY MANUAL 303A.02; NASDAQ LISTING RULES 5605.

8 Rule 10A-3(b)(1)(ii)(a) under the Exchange Act. There is an exception for fixed, non-contingent compensation under a retirement plan.

9 Rule 10A-3(b)(1)(ii)(A) under the Exchange Act. "Indirect acceptance" is defined in Rule 10A-3(e)(8).

10 Rule 10A-3(b)(1)(ii)(B) under the Exchange Act. "Affiliated person" is defined in Rule 10A-3(e)(1).

11 SEC Release No. 33-8220 (Apr. 25, 2003). The SEC had originally proposed that a "designee" of an affiliate would be deemed to be an affiliate, and it deleted that word in the final rule but included the quoted language in the release.

12 Rule 10A-3(b)(1)(iv)(A) under the Exchange Act.

13 Rule 10A-3(b)(1)(iv)(B) under the Exchange Act.

14 Rule 10A-3(b)(1)(iv)(D) under the Exchange Act.

15 Rule 10A-3(b)(1)(iv)(D) under the Exchange Act.

16 Rule 10A-3(b)(1)(iv)(E) under the Exchange Act. In the adopting release, the SEC acknowledged the practice of foreign governmental representatives sitting on audit committees of foreign private issuers, and it sought to balance independence concerns and foreign practices by permitting the practice so long as the "no compensation" prong of the independence requirement is met and the person in question is not a member of management.

17 Rule 10A-3(c)(3) under the Exchange Act.

18 A body composed entirely of board members, or permitted to be composed entirely of board members, would not meet this requirement. We understand, however, that some issuers have received informal comfort from the SEC staff that they may rely on the exemption where the body is mixed, even though home-country law would permit it to be composed entirely of board members.

19 Rule 10A-3, Instruction 1.

20 Rule 10A-3, Instruction 2.

21 Form 20-F, Item 16A. This disclosure requirement, which implements § 407 of the Sarbanes-Oxley Act, is essentially identical to the requirement for proxy statements of domestic issuers, which appears in Item 407(d)(5) of Regulation S-K. The requirement does not apply to a registration statement under the Securities Act or the Exchange Act.

22 Form 20-F, Item 16A, Instruction 3.

23 Form 20-F, Item 16A, Instruction 3.

24 Form 20-F, Item 16A, Instruction to paragraph (a).

25 Form 20-F, Item 16A, paragraph (a)(2).

26 Form 20-F, Item 16A, Instruction 3.

27 SEC Release No. 33-8177 (Jan. 23, 2003). The release also notes that "the fact that a person has experience as a public accountant or auditor, or a principal financial officer, controller or principal accounting officer or experience in a similar position does not, by itself, justify the board of directors in deeming the person to be an audit committee financial expert." Form 20-F, Item 16A, Instruction 3.

[1] Auditor Independence

[a] Overview

In general, maintaining independence from the audit client is a regulatory requirement applicable to auditors, and auditors are responsible for monitoring compliance and may be subject to penalties for failing to do so. [29] A full discussion of U.S. regulation of the auditing profession is beyond the scope of this chapter.

However, independence rules affect a reporting company in important ways. First, the SEC's rules require an issuer to file audited financial statements in annual reports and in registration statements, and the auditor must be independent. [30] If the auditor was not independent, the issuer that filed the audited financial statements violated its obligations under the securities laws. [31] In rare cases,

p. 5-12

the issuer may need to replace its auditor, if the condition that impairs independence is continuing, or to obtain a new audit of a past period by a different auditor. Second, the independence rules require that the issuer have certain governance measures in place; these are separate from the audit committee requirements discussed in § 5.02, but they are closely related in practice. Third, the independence rules affect how the auditor interacts with the company. This § 5.03[1] discusses the independence matters that most regularly affect a reporting foreign private issuer.

Auditor independence is sometimes a major issue in the initial public offering of a foreign private issuer, because SEC standards concerning the independence of auditors are more stringent than those in many other jurisdictions. A foreign issuer, together with its counsel, may need to discuss these standards with the SEC staff in order to confirm that its practices comply or understand what needs to be done to ensure that its practices will comply prior to registering any securities in the United States. If the SEC is not satisfied that auditors are independent, it may request that a second audit be conducted by a different auditing firm covering all periods subsequent to the date on which it deems the auditors to have lost independence. In special circumstances, however, the SEC may permit an issuer to proceed using financial statements for the most recent fiscal year audited either by a different auditor (or the same auditor if it is independent throughout the audit of that fiscal year), even though financial statements for prior years remain "tainted" by the non-independence of the auditors. This may be the case if, for example, the previous auditors lost independence inadvertently and such non-independence for U.S. purposes was permitted by home-country law, or if the issuer had not contemplated a U.S. listing or offering during the period in question.

An audit client already subject to the Exchange Act's ongoing reporting obligations faces potentially serious consequences if its auditor is determined not to be independent. The practical difficulties in resolving such a problem are substantial, and there is also the risk of SEC enforcement action. In the past, in independence cases the SEC has generally pursued remedies against the auditor and not against the issuer, but issuers (and particularly audit committees) would be prudent to exercise reasonable care to ensure that relationships with auditors comply with the independence rules.

Rule 2-01 of Regulation S-X governs independence for SEC purposes. It reflects two major rulemaking exercises in the early 2000s. The first was the Commission's reaction to the growth and diversification of auditing firms, which

p. 5-12
p. 5-13

led to the adoption of a comprehensive new rule in November 2000. [32] The second was the enactment in 2002 of Title II of the Sarbanes-Oxley Act, [33] which led the SEC to adopt amendments in January 2003. [34] The rule has not been significantly amended since 2003. The rule generally applies to foreign private issuers in the same way as to domestic issuers. Within the SEC, the Office of Chief Accountant has primary responsibility for applying and interpreting the rules on auditor independence, and it has published on the SEC's website a detailed set of answers to Frequently Asked Questions on the subject. [35]

The independence requirements in Rule 2-01 apply not only to the principal firm that signs the audit report, but also to any other accounting firm or accountant performing services in connection with an engagement for which independence is required. Many of its provisions also refer to "covered persons," which includes auditor personnel who play specified roles related to the audit. In addition to the SEC's rule, the PCAOB has independence rules that apply to the auditor of any reporting company. [36]

Rule 2-01 sets forth a general standard of independence: an auditor is not independent if it is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that it is not, capable of exercising objective and impartial judgment on all issues encompassed within its engagement. [37] A preliminary note to Rule 2-01 identifies four factors to be considered in determining whether a relationship between the auditor and the audit client, or the provision of a service by the auditor, is consistent with independence: (i) whether there is a mutual or conflicting interest between the auditor and the audit client; (ii) whether the auditor will be in the position of auditing its own work; (iii) whether the auditor will be acting as management or an employee of the audit client; and (iv) whether the auditor is in a position of being an advocate

p. 5-13
p. 5-14

for the audit client. [38] The "audit client" for purposes of Rule 2-01 is defined to include the issuer and its affiliates.

In addition to the general standard, Rule 2-01 also provides that in order to maintain independence:

- the auditor may not provide certain specified non-audit services to the audit client, as discussed in §§ 5.03[1][b] and 5.03[1][c] below; [39]
- the audit client may not employ former auditor personnel in certain positions unless certain conditions are met, as discussed in § 5.03[1][d] below;
- the issuer's audit committee must administer the engagement of the auditor to provide audit and non-audit services, as discussed in § 5.03[1][e] below;
- partners involved in the audit must rotate every five or seven years, depending on the partner's role in the audit; [40]
- an audit partner may not be compensated based on non-audit services provided to the audit client; [41]
- the auditor, and covered persons and their family members, may not have various forms of investment or other financial interest in the audit client; [42]
- the auditor, and covered persons and their family members, may not have various forms of business relationships with the audit client; [43] and

p. 5-14
p. 5-15

- the auditor may not receive contingent fees from the audit client for any services. [44]

The specific requirements of the independence rules are not exclusive, and the general standard and the PCAOB rules must also be taken into account in evaluating independence. [45] For example:

- The SEC takes the position that an audit client's agreement to indemnify the auditor is inconsistent with auditor independence. [46]
- PCAOB rules prohibit an independent auditor from advising on confidential or aggressive tax transactions, and from providing tax reporting services to an individual in a financial reporting oversight role at the audit client. [47]

[b] Prohibited Non-Audit Services

Rule 2-01(c)(4) lists ten categories of non-audit services that are inconsistent with independence. [48] The rule (i) governs the provision of non-audit services by an accountant to an audit client during the audit and professional engagement period and (ii) defines "audit client" broadly to include subsidiaries

p. 5-15

p. 5-16

and affiliates. Section 201(b) of the Sarbanes-Oxley Act provides that the PCAOB may, on a case-by-case basis, exempt any person, issuer, public accounting firm or transaction from the prohibition of a given service to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors. Such exemptions are subject to review by the SEC.

Bookkeeping. Under the rules, an auditor's independence is impaired if the auditor provides the audit client with bookkeeping or other services related to accounting records or financial statements, including:

- maintaining or preparing the audit client's accounting records;
- preparing the audit client's financial statements that are filed with the SEC or form the basis of financial statements filed with the SEC; or
- preparing or originating source data underlying the audit client's financial statements;

unless, in each case, it is reasonable to conclude that the results of such service will not be subject to audit procedures during an audit of the audit client's financial statements. [49] The SEC has stated that the preparation of statutory financial statements by the auditor of a foreign private issuer on behalf of its audit client is prohibited if the statutory financial statements later form the basis of financial statements filed with the SEC. [50]

Information Technology. An independent auditor may not provide its audit client with design or implementation of financial information systems, including:

p. 5-16

p. 5-17

- directly or indirectly operating or supervising the operation of the audit client's information system or managing the audit client's local area network; or
- designing or implementing a hardware or software system that aggregates source data underlying the financial statements or generates information that is significant to the audit client's financial statements or other financial information systems taken as a whole;

unless, in each case, it is reasonable to conclude that the results of such service will not be subject to audit procedures during an audit of the audit client's financial statements. [51] The rules do not preclude an accounting firm from working on hardware or software systems that are unrelated to the audit client's financial statements or accounting records, so long as those services are pre-approved by the audit committee.

The SEC has stated that information will be considered significant to an audit client's financial statements as a whole if such information is reasonably likely to be "material" to the financial statements. The SEC has further stated that since materiality determinations may not be complete before financial statements are generated, the audit client and accounting firm will need to evaluate the general nature of the information rather than only system output during the period of the audit engagement. The SEC noted, for example, that an accounting firm will not be deemed independent of an audit client for which it designs an integrated Enterprise Resource

Planning system. [52]

Appraisals, Valuations, Fairness Opinions, Contribution Reports. An independent auditor may not provide any appraisal service, valuation service or service involving a fairness opinion or contribution-in-kind report for its audit client, in each case unless it is reasonable to conclude that the results of such service will not be subject to audit procedures during an audit of the audit client's financial statements. [53] Appraisal and valuation services include any process of valuing assets (tangible or intangible) or liabilities. This includes valuing, among other things, in-process research and development, financial instruments, assets and liabilities acquired in a merger and real estate, and would include due diligence services to the extent valuation, or the development of assumptions relating to valuation, are involved. [54] Fairness opinions and contribution-in-kind

p. 5-17

p. 5-18

reports include any opinion or report in which an accounting firm provides its opinion on the adequacy of consideration in a transaction.

The SEC has stated that the rule does not prohibit an accounting firm from providing services for nonfinancial reporting purposes, such as preparing transfer pricing studies or cost segregation studies. The SEC has further stated that the rule does not prohibit an accounting firm from using its own valuation specialist to review the work done by an audit client itself or an independent, third-party specialist employed by the audit client, if the audit client or the third-party specialist provides the technical expertise used in determining the required amounts recorded in the financial statements. [55]

The SEC has noted that a strict application of the rule related to contribution-in-kind reports might create conflicts in certain foreign jurisdictions, where laws or regulations require the auditor to provide contribution-in-kind reports in connection with designated transactions of its audit client. Although the SEC has declined to provide a categorical exception for such conflicts, it indicated that it is sensitive to the issue and will work with other regulatory agencies to resolve such conflicts. [56]

Actuarial Services. An auditor's independence is impaired if the auditor provides any actuarially-oriented advisory service involving the determination of amounts recorded in an audit client's financial statements and related accounts, other than assisting a client in understanding the methods, models, assumptions and inputs used in computing an amount, unless it is reasonable to conclude that the results of such service will not be subject to audit procedures during an audit of the audit client's financial statements. [57] The SEC has clarified that the rules permit an accounting firm to use its own actuaries to assist in conducting an audit, provided that the audit client uses its own actuaries or third-party actuaries to provide management with the primary actuarial capabilities. [58]

Internal Audit. An independent auditor may not provide any internal audit service relating to the internal accounting controls, financial systems or financial statements of the audit client, unless it is reasonable to conclude that

p. 5-18

p. 5-19

the results of such service will not be subject to audit procedures during an audit of the audit client's financial statements. [59] The SEC has clarified that the rule does not apply to nonrecurring evaluations of discrete items or programs that are not in substance the outsourcing of the internal audit function, nor does it include operational internal audits unrelated to internal accounting controls, financial systems or financial statements. The SEC has further noted that during the conduct of an audit in accordance with generally accepted auditing standards or when providing audit services related to internal controls, the auditor is expected to evaluate and make recommendations with respect to an audit client's internal controls, and has indicated that such services would not constitute an internal audit outsourcing engagement. [60]

Management Functions. An auditor's independence is impaired if he or she acts, temporarily or permanently, as a director, officer or employee of an audit client or performs any decision-making, supervisory or ongoing monitoring function for the audit client. [61] With respect to management of internal controls, the SEC has noted that its rule on management functions continues to permit an independent auditor to assess the effectiveness of an audit client's internal controls and to recommend improvements in the design and implementation of internal controls and risk management controls. However, the actual design and implementation of internal controls and risk management controls are prohibited. [62]

Human Resources. An auditor's independence is impaired if the auditor provides any of the following services to an audit client:

- searching for or seeking out prospective candidates for managerial, executive or director positions;
- engaging in psychological testing or other formal testing or evaluation programs;
- undertaking reference checks of prospective candidates for an executive or director position;

p. 5-19
p. 5-20

- acting as a negotiator on the audit client's behalf, such as determining positions, status or title, compensation, fringe benefits or other conditions of employment; or
- recommending or advising a client to hire a specific candidate for a specific job (except that an accounting firm may, upon request by an audit client, interview candidates and advise the audit client on a candidate's competence for financial accounting, administrative or control positions). [63]

Broker-Dealer, Investment Adviser or Investment Banking Services. An independent auditor may not provide any of the following services to an audit client:

- acting as a broker-dealer (registered or unregistered), promoter or underwriter on behalf of an audit client;
- making investment decisions on behalf of an audit client or otherwise having discretionary authority over an audit client's investments;
- executing a transaction to buy or sell an audit client's investment; or
- having custody of assets of an audit client, such as taking temporary possession of securities purchased by the audit client. [64]

Legal Services. An independent auditor may not provide a service to an audit client that, under circumstances in which the service is provided, could be provided only by someone licensed, admitted or otherwise qualified to practice law in the jurisdiction in which the service is provided. [65] The rule may create conflicts where an auditor provides a service in a foreign jurisdiction, and the service must be performed by a licensed legal practitioner, even though it could be provided by a non-lawyer in the United States. The SEC has stated that, as a general matter, the rule is not intended to prohibit foreign auditing firms from providing services that an auditing firm in the United States may provide. Thus, in determining whether a service would impair the auditor's independence solely because the service is labeled a legal service in a foreign jurisdiction, the SEC will consider whether the provision of the service would be prohibited in the United States, as well as in the foreign jurisdiction. [66]

p. 5-20
p. 5-21

Expert Services. An independent auditor may not provide an expert opinion or other expert service for an audit client or an audit client's legal representative for the purpose of advocating an audit client's interests in litigation or in a regulatory or administrative proceeding or investigation. [67] The prohibition covers any service that is intended to result in an accounting firm's specialized knowledge, experience or expertise being used to support the contentions of an audit client in adversarial proceedings. Thus, for example, an auditor cannot be engaged by an audit client's legal counsel to provide expert witness or other services, including forensic accounting services, in connection with the client's participation in a legal, administrative or regulatory proceeding. [68]

The independence rule does not, however, prohibit an auditor from testifying as a fact witness with respect to its audit work for a particular audit client. It expressly provides that in any litigation or regulatory or administrative proceeding or investigation, an auditor's independence will not be impaired if the auditor provides factual accounts, including in testimony, of work performed or explains the positions taken or conclusions reached during the performance of any service for the audit client. [69]

The SEC has stated that the rule does not prohibit an auditor from assisting a company's audit committee or its legal counsel by performing internal investigations or fact finding engagements that may result in the issuance of a report to the audit client. [70] If, subsequent to the completion of such an engagement, a proceeding or investigation is initiated, the accountant may allow its work product to be used by the audit client and its legal counsel without impairing the accountant's independence. The accountant, however, may not then provide additional services, with the exception of providing factual accounts or testimony about the work performed.

An auditor would not be considered independent if, at any time during the audit and professional engagement period, the auditor provided translation services in connection with SEC filings to its audit clients based in foreign jurisdictions or U.S. clients with foreign operations. The SEC staff explained that translation services require decisions and judgments on behalf of management on the selection and application of words, phrases, and specific accounting, business and industry terms. In conveying the meanings as expressed by management in the original language, it could create a mutual or conflicting interest between the auditor and the audit client and may put the auditor in the position of auditing its own work. [71]

[c] Tax Services

p. 5-21
p. 5-22

Section 10A(h) of the Exchange Act specifies that tax services are among the non-audit services that an independent auditor may provide. The SEC's independence rule itself, consequently, is silent on tax services, but the SEC has stated that under its rule an accounting firm may provide tax services to its audit clients, such as tax compliance, tax planning and tax advice. [72] The SEC has, however, emphasized that classifying a service as a "tax service" does not necessarily mean that the service is permitted; for example, providing representation before a tax court, district court or federal court of claims, although it is tax-related, is inconsistent with independence.

With respect to the formulation of tax strategies designed to minimize an audit client's tax obligations, the SEC warned in 2003 that an issuer's audit committee should "scrutinize carefully the retention of an accountant in a transaction initially recommended by the accountant, the sole business purpose of which may be tax avoidance and the tax treatment of which may not be supported in the Internal Revenue Code and related regulations." [73] Subsequently the PCAOB adopted a rule providing that an audit firm is not independent if it provides services to its audit client on specified classes of tax-motivated transactions. To define the suspect categories of transactions, the PCAOB relies in part on existing regulations of the Department of Treasury, but it also includes any transaction initially recommended by an auditor or tax advisor "a significant purpose of which is tax avoidance, unless the proposed tax treatment is at least more likely than not to be allowable under applicable tax laws." [74]

PCAOB rules also provide that an audit firm is not independent if it provides any tax service to an officer in a financial reporting oversight role at the audit client. It does not matter who pays for the service. The rule does not apply to tax services provided to directors who are in a financial reporting oversight role solely by virtue of their role as directors, or to other employees that do not have a financial reporting oversight role. [75]

[d] Conflicts of Interest Resulting from Employment Relationships

p. 5-22
p. 5-23

Movement of personnel between an auditing firm and its audit client is not unusual, but it must be monitored so it does not compromise the auditor's continuing independence. The issue that arises most often is employment at the audit client of people who have some current or former connection with the auditor. [76]

In particular, it is inconsistent with independence for the audit client to employ someone who is currently a partner, principal, shareholder or professional employee of the auditor. Such a person also may not serve on the board of directors of the audit client. [77] Even a former partner, principal, shareholder or professional employee of the auditor may not be employed in any accounting role or a "financial reporting oversight role" [78] at the audit client if he or she has a continuing financial interest in the auditor or is in a position to influence its operations or financial policies. [79] These prohibitions apply even if the person has had no involvement in the auditor's work for the issuer.

Employment of former auditor engagement team members in a financial reporting oversight role is subject to a more specific prohibition. The independence rule prohibits employment in such a role of a former partner, principal, shareholder or professional employee of the auditor, if he or she was a member of the audit engagement team of the issuer during the one-year period preceding the date that audit procedures commenced for the fiscal period that included his or her date of initial employment by the issuer. [80] Audit procedures are deemed to commence for a given fiscal period on the day following the filing with the SEC

p. 5-23

p. 5-24

of the issuer's annual report on Form 10-K, Form 20-F or Form 40-F, as applicable, covering the previous fiscal period. [81]

Accordingly, an auditing firm is not independent if a member of the audit engagement team moves into a financial oversight role at the issuer, unless a cooling-off period has passed between the person's last participation in the audit engagement team and his or her first employment with the issuer. Although the formulation of the cooling-off period is complex, in most cases [82] it will last from the time the person ceases to be part of the audit engagement team through the filing of the next annual report, and then until the next fiscal year-end. [83]

These rules on conflicts of interest do not apply to:

- a person, other than the lead partner and the concurring partner, who provides ten or fewer hours of audit, review or attest services during the relevant one-year period preceding the date that audit procedures commenced;
- an individual employed by the issuer as a result of a business combination between an audit client and the employing entity, provided employment was not in contemplation of the business combination and the audit committee of the successor issuer is aware of the prior employment relationship; and
- an individual employed by the issuer due to an emergency or other unusual situation, provided the audit committee determines that the relationship is in the interest of investors. [84]

[e] Audit Committee Administration of the Engagement

p. 5-24

p. 5-25

An auditor is not independent unless the audit committee administers the auditor's engagement. [85] The audit committee has other duties relating to the supervision of auditors, which are not directly related to independence but are set forth in the audit committee requirements of Rule 10A-3, discussed in § 5.02 above. If the issuer does not have an audit committee because it is not subject to Rule 10A-3, the requirement for audit committee administration of the engagement must be met by the board of directors as a whole. [86] If instead of an audit committee the issuer relies on an alternative body such as a board of statutory auditors to meet the requirements of Rule 10A-3, then the requirement for audit committee administration of the engagement must be met by that body. [87]

Under this requirement, each engagement of the auditor to provide any service to the audit client or any subsidiary must be either (i) specifically approved in advance by the audit committee or (ii) entered into pursuant to pre-approval policies and procedures established by the audit committee. [88] This requirement applies to audit services and to non-audit services, and it includes the engagement of statutory auditors for non-U.S. subsidiaries.

If the audit committee establishes pre-approval policies and procedures, they must be detailed as to the specific services that may be engaged, and they may not delegate audit committee responsibilities to management. [89] Any engagement pursuant to the pre-approval policies and procedures must be reported to the audit committee. An issuer must also disclose the audit committee's pre-approval policies and procedures in the annual report on Form 20-F. [90]

There is a limited exception from the pre-approval requirement for small, inadvertent engagements for non-audit services. The pre-approval requirement is waived for non-audit services that meet three conditions: (i) the aggregate amount of all such non-audit services provided to the company is not more than

p. 5-25

p. 5-26

five percent of the total amount of revenues paid by the company to its auditor in the year the services are rendered; (ii) the services were not recognized by the company at the time of the engagement to be non-audit services; and (iii) the services are promptly brought to the attention of the audit committee and approved prior to the completion of the audit by the audit committee or by one or more members of the audit committee to whom authority to grant such approvals has been delegated by the audit committee. [91] Any engagements that fall within this provision must be disclosed in the annual report on Form 20-F. [92]

[2] Auditor Reports to the Audit Committee

Auditors are required to report to the audit committee, pursuant to a variety of separate requirements of the SEC and the PCAOB. As a practical matter, the most important of these is the PCAOB's Auditing Standard No. 1301, which requires the auditor to (i) communicate with the audit committee regarding certain matters related to the conduct of the audit, (ii) obtain certain information from the audit committee relative to the audit, (iii) establish an understanding with the audit committee of the terms of the audit engagement, and (iv) record that understanding in an engagement letter. [93] The communications specified in the standard must occur prior to the issuance of the audit report, and they must be documented in the auditor's work papers and, for some but not all matters, delivered in writing.

The SEC also has a separate rule requiring the auditor to report to the audit committee, prior to the filing of its audit report with the SEC:

- all critical accounting policies and practices used by the issuer;
- all alternative treatments relating to material items that have been discussed with the issuer's management, including the ramifications of using the alternative treatment and the treatment the auditor preferred; and
- other material written communications between the auditor and management, such as any management letter or schedule of unadjusted differences. [94]

p. 5-26

p. 5-27

In addition, there are many PCAOB standards requiring auditors to communicate specific matters to the audit committee. [95] For example, the auditor is required to make certain specific annual communications to the audit committee concerning its independence. [96] These communication requirements can have an impact on how the auditor and management interact; examples include the requirement that the auditor communicate any disagreements with management, the requirement that the auditor provide the schedule of unadjusted differences and discuss their materiality, or the requirement that it communicate its views about any matter about which it is aware that management has consulted with other accountants.

[3] Change-of-Auditor Disclosure

An issuer is required to provide specific disclosures if its auditor has resigned, or declined to stand for re-election, or been dismissed, and if it has engaged a new auditor. For a foreign private issuer, the disclosure requirement is set forth in Item 16F of Form 20-F, and it is required in any annual report and in any registration statement under the Securities Act or the Exchange Act. [97] The disclosure requirements are virtually identical to those that apply to a domestic issuer, except that a domestic issuer must disclose the information more promptly. [98]

Some of the information required by Item 16F is simple background, and for many changes of auditor no further information is required. [99] The purpose of the disclosures, however, is to elicit information about disagreements with the old auditor and about pre-engagement consultations with the new auditor that might represent "opinion shopping." To that end, Item 16F sets forth an extensive list of matters that must be reported if they have occurred, centering around

p. 5-27
p. 5-28

whether there were disagreements with the former auditor and whether there were consultations with the new auditor before its engagement. It also requires that the old auditor provide a letter to the SEC stating whether it agrees with the disclosures, and this letter must be filed as an exhibit to the annual report or registration statement containing the disclosures.

The principal U.S. securities exchanges also require a listed issuer to notify the exchange about a change in its auditors, but neither has substantive disclosure requirements concerning a change of auditors similar to Form 20-F. [100]

[4] Auditor Response to Evidence of Illegality

Section 10A(b) of the Exchange Act requires an auditor, if it encounters evidence of illegal acts in the course of conducting an audit, to take certain specific steps that can culminate in reporting the evidence to the SEC. These are sometimes referred to as "up-the-ladder reporting." These obligations have an important impact on how an issuer and its auditor deal with certain kinds of information that may come up in connection with the audit of the financial statements.

Section 10A(b) is triggered if, in the course of conducting an audit, the auditor discovers or becomes aware of information indicating an illegal act has or may have occurred, whether or not the illegality is perceived to have a material effect on the financial statements. [101] In that event, the auditor must determine whether it is likely an illegal act occurred and if so, determine the possible effect on the financial statements, including the possibility of consequences such as fines, penalties and damages. As soon as practicable, the auditor must inform management and assure that the audit committee is adequately informed, unless the illegal act is "clearly inconsequential." If there is no audit committee, the auditor must assure that the board of directors is adequately informed.

Further consequences under § 10A(b) depend on whether the illegality is material to the financial statements and whether the issuer responds with appropriate remedial actions. The auditor has an obligation to report to the board of directors if it concludes that (i) the illegal act has a material effect on the financial statements, (ii) neither senior management nor the board of directors has taken "timely and appropriate remedial actions" and (iii) the failure to take remedial actions is reasonably expected to warrant departure from the standard report of the auditor, or warrant resignation from the audit engagement. [102] If the board of directors receives such a report from its auditors, it is obligated to notify the

p. 5-28
p. 5-29

Office of the Chief Accountant at the SEC within one business day of receipt and provide a copy of that notice to its auditors; if the auditor does not receive a copy of that notice within one business day, it must either resign from the engagement or furnish its report in writing to the SEC within one business day. [103]

[5] Prohibited Conduct Involving Audits

Rule 13b2-2 under the Exchange Act specifically prohibits certain representations and conduct by issuer personnel in its dealings with auditors. In general terms, paragraph (a) of the Rule prohibits false or misleading statements or omissions by an officer or director to an accountant in connection with a required audit, review or examination or a required filing. [104]

Paragraph (b) of Rule 13b2-2 also specifically prohibits actions to coerce, manipulate, mislead or fraudulently influence an auditor. The directors and officers of a reporting issuer, and any person acting at their direction, may not take any direct or indirect action to coerce, manipulate, mislead or fraudulently influence an auditor in an audit or review of the issuer's financial statements required to be filed with the SEC, if such person knows or should know that such action could, if successful, result in rendering the financial statements materially misleading. [105] This prohibition would capture conduct whether or not it succeeds in affecting the audit or review. It is the act of coercing, manipulating, misleading or fraudulently influencing the auditor, for the purpose of rendering misleading financial statements, that is unlawful, and there is no requirement that the purpose be achieved. [106] Rule 13b2-2 is enforceable in civil proceedings exclusively by the SEC. [107]

p. 5-29

p. 5-30

In addition to officers and directors, Rule 13b2-2(b) regulates the activities of persons acting "under the direction of" officers and directors. The SEC has stated that it interprets the term "direction" as encompassing a broader category of behavior than "supervision" and that persons acting "under the direction" of an officer or director could include persons outside the issuer's hierarchy who improperly influence the conduct of an audit. Such persons may include customers, vendors and creditors of the issuer, attorneys, securities professionals and other professional advisors and partners and other employees of the issuer's accounting firm. [108]

Rule 13b2-2(b) provides that actions that, if successful, could result in rendering an issuer's financial statements materially misleading, include but are not limited to, actions taken at any time, with respect to the professional engagement period, to coerce, manipulate, mislead or fraudulently influence an auditor:

- to issue or reissue a report on an issuer's financial statements that is not warranted in the circumstances (due to material violations of generally accepted accounting principles, generally accepted auditing standards or other professional or regulatory standards);
- not to perform audit, review or other procedures required by generally accepted auditing standards or other professional standards;
- not to withdraw an issued report; or
- not to communicate matters to an issuer's audit committee.

Types of conduct that the SEC believes could constitute improper influence (whether engaged in directly or indirectly, but only if the person engaged in that conduct knows or should know that the conduct, if successful, could result in rendering the issuer's financial statements materially misleading) include, but are not limited to:

p. 5-30

p. 5-31

- offering or paying bribes or other financial incentives, including offering future employment or contracts for nonaudit services;
- providing an auditor with an inaccurate or misleading legal analysis;
- signing misleading management representation letters addressed to the auditor;
- threatening to cancel or canceling existing nonaudit or audit engagements if the auditor objects to the issuer's accounting;
- seeking to have a partner removed from the audit engagement because the partner objects to the

issuer's accounting;

- blackmailing; and
- making physical threats. [109]

With respect to the time frame of the prohibited conduct, the term "engaged in the performance of an audit" should be read broadly and should encompass both the professional engagement period and any other time the auditor is called upon to make decisions regarding an issuer's financial statements. [110] This would therefore include improperly influencing an auditor during negotiations for retention of the auditor, during a review of interim financial statements or in connection with the issuance of a consent to the use of the auditor's report. In limited circumstances, this time frame could also include conduct occurring before the professional engagement period begins—for example, if an officer offers to engage an accounting firm subject to a condition that could result in rendering the financial statements materially misleading, such as a condition that the firm issue an unqualified audit report on financial statements that do not conform with generally accepted accounting principles, or a condition that the firm limit the scope or performance of audit or review procedures in violation of generally accepted auditing standards. [111]

[6] Regulation of the Auditing Profession

Before the Sarbanes-Oxley Act, the auditing profession in the United States was largely self-regulated, and auditing standards were adopted by the AICPA. The PCAOB was established in 2002 pursuant to the Sarbanes-Oxley Act with a mandate to:

p. 5-31

p. 5-32

- register public accounting firms that prepare audit reports for issuers;
- establish auditing, quality control, ethics, independence and other standards relating to the preparation of audit reports; and
- conduct inspections, investigations and disciplinary proceedings of and take enforcement action against public accounting firms. [112]

The Sarbanes-Oxley Act prohibits the issuance of audit reports, or participation in the preparation of an audit report, with respect to any reporting issuer by any accounting firm that has not registered, as required, with the PCAOB. [113]

The PCAOB has five members, who serve full-time and are appointed to staggered five-year terms. They are appointed by the SEC, after consultation with the Chairman of the Board of Governors of the Federal Reserve System and the Secretary of the Treasury, and the SEC has continuing oversight of the PCAOB. [114]

Except for the information required to be provided in the initial registration and subsequent annual reports filed with the PCAOB (including information regarding fees paid to the public accounting firms by each issuer client for audit and nonaudit services), which will be publicly available, [115] other information received by the PCAOB is required to be maintained confidentially, although

p. 5-32

p. 5-33

information with respect to an inspection or investigation may be shared with the SEC and, if deemed to be necessary by the PCAOB, with the U.S. Attorney General or other specified federal and state regulators. [116]

A foreign public accounting firm that prepares or furnishes audit reports with respect to any reporting issuer is required to register with the PCAOB just as a U.S. firm would be, and it is subject to the same inspection, investigation and disciplinary powers. [117] For most reporting foreign private issuers, the audit reports that the issuer files with the SEC are signed not by a U.S. auditing firm but by a local firm in the issuer's home jurisdiction, which must be independently registered with the PCAOB even if it is a member of a global network. In addition, even a foreign public accounting firm that does not furnish audit reports may be required to register if it plays a substantial role in the preparation of audit reports—for example, where a U.S. issuer has major French operations, and the French member of the global network does the audit work relating to those operations.

The PCAOB regularly conducts inspections of non-U.S. firms, and it has also conducted investigations and taken disciplinary actions against non-U.S. firms. [118] Furthermore, any foreign public accounting firm that performs material services relied on by a registered public accounting firm is required to produce its workpapers to the PCAOB. [119]

The conduct of inspections and investigations outside the United States, and the production of workpapers by non-U.S. auditing firms, have proven highly controversial. Some foreign accounting firms are organized in jurisdictions where by law the provision of workpapers requires the consent of the audit client. The PCAOB takes the position that an auditor must choose whether (i) to satisfy itself in advance that the non-U.S. client will provide any necessary consent if and when the PCAOB demands documents or information concerning the client, (ii) to proceed without such assurance and take a risk that it may later have to choose between providing information without the client's consent and facing a PCAOB sanction for failing to provide the information or (iii) to decline the audit engagement. Even if an accounting firm obtains advance assurance that the

client will provide consent, it may still be subject to sanctions if the client ultimately refuses to provide the promised consent at the time the PCAOB requests documents from the auditor. [120]

In other jurisdictions, local law may be understood to prohibit the provision of workpapers or other aspects of cooperation by a local auditing firm with PCAOB inspections and investigations. This difficulty has led to protracted administrative proceedings and international negotiations involving the Chinese members of global auditing networks. [121]

The PCAOB has also faced objections from foreign auditor-oversight authorities in response to its attempts to carry out joint inspections of PCAOB-registered accounting firms located outside the United States, and it has sought to address these objections by entering into formal cooperative arrangements with foreign audit regulators. [122]

Footnotes

29 Rule 10A-2 under the Exchange Act provides that it is unlawful for an auditor not to be independent under the SEC's independence rules. Rule 10A-2 was adopted following the Sarbanes-Oxley Act to clarify that the auditor has a separate obligation to be independent. *See* § 208(b) of the Sarbanes-Oxley Act (providing that it is unlawful for an auditor to issue and audit report if it has violated specified independence requirements set forth in the Act or the SEC's rules thereunder). A failure of independence is a violation by the auditor, but an issuer might also be in violation of the rule to the extent it aided, abetted or caused the auditor to lose independence, and in any case failure of the auditor to be independent often results in failure of the issuer to comply with its Exchange Act reporting obligations, as discussed below.

30 *E.g.*, Item 8.A of Form 20-F (requiring financial statements audited by an independent auditor); Rule 1-02(a)(1)g of Regulation S-X (defining an "accountant's report" as a report of an independent public accountant).

31 SEC enforcement cases finding auditor independence violations have generally found that the issuer violated the Exchange Act but have not imposed sanctions on the issuer. *See*, *e.g.*, *In the Matter of Ernst & Young LLP and Gregory S. Bednar, CPA*, SEC Admin Proc. File No. 3-17552 (Sept. 19, 2016) and *In the Matter of Ernst & Young LLP, Robert Brehl, CPA Pamela J. Hartford, CPA and Michael T. Kamienski, CPA*, SEC Admin Proc. File No. 3-17553 (Sept. 19, 2016) (finding, in administrative proceedings against an auditor but not the audit client, that independence violations arising from improperly close personal relationships between auditor personnel and audit client personnel caused the audit client to violate § 13(a) of the Exchange Act and Rule 13a-1 thereunder); *In the Matter of KPMG LLP*, SEC Admin. Proc. File No. 3-15687 (Jan. 24, 2014) (finding, in administrative proceedings against an auditor but not the audit clients, that

independence violations arising from prohibited non-audit services, employment relationships and investments cause three audit clients to violate § 13(a) of the Exchange Act and Rule 13a-1 thereunder).

32 SEC Release No. 33-7919 (Nov. 21, 2000).

33 §§ 201-204 and 206 of the Sarbanes-Oxley Act are codified as paragraphs (g)-(l) of § 10A of the Exchange Act. § 208(b) of the Sarbanes-Oxley Act separately provides that it is unlawful for an auditor to issue an audit report if it has engaged in conduct prohibited by paragraphs (g)-(l) or SEC rules adopted thereunder.

34 SEC Release No. 33-8183 (Jan. 28, 2003). Much of what § 201 required was already contained in the rule as adopted in 2000, so the 2003 amendments were fairly limited in scope.

35 *See* SEC, Office of the Chief Accountant, Application of the Commission's Rules on Auditor Independence Frequently Asked Questions (Dec. 13, 2004).

36 PCAOB Rules 3520–3526. These PCAOB rules notably prohibit an auditor from accepting contingent fees, from advising on confidential or aggressive tax transactions, and from providing tax reporting services to an individual in a financial reporting oversight role at the audit client. They also impose audit committee pre-approval requirements for certain services relating to tax and to internal controls, and they require auditors to communicate with audit committees concerning independence.

37 Rule 2-01(b) of Regulation S-X.

38 Preliminary Note 2 to Rule 2-01 of Regulation S-X.

39 *See*, *e.g.*, *In the Matter of KPMG*, *LLP*, SEC Release No. 71389 (Jan. 24, 2014) (finding that auditor violated independence rules by providing prohibited non-audit services such as bookkeeping and expert services to affiliates of audit clients).

40 Rule 2-01(c)(6) of Regulation S-X.

41 Rule 2-01(c)(8) of Regulation S-X.

42 Rule 2-01(c)(1). *See*, *e.g.*, *In the Matter of KPMG, LLP*, SEC Release No. 71389 (Jan. 24, 2014) (KPMG violated auditor independence rules because, among other things, KPMG personnel owned stock in companies or affiliates of companies that were KPMG audit clients). The prohibition on "other financial interests" can have far-reaching impact when the audit client provides financial services or is related to entities that do. *See*, *e.g.*, *Fidelity Management & Research Company*, *et al.* (avail. June 20, 2016) (no-action letter addressing whether lending relationships between auditor and an investment company complex are inconsistent with auditor independence). Paragraph (c)(1) also prohibits the audit client having an investment in the auditor.

43 Rule 2-01(c)(3) of Regulation S-X. *See*, *e.g.*, *In the Matter of Ernst & Young LLP*, SEC Release No. 34-49615 (Apr. 26, 2004) (suspending auditor from accepting audit engagements from new public audit clients for a period of six months as a result of auditor's joint business relationships with its audit client).

44 Rule 2-01(c)(5) of Regulation S-X. PCAOB Rule 3521 also provides that a registered public accounting firm is not independent if it enters into contingent fee arrangements, directly or indirectly, with the audit client. In 2002, the SEC settled an auditor independence case with PricewaterhouseCoopers related to violations spanning a five-year period from 1996 to 2001 arising from (i) PwC's use of prohibited contingent fee arrangements with 14 different audit clients for which PwC's broker-dealer affiliate provided investment banking services and (ii) PwC's participation with two other audit clients in an improper accounting of costs that included PwC's own consulting fees. *In the Matter of Avon Products, Inc.*, SEC Release No. 34-46215 (July 17, 2002); *In the Matter of PricewaterhouseCoopers LLP*, SEC Release No. 34-46216 (July 17, 2002).

45 For example, in 2014, an SEC investigation found that Ernst & Young violated auditor independence rules because an Ernst & Young subsidiary lobbied congressional staff on behalf of two audit clients. Ernst & Young agreed to pay more than $4 million to settle the charges. *In the Matter of Ernst & Young LLP*, SEC Release No. 72602 (July 14, 2014). *See In the Matter of Ernst & Young Accountants*, SEC Release No. 34-46130 (June 27, 2002).

46 SEC, Office of the Chief Accountant, Application of the Commission's Rules on Auditor Independence Frequently Asked Questions (Dec. 13, 2004). While the staff generally has not objected to the

indemnification of a former auditor for costs incurred in the successful defense of claims (provided that the current auditor has opined on at least the most recent fiscal year and the indemnification arrangement is fully disclosed), the staff will not permit indemnification of a current auditor under any circumstances. *See also* SEC Codification of Financial Reporting Policies § 602.02.i.i., Fed. Sec. L. Rep. (CCH) ¶3874.

47 PCAOB Rules 3522 and 3523.

48 Section 10A(g) of the Exchange Act lists nine categories, which the SEC reworked into ten in Rule 2-01(c)(4). The 2000 version of the Rule established very similar categories (but it excluded expert services). In debating the Sarbanes-Oxley Act, Congress, like the SEC in the 2000 rulemaking, considered a range of approaches, ranging from the prohibition of any non-audit work (*see* S. Amdts. 4193, 4238, 4239, to S. 2673 (Senators Sarbanes, McCain, et al); "Auditor Independence Act of 2002," S. 1896, 107th Cong., Section 3 (2002) (Senator Boxer)) to permitting all non-audit work subject to audit committee pre-approval (*see* "Investor Confidence in Public Accounting Act of 2002," S.2004, 107th Cong., Section 201 (2002) (Senators Dodd, Corzine, *et al*.)).

49 Rule 2-01(c)(4)(i) of Regulation S-X. The qualification "unless it is reasonable to conclude that the results of these services will not be subject to audit procedures during an audit of the audit client's financial statements'" appears in the SEC's prohibitions on (i) bookkeeping, (ii) financial information systems design and implementation, (iii) appraisal or valuation services, fairness opinions or contribution-in-kind reports, (iv) actuarial services and (v) internal audit outsourcing. This language establishes a rebuttable presumption that the services in question are subject to audit procedures. *See* 2003 Auditor Independence Release, 68 Fed. Reg. 6006, 6030 (Feb. 5, 2003) ("2003 Auditor Independence Release"). The SEC has stated that an example of a situation where it would be reasonable to conclude that the results would not be subject to audit procedures would be where an accounting firm provides a prohibited service to an affiliate of the client, but the accounting firm is not the auditor of the entity that controls the accounting firm's client or its affiliate.

50 2003 Auditor Independence Release.

51 Rule 2-01(c)(4)(ii) of Regulation S-X.

52 2003 Auditor Independence Release.

53 Rule 2-01(c)(4)(iii) of Regulation S-X.

54 Due diligence services are generally regarded as permissible by the SEC if they do not involve valuation. *See* 2003 Auditor Independence Release (discussing "assurance and related services (*e.g.*, due diligence services) that traditionally are performed by the independent accountant" in terms of permissible services). Such services could include reviewing the reasonableness of assumptions and performing calculations based on those assumptions.

55 2003 Auditor Independence Release.

56 *See* SEC Release No. 33-8183 (Jan. 28, 2003) ("[W]e understand that laws and regulations in certain foreign countries require auditors to provide contribution-in-kind reports or valuation services. The Commission has historically addressed conflicts between U.S. and foreign requirements regarding non-audit services on an ad hoc basis. Commission staff has previously afforded relief from proscriptions against appraisal and valuation services where, among other things, the auditor and issuer were able to demonstrate that the auditor was not providing an opinion on the fairness of a given transaction. The Commission will continue to take this ad hoc approach, and will continue to consider requests for exemptive relief from foreign auditors.")

57 Rule 2-01(c)(4)(iv) of Regulation S-X.

58 2003 Auditor Independence Release.

59 Rule 2-01(c)(4)(v) of Regulation S-X. An engagement to provide services related to internal control over financial reporting is also subject to special pre-approval requirements under PCAOB Rule 3525.

60 2003 Auditor Independence Release. Existing auditing standards require an accountant to consider and evaluate an audit client's internal controls. *See* AICPA, CODIFICATION OF ACCOUNTING STANDARDS AND PROCEDURES, Statement on Auditing Standards (AU) § 319, Consideration of Internal Control in a Financial

Statement Audit and Statement on Auditing Standards (AU) § 325, Communication of Internal Control Related Matters Noted in an Audit. In addition, rules under § 404(b) of the Sarbanes-Oxley Act require an auditor to opine on the effectiveness of an issuer's internal control over financial reporting. *See* § 4.06[2].

61 Rule 2-01(c)(4)(vi) of Regulation S-X.

62 2003 Auditor Independence Release.

63 Rule 2-01(c)(4)(vii) of Regulation S-X.

64 Rule 2-01(c)(4)(viii) of Regulation S-X.

65 Rule 2-01(c)(4)(ix) of Regulation S-X.

66 2003 Auditor Independence Release.

67 Rule 2-01(c)(4)(x) of Regulation S-X.

68 2003 Auditor Independence Release.

69 Rule 2-01(c)(4)(x) of Regulation S-X.

70 2003 Auditor Independence Release.

71 *See* SEC, Office of the Chief Accountant, Application of the Commission's Rules on Auditor Independence—Frequently Asked Questions (Dec. 14, 2004).

72 2003 Auditor Independence Release. The SEC noted that reviewing the tax accrual included in an audit client's financial statements is part of audit services and is not, in and of itself, deemed to be a tax compliance service.

73 2003 Auditor Independence Release, *see also* Letter from Donald T. Nicolaisen, Chief Accountant, SEC, to Bruce P. Webb, Chair, AICPA Professional Ethics Executive Committee, (May 21, 2004) (confirming the SEC's view that, notwithstanding the AICPA's assertion to the contrary, the receipt by an auditor of contingent fees for tax services provided to an audit client would impair the auditor's independence with respect to that client). PCAOB rules also treat registered public accounting firms as not independent if they enter into contingent fee arrangements, directly or indirectly, with audit clients.

74 PCAOB Rule 3522.

75 PCAOB Rule 3523. *See infra* Note 78 and the definition of "financial reporting oversight role."

76 Employment at the auditor of former issuer personnel can also impair independence. In particular, a former officer, director or employee of the audit client may not participate in, or be in a position to influence, the audit of the audit client covering any period the individual was associated with the issuer. Rule 2-01(c)(2)(iv) of Regulation S-X.

77 Rule 2-01(c)(2)(i) of Regulation S-X. It is also inconsistent with independence for a "close family member" of a "covered person in the firm" to act in an accounting role or a financial reporting oversight role at the audit client. Rule 2-01(c)(2)(ii) of Regulation S-X. The terms in quotation marks are defined in Rule 2-01(f) of Regulation S-X.

78 A "financial reporting oversight role" is defined as a role in which a person is in a position to, or does, exercise influence over the contents of an issuer's financial statements, such as when a person is a member of the board of directors, chief executive officer, president, chief financial officer, chief operating officer, general counsel, chief accounting officer, controller, director of internal audit, director of financial reporting, treasurer or any equivalent position. Rule 2-01(f)(3)(ii) of Regulation S-X. The SEC has stated that a person who has direct responsibility for overseeing those who prepare a registrant's financial statements and related information, such as the MD&A, is in a financial reporting oversight role. 2003 Auditor Independence Release.

79 Rule 2-01(c)(2)(iii) of Regulation S-X.

80 Rules 2-01(c)(2)(iii)(A) and 2-01(c)(2)(iii)(B) of Regulation S-X. The Exchange Act also specifically provides that it is unlawful for an auditor to perform any audit service for a company if the company's chief executive officer, controller, chief financial officer or chief accounting officer, or any person serving in an equivalent position, was employed by the auditor and participated in any capacity in the audit of the company during

the one-year period preceding the date of initiation of the audit. § 10A(1) of the Exchange Act, codifying § 206 of the Sarbanes-Oxley Act.

81 Rule 2-01(c)(2)(iii)(B)(3) of Regulation S-X.

82 The cooling-off period could differ from the paraphrase in the text above, where the filing date of the annual report changes from one year to the next (so that there is not exactly one year between annual reports), and the person leaves the audit engagement team during the period between the filing date and the date that is one year before the next filing date.

83 There are, however, some interpretive difficulties that could require clarification from the SEC staff. For example, on the face of the rule, the bar would appear to be permanent—if a person moves from the audit engagement team to a financial oversight position before the cooling-off period ends, the auditing firm can never be independent again. The SEC staff has informally indicated that the bar is only intended to last until the end of the cooling-off period, which is all the language of the Sarbanes-Oxley Act requires. The bar also seems to apply if a member of the audit engagement team moves to a nonfinancial-oversight position within the cooling-off period, and then moves into a financial oversight position after the end of the cooling-off period. This result is probably also unintended.

84 Rule 2-01(c)(2)(iii)(B)(2) of Regulation S-X. This particular exception was intended to address issues that may arise in foreign jurisdictions making it extremely difficult or costly to comply, but the SEC has noted that it expects the emergency exception to the rules to be invoked very rarely. 2003 Auditor Independence Release.

85 Rule 2-01(c)(7) of Regulation S-X. This requirement implements § 202 of the Sarbanes-Oxley Act, which is codified in § 10A(i) of the Exchange Act.

86 *See* § 3(a)(58) of the Exchange Act (defining "audit committee" to mean the full board where there is no separate audit committee).

87 SEC Release No. 33-8220 (Apr. 9, 2003).

88 In addition to SEC independence rules, PCAOB independence rules require audit committee pre-approval for certain tax services and for services related to internal control over financial reporting. PCAOB Rules 3524 and 3525.

89 Published guidance of the SEC's Office of Chief Accountant addresses the level of detail necessary, stating that monetary limits and broad, categorical approvals are not sufficient, and that while the level of detail will depend on the circumstances of the issuer, it must be sufficient so that there is no delegation to management and the audit committee can make a well-reasoned assessment of the impact of the services on independence. *See* SEC, Office of the Chief Accountant, Application of the Commission's Rules on Auditor Independence Frequently Asked Questions (Dec. 13, 2004).

90 Item 16C(e) of Form 20-F.

101 § 10A(b)(1) of the Exchange Act.

102 § 10A(b)(2) of the Exchange Act.

103 § 10A(b)(3) of the Exchange Act. Rule 10A-1 under the Exchange Act provides procedures for notices to the Office of Chief Accountant by either the issuer or the auditor. An auditor complying with its obligations under § 10A(b) will not be liable in a private action for any finding, conclusion or statement in its report to the board of directors or the SEC. § 10A(c) of the Exchange Act.

104 Rule 13b2-2(a) under the Exchange Act.

105 Rule 13b2-2(b) under the Exchange Act. The SEC adopted paragraph (b) of Rule 13b2-2 in 2003 to implement § 303 of the Sarbanes-Oxley Act. The SEC has stated that paragraph (b) establishes a negligence standard. SEC Release No. 34-47890 (May 20, 2003).

106 SEC Release No. 34-47890 (May 20, 2003).

107 § 303(b) of the Sarbanes-Oxley Act. A willful violation could also result in criminal penalties under § 32(a) of the Exchange Act. The SEC has brought a number of proceedings against individuals alleging violations of Rule 13b2-2, generally together with other violations. *See*, *e.g.*, *SEC v. Kipp and Viard*, SEC Litigation Release No. 23544 (May 24, 2016) (alleging the company's former CFO and former director of external reporting violated Rule 13b2-2 by manipulated acquisition-related reserves and expenses in order to increase earnings to predetermined targets tied to the expectations of lenders as the basis for future acquisition financing); *United States v. Lundstrom*, SEC Litigation Release No. 23499 (Mar. 25, 2016) (former chairman and CEO sentenced to 11 years in federal prison and ordered to pay a $1.2 million fine for orchestrating a scheme to defraud shareholders and mislead regulators by concealing more than $100 million in losses on loans and declining real estate); *SEC v. Neil*, SEC Litigation Release No. 23192 (Feb. 6, 2015) (alleging the former CEO directed an effort to fraudulently underreport money paid to walnut growers by delaying the recognition of related expenses into later fiscal periods); *In the Matter of Michael Mendes* and *SEC v. Neil*, SEC Litigation Release No. 22902 (Jan. 9, 2014) (alleging that a company's CEO and CFO violated Rule 13b2-2 by making false and misleading statements to external auditors in signed management representation letters); *SEC v. Forman,* SEC Litigation Release No. 21677 (Sept. 30, 2010) (alleging that a company's controller violated Rule 13b2-2 by providing independent auditors with false information and statements regarding prepaid transaction revenue); *SEC v. Gupta*, SEC Litigation Release No. 21451 (Mar. 15, 2010) (alleging that two of the company's CFOs knowingly signed management representation letters to its external auditors containing materially false or misleading statements or omissions); *SEC v. Stanard*, SEC Litigation Release No. 20875 (Jan. 30, 2009) (finding that the former CEO made false or misleading statements to external auditors in signed management representation letters and in providing them with false information about insurance claims).

108 SEC Release No. 34-47890 (May 20, 2003).

109 SEC Release No. 34-47890 (May 20, 2003).

110 SEC Release No. 34-47890 (May 20, 2003).

111 SEC Release No. 34-47890 (May 20, 2003).

112 § 101(c) of the Sarbanes-Oxley Act. The original authority of the PCAOB over audits of reporting "issuers" was extended by the Dodd-Frank Act, which amended the Sarbanes-Oxley Act to give the PCAOB

oversight authority over audits of SEC-registered broker-dealers. The PCAOB adopted implementing amendments to its rules in December 2013. PCAOB Release No. 2013-010 (Dec. 4, 2013).

113 § 102(a) of the Sarbanes-Oxley Act; *see also* SEC Release No. 34-48180 (July 16, 2003). U.S. public accounting firms were required to register with the PCAOB by October 22, 2003; foreign firms were required to register by July 19, 2004. *See* SEC Release No. 34-48180 (July 16, 2003); SEC Release No. 34-49473 (Mar. 25, 2004). The prohibition in § 102(a) applies to audit reports with respect to an "issuer" as defined in § 2(a)(7) of the Sarbanes-Oxley Act, which includes a reporting company but not, for example, a company that is exempt from reporting under Rule 12g3-2(b) under the Exchange Act.

114 § 107 of the Sarbanes-Oxley Act. *See Free Enterprise Fund v. Public Company Accounting Oversight Board*, 130 S. Ct. 3138 (2010) (upholding the constitutionality of the PCAOB, but holding unconstitutional certain tenure provisions, or "removal restrictions," in the Sarbanes-Oxley Act allowing removal of the PCAOB's members only for "good cause" by the SEC).

115 The public availability of PCAOB registration applications and annual reports, or any portion thereof as may be designated by the PCAOB, is subject to the rules of the PCAOB or the SEC and to legal restrictions relating to confidentiality of proprietary or personal information. § 102(e) of the Sarbanes-Oxley Act. The PCAOB has accommodated foreign firms insofar as the scope of information required to be included in their registration applications is reduced and such firms may withhold certain information if they can demonstrate that providing the information would conflict with non-U.S. law (by providing an English copy or translation of the non-U.S. law, a legal opinion that submitting the information would violate the law and an explanation of the firm's efforts to seek consents or waivers to eliminate the conflict). *See* PCAOB Rules, Rules 2105, 2207; *see also* SEC Release No. 34-60497 (Aug. 13, 2009) (approving rules on annual and special reporting by registered public accounting firms proposed by the PCAOB).

116 § 105(b)(5) of the Sarbanes-Oxley Act.

117 § 106(a)(1) of the Sarbanes-Oxley Act.

118 For example, in December 2016, the PCAOB issued orders imposing sanctions on Deloitte Touche Tohmatsu Auditores Independentes, the Brazilian auditing firm in the Deloitte global network, and 12 individuals associated with that firm, arising from violations of U.S. securities laws and PCAOB rules in connection with audits of two reporting foreign private issuers. PCAOB Release No. 105-2016-031 (Dec. 5, 2016).

119 § 106(b) of the Sarbanes-Oxley Act, as amended by § 929J of the Dodd-Frank Act. Such foreign firms are subject to the jurisdiction of the U.S. courts for purposes of enforcing such production of workpapers.

120 PCAOB, Frequently Asked Questions Regarding Issues Relating to Non-U.S. Accounting Firms, Question 4 (Dec. 15, 2016).

121 The proceedings were settled in February 2015. *In the Matter of BDO China Dahua CPA Co.*, SEC Admin. Proc. File Nos. 3-14872, 3-15116 (Feb. 6, 2015) (finding that five auditing firms willfully violated § 106 of the Sarbanes-Oxley Act, and imposing among other things specified undertakings and other relief relating to the production of documents in response to future PCAOB requests).

122 In July 2010, the Dodd-Frank Act amended § 105 of the Sarbanes-Oxley Act to provide that the PCAOB may, in certain circumstances, share information with non-U.S. auditor oversight authorities. As of late 2016, the PCAOB reported that it had entered into cooperative arrangements with regulators in 23 countries, that it had conducted inspections in 45 non-U.S. jurisdictions on a cumulative basis, and that in 12 jurisdictions it was denied access to the information necessary to conduct inspections on the basis of asserted restrictions under local law or objections based on national sovereignty. PCAOB Cooperative Arrangements with Non-U.S. Regulators, Jurisdictions Where the PCAOB has Conducted Inspections of Registered non-U.S. Firms (June 30, 2015), and Registered Firms not yet Inspected even though Four or More Years have Passed since Issuance of an Audit Report while Registered (June 30, 2015), PUB. CO. ACCOUNTING OVERSIGHT BD. (Dec. 15, 2016).

[1] Books and Records Requirement

The Foreign Corrupt Practices Act ("FCPA"), first adopted in 1977, has two parts: (i) the anti-bribery provisions, which prohibit the bribery of non-U.S. government officials, and (ii) the accounting provisions, which require issuers to keep accurate books and records and to maintain a system of internal accounting controls. The FCPA is codified in § 13(b) of the Exchange Act and enforced by the SEC and, in criminal cases, by the Department of Justice (the “DOJ”). The anti-bribery provisions are discussed in § 11.

p. 5-35

The accounting provisions apply only to "issuers," which are defined as companies that have shares registered under § 12 of the Exchange Act or file periodic reports under § 15(d) of the Exchange Act. [123] An issuer is responsible for compliance with the accounting provisions by its controlled subsidiaries. [124] An issuer that controls 50% or less of the "voting power" of an affiliate must use its influence, in good faith and to the extent reasonable under the circumstances, to cause the affiliate to maintain internal accounting controls that meet the FCPA standard. [125]

The accounting provisions of the FCPA require an issuer to keep books, records and accounts that, in reasonable detail, accurately reflect corporate payments and transactions. [126] An issuer must also maintain systems of internal accounting controls able to provide reasonable assurances that (i) transactions are executed in accordance with management's authorization; (ii) transactions are recorded as necessary both to permit the preparation of financial statements in conformity with generally accepted accounting principles and to maintain accountability for assets; (iii) access to assets is permitted only in accordance with management's authorization; and (iv) the recorded accountability for assets is compared with the existing assets at reasonable intervals and appropriate action is taken with respect to any differences. [127]

U.S. authorities frequently use the accounting provisions of the FCPA to impose liability on non-U.S. issuers, even where there might not be jurisdiction

p. 5-35

p. 5-36

to apply the anti-bribery provisions. [128] A bribe payment by an issuer or its consolidated subsidiary, if falsely recorded, creates liability for the issuer, and no other tie with the United States is needed to establish accounting provision jurisdiction. [129] And bribe payments are almost invariably falsely recorded in the payor's accounting records as "sales expense," "commission," "agent fees," or similar terms. [130]

[2] Internal Control Over Financial Reporting

[a] Overview

One of the central innovations in the Sarbanes-Oxley Act was internal control reporting under § 404. Section 404 directed the SEC to adopt rules requiring that each annual report under the Exchange Act contain an internal control report stating that management is responsible for establishing internal controls, containing management's evaluation of their effectiveness, and providing the auditor's attestation as to that assessment. The SEC developed the expression "internal control over financial reporting"—sometimes shortened to "ICFR"—to describe the subject of this reporting requirement. The development of internal control reporting under § 404 involved, in addition to extensive rulemaking by the SEC, the adoption by the PCAOB of a new standard governing the related auditor attestation. [131] These reporting requirements were controversial, with many issuers and other commentators contending that they imposed excessive burdens; with respect to foreign issuers in particular, they were characterized as a significant deterrent to accessing the U.S. public markets. They have, however, come to be an accepted feature of reporting by public companies.

The principal elements of the framework for internal control reporting, as it applies to a reporting foreign private issuer, are listed below. A new reporting

p. 5-36

p. 5-37

company is not subject to these requirements until it has filed at least one annual report. [132]

- The issuer must maintain internal control over financial reporting. [133]
- Management must evaluate the effectiveness of ICFR as of the end of each fiscal year. [134] This evaluation must be made with the participation of the principal executive officer and the principal financial officer, or persons performing similar functions. It must be based on "a suitable, recognized control framework," as defined in the applicable SEC rule. [135]
- Management must also evaluate any change in ICFR that occurred during the fiscal year and that has materially affected, or is reasonably likely to materially affect, the issuer's ICFR. [136] This evaluation must be made with the participation of the chief executive officer and the chief financial officer. Any change that is identified must be disclosed in the annual report on Form 20-F. [137]
- The officer certifications that accompany the annual report on Form 20-F must include specified information about ICFR, as discussed in § 5.04[4] below.
- The annual report on Form 20-F must include a management report on the issuer's ICFR. [138] The report must include a statement of management's responsibility for establishing and maintaining adequate internal control over financial reporting, and it must identify the framework management used to

p. 5-37

p. 5-38

  evaluate effectiveness. It must also state whether or not ICFR was effective as of the end of the fiscal year, as discussed in § 5.04[2][c] below.
- The annual report on Form 20-F must also include an auditor's report on management's assessment of effectiveness. Smaller issuers—issuers that are not "accelerated filers" or "large accelerated filers" [139]—are exempt from this requirement. [140]

The SEC staff has published answers to frequently asked questions on ICFR reporting that address a number of recurring issues in the application of the rules. Among other things, the staff addresses how ICFR reporting applies to an equity method investment or a proportionally consolidated investment. [141] The SEC staff also acknowledges that, where an issuer has recently acquired a business, it may be unable to conduct an assessment of ICFR at the newly acquired business in time to include it in management's report on ICFR. In such a case, the staff will not object to the issuer excluding the acquired business from the scope of the report, for not more than one year from the date of acquisition, provided it makes specified disclosures. [142]

[b] Definition

Internal control over financial reporting is defined as a process designed by, or under the supervision of, an issuer's principal executive and principal financial officers, or persons performing similar functions, and effected by the issuer's board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. [143] Internal control over financial reporting includes those policies and procedures that:

p. 5-38

p. 5-39

- pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of an issuer;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and receipts and expenditures of the issuer are made only in accordance with authorizations of management and directors; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the issuer's assets that could have a material effect on the financial statements.

[c] Effectiveness

A foreign private issuer must disclose under Item 15 of Form 20-F whether its internal control over financial reporting was effective as of the end of the fiscal year. When the conclusion is affirmative, the language used for this disclosure is highly standardized. The SEC staff has objected in comment letters when an issuer provides a partial summary of the definition of ICFR or qualifies management's conclusion about effectiveness.

The determination whether ICFR is effective relies on two concepts that were developed by the PCAOB to govern the auditor's attestation relating to internal control: "significant deficiency" and "material weakness." [144] A material weakness is "a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the registrant's annual or interim financial statements will not be prevented or detected on a timely basis." If management identifies a material weakness, it must disclose the material weakness and may not conclude that internal control over financial reporting is effective. [145] A conclusion that ICFR is

p. 5-39

p. 5-40

not effective does not affect the issuer's eligibility to use short-form registration. [146]

A significant deficiency is "a deficiency, or a combination of deficiencies, in internal control over financial reporting that is less severe than a material weakness, yet important enough to merit attention by those responsible for oversight of the registrant's financial reporting." There is no requirement to disclose a significant deficiency. However, certain process implications are the same as for a material weakness: management is required to certify that it has communicated any significant deficiency to the board of directors, and the auditor is also required to communicate with the audit committee concerning any significant deficiency.

[3] Disclosure Controls and Procedures

The regulatory requirements concerning disclosure controls and procedures are parallel in some ways to the requirements concerning internal control over financial reporting, but there are important differences. [147] Disclosure controls and procedures are not limited to financial reporting, so they are broader in scope than internal control over financial reporting; but with respect to financial reporting, ICFR has a much more developed regulatory framework and an auditor attestation requirement. Auditors do not report on disclosure controls and procedures, and perhaps for that reason compliance has proven to be less burdensome than for internal control over financial reporting.

Disclosure controls and procedures are defined as those controls and other procedures of an issuer that are designed to ensure that information, both financial and nonfinancial, required to be disclosed in reports filed or submitted by such issuer under the Exchange Act is recorded, processed, summarized and reported within the required time periods. These controls and procedures include, without limitation, measures designed to ensure that information required to be

p. 5-40

p. 5-41

disclosed in Exchange Act reports is accumulated or communicated to an issuer's management, including its principal executive and financial officers, or persons performing similar functions, as appropriate to allow timely decisions regarding required disclosure. [148] In discussing how the DC&P requirements are broader than the ICFR requirements, the SEC has stated that disclosure controls and procedures should be designed, in particular, to capture the following types of information:

- information potentially subject to disclosure under Regulation S-X, Regulation S-K and Form 20-F;
- information relevant to an assessment of the need to disclose developments and risks that pertain to an issuer's businesses (including, in some cases, an assessment and evaluation of operational and regulatory risks); and
- information that must be evaluated for disclosure pursuant to Rule 12b-20 under the Exchange Act, which requires that Exchange Act reports include any material information necessary to make the required statements, in the light of the circumstances under which they are made, not misleading. [149]

The requirements for DC&P reporting, as they apply to a reporting foreign private issuer, are as follows:

- The issuer must maintain disclosure controls and procedures. [150]
- Management must evaluate the effectiveness of the issuer's disclosure controls and procedures as of the end of each fiscal year. [151] The evaluation must be conducted with the participation of the principal executive officer and the principal financial officer, or persons performing similar functions.
- The officer certifications that accompany the annual report on Form 20-F must include specified information about DC&P, as discussed in § 5.04[4] below.
- The annual report on Form 20-F must disclose the conclusions of the principal executive officer and the principal financial officer concerning the effectiveness of the issuer's DC&P as of the end of the fiscal year. [152]

p. 5-41

p. 5-42

SEC rules do not provide procedures for the conduct of the evaluation of DC&P, but the SEC has stated that it expects each issuer to develop a process that is consistent with its business and internal management and supervisory practices. [153] In practice, the procedures are generally designed to provide a basis for the certifications the CEO and CFO must provide, as discussed in § 5.04[4] below. The SEC has also recommended, but not required, that an issuer establish a disclosure committee, which would be responsible for considering the materiality of information and determining disclosure obligations on a timely basis. According to the SEC, a disclosure committee might be expected to include the issuer's (i) principal accounting officer or controller, (ii) general counsel or other senior legal officer with responsibility for disclosure matters who reports to the general counsel, (iii) principal risk management officer, (iv) chief investor relations officer (or an officer with equivalent responsibilities) and (v) other officers or employees, including individuals associated with the issuer's business units, to the extent deemed appropriate. [154]

[4] Officer Certifications

[a] Section 302 Certifications

SEC rules adopted pursuant to § 302 of the Sarbanes-Oxley Act require that an issuer's annual and quarterly reports under the Exchange Act must include personal certifications of the issuer's principal executive officer and principal financial officer, or persons performing similar functions. [155] The certification must be filed as an exhibit to the report. For a foreign private issuer, this requirement applies to the annual report on Form 20-F but not to reports on Form 6-K. [156] § 302 certifications are considered filed as part of the report, and are subject to the civil antifraud provisions under § 18 of the Exchange Act and automatically incorporated in the issuer's Securities Act registration statements.

p. 5-42

p. 5-43

The language of the certification is specifically set forth in Form 20-F. [157] It requires each certifying officer to state that he or she has reviewed the report, and that based on his or her knowledge, the report contains no material misstatements or omissions.

The certification then requires each officer to state that based on his or her knowledge, the financial statements and other financial information included in the relevant report fairly present in all material respects the financial condition, results of operations and cash flows of the issuer as of, and for, the periods presented in the report. The information captured by this "fair presentation" standard is not just the financial statements and related notes. It also includes selected financial data, MD&A and other financial information included in the report. The SEC has stated that this standard addresses the financial information in a report viewed in its entirety and is broader than a requirement to present financial information in conformity with generally accepted accounting principles. It encompasses the selection of appropriate accounting policies, proper application of those policies, disclosure of financial information that is informative and reasonably reflects the underlying transactions and events, and the inclusion of any additional disclosure necessary to provide investors with a materially accurate and complete picture of an issuer's financial condition, results of operations and cash flows. [158]

The certification then requires each certifying officers to acknowledge responsibility for establishing, maintaining and "properly" designing disclosure controls and procedures and internal control over financial reporting for the issuer. Each officer must state that he or she has (i) evaluated the effectiveness of DC&P and presented conclusions about such effectiveness; and (ii) disclosed in the report any change in ICFR, occurring during the period covered by the report, that has materially affected or is reasonably likely to materially affect ICFR. Each officer must also state that he or she has disclosed, based on the most recent evaluation of ICFR, to the issuer's auditors and audit committee (i) all significant deficiencies and material weaknesses in the design or operation of ICFR that are reasonably likely to adversely affect the issuer's ability to record, process, summarize and report financial information and (ii) any fraud (regardless of materiality) involving management or other employees having a significant role in such internal control.

The terminology used in the certification reflects the requirements of SEC rules relating to internal control over financial reporting and disclosure controls

p. 5-43

p. 5-44

and procedures. [159] The wording of the certification must be in the form specified and may not be changed in any respect, even if the change would appear to be inconsequential in nature. [160] It must be signed directly by the specified officers and may not be signed pursuant to a power of attorney. [161]

In addition to being subject to liability under the Exchange Act generally in connection with the filing of a report, an officer providing a false certification could be subject, in his or her personal capacity, to SEC actions for violating § 13(a) or § 15(d) of the Exchange Act and to private actions for violating §§ 18 and 10(b) of the Exchange Act and Rule 10b-5 thereunder. [162]

[b] Section 906 Certifications

A separate set of officer certifications is required pursuant to § 906 of the Sarbanes-Oxley Act. [163] Section 906 requires that each periodic report containing financial statements filed by an issuer with the SEC must be "accompanied by" a written statement of the issuer's chief executive officer and chief financial

p. 5-44

officer (or equivalent thereof). The statement must certify that the report fully complies with the requirements of § 13(a) or § 15(d) of the Exchange Act and that the information it contains fairly presents, in all material respects, the financial condition and results of operations of the issuer. Unlike the certification required by § 302 and Rules 13a-14 and 15d-14, the certification required by § 906 does not contain a qualification relating to the "knowledge" of the certifying officer. Nevertheless, it is common practice to include such a qualification, particularly in light of the qualification contained within § 302 itself and because knowledge is a requirement for the criminal penalties under § 906.

Like § 302 certifications, § 906 certifications must be filed as exhibits to an annual report on Form 20-F, [164] but are not required to be filed with a report on Form 6-K. However, § 906 certifications are furnished to, rather than filed with, the SEC. [165] Accordingly, § 906 certifications do not give rise to liability under § 18 of the Exchange Act, and they are not automatically incorporated by reference into an issuer's Securities Act registration statements. [166]

Section 906 imposes criminal liability for inaccurate certifications knowingly or willfully furnished by a certifying party. [167] The penalties consist of up to (i) 20 years' imprisonment and a fine of U.S. $5,000,000 for anyone who willfully certifies such statements or (ii) ten years' imprisonment and a fine of U.S. $1,000,000 for anyone who otherwise certifies such statements, in either case, knowing that the report does not comport with all the relevant requirements.

Footnotes

123 § 13(b)(2) of the Exchange Act. In contrast, the FCPA's anti-bribery provisions apply both to issuers and to "domestic concerns," which is defined as all U.S. citizens, nationals and residents, and all companies that have their principal place of business in the United States or are organized under U.S. law. 15 U.S.C. § 78dd-2(h)(1). The anti-bribery provisions apply to a domestic concern regardless of whether the activity related to the bribe has any other connection to the United States. 15 U.S.C. § 78dd-2(i)(1). For an issuer that is not a "domestic concern," the anti-bribery provisions only apply if the bribe occurs in connection with U.S. interstate commerce. 15 U.S.C. § 78dd-1(a). In addition, the FCPA's anti-bribery provisions apply to a non-U.S. person or company if it, or any person acting on its behalf, performs any part of the acts of bribery while in the territory of the United States. 15 U.S.C. § 78dd-3(a). For corporate entities, in summary, the FCPA's anti-bribery provisions apply to any company that (i) is organized under U.S. law or has its principal place of business in the United States, (ii) is an issuer and uses U.S. interstate commerce in furtherance of a bribe, or (iii) acts within U.S. territory in aid of a bribe. *See* § 11.08[1][a] for a more detailed discussion of the FCPA.

124 *See* Criminal Division of the U.S. Department of Justice and the Enforcement Division of the U.S. Securities and Exchange Commission, A RESOURCE GUIDE TO THE U.S. FOREIGN CORRUPT PRACTICES ACT (2102) ("The FCPA Guide") ("Although the FCPA's accounting requirements are directed at "issuers," an issuer's books and records include those of its consolidated subsidiaries and affiliates.").

125 15 U.S.C. § 78m(b)(6).

130 *See*, *e.g.*, Order, *In re LAN Airlines, S.A.*, SEC Release No. 78402 (July 25, 2016) (payment to consultant for a "study" when company knew that no actual study would be performed); FCPA GUIDE at 39 ("Bribes are often concealed under the guise of legitimate payments, such as commissions or consulting fees.").

131 PCAOB Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That Is Integrated

with An Audit of Financial Statements, was adopted in PCAOB Release No. 2007-005 (May 24, 2007). The PCAOB's initial standard for internal control reporting, adopted in 2004, was Auditing Standard No. 2, An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements, adopted in PCAOB Release No. 2004-001 (Mar. 9, 2004). Auditing Standard No. 5 revised the standards in response to extensive criticism of the burdens imposed on issuers and auditors by internal control reporting.

132 The initial holiday for a new reporting company is reflected in Rules 13a-15 and 15d-15 and in Instruction 1 to Item 15 of Form 20-F.

133 Rule 13a-15(a) and Rule 15d-15(a) under the Exchange Act.

134 Rule 13a-15(c) and Rule 15d-15(c) under the Exchange Act. The SEC provided extensive guidance on how to evaluate effectiveness in Release No. 34-55929 (June 20, 2007).

135 Issuers generally use the framework developed by an organization called the Committee of Sponsoring Organizations of the Treadway Commission or "COSO." The current version of the COSO framework is Committee of Sponsoring Organizations of the Treadway Commission, Internal Control–Integrated Framework (2013). *See* SEC Release Nos. 34-47986 (June 5, 2003) and 34-55929 (June 20, 2007) (each specifically identifying the 1992 COSO framework as meeting the criteria in Rules 13a-15(c) and 15d-15(c) under the Exchange Act, but stating that other control evaluation frameworks could also be acceptable).

136 Rule 13a-15(d) and Rule 15d-15(d) under the Exchange Act. This requirement applies to changes in any fiscal year for a foreign private issuer and in any fiscal quarter for a domestic issuer. The separate requirement to evaluate changes was adopted not to implement § 404, but to track language in the officer certification requirement in § 302 of the Sarbanes-Oxley Act. For a domestic issuer, this is a significant additional requirement because it is quarterly as well as annual.

137 Item 15(d) of Form 20-F.

138 Item 15(b) of Form 20-F.

139 *See* § 3.01 at Note 22 for a discussion of the definition "large accelerated filers."

140 Item 15(c) of Form 20-F. When the auditor's report on internal control is included in a Securities Act registration statement, the auditor's consent is required under Rule 436 under the Exchange Act. Management's Report on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports-Frequently Asked Questions (rev. Sept. 24, 2007) ("2007 FAQs"), Question 9.

141 2007 FAQs, Questions 2 and 15.

142 2007 FAQs, Question 3.

143 Rules 13a-15(f) and 15d-15(f) under the Exchange Act. The expression "internal control over financial reporting," is arguably narrower than the term "internal controls" used in § 404 itself, because it relates only to financial reporting. *Cf.*, *e.g.*, Auditing Standard No. 12, Identifying and Assessing Risks of Material Misstatement (Public Company Accounting Oversight Board, 2010) (including controls over the completeness and accuracy of operating and other nonfinancial information used as audit evidence). The SEC's definition of internal control over financial reporting distinguishes the subject of § 404 reporting from the separate requirements concerning "disclosure controls and procedures"—sometimes referred to as "DC&P"—that the SEC had developed independently of the Sarbanes-Oxley Act. *See infra* § 5.04[3].

144 The terms are defined in Item 1.02(a)(4) of Regulation S-X and Rule 12b-2 under the Exchange Act. The terminology was developed based on prior auditing standards in Auditing Standard No. 2, adopted by the PCAOB in 2004, and then incorporated in Auditing Standard No. 5, which replaced Auditing Standard No. 2 in 2007. It was then added to SEC rules in 2007. SEC Release No. 33-8809 (June 20, 2007) and SEC Release No. 33-8810 (June 20, 2007) (adopting definition of material weakness); SEC Release No. 34-56203 (Aug. 3, 2007) (adopting definition of significant deficiency). The analogous requirements applicable to a domestic issuer are in Item 9A of Form 10-K and Item 307 of Regulation S-K.

145 Item 15(b)(3) of Form 20-F. *See* SEC, Staff Statement on Management's Report on Internal Control Over

Financial Reporting (May 16, 2005), Part E (guidance on disclosures required when reporting a material weakness). The definition of material weakness refers to the preparation of interim financial statements, but the SEC staff takes the view that this reference is not applicable to a foreign private issuer. 2007 FAQs, Question 13.

146 2007 FAQs Question 4.

147 Prior to enactment of the Sarbanes-Oxley Act, the SEC had proposed rules under which (a) the CEO and CFO of a reporting company would be required to certify certain matters in connection with the company's quarterly and annual reports under the Exchange Act and (b) a reporting company would be required to maintain disclosure controls and procedures. SEC Release No. 34-46079 (June 14, 2002). Section 302 of the Sarbanes-Oxley Act included a certification requirement that differed from the SEC's proposals. SEC Release No. 34-46300 (Aug. 2, 2002) (summarizing the differences between the SEC proposals and the statutory requirements). When the SEC implemented the § 302 certification requirement, it also adopted its prior proposal to require an issuer to maintain and report on DC&P. SEC Release No. 33-8124 (Aug. 28, 2002).

148 Rules 13a-15(e) and 15d-15(e) under the Exchange Act.

149 SEC Release No. 33-8124 (Aug. 28, 2002), 67 Fed. Reg. 57,276, at 57,281 (Sept. 9, 2002) (text accompanying nn.72–74).

150 Rules 13a-15(a) and 15d-15(a) under the Exchange Act.

151 Rules 13a-15(b) and 15d-15(b) under the Exchange Act.

152 Item 15(a) of Form 20-F.

153 SEC Release No. 33-8124 (Aug. 28, 2002).

154 SEC Release No. 33-8124 (Aug. 28, 2002).

155 Rules 13a-14 and 15d-14. These rules apply to any reporting company, including a company that files Exchange Act reports "voluntarily," for example with a suspended reporting obligation under § 15(d). SEC Division of Corporation Finance: Sarbanes-Oxley Act of 2002—Frequently Asked Questions (Nov. 8, 2002, revised Nov. 14, 2002), Question 9. The persons performing the specified functions at the time of filing must provide certification, whether or not they had those functions during the period covered by the report. *See* Questions 13–15.

156 Domestic issuers are required to provide certifications in annual reports on Form 10-K and quarterly reports on Form 10-Q.

157 Form 20-F, Instructions as to Exhibits, paragraph (12). The analogous requirements for domestic issuers are in Regulation S-K, Item 601(b)(31). *See* Form N-CSR, Item 11(a) for certifications applicable to registered management investment companies. *See* Rules 13a-14(d), 13a-14(e), 15d-14(d) and 15d-14(e) under the Exchange Act and Item 601(b)(31)(ii) of Regulation S-K for certification requirements applicable to asset-backed issuers, as defined in Regulation AB.

158 SEC Release No. 33-8124 (Aug. 28, 2002), 67 Fed. Reg. 57,276, 57,279 & n.56 (Sept. 9, 2002) (citing Rule 12b-20 under the Exchange Act).

159 *See supra* §§ 5.04[2] and 5.04[3].

160 *See* SEC Release No. 33-8238 (June 5, 2003).

161 Rules 13a-14(c) and 15d-14(c) under the Exchange Act. A number of considerations arise in connection with the application of Rules 13a-14 and 15d-14 to foreign private issuers. Some foreign private issuers must make nuanced determinations as to which persons serve as principal executive officer and principal financial officer and which body functions as the audit committee. In certain countries, such as Germany, different corporate bodies and officials have primary responsibility for disclosure and financial reporting and cannot, under home-country law, delegate such responsibility. In those instances, certifications by principal executive officers and principal financial officers could expose such officers to liability in the United States for misconduct by those different corporate bodies and officials.

162 In various cases, the SEC has sought monetary penalties and injunctive relief against officers who allegedly signed false certifications. In two cases filed not long after the Sarbanes-Oxley Act came into force, the SEC alleged that the issuer filed reports purporting to contain unqualified audit opinions although, in fact, the auditors had not provided signed audit opinions. *SEC v. Cedric Kushner Promotions, Inc.*, SEC Litigation Release No. 19485 (Dec. 5, 2005); *SEC v. Rica Foods*, SEC Litigation Release No. 18293 (Aug. 18, 2003). In a number of more recent cases, the SEC has sought civil penalties for false certifications under Rules 13a-15 and 15d-15. *See*, *e.g.*, *SEC v. Gupta*, SEC Litigation Release No. 21451 (Mar. 15, 2010) (SEC action against executives who understated extent of company funds paid as executive perquisites in certified disclosure documents); *SEC v. Jenkins*, SEC Litigation Release No. 21149A (July 23, 2009) (SEC civil action against CEO who allegedly received bonuses and stock sale profits while company was committing accounting fraud); *SEC v. Sherman*, SEC Release No. 34-72723 (July 30, 2014) and *SEC v. Cummings*, SEC Release No. 34-72722 (July 30, 2014) (SEC action against executives for misrepresenting to external auditors and the investing public the state of its internal controls over financial reporting); and *SEC v. Ormand*, SEC Release No. 77346 (Mar. 10, 2016) and *SEC v. Krueger*, SEC Release No. 77344 (Mar. 10, 2016) (SEC action against executives who failed to evaluate applicable internal control over financial reporting standards and concluded the company had no material weaknesses).

163 Rules 13a-14(b) and 15a-14(b). § 906 of the Sarbanes-Oxley is codified as 18 U.S.C.1350.

164 Although, read literally, § 906 would apply to reports on Form 11-K required to be filed by certain employee benefit plans, the SEC and DOJ have concluded that § 906 certifications do not need to accompany reports on Form 11-K. *See* SEC Release No. 33-8400 (Mar. 16, 2004) 69 Fed. Reg. 15,594, 15,609 n.146 (Mar. 25, 2004).

165 Form 20-F, paragraph (13)(b) to instructions as to Exhibits.

166 Form 20-F, paragraph (13)(b) to instructions as to Exhibits; *see also* SEC Release No. 33-8238 (June 5, 2003).

167 One interesting aspect of § 906 is that the penalties apply to noncompliance with the terms of the certification, but the statute does not explicitly provide that a failure to file triggers the potential liability. *But see* Letter from Daniel J. Bryant, Assistant Attorney General, Department of Justice, to the Honorable Joseph R. Biden, Jr. (Dec. 26, 2002) (stating that willful failure to file a § 906 certification would trigger the criminal provisions of 15 U.S.C. § 78ff).

[1] Prohibition on Personal Loans to Executive Officers and Directors

Section 402(a) of the Sarbanes-Oxley Act [168] prohibits an issuer [169] and its subsidiaries from directly or indirectly extending, maintaining, renewing or

p. 5-46

arranging for an extension of credit in the form of a personal loan to or for any director or executive officer (or equivalent thereof) of the issuer. [170] There is no materiality threshold or de minimis exception. [171]

Section 402(a) raises a number of interpretive issues with respect to practices that involve the provision by an issuer of a benefit that may have some but not all of the features of a loan. Among the practices it may prohibit are loans inherent in split-dollar life insurance arrangements, after-tax leveraged co-investment programs and certain cashless exercises of options. Practitioners have sought to clarify the scope of § 402's prohibitions by interpreting the statutory language, most notably with respect to the words "arranging" and "extension of credit in the form of a personal loan." [172]

The concept of "arranging" for purposes of § 402(a) is generally believed to require some level of issuer involvement in the making of a loan by a third party to the director or executive officer. Limited facilitation of a personal loan, such as providing information or confirming that the issuer will comply with its existing obligations to a director or executive officer, should not constitute "arranging," but more substantial levels of facilitation or participation by the issuer may be deemed to be "arranging." [173] Given the conflict of interest-oriented policy of § 402(a), the use of issuer assets, or facilitation by the issuer of any transaction that could influence directors or executive officers, is more likely to involve "arranging." There may also be circumstances in which an

p. 5-46

p. 5-47

issuer arranges a transaction but should not be viewed as "arranging" a "personal loan," particularly if the nature of the loan feature is incidental to the transaction (for example, an issuer could permissibly develop a broad-based employee benefit program involving incidental loans that are available on the same terms to all participants). [174]

The wording of § 402(a) suggests that only certain "extensions of credit" are subject to its prohibition and that they must meet two separate requirements. First, the transaction must take the form of a loan, and not merely be an extension of credit. [175] A transaction that involves an element of extension of credit but that is primarily intended to confer an immediate or deferred compensation benefit on the individual for services rendered (analogous to salary or bonus), and does not require repayment of fixed amounts, would presumably not be deemed a loan. Second, the loan must be a "personal loan." Presumably, if the primary purpose of the loan from the perspective of the issuer is to advance its business (other than merely through benefiting executive officers and directors of the issuer), it would not be deemed a "personal loan." Where an extension of credit is made in the ordinary course of business primarily for business purposes, but involves limited ancillary personal credit, it would also presumably not be considered to be a "personal loan." For example, business travel advances and use of company credit cards and company cars may involve limited ancillary personal use but presumably would not be subject to the § 402(a) prohibition because the arrangements are primarily for the benefit of the issuer, not the employee, and are not personal loans within the ordinary meaning of that term. [176]

Section 402(a) provides limited exceptions for extensions of credit for home improvement, manufactured housing, consumer credit, open-end credit, charge cards and margin loans by a broker or dealer registered under the Exchange Act to an employee of that broker or dealer (other than to acquire stock of the broker or dealer). [177] Extensions of credit pursuant to any of these exceptions must be (i) provided in the ordinary course of a consumer credit business, (ii) of a type generally made available by the issuer to the public and (iii) made

p. 5-47

p. 5-48

on market terms that are no more favorable than those offered by the issuer to the general public. [178] These exceptions may not, however, be available to most issuers because, among other reasons, most issuers that are not financial institutions cannot meet the ordinary course of consumer credit business requirement.

Section 402(a) also exempts loans made by Federal Deposit Insurance Corporation (the "FDIC") insured banks subject to certain existing U.S. insider lending restrictions. The SEC extended this exemption to qualifying foreign banks and their affiliates under certain circumstances. [179] A foreign bank qualifies for the exemption if the laws or regulations of the foreign bank's home country require the bank to insure its deposits or be subject to a deposit guarantee or protection scheme or the Federal Reserve Board has determined that the foreign bank or another bank in its home jurisdiction is subject to comprehensive consolidated supervision by its home-country supervisor. [180] The exemption requires that the loans must (i) be on arm's-length, market terms, (ii) be made pursuant to a benefit or compensation program that is widely available to employees and does not give preference to executive officers or directors over other employees or (iii) have received the express approval of the bank supervisor in the foreign bank's home jurisdiction.

[2] Disgorgement of Incentive Compensation Following Restatements

Three different provisions of the federal securities laws provide for a mechanism colloquially referred to as a "clawback"—a requirement that issuer personnel return compensation to the issuer after a restatement of the issuer's financial statements. First, § 304 of the Sarbanes-Oxley Act requires the chief executive officer and chief financial officer of an issuer to reimburse it for all bonuses and other incentive-based or equity-based compensation received, as well as all profits realized from sales of issuer securities, in the 12-month period following the first public issuance or filing of reported financial statements that are later restated due to material noncompliance with any financial reporting requirement as a result of misconduct. [181]

p. 5-48

p. 5-49

The term "misconduct" is not defined in the Sarbanes-Oxley Act, but it is generally understood not to be limited to personal misconduct of the chief executive officer or chief financial officer, and the SEC has brought a number of proceedings against chief executive officers and chief financial officers under § 304 when such officers were not personally charged with the underlying misconduct. [182] The phrase "profits realized" is also not defined, so it is unclear how the cost basis of securities sold during the 12-month period is to be determined, whether by means of a matching concept similar to § 16(b) of the Exchange Act or otherwise. [183] Similarly, the reference to compensation "received" during the 12-month period leaves unanswered questions regarding whether, in the case of option compensation for example, it is the grant of the compensation, its vesting or its payment that will control.

The Sarbanes-Oxley Act also does not specify the means of enforcement for § 304, which provides that the chief executive officer and chief financial officer of a company required to prepare an accounting restatement as a result of misconduct "shall reimburse" the issuer. However, the Ninth Circuit has provided some guidance by holding that there is no private right of action under § 304. Only the SEC is entitled to bring actions under the provision. [184] In addition, a company is not permitted to release or indemnify its chief executive officer or chief financial officer for disgorgement liability arising under § 304. [185]

The second "clawback" requirement is under § 10D of the Exchange Act (introduced by § 954 of the Dodd-Frank

Act), which directs the SEC to impose an analogous obligation in respect of all executive officers of all listed issuers. Rule 10D-1, implementing § 10D, has been proposed by the SEC but not adopted as of year-end 2016. [186] The proposed rule would require national security exchanges to adopt listing rules requiring all listed issuers to adopt, disclose and implement written policies to recover any incentive-based compensation from current and former executive officers that was received based on materially erroneous financial information. As proposed, Rule 10D-1 would apply to foreign private issuers.

The clawback under proposed Rule 10D-1 would be triggered by an accounting restatement and apply to incentive-based compensation received by

p. 5-49

p. 5-50

an executive officer [187] during the three fiscal years preceding the date the accounting restatement is triggered. The clawback amount would be the pre-tax amount received by the current or former executive officer to the extent it exceeds what the executive would have received if compensation were determined based on the restated financial statements. Indemnification of executive officers by the issuer is prohibited with respect to clawback liabilities. [188] Under the proposed rule, issuers would have limited discretion to choose not to pursue a clawback claim, [189] although foreign private issuers would be permitted to forgo recovery as impracticable if the recovery would violate the home country's laws. [190] Further, the proposed rule would require disclosure of specified information regarding completed, ongoing and forgone recoveries, with executive officer names and specified amounts.

There are a number of important differences between these proposed listing rule and the obligation in § 304 of the Sarbanes-Oxley Act. First, the proposed rule would require the issuer to seek reimbursement, rather than requiring the issuer's officers to make reimbursement. Issuers, rather than just the SEC, would have the right (and obligation) to pursue their officers. Second, reimbursement would be sought from all current and former executive officers, rather than just the current chief executive officer and chief financial officer. Third, there would be no requirement of misconduct on the part of either the issuer or the individual in connection with the restatement. Fourth, the measure for recovery would be the amount of incentive-based compensation in excess of that which would have been paid to the executive officer based on the restated financial statements, rather than the entire amount of such compensation, plus proceeds of stock sales. Finally, the recovery period would be three years before the date the issuer becomes required to prepare restated accounts, rather than one year following the first public issuance or filing of the financial statements that were later restated.

The third clawback provision is § 956 of the Dodd-Frank Act, which charges appropriate federal regulators with jointly issuing rules regulating incentive-based compensation at certain covered financial institutions. [191] The rules must prohibit incentive-based compensation arrangements that encourage inappropriate risks by providing excessive compensation or that could lead to a material financial loss and must require financial institutions to disclose

p. 5-50

p. 5-51

incentive-based compensation arrangements to the appropriate federal regulator. [192] The National Credit Union Administration, the Office of the Comptroller of the Currency, the FDIC, the Federal Housing Finance Agency, the Board of Governors of the Federal Reserve System and the SEC have each released versions of the proposed rule. The proposals apply to banks and a broad range of financial institutions with average total consolidated assets over $1 billion, with a tiered applicability for institutions with average total consolidated assets of between $50 billion and $250 billion (Level 2) and those with assets above $250 billion (Level 1). [193]

Among other things, the proposed rules would require incentive-based compensation payable to senior executive officers or "significant risk-takers" at a Level 1 or Level 2 institution to be subject to a seven-year clawback of between 40-60% of incentive compensation, depending on the employee title and the level of the institution, with a substantial portion of incentive-based compensation payable to be deferred. [194] Potential amounts of incentive-based compensation are limited to specific target measures. The rules would also require governance oversight, with boards of directors, or a committee delegated therefrom, to approve all incentive-based compensation payable to senior executive officers and charge the board with maintaining records documenting guidelines to approving and implementing incentive-based compensation-related decisions. [195]

[3] Lawyers' Professional Responsibility Rules

The Sarbanes-Oxley Act required the SEC to promulgate rules setting forth minimum standards of professional conduct for lawyers appearing and practicing before the SEC in the representation of an issuer. [196] Among other things, rules adopted by the SEC to implement § 307 of the Sarbanes-Oxley Act adopt so-called "up-the-ladder" reporting requirements and clarify, through the means

p. 5-51

p. 5-52

of a safe harbor, the extent to which the conduct of foreign attorneys is regulated. [197]

The principal features of the SEC's up-the-ladder reporting procedures are:

- An attorney appearing and practicing before the SEC [198] in the representation of an issuer [199] owes his or her professional and ethical duties to the issuer as an organization, and not to the issuer's officers, directors or employees.
- Whenever an attorney appearing and practicing before the SEC in the representation of an issuer becomes aware of evidence of a material violation [200] of securities laws or breach of fiduciary duty, or a similar violation, by the issuer or by any officer, director, employee or agent of the issuer, the attorney must report the evidence to the issuer's chief legal officer ("CLO") or to both the CLO and the chief executive officer.
- Upon receiving such a report, the CLO must cause such inquiry into the reported matter as he or she reasonably believes is appropriate to determine if a material violation has occurred, is ongoing or is about to occur, and (i) if the CLO reasonably finds no material violation, or concludes after being advised by outside counsel (and consulting the audit committee) that the issuer has a colorable defense to the reported violation, then he or she must notify the reporting attorney of that conclusion and its basis or (ii) if, instead, the CLO concludes that a material violation has occurred, is ongoing, or is

p. 5-52

p. 5-53

  about to occur, he or she must take reasonable steps to ensure the issuer adopts remedial measures, including sanctions if appropriate.
- A reporting attorney who receives what he or she reasonably believes to be an appropriate and timely response from the CLO has no further obligation. If the reporting attorney does not receive an appropriate and timely response from the CLO, or if the attorney believes that it would be futile to report to the CLO or chief executive officer because either or both may be implicated in the misconduct, the attorney must report the evidence to either the audit committee of the issuer's board of directors or to another board committee consisting solely of independent directors. If the issuer has neither an audit committee nor such an independent committee, the attorney must, in the absence of an appropriate response from the issuer's CLO, report the evidence to the full board of directors. The CLO must inform the reporting attorney of any course of action taken in response to the attorney's report.
- A reporting attorney who receives what he or she reasonably believes to be an appropriate response from the audit committee, independent committee of the board of directors or the board itself has no further reporting obligation. If the reporting attorney does not reasonably believe the issuer has made an appropriate response within a reasonable time, the attorney must inform the CLO, the chief executive officer and directors to whom the attorney originally reported that belief and the reasons behind it. [201]
- An attorney may avail himself or herself of an alternative reporting procedure under which an attorney may report evidence of a material violation to a qualified legal compliance committee ("QLCC") established by the issuer, rather than to the issuer's CLO (the CLO may also refer reports to the QLCC),

if the issuer has elected to establish a QLCC, thereby satisfying his or her obligations (with no requirement to assess the appropriateness of the issuer's response to the reported evidence).

- (i) An attorney retained to investigate reported evidence of a material violation must inform the CLO of the results of the investigation, (ii) unless the investigating attorney and the CLO each reasonably believes that no material violation has occurred, is ongoing or is about to occur, the CLO must notify the issuer's board of directors, an independent board committee, or the QLCC

p. 5-53

p. 5-54

of the results of the investigation, (iii) if the CLO does not do so, the investigating attorney must report up-the-ladder and (iv) the investigating attorney has no duty to make such a report if such attorney was retained or is directed by the CLO to assert, consistent with his or her professional obligations, a colorable defense on behalf of the issuer in any investigation or proceeding arising from the alleged misconduct, in which case the CLO must nevertheless keep the board informed as to the progress and outcome of the investigation or proceeding. [202]

In response to widespread concerns raised by non-U.S. attorneys over the reach of § 307, the SEC created a safe harbor from the reporting requirements for a "non-appearing foreign attorney." To qualify as a "non-appearing foreign attorney," an attorney:

- must be admitted to practice in a foreign jurisdiction;
- cannot hold himself or herself out as practicing, or give legal advice regarding, U.S. federal or state securities or other laws; [203] and
- must conduct activities that would constitute appearing and practicing before the SEC only (i) incidentally to, and in the ordinary course of, his or her foreign law practice or (ii) in consultation with U.S. counsel.

Attorneys who satisfy the above conditions are exempt from the reporting requirements set forth in the rules. [204] Although the rules do not exempt all foreign attorneys, the scope of the work customarily performed by most foreign attorneys should allow them to qualify for the exemption. In addition, attorneys practicing outside the United States are not required to comply with the requirements set forth in the rules to the extent that such compliance is prohibited by applicable foreign law. [205]

[4] Conflicts Between Whistleblower Procedures and Foreign Law

The requirement that the audit committee maintain whistleblower procedures—a channel for confidential, anonymous submissions by employees

p. 5-54

p. 5-55

of concerns regarding questionable accounting or auditing matters [206]—may raise concerns under privacy, personal data and labor laws in other jurisdictions, particularly the European Union ("EU"). Similar concerns could arise with respect to the protections and financial incentives for whistleblowers introduced pursuant to the Sarbanes-Oxley Act and the Dodd-Frank Act. [207]

In particular, whistleblower procedures implemented by EU affiliates of U.S.-listed companies must comply with the requirements set out by the national personal data protection laws of the EU member states transposing Directive 95/46 [208] (the "Data Protection Directive"). An advisory body established under the Data Protection Directive, called the Article 29 Data Protection Working Party, adopted an opinion (the "Article 29 Opinion") providing guidance on the application of the EU's data protection laws to whistleblowing programs in the areas of accounting, internal controls, auditing matters, antibribery, banking and financial crimes. The Article 29 Opinion emphasizes, among other matters, the provision of clear and complete information about the whistleblowing programs, the rights of incriminated persons and security of data processing operations.

Although the Article 29 Opinion is not binding on the courts or data protection authorities of the EU member states, it has played an important role in the interpretation and application of national personal data protection laws by the data protection authorities and jurisdictions in the various EU member states. As an illustration, the Article 29 Opinion is substantially similar to the "unified authorization" adopted by the French *Commission Nationale de l'Informatique et des Libertés*, the authority responsible for administering the French personal data protection law ("CNIL"), [209] under which the CNIL will deem authorized certain whistleblower procedures required to be implemented pursuant to the Sarbanes-Oxley Act establishing internal control procedures in the areas of finance, accounting, banking and anti-corruption matters, provided that they meet certain criteria for the protection of personal data.

The SEC staff raised several concerns as the Article 29 Opinion relates to whistleblower requirements under the Sarbanes-Oxley Act, which include (i) local handling of reports, (ii) discouragement of anonymous reporting,

p. 5-55

p. 5-56

(iii) possible limitation in the scope of employees covered and (iv) time limits for data retention. [210]

[5] Code of Ethics

Item 16B of Form 20-F requires a registrant to disclose in an annual report on Form 20-F whether it has adopted a code of ethics that applies to the principal executive officer, principal financial officer, principal accounting officer or controller or persons performing similar functions. If it has not adopted such a code of ethics, it must explain why it has not. [211] If a registrant has a broad code of ethics that applies widely, the requirements of Item 16B apply only to the portions of the document that apply to the senior officers described. [212]

If the registrant has a code of ethics, it must either file the code as an exhibit to the annual report on Form 20-F, post the text of the code on its website [213] and disclose in the annual report on Form 20-F that it has been so posted, or undertake in the annual report on Form 20-F that it will provide the code to any person who requests a copy and explain how to obtain it.

The term code of ethics is defined as written standards reasonably designed to deter wrongdoing and promote:

- Honest and ethical conduct, including ethical handling of actual or apparent conflicts of interests between personal and professional relationships.
- Full, fair, accurate, timely and understandable disclosure in SEC-filed or submitted reports and documents, as well as other public communications.
- Compliance with applicable governmental laws, rules and regulations.
- Prompt internal reporting of code violations to the persons identified in the code or other appropriate persons.
- Accountability for adherence to the code.

A registrant is required to disclose in its annual report on Form 20-F if during the fiscal year it has granted a waiver, explicit or implicit, from the code of ethics to one of the specified persons to whom it applies. The registrant must

p. 5-56

p. 5-57

disclose the name of the waiver grantee and the nature of the waiver. [214] It must also disclose any amendment in the annual report. [215] There is an exception for a registrant that discloses the waiver or amendment on its website within five business days following the event, if the website address where the information can be found appears in its most recent annual report on Form 20-F and the information remains on its website for at least 12 months. The registrant must also retain the information for at least five years. [216]

[6] Shareholder Approval of Stock Issuances

The NYSE and Nasdaq each has a policy requiring a listed company to obtain shareholder approval for any issue of common stock (with exceptions including public offerings or certain private offerings for cash) equal to 20% or more of its voting power outstanding prior to such issue. [217] The NYSE has historically not applied this policy to foreign private issuers. Nasdaq permits companies to follow home country practice so long as companies meet certain disclosure and opinion requirements. [218]

[7] Trading Windows

Many listed issuers adopt policies restricting directors, officers and often other employees from trading in the issuer's securities during specified periods when there is a heightened risk that the company, or the individuals subject to the policy, have access to material non-public information about the company. These restricted periods are often referred to as "blackout periods," and they usually begin around the end of each fiscal quarter and end several days after results for the period are announced. The converse period, when trading is permitted, is often referred to as a an "open window" or "window period." These policies are not required by law, but trading by such persons on the basis of material non-public information may violate the law. The policies are a common prophylactic that serves to protect individuals from the risk of insider trading, to support disciplinary action if insider trading occurs, to protect the issuer's general counsel or others from having to make case-by-case judgments on the permissibility of

p. 5-57

p. 5-58

trading, and to protect the issuer from controlling person liability in the event of insider trading. [219]

[8] Disclosure of Corporate Governance Differences

A U.S. exchange-listed foreign private issuer is required to provide, in its annual report on Form 20-F, a concise summary of significant ways in which its corporate governance practices differ from those followed by U.S. companies under the exchange's listing standards. [220] The instructions specify that this disclosure is intended to be a brief and general discussion, as opposed to a detailed item-by-item analysis. In practice, companies typically disclose this information in a table illustrating the differences.

Practices of reporting foreign private issuers in meeting this requirement vary. Some use a tabular presentation that tracks the requirements of the applicable listing rules and sets forth the issuer's corresponding practices, which are typically based on the legal or listing requirements of its home jurisdiction. Others present a more synthetic discussion of the U.S. requirements and refer to the issuer's own, more complete description of its corporate governance practices appearing elsewhere in its annual report. The principal areas of focus in these disclosures would typically include: [221] the requirement that the majority of the board consist of independent directors, except for the board of a "controlled company" as defined in the exchange rules (generally, where more than 50% of the voting power is held by an individual, group or other company); different independence standards for directors; the requirement that the board meet periodically in "executive session," i.e., without management representatives; the requirement for majority-independent nominating and governance committees, except at a controlled company; the requirement for a fully independent compensation committee, except at a controlled company; the requirement to hold a shareholder vote on equity compensation plans; and the requirements to disclose corporate governance guidelines and a code of business conducts and ethics.

[9] Exchange Certification and Affirmation Requirements

p. 5-58

p. 5-59

As noted *supra* in § 5.01, both NYSE and Nasdaq exempt foreign private issuers from most of their corporate governance-related rules. [222] However, each of them requires certain certifications, affirmations or disclosures.

A NYSE-listed foreign private issuer is subject to two certification requirements under exchange rules. First, the chief executive officer must promptly notify the NYSE in writing if he or she becomes aware of any non-compliance with any applicable corporate governance rule of the NYSE. [223] Second, the issuer must submit an executed written affirmation annually and an interim written affirmation under specified circumstances. [224] The contents of each affirmation, and the circumstances under which an interim affirmation is required, are set forth in forms published on the NYSE website. The annual affirmation must describe the issuer's compliance with the audit committee requirements of Rule 10A-3 and its disclosure of significant differences between its corporate governance practices and those required of listed domestic issuers. The interim affirmation is required within five business days if:

- An audit committee member who was deemed independent is no longer independent;
- A new member is added to the audit committee;
- The company or a member of the audit committee is no longer eligible to rely on or choosing to no longer rely on a previously applicable exemption from Rule 10A-3 on audit committees;
- A member has been removed from the audit committee resulting in the issuer no longer having a Rule 10A-3 compliant audit committee; or
- The company determines it no longer qualifies as a foreign private issuer. [225]

p. 5-59

p. 5-60

A Nasdaq-listed foreign private issuer is required to provide Nasdaq with prompt notification after an executive officer becomes aware of any noncompliance with the requirements of any corporate governance requirements under Nasdaq's listing rules. [226] A Nasdaq-listed foreign private issuer is also subject to the rule providing that voting rights cannot be disparately reduced or restricted through any corporate action or issuance. [227]

Footnotes

168 § 13(k)(1) of the Exchange Act. Investment companies registered under § 8 of the Investment Company Act are exempt from § 402(a).

169 "Issuer" is defined for this purpose to include any issuer that has filed a registration statement that it has not withdrawn, even if the registration statement has not yet become effective, so an issuer going public must address any outstanding loans earlier in the registration process than might otherwise be expected.

170 *See*, *e.g.*, *In the Matter of Goodfellow*, SEC Admin. Proc. File No. 3-12117 (Dec. 1, 2005). In *Goodfellow*, the SEC alleged that the chief executive officer and the chief financial officer of a foreign private issuer (later acquired by a U.S. issuer) authorized interest-free loans to themselves from the issuer and imposed a cease-and-desist order. In response to the officers' claim that the loans were mere "advances," the SEC noted that § 402(a) does not distinguish between loans and advances. *But see infra* Note 176 regarding indemnification advances.

171 This prohibition became effective immediately upon the passage of the Sarbanes-Oxley Act, but it grandfathered loans outstanding at that time, so long as no material modification to any term or renewal of those loans occurs. The prohibition on "maintaining" loans means that any extension of credit must be extinguished before a foreign company becomes a U.S. reporting issuer, for example by conducting a U.S. public offering.

172 While these words are the same as those used in §§ 7 and 11(d) of the Exchange Act, the policies behind §§ 7 and 11(d) are fundamentally different from the policy underlying § 402(a). Accordingly, many practitioners believe that § 402(a) does not necessarily require the same reading of the concepts of "extension of credit" and "arrange". *See* outline authored by a group of 25 leading law firms, including ours, *Sarbanes-Oxley Act Interpretive Issues Under § 402—Prohibition of Certain Insider Loans* (Oct. 15, 2002) (the "§ 402 Outline").

173 *See RingsEnd Partners, LLC/EBIC Program* (avail. Mar. 4, 2013). While the no-action letter addresses a specific compensatory program, it does provide examples of "ministerial or administrative activities" in which an issuer may engage without running afoul § 402(a).

174 *See generally* § 402 Outline.

175 As a result, the fact that a transaction may, for example, be deemed for other purposes under the Exchange Act (including under the margin regulation provisions of § 7 and prohibitions on extensions of credit for new issues contained in § 11(d)) to involve an extension of credit is not sufficient to trigger the § 402(a) prohibition.

176 *See generally* § 402 Outline. In 2006, the Southern District of New York addressed directly the issue of indemnification advances, declaring that "[t]he Court need not for present purposes define "personal loan," but an advance of defense costs pursuant to state law and corporate by-laws is not within that term. The Sarbanes-Oxley Act does not prohibit such advances." *Envirokare Tech, Inc. v. Pappas*, 420 F. Supp. 2d 291, 294 (S.D.N.Y. 2006).

177 Read literally, however, the exception does not apply to margin loans to employees of the parent of the broker or dealer.

178 § 402(a) of the Sarbanes-Oxley Act.

179 Rule 13k-1 under the Exchange Act.

180 *See*, *e.g.*, the Federal Reserve Board Order *HSH Nordbank AG, Hamburg/Kiel, Germany*, 89 Fed. Res. Bull. 344.

181 The SEC has relied on the equitable relief provisions of § 305(b) of the Sarbanes-Oxley Act to extend this disgorgement power to include all compensation received after allegedly fraudulent conduct has occurred. For examples of cases in which the SEC has sought disgorgement of profits resulting from misconduct, *see*, *e.g.*, *SEC v. Gupta*, SEC Litigation Release No. 21451 (Mar. 15, 2010) and *SEC v. Mercury Interactive, LLC*, SEC Litigation Release No. 20964 (Mar. 20, 2009).

182 *See SEC v. Moore*, SEC Litigation Release No. 22241 (Jan. 30, 2012); *SEC v. O'Leary*, SEC Litigation Release No. 22074 (Aug. 30, 2011); *SEC v. Jenkins*, SEC Litigation Release No. 21149A (July 23, 2009). The Ninth Circuit has also held that § 304 "allows the SEC to seek disgorgement from CEOs and CFOs even if the triggering restatement did not result from misconduct on the part of those officers." *SEC v. Jensen*, 835 F.3d 1100, 1114-1115 (9th Cir. 2016).

183 Under the short swing profit rules of § 16(b), multiple purchases and sales may be matched to create profit even where no net economic gain is realized. *See* § 6.04[2][b].

184 *In re Digimarc Corp. Derivative Litigation*, 549 F.3d 1223 (9th Cir. 2008).

185 *See Cohen v. Viray*, 622 F.3d 188 (2d Cir. 2010). The rationale for this position was that such agreements frustrate the SEC's power to pursue the public's interests in § 304 enforcement actions.

186 SEC Release No. 33-9861 (July 1, 2015).

187 Section 10D of the Exchange Act does not define executive officers, but the proposed rule applies to officers subject to §16 of the Exchange Act.

188 SEC Proposed Rule 10D-1(b)(1)(iv) of the Exchange Act. The proposal would not preclude executives from purchasing insurance. SEC Release No. 33-9861 (July 1, 2015).

189 Non-pursuit of claims would be permissible only if it were impracticable because it would impose undue costs to the issuer or its shareholders. *See* SEC Release No. 33-9861 (July 1, 2015).

190 SEC Release No. 33-9861 (July 1, 2015).

191 § 956 of the Dodd-Frank Act.

192 § 956 of the Dodd-Frank Act.

193 76 Fed. Reg. 21170 (Apr. 14, 2011).

194 76 Fed. Reg. 21170 (Apr. 14, 2011). Awards that vest solely on the basis of continued employment are not considered incentive-based compensation.

195 76 Fed. Reg. 21170 (Apr. 14, 2011).

196 § 307 of the Sarbanes-Oxley Act; *cf.* Letter from Giovanni P. Prezioso, General Counsel, SEC, to J.

Richard Manning, President, Washington State Bar Association, and David W. Savage, President-Elect, Washington State Bar Association (July 23, 2003) (citing federal case law, in response to a proposed ethics opinion of the Washington State Bar Association counseling lawyers against making disclosure permitted by the SEC's rules implementing § 307 of the Sarbanes-Oxley Act, for the proposition that rules adopted by the SEC, as a federal agency, would preempt any conflicting state rules governing attorney professional conduct).

197 17 C.F.R. § 205.1–205.7.

198 "Appearing and practicing" before the SEC consists of (i) transacting any business with the SEC, including communications in any form, (ii) representing an issuer in a SEC administrative proceeding or in connection with any SEC investigation, inquiry, information request or subpoena, (iii) providing advice in respect of the U.S. securities laws or SEC rules or regulations regarding any document that the attorney has notice will be filed with or submitted to, or incorporated into any document that will be filed with or submitted to, the SEC (this includes providing such advice in the context of preparing, or participating in the preparation of, any such document), or (iv) advising an issuer as to whether information or a statement, opinion or other writing is required to be filed with or submitted to, or incorporated into any document that will be filed with or submitted to, the SEC. 17 C.F.R. § 205.2(a).

199 "Representation of an issuer" is defined as "providing legal services as an attorney for an issuer, regardless of whether the attorney is employed or retained by the issuer." 17 C.F.R. § 205.2(g). Counsel to underwriters would not be covered by the reporting requirements because such counsel do not provide legal services to the issuer. *See* SEC Release No. 33-8185 (Jan. 29, 2003).

200 "Evidence of a material violation" is credible evidence, based upon which it would be unreasonable, under the circumstances, for a prudent and competent attorney not to conclude that it is reasonably likely that a material violation has occurred, is ongoing or is about to occur. 17 C.F.R. § 205.2(e). This standard, while objective, takes into account the fact that there may be a range of views an attorney could hold without being unreasonable.

201 In 2003, the SEC proposed for comment two alternative provisions that would have extended the obligations of a reporting attorney. These came to be referred to as "noisy withdrawal" (where an attorney is obligated under specified circumstances to resign and notify the SEC of having done so) and "reporting out" (where an attorney is obligated to resign and the issuer must notify the SEC). This proposal was never withdrawn or acted upon. *See* SEC Release No. 33-8186 (Jan. 29, 2003) (solicitation of public comments).

202 17 C.F.R. § 205.1–205.7

203 One example of conduct that might constitute holding oneself out as practicing U.S. federal or state securities laws might be distributing business cards highlighting one's admission to a U.S. state bar.

204 Although a CLO who qualifies as a non-appearing foreign attorney is exempt from the reporting requirements under § 307 of the Sarbanes-Oxley Act, he or she is required to conduct an investigation upon receiving a report of a violation from a reporting attorney.

205 17 C.F.R. § 205.6(d).

206 § 5.0[2][a].

207 § 11.07[1][c].

208 Directive 95/46/EC of the European Parliament and of the Council of October 24, 1995 on the protection of individuals with regard to the processing of personal data and on the free movement of such data. As from May 25, 2018, this Directive will be replaced by Regulation (EU) 2016/679 of the European Parliament and of the Council of April 27, 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (the "General Data Protection Regulation").

209 CNIL unified authorization n° AU-004 adopted December 8, 2005, as amended on October 4, 2010.

210 *See* Letter from Ethiopis Tafara, SEC Director, Office of International Affairs, to Peter Schaar, Chairman of Article 29 Data Protection Working Party (June 8, 2006).

211 Item 16B of Form 20-F.

212 Instruction 2 to Item 16B of Form 20-F.

213 The code of ethics must remain accessible on the website for as long as the registrant chooses to disclose its code of ethics via its website and is obligated to file an annual report on Form 20-F. Instructions to Item 16B of Form 20-F.

p. 6-3

This chapter discusses considerations relevant to directors, officers and major shareholders of public companies in the United States, with a focus principally on foreign private issuers. [1]

Section 6.02 discusses corporate governance requirements applicable to the directors and officers of a foreign private issuer that has registered its equity securities under the Exchange Act.

Section 6.03 discusses disclosure required in an issuer's filings regarding directors, officers and significant shareholders.

Section 6.04 discusses certain U.S. reporting requirements under the Exchange Act, including for:

- shareholders beneficially owning more than 5% of a class of voting equity securities registered pursuant to § 12 of the Exchange Act, §§ 13(d) and 13(g), which are intended to keep investors aware of significant accumulations of shares that may lead to a change in control of an issuer; [2] and
- directors and officers of a U.S. issuer (but not a foreign private issuer) with equity securities registered pursuant to § 12 of the Exchange Act, and for shareholders beneficially owning more than 10% of a class of voting equity issued by such an issuer, § 16(a), which generally requires these "insiders" to report equity trading activity to facilitate enforcement of § 16(b)'s "short-swing" profit recovery provision.

Section 6.05 discusses potential liabilities under the federal securities laws for material misstatements or omissions in disclosure, as well as for insider trading.

Section 6.06 discusses resales by directors, officers and significant shareholders, including "affiliates," of an issuer.

Footnotes

1 *See* § 3.01, Note 1 for a discussion of the definition of "foreign private issuer."

2 The 13(d) shareholder reporting requirements for significant accumulations of shares were added to the Exchange Act by the Williams Act of 1968. Williams Act of 1968, Pub. L. No. 90-439, 82 Stat. 454 (1968).

U.S. Regulation of the International Securities and Derivatives Markets, § 6.02, REQUIREMENTS AFFECTING DIRECTORS AND OFFICERS RELATING TO CORPORATE GOVERNANCE

The U.S. securities laws impose corporate governance requirements on the directors and officers of a foreign private issuer that has registered its equity

p. 6-4

securities under the Exchange Act. These requirements, which are discussed in detail elsewhere in this book, [3] include:

- Rule 13b2-2 under the Exchange Act, as amended by the SEC to implement § 303 of the Sarbanes-Oxley Act, which prohibits the directors and officers of an issuer, and any person acting at their direction, from taking any direct or indirect action to coerce, manipulate, mislead or fraudulently influence any independent public or certified public accountant in an audit or review of the issuer's financial statements required to be filed with the SEC, if such person knew or should have known (a negligence standard) that such action could, if successful, result in rendering the financial statements materially misleading (*see* § 5.03[5]);
- Rules 13a-15(f) and 15d-15(f) under the Exchange Act, relating to internal control over financial reporting, which is a process designed by, or under the supervision of, an issuer's principal executive and principal financial officers, or persons performing similar functions, and effected by the issuer's board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles (*see* § 5.04[2]);
- §§ 302 and 906 of the Sarbanes-Oxley Act, which require an issuer's principal executive officer(s) and principal financial officer(s), or persons performing similar functions, to make certain certifications in the issuer's annual report (*see* § 5.04[4]);
- § 402(a) of the Sarbanes-Oxley Act, which prohibits an issuer and its subsidiaries from directly or indirectly extending, maintaining, renewing or arranging for an extension of credit in the form of a personal loan to or for any executive officer or director of the issuer (*see* § 5.05[1]);
- § 304 of the Sarbanes-Oxley Act, which requires the chief executive officer and chief financial officer of an issuer to reimburse it for all bonuses and other incentive-based or equity-based compensation received, as well as all profits realized from sales of issuer securities, in the 12-month period following the first public issuance or filing of reported financial statements that are later restated due to material noncompliance with any financial reporting requirement as a result of misconduct (*see* § 5.05[2]); and
- § 21C of the Exchange Act and § 8A of the Securities Act, as amended by § 1105 of the Sarbanes-Oxley Act, which authorize the SEC, in connection

p. 6-4

p. 6-5

with a cease-and-desist proceeding, to issue an order barring any person who has violated § 10(b) of the Exchange Act or § 17(a)(1) of the Securities Act, as applicable, from acting as a director or officer of any issuer "if the conduct of that person demonstrates unfitness to serve as an officer or director" (*see* § 5.05[3]).

[1] Disclosure in Issuer's Filings of Information Regarding Directors and Officers

A foreign private issuer that is subject to the reporting requirements of the Exchange Act is required to make disclosures relating to the share ownership of its directors and officers and certain compensation matters, including:

- information as to share ownership in the issuer (including ownership of options over shares in the issuer) by the directors and members of its administrative, supervisory or management bodies (*see* § 4.07[9]);
- information concerning the compensation of directors and officers (*see* § 4.07[9]); and
- information regarding related party transactions (*see* § 4.07[10]).

[2] Disclosure in Issuer's Filings of Shareholders That Beneficially Own 5% or More of the Issuer's Shares or Control the Issuer

An issuer registering a public offering under the Securities Act [4] or registering or filing an annual report under the Exchange Act [5] (for example, in connection with a U.S. exchange listing) is required to name each owner known to it of 5% or more of its voting securities [6] and persons controlling the issuer, together with certain other information related to control. [7]

p. 6-6

Rule 12b-2 under the Exchange Act defines control as "the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract or otherwise." [8]

As this definition suggests, the determination of whether "control" of one person or company by another exists is essentially factual in nature, rather than legal. The analysis looks to the dynamics and functional realities of each situation, rather than to formal legal structures or arrangements. It is clear that majority share ownership is not required for control. There are cases where, for one purpose or another, control has been found to exist at relatively low share ownership levels, although generally not below 10%. [9]

Share ownership is not the only consideration in determining whether control exists. Other relevant factors, which might militate for or against a finding of control, include:

- whether the shareholder is, or has the right to be, represented on the issuer's board of directors as well as any key committees of the issuer's board;
- whether any officers of the issuer are designees of the shareholder or have been selected by, or with the concurrence of, the shareholder, and, if so, which officers;
- whether any major policy decisions by the issuer are, as a practical matter, ever precleared by or discussed in advance with the shareholder;

- the nature and volume of any ongoing business and contractual relationships between the shareholder and the issuer;
- whether there are regulatory restrictions on the shareholder's ability to exercise control;
- whether the shareholder could be found to control, or have an ability to influence, the day-to-day activities of the issuer;
- the background of, reasons for and method by which the shareholder obtained its share ownership in the issuer;

p. 6-6
p. 6-7

- whether there are other shareholders with a comparable ownership position and, if so, the nature of the relationship among such shareholders; and
- corporate structure, for example, whether there are one or more boards that manage the company, as in Germany.

Footnotes

4 *See* Chapter 3, particularly § 3.02.

5 *See* §§ 3.03[1] and 4.02.

6 *By contrast*, § 13(d) of the Exchange Act applies to beneficial owners of more than 5% of the class.

7 Form 20-F, Item 7. In 1999, the SEC replaced almost all the existing Form 20-F requirements with international disclosure standards adopted by IOSCO in 1998. *See* SEC Release No. 33-7745 (Sept. 28, 1999). The SEC reduced the threshold for disclosure of beneficial ownership from 10% to 5% of each class of the registrant's voting stock and now requires disclosure of significant changes in beneficial ownership by such shareholders over the last three years.

8 Rule 12b-2 under the Exchange Act.

9 *Cf*. Rule 10A-3(e)(1) under the Exchange Act (providing that those persons who are not executive officers or shareholders beneficially owning more than 10% of a class of voting equity securities of an issuer are deemed not to control such entity for purposes of rules implementing § 301 of the Sarbanes-Oxley Act; this safe harbor does not create a presumption that persons outside the safe harbor control an entity, or are affiliates, for which a facts-and-circumstances analysis is appropriate). *See* § 5.02[1][b].

U.S. Regulation of the International Securities and Derivatives Markets, § 6.04, REPORTING AND OTHER REQUIREMENTS APPLICABLE TO SIGNIFICANT BENEFICIAL OWNERS OF SHARES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 6.04 (11th and 12th Editions 2014-2017)
11th and 12th Editions

[1] Section 13 Reporting Requirements

[a] Scope

Sections 13(d) and 13(g) of the Exchange Act are intended to provide the investing public (and issuers) with information about beneficial ownership of significant blocks of voting securities. [10] Under these provisions, persons who are directly or indirectly beneficial owners of more than 5% of any class of voting equity securities registered under § 12 of the Exchange Act are required to file reports with the SEC. [11] A person is the beneficial owner of a security if he or she has or shares the power to vote or the power to sell the security, directly or indirectly, through any contract, arrangement, understanding, relationship or otherwise. [12] Furthermore, a person is deemed the beneficial owner of any shares that he or she has the right to acquire (such as pursuant to the exercise of an option

p. 6-8

or a conversion right) if the right is exercisable within 60 days or was acquired with the purpose or effect of changing or influencing control of the issuer. [13] Accordingly, more than one person can be deemed to beneficially own the same shares.

The beneficial ownership reporting requirements of § 13 of the Exchange Act apply to both U.S. and foreign entities that hold Exchange Act-registered voting equity securities regardless of (i) the issuer's home country, (ii) whether the securities were purchased outside the United States, (iii) whether U.S. jurisdictional means were used in connection with the purchase and (iv) any position reporting obligations that may be incurred in other jurisdictions. For example, a German person or entity that acquires in France more than 5% of the outstanding stock of a French company whose shares are registered under § 12 of the Exchange Act must file, whether or not reporting is also required under French law. In this regard, the U.S. beneficial ownership reporting system is similar to the position reporting systems adopted by many other jurisdictions. [14]

[b] Qualification for Schedule 13G

p. 6-8

p. 6-9

Regulation 13D-G under the Exchange Act generally requires each person (or group of persons acting together) [15] acquiring any voting "equity securities" registered under the Exchange Act as a result of which such person or group beneficially owns [16] more than 5% of such securities to file with the SEC, within ten days after the 5% threshold is crossed, a report on Schedule 13D. [17] However, under certain circumstances, investors that have acquired the securities without the purpose or effect of changing or influencing control of the issuer [18] may qualify to file a short-form report on Schedule 13G instead of a Schedule 13D. Utilization of Schedule 13G is available for such passive investments only if such investor (i) has acquired the securities in the ordinary course of its business and is (A) one of the types of entities enumerated in Rule 13d-1(b) under the Exchange Act, which include U.S. banks as defined in § 3(a)(6) of the Exchange Act, registered investment companies and other specified types of U.S. institutional investors, or (B) is a foreign institution that is functionally equivalent to

p. 6-9

p. 6-10

one of the specified types of U.S. institutional investors and is subject to a substantially comparable regulatory scheme [19] ((A) and (B) together, a "qualified institutional investor"), or (ii) beneficially owns less than 20% of the outstanding voting equity securities (a "nonqualified passive investor"). [20]

Qualified institutional investors generally need not file their Schedule 13G until 45 days after the end of the calendar year in which the acquisition occurred, and only if they remain above the 5% threshold at the end of the calendar year. [21] Nonqualified passive investors must file their Schedule 13G within the same period as a Schedule 13D would be due, *i.e.*, within ten calendar days of crossing the 5% threshold. [22]

Section 13(d) requires a person to make a filing only if it *acquires* more than 5% of a class of voting equity securities that is already *registered* under the

p. 6-10

p. 6-11

Exchange Act. Thus, a person already owning more than 5% of a company at the time the shares are initially registered under the Exchange Act is "grandfathered" and is not required to file a Schedule 13D unless and until such person acquires beneficial ownership of an additional 2% of the outstanding stock in any 12-month period. [23] Any such person beneficially owning more than 5% of a registered class of securities as of the end of a calendar year is, however, required to file a Schedule 13G within 45 days of the end of that year. This right to file a Schedule 13G instead of a Schedule 13D does not require the investor to be passive.

[c] Groups

When two or more persons agree to act together "for the purpose of acquiring, holding, voting or disposing of equity securities," a group will be considered to have been formed and will be considered to own beneficially all the equity securities owned by each member. [24] The touchstone of a group within the meaning of § 13(d) "is that the members combined in furtherance of a common objective." [25] The agreement to act together does not need to be in writing, and the SEC or a court may infer an agreement exists by reason of parallel action, an inquiry that is highly fact-specific. [26] Financial institutions and their subsidiaries

p. 6-11

p. 6-12

and affiliates are usually thought to be a group for purposes of filing because of common control. Thus, the holdings of all these entities must be monitored. [27]

[d] Schedule 13D Disclosure Requirements and Amendments

Regulation 13D-G under the Exchange Act generally requires each person (or group of persons acting together) acquiring any voting equity securities registered under the Exchange Act as a result of which such person or group beneficially owns more than 5% of such securities to file with the SEC, within ten days after the 5% threshold is crossed, a report on Schedule 13D. [28] (An acquiror may continue to purchase target securities after the 5% threshold is crossed and

p. 6-12

p. 6-13

thus hold significantly in excess of 5% of the target securities by the time it files its report on Schedule 13D.)

Schedule 13D requires, among other things, disclosure of:

- the identity of the acquiror (or each member of the group), including its management, directors and controlling entities;
- the source and amount of funds used to acquire the securities; [29]
- the purpose of the acquisition, including any plans or proposals the acquiror may have for future

purchases or sales of target stock or for any changes in the target management or board of directors or any major corporate transaction affecting control of the target, such as a tender offer or business combination;

- the amount and percentage of target securities held by the acquiror and details about transactions in such securities during the 60 days prior to filing of the Schedule 13D (or, if shorter, for the period since the most recent Schedule 13D filing); and
- the nature of any arrangements to which the acquiror is a party relating to the target's securities.

Documents relating to, among other matters, the financing of the acquisition, any contemplated extraordinary transaction involving the issuer and the transfer or voting of the securities must be filed as exhibits to the Schedule 13D. In practice, the filing prepared in response to these requirements is usually quite long and complex and must be put together carefully. If the issuer of the securities is or becomes the target of a hostile bid by the person filing the Schedule 13D or otherwise, litigation may be instituted by the issuer, another shareholder (in some circumstances) or the SEC challenging the accuracy of the filing, especially the accuracy of statements describing the acquiror's purpose and plans. [30] As a consequence, persons or entities obligated to file often try to preserve as

p. 6-13

p. 6-14

much flexibility as possible by describing a wide variety of options. [31] A report on Schedule 13D must be amended "promptly" (which can mean almost "immediately" in some circumstances) in the event of a material change in the information disclosed in the schedule, including a change in or, in the view of the SEC, the selection of one particular purpose from, the previously disclosed options. [32] Any acquisition or disposition of 1% or more of the relevant class of securities is deemed material for this purpose, while a lesser change in percentage holding, or a change in holdings that does not occur as a result of an

p. 6-14

p. 6-15

acquisition or disposition (*e.g.*, as a result of issuances or repurchases of shares by the issuer), [33] may be material, depending upon the circumstances. [34]

[e] Schedule 13G Disclosure Requirements and Amendments

Schedule 13G requires much more limited information than Schedule 13D. The principal disclosures required by Schedule 13G include:

- the identity of the holder;
- the basis for its eligibility to use Schedule 13G;
- the amount and percentage of target securities that it holds; and
- the identity of the persons on whose behalf it owns the securities or who compose an acquiring group.

A Schedule 13G filer must amend its Schedule 13G filing within 45 days of the end of each calendar year to reflect any changes, as of that year end, in the information filed in its previous report on Schedule 13G. [35]

In addition, an amendment to a qualified institutional investor's report on Schedule 13G must also be filed within ten days after the end of the first month in which the qualified institutional investor's direct or indirect beneficial ownership interest exceeds 10% of the class of outstanding shares, and thereafter within ten days after the end of any month in which such person's interest, computed at the end of the month, increases or decreases by more than 5% of that class. [36]

In contrast, an amendment to a nonqualified passive investor's report on Schedule 13G must be filed "promptly" if at any time the nonqualified passive investor acquires beneficial ownership of more than 10% of the subject class of securities. [37] After a nonqualified passive investor exceeds the 10% threshold and

p. 6-15

p. 6-16

so long as its percentage of beneficial ownership remains below 20%, an additional amendment to the nonqualified passive investor's report on Schedule 13G must also be filed "promptly" to reflect any increase or decrease in beneficial ownership of more than 5% of the class of subject securities. [38]

If a nonqualified passive investor increases its ownership above 20%, it must file a Schedule 13D within ten days and is prohibited from purchasing any additional shares or voting the securities subject to the Schedule 13D filing until ten days after the filing. [39] Similarly, both a qualified institutional investor and a nonqualified passive investor must convert to a Schedule 13D within ten days after their intentions are no longer passive and are prohibited from purchasing any additional shares or voting the securities subject to the Schedule 13D filing until ten days after the filing. [40]

Grandfathered investors reporting on Schedule 13G as a result of their ownership of shares before the class was registered under § 12 of the Exchange Act must convert from reporting on a Schedule 13G to reporting on a Schedule 13D within ten days after they have acquired beneficial ownership of additional shares totaling 2% or more of the outstanding class of securities in any 12-month period, [41] but they do not need to amend their Schedule 13G or file a Schedule 13D merely by reason of a change in their intent or plans.

[f] Electronic Filing Required

The SEC rules mandate electronic filing for foreign private issuers through the SEC's Electronic Data Gathering, Analysis and Retrieval System (known as EDGAR). [42] Accordingly, persons (including non-U.S. persons) required to make filings on Schedule 13D or 13G by virtue of acquisitions or ownership of shares of foreign private issuers may not make such filings on paper, absent a hardship exemption. It should be noted that a person filing a Schedule 13D or 13G must have its own EDGAR codes, which can be obtained by electronically filing a Form ID with the SEC. [43] The SEC will generally provide the codes within two business days of receiving the form.

[2] Section 16 Reporting and Other Requirements Not Applicable to Shareholders of Foreign Private Issuers

p. 6-16

p. 6-17

Section 16 of the Exchange Act requires "insiders" of certain issuers that are not foreign private issuers [44] to report their transactions in the issuer's equity securities and to pay or disgorge to the issuer profits (or deemed profits) resulting from "short-swing" trading in the issuer's equity securities. [45] Section 16 is intended to provide "bright-line" rules that do not depend on an insider's possession of material nonpublic information or on the insider's intent. In practice, these bright-line rules present many potential pitfalls.

In general, insiders of issuers that have a class of equity security (whether or not entitled to vote) registered under § 12 of the Exchange Act and that are not foreign private issuers are subject to the requirements of § 16. Non-U.S. persons who are insiders are subject to the same rules as domestic persons who are insiders. Insiders are defined for purposes of § 16 to include officers [46] and directors [47] of an issuer and persons who are "beneficial owners" of more than 10% of a registered class of voting equity securities of an issuer. [48]

Insiders generally must file reports regarding their ownership of, and transactions in, equity securities of the issuer. [49] They are also subject to "short-swing profit recapture" provisions designed to recapture for the benefit of the issuer profits realized on purchases and sales of equity securities within any six-month

p. 6-17

p. 6-18

period. [50] Additionally, Section 16(c) prohibits insiders from selling equity securities of a § 12 issuer that the seller does not own (*i.e.*, certain types of short sales). [51]

[a] Section 16(a)

Section 16(a) requires insiders to file reports on Forms 3, 4 or 5, depending upon the nature of the transaction involved. These filings must be made with the SEC and with the issuer. [52]

Within ten days of becoming an insider (or on the effective date of the Exchange Act registration statement for an issuer registering securities under § 12 for the first time— *e.g.*, pursuant to a Form 8-A in an initial public offering), the insider is required to file a report on Form 3 stating the insider's aggregate position in (i) the class of equity securities of the issuer giving rise to its status as an insider and (ii) all other equity securities (whether voting or nonvoting and whether or not registered under the Exchange Act, including derivative securities and rights, contracts or arrangements treated as derivative securities) [53] of that issuer, in each case, as to which such insider has a direct or indirect pecuniary interest. [54]

Subsequent to the initial filing on Form 3, an insider is required to report changes in beneficial ownership of equity securities as to which it has a direct or indirect pecuniary interest on Form 4 or Form 5, depending on the circumstances. [55] Insiders are required to report virtually all of their transactions in an

p. 6-18

p. 6-19

issuer's equity securities on a Form 4 before the end of the second business day following the day on which the transaction is executed, [56] although a very limited number may be reported on Form 5 within 45 days following the end of the issuer's fiscal year.

In addition, all Form 3, Form 4 and Form 5 reports must be filed electronically, and issuers that maintain corporate websites must provide the reports electronically to the public not later than the end of the business day following filing. [57] The SEC's rules additionally require, among other things, that issuers with corporate websites make the forms available free of charge, that the forms not be burdensome to access and that they be available for at least 12 months. [58]

An issuer subject to § 16 is required to publicly disclose, generally in its annual proxy statement to shareholders, any failures of an insider to file on a timely basis any reports required under § 16(a) of the Exchange Act. [59] Such disclosure must include the insider's name, the number of transactions either reported late or not reported at all and certain other information.

p. 6-19

p. 6-20

In addition, the SEC is empowered, in connection with any reporting failure, to seek civil penalties against an insider, [60] to issue a permanent cease-and-desist order against an insider and to require an accounting of affected transactions and disgorgement of profits to the issuer. [61]

[b] Section 16(b): Short-Swing Profit Recovery Rules

Section 16(b) of the Exchange Act requires insiders to disgorge to an issuer profits realized from purchases and sales of equity securities of the issuer within any six-month period. (As noted above, this section is not applicable to foreign private issuers.) The transactions can occur in any order, *i.e.*, a purchase followed by a sale at a higher price or a sale followed by a purchase at a lower price. In addition, transactions in the actual equity security can be "matched" for these purposes with transactions in derivative securities relating to that equity security. Section 16(b) imposes strict liability on an insider, and an insider's good faith is irrelevant to any determination of liability. Nonetheless, purchases and sales resulting in a duty to disgorge profits are not illegal and do not result in criminal liability or SEC penalties or sanctions. Most § 16(b) claims are initiated by plaintiffs' attorneys who specialize in pursuing such claims.

In calculating "profit" under § 16(b), courts will match the lowest purchase price paid by the insider against the highest sales price received by the insider in any six-month period. As a result, even though an insider may have suffered a net economic loss with respect to a series of transactions effected in issuer securities during a six-month period, the insider may be treated for purposes of § 16(b) as having realized a "profit" recoverable by the issuer. For example, an insider who during any six-month period buys 100 shares of stock at $10, buys another 100 shares at $20 and sells 200 shares at $12 will have a recoverable "profit" as a result of those transactions of

$200 (100 shares sold at $12 less 100 shares bought at $10) notwithstanding that the actual overall economic effect of the insider's transactions during the six-month period was a $600 loss.

[c] Exempt Transactions

There are a small number of transactions that are exempt from § 16(a) reporting and a somewhat larger number of transactions that are exempt from the short-swing profit recovery rules of § 16(b). Many transactions, such as exercises of employee stock options, that are exempt from § 16(b) are nonetheless reportable under § 16(a). Transactions exempt from § 16(b) are not taken into

p. 6-20

p. 6-21

account when determining whether a matchable purchase and sale have occurred during any six-month period. As a result, an insider may effect an exempt purchase and a nonexempt sale (or *vice versa*) in a six-month period without incurring liability under § 16(b).

For example, Rule 16b-3 under the Exchange Act generally provides an exemption from § 16(b) for grants, awards or acquisitions of equity securities from the issuer, or dispositions of equity securities to the issuer, provided that the transaction is approved by the board of directors of the issuer or by holders of a majority of the voting securities of the issuer. Rule 16b-6 under the Exchange Act provides an exemption generally for exercises of derivative securities such as options, warrants or convertible securities with exercise or conversion privileges at a fixed price related to an equity security.

For persons who are not officers or directors (including by deputization), but become subject to § 16 because they acquire more than 10% of a class of registered voting equity securities, the transaction that initially takes them over 10% cannot be matched with any sales. Thus, if such an investor does not purchase any additional shares after the transaction that takes it over 10% ownership (which can be a block purchase that takes it significantly over 10%), subsequent sales within six months will not be subject to § 16(b). [62]

Footnotes

10 Sections 13(d) and 13(g) of the Exchange Act apply only to classes of voting equity securities registered under the Exchange Act. They do not apply to equity securities of issuers that must file periodic reports only by reason of § 15(d) of the Exchange Act as a result of having made a U.S. public offering or to foreign companies that furnish information to the SEC pursuant to Rule 12g3-2(b) under the Exchange Act. Moreover, if an issuer has two classes of equity securities, one registered and one not (or one voting and one not), the sections only apply with respect to the registered, voting class. However, if the unregistered (or nonvoting) class is immediately (or within 60 days) convertible into a registered voting class, filing will be required with respect to the securities owned of the unregistered (or nonvoting) class if such securities would, if converted, represent more than 5% of the registered, voting class. *See* Rule 13d-3(d) under the Exchange Act.

11 ADRs are not a separate class of voting equity securities for purposes of § 13(d) or § 13(g) of the Exchange Act. SEC Release No. 33-6894 (May 23, 1991). Thus, a person owning ADRs will be required to file reports under § 13(d) and § 13(g) of the Exchange Act only if the voting equity securities represented by his or her ADRs plus any underlying securities that he or she beneficially owns outside the ADR facility constitute more than 5% of the underlying securities (including those represented by ADRs).

An ADR holder's standing directions to a depositary to vote shares underlying the ADRs in the manner set forth in a deposit agreement do not confer voting power on the depositary. Consequently, the depositary would not be considered the beneficial owner of such shares and no reporting obligations would arise in connection therewith. *See Second National Bank of Warren* (avail. Aug. 15, 1988).

12 The definition of beneficial ownership generally was not interpreted historically to cover most swaps relating to voting equity securities. With the passage of the Dodd-Frank Act, however, §§ 13(d), 13(f) and 13(g) of the Exchange Act expressly include the purchase or sale of security-based swaps, to the extent defined by

rule by the SEC, as one type of beneficial ownership, thereby giving the SEC the authority to adopt rules that would include security-based swaps within the definition of beneficial ownership. *See* § 766 of the Dodd-Frank Act. The SEC has not utilized this authority other than to readopt existing Rules 13d-3 and 16a-1 under the Exchange Act to ensure that persons who purchase or sell security-based swaps after July 16, 2011 remain within the scope of the beneficial ownership rules to the same extent they were covered prior to July 16, 2011. SEC Release No. 34-64628 (June 8, 2011).

The language in Title VII of the Dodd-Frank Act was preceded by case law finding that a holder of derivative instruments could be regarded as a beneficial owner of shares held for hedging purposes by their counterparties where there is a course of conduct regarding the voting or disposition of such shares. *See CSX Corp. v. TCI Fund Management (UK) LLP*, 562 F. Supp. 2d 511 (S.D.N.Y. 2008), *aff'd in part*, *vacated in part*, 654 F.3d 276 (2d Cir. 2011), which discusses in *dicta* whether the 5% beneficial ownership threshold was met and concomitant § 13(d) reporting requirements were triggered due to the holding of equity swaps, in addition to actual shares, by two hedge funds, which each owned less than 5% of CSX outright, but held equity swap positions with an economic interest equivalent to 8% to 12% of CSX. The court found that the hedge funds were required to file a Schedule 13D because they were a "group," but further noted that the holding of swaps could be considered beneficial ownership because the swap holder could influence the counterparty's voting decisions due to the nature of the equity swap market. The SEC's Division of Corporation Finance wrote an *amicus* letter arguing that beneficial ownership would not arise from holding equity swaps, and that economic incentives and influence were insufficient to provide "voting power" to the holders of the swaps. On appeal, the Second Circuit did not address the question whether a long holder of equity swaps may be deemed to beneficially own the shares purchased by the short party as a hedge; however, one member of the panel addressed in a concurrence the reasons that the long party should not be deemed to beneficially own the shares, because it does not, through the swap, obtain investment or voting power over the shares.

13 Rule 13d-3 under the Exchange Act.

14 For example, both U.K. and non-U.K. persons are required to report large holdings in certain companies pursuant to the U.K. Vote Holder and Issuer Notification Rules set out in Chapter 5 of the Disclosure and Transparency Rules of the U.K. Financial Conduct Authority Handbook of Rules and Guidance. The U.K. system requires reporting of such holdings in U.K. companies whose shares are admitted to trading on an EEA-regulated market or on a U.K.-prescribed market (*e.g.*, AIM) and in other companies incorporated in an European Economic Area state (an "EEA state"), with shares admitted to trading on a regulated market, where the United Kingdom is their home state. A non-EEA company with shares admitted to trading on an EEA-regulated market for which the United Kingdom is its home member state is also subject to these requirements unless its domestic regime is deemed equivalent (presently, the United States, Japan, Israel and Switzerland). Similar requirements arise in other EEA states as a result of implementation of the European Union's Directive of the European Parliament and of the Council on Transparency Obligations of December 15, 2004 (Directive 2004/109/EC), as amended by Directive 2010/73/EU and Directive 2013/50/EU.

15 For a further discussion of groups, *see* § 6.04[1][c].

16 *See* § 6.04[1][a].

17 The *Hart-Scott-Rodino Antitrust Improvements Act* ("HSR Act"), as well as other statutes, may, however, delay purchases above certain levels that, depending on the stock price, may be below or above 5%. *See* § 9.06. Similarly, specific ownership thresholds may be relevant in other contexts, such as in regulated industries (e.g., telecommunications, gaming and energy); pursuant to business combination statutes (*e.g.*, DGCL § 203, which generally prohibits, unless a company has in its charter expressly opted out of the provision, an "interested stockholder"—generally a person beneficially owning 15% or more of a corporation's voting stock or an affiliate or associate of that person—from engaging in a "business combination" for three years following the date on which the person became an interested stockholder); and in connection with review by the Committee on Foreign Investment in the United States ("CFIUS"), which has the authority to review transactions in which a foreign person acquires direct or indirect "control" over a

U.S. company to determine whether national security issues may exist, but generally does not review passive acquisitions of voting securities representing less than 10% of outstanding voting securities (*see* § 9.07).

18 A determination of whether securities were acquired without the purpose or effect of changing or influencing control of the issuer is highly dependent on the attendant facts and circumstances. *See* SEC Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Sections 13(d) and 13(g) and Regulation 13D-G Beneficial Ownership Reporting, Question 103.11 (July 14, 2016).

19 *See* Rule 13d-1(b)(1)(ii)(J) under the Exchange Act. A foreign institution relying on this rule must certify on Schedule 13G that it is subject to a regulatory scheme that is substantially comparable to the regulatory scheme applicable to its U.S. counterparts and undertake to provide to the SEC information that would otherwise be required if the institution filed on Schedule 13D. This rule is a codification of the pre-2008 practice of the SEC of issuing no-action letters permitting Schedule 13G to be used by certain foreign institutional investors that, except for their nationality, qualified for the form in their capacity as qualified institutional investors. The requirements applicable to qualified institutional investors are less onerous than those applicable to nonqualified passive investors, and qualified institutional investors may file a Schedule 13G (and not convert to filing on Schedule 13D) even if their ownership interest exceeds 20%. *See*, *e.g.*, *National Consumer Cooperative Bank* (avail. Jan. 3, 2011); *Morgan Stanley Smith Barney LLC* (avail. May 29, 2009); *Goldman, Sachs & Co.* (avail. Dec. 30, 2008); *Auction Rate Securities* (avail. Sept. 22, 2008); *Orbis Group* (avail. July 16, 2008); *DnB NOR ASA* (avail. Jan. 9, 2008); *Natixis S.A*. (avail. Oct. 9, 2007); *Mellon Financial Corp*. (avail. Nov. 16, 2006); *Mitsubishi UFJ Financial Group, Inc.* (avail. Jan. 23, 2006); *Citigroup Inc*. (avail. May 27, 2004); *Stichting Pensioenfonds ABP* (avail. May 7, 2004); *CGNU PLC* (avail. Mar. 19, 2002); *Cater Allen International Limited* (avail. Mar. 7, 2001); *Swiss Bank Corp*. (avail. Jan. 17, 1997); *Deutsche Bank AG* (avail. Apr. 9, 1996); *Union Bank of Switzerland* (avail. Nov. 23, 1992); *Ontario Teachers' Pension Plan Board* (avail. May 6, 1992); *Royal Bank of Canada* (avail. Dec. 10, 1990); *B.A.T. Industries plc* (avail. Nov. 26, 1990). Certain foreign governments have also used Schedule 13G as qualified institutional investors. *See*, *e.g.*, *Her Majesty's Government* (avail. Dec. 10, 2008).

20 Rule 13d-1(c) under the Exchange Act.

21 Rules 13d-1(b)(2) and 13d-1(d) under the Exchange Act. Section 13(d) requires a person to make a filing only if it *acquires* more than 5% of a class of equity securities that is already *registered* under the Exchange Act. Similarly, where any holding is increased to more than 5% solely due to the issuer's repurchase of its shares, the holder has not made an acquisition within the meaning of § 13(d) and there is no Schedule 13D filing obligation, although a Schedule 13G is required to be filed within 45 days after the year end. *See Drico Industrial Corp.* (avail. June 25, 1976). This exception from the obligation to file a Schedule 13D is not available to persons who influence or control the change in the aggregate number of outstanding securities, including, but not limited to, officers and directors of the issuer. *See* SEC Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Sections 13(d) and 13(g) and Regulation 13D-G Beneficial Ownership Reporting, Question 103.08 (Sept. 14, 2009).

22 Rule 13d-1(c) under the Exchange Act.

23 § 13(d)(6)(B) of the Exchange Act. The SEC staff has indicated that the 2% calculation should be based on the number of shares outstanding at the beginning of the 12-month period. *See Refreshment Machinery, Inc.* (avail. June 16, 1975). The SEC staff has provided relief from filing a Schedule 13D where a person purchases shares above the 2% threshold to maintain an existing percentage interest in an issuer, where the purchases were contemporaneous with new issuances and sales to other parties. *See Exxon Corporation* (avail. Dec. 13, 1989); *Coca-Cola Co.* (avail. Dec. 12, 1991).

24 § 13(d)(3) of the Exchange Act; Rule 13d-5(b) under the Exchange Act.

25 *Wellman v. Dickinson*, 682 F.2d 355, 363 (2d Cir. 1982), *cert. denied*, 460 U.S. 1069 (1983); *see also Roth v. Jennings*, 489 F.3d 499 (2d Cir. 2007).

26 *See*, *e.g.*, *SEC v. Savoy Industries, Inc.*, 587 F.2d 1149 (D.C. Cir. 1978), *cert. denied*, 440 U.S. 913 (1979); *CSX Corp. v. TCI Fund Management (UK) LLP*, 562 F. Supp. 2d 511 (S.D.N.Y. 2008), *aff'd in part*, *vacated*

in part, 654 F.3d 276 (2d Cir. July 18, 2011) (the district court found that a group was formed based on concerted investment action in a highly fact-specific analysis; the Second Circuit remanded the question of group formation for further review); *GAF Corp. v. Milstein*, 453 F.2d 709 (2d Cir. 1971), *cert. denied*, 406 U.S. 910 (1972) (finding a group may be formed without any accompanying agreement to acquire additional securities); *Dreiling v. America Online, Inc.*, 578 F.3d 995 (9th Cir. 2009) (finding no group existed where there was no probative evidence suggesting that there ever was an agreement by the parties to act together to acquire, hold, vote or dispose of the subject stock). Evidence of a pre-existing relationship is inadequate by itself to prove the formation of a group. *See*, *e.g*., *Bayly Corp. v. Marantette*, Fed. Sec. L. Rep. (CCH) ¶98,834 (D.D.C. Oct. 19, 1982). Moreover, action with respect to particular securities must proceed beyond preliminary discussions to actual agreement to act in concert. *See*, *e.g.*, *Lane Bryant, Inc. v. Hatleigh Corp.*, Fed. Sec. L. Rep. (CCH) ¶97,529 (S.D.N.Y. June 9, 1980). *See also Morales v. Quintel Entertainment, Inc*., 249 F.3d 115 (2d Cir. 2001), in which the Second Circuit held that it was a triable issue of fact whether an individual owner, Richard Morales, of less than 2.5% of the common stock of a publicly traded corporation, Quintel, was the "beneficial owner" of more than 10% of such stock by reason of the existence of a "group" of three shareholders for purposes of § 13(d), and therefore had liability under § 16(b). In vacating the district court's decision in part and remanding the case to it, the Second Circuit found, as evidence of the existence of such a group, that the three shareholders had entered into a sales agreement to sell their interest in a closely held corporation in exchange for the issuance of Quintel common stock (though not necessarily for the purpose of acquiring control of Quintel); that such agreement contained lock-up provisions governing the holding and disposal of Quintel common stock; that all three shareholders had deposited their holdings in identical trusts naming the same person as trustee; and that Quintel had redeemed the holdings of all three shareholders together on the same day. In addition, the Second Circuit noted that, although they had disclaimed beneficial ownership of the others' shares in such filing (but not in filings made by Morales on Forms 4 and 5), the three had jointly filed a single Schedule 13D. *But see Lowinger v. Morgan Stanley & Co. LLC*, 841 F.3d 122 (2d. Cir. 2016) (finding an ordinary course lock-up agreement between shareholders and underwriters in connection with Facebook, Inc.’s initial public offering did not result in the formation of a group); *see also Chechele v. Scheetz*, 819 F. Supp. 2d 342 (S.D.N.Y. 2011), *aff'd*, 466 F. App'x 39 (2d Cir. 2012).

27 The SEC has clarified that in cases where appropriate information barriers are in place between business units, divisions or subsidiaries within a group, thereby allowing for the independent exercise of voting and investment powers by the party holding the securities, the attribution of beneficial ownership from the holding party to parties on the other side of the barrier may not be required. The determination as to the independent exercise of voting and investment powers is based on facts and circumstances, but the SEC has indicated that written policies and procedures reasonably designed to prevent the flow of information relating to voting and investment between the relevant parties should be maintained and enforced. These policies and procedures should also be subject to an annual, independent assessment as to their effectiveness. In addition, the separation of the parties must not be "artificial"— *e.g.*, the parties should not participate in a common compensation pool that may result in the alignment of voting and investment decisions between them. Finally, the parties on the other side of the barrier should not have any officers, directors or employees involved in the exercise of the holding party's voting and investment powers. In this regard, the SEC has stated that the existence of an independent investment committee would be evidence of an effective separation between the parties. *See* SEC Release No. 34-39538 (Jan. 12, 1998); *Goldman Sachs Group, Inc.* (avail. Mar. 30, 2001).

28 Title IX of the Dodd-Frank Act gives the SEC rulemaking discretion to shorten the current ten-day reporting time period under Schedule 13D, which it has not elected to exercise to date. In addition, the Dodd-Frank Act amended § 13(d) of the Exchange Act such that the filer is no longer required to mail copies of the filings to the issuer or relevant national securities exchange.

29 In the case of funds loaned in the ordinary course of business by a bank operating under the laws and supervision of bank regulators of the United States or any state, the name of the bank will not be made available to the public if the acquiror at the time of filing of the Schedule 13D so requests in writing and files

such request, naming such bank, with the SEC. Schedule 13D, Item 3; § 3(a)(6) of the Exchange Act; *see also* Item 1007(d) of Regulation M-A under the Securities Act, which allows for the same relief in the business combination context. An acquiror must, however, disclose the identity of any foreign bank providing funds used to acquire the securities.

30 *See* Schedule 13D, Item 4; *see also* Item 1006(c) of Regulation M-A under the Securities Act, which contains substantially similar provisions in the business combination context. The failure to accurately amend a report to describe new intent on Schedule 13D could also lead to violations of state law. *See NACCO Industries*, *Inc. v. Applica Inc.*, 997 A.2d 1 (Del. Ch. 2009) (allowing a fraud claim under state law where an investor filed a Schedule 13D including an allegedly misleading statement on a change in the intent of the investment, stating that its intent was for investment, while accumulating a large stake in anticipation of a takeover bid). The U.S. Court of Appeals for the Seventh Circuit has found a private right of action relating to a Schedule 13D exists in favor of shareholders only in the context of a tender offer or aggregation of shares for the purpose of controlling the issuer. *See Edelson v. Ch'ien*, 405 F.3d 620 (7th Cir. 2005); *see also Motient Corp. v. Dondero*, 529 F.3d 532 (5th Cir. 2008); *E.On AG v. Acciona, SA*, 468 F. Supp. 2d 537 (S.D.N.Y. 2006).

31 For example, investors might disclose their intention as follows: to review their investment in the issuer on a continuing basis, and increase or decrease their investment in the issuer depending upon the price and availability of the securities, subsequent developments affecting the issuer, the issuer's business and prospects, other investment and business opportunities available to the investors, general stock market and economic conditions, tax considerations and other factors. The SEC staff has indicated that generic disclosure must be amended when the security holder has formulated a specific intention with respect to one of the matters enumerated in Item 4(a)-(j). *See* SEC Division of Corporation Finance, Compliance and Disclosure Interpretations, Exchange Act Sections 13(d) and 13(g) and Regulation 13D-G Beneficial Ownership Reporting, Question 110.06 (Sept. 14, 2009).

32 The SEC has taken enforcement action that illustrates its construction of the requirement to amend "promptly" reports on Schedule 13D. *See SEC v. Edelman*, SEC Litigation Release No. 12835 (Apr. 11, 1991). For example, on Sunday, September 10, 1989, Asher Edelman established a plan to buy additional stock of Datapoint Corporation. He purchased shares on the following Monday and Tuesday and amended his Schedule 13D the next day. Subsequent comments by the SEC staff suggested that Mr. Edelman may have been obligated to amend his outstanding Schedule 13D (which stated that he would review his holdings in Datapoint from time to time) as early as the morning following his formulation of a plan to purchase more Datapoint shares. Kevin G. Salwen, *Edelman Named In SEC Action On 1989 Plan*, WALL ST. J., Apr. 12, 1991; *see also In the Matter of Cooper Laboratories Inc.*, SEC Release No. 34-22171 (June 26, 1985).

A change in intent triggers an obligation to amend Schedule 13D. A "plan or proposal," as those terms are used in Item 4 of Schedule 13D, arises upon formulation of a specific intention, not only once a formal agreement has been signed or a tender offer launched. *See In the Matter of Tracinda Corp.*, SEC Release No. 34-58451 (Sept. 3, 2008). Tracinda Corporation proposed selling 28 million shares of General Motors Corporation to a broker-dealer on November 20, 2006, but only sold 14 million shares because the bid offered by the broker-dealer for the full 28 million shares represented a deeper discount than Tracinda was willing to accept. On November 22, 2006, Tracinda amended its 13D reporting the sale of 14 million shares, but omitted to disclose its plan and proposal to sell the 28 million shares. On November 28, 2006, Tracinda sold an additional 14 million shares of GM stock. This sale reduced its holdings in GM to 4.95%. On November 30, 2006, Tracinda sold its remaining shares of GM stock. The SEC found violations of § 13(d)(2) of the Exchange Act and Rules 12b-20 and 13d-2(a) thereunder and Tracinda was ordered to cease and desist from committing or causing any violations, and any future violations, of such provisions and rules.

33 *See Darco Asso. Calny Food Services, Inc.* (avail. May 6, 1979).

34 Rule 13d-2(a) under the Exchange Act. The requirement to amend "promptly" reports on Schedule 13D creates problems for filers disposing of a material block of the class of subject securities. In such cases, difficulty may arise because of the tension between the requirement of the seller to file an amendment

promptly and the desire of the block positioner to delay the filing until the sale is completed. *See supra* Note 33.

35 Rule 13d-2(b) under the Exchange Act. An amended Schedule 13G must only be filed if there are changes as of the end of the calendar year, and no amendment is required if there is a change in the percent of the class outstanding previously reported if the change results solely from a change in the aggregate number of securities outstanding.

36 Rule 13d-2(c) under the Exchange Act.

37 Rule 13d-2(d) under the Exchange Act. The requirement to file "promptly" is the same standard that applies to amendments to reports on Schedule 13D.

38 Rule 13d-2(d) under the Exchange Act.

39 Rule 13d-1(f) under the Exchange Act.

40 Rule 13d-1(e) under the Exchange Act.

41 § 13(d)(6)(B) of the Exchange Act. The SEC staff has indicated that the 2% calculation should be based on the number of shares outstanding at the beginning of the 12-month period. *See Refreshment Machinery, Inc.* (avail. June 16, 1975); *Exxon Corporation* (avail. Dec. 13, 1989); *Coca-Cola Co.* (avail. Dec. 12, 1991); *Stolt Tankers and Terminals (Holdings) S.A.* (avail. Mar. 12, 1992).

42 *See* SEC Release No. 33-8099 (May 14, 2002) and § 4.02[3][b][i], for a further discussion of EDGAR.

43 *See generally* Regulation S-T under the Securities Act. The Form ID must be filed by completing an online form *available at* https://www.filermanagement.edgarfiling.sec.gov. The SEC does not accept submissions of Form ID by mail.

44 *See* Rule 3a12-3 under the Exchange Act.

45 *See* Peter J. Romeo & Alan L. Dye, SECTION 16 TREATISE AND REPORTING GUIDE (4th ed. 2012) for a comprehensive treatment of § 16 of the Exchange Act.

46 For purposes of § 16, an "officer" is defined to include the president of an issuer, its principal financial and accounting officers or controllers, any other individual who is a vice president in charge of a principal business unit, division or function of the issuer and any other individual who performs a policy-making function for the issuer. *See* Rule 16a-1(f) under the Exchange Act. A person may be an officer for these purposes without regard to that person's title or formal position.

47 A "director" is, in general, any director of a corporation. § 3(a)(7) of the Exchange Act. However, an "honorary director" or "director emeritus" may be deemed to be a director for purposes of § 16 of the Exchange Act, depending on the person's authority, responsibility and access to inside information. *See* SEC Release No. 34-28869 (Feb. 8, 1991); SEC Release No. 34-26333 (Dec. 2, 1988); SEC Release No. 34-18114 (Sept. 24, 1981). A shareholder of an issuer may be deemed to be a director of the issuer if the corporation "deputizes" a representative to occupy the shareholder's position on the board of directors of the issuer, *i.e.*, designates one of its representatives to be a director of the issuer. The shareholder is subject to disgorgement under § 16(b) if it trades, even if the director it designated has not engaged in any trading. *See Blau v. Lehman*, 368 U.S. 403 (1962); *Feder v. Martin Marietta Corp.*, 406 F. 2d 260 (2d Cir. 1969), *cert. denied*, 396 U.S. 1036 (1970).

48 The determination of whether a person is a 10% beneficial owner of an issuer is based on the beneficial ownership provisions of § 13(d) of the Exchange Act discussed above. *See* Rule 16a-1(a)(1) under the Exchange Act; § 6.04[1][a].

49 § 16(a) of the Exchange Act.

50 § 16(b) of the Exchange Act.

51 *But see* Rule 16c-4 under the Exchange Act, which exempts certain short positions that are fully covered through ownership of the underlying equity positions. §§ 16(d), 16(e), 16(f) and 16(g) describe the application of §§ 16(a), 16(b) and 16(c) to certain types of transactions.

52 Rule 16a-3 under the Exchange Act.

53 In general, the term "equity security" is defined very broadly for most purposes of § 16, and includes instruments that may not be considered securities for other purposes of the Exchange Act. In addition to common stock, the term "equity securities" includes derivative securities, such as options to acquire stock and debt convertible into stock, as well as other contracts, rights or arrangements the value of which is based on the value of equity securities, including equity swap contracts and certain rights that are typically awarded in connection with executive compensation arrangements.

54 The term "pecuniary interest" means, generally, an economic interest. A pecuniary interest may arise from a direct holding of an equity security, from an indirect interest in a security through a corporation, partnership or trust (of which the insider is a trustee, a settlor or a beneficiary), from equity securities held by certain family members or from equity securities held by an investment partnership from which the insider is entitled to a performance-related management fee. Rule 16a-1(a)(2)(i) under the Exchange Act.

55 The Sarbanes-Oxley Act shortened the period for the reporting of most insider transactions from ten days following the end of the month in which they transpire to within two business days following their occurrence. *See* § 6.04[2]. The Sarbanes-Oxley Act did not amend the ten-day reporting rule applicable to insiders initially becoming subject to § 16 reporting obligations. *See* § 16(a)(2) of the Exchange Act; Form 3. However, Title IX of the Dodd-Frank Act gives the SEC rulemaking discretion to shorten the current ten-day reporting time period for initial reporting.

56 The SEC has established two limited exceptions to the two-day rule to cover circumstances where the insider does not select the date of the execution of the transaction. The first exception covers transactions pursuant to a contract, instruction or written plan for the purchase or sale of issuer securities that satisfies the conditions of Rule 10b5-1(c) under the Exchange Act. These conditions set out an affirmative defense to insider trading liability under Rule 10b-5 where an insider enters into a written plan to engage in nondiscretionary securities transactions before becoming aware of relevant material nonpublic information. *See* § 11.05[2][a][i]. The second exception covers "discretionary transactions" (as defined by Rule 16b-3(b)(1) under the Exchange Act) involving an employee benefit plan, whether or not exempted by Rule 16b-3 under the Exchange Act (which exempts certain transactions from § 16(b) liability). In these cases, the date of execution (triggering the two-day filing deadline) is deemed to be the date the executing broker, dealer or plan administrator notifies the insider of the execution, except that if the notification occurs later than the third business day following the actual trade date of the transaction, then the deemed date of execution is that third business day. The SEC has noted that it expects insiders to make arrangements with executing entities to provide such notification as quickly as feasible and has urged executing entities to provide such information either electronically or by telephone and not to rely on mailed confirmations. *See* SEC Release No. 34-46421 (Aug. 27, 2002).

57 § 16(a)(4) of the Exchange Act.

58 *See* Rule 16a-3(k) under the Exchange Act; SEC Release No. 33-8230 (May 7, 2003). In order to facilitate the easy filing of Forms 3, 4 and 5 by individuals, the SEC established a separate website, https://www.onlineforms.edgarfiling.sec.gov, dedicated exclusively to the on-line creation and submission of the forms. It also adopted a rule providing that direct transmission of the forms through the website on or before 10:00 P.M. Eastern time on a business day will result in the forms being deemed filed on that day. The forms may not be filed via the traditional means of EDGARLink. *See* SEC Release No. 33-8224 (Apr. 30, 2003); SEC Release No. 33-8230 (May 7, 2003).

59 Item 405 of Regulation S-K under the Securities Act.

60 § 32 of the Exchange Act.

61 § 21C of the Exchange Act.

62 *See* Rule 16a-2 under the Exchange Act; *Foremost-McKesson, Inc. v. Provident Securities Co.*, 423 U.S. 232 (1976).

U.S. Regulation of the International Securities and Derivatives Markets, § 6.05, POTENTIAL LIABILITY FOR MATERIAL MISSTATEMENTS OR OMISSIONS AND INSIDER TRADING

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 6.05 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Directors, certain executive officers and controlling shareholders, as well as any selling shareholders, may be liable for materially deficient disclosure, including disclosure contained in registration statements filed under the Securities Act and the Exchange Act and offering documents used in private placements. [63]

In addition to potential liability for material misstatements or omissions in disclosure, U.S. securities laws—specifically § 10(b) of the Exchange Act and Rule 10b-5 and the extensive case law thereunder—prohibit trading by certain persons while knowingly in possession of material nonpublic (*i.e.*, "inside") information in connection with the purchase or sale of securities. [64]

Footnotes

63 *See* § 11.03.

64 *See* § 11.05[2][a]. Issuers commonly adopt insider trading policies that impose "black-out periods," during which trading in issuer securities by directors, officers and other employees is prohibited, to prevent such persons from trading while they may be in possession of material nonpublic information.

U.S. Regulation of the International Securities and Derivatives Markets, § 6.06, RESTRICTIONS ON RESALES BY DIRECTORS, OFFICERS AND SIGNIFICANT SHAREHOLDERS OF THE ISSUER

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 6.06 (11th and 12th Editions 2014-2017)
11th and 12th Editions

[1] Resales of Securities by Affiliates

U.S. law, and contractual arrangements entered into in connection with U.S. public offerings, can restrict the resale of an issuer's securities by its directors, executive officers and significant shareholders.

Resales of securities by "affiliates" of the issuer are restricted under the U.S. securities laws, even when the issuer is public in the United States and has listed securities there. A person is an "affiliate" of an issuer if it directly, or indirectly through one or more intermediaries, controls, is controlled by, or is under common control with the issuer. Rule 405 under the Securities Act defines control as "the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract or otherwise." [65] An issuer's directors, executive officers and significant shareholders (*e.g.*, those holding at least 10% of the outstanding equity securities) are generally considered to be its affiliates.

Offers and sales of an issuer's securities by an affiliate of the issuer may not be made in the United States unless: (i) prior to their offer and sale, the securities have been registered with the SEC under the Securities Act or (ii) the affiliate's offers and sales of the securities are made pursuant to an exemption from these registration requirements. As a practical matter, the most frequently used exemptions involve sales of limited numbers of shares through transactions under Rule 144 under the Securities Act, [66] resales under Rule 144A under the Securities Act [67] and private placements. [68]

As indicated in Chapter 3, the issuer itself must register any of its securities that are to be sold in the United States pursuant to a registration statement filed with the SEC, even resales by shareholders. Because shareholders may not always be able to cause an issuer to register their securities under the Securities Act for resale purposes, even where they are deemed to "control" the issuer for purposes of determining whether they are affiliates for U.S. securities law purposes, substantial shareholders sometimes negotiate with issuers in order to obtain specific contractual rights with respect to registration of the shareholders' securities in order to permit their public sale. Such registration rights generally

take the form of the issuer's commitment to (i) prepare a "shelf registration statement" registering the sale of the shares, (ii) register the sale of the shares within a specified period, upon demand (generally referred to as "demand rights"), or (iii) include the shareholder's shares as one portion of any contemplated sale involving the filing of a registration statement within a specified period. The third category is usually referred to as "piggyback rights" because the shareholder's offering is, in a sense, carried along as part of the primary offering contemplated by the issuer or a secondary offering by another shareholder. [69]

Affiliates also may sell securities of the issuer in a transaction that takes place outside the United States and complies with Regulation S under the Securities Act. [70]

[2] Lock-Ups in Connection with Offerings of Shares by the Issuer

In connection with securities offerings, directors, officers and shareholders are often required to enter into lock-up agreements with the underwriters of the offering in order to facilitate an orderly trading market following the completion of the offering. [71] In an initial public offering, all or nearly all of the existing shareholders typically will be required to enter into lock-up agreements with the representative(s) for the underwriters. In a follow-on offering, typically only the selling shareholders or those with a separate contractual obligation to do so (*e.g.*, pursuant to a shareholders' agreement) enter into lock-up agreements. Shareholders' agreements and registration rights agreements often include a commitment by the shareholders to enter into lock-up agreements in connection with securities offerings.

[3] Prohibition of Insider Trades During Certain Plan Blackout Periods

Section 306(a) of the Sarbanes-Oxley Act, and Regulation Blackout Trading Restriction ("Regulation BTR") adopted by the SEC to clarify the operation of § 306(a), prohibit directors and executive officers of an issuer from, directly or indirectly, purchasing, selling or otherwise acquiring or transferring any equity security of an issuer that was acquired in connection with the director's or

p. 6-23

p. 6-24

executive officer's service or employment in such capacity [72] during a pension plan blackout period that prevents plan participants or beneficiaries from engaging in issuer equity securities transactions. [73] Although not the exclusive remedy, any profit realized by a director or executive officer from any transaction in equity securities of an issuer in violation of § 306(a) is recoverable by the issuer, regardless of the intention of the director or executive officer. [74] In addition, § 306(a) and Regulation BTR require issuers to provide notice of blackout periods to affected officers and directors, as well as to the SEC, and specify the content and timing of that notice. [75]

[a] Applicability to Foreign Private Issuers

Regulation BTR provides that § 306(a) of the Sarbanes-Oxley Act applies to equity securities transactions by directors and executive officers of a foreign private issuer only if (i) 50% or more of the participants or beneficiaries in individual account plans [76] maintained by the issuer [77] who are located in the United States are subject to a blackout period and (ii) either (a) the affected employees

p. 6-24

p. 6-25

located in the United States represent more than 15% of the total number of employees of the foreign private issuer and its consolidated subsidiaries worldwide or (b) more than 50,000 participants or beneficiaries located in the United States are affected.

[b] Definition of Blackout Period and Exceptions

A blackout period is any period of more than three consecutive business days during which the ability of not fewer than 50% of the participants or beneficiaries located in the United States under all individual account plans maintained by an issuer (and certain 80% or more commonly controlled entities) to purchase, sell or otherwise acquire or transfer an interest in any equity security of such issuer held in such an individual account plan is temporarily suspended by the issuer or by a fiduciary of the plan. [78] Section 306(a)(4)(B) of the Sarbanes-Oxley Act and Rule 102 of Regulation BTR expressly exclude from the definition of "blackout period" (i) certain regularly scheduled blackout periods and (ii) any suspension imposed solely in connection with the commencement or termination of participation in an individual account plan by reason of a corporate merger, acquisition, divestiture or similar transaction involving the plan or the plan sponsor.

[c] Persons Subject to the Trading Prohibition

With respect to foreign private issuers, the term "director" is defined as any director who is a "management employee" of the foreign private issuer, thus excluding outside directors and non-management employee directors. [79] The term "executive officer" is defined, with respect to foreign private issuers, as the principal executive officer or officers, the principal financial officer or officers and the principal accounting officer or officers. [80]

[d] Securities Subject to the Trading Prohibition

p. 6-25
p. 6-26

Section 306(a) applies to any equity securities of an issuer other than an exempt security (as defined in § 3(a)(12) of the Exchange Act). Regulation BTR defines "equity security of the issuer" to include any equity security or derivative security relating to an issuer, whether or not issued by that issuer. [81] As a result, § 306(a) applies to options, warrants and exchangeable securities issued by third parties. Regulation BTR defines "derivative security" by reference to Rule 16a-1(c) under the Exchange Act. [82]

[e] Exempt Transactions

Rule 101(c) of Regulation BTR exempts from the trading prohibition certain categories of transactions that occur automatically, are made pursuant to an advance election or are otherwise outside the control of the director or executive officer, including, among others, (i) acquisitions of equity securities under certain dividend or interest reinvestment plans, (ii) purchases or sales of equity securities under so-called "10b5-1 plans" [83] in certain circumstances, (iii) purchases or sales of equity securities made under certain tax-qualified employee benefit plans (other than discretionary transactions), (iv) compensatory grants and awards of equity securities pursuant to programs under which grants occur automatically, (v) exercises, conversions or terminations of certain derivative securities which, by their terms, occur only on a fixed date or are exercised, converted or terminated by a counterparty not subject to influence by the director or executive officer and (vi) increases or decreases in equity securities holdings resulting from a stock split, stock dividend or *pro rata* rights distribution.

Footnotes

65 Rule 405 of Regulation C under the Securities Act.

66 *See* § 7.04[2].

67 *See* § 7.04[1]. A resale under Rule 144A would not be available, however, for shares of the same class as shares listed on a U.S. securities exchange unless the resale shares were issued prior to the listing. § 7.02[3][b].

68 *See* § 7.04[3].

69 *See generally* § 7.05 for a discussion of private offerings with registration rights.

70 *See* Chapter 8. This option may be much more limited in the case of a U.S. issuer, as the requirements of Regulation S applicable to offshore sales of securities of U.S. issuers generally are much more restrictive than the requirements applicable to offshore sales of securities of foreign private issuers.

71 *See* § 3.02[5][d]. Such lock-up agreements are generally not deemed to create a "group" for purposes of § 13(d) of the Exchange Act. *See Lowinger v. Morgan Stanley & Co. LLC*, 841 F.3d 1224 (2d. Cir. 2016).

72 Equity securities sold or otherwise transferred during a blackout period by a director or executive officer of an issuer will be considered to have been acquired in connection with service or employment as a director or executive officer to the extent that the director or executive officer owned such securities at the time of the transaction, unless he or she establishes that the equity securities were not so acquired. To establish this defense, a director or executive officer must specifically identify the origin of the equity securities in

question and demonstrate that this identification of the equity securities is consistent for all purposes related to the transaction (such as tax reporting and any applicable disclosure and reporting requirements). Rule 101(b) of Regulation BTR under the Exchange Act; SEC Release No. 34-47225 (Jan. 22, 2003).

73 § 306(a)(1) of the Sarbanes-Oxley Act; Rule 101 of Regulation BTR under the Exchange Act. *See* § 5.05[7] for a discussion of issuer-adopted policies restricting directors, officers and certain other employees from trading during specified periods.

74 Rule 103 of Regulation BTR under the Exchange Act.

75 § 306(a)(6) of the Sarbanes-Oxley Act; Rule 104 of Regulation BTR under the Exchange Act. In the case of a foreign private issuer, notice to the SEC will be considered timely if provided as an exhibit to the first annual report on Form 20-F filed after such notice is given to the affected officers and directors or, as encouraged by the SEC, furnished earlier on Form 6-K.

76 The definition of "individual account plan" in Rule 100(j) of Regulation BTR under the Exchange Act is based on § 3(34) of the Employee Retirement Income Security Act of 1974, Pub. L. No. 93-406, as amended ("ERISA"), and includes retirement plans providing for individual accounts for each participant that provide benefits based solely upon amounts contributed to the account and any earnings and losses (and would include 401(k) plans, profit sharing plans and stock bonus plans). It does not include one-participant plans or plans in which only directors may participate.

77 The SEC has clarified that, for purposes of calculating the 50% threshold, individual account plans "maintained by the issuer" include individual account plans in which participants or beneficiaries held or could hold equity securities of the issuer, and would include account plans that (i) permit participants to invest their plan contributions in equity securities of the issuer, (ii) provide for an "open brokerage window" that permits participants to invest in the equity securities of any publicly traded company, including the issuer, (iii) match employee contributions with equity securities of the issuer or (iv) reallocate forfeitures that included equity securities of the issuer to remaining plan participants, whether or not the plan actually contains equity securities of the issuer at the time of the calculation. SEC Release No. 34-47225 (Jan. 22, 2003).

78 Rule 100(b)(3)(ii) of Regulation BTR under the Exchange Act excludes individual account plans maintained outside the United States primarily for the benefit of nonresident aliens.

79 Rule 100(c)(2) of Regulation BTR under the Exchange Act.

80 Rule 100(h)(2) of Regulation BTR under the Exchange Act. This definition and the definition of "director" in Rule 100(c)(2) are intended to assist foreign private issuers in identifying the individuals who are subject to § 306(a) and ensure that § 306(a) does not apply to lower-level employee representatives or nonemployee directors who may be on the boards of directors of foreign private issuers. SEC Release No. 34-46778 (Nov. 6, 2002).

81 Rule 100(f) of Regulation BTR under the Exchange Act. Rule 100(e) of Regulation BTR refers to the definition of "equity security" set out in § 3(a)(11) of the Exchange Act and Rule 3a11-1 thereunder. In the case of foreign private issuers, this includes American Depositary Shares ("ADSs") evidenced by ADRs.

82 Rule 100(d) of Regulation BTR under the Exchange Act.

83 *See* § 11.05[2][a] for a discussion of 10b5-1 plans.

U.S. Regulation of the International Securities and Derivatives Markets, § 7.01, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 7.01 (11th and 12th Editions 2014-2017)
11th and 12th Editions

p. 7-3

Cross-border securities offerings are regularly conducted without registration under the Securities Act, in reliance on exemptions for private offerings and for transactions conducted outside the United States—and often in reliance on both exemptions at once. This chapter discusses the exemption for private offerings, while Chapter 8 discusses the exemption for transactions conducted outside the United States.

Offerings by issuers are exempt from registration under § 4(a)(2) of the Securities Act if they are "[t]ransactions by an issuer not involving any public offering." These are usually referred to as "private placements" or "private offerings." Over more than half a century, a substantial body of case law and SEC regulatory practice has developed concerning private placements by U.S. issuers and the resale of privately placed securities. [1] Standardized procedures and documentation have also evolved to allow private placements to proceed with assurance that the exemption from registration under § 4(a)(2) is available.

Private offerings have come to represent a significant portion of total U.S. financing activity, particularly since the SEC adopted Rule 144A under the Securities Act in 1990. [2] Many U.S. issuers rely on the private offering exemption to sell specialized securities that are tailored for the investing institutions. In such cases, the ability to resell the securities in a liquid market is not a primary consideration. Where liquidity is important to investors, however, the price the issuer receives in a private offering has historically been lower than in a public transaction, and investors often require the issuer to provide "registration rights"—a prompt avenue to resell in the public market *via* either a subsequent resale registration statement or a subsequent registered A/B exchange offer—as a condition to purchase. While Rule 144 now provides most purchasers of securities in a private placement the ability to resell publicly one year (or, in the case of reporting companies, six months) after purchase, registration rights are still for a number of reasons not uncommon in Rule 144A offerings. [3]

p. 7-3

p. 7-4

Foreign issuers, on the other hand, often seek to place privately in the U.S. institutional market the same kinds of securities that they sell in their domestic markets or in international markets. They also seek the same pricing as they receive in those markets. The market for such private offerings by foreign issuers is well established and includes a broad range of U.S. institutional investors, reflecting the growing liquidity in overseas public markets and the growth of cross-border investing generally.

The principal reasons for the complexities of the private offering process, and for the lack of liquidity in the U.S. private offering market, are legal and regulatory. There have been two main areas of legal and regulatory focus to facilitate private offerings: providing issuers and participating financial institutions with certainty that an offering is exempt from registration under § 4(a)(2) of the Securities Act; and providing investors with flexibility to resell securities purchased in a private offering to increase liquidity. While these developments affect private offerings generally, they are particularly relevant to foreign issuers considering the U.S. private offering market.

With respect to providing certainty regarding the § 4(a)(2) exemption, since 1974, the SEC has provided safe harbor rules, now included in Regulation D under the Securities Act, for private offerings by issuers. While most U.S. private offerings to institutions by foreign issuers are made in reliance on § 4(a)(2) itself rather than Regulation D, [4] the safe harbor procedures provide important guidance on how to conduct U.S. private offerings.

Securities purchased in U.S. private offerings are viewed as "restricted" under SEC rules and thus may not be immediately resold publicly in the U.S. secondary market. [5] Since 1972, the SEC has provided a safe harbor under Rule 144 that permits unlimited resales of restricted securities in the public market by

p. 7-4

p. 7-5

non-affiliates of the issuer after an initial holding period, which is currently six months for securities of an SEC-reporting issuer (provided the issuer has filed its required periodic reports under § 13 or 15(d) of the Exchange Act), [6] and one year for securities of other issuers. [7]

U.S. investors can immediately resell restricted securities into markets outside the United States and to qualified private placement investors in the United States, provided they satisfy certain conditions. Resales outside the United States of restricted securities of a foreign issuer were first approved by the SEC in a series of no-action letters beginning in the late 1980s, [8] and since 1990, they have been permitted by Regulation s under the Securities Act. [9] This is important for equity securities of foreign issuers because the home market generally has more depth, and the securities can in effect be sold in the "regular way" in that market.

Before the adoption of Rule 144A, resales of restricted securities to qualified U.S. investors had long been conducted under a legal analysis developed by the U.S. private bar and referred to as the "Section 4(1 ½) exemption." [10] In 1990, the SEC adopted Rule 144A, a safe harbor permitting resales to large institutional investors. The growing reliance on Rule 144A for U.S. institutional resales has led to the development of standardized practices for "Rule 144A offerings." Rule 144A offering practices differ from those in traditional § 4(a)(2) private

p. 7-5

p. 7-6

placements, which prevailed before the advent of Rule 144A and are still sometimes conducted today. Rule 144A offerings are typically conducted on an underwritten basis, with terms and conditions substantially identical to those applicable to public offerings. In the case of debt securities, the investment banks that act as initial purchasers and resell in reliance on Rule 144A negotiate the terms of the securities to be offered, while a traditional private placement may involve direct and often protracted negotiations between the issuer and the ultimate investors.

A consensus has also developed within the private securities bar as to appropriate documentation with respect to Rule 144A offerings. [11] In connection with traditional private placements, the private bar has generally required letters from each purchaser (often referred to as nondistribution letters or investment letters) to negate the presence of a distribution subject to Securities Act registration, but these are not required from purchasers under Rule 144A. [12] Other similar requirements developed by the private bar, such as large minimum denominations, the use of legended physical securities and stop-transfer procedures, are also not necessary in connection with an offering made exclusively to "qualified institutional buyers," or "QIBs," under Rule 144A. [13] Regulation M under the Exchange Act specifically exempts Rule 144A offerings from limitations on trading during a distribution, [14] and securities sold in Rule 144A offerings are eligible for clearing at The Depository Trust Company ("DTC"), the principal U.S. clearing organization, which further facilitates trading under Rule 144A. Aftermarket trading in Rule 144A debt securities is also required to be reported to the Financial Industry Regulatory Authority, Inc. ("FINRA"), through the Trade Reporting and Compliance Engine ("TRACE"). [15]

Some concerns about the U.S. private placement market remain for non-U.S. issuers. Some foreign issuers are reluctant to submit to customary market practices incidental to a U.S. private offering, which even if limited to institutional investors and carried out under Rule 144A can involve procedures that

p. 7-6

p. 7-7

foreign issuers find intrusive, including extensive "due diligence" inquiries and the need for accountants' and lawyers' negative assurances as to the quality of disclosure provided to initial investors. The requirement under Rule 144A that a nonreporting issuer covenant to provide certain information to purchasers and prospective purchasers in secondary market transactions has also sometimes raised questions for foreign issuers. Notwithstanding these concerns, offerings under Rule 144A by foreign issuers have been a popular approach to the U.S. markets since the Rule's adoption.

Footnotes

1 *See* § 7.02 for a discussion of certain of the principal precedents and SEC rules regarding private placements.

2 According to a published summary of capital markets activity in the United States, in 2015, there were 535 private placements of debt and equity in the U.S. market that raised a total of U.S.$137.0 billion. By comparison in 2015, there were 4,000 SEC-registered public offerings of debt and equity in the U.S. market that raised a total of approximately U.S.$2.1 trillion. Securities Industry and Financial Markets Association ("SIFMA"), 2016 Fact Book.

3 *See* § 7.05 for a discussion of registration rights.

4 *See* § 7.02[2].

5 Rule 144(a)(3) under the Securities Act defines "restricted securities" as, *inter alia*,

> (i) securities acquired directly or indirectly from the issuer, or from an affiliate of the issuer, in a transaction or chain of transactions not involving any public offering, (ii) securities acquired from the issuer that are subject to the resale limitations of Rule 502(d) under Regulation D or Rule 701(c), (iii) securities acquired in a transaction or chain of transactions meeting the requirements of Rule 144A, (iv) securities acquired from the issuer in a transaction subject to the conditions of Regulation CE, and (v) equity securities of domestic issuers acquired in a transaction or chain of transactions subject to the conditions of Rule 901 or Rule 903 under Regulation s.

Securities (other than equity securities of domestic issuers) offered in offshore offerings pursuant to Regulation s are not regarded as "restricted securities." For a discussion of resale restrictions applicable to securities originally sold under Regulation s under the Securities Act, *see* § 8.02.

6 Rule 144(c) under the Securities Act. Timely filing of current reports on Form 8-K (for domestic issuers) or reports on Form 6-K (for foreign private issuers) is not a requirement for this purpose.

7 Rule 144(d) under the Securities Act. The current holding period has been in effect since 2008. *See* SEC Release No. 33-8869 (Dec. 6, 2007). The holding period was originally three years and in 1997 was reduced to one year (subject to conditions relating to current public information, volume of sales, manner of sale and filing of Form 144) or two years (after which these conditions ceased to apply).

8 *See, e.g.*, *French Privatization Program* (avail. Apr. 17, 1987); *College Ret. Equities Fund* (avail. Feb. 18, 1987).

9 Rule 904 of Regulation s under the Securities Act. Resales under Regulation s are discussed in § 7.04[5].

10 *See* § 7.04[3]. *See generally Law of Private Placements (Non-Public Offerings) Not Entitled to Benefits of Safe Harbors—A Report*, 66 BUS. LAW, 85 (2010) (a Report by the Committee on Federal Regulation of Securities, ABA Section of Business Law); *The Section 4(1 ½) Phenomenon: Private Resales of "Restricted" Securities*, 34 BUS. LAW, 1961 (1979) (a Report to the Committee on Federal Regulation of Securities from the Study Group on Section 4(1 ½) of the Subcommittee on 1933 Act) ("*The Section 4(1 ½) Phenomenon*"); SEC Release No. 33-6806 (Oct. 25, 1988).

Resales of restricted securities may now also be effected under § 4(a)(7) of the Securities Act, added to the

Securities Act in December 2015. Although subject to certain limitations not thought by the private bar to be applicable to § 4(1 ½) resales, the non-exclusive safe harbor provided by § 4(a)(7) should be particularly useful in resales of restricted securities to accredited investors that are natural persons rather than institutional investors.

11 *See* § 7.04.

12 *See* § 7.02[3].

13 *See* text accompanying *infra* Note 80.

14 Rule 102(b)(7) under Regulation M. Prior to the adoption of Regulation M in 1996, Rule 10b-6 under the Exchange Act imposed limitations on trading by distribution participants in private placements that were considered distributions for purposes of Rule 10b-6. *See* SEC Release No. 34-38067 (Dec. 20, 1996); § 7.10.

15 FINRA Rule 6750 requires that information about aftermarket Rule 144A transactions be publicly disseminated immediately upon FINRA's receipt of the transaction report. *See* SEC Release No. 34-70345 (Sept. 6, 2013).

[1] Securities Act § 4(a)(2)

The legal basis for private placements and for subsequent resales among institutions and dealers derives from the exemptions from registration found in §§ 4(a)(1), 4(a)(2) and 4(a)(3) of the Securities Act. Section 4(a)(1) exempts from the registration requirements of the Securities Act "[t]ransactions by any person other than an issuer, underwriter or dealer"; § 4(a)(2) exempts "[t]ransactions by an issuer not involving any public offering"; and § 4(a)(3) exempts transactions by a dealer not acting as an underwriter. [16] The Securities Act defines an underwriter to include "any person who has purchased from an issuer with a view to, or offers or sells for an issuer in connection with, the distribution of any security, or participates or has a direct or indirect participation in any such undertaking, or participates or has a participation in the direct or indirect underwriting of any such undertaking." [17] One key to these exemptions lies in the twin concepts of a "public offering" and a "distribution" of securities: if there is no public offering, there is no distribution within the meaning of the Securities Act; and, if there is no distribution, there can be no underwriter, so that if there is no public offering, the issuer can find an exemption for its offers and sales under § 4(a)(2), the dealer under § 4(a)(3) and all others under § 4(a)(1) of the Securities Act.

p. 7-8

Whether a public offering has occurred may depend not only on the nature of the issuer's initial offer and sale of securities to a purchaser but also on the nature of subsequent reoffers and resales. If a purchaser from an issuer (or under prevailing SEC positions, any purchaser in a chain of sales from the issuer) resells in such a manner that the securities are distributed to the public, the selling party may be an underwriter and thus not be entitled to an exemption under § 4(a)(1) (or § 4(a)(3) in the case of dealers) and the issuer may not be entitled to an exemption under § 4(a)(2). [18]

What constitutes a "public offering" and, therefore, a distribution for purposes of the securities laws has been the subject of intense discussion. Starting immediately after the adoption of the Securities Act, requests for guidance concerning the § 4(a)(2) exemption were sufficiently numerous to prompt the General Counsel of the SEC to attempt a clarification of the "public offering" concept in 1935. The General Counsel's opinion established that 25 offerees were generally permissible in a private offering, and also enumerated four factors that the SEC would take into account in determining the existence or absence of a public offering. Those factors were (i) the number of offerees and their relationship to each other and to the issuer, (ii) the number of units offered, (iii) the size of the offering and (iv) the manner of the offering. [19]

After a number of conflicting lower court decisions, in 1953 the U.S. Supreme Court in *SEC v. Ralston Purina Co.* [20] attempted to clarify the scope of the private offering exemption by declaring that a public offering was one in which the investors required the protections applicable to public offerings; private offerings were those in which such protections were not needed: "[T]he applicability of [§ 4(a)(2)] should turn on whether the particular class of persons affected needs the protection of the [Securities] Act. An offering to those who are shown to be able to fend for themselves is a transaction ‘not involving any public offering.’" [21]

p. 7-8

p. 7-9

The Court in *Ralston Purina* determined that "[§ 5] would seem to apply to a 'public offering' whether to few or many." [22] Consequently, the Court did not fix a maximum number of offerees that would ensure the absence of a public offering. [23] Although *Ralston Purina* continues to be the seminal judicial pronouncement concerning private offerings, its effect was as much to increase the number of potential factual considerations appropriate to a § 4(a)(2) analysis as to focus the inquiry on the nature of prospective investors. [24]

The concept of investors "able to fend for themselves" was not as obvious as it seemed at first blush. The courts ruled that sophistication alone was not necessarily sufficient to ensure availability of the exemption; [25] a prospective investor's relationship with the issuer, based on factors such as employment, family or economic bargaining power, could be sufficient. [26] In addition, the burden to prove the availability of the exemption is placed on the person seeking to take advantage of it [27] and failure to satisfy the burden results in strict liability for the "seller." [28]

Notwithstanding the uncertainties regarding the private offering exemption under § 4(a)(2), the securities bar developed procedures and documentation for offerings before and after *Ralston Purina* that sought to take advantage of the

p. 7-9

p. 7-10

exemption. The focus of these procedures was on the factors highlighted, albeit not consistently or uniformly, by the SEC and the courts, including the manner of offering, the number, wherewithal and sophistication of offerees and the relationship between the offerees and the issuer.

Even though the private offering market continued to operate, the SEC was pressured by market participants and the private bar, in light of the unease produced by the case law under § 4(a)(2) and the draconian liability that could result if the exemption were not available—rescission by all purchasers—to provide certainty as to the availability of the exemption. In response, the SEC in 1974 adopted a nonexclusive "safe harbor" rule for private offerings. [29] Eight years later, the SEC adopted Regulation D under the Securities Act, a more comprehensive, but still nonexclusive, safe harbor rule. [30]

[2] Regulation D

Rule 506 under Regulation D provides a safe harbor from registration for offers and sales by issuers. Prior to the SEC's implementation of § 201(a) of the Jumpstart Our Business Startups Act (the "JOBS Act") in 2013, one of the conditions for reliance on the safe harbor was that neither the issuer nor any person acting on its behalf could offer or sell securities under Regulation D by any form of general solicitation or general advertising. Section 201(a) of the JOBS Act directed the SEC to amend Rule 506 to permit general solicitation or general advertising in offerings under the Rule, subject to certain additional conditions. As a result, the SEC adopted changes to Rule 506 that left the existing safe harbor unchanged, but redesignated it as Rule 506(b), and added a new safe harbor in Rule 506(c), under which a private offering may make use of general solicitation and general advertising. [31] These safe harbors cannot be used for transactions other than offers and sales by an issuer. [32] Securities acquired in an offering

p. 7-10

p. 7-11

made under Regulation D are "restricted" for purposes of the Securities Act registration requirements. [33]

[a] General Requirements

To qualify for the safe harbor under Rule 506(b), all of the following conditions must be met:

- Neither the issuer nor any person acting on its behalf may offer or sell the securities by any form of general solicitation or general advertising. [34]
- Sales may only be made to "accredited investors" plus up to 35 persons who are not accredited investors. There is no limitation on the number of "accredited investors" to which sales may be made. [35]

- If any purchaser is not an accredited investor, then (i) the issuer must "reasonably believe" that each such purchaser "has such knowledge and experience in financial and business matters that he is capable of evaluating the merits and risks of the prospective investment" [36] and (ii) each such purchaser must receive prior to sale certain information specified by the regulation,

p. 7-11
p. 7-12

which is broadly similar to that required to be provided in an SEC-registered offering. [37]

- The issuer must exercise "reasonable care" to ensure that the purchasers of the securities are not underwriters within the meaning of § 2(a)(11) of the Securities Act (also referred to as "statutory underwriters")—that is, that they are not taking with a view to, or offering or selling for the issuer in connection with, a distribution of the securities. [38]
- The issuer must file a notice of the offering on Form D [39] with the SEC no later than 15 days after the first sale of securities in the offering. [40]

The safe harbor under Rule 506(c) differs from the safe harbor under Rule 506(b) in five respects:

- The requirement that there be no general solicitation or general advertising does not apply. [41]

p. 7-12
p. 7-13

- Sales may only be made to accredited investors. [42]
- The issuer must check a box on Form D to indicate whether it is relying on either Rule 506(b) or Rule 506(c). [43] Some comments on the proposed rule suggested that an issuer might check both boxes—for example, if general solicitation is contemplated but might not be used, or to protect against losing the exemption as a result of inadvertent solicitation. [44] The adopting release specifies that the issuer must check one box or the other. [45] It would appear, however, that an issuer can amend a Form D for an offering to select 506(b) after having selected 506(c) in a prior Form D filing for that offering or vice versa, assuming all other conditions are met.
- The requirement that certain information concerning the issuer be furnished to any investor other than accredited investors [46] does not apply, because only accredited investors may participate. [47]
- The issuer must take "reasonable steps to verify" that the purchasers are accredited investors. [48] This is an independent procedural requirement, and it must be met even if in fact all offerees happen to be accredited investors.

[b] Required Reasonable Steps to Verify Accredited Investors in Rule 506(c) Offerings

The "reasonable steps to verify" that an issuer must take in a Rule 506(c) offering was the subject of extensive comment and is discussed at length in the adopting release. The release explains that it is a "principles-based" requirement, resting on "an objective determination by the issuer (or those acting on its behalf), in the context of the particular facts and circumstances of each purchaser and transaction." [49] Issuers should consider a number of factors, and the

p. 7-13
p. 7-14

release discusses three examples: the nature of the purchaser, the information the issuer has about the purchaser, and the nature and terms of the offering. [50]

The final rule includes a safe harbor specifying acceptable, but nonexclusive, methods to verify the accredited investor status of natural persons. [51] The addition of the safe harbor was widely sought in the comment process following the proposed rule and is consistent with the SEC's decades-long practice of providing safe harbors from § 5 violations in light of the draconian consequences (in particular, a strict liability rescission right for purchasers) for those violations.

Specifically, Rule 506(c) provides a nonexclusive list of methods to verify accredited investor status for natural persons that will be deemed to satisfy the verification requirement. These are (a) review of specified documentation showing that a person meets the income test in the definition of accredited investor, [52] (b) review of specified documentation showing that a person meets the net worth test, [53] (c) reliance on written confirmation from a third party that it has verified the person's accredited investor status [54] and (d) reliance on certification from an existing investor who previously invested in a Rule 506(b) offering by the issuer. [55] The issuer may not rely on the Rule 506(c) safe harbor if it or its agent has knowledge that the purchaser is not an accredited investor. [56]

In addition to the new Rule 506(c), the SEC simultaneously adopted Rule 506(d) (pursuant to § 926 of the Dodd-Frank Act), which removes the protection of the Rule 506 safe harbor from offerings in which a "bad actor" participates. [57]

p. 7-14

---

p. 7-15

Rule 506(d) applies if certain categories of persons are subject to certain disqualifying events.

The categories of persons are:

- the issuer, any predecessor, any affiliated issuer and any promoter;
- any director, executive officer, other officer participating in the offering, general partner or managing member of the issuer;
- any beneficial owner of 20% or more of the issuer's outstanding voting equity securities;
- with respect to an issuer that is a pooled investment fund, any investment manager of the issuer;
- any person paid (directly or indirectly) to solicit purchasers in connection with sales in the offering (*e.g.*, a placement agent); and
- with respect to any such investment manager or solicitor, (i) any general partner or managing member and (ii) any director, executive officer or other officer participating in the offering of the investment manager, the solicitor or a general partner or managing member of the investment manager or solicitor. [58]

Disqualifying events include:

- criminal convictions in connection with purchases or sales of a security, making false filings with the SEC or that arise from conducting business as an underwriter, broker-dealer, investment adviser or paid solicitor;
- injunctions and court orders related to engaging in or continuing conduct or practices relating to such activities;
- final orders of certain federal and state regulators that either bar a person from engaging in securities, insurance, banking or similar activities (or from association with an entity regulated by the regulator issuing the order), or that

  p. 7-15

  ---

  p. 7-16

  are based on a violation of any law or regulation prohibiting fraudulent, manipulative or deceptive conduct;
- SEC cease-and-desist orders arising from a violation of § 5 of the Securities Act or *scienter*-based antifraud provisions of the federal securities laws;
- certain other SEC orders (including suspension, revocation of registration or limitations on activities as a broker-dealer or investment adviser);

- suspension, expulsion or being barred from association with a national securities exchange or association for improper conduct;
- filing or being named as an underwriter in a registration statement as to which a stop or suspension order was issued, or being the subject of an investigation to determine whether such an order should be issued; or
- U.S. Postal Service false representation orders and certain temporary restraining orders or injunctions. [59]

The time periods for disqualification generally address conduct arising from between five and ten years prior to the date of the Rule 506 sale, although in certain cases an event will only be disqualifying if the injunction, order, investigation or similar event is in effect and continuing at the time of the Rule 506 sale.

Rule 506(d) limits disqualification to triggering events that occur after effectiveness of the Rule (September 23, 2013), although the issuer will still be required to disclose past events that would be disqualifying if they had occurred after the effective date to purchasers in advance of sales under Rule 506 (unless the issuer can establish that it did not know and reasonably could not have known of the existence of those past disqualifying events). Although this will still require issuers to determine whether any pre-adoption disqualifying events exist for purposes of disclosure, the change has helped to address at least some of the concerns raised by commenters as to market participants who may have voluntarily entered into consent decrees or who would otherwise be disqualified based on prior conduct, but who were not in a position to know of the consequences under revised Rule 506.

Rule 506(d) also includes a waiver provision, under which a waiver of disqualification may be granted by the SEC upon a showing of good cause. [60]

p. 7-16

p. 7-17

Rule 506(d) sets out a "reasonable care" exception, under which an issuer will not lose the benefit of the Rule 506 safe harbor, despite the existence of a disqualifying event, if it can show that it did not know and, in the exercise of reasonable care, could not have known of the disqualification. The adopting release indicates the issuer will be expected to conduct a factual inquiry to rely on this exception and makes clear that the steps an issuer must take to be deemed to have exercised "reasonable care" will vary according to the particular facts and circumstances. [61] The release notes issuers will likely have in-depth knowledge of their own directors and officers, and that additional inquiry "by means of questionnaires or certifications, perhaps accompanied by contractual representations, covenants and undertakings, may be sufficient in some circumstances, particularly if there is no information or other indicators suggesting bad actor involvement." [62] The release also notes the SEC's expectation that market participants, such as placement agents and broker-dealers, will develop procedures to assist issuers in gathering the necessary information. Finally, for continuous, delayed or long-lived offerings, the release notes that the requirement to exercise reasonable care will include updating the factual inquiry on a "reasonable" basis, but that, in appropriate cases, periodic updating should suffice. [63]

Regulation D is a safe harbor: compliance with its requirements assures the availability of the private placement exemption. Because it is a nonexclusive safe harbor, however, failure to comply with its requirements does not preclude reliance on § 4(a)(2) to conduct a good private offering. In fact, issuers and their legal advisers generally follow the guidelines of Regulation D as to the manner of conducting a private offering while not attempting formal compliance with the regulation itself. [64] In particular, foreign issuers, like many U.S. issuers, are

p. 7-17

p. 7-18

reluctant to publicly disclose the information required by Form D, including the compensation paid to dealers. [65]

Many of the requirements built into Regulation D mirrored prior practice, and their adoption by the SEC provided such practice with new support, even if not all of the technical requirements of the regulation are followed. Other aspects of Regulation D were new developments. [66] Similarly, many of the procedures and practices that developed to ensure compliance with Regulation D were derived from offering practices that predated the regulation. However, the promulgation of the regulation, due to the specificity of its standards as compared to the vague case law under § 4(a)(2), has created greater consistency in the practices followed in private offerings of securities, whether reliance is placed on Regulation D or on § 4(a)(2) itself.

The guidance provided by Regulation D concerning the types of activities that may constitute general solicitation or general advertising has become standard, and still relevant for issuers that seek to offer or sell securities pursuant to Rule 506(b) or the statutory exemption in § 4(a)(2) of the Securities Act. [67] Although Rule 502(c) nonexclusively identifies certain activities that constitute a general solicitation, [68] many issuers have sought no-action advice from the SEC staff concerning particular situations. The general rule that has emerged from staff positions is that no general solicitation will be found to have occurred if there is a pre-existing relationship between the offeror (or its agent) and offeree,

p. 7-18

p. 7-19

sufficient to permit the offeror to evaluate the financial sophistication of the offeree. [69]

Rule 502(d) of Regulation D specifies that the issuer must "exercise reasonable care to assure that the purchasers of the securities are not underwriters"—in other words, that purchasers are not taking securities with a view to distribution. The Rule identifies certain steps that an issuer should consider implementing: (i) reasonable inquiry as to whether the purchaser is acquiring the securities for its own account or the account of another person, (ii) notice to purchasers that the securities in question have not been registered under the Securities Act and cannot be resold unless registered or pursuant to an exemption from registration and (iii) the use of an appropriate legend on the securities. The Rule states, however, that these steps are not the exclusive means of complying with the "reasonable care" test.

The private securities bar has developed a fairly consistent series of procedural steps intended to meet the requirements of Regulation D and also the less certain statutory standard of § 4(a)(2) itself. First, letters, commonly called "investment letters" or "nondistribution letters," are generally required of each buyer. In such a letter, the buyer generally (i) is notified and acknowledges that the securities in question were not registered under the Securities Act, (ii) certifies that it is a sophisticated investor and has received all information it has requested about the investment [70] and (iii) acknowledges that it is not purchasing the securities in question with a view to distribution (within the meaning of the Securities Act). Such letters often also include an agreement by the buyer that in the absence of registration or, in certain cases, a clearly available exemption, [71]

p. 7-19

p. 7-20

resales of the securities will only be permitted if accompanied by a legal opinion that the resale in question is exempt or if the resale complies with specified restrictions designed to provide sufficient assurances that an exemption from registration is available. Second, the securities are often either denominated, or offered and sold, in large amounts (in the hundreds of thousands or even millions of dollars) that are usual for institutional private transactions but not characteristic of public offerings to retail investors. Third, the number of offerees, generally other than institutional accredited investors, is often limited. Fourth, if the securities are in physical form, the certificates contain restrictive legends and are often subject to stop-transfer instructions to prevent unapproved resales. Such instructions are a mechanism to apply to subsequent purchasers the transfer restrictions imposed on the original purchasers through investment or nondistribution letters. If the securities are not in physical form, either because they are represented by interests in a global security or because they are part of a paperless, book-entry system, other mechanisms may be used for the same purpose. [72]

Despite an overall fairly standard pattern, the exact combination of procedures used in a particular offering may depend on the circumstances. Not all of these procedures are employed in all § 4(a)(2) offerings. For example, in private offerings of commercial paper, with its short maturities and relative lack of trading, the procedures are usually somewhat curtailed. Most important, if the securities to be offered are Rule 144A-eligible and are offered and sold only to "qualified institutional buyers," or QIBs, as defined in Rule 144A, typically the procedures implemented are quite limited, investment letters are not required and no policing of resales is considered necessary. [73] Even if the securities are not Rule 144A-eligible (because, when issued, they were fungible with securities listed on a U.S. exchange), procedures can also remain relatively limited if the securities are offered and sold only to QIBs and there is a *bona fide* market for these securities outside the United States. [74] The procedures in these cases generally would include a notice that the securities may only be resold outside the United States, investor letters confirming each purchaser's status as a QIB and an agreement by each purchaser to resell shares only outside the United States under Regulation s and not to conduct any hedging activities that would be in

p. 7-20

p. 7-21

violation of the Securities Act, as well as procedures designed to restrict deposit of securities acquired during the offering into any American Deposit Receipt ("ADR") facility for a period of 40 days after commencement of the offering.

[3] Rule 144A Private Placements

Rule 144A under the Securities Act, adopted in 1990, provides a nonexclusive safe harbor from registration for resales to institutions reasonably believed by the seller [75] to be QIBs. The securities may not be "of the same class" as, or fungible with, securities listed on a national securities exchange or traded on a U.S. automated inter-dealer quotation system. [76] The Rule imposes only two procedural requirements: (1) the seller must take reasonable steps to ensure that purchasers are aware that the seller may be relying on the Rule and (2) in the case of issuers (other than foreign governmental issuers) that do not report or furnish information to the SEC under the Exchange Act, purchasers must have a right to obtain prior to sale certain information concerning the issuer of the securities.

Although Rule 144A is a safe harbor only for *resales*, it provides a way for an issuer to conduct a private placement to large institutional investors without the cumbersome measures to police resales that otherwise apply under § 4(a)(2) of the Securities Act or Regulation D thereunder. [77] The Rule provides that an investor or a dealer that reoffers or resells securities in compliance with the Rule is not engaged in a distribution and is not an underwriter. Rule 144A is premised on the theory that QIBs can "fend for themselves" and therefore do not need the protections of the registration requirements of the Securities Act; accordingly, sales made only to QIBs are not considered to be distributions. Moreover, because QIBs are considered to be familiar with resale restrictions, sales to them are thought to pose little risk that they could lead to a subsequent distribution. Because resales to QIBs under the Rule are not themselves distributions, and pose little risk of leading to subsequent distributions, they are not public

p. 7-21

p. 7-22

offerings, and an investor or dealer taking restricted securities purchased from an issuer and reselling them to QIBs is not an underwriter. Thus, the § 4(a)(1) exemption is available for investors (other than dealers) selling in compliance with the Rule, and the § 4(a)(3) exemption is available for dealers. [78] Finally, since the resales are not public offerings, they are consistent with the requirement that an issuer's reliance on § 4(a)(2) or Regulation D be supported by reasonable care to assure that the purchasers of the securities are not underwriters. [79]

Consequently, Rule 144A, although it technically applies only to resales and not to offers and sales by issuers, effectively permits a simplified form of private offering by an issuer. It codifies a form of resale of privately placed securities in a manner that permits the use of simplified procedures both upon an issuer's initial sale and upon such resales. The procedures described above in connection with § 4(a)(2) and Regulation D private placements, including investment letters, limitations on the number of potential offerees (at least outside the safe harbor of Regulation D) and the use of legends, stop-transfer and other procedures that affect pricing and liquidity, are generally not required—either for the initial issuance if the securities are to be resold only under Rule 144A, or for any subsequent resales relying on the Rule. [80] A key effect of this simplification is the enhanced marketability on original issuance of securities that may be resold in reliance on Rule 144A.

One of the objectives of Rule 144A was to make primary offerings of foreign securities available to U.S. institutions in the U.S. market through intermediaries (rather than forcing such investors to go to overseas markets) by making the private offering market in the United States more attractive to foreign issuers. [81] The absence of significant procedural limitations on trading under Rule 144A has increased the willingness of foreign issuers to offer their securities in the United States, both in separate offerings and in conjunction with larger, global offerings. Indeed, a firm commitment offering targeted to QIBs in the United States under Rule 144A is conducted very much like an underwritten public offering except that purchasers are restricted to large institutional investors. [82] Preliminary offering memoranda are often circulated, standard documentation is used, and road shows are conducted to give eligible investors the chance to hear from and question management.

[a] Qualified Institutional Buyer

p. 7-22

p. 7-23

The criteria for eligibility as a QIB depend on the type of institution involved. [83]

(i) Any institution in one of the following categories is a QIB if it owns, or invests on a discretionary basis, at least $100 million in securities:

a) a corporation (other than a U.S. or foreign bank or thrift), [84] a partnership, [84.1] a not-for-profit organization qualified under U.S. federal tax law, [85] or a "Massachusetts or similar business trust"; [86]

b) an insurance company; [87]

c) a public or private employee benefit plan or a trust fund for the benefit of such plans; [88] or

p. 7-23

p. 7-24

d) an entity registered under applicable U.S. federal statutes as an investment adviser, an investment company, a small business investment company, a business development company or a small business development company. [89]

(ii) A securities dealer registered under the Exchange Act is a QIB if it owns, or invests on a discretionary basis, at least $10 million in securities. Even if it does not meet this threshold, it is a QIB when it acts in a "riskless principal transaction" for a QIB—where it buys a security and makes a simultaneous offsetting sale of such security to a QIB. [90]

(iii) A registered investment company is a QIB if it is part of a "family" of registered investment companies that in the aggregate owns, or invests on a discretionary basis, at least $100 million in securities. This alternative is available to an investment company that does not meet the investment threshold on its own, as described in paragraph (i)(d) above. Under the Rule, a family of investment companies means any two or more investment companies registered under the Investment Company Act (other than a unit investment trust investing solely in shares of other registered investment companies) that have the same investment adviser, or depositor in the case of unit investment trusts. [90.1] Advisers or depositors that are majority-owned subsidiaries of the same parent or of one another will be considered to be the "same" adviser or depositor. [91]

(iv) A U.S. or foreign bank, thrift or equivalent institution is a QIB if it owns, or invests on a discretionary basis, at least $100 million in securities and it also has net worth of at least $25 million. [92] The SEC imposed the net worth test on the grounds that U.S. banks and thrifts, because they are federally insured, "effectively are able to purchase securities using public funds." [93] It extended the net worth

p. 7-24

p. 7-25

test to foreign banks and thrifts and equivalent institutions for competitive reasons. [94]

(v) Any entity is a QIB if all of its equity owners are QIBs. [95]

The SEC has clarified that a purchase under the Rule by an insurance company on behalf of one or more of its separate accounts that are not registered, or required to be registered, under the Investment Company Act will be deemed to be a purchase by the insurance company. [96] It is not sufficient, in the case of a sale to an investment adviser or other fiduciary acting with discretion on behalf of another institution, that the adviser or fiduciary be a QIB—both the adviser or other fiduciary and the underlying account must meet the Rule's requirements.

The Rule generally requires that securities holdings be valued at cost, unless the institution reports its holdings on the basis of market value and no current information regarding the cost of the securities has been published (in which case the securities may be valued at market). The Rule also specifies that the securities holdings of an entity's consolidated subsidiaries may be included in the calculation only if they are managed by the entity and that the securities may not be included at all if the entity is itself a majority-owned subsidiary included in the consolidated financial statements of another entity, unless the entity is an Exchange Act-reporting company.

p. 7-25
p. 7-26

Securities issued or guaranteed by the United States and its instrumentalities, [97] securities held on margin and securities loaned out to borrowers [97.1] are permitted to be included in calculating the amount of securities investments by an institution, whereas bank deposit notes and certificates of deposit, loan participations, [98] repurchase agreements, securities subject to repurchase agreements, borrowed securities and short positions in securities [98.1] as well as currency, interest rate and commodity swaps may not be so included. [98.2] A broker-dealer may not include allotment securities in its calculation. [98.3]

Rule 144A specifies that sellers can rely on certain means identified in the Rule to establish that a prospective purchaser satisfies the securities ownership requirement. [99] The most widely used method among U.S. broker-dealers to establish that a prospective purchaser is a QIB is to rely on a "QIB list" maintained by a commercial service. [100]

[b] Nonfungible Securities

A security's eligibility for resale under Rule 144A is determined when the security is issued. A security is not eligible for resale under Rule 144A if when

p. 7-26
p. 7-27

issued it is "of the same class" as securities listed on a U.S. national securities exchange or quoted in a U.S. automated inter-dealer quotation system. The fungibility test of Rule 144A is intended to prevent the creation of "side-by-side" public and private markets in the same security, which could divert resales of the securities away from the public market with possible adverse implications for the public market's liquidity and volatility. [101] Securities of a particular class that are issued prior to the listing of that class (such as securities held by significant shareholders of an issuer at the time of its IPO, often referred to as "founder shares") are eligible for resale under Rule 144A if they can be specifically identified.

Rule 144A is not available with respect to the securities of any open-end investment company, unit investment trust or face-amount certificate company that is or is required to be registered under § 8 of the Investment Company Act. [102]

Convertible and exchangeable securities present specific issues under the nonfungibility requirement. In general, securities that are convertible into or exchangeable for securities that are listed on a U.S. national securities exchange or quoted on a U.S. automated interdealer quotation system are not considered to be fungible with such listed or quoted securities if such convertible or exchangeable securities had an effective conversion premium of 10% or more when issued. [103] In addition, warrants to purchase such U.S. listed or quoted securities are not considered fungible with such securities if the warrants are exercisable for at least three years after issuance and had an effective exercise premium of 10% or more when issued. [104] Listed or quoted ADRs are considered fungible with the class of securities that underlies them. [105] Mandatorily exchangeable

p. 7-27

p. 7-28

securities, which involve the issuance by issuer A of a debt security mandatorily exchangeable at its maturity into a security, generally common stock, of issuer B (or, at A's election, its cash equivalent), raise additional issues under Rule 144A, particularly relating to the nonfungibility requirement. [106] The SEC has retained authority to designate other securities as not fungible with listed or quoted securities, [107] but to date has not exercised its authority. Because not many debt or preferred stock issues are listed on a U.S. securities exchange, the question of fungibility arises less often than for common stock.

Whether a new issue of equity securities will be considered to be part of the "same class" as outstanding securities listed or quoted for purposes of Rule 144A depends on whether they are of substantially similar character and whether the holders have substantially similar rights and privileges. Although used for many years and for a variety of purposes in the U.S. federal securities laws, [108] this standard has not been elaborated in SEC no-action letters. A difference in designation alone will not be sufficient to create distinct classes. [109] In general, if equity securities differ as to preference or voting rights, they will not be considered to be of the same class. [110] On the other hand, if equity securities have identical terms with respect to dividend, liquidation and voting rights, but differ as to terms such as redemption or convertibility, they nevertheless may be deemed to constitute a single class. [111]

In the case of preferred stock and debt securities, the SEC stated in the release adopting Rule 144A that issues "commonly viewed as different series will generally be viewed as different, nonfungible classes of securities for purposes of Rule 144A." [112] The SEC stated, however, that preferred stock issues

p. 7-28

p. 7-29

will be considered to be of the same class "if their terms relating to dividend rate, cumulation, participation, liquidation preference, voting rights, convertibility, call, redemption and other similar material matters are substantially identical." [113] Debt securities will be considered fungible if there is substantial identity in terms relating to coupon rate, maturity, subordination, security, convertibility, call, redemption and any other material terms. [114]

[c] Information Delivery

If the issuer of the securities is a reporting company under the Exchange Act, or if it is exempt from reporting under Rule 12g3-2(b) thereunder, [115] Rule 144A does not impose any requirement concerning available public information as a condition for resale under the Rule. There is also no information requirement if the issuer is a foreign government or government agency eligible to register securities under Schedule B to the Securities Act. [116]

Otherwise, however, Rule 144A provides that, as a condition to an exempt resale, the holder and the prospective purchaser must "have the right to obtain from the issuer" certain reasonably current information concerning the issuer. Documentation for Rule 144A offerings typically addresses this requirement by including an undertaking by the issuer to provide any information required by Rule 144A(d)(4) in connection with a future resale, unless it is reporting or exempt at that time. The existence of a reporting obligation in the issuer's home jurisdiction does not suffice. In the case of guaranteed securities, the SEC has stated that the information furnishing requirement does not apply if the guarantor is a reporting company under the Exchange Act or exempt pursuant to Rule 12g3-2(b) thereunder; alternatively, the information furnishing requirement may

p. 7-29

p. 7-30

be satisfied in the case of guaranteed securities by looking to information furnished under Rule 144A(d)(4)(i) by the guarantor. [117] The Rule permits the seller or any of its agents, in addition to the issuer and its agents, to deliver the information to the prospective purchaser.

The information required by Rule 144A is a brief description of the issuer's business and the products and services it offers, its most recent balance sheet, profit and loss and retained earnings statements, and similar financial statements for that portion of the two preceding fiscal years during which the issuer has been in operation. [118] The financial statements should be audited "to the extent reasonably available," and the information must be "reasonably current" in relation to the date of resale pursuant to the Rule. The Rule specifies that information will be deemed to be "reasonably current," in the case of a foreign private issuer, if it meets the timing requirements of the issuer's home country or principal trading markets. [119]

p. 7-30

p. 7-31

It has been suggested that the requirement to supply information could create additional liability for issuers under the U.S. securities laws, including in particular civil liability under § 10(b) of the Exchange Act and Rule 10b-5 thereunder. [120] This potential liability could also exist for any broker-dealer or other seller that provides the information to a prospective purchaser under Rule 144A. Rule 10b-5 imposes liability for material misstatements or omissions made in connection with the sale of a security. To sustain a claim under Rule 10b-5, a plaintiff must prove both that the defendant acted with *scienter* (*i.e.*, intentionally or recklessly) and that the plaintiff relied on the misstatement or omission in making its purchase. Issuers (and broker-dealers) providing information pursuant to Rule 144A(d)(4) may also be subject to liability for such information under state securities laws and the common law. [121] A particular issue with respect to liability is whether the information delivery requirement of Rule 144A(d)(4) includes a duty of the issuer to update the information with material developments affecting the issuer's financial condition and results of operations [122]—in effect, to maintain an "evergreen" disclosure document—to avoid liability to purchasers who request the information.

Although these risks may be remote, a nonreporting foreign issuer should consider whether to avoid the Rule 144A information requirement by complying with the conditions for the Rule 12g3-2(b) exemption from reporting, especially if a high volume of Rule 144A resales can be expected. [123] There is then no

p. 7-31

p. 7-32

requirement to supply information as a condition to Rule 144A resales and no duty to keep information current or updated other than to continue complying with the conditions for the Rule 12g3-2(b) exemption. [124] Complying with the Rule 12g3-2(b) exemption would, however, also permit the establishment of a public ADR program for the issuer's securities without the issuer's consent, and this could be a disadvantage for an issuer that otherwise prefers to prevent the establishment of unsponsored ADR programs. [125]

[d] Notice

Rule 144A requires that a seller and any person acting on its behalf "take reasonable steps to ensure that the purchaser is aware that the seller may rely on [Rule 144A]." [126] This requirement will not in most cases present any difficulties. If the sale is by an investment bank in connection with a purchase from an issuer in a private placement, the offering document will indicate that the bank and other members of the syndicate may rely upon the Rule. If no offering document is prepared, such as where a block trade is being conducted on an "undocumented" basis, [127] notice may be provided in confirmations of sale. [128]

[4] Publicity and Marketing Consistent with Restrictions on General Solicitation and General Advertising

Although the SEC has eliminated the prohibitions on general solicitation and general advertising applicable to Rule 506(c) offerings and Rule 144A offerings, the prohibition on general solicitation and general advertising continues to apply to offerings made under Rule 506(b) and the statutory exemption under § 4(a)(2). [129] A press announcement in or directed into the United States regarding a private offering, which is made prior to completion of the offering, may constitute a general solicitation or general advertisement of the offer and could

p. 7-32

p. 7-33

jeopardize the availability of these private placement exemptions. [130] There are, however, two rules that provide "safe harbor" protection by specifying that communications meeting specified conditions are not deemed to be offers.

Rule 135c under the Securities Act provides a safe harbor for certain public announcements of unregistered offerings by the issuer. It is similar to Rule 135, a safe harbor for announcements of registered public offerings made prior to the filing of a registration statement, but unlike Rule 135 it is available only to the issuer and not to a selling securityholder. To rely on the Rule 135c safe harbor, the issuer must be either subject to the reporting requirements of § 13 or § 15(d) of the Exchange Act or exempt from Exchange Act reporting requirements pursuant to Rule 12g3-2(b) thereunder. [131] Rule 135c(b) provides that an issuer may announce an offering in the form of a news release, written communication to securityholders or employees, or other published statements. The announcement may include (i) the name of the issuer, (ii) the title, amount and basic terms of the securities offered, (iii) the amount sold by any selling securityholders, (iv) the time of the offering and (v) a brief statement of the manner and purpose of the offering without naming the participating financial institutions. [132] The announcement must also include a legend to the effect that the securities have not been registered under the Securities Act and may not be offered or sold in the United States absent registration or an applicable exemption. Rule 135c specifies that it is not available if the announcement is made to condition the market for the offered securities. A foreign private issuer subject to Exchange Act reporting requirements must furnish a copy of any Rule 135c announcement to the SEC on Form 6-K. An issuer subject to the domestic reporting forms would instead file the announcement on Form 8-K. [133]

Rule 135e under the Securities Act provides a safe harbor for certain press-related activities outside the United States. It was adopted in 1997 to encourage issuers to grant the U.S. press equal access to offshore press activities in connection with offshore offerings. [134] Under Rule 135e, a foreign private issuer, foreign government issuer, or selling securityholder may give U.S. journalists access to offshore press activities relating to an offering of securities without being deemed to have made an offer for the sale of a security within the meaning

p. 7-33

p. 7-34

of § 5 of the Securities Act, engaged in "general solicitation" within the meaning of Regulation D or engaged in "directed selling efforts" within the meaning of Regulation s —provided that it respects certain conditions. These conditions are (i) at least part of the offering is conducted outside the United States, (ii) access is provided to both U.S. and foreign journalists and (iii) any written materials released to journalists bear a specified legend and meet certain other conditions. Issuers conducting side-by-side offshore offerings and U.S. private offerings may rely on Rule 135e in conducting offshore press activities, so long as there is "an intent to make a *bona fide* offering offshore." [135]

The elimination of the prohibitions on general solicitation and offers to non-QIBs in Rule 506(c) and Rule 144A offerings, respectively, permits issuers and their agents to communicate with prospective investors in Rule 144A and Rule 506(c) offerings with no limit on the method of communication or the number or type of investors reached. Issuers may use, among other methods, cold calls, blast e-mails, advertisements, articles and other communications published in newspapers, magazines, on the Internet or in television or radio broadcasts. The liberalization also allows communications about these kinds of offerings at conferences, promotional seminars or other meetings. Regardless of the prospective investors reached by these communications, the ultimate sales must be made to investors reasonably believed to be QIBs (in Rule 144A offerings) or accredited investors (in Rule 506(c) offerings).

Issuers and their agents should be aware that any communications made to prospective investors are, of course, still subject to the antifraud provisions of the securities laws and, in particular, § 10(b) of the Exchange Act and Rule 10b-5 thereunder. In addition to liability concerns related to the purchasers in the offering itself, use of general solicitation may also expand the scope of potential liability for information contained in these communications to secondary market participants, either with respect to the security being sold or other securities of the issuer. Furthermore, many foreign jurisdictions have their own rules and restrictions regarding publicity in connection with offerings [136] that will require careful analysis and consultation with local counsel. As a result, issuers and their agents should carefully consider the content, form and distribution of general solicitation communications. To date, offering participants do not appear to be

p. 7-34

p. 7-35

making any dramatic changes to offering practices to take advantage of the added flexibility.

Nevertheless, some changes in practice with respect to press releases and other publicity about or at the time of an offering pursuant to Rule 144A or Rule 506(c) seem likely over time. These press releases and other communications no longer need to comply with the strict requirements of Rule 135c under the Securities Act or other similar safe harbors. For example, participating financial institutions may now wish to include their names on press releases. In light of liability concerns, however, it would still be prudent to limit the content and ensure it is consistent with the offering circular. The timing of offering press releases is unlikely to change—they are unlikely to be published prior to launch both to avoid liability concerns associated with making statements prior to finalizing the content of the offering circular and also to preserve flexibility for the offering participants about whether and when to launch the offering. [137]

In light of these liability concerns, issuers and participating financial institutions may also want to limit discussion of Rule 144A and Rule 506(c) offerings at conferences or other public speaking engagements to completed transactions [138] and, after an offering has launched, to information consistent with the offering circular. [139]

Finally, the ability to use general solicitation permits issuers and their agents to expand the pool of potential investors and contact investors with which they had no pre-existing relationship. Over time, paid referral agencies and other similar services may develop to facilitate this process. [140]

The publication of a research report on an issuer by a financial institution participating in a distribution of securities of that issuer may be viewed as general solicitation, which would be inconsistent with the exemptions under Rule

p. 7-35

p. 7-36

506(b) or § 4(a)(2). Accordingly, a financial institution that is participating in a U.S. private placement will ordinarily cease publishing research on the issuer in the United States unless the research qualifies for a safe harbor under Rule 138 or Rule 139 under the Securities Act. These safe harbors were originally developed to permit continuation of research coverage during a registered offering, but the SEC and the private bar understood them to be available also to permit publication of research during a Rule 144A offering, and the rules were amended in 2005 to codify that view. [141] In light of the adoption of Rule 506(c) and the change to Rule 144A, financial institutions are no longer restricted from publishing research reports on an issuer conducting a Rule 506(c) or a Rule 144A offering. However, given the liability concerns under Rule 10b-5, financial institutions participating in these offerings are not likely to take advantage of this flexibility to publish research other than in the ordinary course or that refers to a pending offering.

Rule 138 permits the publication of a research report about a qualifying issuer if the report relates to securities other than the type of securities being offered. Rule 139 permits issuer-specific research to continue if it meets certain conditions and the issuer is eligible. Eligible issuers include seasoned Exchange Act-reporting companies and nonreporting foreign private issuers that meet certain quantitative criteria for public float and trading markets. Rule 139 also permits the inclusion of an issuer in an industry report under specified circumstances. [142] The safe harbors typically are not available where the offering is a debut offering in the issuer's home market.

If a foreign private issuer is offering securities outside the United States, the participating financial institutions may propose to publish research reports in advance of the offering—often referred to as "pre-deal" research—based on customary practices in the home jurisdiction or other markets where the securities will be offered; this is particularly common in debut offerings. [143] For pre-deal research distribution in the United States, the participating financial institutions

p. 7-36
p. 7-37

may rely on Rule 144A, which includes no prohibition on general solicitation and general advertising. They must also, however, consider limitations on the distribution of research in the United States that arise from the Global Research Settlement and FINRA rules limiting interaction between investment banking and research personnel. [144] Among other things, the settlement strictly limits communications between investment bankers and research analysts at the investment banking firms that are party to it, while the FINRA rules prohibit investment bankers at member firms from directing [145] a research analyst to engage in sales or marketing efforts related to an offering or to engage in any communication with an investor about an offering. Compliance with these restrictions, as well as concern over 10b-5 liability, led investment banking firms to refrain from distributing pre-deal research in the United States even to eligible investors in Rule 144A offerings and traditional private placements.

The practice of holding meetings between research analysts and prospective investors to discuss an issuer and its securities prior to the commencement of marketing—often referred to as "investor education"—also presents issues

p. 7-37
p. 7-38

under the Global Research Settlement and FINRA rules. It is common in some markets outside the United States for meetings of this kind to occur in connection with a debut offering after the first public filing or other public disclosure. When the offering will include a Rule 144A component, research analysts at the banks involved may wish to conduct investor education with investors in the United States. Considering the potential liability for communications with investors during these meetings, analysts have generally only met with a limited number of QIBs despite the greater flexibility to engage with investors afforded by amendments to Rule 144A introduced by the JOBS Act. Investment banking personnel and representatives of the issuer may not participate in the meetings, and they must be organized and scheduled in compliance with the prohibition under the FINRA rules on investment banking personnel directing research analysts to engage in sales and marketing efforts or to communicate with investors concerning an offering. The information concerning the issuer that is used in investor education should be consistent as to factual matters with what will be included in the preliminary offering circular, though it often includes the analyst's (but not the issuer's) projections. Written presentations used in the meetings generally are not delivered in a manner that allows investors to retain them.

There is also a wide range of pre-launch investor contacts that do not include research personnel, and a range of terminology to describe them. One common form is sometimes called "pilot fishing," "pre-sounding" or "testing the waters"—contacts between the issuer and potential investors arranged by the investment bankers with a view to, for example, gauging investor interest, deciding whether to proceed with an offering, identifying issuers considered comparable, or developing an approach to valuation and the price range for launch. In private offerings by foreign private issuers, pilot fishing may occur in a variety of circumstances, such as a Rule 144A offering that is part of a home-country IPO, or a proposed debt offering in difficult market circumstances. Similarly, in some Rule 144A offerings, the launch of marketing is preceded by investor meetings at which the issuer and the investment bankers make a road show style presentation but do not typically market a specific offering (sometimes referred to as a "nondeal road show"); whether the launch then occurs depends on investor receptivity and market conditions.

In these pre-launch marketing activities, as with investor education, the issuer information is consistent with what will be included in the offering circular, investors do not retain written presentations, and the meetings are limited to QIBs. Some bank policies impose limits on the number of investors that may be contacted in some forms of pre-launch marketing, and the laws of the home country or other markets may require further limitations. Sometimes difficult negotiations arise concerning whether the issuer's indemnification, under the purchase agreement for the offering, should cover materials used in pilot fishing,

p. 7-38
p. 7-39

pre-launch investor meetings or even investor education. Marketing to prospective "cornerstone" or "anchor" investors can raise some of the same issues. [146]

[5] Use of the Internet for Private Placements

As is the case with public offerings, the Internet provides an additional forum for private placements of securities, whether in the United States in reliance on § 4(a)(2) of the Securities Act or Regulation D thereunder or pursuant to Rule 144A or outside the United States in reliance on Regulation s. Because of the widespread public access to the Internet, conducting a private offering through the Internet in a manner that complies with the requirements for a valid private offering—in particular limiting, in the case of § 4(a)(2), the number and type of offerees and (with respect to Rule 506(b) offerings under Regulation D as well) the prohibition on the use of general solicitation or general advertising [147]—poses particular challenges.

[a] Material Available on Unrestricted Websites

Despite the existence of appropriate, restricted access procedures for offering-related information on a website, issuers in private placements made pursuant to § 4(a)(2) or Rule 506(b), in which general solicitation is not allowed, are advised to refrain from including on their unrestricted websites information that can reasonably be expected to encourage directly or indirectly interest in the offering or that could be deemed to have been released primarily for the purpose of directly or indirectly encouraging interest in the offering. This includes all information about any aspect of the offering (other than what is permitted by Rule 135c). [148] It can also encompass information about the operations, financial position or prospects of the company, statements with respect to the level of dividend payout, any predictions, projections, forecasts or opinions regarding the

p. 7-39

p. 7-40

value of the company, any "corporate image" or other advertising not in the ordinary course of the company's business or inconsistent with its past practice and any information released through arranged press coverage about the company. Information that relates solely to the company's products or services and the publication of which is consistent with the company's past practice generally may be kept on an unrestricted website. As a rule, issuers in private offerings pursuant to § 4(a)(2) or Rule 506(b) should not establish or expand unrestricted websites until after completion of the offering. [149]

[b] Electronic Road Shows

One component of private offerings for which issuers have made frequent use of the Internet is the road show. As in the case of public offerings, [150] the SEC has approved the use of the Internet to conduct road shows for private offerings in the United States. [151] In order to comply with § 4(a)(2) of the Securities Act, no-action guidance has sought to ensure that the electronic road show is transmitted on behalf of a seller solely to persons reasonably believed to be QIBs (or accredited investors in Regulation D or traditional private placements). [152] Other protective measures arising from no-action relief or traditionally advocated by counsel include measures similar to those in the context of road shows for public offerings. These include presenting the entire unedited live road show, [153] except for corrections of misstatements and deletions of dead air, making the offering circular available on the website, accessible only through a password-protected "button" on the site; restrictions on downloading, videotaping or other copying and distribution of the road show's content, and consistency between the road show and the offering circular. The limited no-action relief granted in the context of private offerings so far suggests that unlimited viewings of a road show may be permitted until the offering is concluded.

[c] Non-U.S. Offerings

Special concerns arise when an issuer conducts through the Internet a private placement in the United States concurrently with an offshore offering to

p. 7-40

p. 7-41

non-U.S. persons under Regulation s. In such cases, the SEC staff has suggested some measures that could be taken in order to comply with § 4(a)(2) and Rule 506(b) of Regulation D, as the case may be, but has expressly indicated that other types of measures may be sufficient to prevent offshore Internet offerings from being used to solicit investors in a private placement in the United States. [154] Consistent with the staff's suggestions, persons responding to the non-U.S. Internet offering should be prohibited from participating in the concurrent private placement in the United States, even if they would otherwise be qualified to do so. In addition, access to the offering materials posted on the Internet for the Regulation s offering should generally be limited to those viewers who first provide residence information (and who do not provide other information that would otherwise indicate that they are U.S. persons). [155] Finally, unless password protections are put in place, the posted offering information should generally be limited to information about the non-U.S. offering, except for information about the U.S. offering required by applicable non-U.S. law to be provided to investors participating in the non-U.S. offering.

[d] Electronic Document Distribution

Just as the SEC has expressly permitted the Internet to be used for the dissemination of mandatory disclosure documents in a U.S.-registered offering, [156] the Internet may also be used to distribute disclosure documents in a Regulation D private placement, a Rule 144A transaction or a traditional private placement, provided that the relevant requirements applicable to these types of offerings are satisfied. [157] The same considerations applying to hyperlinks in the context of

p. 7-41

p. 7-42

public offerings apply in private offerings as well. [158] In addition, many market participants now distribute disclosure documents in Rule 144A transactions or other private offerings by e-mail; prior to the changes, to Rule 144A permitting general solicitation, such e-mails typically included a legend as to the possible reliance upon an exemption from the registration requirements under the Securities Act and the restrictions on redistribution of such disclosure documents. Although broad-reaching redistribution is no longer restricted by Rule 144A, the inclusion of legends on such e-mails is unlikely to change given the 10b-5 liability concerns discussed above. [159]

[6] Integration Concerns and Mixed Private/Public Offerings

All sales that are part of "the same Regulation D offering" must meet all the requirements for the exemption. This "integration" doctrine was developed to prevent a public offering from being divided into multiple "private" offerings to avoid registration. Regulation D provides a safe harbor from this "integration" doctrine with respect to offers and sales made more than six months before or after the transaction under consideration. [160]

The ability to use general solicitation in Rule 506(c) offerings raised integration questions in the context of proximate private offerings. If a Rule 506(c) offering that uses general solicitation is integrated with a Rule 506(b) offering, the general solicitation will result in the loss of the Rule 506(b) exemption and any sales to nonaccredited investors will be a violation of § 5. [161]

p. 7-42

p. 7-43

If an issuer conducts a private offering of securities in close temporal proximity to a registered public offering, it could be argued that the two offerings should be integrated and viewed as a single distribution of securities. [162] If the private offerings are conducted under Rule 506(b) or § 4(a)(2), the resulting integrated offering would be illegal because the private offering exemption would be unavailable due to the general solicitation involved in the public offering. The offers and sales in the prior private offering (including private offerings under Rule 506(c) or Rule 144A) might also constitute an illegal public offer in connection with the registered public offering (so-called "gun jumping") in violation of § 5 of the Securities Act. The SEC has, however, provided some relief in this area through Rules 152 and 155 under the Securities Act, as well as no-action positions and interpretive guidance.

Rule 152 provides generally that a transaction that qualifies for the § 4(a)(2) exemption will continue to be exempt even if the issuer subsequently decides to make a public offering of the securities or files a registration statement. The SEC staff has clarified this Rule by taking the position that the filing of a registration statement following an offering otherwise exempt under § 4(a)(2) for the same securities does not vitiate the exemption, so long as the private offering is completed prior to the filing of the registration statement. [163] In *Black Box Inc.*, the staff indicated that the execution of binding purchase agreements for a private offering that were not subject to conditions within the control of the purchasers could constitute "completion" for these purposes even though the closing of the private offering had not occurred prior to the filing of the registration statement. [164] In *Privatization of the United States Enrichment Corp.*, the SEC staff indicated that abandonment of a private offering could also constitute completion for purposes of Rule 152. [165]

In *Squadron, Ellenoff, Pleasant & Lehrer*, the SEC staff confirmed that it intended Black Box to represent a policy position not to integrate a private placement to QIBs under Rule 144A (along with a private placement to up to three large institutional accredited investors that were not QIBs) with a concurrently registered public offering of the same class of securities. [166] The staff noted in *Squadron*, however, that the mere filing of a registration statement will generally be considered as a general solicitation, even where the issuer does not circulate a "red herring" prospectus or make any press announcement concerning the proposed offering. [167]

In its 2007 proposal to revise Regulation D, the SEC provided further guidance regarding the integration of concurrent public and private offerings, reiterating and elaborating on its position set out in *Black Box* and *Squadron*. The SEC clarified that, while there are many situations in which the filing of a registration statement could serve as general solicitation or general advertising for a concurrent private offering, the filing of a registration statement does not *per se* eliminate a company's ability to conduct a concurrent private offering. The determination as to whether the filing of the registration statement should be considered to be general solicitation or general advertising that would affect the

p. 7-44

p. 7-45

availability of the § 4(a)(2) exemption for such a concurrent unregistered offering should be based on a consideration of whether the investors in the private placement were solicited by the registration statement, or instead through some other means that would otherwise not foreclose the availability of the § 4(a)(2) exemption, such as through a substantive, pre-existing relationship with the company or direct contact by the company or its agents unrelated to the registration statement or the public offering effort. [168]

Rule 155 under the Securities Act provides a safe harbor for a registered offering following an abandoned private offering and for a private offering following an abandoned registered offering. Rule 155 facilitates a switch from a private offering to a registered public offering and *vice versa* in response to changing securities markets; it does not, however, modify or rescind the five-factor test for assessing integration in Regulation D, Rule 152 or the SEC guidance described above. [169]

Under Rule 155(b), an issuer that begins a private offering may subsequently commence a registered offering [170] without the risk that both offerings will be integrated if the following conditions are met:

- no securities were sold in the private offering;
- the issuer and any person acting on its behalf terminate all offering activity in the private offering before the issuer files the registration statement for the registered offering;
- any prospectus filed as part of the registration statement discloses information about the abandoned private offering, including the size and nature of the private offering, the date on which the issuer terminated all offering activity in the private offering, that any offers to buy or indications of interest in the private offering were rejected or otherwise not accepted and that the prospectus delivered in the registered offering supersedes any selling material used in the private offering; and

p. 7-45

p. 7-46

- the issuer does not file the registration statement until at least 30 calendar days after termination of all offering activity in the private offering, except that the 30-day delay does not apply if the issuer and any person acting on its behalf offered securities in the private offering only to persons who were (or who the issuer reasonably believes were) accredited investors or who satisfy the knowledge and experience standard of Rule 506(b)(2)(ii) under the Securities Act.

Under Rule 155(c), an issuer that begins a registered offering may subsequently commence a private offering without the risk that both offerings will be integrated if the following conditions are met:

- no securities were sold in the registered offering;
- the issuer withdraws the registration statement for the registered offering; [171]
- the issuer and any person acting on its behalf do not commence the private offering earlier than 30 calendar days after the effective date of withdrawal of the registration statement;
- the issuer notifies each offeree in the private offering that the offering is not registered under the Securities Act, the securities offered will be "restricted securities" as defined in Rule 144 under the Securities Act and cannot be resold without registration unless an exemption is available, purchasers do not have the protection of § 11 of the Securities Act and a registration statement for the abandoned offering was filed and withdrawn, specifying the effective date of the withdrawal; and
- any disclosure document used in the private offering discloses any changes in the issuer's business or financial condition that occurred after the issuer filed the registration statement that are material to the investment decision in the private offering.

Each of the specific conditions must be satisfied in order to take advantage of the Rule 155 safe harbor; however, it is not available for transactions that are

p. 7-46

p. 7-47

part of a plan or scheme to avoid registration even if the issuer technically complies with the requirements of the Rule. [172]

Footnotes

16 Section 4(a)(3) of the Securities Act is not available (i) for sales of securities by a dealer taking place prior to the expiration of 40 days after the first date on which any of such securities were "*bona fide* offered to the public by the issuer or by or through an underwriter" or (ii) at any time with respect to an underwriter's unsold allotment securities. In a private placement that is part of a larger, non-U.S. public offering of securities, the 40-day § 4(a)(3) restriction on dealer sales is applicable commencing on the initial offering date of the non-U.S. offering, which is generally the date on which the offering price of the securities is determined.

17 § 2(a)(11) of the Securities Act.

18 *See, e.g.*, *Gilligan, Will & Co. v. SEC*, 267 F.2d 461, 466 (2d Cir.), *cert. denied*, 361 U.S. 896 (1959). In proposing amendments to Rule 144 in 1997, the SEC stated that:

> [i]ndividual investors who are not professionals in the securities business may be "underwriters" [and taking "with a view to … distribution"] within the meaning of that term as used in the [Securities] Act if they act as links in a chain of transactions through which securities move from an issuer to the public.

SEC Release No. 33-7391 (Feb. 20, 1997), 62 Fed. Reg. 9246, 9256 (Feb. 28, 1997).

19 Op. Gen. Counsel, SEC Release No. 33-285 (Jan. 24, 1935).

20 *SEC v. Ralston Purina Co.*, 346 U.S. 119 (1953).

21 *SEC v. Ralston Purina Co.*, 346 U.S. 119, 125 (1953). *Ralston Purina* actually refers to § 4(1), because what is now § 4(2) of the Securities Act was included in a second clause of § 4(1) until 1964.

22 *SEC v. Ralston Purina Co.*, 346 U.S. 119, 125 (1953). Footnote 11 to the quoted text cites *Nash v. Lynde*, [1929] A.C. 158, 169 (H.L.) (U.K.): "[t]he 'public'… is of course a general word. No particular numbers are prescribed. Anything from two to infinity may serve; perhaps even one, if he is intended to be the first of a series of subscribers, but makes further proceedings needless by himself subscribing the whole." *SEC v. Ralston Purina Co.,* 346 U.S. 119, 125 n.11 (1953).

23 *SEC v. Ralston Purina Co.*, 346 U.S. 119, 125 (1953).

24 *See*, *e.g.*, SEC v. Continental Tobacco Company of South Carolina, Inc., 463 F.2d 137, 158 (5th Cir. 1972); *Henderson v. Hayden, Stone Inc.*, 461 F.2d 1069, 1071–72 (5th Cir. 1972); *Hill York Corp. v. American International Franchises, Inc.*, 448 F.2d 680, 687–89 (5th Cir. 1971); *SEC v. Murphy*, 626 F.2d 633, 645–47 (9th Cir. 1980).

26 *See*, *e.g.*, SEC v. Continental Tobacco Company of South Carolina, Inc., 463 F.2d 137, 159 (5th Cir. 1972); *Western Federal Corp. v. Erickson*, 739 F.2d 1439, 1443 (9th Cir. 1984).

27 *SEC v. Ralston Purina Co.*, 346 U.S. 119, 126 (1953); *see also Mark v. FSC Securities Corp.*, 870 F.2d 331, 333 (6th Cir. 1989).

28 *See* § 11.02[2][b] for a discussion of liability for the offer or sale of unregistered securities under § 12(a)(1) of the Securities Act. Some courts have even indicated that if the person claiming a private placement exemption cannot show that each offeree was sufficiently sophisticated to participate in a private offering, all buyers could rescind even if the nonqualifying offerees did not actually purchase any securities. *Lively v. Hirschfeld*, 440 F.2d 631 (10th Cir. 1971); *see also SEC v. Murphy*, 626 F.2d 633 (9th Cir. 1980); *Eriksson v. Galvin*, 484 F. Supp. 1108 (S.D.N.Y. 1980).

29 SEC Release No. 33-5487 (Apr. 23, 1974). This safe harbor, Rule 146 under the Securities Act, was rescinded on adoption of Regulation D.

30 SEC Release No. 33-6389 (Mar. 8, 1982).

31 Regulation D under the Securities Act includes four safe harbors from registration. Two of the four, set forth in Rule 506 of the Regulation, arise under § 4(a)(2) of the Securities Act. The other two safe harbors, set out in Rules 504 and 505, are promulgated under the exemption for small offerings in § 3(b) of the Securities Act. Only the Rule 506 safe harbors are discussed here.

32 Preliminary Note 4 to Regulation D under the Securities Act. Regulation D may be relied upon for a sale by an issuer to one or more investors that involves an intermediary acting as *agent* for the issuer. However, Regulation D may not be relied upon for a sale to one or more investors by a dealer that purchases from an issuer as *principal*. In the second case, the sale by the issuer to the dealer may qualify for the Regulation D safe harbor and the sale by the dealer to the investors may qualify for the Rule 144A safe harbor. Thus, in private offerings structured on the model of public underwritten offerings (*i.e.*, an issuer sale to a dealer, acting as principal, followed by the dealer's separate sales to investors), the Regulation D safe harbor could cover the issuer's sale to the dealer, but not the dealer's resales.

33 Rules 502(d) and 144(a)(3) under the Securities Act.

34 Rule 502(c) under the Securities Act.

35 Rules 506(b)(2)(i) and 501(e)(1)(iv) under the Securities Act. Regulation D defines "accredited investor" to include most institutions, as well as directors and specified management officials of the issuer and certain

wealthy individuals. Rule 501(a) under the Securities Act. The SEC solicited comments on the definition of "accredited investor" for natural persons (SEC Release No. 33-9416 (July 10, 2013)) and published a report summarizing its review of the definition in December 2015 (SEC, REPORT ON THE REVIEW OF THE DEFINITION OF "Accredited Investor" (Dec. 18, 2015)). In the report, the staff recommended that the SEC consider several revisions to the definition, including (i) revising the financial thresholds above which a natural person may qualify as an accredited investor and (ii) permitting natural persons to qualify as accredited investors based on indicators other than financial thresholds, including a minimum investment amount or certain professional credentials. To date, the SEC has not adopted any changes to the definition of accredited investor.

36 Rule 506(b)(2)(ii) under the Securities Act. Like its predecessor (Rule 146), Rule 506 permits a prospective investor to be represented by one or more other persons having the appropriate degree of knowledge and sophistication. Rule 501(h) under the Securities Act.

37 Rule 502(b)(2)(i)(C) under the Securities Act. In 2010, the SEC proposed broad changes in disclosure requirements for asset-backed securities, including private placements. SEC Release No. 33-9117 (Apr. 7, 2010). Under these proposals, it would have been a condition to the exemptions under Rule 506 and Rule 144A for asset-backed securities that there be an undertaking to provide specified information to investors on a continuous basis throughout the life of the securities. This would have been a substantial departure from existing law, since there are currently no specific information requirements for sales to accredited investors under Rule 506 and only a limited requirement to provide continuous information for resales under Rule 144A. After requesting additional comments (SEC Release No. 33-9244 (July 26, 2011)), the SEC ultimately declined to adopt the proposed changes to the rules governing private placements. SEC Release No. 33-9638 (Sept. 4, 2014).

38 Rule 502(d) under the Securities Act.

39 Rule 503 under the Securities Act. Form D requires, among other things, information on the issuer (including its directors and officers, industry group, revenues and assets), the offering (including the number of accredited and nonaccredited investors, minimum investment size and the jurisdictions in which solicitation occurred) and the broker-dealers involved (including names and compensation).

40 Compliance with Rule 503 is not a condition to the availability of the exemption under Rule 506. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 257.07 (Jan. 26, 2009). Rule 507 under the Securities Act expressly provides that the Regulation D exemptions are unavailable to an issuer that has previously been enjoined for failure to comply with Rule 503, but apparently no such injunction has ever been issued. *See* SEC Release No. 33-8891 (Feb. 6, 2008); SEC Office of Inspector General, Regulation D Exemption Practice 10 (Mar. 31, 2009). A 2009 report of the SEC's Office of Inspector General noted that noncompliance with Rule 503 is common and that there is no effective enforcement of the Rule. The report recommended that the SEC develop an enforcement program and consider making filing a Form D a required element of the Regulation D exemptions. SEC Office of Inspector General, Regulation D Exemption Practice (Mar. 31, 2009). In July 2013, the SEC stated that some issuers do not make Form D filings in Regulation D offerings because the filing of the form is not a condition to reliance on the Regulation D rules. SEC Release No. 33-9416 (July 10, 2013).

41 *See* Rule 506(c) under the Securities Act.

42 Rule 506(c)(2)(i) under the Securities Act.

43 Rule 503 under the Securities Act. The SEC has proposed to revise Form D to require certain additional disclosure items, some of which would apply to all Regulation D offerings and some of which would apply only to Rule 506(c) offerings. The most notable of the proposed changes would require issuers relying on Rule 506(c) to disclose (a) the methods of general solicitation used, (b) the methods used to verify accredited investor status of the purchasers and (c) the persons directly or indirectly controlling the issuer. SEC Release No. 33-9416 (July 10, 2013). To date, these proposed changes to Form D have not been adopted.

44 SEC Release No. 33-9415 (July 10, 2013).

45 SEC Release No. 33-9415 (July 10, 2013).

46 Rule 506(b) under the Securities Act.

47 *See* Rule 506(c) under the Securities Act.

48 Rule 506(c)(2)(ii) under the Securities Act.

49 SEC Release No. 33-9415 (July 10, 2013), 78 Fed. Reg. 44,771, 44,778 (July 24, 2013).

50 SEC Release No. 33-9415 (July 10, 2013).

51 Rule 506(c)(2)(ii) under the Securities Act.

52 Rule 506(c)(2)(ii)(A) under the Securities Act. The verification requirement is met if the issuer reviews specified IRS forms showing the requisite income level for the two most recent years and obtains a written representation from the potential investor that he or she has a reasonable expectation of reaching the requisite income level during the current year.

53 Rule 506(c)(2)(ii)(B) under the Securities Act. The verification requirement is met if the issuer reviews specified types of documentation of the potential investor's net worth and obtains a written representation from the potential investor that all liabilities necessary to make a determination of net worth have been disclosed.

54 Rule 506(c)(2)(ii)(C) under the Securities Act. The third party may be a broker-dealer, an investment adviser, an attorney or a certified public accountant. On June 23, 2014, SIFMA issued guidance to registered broker-dealers and investment advisers on some verification methods they could use to comply with the requirements of the safe harbor method designated for them with respect to purchasers who are natural persons as well as on some verification methods they could use to determine whether certain legal entities qualify as accredited investors. *See* SIFMA, SIFMA Guidance on Rule 506(c) Verification (June 23, 2014).

55 Rule 506(c)(2)(ii)(D) under the Securities Act. The investor must have invested in the issuer's Rule 506(b) offering prior to September 23, 2013 and continue to hold such securities.

56 Rule 506(c)(2)(ii) under the Securities Act.

57 SEC Release No. 33-9414 (July 10, 2013).

58 Rule 506(d) does not define what it means for an officer to be "participating in the offering." According to the adopting release, however, participation in an offering would be more than transitory or incidental involvement, and could include activities such as participation or involvement in due diligence activities, involvement in the preparation of disclosure documents and communication with the issuer, prospective investors or other offering participants. The SEC also considered, but determined not to make any changes to, the definition or coverage of promoters, noting that promoters represent a broad category of persons that captures all individuals and entities that have relevant relationships with the issuer or to the offering, and that those relationships must be analyzed on a look-through basis. SEC Release No. 33-9414 (July 10, 2013).

59 SEC Release No. 33-9414 (July 10, 2013).

60 The Rule delegates waiver authority to the Director of the Division of Corporation Finance and permits any court or regulatory authority that enters an order, judgment or decree that would cause an actor to be disqualified under the Rule to advise the SEC that, in its view, disqualification under Rule 506 should not arise as a consequence of such order, judgment or decree, and in such circumstances disqualification will not arise. The notice provided by the court or regulatory agency can either be in the relevant order, judgment or decree or in a separate writing to the SEC or its staff. That waiver will be effective even without a separate waiver from the SEC, if it was made before the relevant Rule 506 sale.

61 The adopting release states that issuers "should consider the totality of the offering taking into account the circumstances of the offering, the covered persons involved in the offering and the Rule's requirements, which include specific disqualifying events and covered persons subject to those disqualifying events." This will enable issuers to "determine their own methodology for a factual inquiry," which helps to promote efficiency because it enables the issuer "to tailor its own inquiry without adherence to uniform standards that

may not be applicable or appropriate in the context of a particular issuer or particular offering." SEC Release No. 33-9414 (July 10, 2013), 78 Fed. Reg. 44,730, 44,765 (July 24, 2013).

62 SEC Release No. 33-9414 (July 10, 2013), 78 Fed. Reg. 44,730, 44,747 (July 24, 2013).

63 SEC Release No. 33-9414 (July 10, 2013).

64 As an attempt to make the Regulation D safe harbors more "user friendly," the SEC adopted Rule 508, which permits issuers to deviate in part from Regulation D without losing the benefits of the safe harbor. SEC Release No. 33-6825 (Mar. 14, 1989).

65 *See supra* Note 39.

66 For example, the Rule 506 exemption turns on the nature and number of purchasers, not offerees, which is a departure from the generally accepted, and still prevailing, judicial interpretation of the § 4(a)(2) exemption. Moreover, it does not limit the number of accredited investors that can participate in any offering. The view that an exempt private placement can be made to an unlimited number of large institutional investors is also supported by the SEC's adoption of Rule 144A, as discussed at § 7.02[3].

67 SEC Release No. 33-9415 (July 10, 2013). The release states that "[a]n issuer relying on Section 4(a)(2) outside of the Rule 506(c) exemption will be restricted in its ability to make public communications to solicit investors for its offering because public advertising will continue to be incompatible with a claim of exemption under Section 4(a)(2)." 78 Fed. Reg. 47,771, 44,774 (July 24, 2013).

68 Such activities include any advertisement, article, notice or other communication published in any newspaper, magazine or similar media or broadcast over television or radio and any seminar or meeting whose attendees have been invited by any general solicitation or general advertising. Rules 135c and 135e under the Securities Act provide exemptions for certain publicity activities. *See* §§ 7.02[4] and 3.02[4]. In 2007, the SEC proposed a new exemption within Regulation D, which would have permitted certain kinds of advertising in connection with an exempt offering to "large accredited investors." SEC Release No. 33-8828 (Aug. 3, 2007). This proposal was never adopted.

69 *See* SEC Release No. 33-8828 (Aug. 3, 2007), Part II.C (interest in a private placement through a "substantial, pre-existing relationship" could mean that a prior registration statement did not constitute general solicitation); *Robert T. Willis, Jr., P.C.* (avail. Jan. 18, 1988); *Mineral Lands Research & Marketing Corp.* (avail. Dec. 4, 1985); *E. F. Hutton & Co.* (avail. Dec. 3, 1985); *Woodtrails-Seattle, Ltd.* (avail. Aug. 9, 1982). *But see Agristar Global Networks, Ltd.* (avail. Feb. 9, 2004) ("Agristar") (refusing to confirm that no general solicitation would occur although a pre-existing relationship existed between the proposed offeror and the proposed offeree when the offeror proposed to send generic investor qualification questionnaires to certain principals in the offeror's database who appeared likely to be accredited investors).

70 This is to establish that, based on the *Ralston Purina* interpretation of § 4(a)(2) described above, the investor does not require the protection of the registration provisions of the Securities Act. Courts interpreting the § 4(a)(2) exemption have emphasized the importance of prospective purchasers having access to information, but have not imposed an affirmative duty on sellers to provide information to prospective purchasers. *See Law of Private Placements (Non-Public Offerings) Not Entitled to Benefits of Safe Harbors—A Report*, 66 B US. LAW, 85, 100 n.82 (2010) (a Report by the Committee on Federal Regulation of Securities, ABA Section of Business Law); *see also Investors Mortgage Group, Inc.* (avail. Feb. 9, 1976).

71 *See, e.g.*, the discussion of the exemption from registration under Rule 144 at § 7.04[2].

72 These arrangements may include, among others, establishing a restricted depositary facility for the securities or requiring an underwriter of the securities or a designated custodian to be the sole custodian through which all such securities may be held. Such measures would facilitate policing of the transfer restrictions.

73 *See* § 7.04[1].

74 Although we are not aware of any SEC gloss on what constitutes a *bona fide* market, we believe 20% of trading volume—the minimum threshold for a substantial U.S. market interest—certainly would suffice.

75 The belief may be held by a bank acting as an underwriter or a placement agent, even if as a contractual matter it does not purchase and resell the securities.

76 Nasdaq was the only such system but became a national securities exchange in 2006. *See* § 3.01, Note 4. The term "automated inter-dealer quotation system" does not include, for example, bid and ask quotations appearing in the "pink sheets" of Pink Sheets LLC (formerly the National Quotation Bureau, Inc.) or the OTC Bulletin Board. *See* SEC Release No. 34-27975 (May 1, 1990).

77 SEC Release No. 33-6806 (Oct. 25, 1988) (proposed rule); SEC Release No. 33-6862 (Apr. 23, 1990) (final rule).

78 For purposes of § 4(a)(3), the resold securities are also not part of an unsold allotment and are deemed not to have been *bona fide* offered to the public.

79 Preliminary Note 7 to Rule 144A under the Securities Act.

80 *See* § 7.04[1] for a more detailed discussion of certain documentation issues.

81 SEC Release No. 33-6862 (Oct. 25, 1988).

82 Indeed, § 201(a) of the JOBS Act required the SEC to amend Rule 144A to permit offers to persons other than QIBs, including by means of general solicitation or general advertising. In response, the SEC amended Rule 144A to eliminate the references to "offers" and "offerees" in the conditions set forth in paragraph (d)(1) of the Rule. Consequently, a seller may rely on Rule 144A even if the securities were offered to non-QIBs and even if there has been general solicitation or general advertising. Sales, however, must still be made only to QIBs. SEC Release No. 33-9415 (July 10, 2013).

83 "Qualified institutional buyer" is defined in Rule 144A(a)(1) under the Securities Act.

84 Rule 144A(a)(1)(i)(H) under the Securities Act. Certain other forms of corporate organization may also be treated as qualified institutional buyers—for example, the SEC staff has advised that limited liability companies meeting the $100 million threshold may be deemed to have QIB status. The SEC staff has also informally expressed the view that municipalities organized as corporations (such as New York City) may be treated as QIBs, while unincorporated states (such as New York State), or municipalities as such, may not. *See also Alaska Permanent Fund* (avail. July 14, 2011) (large sovereign wealth investment fund with unique form of organization may be treated as a QIB).

84.1 A limited partnership will be deemed a QIB if all of its limited partners are QIBs. The general partner need not be a QIB for the limited partnership to be deemed a QIB, unless the general partner is also a limited partner. SEC Division of Corporation Finance Compliance and Disclosure Interpretations Question 138.10 (Dec. 8, 2016).

85 A not-for-profit organization must be registered under § 501(c)(3) of the Internal Revenue Code to be eligible for purposes of Rule 144A(a)(1)(i)(H).

86 Although the SEC has not defined the term "similar business trust" for purposes of Rule 144A or the Securities Act, we consider it reasonable, based on the distinction drawn between institutional investors and individual investors in Rule 144A (both as adopted and amended) and on other factors, to conclude for purposes of Rule 144A that the term "similar business trust" refers to any trust created primarily to aggregate funds of a number of investors to engage in profit-making activity, including investing in securities or other assets, rather than one created primarily to protect and preserve the assets of an individual or one or more related individuals. If a trust is not established as a Massachusetts or similar business trust, in order for the trust to qualify as a QIB, each of its beneficiaries must be a QIB as provided in paragraph (v) below.

87 Rule 144A(a)(1)(i)(A) under the Securities Act.

88 Rule 144A(a)(1)(i)(D), (E) and (F) under the Securities Act. A trust fund may not have individual accounts as participants.

89 Rule 144A(a)(1)(i)(B), (C), (G) and (I) under the Securities Act. It is also reasonable to conclude that an unregistered investment adviser (assuming it is organized as a partnership or corporation and is not a natural person) that is acting for an unregistered investment company that is a qualified institutional buyer may purchase under Rule 144A.

90 Rule 144A(a)(1)(ii) and (iii) under the Securities Act.

90.1 An investment company that is not registered under the Investment Company Act cannot aggregate investments by other funds that are part of its family of funds when determining its status as a QIB. SEC Division of Corporation Finance Compliance and Disclosure Interpretations Question 138.09 (Dec. 8, 2016).

91 Rule 144A(a)(1)(iv) under the Securities Act.

92 Rule 144A(a)(1)(vi) under the Securities Act.

93 SEC Release No. 33-6862 (Apr. 23, 1990), 55 Fed. Reg. 17,933, 17,936 (Apr. 30, 1990).

94 According to the release adopting Rule 144A, "foreign bank" is defined in Rule 6c-9(b)(2) and (3) under the Investment Company Act. As a result of the SEC's rescission of Rule 6c-9 in 1991, the release should be read to refer instead to Rule 3a-6 under the Investment Company Act, which replaced Rule 6c-9. *See* § 15.05[2]. In keeping with the less stringent financial reporting standards applicable to foreign private issuers (Item 8 of Form 20-F), net worth is to be determined as of a date not more than 18 months (as opposed to 16 months) prior to the sale date. A bank's net worth currently includes the bank's perpetual preferred stock, common stock, surplus, undivided profits and capital reserves (less net unrealized loss on marketable equity securities) and cumulative foreign currency translation adjustments. For a U.S. thrift, net worth equals its adjusted core capital stated in its audited balance sheet. In adopting Rule 144A, the SEC requested comment on the appropriateness of the net worth test, including the $25 million threshold, and whether this test is rightly applied to foreign banks. SEC Release No. 33-6862 (Apr. 23, 1990). The test received mixed reviews. On the one hand, the Board of Governors of the Federal Reserve System preliminarily concluded that the test does not appreciably affect the number of insured banks that would qualify to purchase securities under Rule 144A, *see* Letter from Robert S. Plotkin, Division of Banking, Board of Governors of the Federal Reserve System, to Linda C. Quinn, Director, SEC Division of Corporation Finance (Aug. 1, 1990), and the United States League of Savings Institutions expressed support for the test, *see* Letter from Renie Yoshida Grohl, United States League of Savings Institutions, to Jonathan G. Katz, Secretary, SEC (June 12, 1990). On the other hand, private banking associations objected to the test as unfairly discriminating against banks, *see* Letter from Anthony T. Cluff, Association of Reserve City Bankers, to Jonathan G. Katz, Secretary, SEC (June 14, 1990). No commenters addressed the application of the test to foreign banks.

95 Rule 144A(a)(1)(v) under the Securities Act.

96 SEC Release No. 33-6963 (Oct. 22, 1992).

97 SEC Release No. 33-6963 (Oct. 22, 1992).

97.1 SEC Division of Corporation Finance Compliance and Disclosure Interpretations Questions 138.05 and 138.06 (Dec. 8, 2016).

98 The SEC staff has declined to take the position that the only type of arrangement to be excluded as a loan participation is that in which a participating bank is not in privity with the borrower but instead relies on an original lender to underwrite, administer and enforce the loan, although it has confirmed that generally, if an instrument would be subject to registration under the Securities Act, absent an exemption, it may be counted in determining the status of a buyer under the Rule. *Unum Life Insurance Company* (avail. Nov. 21, 1990). The SEC staff has often said that "pass-through" securities will not be deemed to be loan participations.

98.1 SEC Division of Corporation Finance Compliance and Disclosure Interpretations Questions 138.07 and 138.08 (Dec. 8, 2016).

98.2 Rule 144(a)(2) under the Securities Act.

98.3 Rule 144(a)(1)(ii) under the Securities Act.

99 Rule 144A(d)(1) under the Securities Act. Acceptable means are (i) a certificate of the chief financial or other executive officer of the prospective purchaser that specifies the amount of securities that it owned and invested on a discretionary basis on a specific date on or since the close of the prospective purchaser's

most recent fiscal year, (ii) the most recent publicly available financial statements of the prospective purchaser, (iii) the most recent publicly available information appearing in documents filed by the prospective purchaser with the SEC or another U.S. or foreign governmental agency or self-regulatory organization and (iv) the most recent publicly available information appearing in a recognized securities manual, in each case if the information is provided as of a date (16 months or, in the case of a foreign purchaser, 18 months prior to sale under the Rule) otherwise required by the Rule. However, a representation or certificate of a prospective purchaser claiming that it is a qualified institutional buyer, without more, is not sufficient in the view of the SEC staff.

100 *See CommScan, LLC* (avail. Feb. 3, 1999) (sellers may rely on the QIB List maintained by CommScan (now Dealogic)); *Communicator Inc.* (avail. Sept. 20, 2002) (broker-dealers may rely on the QIB List maintained by Communicator in a joint venture with eight leading broker-dealers).

101 SEC Release No. 33-6839 (July 11, 1989) (reproposing Rule 144A for public comment).

102 Rule 144A(d)(3)(ii) under the Securities Act. *See* § 15.06 for a discussion of issues raised in connection with U.S. private placements of securities by companies that are investment companies, including closed-end investment companies, whose securities are technically eligible for Rule144A. Private offerings of investment company securities are subject to restrictions that go beyond those applicable under the Securities Act.

103 Rule 144A(d)(3) under the Securities Act. The staff of the SEC has also confirmed that securities are eligible for resale under Rule 144A if they are received, without any payment by holders, upon conversion of convertible securities that are themselves eligible for resale under the Rule. *Debevoise & Plimpton* (avail. July 23, 1990). Based on a similar analysis, securities of an issuer obtainable upon the cashless exercise of warrants issued by the same issuer should be eligible for resale under Rule 144A, provided that the warrants themselves are eligible for resale under Rule 144A *. Cf.* Rule 144(d)(3)(x); SEC Release No. 33-8869 (Dec. 6, 2007); SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 132.11 (Jan. 26, 2009) (where equity securities of an issuer are acquired upon "cashless" exercise of warrants or options, the holding period for the equity securities may be "tacked" to the holding period of the warrants or options, except in the case of cashless exercise of employee stock options).

104 Rule 144A(d)(3)(i) under the Securities Act.

105 SEC Release No. 33-6839 (July 19, 1989); SEC Release No. 33-6862 (Apr. 23, 1990).

106 *See* § 10.06 for a general discussion of mandatorily exchangeable securities.

107 SEC Release No. 33-6862 (Apr. 23, 1990).

108 *See, e.g.*, §§ 12(g)(5), 15(d) and 16 of the Exchange Act. In the release adopting Rule 144A, the SEC expressed its intention to interpret Rule 144A's "fungibility" requirement in the case of equity securities in a manner consistent with its practice under § 12(g)(5) of the Exchange Act.

109 Louis Loss, FUNDAMENTALS OF SECURITIES REGULATION 642–43 (6th ed. 2011).

110 *See, e.g.*, *Jevic Transportation, Inc.* (avail. Apr. 20, 1999); *Bear, Stearns & Co.* (avail. Aug. 2, 1982); *Cal-West Real Estate Fund* (avail. Oct. 15, 1979); *Cal-American Income Property Fund II* (avail. Sept. 1, 1975); *Motorola, Inc.* (avail. Jan. 31, 1972); *see also Turner Broadcasting System, Inc.* (avail. Feb. 6, 1990) (two classes of common stock that varied as to voting and dividend rights were separate classes for purposes of § 16(a) of the Exchange Act); *Petro-Search, Inc.* (avail. July 28, 1975) (interests in separate partnerships constituted separate classes of securities for purposes of § 15(d) of the Exchange Act).

111 *Amana Society* (avail. Sept. 23, 1974); *Ellerin v. Massachusetts Mutual Life Insurance Co.*, 270 F.2d 259 (2d Cir. 1959).

112 SEC Release No. 33-6862 (Apr. 23, 1990), 55 Fed. Reg. 17,933, 17,935 (Apr. 30, 1990). In this respect, the SEC deviated from the position it has taken from time to time with respect to the broad reach of Exchange Act reporting requirements. *See, e.g.*, *Ellerin v. Massachusetts Mutual Life Insurance Co.*, 270 F.2d 259 (2d Cir. 1959) (where the SEC urged treatment of two series of preferred stock as a single class

of securities for purposes of § 16 of the Exchange Act).

113 SEC Release No. 33-6862 (Apr. 23, 1990), 55 Fed. Reg. 17,933, 17,935 (Apr. 30, 1990).

114 SEC Release No. 33-6862 (Apr. 23, 1990). In view of the aim of the nonfungibility requirement, for purposes of Rule 144A, securities are not of the same class and series if they are expected to trade as different series in the secondary market. In the case of "strips," where the interest and principal payments, or the dividend and capital appreciation components, of a listed security are separated into two securities, a question is raised as to the fungibility of the new instruments with the underlying security. In light of the purpose of the Rule 144A fungibility requirement, the "strips" should not be considered fungible since they can be expected to have substantially different trading patterns from the listed security.

115 The exemption under Rule 12g3-2(b) is discussed in § 4.02[3][a][iv].

116 Schedule B to the Securities Act is available for the registration of securities of a foreign government, as defined in Rule 405 under the Securities Act. The definition includes the government of a foreign country or a political subdivision of a foreign country, and Schedule B is also used to register securities of an agency or instrumentality of a foreign government that are fully and unconditionally guaranteed by that government. *See* § 3.05[1].

117 *See Homestake Mining Company* (avail. Aug. 28, 1998); *British Aerospace Public Limited Company* (avail. May 9, 1990). The SEC has also taken this position where an entity guarantees all of the obligations of its wholly owned subsidiary under warrants issued by the subsidiary and exercisable for securities of the guarantor. *Schering-Plough Corp.* (avail. Nov. 21, 1991). According to informal SEC advice, an agreement between an issuer and, for example, its parent whereby the parent agrees to provide funds or net worth necessary for the issuer to make payment (a so-called "keepwell" or "support" agreement) will not be treated as the functional equivalent of a guarantee for these purposes and, accordingly, a subsidiary benefiting from such an agreement must comply with Rule 144A(d)(4) in connection with its issuance of Rule 144A securities.

118 The SEC did not specify in adopting Rule 144A whether the required information must be provided in English. It ought to be the case, however, that no special translations or English language versions of the information need be provided if not otherwise available. First, the premise of Rule 144A is that qualified institutional buyers have sufficient sophistication and economic clout to fend for themselves—including, presumably, by reviewing disclosure in a foreign language or requiring the issuer to provide English summaries of any information not already in English. Second, in the context of Rule 12g3-2(b) under the Exchange Act (discussed at § 4.02[3][a][iv]), the SEC has expressly addressed the translation issue by specifying cases in which translations or English language summaries or versions are required. The SEC could have, but did not, include a similar requirement in Rule 144A. Thus, it would appear that the Rule's information delivery requirement may be met using foreign language documents. Certainly no more than an English language summary of the documents should be required. The staff of the SEC has in any event stated that it will not respond to inquiries concerning the adequacy of information proposed to be supplied pursuant to Rule 144A(d)(4). SEC Release No. 33-6862 (Apr. 23, 1990). Nevertheless, the SEC staff has stated, in the case of securities issued by a company and its principal subsidiary and guaranteed by two other groups of subsidiaries, that compliance with the Rule 144A(d)(4) requirements regarding financial statement presentation may be satisfied by aggregate presentation of financial results for each of the two groups. *CEMEX, S.A.* (avail. May 7, 1992).

119 Rule 144A(d)(4)(ii)(C) under the Securities Act. For U.S. issuers, by contrast, the balance sheet must be as of a date less than 16 months before the date of resale, and the statements of profit and loss and retained earnings must relate to the 12-month period preceding the date of the balance sheet. If the balance sheet is not as of a date less than six months before the date of resale, it must be accompanied by additional statements of profit and loss and retained earnings for the period from the date of the balance sheet to a date less than six months prior to the resale date. Rule 144A(d)(4)(ii)(A) under the Securities Act. Finally, the description of the issuer's business must be as of a date within 12 months prior to the resale date. Rule 144A(d)(4)(ii)(B) under the Securities Act.

120 *See* Separate Statement of Commissioner Fleischman, SEC Release No. 33-6862 (Apr. 23, 1990); *see also* Preliminary Note 1 to Rule 144A under the Securities Act ("This section relates solely to the application of Section 5 of the [Securities] Act and not to the antifraud or other provisions of the federal securities laws."). When Rule 144A was adopted, it was widely assumed that purchasers in a private placement also had a remedy under § 12(a)(2) of the Securities Act, although *Gustafson v. Alloyd Co.*, 513 U.S. 561 (1995), later held otherwise. *See* § 11.04[1].

121 *See* § 11.04.

122 Similar questions arise with respect to information presented in a "Management's Discussion and Analysis" section in a registration statement or report, *see* § 4.06, and with respect to communications with financial analysts, *see* § 4.10[4].

123 Under § 12(g) of the Exchange Act, a foreign private issuer that has 2,000 or more holders of record (or 500 or more holders of record who are not accredited investors) of a class of equity securities and more than $10 million in total assets, and 300 or more U.S. resident holders at the end of its most recently completed fiscal year, must register that class under the Exchange Act unless an exemption is available. Exchange Act registration requires a company to comply with SEC reporting requirements and with the Sarbanes-Oxley Act. However, an automatic exemption is available under Rule 12g3-2(b) under the Exchange Act, which exempts a non-U.S. company that has not listed or publicly offered securities in the United States from Exchange Act registration provided such company complies with the criteria under Rule 12g3-2(b). SEC Release No. 33-10075 (May 3, 2016). The criteria for the exemption under Rule 12g3-2(b) are discussed in § 7.02[3].

124 The information made public to meet the conditions for the Rule 12g3-2(b) exemption may still be subject to the antifraud provisions of § 10(b) of the Exchange Act and Rule 10b-5 thereunder.

125 *See* Form F-6, General Instruction I.A; § 3.04[1][b].

126 Rule 144A(d)(2) under the Securities Act. In 2010, the SEC proposed broad changes to the disclosure requirements for asset-backed securities, including private placements. SEC Release No. 33-9117 (Apr. 7, 2010). Under these proposals, an issuer would have been required to file with the SEC a notice of a Rule 144A offering of asset-backed securities providing specified information to investors. Rule 144A has not otherwise required any public notice. After requesting additional comments (SEC Release No. 33-9244 (July 26, 2011)), the SEC ultimately declined to adopt the proposed changes to the rules governing private placements. SEC Release No. 33-9638 (Sept. 4, 2014).

127 For a discussion of undocumented offerings, *see* § 13.06.

128 A sample legend might read "Sale Relying on Rule 144A—Restricted Security."

129 *See supra* Notes 67 and 68. *See also* text accompanying Notes 147–155 for a discussion of general solicitation and general advertising in the context of private offerings through the Internet.

130 A tombstone advertisement issued upon completion of a traditional private placement may also constitute a solicitation if, for example, the offering was part of an ongoing program. *Alma Securities Corp.* (avail. Aug. 2, 1982).

131 Rule 135c(a) under the Securities Act.

132 In the case of rights or exchange offerings, or offerings to the employees of the issuer or its affiliates, certain additional information may be provided. Rule 135c(a)(3) under the Securities Act.

133 Rule 135c(d) also requires an issuer that is exempt under Rule 12g3-2(b) to furnish any Rule 135c notice to the SEC "in accordance with the provisions of that exemptive section," but Rule 12g3-2(b) was amended in 2008 to eliminate the submission of documentation to the SEC. SEC Release No. 34-58465 (Sept. 5, 2008).

134 SEC Release No. 33-7470 (Oct. 10, 1997).

135 Note to paragraph (a)(1) of Rule 135e under the Securities Act. *See* § 4.05[4] for further discussion of Rule 135e.

136 As discussed below in § 7.09, for non-SEC-reporting issuers in Rule 144A offerings, U.S. state "blue sky"

laws also may inhibit the full use of the flexibility provided under the revised rules.

137 The SEC's proposal to require a Form D filing in advance of the first use of general solicitation, if adopted, could affect the timing of these press releases in Rule 506(c) offerings.

138 Issuers subject to Regulation FD will also have to consider the implications of any communications or disclosures of material nonpublic information they make as part of general solicitation materials. *See* § 3.02[3][c] for a discussion of Regulation FD. Form 8-K and Form 6-K filings designed to ensure public dissemination of material nonpublic information included in an offering circular for a Rule 144A or Rule 506(c) offering can now include the offering circular as an exhibit rather than including a summary of the specific material information without referencing the offering, as had been the practice to comply with Regulation FD before the elimination of restrictions on general solicitation and general advertising in connection with these types of offerings. However, liability concerns about expanding the scope of potential liability to secondary market participants for the entire contents of the offering circular may still favor the previous practice.

139 [Reserved.]

140 These kinds of services will need to consider a variety of issues, including whether they will be required to register as a broker-dealer under the Exchange Act.

141 Rules 138(b) and 139(c) under the Securities Act; *see* SEC Release No. 33-8591 (July 19, 2005). The safe harbors are not available for an offering under Regulation D (but are no longer necessary in connection with a Rule 506(c) offering) or § 4(a)(2).

142 *See* § 3.02[2][c] for a full discussion of Rules 138 and 139. *See* § 14.07[5] for a discussion of FINRA rules applicable to broker-dealer research practices.

143 *See* §§ 3.02[2] and 3.02[2][d] for a discussion of research in the context of a registered offering. As discussed in § 3.02[2][d], underwriters' practices concerning pre-deal research are influenced not only by regulatory issues, but also by the prospect that the content of research reports could be a potential source of liability. (Liability for a research report is not covered by indemnification from the issuer in a standard purchase agreement.) Based mainly on this concern, market participants have historically imposed a blackout period on pre-deal research for a limited period prior to the launch of marketing for the offering in order to be in a position to argue that the research reports should be viewed separately from the prospects, and underwriters also often agree to other restrictions such as limiting the scope of projections.

144 *See* § 14.07[5][b] for a discussion of the Global Research Settlement. *See also* FINRA Rules 2241 (for equity research) and 2242 (for debt research), FINRA MANUAL. Some banks avoided the distribution of pre-deal research in the United States for liability reasons even before the settlement. The research practices of international investment banks concerning pre-deal research still vary, based on differing views of the concerns discussed in the text above and in Note 143 *supra*, but in a given offering the underwriters often agree on a set of procedures to avoid divergent approaches. The SEC clarified that the provisions of the JOBS Act liberalizing the publication of research about "emerging growth companies" do not amend or modify the Global Research Settlement. *See* SEC, Division of Trading and Markets, Jumpstart Our Business Startup Act—Frequently Asked Questions [("FAQs")] About Research Analysts and Underwriters (Aug. 22, 2012), SEC Trading and Markets FAQs, FAQ2. Any investment bank currently subject to the Global Research Settlement therefore cannot take advantage of any relevant JOBS Act provision without first seeking amendment or modification of the Global Research Settlement from the court overseeing its application, and the SEC could support or oppose a requested modification. Although the SEC has indicated that the Global Research Settlement may also be modified through an SEC, FINRA or NYSE rule that specifically states an intent to supersede it, there is no evidence that such future rulemaking is likely.

145 The SEC has addressed the difference between investment banking personnel "arranging" for communication between research analysts and investors—conduct permitted by the JOBS Act in connection with an emerging growth company IPO—and "directing" research analysts to communicate with prospective clients or engage in other sales efforts—conduct prohibited by existing FINRA/NASD and NYSE rules. Permissible "arranging" includes an investment banker sending an analyst a list of clients to

contact, provided the analyst retains the discretion to decide whether to do so, and an investment banker arranging a call between an analyst and a client, provided the investment banker does not participate in such call. SEC Trading and Markets FAQs, FAQ 3 (Aug. 22, 2012).

146 In a registered offering, this kind of activity is limited by a number of considerations: the prohibition under § 5(c) of the Securities Act on making offers before a registration statement is filed; the conditions on reliance on the safe harbors from § 5(c) provided by Rule 163 (for a well-known seasoned issuer) and Rule 163A under the Securities Act; and the requirement (in an IPO) under the Instructions to Item 501(b)(3) of Regulation s -K to provide a price range in any preliminary prospectus that is "circulated." *See* §§ 3.02[2][a] and [b].

147 *See* § 7.02[1] and [2] for a discussion of the requirements for valid private offerings conducted in reliance on § 4(a)(2) of the Securities Act or Regulation D thereunder and § 7.02[3] for a discussion of the requirements for valid private offerings conducted pursuant to Rule 144A. As discussed above, the prohibition on general solicitation and general advertising no longer applies in offerings under Rule 506(c) of Regulation D and Rule 144A.

148 *See* § 7.02[4].

149 *Cf.* § 3.02[2][v][A] for a discussion of publicity with respect to the Internet in the context of a public offering.

150 *See* § 3.02[2][v][A]. This approval is relevant only for issuers who are not conducting a Rule 144A or Rule 506(c) offering, for which general solicitation (*via* the Internet or any other medium) is not prohibited.

151 *See Net Roadshow, Inc.* (avail. Jan. 30, 1998); *Net Roadshow, Inc.* (avail. Sept. 8, 1997).

152 *Net Roadshow, Inc.* (avail. Jan. 30, 1998).

153 *See* § 3.02[2][c][iii], therein and the accompanying text for a discussion of standard market practice regarding the taping of live road shows.

154 SEC Release No. 33-7516 (Mar. 23, 1998). The SEC subsequently emphasized the importance of restricting access from the United States or by U.S. persons, as appropriate, to web-posted offshore offering materials for offshore offerings conducted in conjunction with a U.S. private placement.

155 *See* Chapter 3, Note 237 therein for a discussion of the variety of electronic "gateposts" that can be used to restrict access to an Internet website. Where the offering materials posted on the website appear in English, it would be prudent to employ the more restrictive of these gateposts. Even where the posted offering materials are not in English, it may be prudent to employ more restrictive mechanisms, where, for instance, there is reason to believe a large expatriate community resident in the United States may seek to invest in securities issued by a company in their home jurisdiction.

156 *See* § 3.02[3][ix]. Some companies have conducted their own offerings on the Internet. These have tended to be issuers with small capitalizations that have used the Internet to raise fairly small sums, typically without the assistance of established underwriters. However, most issuers and established underwriters do not show signs of moving substantially away from traditional offering practices relying on paper-based disclosure, and most are using the Internet only supplementally.

157 Consideration must also be given to compliance with the broker-dealer registration requirements of the Exchange Act in connection with the use of the Internet to disseminate disclosure documents. *See* § 14.03.

158 *See* § 3.02[3][c][i].

159 *See* § 7.02[4].

160 Rule 502(a) under the Securities Act. In 2007, the SEC proposed to reduce the time frame for the Rule 502(a) integration safe harbor to 90 days, but it has never acted on the proposal. SEC Release No. 33-8828 (Aug. 3, 2007). The Note to Rule 502(a) also describes five factors to be considered in determining whether offers and sales should be integrated: (i) whether the sales are part of a single plan of financing, (ii) whether the sales involve issuance of the same class of securities, (iii) whether the sales have been made at or about the same time, (iv) whether the same type of consideration is being received and (v) whether the sales are made for the same general purpose.

161 Recent guidance from the SEC confirmed that a Rule 506(c) offering can follow a Rule 506(b) offering,

within six months of the Rule 506(b) offering (six months being the Rule 502(a) time-based threshold otherwise applicable to determine that two Regulation D offerings should not be integrated), and notwithstanding the five factors set forth in Rule 502(a) as being indicative of whether two offerings within six months of each other should be integrated. SEC Division of Corporation Finance Compliance and Disclosure Interpretations Question 256.34 (Nov. 17, 2016).In practice, this means an issuer can, for example, raise capital today from a number of investors with whom it has a previously existing relationship, under Rule 506(b) and without the need to take reasonable steps to verify the accredited investor status of those investors (so long as it "reasonably believes" they are accredited investors, as Rule 506(b) requires). Once all sales under that Rule 506(b) offering are completed, the issuer can then immediately do a separate offering under Rule 506(c) to raise additional capital by using general solicitation to find additional investors. The issuer would then have to take reasonable steps to verify accredited investor status of the investors only in the second (Rule 506(c)) offering. Earlier integration guidance from the SEC in 2015 addressed the combinations of Rule 506 offerings with each of Regulation A (SEC Release No. 33-9741 (Mar. 25, 2015)), proposed amendments to Rule 147 under the Securities Act (SEC Release No. 33-9973 (Oct. 30, 2015) (final rule)) and Regulation Crowdfunding (SEC Release No. 33-9974 (Oct. 30, 2015) (final rule)) but did not address the combination of consecutive offerings under Rules 506(b) and 506(c) (or vice versa).

162 The SEC's integration doctrine concerns "the determination as to whether separate sales of securities are part of the same offering (*i.e.*, are considered 'integrated')." SEC Release No. 33-6863 (Apr. 24, 1990), 55 Fed. Reg. 18,306, 18,322 (May 2, 1990). The question of integration originally arose with respect to whether two or more otherwise exempt offerings should be treated as a single offering to determine whether an exemption is available. The SEC has addressed integration of exempt offerings in, *inter alia*: Rule 502(a) under the Securities Act (safe harbor from integration for Regulation D offerings) and Preliminary Note 7 to Regulation s (no integration of private domestic offerings with offshore sales under Regulation s); *see also* § 7.02[2].

163 *Black Box Inc.* (avail. June 26, 1990); *Quad City Holdings, Inc.* (avail. Apr. 8, 1993).

164 *Black Box Inc.* (avail. June 26, 1990) (noting, however, that, if the issuer were to renegotiate the purchase agreements following the filing of the registration statement, the renegotiated placement might constitute a new offering and thus render this "completion" interpretation of the rule inapplicable). Thus, transactions in which investors agree to purchase securities in private offerings but condition closing on the availability of an effective resale registration statement (so-called "PIPE" transactions) are permitted under this *Black Box Inc.* interpretation of Rule 152, so long as the investors' commitments are subject only to conditions beyond their control and there is no renegotiation of the terms of the purchase after the filing of the registration statement. However, if there are any commitments made by investors after such filing to purchase privately the securities to which the registration statement relates, Rule 152 would be unavailable, the private offering could be integrated with the public offering deemed to have commenced with the filing of the registration statement, and the solicitation of the pre-filing commitments could be deemed to constitute an illegal public offer.

165 *Privatization of the United States Enrichment Corp*. (avail. May 13, 1998) (expressing the staff's view that unregistered offers to sell securities in connection with a possible merger or acquisition transaction, if made pursuant to a valid private placement exemption, need not be integrated with a subsequent initial public offering commenced by the filing of a registration statement after such possible merger or acquisition transaction has been abandoned).

166 *Squadron, Ellenoff, Pleasant & Lehrer* (avail. Feb. 28, 1992). Although the SEC staff is understood to have intended the restrictions in the Squadron letter to apply to both offerees and purchasers, we believe applying the restrictions to offerees is unduly restrictive and inconsistent with Regulation D 's focus on purchasers alone.

167 In taking this position, the SEC nevertheless distinguishes between a registration statement filed with respect to a specific issue of securities and a shelf registration statement. In the latter case, because the registration statement covers securities the final terms of which will not be determined until a "takedown" is

effected, no general solicitation occurs upon the mere filing of the registration statement. *See* SEC Release No. 33-7606 (Nov. 3, 1998), *as amended*, SEC Release No. 33-7606A (Nov. 13, 1998). This concern does not apply in the case of a Rule 144A or Rule 506(c) offering, for which general solicitation is not prohibited.

168 SEC Release No. 33-8828 (Aug. 3, 2007); *see also* SEC Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Sections, Question No. 139.25 (Nov. 26, 2008). Although the proposal to revise Regulation D was not adopted, the guidance in the release on this topic remains salient. Again, this concern does not apply in the case of a Rule 144A or Rule 506(c) offering, for which general solicitation is not prohibited.

169 SEC Release No. 33-7943 (Jan. 26, 2001); *see also infra* Note 234. Reliance on Rule 155 is unnecessary where an abandoned public offering is followed by a Rule 144A or Rule 506(c) offering, for which general solicitation is not prohibited.

170 The SEC staff has said informally that it will not permit reliance on Rule 155(b) if an issuer with an effective shelf registration statement wishes to distribute, on a private basis and without filing, written material about a proposed new securities offering and, if it is well received, convert that private placement into a shelf takedown.

171 In connection with the adoption of Rule 155, Rule 477 under the Securities Act was amended to provide that an issuer's application to withdraw an entire pre-effective registration statement will become effective automatically upon filing with the SEC unless it objects within 15 days. The SEC also indicated that it would consider promptly applications to withdraw effective registration statements. In addition, Rules 429 and 457 under the Securities Act were amended to permit issuers to offset the filing fees paid in respect of withdrawn registration statements against future filing fees within the five years following their original filing. *See* SEC Release No. 33-7943 (Jan. 26, 2001).

172 *See* SEC Release No. 33-7943 (Jan. 26, 2001). The SEC staff has indicated in an informal meeting with practitioners that the Rule 155(c) safe harbor will not be available if marketing efforts prior to abandoning the registered public offering constitute general solicitation with respect to the subsequent private offering, even if those marketing efforts were part of a good faith effort to complete the public offering and not part of a plan or scheme to avoid registration of the subsequent private offering. Neither the language of the Rule itself nor the discussion of it in the adopting release suggests this additional condition. If indeed the SEC continues to take this view, it could effectively limit the availability of the safe harbor, where there has been more than a quiet filing of the registration statement, to private offerings only to those with whom the issuer or its underwriters have a pre-existing relationship or done in reliance on Rule 506(c) or Rule 144A.

U.S. Regulation of the International Securities and Derivatives Markets, § 7.03, DISCLOSURE AND DUE DILIGENCE PRACTICES IN RULE 144A OFFERINGS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 7.03 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Most offerings by foreign private issuers to U.S. investors are structured as private placements, generally as offerings through financial intermediaries relying on Rule 144A. The principal technical U.S. legal issues in such an offering involve meeting U.S. regulatory requirements: ensuring that the offering is exempt from registration under the Securities Act; determining that the issuer is not an investment company or, if it is, ensuring that the offering is structured to comply with the Investment Company Act; [173] determining that the offering does not have derivative features that present issues under the Commodity Exchange Act; [174] and in the case of debt securities, ensuring that there is no violation of the Tax Equity and Fiscal Responsibility Act of 1982 ("TEFRA") rules. [175] In addition to these technical issues, however, Rule 144A offerings are shaped by disclosure and due diligence practices. These practices reflect U.S. liability concerns, and they have evolved to address them, in addition to complying with legal requirements and market practices in the issuer's home jurisdiction or in the primary trading market for its shares. [176]

The disclosure process in a typical Rule 144A offering is similar in its broad outlines to the process in a U.S. public offering. The issuer, assisted by counsel, prepares a formal offering document, [177] which is distributed to investors in preliminary form for use in marketing the offering and then in final form

p. 7-48

after the offering has been priced. [178] The financial institutions conducting the offering, assisted by counsel, conduct a due diligence investigation prior to the commencement of marketing and update it (or "bring it down") before pricing and again at closing. Those institutions, acting as initial purchasers, [179] enter into a purchase agreement with the issuer, in which (among other things) the issuer provides representations relating to the offering circular and to its legal status, business and other matters, the issuer agrees to indemnify the initial purchasers against liabilities arising from the disclosure, and the obligations of the initial purchasers are conditioned on delivery of documentation (*e.g.*, legal opinions and auditors' comfort letters) that supports the due diligence. If there are selling securityholders in an equity offering, they are also parties to the purchase agreement, and the contractual allocation of risk between selling securityholders and the issuer, through representations and indemnities, is negotiable; but the issuer is still responsible for the offering circular. There is typically a road show presentation, distinct from the offering circular but in principle consistent with it. [180]

[1] The Rule 144A Offering Circular—Form

There are many possible formats for an offering circular in a Rule 144A offering, depending on the structure of the offering. For example, many debt

p. 7-48

p. 7-49

offerings are placed with U.S. institutional investors under Rule 144A and with non-U.S. investors under local exemptions from registration for institutional placements, so that no regulatory approval is required in any jurisdiction. In such an offering, it is typical to prepare a single, integrated, stand-alone offering circular in English. [181] Many equity offerings, on the other hand, are placed with U.S. institutional investors under Rule 144A and in a concurrent public offering registered under local securities laws in the home jurisdiction, which is the principal or only trading market. [182] In an equity offering of this kind, there would be (i) an offering circular for use in the Rule 144A placement (and for use in the offering elsewhere outside the home market) and (ii) a parallel prospectus for use in the home jurisdiction. The preparation of the parallel offering documents is particularly complex if the home jurisdiction prospectus is not in English. Practices vary widely as to whether the English-language offering circular or the home-language prospectus is prepared first.

If the issuer is a reporting company in the United States, information may be incorporated by reference into a Rule 144A offering circular from material filed with the SEC. This practice was at one time debated, because of the absence of any specific basis for it in the SEC's rules, but it has ceased to be controversial. Rule 144A offering circulars do not typically incorporate by reference material filed with a non-U.S. securities regulator or exchange, although they could presumably do so if the material is readily available, at least if it is in English.

Where the Rule 144A offering is part of a global offering that is primarily conducted outside the United States, the global offering document may include certain disclosure material that relates specifically to the U.S. placement. This disclosure might, for example, cover the aspects of the plan of distribution that are relevant to the U.S. market, restrictions on resale of the privately placed securities, any related ADR program, and tax consequences to U.S. purchasers. Alternative approaches, used less often today than in the past, include (i) a supplement (sometimes known as a "*wrap-around*") attached to the non-U.S. offering documentation and containing only the U.S. market material and (ii) a separate "U.S. version" of the offering circular for use in the United States, differing from the "non-U.S. version" only in including the U.S. market material.

[2] The Rule 144A Offering Circular—Content

The content of a Rule 144A offering circular is determined by a number of different factors. One of the most important is marketing, because the offering

p. 7-49

p. 7-50

circular serves to present the securities and the issuer in a manner that is favorable to the success of the offering and that also responds to the expectations of institutional investors. Another is precedent, because investors and initial purchasers tend to compare disclosure in a new offering with disclosure in similar offerings or of similar issuers.

A third factor is existing disclosure. If the issuer is subject to periodic reporting in its home country or principal trading market, it will have existing disclosure that responds to local regulatory requirements and that is already being relied on by existing investors. If, on the other hand, it is conducting an initial public offering in its home jurisdiction concurrently with a Rule 144A offering in the United States, it will prepare disclosure for its home regulator in accordance with that regulator's requirements. In such cases, where the issuer will provide disclosure for home-country purposes at the same time as it provides an offering circular to Rule 144A investors, there is usually consensus that the two disclosure documents should be consistent—because if they diverge, the differences could be used in retrospect to characterize one of them as deficient, and also because regulators in the home jurisdiction may expect that information provided to investors in the international offering will also be provided to investors in the home offering. Divergences do, however, arise. The home country disclosure may include material that is unnecessary or confusing in the context of a Rule 144A offering, or that cannot be verified in the due diligence process, and that is consequently omitted from the Rule 144A offering circular. [183] Conversely, the Rule 144A offering circular may include material that is considered unnecessary under home country practice.

In addition to these factors, practitioners have developed a broad consensus that certain items of disclosure are standard in Rule 144A offerings. This consensus is reflected in the criteria of international financial institutions for their participation in a Rule 144A transaction, and in the criteria of international law firms and auditing firms for their participation and for their delivery of the "negative assurance" letters on disclosure that are customary conditions precedent to closing. Ultimately all these are driven by a combination of liability concerns, reputational concerns, investor expectations and institutionalized best practices. For all these purposes, the touchstone is materiality to investors—the offering

p. 7-50

p. 7-51

circular must be free of both material misstatements and omissions of material facts necessary to make the statements made therein not misleading. Practices in SEC-registered offerings often serve as a reference point: if a particular element of disclosure would be sufficient in a U.S.-registered offering, it is presumed to be sufficient in a Rule 144A offering. But other sources, including implementing regulations and practices under the European Prospectus Directive, are important as well, and generally the fact that information would be disclosed in a registered public offering does not in itself require the conclusion that it must also be disclosed in a Rule 144A offering.

Views about the sufficiency of disclosure evolve as market practices change. Following is a list of core elements of disclosure in a Rule 144A offering, without which an offering circular would present challenges for an investment bank, an auditor or a law firm. The list includes only the principal disclosure elements that arise in common situations.

Audited financial statements—Financial statements of the issuer, with full notes and audited by an independent auditor are included. Financial statements in Rule 144A offerings may be presented under various systems of accounting principles—U.S. generally accepted accounting principles ("GAAP"), International Financial Reporting Standards ("IFRS") or another national system. [184] The audited financial statements are generally consolidated. They typically cover three years, based on what would be required under SEC rules and under the European Prospectus Directive and implementing regulations. [185] They are accompanied by explanatory notes, whose scope and content are governed by the applicable accounting and auditing principles. Unless the issuer is an SEC-reporting company, the standards governing the conduct of the audit are usually not the Public Company Accounting Oversight Board ("PCAOB") standards that would apply in an SEC-registered offering, [186] and auditor independence is not

p. 7-51

p. 7-52

usually evaluated under Regulation s -X, as it would be in an SEC-registered offering. [187] The audited financial statements are sometimes more than 12 months old by the time the securities are sold—in other words, the offering may be conducted in the early months of a fiscal year without audited financial statements from the most recently completed fiscal year.

If the issuer has not otherwise published interim financial statements, difficult questions occasionally arise as to whether they should be included, depending on the age of the audited financial statements at the time of the offering. [188] When interim financial statements are presented, they are ordinarily not audited, and a limited review report of the auditor is generally not included in the offering circular. [189] An interim income statement is ordinarily accompanied by the income statement for the corresponding period of the previous year.

Potentially challenging issues regarding financial statements arise when the issuer has recently made a material acquisition, or has agreed to make one. In such a situation, financial statements of the target could obviously be valuable for investors to understand the acquisition, but they may not be readily available or reliable. In an SEC-registered offering, detailed rules provide for the inclusion in the registration statement of separate financial statements of the acquired (or target) company and *pro forma* financial information showing the effects of the acquisition, depending on how "significant" the acquisition is under a highly specific measurement rule. [190] In Rule 144A offerings, these rules are of course inapplicable, and many other jurisdictions have either no applicable regulation, or principles of uncertain application, or regulator discretion. Practitioners accordingly often refer to the rules that apply in an SEC-registered offering as a first

p. 7-52

p. 7-53

step in determining what financial information should be provided. [191] In some cases, the inability to provide target financial statements or *pro forma* financial information makes it impossible to proceed with an offering.

MD&A or OFR—A discussion of the issuer's financial performance and its financial condition is included, and is similar to the "management's discussion and analysis" ("MD&A") or "operating and financial review" ("OFR") required in offerings and periodic reports under SEC rules, the European Prospectus Directive and many other national disclosure regimes. [192] The guiding principle is to present management's view of the issuer's financial performance and financial condition, supplementing the information provided in the financial statements and notes. The typical elements include: (i) an overview identifying key issues about the financial statements and recent performance, (ii) a discussion of critical accounting policies, generally meaning policies that require significant estimates and judgments, (iii) a detailed discussion comparing results of operations for recent annual and interim periods, with particular attention to trends and uncertainties that will affect future performance and to factors that may affect comparability among periods, and (iv) a discussion of liquidity and capital resources, with particular attention to liquidity, funding requirements, sources of funding, terms of outstanding debt and related matters. Of these four elements, the last two are more nearly universal. Many of the specific elements of the discussion are based on SEC requirements, although some of the specific disclosures required in SEC filings, particularly those introduced after the Sarbanes-Oxley Act of 2002, are not as common in Rule 144A offerings. [193]

p. 7-53

p. 7-54

Risk factors—A discussion of the principal risks applicable to the issuer, its business and the particular securities is included. In its breadth, this discussion usually corresponds to practices in the U.S. public markets. The expression "risk factors," borrowed from SEC requirements [194] but now adopted in many other jurisdictions, is perhaps too narrow, as this discussion usually provides an extensive list of challenges facing the issuer and potential disadvantages of investing in its securities. While there may be an argument that a particular issuer or offering does not present significant risks, it is extremely rare for a Rule 144A offering circular to omit risk factors altogether.

Use of proceeds—In a primary offering (where the net proceeds will go to the issuer, as opposed to a selling securityholder), disclosure about how the issuer plans to use the net proceeds of the offering is included.

Description of business—A description of the issuer's business, including strategy, operations, facilities, competitive and regulatory environment and other elements is provided. [195] The extent of this description varies widely, depending on many factors including home-country regulatory requirements, economic sector of the issuer, familiarity with the issuer on the part of the market and investors, and marketing considerations. [196] Some key elements of the business description, such as capital expenditure requirements, major contracts or material legal proceedings, may be described under other or separate headings.

SEC rules provide specific, detailed disclosure regimes for registered offerings by issuers in certain sectors, including banking, mining, oil and gas and insurance. [197] In Rule 144A offerings by foreign private issuers in those sectors, questions often arise as to the degree to which the offering circular should follow the SEC's specific disclosure requirements. If there is a well-developed alternative disclosure regime under home country law that addresses the same issues—as there may be, for example, for disclosure of mineral reserves or oil

p. 7-54

p. 7-55

and gas reserves—that can be sufficient. [198] Otherwise, practitioners usually agree on a package of disclosures that addresses the same issues as the SEC's requirements but may do so in a different way or at a lower level of detail.

Management and board of directors—There is a discussion of how the issuer is managed and governed, including the identity of the members of the board of directors (or similar body) and the principal executives. A particularly sensitive issue is arrangements for compensation of directors and especially management. Although regulatory requirements have become far more demanding in domestic markets around the world, and especially in the United States, it remains common in Rule 144A offerings to provide aggregate disclosure at a

p. 7-55

p. 7-56

comparatively low level of detail. [199] Additional detail is provided if it is publicly available or it is particularly material, either because of the amounts involved or the potential incentives or contingencies they create, for example, with respect to a potential change of control.

Major shareholders—Any shareholders with a controlling or otherwise significant interest are identified, and there is disclosure of contractual arrangements among them relating to their investment in the issuer. Practices differ concerning the threshold for disclosure of a shareholding interest. [200] In some cases, the identification of direct shareholders of the issuer is simple enough, but if effective control lies with other parties that own their interest through the direct shareholders, more detailed disclosure relating to such other parties would be appropriate. It is sometimes difficult to determine the parties that have effective control, and the issuer or such parties may be reluctant to disclose their identities, but most practitioners believe controlling interests must be disclosed where the information is known or reasonably available to the issuer or selling securityholders. [201]

Related-party transactions—A description of transactions or circumstances that present the possibility of conflict of interest between the issuer and its executives, directors or major shareholders is provided. This topic is fundamentally important, because of the potential that parties in a position to influence the issuer will do so to the detriment of investors in the offering, because of the inherent importance of conflicting interests, and because in rare cases the consequences can be serious for investors and for the initial purchasers. It can be difficult to identify and evaluate related-party transactions, but in close cases the touchstone should be the potential for material effects on investors and it is common to err on the side of caution. [202]

p. 7-56

p. 7-57

Description of securities—There is a description of the terms of the securities and their governing instruments. For debt securities, this description is ordinarily very complete and may consist of the actual terms of the securities. For equity securities, it customarily consists of a description of those aspects of the issuer's constitutive documents that bear on the rights of equity holders.

Tax disclosure—A summary of the tax implications of investing in the securities is provided. In Rule 144A offerings, this disclosure typically covers the laws of the United States and the issuer's home jurisdiction.

Plan of distribution—There is disclosure about the contractual arrangements between the initial purchasers and the issuer or selling securityholders, including the terms of initial purchase, the expected terms of sale to investors and other matters. [203]

Transfer restrictions—A summary of the restrictions applicable to any offer, sale or transfer of the securities by a holder after closing, including deemed representations by purchasers in the offering that they acknowledge the securities have not been registered under the Securities Act and may only be offered, resold or transferred in compliance with the Securities Act, is provided.

[3] Due Diligence Practices

The initial purchasers in a Rule 144A offering conduct due diligence for the same reasons as underwriters in a registered public offering—because it assists them in defending against liability and because it reduces the risk of defective disclosure. [204] Defective disclosure is harmful to the initial purchasers even when it does not lead to litigation and liability, because if investors suffer losses they may hold the initial purchasers commercially responsible, which hurts their reputation and may also entail direct costs to compensate investors.

The standard due diligence process includes discussions with the issuer's senior management, often based on a written questionnaire, and often referred to as management or business due diligence. Sometimes these discussions extend to major shareholders or outside parties like important creditors or suppliers. There are also discussions with the issuer's auditors. All these conversations are

p. 7-57

p. 7-58

updated ("brought down") by additional conversations shortly prior to pricing and again shortly prior to closing.

The standard due diligence process also includes review of issuer documentation, again often in response to a written list of requests typically prepared by counsel to the initial purchasers. For example, the review may include corporate documentation, major contracts and records of the board of directors and its major committees. In some cases, sensitivities about the confidentiality of documents lead issuers to restrict access to certain documents or impose other conditions on the due diligence process, but counsel need to conclude that any proposed restrictions will not unreasonably interfere with the access they require to provide their negative assurance letters. The review is usually conducted mainly by counsel, often in a team including lawyers from the home jurisdiction who are qualified to review documentation and lawyers with experience in U.S. disclosure practices. [205]

As a supplement to the due diligence process, there is a contractual requirement that the issuer deliver various documents as a condition to the obligations of the initial purchasers to close. These documents typically include, in addition to various certificates, negative assurance letters of counsel (often from more than one law firm) [206] and a comfort letter from the auditor. Under the applicable auditing standards, delivery of a comfort letter in a transaction that is not subject to § 11 of the Securities Act is not permitted unless the recipient of the letter has provided the auditors with a representation letter to the effect that it has conducted a review process, or due diligence inquiry, substantially consistent with that it would conduct in a registered offering. [207] Alternatively, if the recipient chooses not to provide such a letter, the auditors may report on the results of applying certain agreed-upon procedures to specific financial statement line

p. 7-58

p. 7-59

items; [208] under these circumstances, the auditors may not, however, provide negative assurance with respect to such items. [209]

Footnotes

173 *See* Chapter 14, Part A.

174 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.03[4].

175 *See* § 8.03[2].

176 The liability regime under U.S. law applicable to Rule 144A and other private placements is discussed in Chapter 11.

177 The Rule 144A offering document is not ordinarily referred to as a "prospectus"—that term being reserved for the analogous document filed with the SEC in an offering registered under the Securities Act and, in many cases, for a disclosure document filed for regulatory purposes in a non-U.S. jurisdiction. The names most often used are offering circular (which is used in this Chapter 7) and offering memorandum.

178 In a Rule 144A offering, the use of preliminary and final versions of the offering document is not required for any regulatory reason (in contrast to the practice in SEC-registered offerings and in many non-U.S. jurisdictions). In a successful Rule 144A offering, the offering is fully sold before the final offering circular is prepared, so the final offering circular is not actually used in the marketing process or as a basis for investment decisions.

179 The financial institutions conducting a Rule 144A offering on behalf of the issuer are not typically referred to as "underwriters," even when they make a firm commitment to purchase the securities just as underwriters do in a registered offering, because pursuant to Rule 144A they are not underwriters for purposes of the statutory definition of the term in § 2(a)(11) of the Securities Act. They are often referred to as "initial purchasers." For the same reason, the agreement is not typically called an "underwriting" agreement. In some markets, the financial institutions conducting the offering do not purchase and resell the securities but rather undertake to procure purchasers, and they agree that if they fail to do so they will purchase the securities themselves. In other markets, the financial institutions conducting the Rule 144A placement do so as agents for the home-country underwriters. Practices of this kind may be to avoid additional stamp duty under applicable local law, or to accommodate local regulatory concerns.

180 Road show presentations may be made in person or accessed *via* the Internet, but in either case the presentation is not usually made available in a format that allows investors to retain it. Transaction participants typically seek to ensure that road show materials are consistent with the offering circular and do not contain material information that is not in the offering circular. Initial purchasers increasingly request that road show materials be covered by company representation and indemnities in the purchase agreement, especially when there is an electronic road show.

181 The offering circular, or a slightly modified version of it, may also serve as a listing prospectus for a listing on an exchange-regulated market like the Euro MTF in Luxembourg or the Global Exchange Market in Ireland.

182 In both the debt and equity examples, the non-U.S. offering is, for U.S. purposes, exempt from registration under Regulation s.

183 Forward-looking information, such as projections or forecasts of future financial performance, presents difficult issues in this respect. In some jurisdictions outside the United States, it is required or customary, particularly for a company or operation that is new or still under development, to include projections that would be unusual in U.S. practice because of the perception that liability risk is high and conducting due diligence is difficult. Unless the information is clearly positive or inconsequential (which will rarely be the case), excluding it from the Rule 144A offering circular might appear to be a material omission, so including it with appropriate cautionary language and due diligence procedures may be preferable. *See* Chapter 11 for a discussion of 10b-5 liability considerations applicable to forward-looking information.

184 In the early years of Rule 144A offerings it was common, where the financial statements were presented under a system other than U.S. GAAP, for the offering circular to include a discussion of significant differences between that system and U.S. GAAP. Such a discussion is no longer considered necessary, at least if the system of accounting principles is reasonably well established. If it is not, the offering participants would want to consider additional due diligence concerning the system of accounting principles as well as disclosure about how it differs from U.S. GAAP or IFRS. Similar considerations might arise in the case of a financial presentation under a variant of IFRS that does not conform fully to IFRS as adopted by the International Accounting Standards Board ("IASB").

185 A balance sheet as of the end of the earliest of the three years is not required under SEC rules, however, if that balance sheet is not required by the registrant's home jurisdiction (or any other jurisdiction whose rules are applicable to the registrant outside the United States). If the issuer were an "emerging growth company," consideration could be given to including only two years of audited financial statements. *See* § 3.02[1][c].

186 *See* Chapter 5 for a discussion of the standards of the U.S. PCAOB. Many non-U.S. jurisdictions require an audit to be performed in accordance with the International Standards on Auditing ("ISAs") promulgated by the International Auditing and Assurance Standards Board ("IAASB"), while others rely on auditing standards adopted by a national auditor oversight body. An auditor's use of unfamiliar auditing standards would be a point for additional due diligence and possibly for cautionary disclosures.

187 *See* Rule 2.01 of Regulation s -X (auditor independence requirements for an SEC registration statement or annual report). There is, however, a general expectation that the auditors qualify as independent under some applicable standard, and they are ordinarily expected to confirm it in their comfort letter to the initial purchasers. If the independence standards are unfamiliar, they would be a topic for due diligence inquiry by the initial purchasers.

188 For an SEC registration statement of a foreign private issuer, interim financial statements are required if the audited financial statements are more than nine months old, and if the issuer has published more recent financial information, that information must be reflected in the registration statement. *See* Form 20-F, Item 8.A.5; § 4.04[4].

189 Depending on how much time has passed since the last audit, limited review may be necessary to support the ability of the auditor to provide, in its comfort letter to the initial purchasers, negative assurance as to changes subsequent to the date of the last financial statements included in the offering circular. *See* AS §

6101.46. Even then, however, the limited review report is not typically included in the offering circular unless it is included in home-country disclosure.

190 *See* § 4.04[10].

191 SEC rules for a registered offering also require the inclusion in the registration statement of financial statements of a major unconsolidated subsidiary or equity-method investee. *See* § 4.05[5][b]. These financial statements are not always considered necessary in a Rule 144A offering.

192 *See* Form 20-F, Item 5 (for an SEC registration statement or annual report of a foreign private issuer); Item 303 of Regulation s -K (for an SEC registration statement or annual report of a domestic issuer); Items 9 and 10 of Annex I to Commission Regulation (EC) 809/2004, as amended (the "Prospectus Regulation") (disclosures on operating and financial review and capital resources applicable to equity offerings). The term "MD&A" derives from the title of the disclosure under SEC rules applicable to domestic issuers; it has not been used since 2000 in the SEC rules governing disclosure by foreign private issuers (Form 20-F requires instead, in Item 5, a discussion of "Operating and Financial Review and Prospects"). Lawyers and auditors often refer to SEC guidance on the content of MD&A, even though for a nonreporting issuer it has no direct bearing on a Rule 144A offering and might be unknown to the issuer's financial reporting personnel. *See* § 4.05.

193 For example, disclosure requirements on off-balance sheet arrangements and on contractual obligations were added to Item 5 of Form 20-F pursuant to the Sarbanes-Oxley Act but are not required by the International Organization of Securities Commissions ("IOSCO") standards on which Form 20-F is otherwise based. These disclosures are often not included in Rule 144A offering circulars, particularly in equity offerings where home country requirements frequently guide the scope of disclosure.

194 *See* Form 20-F, Item 3.D; Item 503 of Regulation s -K; *see also*, *e.g.*, Item 4 of Annex I and Item 2 of Annex III to the Prospectus Regulation (risk factor disclosure requirements for equity offerings).

195 Early Rule 144A offering circulars often also included disclosure about general economic and political conditions in the issuer's country, primarily because information about the country was considered helpful for marketing to U.S. investors that might not be familiar with it. This practice has become rare, as investors have become familiar with a wide range of jurisdictions and have developed other information sources. Initial purchasers may find it challenging to conduct adequate due diligence on country disclosures, unless they are attributable to official sources. In this regard, the liability provisions applicable to a registered offering establish a lower threshold for an initial purchaser's due diligence defense where statements in a registration statement are copied or extracted from a public official document. § 11(b)(3)(D) of the Securities Act.

196 The SEC requirements applicable in registered offerings are in Item 4 of Form 20-F (for a foreign private issuer) and Item 101 (as to business), Item 102 (as to property) and Item 103 (as to legal proceedings) of Regulation s -K (for a domestic issuer). *See also*, *e.g.*, Item 6 of Annex I to the Prospectus Regulation (business disclosure requirements for equity offerings).

197 *See* § 4.08 ; *see also* § 4.02[1][a].

198 Some private placements involve more expansive disclosures than would be required in an SEC-registered offering. For example, some Russian oil companies making Rule 144A offerings have provided more complete disclosure than their U.S.-registered counterparts in the oil and gas context. The offering circular prepared in connection with a Rule 144A private placement by Rosneft in July 2006 contained a variety of reserves and resources data that would not otherwise have been permitted under SEC rules in place at the time. *See* Rosneft, Offering Circular (July 14, 2006). Generally, the SEC had permitted oil and gas companies, in their filings with the SEC, to disclose only proved reserves, *i.e.*, the estimated quantities of crude oil, natural gas and natural gas liquids that geological and engineering data demonstrate with "reasonable certainty" to be recoverable in future years from known reservoirs under existing economic and operating conditions. The SEC now permits additional categories of reserves to be disclosed, but still does not allow the disclosure of resources that are not reserves. *See* § 4.08[1] for a discussion of amendments to the SEC's rules governing disclosures about oil and gas activities that took effect for Securities Act

registration statements filed on or after January 1, 2010. In addition, SEC guidance has indicated that disclosed reserves should generally include only those reserves that can be produced through the license expiration date, unless there is a long and clear track record of license renewal as a matter of course. The Rosneft offering circular contained not only SEC-standard proved reserves data through expiration of licenses, but also SEC-standard proved reserves data through the economic lives of the fields, as well as proved, probable and possible reserves data under the standards set forth by the Society of Petroleum Engineers (the "SPE"), estimates of reserves determined under the Russian reserves methodology and crude oil and gas resources data based on standards set forth by the SPE covering both prospective and contingent resources. *See* Rosneft, Offering Circular (July 14, 2006). The SEC-standard proved reserves data through the economic lives of the fields were included in the offering circular based on the fact that, under relevant Russian law, Rosneft had a right to renew its licenses to the end of the economic lives of the fields so long as it did not violate the conditions of the license, and Rosneft's established history of success in extending various licenses. The other additional reserves and resources data were included in the Rosneft offering circular following consideration, in part, of the customary scope of disclosure in the international market and the issuer's home market. It is our experience that disclosure of proved, probable and possible reserves data under the SPE standards has become quite standard in the international market in connection with a Rule 144A offering. Inclusion of any other resources data in an offering document prepared in connection with a private placement will require a case-by-case analysis of the facts and circumstances concerning the issuer and any particular characteristics of its home market. In June 2016, the SEC proposed new rules intended to align disclosure requirements for mining properties with industry and global regulatory practices and standards. The proposed rules include more expansive disclosure requirements relating to mining operations and mineral reserves, exploration and resources. SEC Release No. 33-10098 (June 16, 2016). *See* § 4.07.

199 Aggregate disclosure is permitted in an SEC registration statement or annual report of a foreign private issuer, provided that individual information is not required in the home jurisdiction or otherwise publicly disclosed. Form 20-F, Item 6.B. This would support the position that the absence of individual disclosures is not *per se* a material omission.

200 The 5% level applicable in an SEC registration statement or annual report may serve as a threshold below which an interest can generally be presumed not to be material. *See* Form 20-F, Item 7.A; Item 403(a) of Regulation s -K.

201 Similarly, in some cases there are arrangements between shareholders that have an important effect on control of the issuer but to which the issuer is not a party, and these should be disclosed if the information is known or reasonably available to the issuer or selling securityholders. *See* Form 20-F, Item 7.A; Item 403(c) of Regulation s -K. In some countries, concern for personal security may be a factor in the discussion whether to identify an individual with a significant interest or to provide individual compensation information. The key issue is whether the information is material to investors, and the materiality concern is strongest where control of the issuer is concerned and may be less strong where compensation is concerned.

202 *See* Form 20-F, Item 7.B; Item 404(a) of Regulation s -K.

203 *See* Form 20-F, Item 9.B; Item 508 of Regulation s -K. Many Rule 144A offering circulars include disclosures derived from those included for regulatory reasons in registered offerings—for example, relating to stabilization transactions. However, they often do not include information about initial purchaser compensation and the allocation of offering expenses that would be required in an SEC-registered offering when that disclosure is determined not to be material to investors.

204 *See* § 11.04 for a discussion of the liability standards applicable to a Rule 144A offering under the securities laws. *See* § 3.02[6] for a discussion of due diligence practices in public offerings.

205 Practices vary widely with respect to the preparation of written reports on due diligence, depending on how initial purchasers and their counsel balance the potential advantages of documenting a rigorous process against the risk that a written report will be damaging evidence in future litigation. In some cases, local

underwriter or listing sponsor requirements will dictate whether due diligence or verification documentation will be preserved.

206 *See Negative Assurance in Securities Offerings* (*2008 Revision*), 64 BUS. LAW. 395 (2009) (report of an American Bar Association ("ABA") committee on law firm negative assurance letters). While there are other approaches, negative assurance is commonly provided by two U.S. firms, one representing the issuer and the other representing the initial purchasers. It is also often provided by law firms in the issuer's home jurisdiction and by in-house counsel for the issuer.

207 U.S. auditor comfort letters are governed by AS § 6101, which codifies Statement of Auditing Standards No. 72 and subsequent amending statements. *See* AS § 6101.04 (providing for a representation letter from the recipient in unregistered offerings). For a general discussion of comfort letters, *see* § 3.02[6], Note 325.

208 Reports of the results of applying agreed-upon procedures are governed by AT § 201 ("Agreed-Upon Procedures Engagements"). AT § 201 is based on Statement on Standards for Attestation Engagements ("SSAE") No. 10 (Attestation Standards: Revision and Recodification), which also withdrew SAS 75 (Engagements to Apply Agreed-Upon Procedures to Specified Elements, Accounts, or Items of a Financial Statement).

209 *See* § 3.02[6], Note 348, as to the meaning of the term "negative assurance." Although the negative assurance provided through a comfort letter is based essentially on the same procedures reported on in an agreed-procedures letter, the extent to which a court may accord greater weight to a comfort letter in establishing that the initial purchasers did not have the requisite *scienter* for Rule 10b-5 liability remains untested.

U.S. Regulation of the International Securities and Derivatives Markets, § 7.04, RESALES OF PRIVATELY PLACED SECURITIES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 7.04 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

While § 4(a)(2) of the Securities Act and Regulation D thereunder provide the basis for an issuer's exemption from the registration requirements of the Securities Act, they do not provide an exemption from registration for investors to resell, publicly or privately, securities purchased in a private offering. Securities acquired from an issuer in a private placement are considered "restricted" securities, and purchasers must have their own exemption for resale of those securities. The SEC's concept of "restricted securities" was without direct foundation in the Securities Act and was based on its view that a purchaser in a private offering that subsequently resold the securities in the public market could be viewed as "taking from an issuer with a view to distribution" and thus be an underwriter, in which case it had no statutory exemption from Securities Act registration requirements under § 4(a)(1), or in the case of dealers, § 4(a)(3). Further, as noted above, one of the requirements of Regulation D is that the issuer exercise "reasonable care" to ensure that purchasers are not underwriters of the securities in question, and the procedures used to ensure compliance with either Regulation D or § 4(a)(2) include restrictions on resales of privately sold securities. Regulation D and § 4(a)(2) do not, however, indicate what resales are permissible. One answer, as discussed above, is embodied in the safe harbor for resales to QIBs under Rule 144A. This section also addresses resales under the Rule 144 safe harbor, the § 4(1 ½) doctrine, the § 4(a)(7) safe harbor and the Regulation s safe harbor.

[1] Resale Under Rule 144A

Securities sold in a private placement can be resold pursuant to Rule 144A under the Securities Act, as discussed above.

p. 7-60

Many foreign issuers also provide for the possibility of Rule 144A resales in connection with offerings of their securities under Regulation s under the Securities Act. [210] As discussed below, securities initially sold under Regulation s are effectively subject to a limitation on U.S. sales, generally 40 days from the date the offering commenced, as a result of the prohibition against dealer sales contained in § 4(a)(3)(A) of the Securities Act. [211] In addition, in certain cases resales are also subject to the applicable distribution compliance period (40 days, six months or one year), also referred to as a "seasoning" period, under the safe harbors of Regulation s. [212] After these periods, securities sold in a Regulation s offering are generally unrestricted with two important exceptions: (i) equity securities of U.S. issuers [213] and (ii) securities that are part of an unsold allotment, for which the limitations on U.S. sales of § 4(a)(3)(C) of the Securities Act apply. [214] However, Rule 144A provides a safe harbor for U.S. sales of eligible securities even during these periods. In cases where the underwriting or other selling documentation does not restrict sales of the securities under Rule 144A, and the securities are otherwise eligible for resale under Rule 144A (*i.e.*, the securities are not fungible with U.S. exchange-listed securities and the information requirement is satisfied or does not apply), U.S. broker-dealers may purchase securities sold abroad under Regulation s and resell them to QIBs under the Rule, even during any applicable Regulation s distribution compliance period and the 40-day period of § 4(a)(3)(A). Following Rule 144A sales, the securities in question will be "restricted" even after the expiration of any such seasoning period. [215]

The rationale underpinning the broker-dealer's ability to resell under Rule 144A securities initially sold abroad derives from the nature of the exemption

p. 7-60
p. 7-61

provided by Rule 144A. Sales under Rule 144A do not constitute a distribution and are not subject to registration under the Securities Act, even during the distribution compliance period that follows a foreign offering. [216]

Under the philosophy of Rule 144A, issuer-imposed documentation and procedures to police resales by the purchaser should not be necessary. However, since Regulation D requires the issuer to take "reasonable care" to ensure that purchasers are not underwriters—or risk strict liability under § 12(a)(1) of the Securities Act—the question for issuers is to what extent they need to police resales to comply with the reasonable care requirement. Commenters on Rule 144A as originally proposed requested that the SEC amend Regulation D to provide expressly that "reasonable care" could include sales to dealers based solely on contractual restrictions requiring them to resell the securities only pursuant to Rule 144A. The imposition of other restrictions to monitor subsequent resales, such as transfer restrictions, "stop-transfer" procedures, letters from subsequent purchasers and other procedures, would then be unnecessary to establish the issuer's private offering exemption. The SEC did not, however, amend Regulation D, leaving open the question whether contractual restrictions limited to the requirement that the first round of resales be made under Rule 144A are sufficient to constitute "reasonable care."

The SEC adopted Rule 144A on the premise that QIBs can be relied on to know the law, and the law requires them to have an exemption for any resale of a restricted security. The seller under Rule 144A does not police and is not responsible for the resales by the buyer—it must only notify a buyer that the seller may be relying on the Rule. If a seller is not responsible for the acts of its buyer, it would be anomalous to think that the issuer has responsibility for resales after its initial § 4(a)(2) sale; it should therefore be enough that the issuer has by contract required that resales be made only to QIBs in compliance with Rule 144A. Under this analysis, a court should respect an issuer's § 4(a)(2) exemption in a case where a remote purchaser sells in violation of the Rule, and liability should be found under § 12(a)(1) only against the seller that sold without a Securities Act exemption. Moreover, if the SEC did not intend, by the very adoption of Rule 144A, to facilitate liquidity by reducing documentation, it is difficult to imagine a rationale for the SEC initiative in proposing the Rule at all. [217]

p. 7-61
p. 7-62

Transaction practices suggest a consensus among issuers and the private securities bar that (i) an issuer has a valid exemption under § 4(a)(2) if it sells securities to investment banks that agree to resell only under Rule 144A and in accordance with its requirements and (ii) there is no need to restrict subsequent resales by investors or take other procedural steps. Under this approach, no investment letters from initial or subsequent investors are required, no transfer restrictions or "stop-transfer" provisions are imposed, and no legends on securities are necessary. Documentation for Rule 144A offerings does generally include disclosure—under the headings "Transfer Restrictions" and/or "Notice to Investors"—stating that investors are (i) deemed to represent and agree as to their sophistication and investigation in respect of the offering and (ii) notified that the offering is exempt from registration under the Securities Act, that they may only resell or otherwise transfer the restricted securities they will hold under a valid exemption from registration (such as resales under Rule 144A, Rule 144 and Regulation s and, in some cases, under § 4(1 ½)), and of other matters. [218] It is also common practice to include a legend on certificated and global securities that describes the limitations on resale. [219]

One area where there is a tendency to obtain letters from investors in Rule 144A offerings, notwithstanding the general practice of not obtaining such letters, involves cautionary letters in cases of issuers, especially in certain emerging markets, where special levels of sophistication and care by investors are required. Such letters have been used for offerings out of certain markets at certain times, such as Russia and parts of Eastern Europe during their transition to market-based economies, where accounting standards, disclosure standards and

p. 7-62
p. 7-63

the relative unavailability of information raise special issues, but where there is demand for investment opportunities by sophisticated investors. In such letters, investors generally acknowledge their special sophistication in the market in question and the special accounting and disclosure issues and lack of information involved, state that they have not relied on the financial institution intermediary in making their investment decision, represent that they have performed and relied on their own investigation and make certain other representations and undertakings. These letters are sometimes referred to as "toxic waste" letters.

A consensus among issuers and the private bar has also developed with respect to "side-by-side" offerings in which the participating financial institutions are permitted to resell both to QIBs under Rule 144A and to other investors under § 4(1 ½). The non-QIB investors are usually limited to institutions that are accredited investors as defined in Regulation D. In the immediate wake of Rule 144A's adoption, there was concern that, whatever the SEC's view of the sophistication of QIBs, the introduction of the § 4(1 ½) element requires policing of all resales to ensure that the issuer has taken reasonable care to avoid a distribution. The imposition of such procedures on Rule 144A transactions, even if only using a short form of nondistribution letter, [220] can still lead to reduced market liquidity, and reduced attractiveness of private placements, especially for foreign issuers.

The consensus approach instead applies traditional § 4(1 ½) procedures only to the sales relying on that exemption, thus in effect separating the transaction into two parts and giving the Rule 144A part the full benefit of the Rule on the theory that it is independent of the part proceeding under full § 4(1 ½) procedures. Transfers are permitted not only by the § 4(1 ½) purchasers to QIBs under Rule 144A but also by QIBs to other QIBs or to accredited investors under § 4(1 ½) (with QIBs deciding for themselves what procedures to apply to document their own compliance with the Securities Act in the case of subsequent transfers). In the case of side-by-side placements in which accredited investors purchasing in the initial placement are required by the applicable documentation to resell only to QIBs, thereby subjecting the entire deal to Rule 144A after all accredited investors have completed their first resale, ongoing stop-transfer and other transfer restrictions on the securities are not necessary.

p. 7-63

p. 7-64

Putting aside the legal debate as to sufficiency of procedures, the lack of uniform documentation in respect of resale restrictions may raise practical uncertainties for a secondary market purchaser. It can be expected that when an offering document is prepared, the applicable restrictions will be disclosed to the initial investors in detail. An offering document, however, is not generally made available to subsequent investors. Moreover, certificates representing securities held in "street" name or book-entry form (on which contractual transfer restrictions might be stated) are not generally available to investors. Similar factors limit the utility of a "Notice to Investors" in the original offering document outlining contractual resale restrictions that could prohibit exempt transfers outside Rule 144A or impose procedural requirements. As a result, investors considering a resale of restricted securities outside Rule 144A should ascertain the scope of any applicable resale restrictions.

[2] Resale Under Rule 144

Early doctrine suggested that private placement investors were required to purchase with an intent to invest and with no current intention to dispose of the security. [221] This doctrine gave rise to a theory that restricted securities could be sold only upon a "change of circumstances" affecting the investor. [222] There was no clear indication what "change" was sufficient or that passage of time alone was enough to free restricted securities of any applicable resale restrictions.

The SEC expressly rejected the "change of circumstances" doctrine in 1972 when it adopted Rule 144 under the Securities Act. Rule 144 provides a nonexclusive safe harbor from the § 2(a)(11) definition of "underwriter" for resales in the U.S. public market of securities acquired in a private offering, establishing specific criteria for determining that a holder of such securities is not engaged in a distribution. [223] The critical element under the Rule is the passage of time after acquisition of the securities from the issuer, or from an affiliate of the issuer. The other conditions for the Rule 144 safe harbor depend on whether the seller is an affiliate or a nonaffiliate of the issuer.

If the seller is not an affiliate of the issuer (and has not been for the three months preceding the sale), the Rule provides safe harbor protection for a resale

p. 7-64
p. 7-65

beginning one year after acquisition of the securities, with no other conditions. [224] Where the issuer is an Exchange Act-reporting company that is current in its reporting obligations, the Rule provides safe harbor protection for resale by a nonaffiliate beginning six months after acquisition of the securities, with no other conditions. To be current for this purpose, the issuer must have been a reporting company for at least 90 days prior to the sale and must have filed all required reports (other than on Form 8-K or Form 6-K) during the 12 months (or such shorter period as it has been a reporting company) preceding the sale. [225]

If the seller is an affiliate of the issuer and acquired the securities in a private offering, [226] the same holding periods apply, and resales are subject to additional conditions relating to current public information, volume of sales, manner of sale and filing of a notice with the SEC. [227] These additional requirements are summarized below:

(i) If the issuer is an Exchange Act-reporting company, it must be current in its reporting obligations, as described above. If it is not an

p. 7-65
p. 7-66

Exchange Act-reporting company, certain information concerning the issuer must be publicly available. [228]

(ii) The seller must comply with restrictions limiting the aggregate amount of securities of the issuer sold during the preceding three months pursuant to Rule 144 to:

(a) for equity securities, the greater of:

- 1% of the outstanding shares or other units of the class of securities as shown by the most recent report or statement published by the issuer; and
- the average weekly reported volume of trading in such securities on all national exchanges in the United States and/or reported through an automated quotation system in the United States or on the consolidated tape during the four calendar weeks preceding the date of execution of the sale order or the date of notice in paragraph (iv) below; and

(b) for debt securities, the greater of the two tests described above for equity securities and 10% of the principal amount of the tranche [229] (or class when the securities are nonparticipatory preferred stock) attributable to the securities sold. [230]

(iii) In the case of equity securities only, the securities must be sold in "brokers' transactions" exempt from registration pursuant to § 4(4) of the Securities Act, in transactions directly with a market-maker [231]

p. 7-66
p. 7-67

(which is the manner of sale generally relied upon for Rule 144-complying block trades) [232] or in riskless principal transactions, [233] and no solicitations of orders may be made.

(iv) If sales during any three-month period exceed 5,000 shares or other units or $50,000 in sale price, a notice must be filed with the SEC.

Rule 144 includes specific "tacking" rules that address the calculation of the six-month and one-year holding periods in special cases, such as stock dividends and splits, convertible securities and pledges. Acquisition and resale of securities by the issuer or any of its affiliates restarts the holding periods.

Rule 144 also applies to the sale of securities that are not restricted securities when those securities are sold by an affiliate of the issuer (*i.e.*, "control securities"). For example, it provides a safe harbor for resale of securities acquired by the affiliate in the open market, in a registered offering or in an offering of securities (other than equity securities of domestic issuers) exempt from Securities Act registration under Regulation s. For such resales, no holding period is required, but resales must be conducted in accordance with the other requirements described above. The SEC, however, has taken the position that the Rule 144 safe harbor is not available for sales of securities by a wholly owned subsidiary of an issuer. [234] The SEC staff has also rejected the use of the Rule 144

p. 7-67

p. 7-68

safe harbor in so-called "gypsy swap" transactions. In such transactions, an issuer would arrange for a nonaffiliated stockholder who either has unrestricted securities or has restricted securities eligible for resale under Rule 144, or an affiliated stockholder who has securities eligible for resale under Rule 144, to sell its securities to end investors. Through pre-arrangement, the issuer would, at or about the same time, sell an equivalent number of unregistered securities to the selling stockholder. The SEC has stated that the shares taken by the end purchasers would be restricted securities within the meaning of Rule 144(a)(3) notwithstanding the purported reliance on the Rule 144 safe harbor, and that the holding period for such securities would begin on the date of the acquisition from the seller. [235]

[a] Hedging Transactions

The SEC has repeatedly expressed concern regarding the effect of hedging activities designed to shift the economic risk of investment away from the holder of restricted securities. If a holder of restricted securities, soon after acquiring them, enters into a derivative transaction that transfers the economic risk of owning the securities to another party, "[i]t becomes more difficult to conclude that the security holder … has held the security for investment purposes and not with a view to distribution." [236]

This concern has led the SEC to question whether Rule 144 adequately deals with hedging activities. One specific proposal has been to provide that hedging suspends (or "tolls") the holding period under Rule 144. Under Rule 144 as it stood prior to 1990, the Rule 144 holding period for restricted securities would be tolled if the securityholder maintained a short position in, or held any put or other option to dispose of, securities equivalent to the restricted securities. This tolling provision was eliminated in 1990 when the Rule was amended to broaden the ability to tack the holding period of a prior holder to the holding period of the current holder. [237] The SEC proposed in 1997 and again in 2007 to reinstitute a version of the tolling provision, but it has not adopted either proposal, in part because of the complexity of applying it to investors with complex

p. 7-68

p. 7-69

positions or where holding periods of successive holders are tacked. [238] A number of other proposals to address hedging activities were included in the 1997 proposal but not the 2007 proposal. [239]

On the other hand, industry participants have been concerned about uncertainty whether certain hedging activities could be viewed as distributions violating § 5 of the Securities Act. They have, for example, proposed that the SEC adopt a specific safe harbor for certain hedging activities that would be deemed permissible under Rule 144, and the SEC has declined to do so but has addressed some of these concerns in an interpretive letter. [240] Some hedging activities are widely thought to be permissible despite the absence of any confirmation from the SEC—for example, the widespread practice of a buyer of convertible notes in a Rule 144A private placement engaging in a short sale of equity securities corresponding to the shares into which the notes are convertible. However, where an investor purchases securities in a private placement and then engages in a short sale of a corresponding amount of the same securities, uncertainty remains as to whether the short sale should be considered a distribution. [241]

[3] Resale Under Section 4(1 ½)

p. 7-69

p. 7-70

Rule 144 does not address the question whether and under what circumstances a purchaser in a private offering can sell in another private sale without waiting for the expiration of the applicable Rule 144 holding period. However, so long as the subsequent resale also is private, it would be consistent with concluding that the seller—as initial investor in the private placement—had not taken the privately placed, restricted securities from the issuer with a "view to distribution" and therefore was not an underwriter.

While the SEC did not provide any guidance in this area, the private bar and market participants developed mechanisms permitting limited resales from one purchaser in a private offering to another, without requiring any particular holding period, and dubbed the exemption "Section 4(1 ½)." [242] The exemption relies on the interplay of §§ 4(a)(1) (or for dealers, 4(a)(3)) and 4(a)(2), and it proceeds on the theory that if the seller is not an underwriter—that is, the seller did not purchase with a view to distribution and its sale is not being made for the issuer—one of these exemptions should be available. [243]

Thus, if an investor to whom the private sale could originally have been made purchases from another investor a security acquired in a private offering where the new investor will be subject to the same restrictions imposed on the original purchaser, the resale should not be a distribution and should therefore be exempt from registration. Such resales generally are permitted under the § 4(a)(1) exemption only if accompanied by (i) a legal opinion that the transaction in question is exempt or (ii) an investment or nondistribution letter from the purchaser containing essentially the same representations and agreements as those provided by the original purchaser, [244] or both. Restrictive legends on the securities and any stop-transfer instructions ordinarily remain in place. [245]

The continuation of these restrictions through the chain of opinions and letters required by the investment or nondistribution letter obtained from each purchaser by each seller in the chain is intended to keep the requirements of the original private offering in effect. The use by the private bar and market participants of this method of cascading sales restrictions is consistent with the SEC's policy of preventing public offerings or distributions of unregistered securities

p. 7-70

p. 7-71

before the end of the periods set out in Rule 144 and, in that respect, does not take advantage of a more aggressive reading of the exemptions provided in the Securities Act. One may ask why an investor, at the end of a chain of resales that are exempt under so-called § 4(1 ½), is not entitled to the § 4(a)(1) exemption on resale, regardless of the manner of sale or the time elapsed since its initial sale. The only argument that § 4(a)(1) is not available is that the selling investor is a so-called "statutory underwriter." But even if the sale in question is a "distribution," the investor at the end of a chain of resales arguably does not meet the other prong of the definition of underwriter—it has not taken from an issuer or sold for an issuer or participated (even indirectly) in any such undertaking within any reasonable meaning of the words. Some insurance companies and other investors in private offerings have, on the basis of this argument, taken the position that when they sell a security, whether purchased in a public or private offering, they are entitled to rely on the § 4(a)(1) exemption. The SEC, however, has never accepted this position, and indeed its entire "restricted security" theory is based on its assertion that any seller, however remote from the issuer, may be an underwriter if the sale is into the public market before the end of the periods set out in Rule 144. While this theory has, as indicated above, no direct basis in the statute, the fact that § 4(1 ½) and the regulatory safe harbors (Rule 144, Rule 144A and Regulation s) have been almost the exclusive means of resale for securities purchased in private offerings attests to the dominance of the SEC's view.

[4] Resale Under § 4(a)(7)

A new nonexclusive safe harbor from registration for resales in the United States came into effect in December 2015 upon the signing into law of the Fixing America's Surface Transportation Act (the "FAST Act"). [246] New § 4(a)(7) of the Securities Act exempts from registration certain resales of securities to accredited investors. We believe § 4(a)(7) was generally intended to codify existing market use of § 4(1 ½). The new exemption, like Regulation D for private placements by issuers, provides sellers, and issuers required to police resales following their private placements, with certainty regarding these subjective elements for private resales, which is particularly important for sales to natural persons.

Section 4(a)(7) includes several significant limitations that will not allow sellers to rely on it as broadly as they have relied on § 4(1 ½) in the past. However, § 4(a)(7) by its terms is a nonexclusive safe harbor, and we believe market

p. 7-71

p. 7-72

participants will continue to rely on § 4(1 ½) in many situations, which we discuss below.

The requirements of § 4(a)(7) [247] are as follows:

- All purchasers must be accredited investors. A seller seeking an exemption from registration under § 4(a)(7) should be able to rely on the "reasonable belief" standard with respect to the determination as to whether a purchaser is an accredited investor, but the SEC has not provided guidance as to whether the "reasonable belief" standard applies in the context of § 4(a)(7).
- No general solicitation or general advertising may be used by the seller or anyone acting on the seller's behalf. This prohibition is limited to actions taken by the seller or anyone acting on its behalf and does not capture concurrent actions by the issuer, which provides confirmation that an issuer's conduct should not affect a private resale by an unaffiliated seller not acting in concert with the issuer.
- For resales of securities of an issuer that is not an SEC reporting company or exempt from reporting pursuant to Rule 12g3-2(b) under the Exchange Act, the seller must deliver certain information to prospective purchasers. The required information includes, among other items, "reasonably current" financial information [248] prepared in accordance with U.S. GAAP or IFRS but which need not be audited or reviewed. [249]
- If the seller is an affiliate of the issuer, the seller must include a brief statement regarding the nature of the affiliation and a statement certified by the

p. 7-72

p. 7-73

  seller that it has no reasonable grounds to believe the issuer is in violation of the securities laws or regulations. [250]
- The exemption may not be used if the seller or any agent being compensated for its participation in the transaction would be disqualified under the bad actor provisions of Rule 506(d)(1) of Regulation D.
- The exemption may not be used by an issuer or a direct or indirect subsidiary of the issuer.
- The issuer must be engaged in business. The exemption may not be used for resales of securities of an issuer that is in bankruptcy or reorganization, or in formation, or that is a blank check, blind pool or shell company.
- The exemption cannot be used for an unsold allotment held by a broker or dealer as an underwriter.
- The exemption may only be used for securities of a class that has been authorized and outstanding for at least 90 days.

Furthermore, § 4(a)(7) expressly establishes that (i) securities sold under the exemption are "covered securities" within the meaning of § 18 of the Securities Act, and therefore state "blue sky" laws [251] are preempted for resales made in compliance with the exemption, and (ii) the exemption provided by § 4(a)(7) "shall not be the exclusive means for establishing an exemption from the registration requirements of [S]ection 5."

The new exemption under § 4(a)(7) will be particularly useful for private resales to natural person accredited investors because, as discussed above, it avoids the need to assess investors' sophistication, familiarity with the issuer and ability to "fend for themselves" as required by *Ralston Purina*. [252] Equally important to facilitate such sales is the preemption of "blue sky" laws provided by the exemption, because those laws are more burdensome for offers and sales to natural persons, even accredited investors, than to institutional investors.

For sales of securities of private companies, the information delivery requirement in § 4(a)(7) appears at first glance to be the biggest obstacle to using the new exemption, but it generally should not be too burdensome for sellers.

p. 7-73

p. 7-74

Even small companies should be able to provide the required financial information, which need not be audited or reviewed. The information requirement does make resales contingent on the issuer cooperating with the seller by making the required information available. It is common, however, for private companies to contractually regulate subsequent transfers anyway, by imposing pre-approval requirements at the time of an initial investment. In any event, we expect the market may require an issuer in a private offering to covenant to make the information required by § 4(a)(7) available to sellers on request, similar to the covenant to make information available to a prospective investor required by Rule 144A(d)(4).

Finally, § 4(a)(7) is available to affiliates of the issuer. The exemption will therefore provide affiliates with additional secondary market liquidity, which could be particularly valuable where there is no public market for the securities.

In situations other than secondary market trading in private company securities, the use of § 4(a)(7) may be limited. In light of the 90-day seasoning condition for the class of securities sought to be sold, § 4(a)(7) will not be available for the kind of side-by-side transaction that is sometimes used, for example, by an issuer and a selling securityholder in a private placement of a newly issued class of debt or preferred stock, to expand the investor pool beyond QIBs to include institutional accredited investors. Nevertheless, the use of § 4(1 ½) for those private placements has never been viewed as problematic, because those accredited investors are sophisticated and have adequate access to information about the issuer, and offers and sales to them therefore typically do not raise any burdensome *Ralston Purina* (or "blue sky") concerns. The market will likely continue to rely on § 4(1 ½) in these contexts.

Section 4(a)(7) will be available, but burdensome to comply with due to the information delivery requirement, for other resales to institutional investors that are traditionally made in reliance on § 4(1 ½), such as private, secondary block trades. In these cases, because § 4(a)(7) is a nonexclusive safe harbor, we believe sellers will generally treat the choice between § 4(1 ½) and § 4(a)(7) as issuers have historically treated the choice between § 4(a)(2) and Regulation D. Where private offerings by issuers are limited principally to institutional investors, they generally are made under § 4(a)(2) and not Regulation D. Similarly, we believe private resales principally to institutional investors will generally continue to rely on § 4(1 ½) notwithstanding the availability of § 4(a)(7).

In these contexts, we do not expect law firms to change their practices regarding no-registration opinions just because the transactions either cannot or do not comply with § 4(a)(7).

As noted above, it is clear that a broker-dealer cannot use § 4(a)(7) to resell unsold allotments of securities acquired in a public offering. A question remains whether a broker-dealer can effect a firmly underwritten resale, under § 4(a)(7), of securities acquired privately from the issuer (assuming the class of securities

p. 7-74

p. 7-75

has been outstanding for 90 days). [253] There is no express prohibition on this type of resale, but in contrast to Rule 144A, § 4(a)(7) does not expressly permit an immediate resale by a broker-dealer following a purchase from an issuer. [254] Moreover, Congress may well have intended the prohibition on issuer use of the exemption to also prohibit sales made in a planned, two-step process effectively on behalf of an issuer.

Broker-dealers will need to consider this question when deciding whether to rely on § 4(a)(7) to expand the universe of potential purchasers in underwritten offerings of private company equity securities, particularly to natural person accredited investors. They also will need to consider the question in connection with reopenings of debt and preferred stock issues, which will often meet the requirement of § 4(a)(7) that the class of securities have been outstanding for 90 days. Of course, broker-dealers can continue to rely on § 4(1 ½) for these types of underwritten offerings so long as sales are made only to institutional accredited investors and to natural person accredited investors that clearly meet the requirements of *Ralston Purina* and raise no "blue sky" concerns.

[5] Resale Outside the United States Under Regulation s

Securities sold in reliance on Rule 144A are restricted securities under the Securities Act. Regulation s, however, provides—as discussed in Chapter 8 —a safe harbor for resales of securities outside the United States, including by investors that have acquired their securities in Rule 144A or other private placement transactions. [255] The only requirements for this safe harbor are that the seller not use directed selling efforts in the United States and that the sale be made in an offshore transaction. [256] For purposes of this safe harbor, the offshore transaction requirement is met if the offer is not made to a person in the United States and either the buyer is outside the United States when the order is given (or the seller and its agent reasonably believe the buyer is outside the United States) or the transaction takes place on one of the markets outside the United States designated by the SEC. [257] Once resold outside the United States pursuant to Rule 904

p. 7-75

p. 7-76

under the Securities Act, securities issued by foreign companies generally are considered unrestricted, and may be freely sold anywhere, including into the United States. [258]

This ability to resell restricted securities outside the United States provides perhaps the major source of liquidity for foreign securities (particularly foreign equity securities) privately placed in the United States. For example, common equity shares of a foreign issuer with a foreign trading market that are sold in the United States pursuant to Rule 144A (directly or in ADR form) can be resold on that foreign market. [259] A security sold in a Rule 144A tranche of a foreign public offering can thus be resold into the same secondary market in which the securities originally sold outside the United States will trade. [260] U.S. private placement investors in foreign equity securities have essentially the same liquidity as foreign investors in those securities. [261]

Footnotes

210 For a discussion of the safe harbor provisions of Regulation s, *see* § 8.02.

211 *See supra* Note 16; § 8.03.

212 The one-year distribution compliance period was shortened to match the most shortened holding period for restricted securities of reporting companies in the amendments to Rule 144. *See* SEC Release No. 33-8869 (Dec. 6, 2007).

213 Rule 905 under the Securities Act; *see* § 8.02[2].

214 The SEC staff has indicated that an underwriter may resell, in compliance with Rule 144's volume and manner of sale restrictions, an unsold allotment of securities from a public offering, provided that six months have elapsed since the closing of the last sale under the relevant registration statement. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 128.02 (Jan. 26, 2009). We believe the same analysis should apply to allotment securities from offshore transactions conducted pursuant to Regulation s.

215 *See supra* Notes 5–7 and accompanying text. Resales of restricted securities in the public market by nonaffiliates of the issuer may be made after six months for securities of an SEC-reporting issuer and one year for securities of other issuers.

216 Although the SEC has not addressed the issue, the same rationale should apply to permit § 4(1 ½) sales, which should not constitute a "distribution," during the distribution compliance period.

217 No reported case has addressed the liability of an issuer for remote sales in violation of Securities Act registration requirements. However, the U.S. Supreme Court has narrowed the view of who may be a "seller" from that adopted by some lower courts, holding that a person does not become a "seller" for purposes of § 12(a)(1) solely because his or her actions were a "substantial factor" in causing purchases of

unregistered securities. Rather, there must be evidence that the person sought or received financial benefit for himself or herself (or someone other than the purchaser) as a result of the purchaser's investment. *Pinter v. Dahl*, 486 U.S. 622 (1988). In *In re Deutsche Telekom AG Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶91,703 (S.D.N.Y. Feb. 20, 2002), the court expressed the Pinter holding as a two-prong test: to be found as a statutory seller, a person "must have either (1) passed title of the security to the plaintiff or (2) successfully solicited the purchase motivated at least in part by his own financial interest." Under this test, an issuer of Rule 144A securities would not seem to fall within either prong of the test with respect to any remote sale because title passes from the immediate seller, not the issuer, to the purchaser in such a sale, and the issuer does not seek or receive any financial benefit from such a sale. Therefore, an issuer should not be liable for sales in violation of the Securities Act by remote purchasers.

218 A qualified institutional buyer making a resale under § 4(1 ½) not prohibited by the documentation might consider various steps to ensure that the purchaser is in fact sophisticated and able to fend for itself and is aware of the restricted nature of the securities.

219 Until 2009, Rule 144A securities were required to be included in the PORTAL Market in order to clear in DTC. SEC Release No. 34-59384 (Feb. 11, 2009) (Order). Under pressure from the SEC, the rules of the PORTAL Market originally provided that, if a PORTAL security was issued in certificated form, each certificate must bear a legend to the effect that the security is restricted. SEC Release No. 34-33326 (Dec. 13, 1993). The legending requirement was eliminated in 2001. SEC Release No. 34-44042 (Mar. 6, 2001). The practice of including legends has, however, continued.

220 Certain issuers have attempted to simplify the policing of resales in side-by-side offerings by requiring only that a transferor relying on Rule 144A so indicate by checking a box on the reverse of the security. No additional documentation is required. Even this has encountered resistance from intermediaries, which are concerned about "back-office" procedures and compliance, and qualified institutional buyers, which, by taking a broad view of the premise of Rule 144A, have objected to any procedural steps whatsoever not otherwise required by the Rule.

221 *See* Preliminary Note to Rule 144 under the Securities Act ("[I]ndividual investors who are not professionals in the securities business also may be ‘underwriters' if they act as links in a chain of transactions through which securities move from an issuer to the public.").

222 *See, e.g.*, *Roto American Corp.* (avail. Feb. 19, 1971); *Gilligan, Will & Co. v. SEC*, 267 F.2d 461 (2d Cir.), *cert. denied*, 361 U.S. 869 (1959).

223 SEC Release No. 33-5223 (Jan. 11, 1972). The SEC has adopted major amendments to Rule 144 in 1990, 1997 and 2007. SEC Release No. 33-6862 (Apr. 23, 1990); SEC Release No. 33-7390 (Feb. 20, 1997); SEC Release No. 33-8869 (Dec. 6, 2007).

224 Prior to the 2007 amendments to Rule 144, a nonaffiliate selling restricted securities under Rule 144 was subject to a one-year holding period and to other conditions relating to current public information, volume of sales, manner of sale and filing of Form 144; the other conditions ceased to apply after a two-year holding period. For resales by nonaffiliates, the 2007 amendments reduced the holding period to six months with respect to securities of an Exchange Act-reporting issuer and eliminated all conditions other than the holding period and, with respect to securities of an Exchange Act-reporting issuer sold after six months and before one year, the current public information requirement described in the text. SEC Release No. 33-8869 (Dec. 6, 2007).

225 An issuer that submits reports to the SEC voluntarily is not considered a reporting issuer for purposes of Rule 144. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Questions 131.07, 132.09 (Jan. 26, 2009).

226 For purposes of Rule 144, the term "affiliate" means "a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with" the issuer. The term "control" is defined broadly as "the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract, or otherwise." The SEC staff has declined to issue no-action letters on affiliate status because

of its facts-and-circumstances nature, but an executive officer or director or beneficial owner of more than 10% of the voting securities of the issuer are rebuttably presumed to be affiliates. Securities held by affiliates of the issuer (whether or not the securities were acquired in a private placement or are otherwise restricted securities) are often referred to as "control securities."

227 With respect to resales by affiliates, the 2007 amendments shortened the holding period from one year to six months with respect to securities of an Exchange Act-reporting issuer and modified the other conditions in several respects. SEC Release No. 33-8869 (Dec. 6, 2007).

228 The information that must be publicly available is defined (except for an insurance company) by reference to Rule 15c2-11 under the Exchange Act, which identifies information concerning an issuer that a U.S. broker-dealer is required to maintain if it publishes quotations for that issuer's securities.

229 While the SEC has not formally defined the term "tranche," it has been used by the SEC in other contexts to mean securities with identical terms. *See, e.g.*, Rule 902(f)(3) of Regulation s under the Securities Act ("[I]n a continuous offering of nonconvertible debt securities offered and sold in identifiable tranches, the distribution compliance period for securities in a tranche shall commence upon completion of the distribution of such tranche.").

230 Rule 144(e)(3)(vi) also provides that all sales of the same class of securities made by two or more affiliates of the issuer, or other persons who have agreed to act in concert for the purpose of selling securities of an issuer, shall be aggregated during any three-month period for purposes of determining the limitation on the amount of securities that can be sold pursuant to Rule 144.

231 A "market-maker" is "any specialist permitted to act as a dealer, any dealer acting in the capacity of block positioner, and any dealer who, with respect to a security, holds himself out (by entering quotations in an inter-dealer communications system or otherwise) as being willing to buy and sell such security for his own account on a regular or continuous basis." § 3(a)(38) of the Exchange Act.

232 *See* § 10.04 for a discussion of offerings on an "undocumented" basis.

233 For purposes of Rule 144, "riskless principal transactions" are defined as "principal transaction[s] where, after having received from a customer an order to buy, a broker or dealer purchases the security as principal in the market in order to satisfy the order to buy or, after having received from a customer an order to sell, sells the security as principal to the market to satisfy the order to sell." Note to Rule 144(f)(1) under the Securities Act. To be eligible for the Rule 144 safe harbor, the offsetting trades must be executed at the same price (excluding any explicitly disclosed markup or markdown, commission equivalent or other fee), must be permitted to be reported as riskless under the rules of a self-regulatory organization and must meet all the requirements of a brokers' transaction enumerated in Rule 144(g) (except for the requirement that the broker does no more than execute the order to sell the securities as agent). Rule 144(f)(1)(iii) under the Securities Act. The SEC amended Rule 144 in 2007 to permit the resale of equity securities by affiliates not only through brokers' transactions and transactions with a market-maker but also, based on input from commenters, through riskless principal transactions, which it believes will help to ensure the Rule 144 restrictions better reflect current trading practices and venues. The SEC also amended Rule 144(g) to except the posting of bid and ask quotations in alternative trading systems from the Rule's nonsolicitation provisions. In order to comply with Rule 144, a broker may not solicit or arrange for the solicitation of customers' orders to buy the securities in anticipation of, or in connection with, the transaction, subject to certain exceptions. The posting of bid and ask quotations by a broker in an alternative trading system will not be deemed a solicitation so long as the broker has published *bona fide* bid and ask quotations for the security in the alternative trading system on each of the last 12 business days. Rule 144(g)(3)(iv) under the Securities Act.

235 SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Interpretive Responses Regarding Particular Situations, Section 528.08 (Jan. 26, 2009).

236 SEC Release No. 33-8813 (June 22, 2007), 72 Fed. Reg. 36,822, 36,826 (July 5, 2007) (solicitation of

public comments).

237 SEC Release No. 33-6862 (Apr. 23, 1990) (eliminating the tolling provision in Rule 144).

238 *See* Letter from SIFMA, International Swaps and Derivatives Association, Inc., and Managed Funds Association to the SEC (Sept. 21, 2007).

239 SEC Release No. 33-7187 (June 27, 1995) (requesting comment on whether Rule 144 should be amended to address derivatives); SEC Release No. 33-7391 (Feb. 20, 1997) (proposals—on which the SEC never acted—to make Rule 144 unavailable to a holder who hedges during the restricted period, to define a sale for purposes of § 5 to include specified hedging transactions, to adopt a shorter holding period during which hedging could not occur without losing the safe harbor, and to reinstitute tolling); SEC Release No. 33-8813 (June 22, 2007) (proposal to reinstitute tolling); SEC Release No. 33-8869 (Dec. 6, 2007) (determining not to reinstitute tolling).

240 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.03[1], Note 42, and accompanying text for a discussion of SEC interpretive relief granted for certain equity derivative transactions.

241 Counsel often advise that there should be a delay between the purchase of the restricted securities and the short sale, and that, rather than cover the short position with the restricted securities, the investor should, after the Rule 144 holding period, sell the restricted securities in the open market and cover the short position with securities purchased in the open market (a practice referred to as "double-printing"). *See* SEC Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 528.03 (Jan. 26, 2009). A related question is presented by "PIPE" (or private investment, public equity) transactions, in which investors agree to purchase shares in a private placement but closing is conditioned on availability of an effective resale shelf registration statement. Several courts have considered whether a PIPE investor that sells short before the registration statement is effective and covers with registered shares after it is effective has violated § 5 of the Securities Act. *SEC v. Lyon*, 529 F. Supp. 2d 444 (S.D.N.Y. 2008); *SEC v. Berlacher*, Civil Action No. 07-3800-ER, 2008 U.S. Dist. LEXIS 109246 (E.D. Pa. Jan. 23, 2008); *SEC v. Mangan*, No. 3: 06-CV-531, 2008 WL 3925059 (W.D.N.C. Aug. 20, 2008). These courts found that there was no § 5 violation, but the question remains uncertain.

242 *See supra* Note 10.

243 *See The Section 4(1 ½) Phenomenon* (arguing that notwithstanding certain judicial precedent and staff no-action letters to the contrary, § 4(a)(1) provides the only viable statutory basis for private resales of unregistered securities, since § 4(a)(2) is expressly limited to sales by an issuer).

244 *See* text accompanying *supra* Note 70.

245 Offshore sales under Regulation s of securities of non-U.S. issuers generally would not require such procedures. *See* § 7.05[4].

246 Pub. L. No. 114-94, 129 Stat. 1312 (2015); *see* Nicolas Grabar, *FAST Act Amendments to the U.S. Securities Laws*, HARVARD LAW SCHOOL FORUM ON CORPORATE GOVERNANCE AND FINANCIAL REGULATION, *available at* https://corpgov.law.harvard.edu/2016/01/16/fast-act-amendments-to-the-u-s-securities-laws (Jan. 16, 2016).

247 Conditions to reliance on the exemption under § 4(a)(7) are included in §§ 4(d) and 4(e) of the Securities Act.

248 This financial information must include the issuer's most recent balance sheet and profit and loss statement and "similar financial statements" for the two preceding fiscal years (for which the issuer has been in operation) and it must be "reasonably current," meaning it must include a balance sheet and corresponding profit and loss statement as of a date and for a fiscal year ended less than 16 months prior to the sale and, if those items are not as of a date and for a period ending less than six months prior to the sale, be accompanied by an interim balance sheet and profit and loss statement for a date and a period ending less than six months before the transaction date.

249 This information requirement is more burdensome than the information requirements imposed by Rule

144A and Regulation D. First and most importantly, while the information is similar to what an issuer is required to make available if requested by a purchaser under Rule 144A(d)(4), § 4(a)(7) requires a seller to deliver the information to a purchaser. Section 4(a)(7) also imposes the same requirement for all issuers, while Rule 144A has a special rule for foreign private issuers, allowing them to meet the "reasonably current" financial information requirement by complying with the requirements of their home country or principal trading market. The § 4(a)(7) information requirement is also more stringent than Regulation D, where information delivery is mandatory only for offerings that include nonaccredited investors.

250 It is not clear what duty this requirement imposes on a seller with respect to potential securities law violations by the issuer. By comparison, an affiliate can avoid control person liability under § 20 of the Exchange Act if the person "in good faith" was unaware of issuer violations of the Exchange Act. Further, as written, the representation would extend to any violations of the securities laws or regulations (which could include minor violations).

251 *See* § 7.09.

252 *See* § 7.02[1].

253 We believe it is clear that a broker-dealer may purchase restricted securities from a nonsubsidiary affiliate and resell them in reliance on § 4(a)(7), because the new exemption expressly permits use by such affiliates and there is no reason why such use could not be done indirectly *via* a broker-dealer.

254 In Rule 144A, it is explicit that these types of firmly underwritten back-to-back sales are permitted. *See* Note 7 to Rule 144A and Rule 144A(e).

255 Rule 904 under the Securities Act; SEC Release No. 33-6863 (Apr. 24, 1990) (adopting Regulation s); *see* § 8.02[2].

256 Additional requirements apply to resales by dealers, persons receiving selling concessions and certain affiliates. *See* Rule 904 under the Securities Act. Conditions applicable to the Regulation s safe harbor are discussed in § 8.02.

257 *See* Rule 902(h) under the Securities Act; § 8.02[1][a].

258 As discussed in § 8.02[2], in 1998 the SEC adopted amendments to Regulation s that classify domestic equity securities (but not the equity securities of foreign private issuers) as "restricted securities" within the meaning of Rule 144. SEC Release No. 33-7505 (Feb. 17, 1998). The amendments were adopted after the SEC staff expressed concern with alleged abuse of the safe harbor of Regulation s to sell offshore, free from the registration requirements of the Securities Act, securities that later return to the U.S. public markets. The concern applied in particular to sales of restricted securities under Rule 904 to "wash" the restrictions off, followed by resales (or matched sales) back into the United States—especially in the case of securities of U.S. companies trading publicly in the United States.

259 Many Rule 144A offerings of foreign equity securities have been made in ADR form or have given purchasers the option of purchasing ADRs or ordinary shares. In either case, a "restricted" ADR program is established that does not require filing a registration statement with the SEC. The original private placement securities sold in ADR form are deposited in that facility and the resulting ADRs are restricted securities, as are the underlying securities that the ADR represent. *See* § 10.05[3][b].

260 U.S. tax law limits the ability of issuers to offer or sell in the United States debt obligations in bearer form. Combined foreign offerings and U.S. private placements of debt securities sold to U.S. investors generally must be in registered form and not be later exchangeable for bearer form securities. In the common case where the securities sold in a foreign offering are in bearer form, the U.S. portion of the offering is not interchangeable with the offshore portion, and much of the liquidity advantage that the resale safe harbor of Regulation s would otherwise provide is lost. *See* § 8.03[2] for a discussion of U.S. tax law restrictions on the offer and sale of debt obligations in bearer form.

261 *See* § 8.02[2].

U.S. Regulation of the International Securities and Derivatives Markets, § 7.05, PRIVATE OFFERINGS WITH REGISTRATION RIGHTS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 7.05 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

The term "registration rights" refers to a practice that developed to improve the execution of a private placement by having the issuer promise investors a mechanism to resell the securities in the United States without the resale restrictions that apply to privately placed securities. One possible mechanism is a resale registration statement, which the issuer files after the private offering to register

p. 7-77

resales by the investors in the offering. The other possible mechanism is a registered exchange offer—referred to as an "A/B" exchange offer or an "Exxon Capital" exchange offer (after a leading no-action letter)—in which, following the private placement, the issuer offers securities that are materially identical to those initially issued but that, having been sold in a registered exchange offer, can be freely resold. [262] In either case, the issuer enters into a "registration rights agreement" with the financial institutions conducting the initial private offering, in which the issuer undertakes for the benefit of holders of the securities to take the necessary steps—either to establish an effective resale registration statement, or to conduct a registered exchange offer—and generally agrees to pay holders liquidated damages if it fails to meet specified deadlines. [263] Registration rights can improve the attractiveness of the securities by enlarging the population of potential investors, particularly where the principal secondary market is expected to be in the United States. Some key market indices also require that debt securities include registration rights for inclusion in those indices.

[1] Registration Rights Generally

Registration rights are employed in a variety of situations where the resale restrictions applicable to privately placed securities make the securities less attractive, and SEC registration is practicable eventually but not immediately. [264] Conducting a registered offering has become substantially easier for SEC-reporting companies with the refinement of the shelf rules and particularly the 2005 reform establishing automatic shelf registration for well-known seasoned issuers, but there are still several situations where a Rule 144A offering, coupled with registration rights, is used. One is where the registrant is not yet a reporting company, or the registrant or the transaction is ineligible for shelf registration. In such cases, a private placement with registration rights can be executed more quickly than a registered offering. Another case is where the registrant is unable to meet some specific requirement for an SEC-registered offering, such as (i) the presentation of the most recently available financial information of an acquired company or *pro forma* financial statements showing the effects of an acquisition

p. 7-77

p. 7-78

or disposition, [265] or (ii) for a foreign private issuer, the presentation of the required most recently available interim financial statements. [266]

The 2008 amendments to Rule 144 led to the development of new procedures that have replaced traditional registration rights techniques in some transactions. Rule 144 now permits a nonaffiliate to resell privately placed securities without restrictions after a one-year holding period, [267] and thus promises a mechanism for unrestricted resales that is much less cumbersome and almost as fast as under many traditional registration rights agreements.

Under the procedures, the privately placed securities are initially issued with a restricted Committee on Uniform Security Identification Procedures ("CUSIP") or an International Securities Identification Number ("ISIN") identifier code, and the global security certificate deposited with the clearing system bears a legend setting forth transfer restrictions. When the required holding period has expired and the issuer certifies to the trustee that the securities have become freely resalable by nonaffiliates, an unrestricted code (reserved at the time of issuance), which may be the Regulation s CUSIP or ISIN, replaces the restricted code and the restrictive legend is removed from the global security. [268] To implement the removal of the legend, the issuer must also certify to the Depository Trust Company ("DTC") at least 15 days prior to the date of the change in CUSIP (in the case of a mandatory change), or ten days (if the terms of the security allow holders the option of retaining the restricted security). [269] To inform the market of the change, Bloomberg has indicated that upon notice from issuers or trustees, it will advise holders through its system of a corporate action

p. 7-78

p. 7-79

indicating the change in CUSIP or ISIN, and also make corresponding adjustments to its screen pages. [270] No action from holders is required under the procedures, and there is no need for a new global note to be executed. [271]

These procedures have been more readily adopted for some types of securities than for others. In the investment grade debt market, A/B exchange offers remain the normal practice. Certain key market indices such as the Barclays Capital U.S. Aggregate Bond Index still require securities to be "registered" and not merely "unrestricted" for inclusion, and investment funds may maintain similar requirements for the securities that can be included in some or all of their portfolios. On the other hand, in the convertible debt market, most transactions have done away with resale registration rights altogether in favor of the issuer being required to pay additional interest if it fails to permit delivery of unrestricted securities after a defined period. In the high-yield market, practice is varied, but there appears to be a trend toward using the new procedures, while providing investors with contingent registration rights. [272]

[2] A/B Exchange Offers

In an "A/B" or "Exxon Capital" exchange offer, [273] the issuer of securities that have been sold in a private placement offers to exchange those securities for securities that are identical in all material respects. The SEC has taken the position that, for certain types of securities, the securities issued pursuant to the SEC-registered exchange offer can be freely resold by a nonaffiliate of the issuer without registration. [274]

This SEC position permitting resale by nonaffiliates of the issuer without registration is available for debt securities and investment grade preferred stock that are not convertible into equity securities of a U.S. issuer (other than into preferred stock), as well as warrants or other rights to subscribe for such debt or preferred stock. [275] The SEC has also permitted foreign issuers that are not yet reporting companies under the Exchange Act wider latitude than U.S. issuers to

p. 7-79

p. 7-80

make use of A/B exchange offers in connection with equity offerings. Foreign issuers have received no-action relief from the SEC allowing them to conduct registered A/B exchange offers of equity securities and convertible debentures in connection with a subsequent listing or offering of equity securities. [276] This more lenient position reflects the SEC's policy of encouraging foreign listings on U.S. public equity markets by allowing foreign issuers to take a "stepping stone" approach, by first conducting a private placement to institutional investors (usually accompanied by an offshore placement under Regulation s) before pursuing a full public offering in the United States. [277] This exchange-offer structure does not appear to have been used recently, however, perhaps reflecting the general reticence of foreign companies to commit to U.S. equity listings and the accompanying regulatory burdens.

A nonaffiliate reselling securities received in an A/B exchange offer is not required to deliver a prospectus, unless it is a broker-dealer. A broker-dealer that

p. 7-80
p. 7-81

receives for its own account registered securities in exchange for restricted securities must agree to deliver a prospectus meeting the requirements of the Securities Act in connection with any resales (and the prospectus and any related letter of transmittal used in the exchange offer must contain a notice to such effect). The prospectus it delivers may be the prospectus for the exchange offer so long as it contains disclosure regarding the plan of distribution with respect to resale transactions. The plan of distribution need not name the broker-dealer or the amount of exchange securities owned by the broker-dealer. According to the SEC staff, by agreeing to deliver or by delivering a prospectus, the broker-dealer will nevertheless not be deemed to have admitted that it is an "underwriter" within the meaning of the Securities Act. [278]

The structure sanctioned by these SEC staff no-action letters has been conditioned upon an agreement by the issuer to provide to the SEC a supplemental letter stating that the issuer is relying upon this no-action relief. The letter must also include representations that the issuer has not entered into any arrangement with any person to distribute the securities to be issued in the exchange and that, to the best knowledge of the issuer, persons participating in the exchange are acquiring the securities in the ordinary course and have not entered into any arrangement or understanding with anyone to participate in a distribution of the securities. [279]

The A/B exchange offer procedure offers advantages to both issuers and investors over the alternative of granting investors resale registration rights. First, issuers in these transactions avoid maintaining an "evergreen" resale registration statement, as is customary in the case of privately offered securities with resale registration rights. [280] Second, from the investor's perspective there is no potential liability in connection with a resale by an exchanging holder under § 12(a)(2) of the Securities Act (unless the seller is a broker-dealer), no prospectus delivery requirement (unless the seller is a broker-dealer) and no requirement to include the names of the holders of securities being exchanged in the registration statement.

p. 7-81
p. 7-82

Standard agreements to conduct A/B exchange offers typically set deadlines for the filing and declaration of effectiveness of the exchange offer registration statement and the consummation of the related exchange offer. They also usually require the issuer to maintain the effectiveness of the registration statement for a specified period (often 90 to 180 days) to enable broker-dealers to comply with their prospectus delivery obligations. The issuer must consequently consider whether any development that occurs during this period requires the filing of a prospectus supplement or a post-effective amendment to the registration statement. [281] Any failure to comply with these deadlines typically triggers liquidated damages in the form of the obligation to pay additional interest on debt securities until the failure is cured. This consequence emphasizes the importance of assessing, in connection with the initial private placement, whether any difficult issues are likely to arise that could delay or prevent filing or the effectiveness of the exchange offer registration statement.

[3] “Rule 144A for Life” Offerings

If, generally in the case of debt securities or non-participating preferred stock, an issuer's investor base is willing to hold restricted securities, an issuer may not be required to offer registration rights, whether *via* resale registration or a registered exchange offer. This is particularly true where an issuer does not have reporting obligations under the Exchange Act and does not wish to become a reporting issuer. Such offerings that do not provide for registration rights are referred to as "Rule 144A for Life" offerings, and the offered securities remain unregistered and restricted for the entire period during which they remain outstanding.

Footnotes

262 A/B (or Exxon Capital) exchange offers are discussed at § 7.04[2]. A/B exchange offers are used primarily for nonconvertible debt securities and investment grade preferred stock. They are not permitted for other equity securities (including convertible debt), except in limited circumstances for equity securities of a

foreign private issuer. Resale registration statements are most frequently used for issuances of common stock.

263 If a registered exchange offer is contemplated, debt securities in a Rule 144A placement will need to be issued pursuant to a trust indenture that meets the requirements of the Trust Indenture Act. *See* § 3.05[4]. The same applies if a resale registration statement is used for debt securities, although this practice is less common.

264 Issuers may also offer registration rights to affiliates holding control securities if so requested. *See* §§ 7.05 and 9.05[8].

265 *See* § 4.04[10].

266 *See* § 4.04[4]. In addition, securities that are convertible into U.S.-listed equity are sometimes sold in a Rule 144A private placement even where SEC registration would be available. This practice exists because, in order to facilitate the offering, the issuer will sometimes purchase shares from the investors to mitigate the downward pressure on the shares resulting from the offering, thereby also permitting the investors to establish under their hedge. The issuer would not be permitted to purchase its shares under Regulation M of the Exchange Act if the offering were done on an SEC-registered basis.

267 Under Rule 144, a nonaffiliate can resell securities of an Exchange Act-reporting issuer freely after a six-month holding period, but only if the issuer is current in its periodic reporting. If the issuer ceases to be current ("goes dark"), nonaffiliates must wait one year to resell without restrictions.

268 The SEC has stated that it will not object if issuers remove restrictive legends from securities held by nonaffiliates after all of the applicable conditions in Rule 144 are satisfied, while observing that such removals are at the discretion of the issuer and that disputes over removals are likely to be governed by contract and by state law, rather than federal law. *See* SEC Release No. 33-8869 (Dec. 6, 2007).

269 *See* The Depository Trust Company, DTC Important Notice 4903-09, Optional Use of the Depository Trust Company's ("DTC") Mandatory Exchange Platform for Rule 144A and Reg. S Securities that have become unrestricted securities (Apr. 1, 2009). Similar actions would need to be taken if the securities are held in a different clearing system.

270 SIFMA, *SIFMA Guidance: Procedures, Covenants, and Remedies in Light of Revised Rule 144* (Oct. 2008).

271 In the case of optional resales where an issuer has not undergone procedures to provide for free transferability of the entire tranche of securities, a holder may need to submit a certificate of transfer.

272 *See* Adam E. Fleisher & Jung W. Ju, *Revised Rule 144 and Registration Rights, Market Practice Two Years On*, PRACTICAL LAW, THE JOURNAL (Feb. 2010).

273 *Exxon Capital Holdings Corp.* (avail. May 13, 1988).

274 *See Shearman & Sterling* (avail. July 2, 1993), *Morgan Stanley & Co. Inc.* (avail. June 5, 1991) ("Morgan Stanley") and letters cited therein.

275 The SEC has offered no rationale to explain why preferred stock should be rated investment grade to qualify for relief, whereas debt securities are not subject to any rating requirement. Some exceptions from the rating requirement have been granted, *see K-III Communications Corp.* (avail. May 14, 1993) (permitting the use of a registered exchange offer in connection with unrated preferred stock convertible into debt securities of the issuer), but the SEC staff has informally advised that *K-III Communications* should not be viewed as an extension of *Morgan Stanley* or its progeny since the preferred stock at issue was in the staff's view the functional equivalent of debt. (It remains to be seen whether the removal in July 2011 of references to credit ratings in Securities Act rules and forms pursuant to § 939A of the Dodd-Frank Act, *see* SEC Release No. 33-9245 (July 27, 2011), will affect the SEC's position on this issue.) The SEC also suggested in a subsequent no-action letter that the availability of the exchange offer procedure may depend upon characteristics of the privately placed security, including, among others, whether it is more attractive to qualified institutional buyers and institutional accredited investors and, accordingly, has been sold to them rather than to "retail" investors, whether the security is listed on a national securities exchange and whether it pays distributions semi-annually rather than monthly or quarterly. *See Brown & Wood LLP*

(avail. Feb. 7, 1997). Again, the staff offered no rationale for why those characteristics are significant.

276 *Grupo Financiero InverMexico, S.A.* (avail. Apr. 4, 1995) (granting no-action relief in connection with an exchange offer of convertible debentures in connection with a registered offering or listing of capital stock of the issuer); *Corimon C.A. S.A.C.A.* (avail. Mar. 22, 1993) (granting no-action relief in connection with an exchange offer of ADRs in connection with the listing of similar ADRs); *Transportación Maritima Mexicana, S.A. de C.V.* (avail. June 8, 1992) (granting no-action relief in connection with an exchange offer of ADRs to be conducted concurrently with a global offering outside Mexico, including a registered U.S. offering, of units consisting in part of similar ADRs); *Vitro, Sociedad Anónima* (avail. Nov. 19, 1991) (granting no-action relief in connection with an exchange offer of ADRs to be conducted concurrently with a global offering of common shares, including a registered U.S. offering of ADRs representing common shares). Certain Schedule B issuers have relied on the *Exxon Capital* no-action letters (see, e.g., Corporación Andina de Fomento (SEC File Nos. 333-90296 and 333-88404, filed June 6, 2002, and May 10, 2002, respectively) and Republic of Peru (SEC File No. 333-98403, filed Aug. 19, 2002).

277 It is not clear, however, that the SEC staff would permit a foreign issuer of equity securities to conduct an A/B exchange offer if its obligation to conduct the exchange offer were not also contingent on a subsequent public offering or listing in the United States. *See* Adam E. Fleisher, David E. Webb & Malini Mukhopadhyay, THE MECHANICS OF A/B EXCHANGE OFFERS (Practical Law Company, 2010).

278 *Shearman & Sterling* (avail. July 2, 1993). The SEC has also stated its view that the initial purchasers in the private placement would not normally be considered "underwriters" of the subsequent registered exchange offer or bear liability under § 11 or § 12(a)(2) of the Securities Act. *See* Brief of SEC as *Amicus Curiae* Supporting Defendants, *In re HealthSouth Securities Litigation*, No. CV-03-BE-1500-S (N.D. Ala. Nov. 28, 2006); *see also In re Livent*, 151 F. Supp. 2d 371 (S.D.N.Y. 2001).

279 *See Grupo Financiero InverMexico, S.A.* (avail. Apr. 4, 1995); *Corimon C.A. S.A.C.A.* (avail. Mar. 22, 1993); *Transportación Maritima Mexicana, S.A. de C.V.* (avail. June 8, 1992); *Vitro, Sociedad Anónima* (avail. Nov. 19, 1991).

280 Agreements to conduct an A/B exchange offer do, however, typically require the filing and maintenance of a resale registration statement in certain circumstances if the exchange offer is not available to all investors (including if the initial purchasers are holding allotment securities) or if the SEC repeals its position permitting exchange offers.

281 An issuer eligible to use Form S-3 or F-3 is permitted to incorporate by reference into its exchange offer registration statement any current Exchange Act report filed on Forms 8-K or 6-K (as applicable) after the effective date of the registration statement. An issuer filing on Form S-1 or F-1, however, may only incorporate by reference past, rather than future, Exchange Act reports—as a result, such an issuer may be required to file a post-effective amendment to its registration statement in order to reflect any material development arising after the initial effective date. The amendment to the registration statement is subject to SEC review (like the original registration statement itself), which can require suspending use of the registration statement.

U.S. Regulation of the International Securities and Derivatives Markets, § 7.06, PRIVATE PLACEMENT OF ADRs

U.S. Regulation of the International Securities and Derivatives Markets

11th and 12th Editions

Click to open document in a browser

Rule 144A offerings of foreign equity securities are sometimes made in ADR form or give investors the option of purchasing American depositary shares ("ADSs") or ordinary shares. In either case, the issuer and the depositary establish a "restricted" ADR program, under which privately placed shares are delivered to the depositary, which issues ADSs that are restricted securities for

p. 7-83

purposes of Rule 144 under the Securities Act. The restricted ADSs are not eligible for registration on Form F-6 with the SEC. [282]

In some cases, the foreign issuer may also plan to set up an "unrestricted" ADR program subsequently. Under the unrestricted program, shares are delivered to the depositary, which issues unrestricted ADSs that are available for public trading, and the program is registered with the SEC on Form F-6. [283] Special issues can arise where a foreign issuer attempts to establish an unrestricted ADR facility within one year after a private placement, since the shares sold in the private placement are restricted securities and not yet eligible for resale under Rule 144, and accordingly may not be deposited in the unrestricted facility. The SEC staff has cautioned that it may be unwilling to declare the requisite F-6 registration statement effective unless the purchasers in the private placement (but not subsequent transferees) have acknowledged in writing the restrictions on transfer and deposit in an unrestricted ADR facility of the privately placed shares. Some banks have resisted issuer requests to require such acknowledgements, arguing that the resulting administrative burden could significantly limit the number of potential investors in the Rule 144A offering. An issuer that accedes to these marketing concerns may not be able to establish an unrestricted ADR facility within one year of the private placement. [284]

Special issues also may arise where a foreign issuer wishes to establish an unrestricted ADR facility immediately upon, or shortly after, completion of an offering outside the United States that is exempt from Securities Act registration under Regulation s. The SEC staff has taken the position that the registration statement on Form F-6 relating to the unrestricted ADSs may not be filed until the expiration of the applicable distribution compliance period (if any) under Regulation s or seasoning period under § 4(a)(3), whichever is longer. [285]

The SEC has also expressed concern regarding the possibility for leakage of restricted securities into the U.S. public market where an issuer proposes to sponsor concurrent restricted and unrestricted ADR programs. These programs can operate as a single combined facility, under which both restricted and unrestricted securities are issued under a single deposit agreement, or as separate facilities. In such cases, the SEC staff has taken the position, as a condition to

p. 7-83

p. 7-84

effectiveness of a Form F-6, that it will require various procedures to be implemented in connection with the facility or facilities to prevent leakage, including assigning separate CUSIP numbers to the restricted and unrestricted ADSs and obtaining written certifications acknowledging applicable transfer restrictions on the restricted ADSs or that the ADSs were obtained in an offshore transaction complying with Rule 904 of Regulation s. [286] So-called "collapsible" facilities, which provide, upon effectiveness of the related Form F-6, for automatic fungibility of restricted ADSs with ADSs issued out of an unrestricted facility, have also attracted SEC attention. In such circumstances, the SEC staff has informally taken the position that effectiveness of the Form

F-6 will depend upon implementation of various procedures, including obtaining written certifications on deposit and withdrawal of securities with respect to the restricted ADR facility as to the status of the beneficial owner and compliance with resale restrictions.

Footnotes

282 The ADSs are not eligible for registration because the underlying shares, having been sold in a private placement, do not meet the requirements of General Instruction I.A(2) of Form F-6. Restricted ADSs may be resold under Rule 144 to the same extent the underlying restricted shares could have been. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules 532.16 (Jan. 26, 2009).

283 ADR programs of foreign issuers generally are discussed in § 3.04.

284 If the unrestricted facility is to be exchange-listed, the issuer might consider conducting a registered exchange offer of unrestricted shares for restricted shares at the time it establishes the unrestricted ADR facility. *See* § 7.04[2].

Under the rules of the principal U.S. clearing system, The Depository Trust Company, securities that are eligible for resale under Rule 144A are eligible for electronic clearing and settlement through DTC. [287] In a typical Rule 144A offering of debt securities or ADSs, DTC holds one or more certificates in global form evidencing the amount of securities issued. Restricted securities placed with QIBs pursuant to the § 4(a)(2) exemption may also be held in DTC if they meet the criteria for resale under Rule 144A. Securities sold to non-QIBs are not normally held in DTC, since resales of such securities are ordinarily subject to "policing" mechanisms to prevent a distribution, and DTC does not have procedures for this purpose. All Rule 144A securities deposited at DTC are required to bear a CUSIP or other identification number different from the number borne by any unrestricted securities of the same class, including, for example, securities that were sold in a concurrent offering under Regulation s and that have "seasoned" for purposes of U.S. securities law. [288] DTC participants (brokers and dealers) trade and settle transactions electronically through book-entry trades recorded on the participants' accounts.

Euroclear and Clearstream are able to participate in DTC indirectly through their depositaries that maintain an account as participants in DTC. This arrangement permits trades to be made between DTC participants and participants in Euroclear and Clearstream.

p. 7-85

Many offerings use a "dual tranche" system, in which two global securities are deposited with DTC, one for the Rule 144A tranche and one for the Regulation s tranche, but it is also possible for an entire issue of securities placed in a global offering to be represented by one global security deposited with DTC and for transactions in the securities to be effected worldwide using a single book-entry system; in such a case all securities are subject to Rule 144A restrictions.

Rule 144A securities trade primarily over the counter among dealers. Transactions in Rule 144A securities conducted by U.S. broker-dealers are generally subject to transaction reporting requirements. [289] Attempts to develop organized markets or trading systems for Rule 144A securities began concurrently with the adoption of Rule 144A, when the SEC approved the PORTAL Market, a system for primary and secondary trading of securities pursuant to Rule 144A with facilities for clearance and settlement of both domestic and foreign securities through DTC, in the case of transactions effected in the United States, and Clearstream Banking, in the case of transactions effected outside the United States. [290]

The PORTAL Market originally was a "closed" trading system, in that it required prequalification of PORTAL Market participants and imposed restrictions on a participant's ability to trade securities out of the system except in transactions that resulted in the delivery of an unrestricted security. The PORTAL rules were substantially amended in 1993 and again in 2007, each time in an effort to make PORTAL a more effective trading venue. [291] But these measures were unsuccessful, and the PORTAL Market ultimately ceased operating in 2008. [292]

p. 7-85

p. 7-86

In addition to the PORTAL Market, there have been several other attempts to develop electronic trading platforms for Rule 144A securities. These trading platforms have not been widely used.

U.S. Regulation of the International Securities and Derivatives Markets, § 7.08, SPECIAL CONCERNS OF BROKER-DEALERS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 7.08 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Private placements raise certain specific compliance issues for broker-dealers, including those discussed below.

[1] Application of Regulation T to Rule 144A Transactions

Regulation T, promulgated by the Board of Governors of the Federal Reserve System (the "Board") under § 7 of the Exchange Act, regulates extensions of credit by broker-dealers. [293] Under Regulation T, purchases by broker-dealers of debt securities in a *bona fide* public offering are deemed not to be extensions of credit to the issuer, [294] while purchases of privately offered debt securities are deemed to be extensions of credit. [295] When purchasing privately offered debt securities, therefore, broker-dealers must take steps to comply with Regulation T. [296]

To facilitate the SEC's goal in adopting Rule 144A of achieving a more liquid and efficient institutional resale market for unregistered securities, however, the Board has interpreted Regulation T not to treat a broker-dealer's purchase of an unregistered debt security for resale under Rule 144A, including a purchase in the course of Rule 144A market-making activities, as an extension of credit by the broker-dealer for purposes of Regulation T. [297] The Board's interpretation is applicable to both primary and secondary market transactions.

The theory of the Board's interpretation is that, in purchasing debt securities with the intention to resell them pursuant to Rule 144A, a broker-dealer is "arranging" for an extension of credit by the purchaser of the debt securities in the resale transaction, rather than extending the credit itself. Regulation T permits a broker-dealer to arrange any credit provided that it does not willfully

p. 7-87

arrange credit that violates the Board's other margin regulations, Regulations U and X. [298] The narrow focus of the Board's interpretation leaves open the applicability of Regulation T in circumstances in which, notwithstanding a good faith intention when the security is purchased to resell it under Rule 144A, the broker-dealer is unable to resell it or resells it other than pursuant to Rule 144A.

In adopting its interpretation, the Board declined to accept a proposal made by the Securities Industry Association that it simply declare that a broker-dealer's purchase of a security for resale—whether or not pursuant to Rule 144A—constitutes a permitted arranging rather than an extension of credit. The effect of the Board's refusal is to leave Regulation T relevant for a broker-dealer's purchase, as principal, of privately offered debt securities other than for resale under Rule 144A. In the context of such transactions (including, *e.g.*, initial resales to both QIBs and to accredited investors in traditional private sales), the participating financial institution should consider whether it needs to obtain an appropriate representation from the issuer that the proceeds of the offering will not be used for purchasing, carrying or trading in securities. [299]

[2] Net Capital Consequences of Rule 144A Securities

Restricted securities held by a broker-dealer have traditionally resulted in a 100% charge to its regulatory capital because such securities do not have a "ready market" and "cannot be publicly offered or sold because of statutory, regulatory or contractual arrangements or other restrictions." [300] In the adopting

p. 7-87

release for Rule 144A, however, as well as in several subsequent no-action letters, the SEC and its staff have outlined criteria under which certain Rule 144A-eligible securities and other securities that the SEC may not otherwise deem to have a "ready market" may qualify for reduced capital charges. Application of such reduced capital charges depends on factors such as, among other things, the rating of the securities (or the issuer) by "nationally recognized statistical rating organizations," [301] the availability of public information regarding the issuer, the issuance size and the convertibility of the securities into publicly traded securities that have a ready market. [302]

[3] FINRA Rule 5123

Upon its effectiveness in 2012, FINRA Rule 5123 increased the disclosure and reporting obligations of certain broker-dealers that participate in private placements. Rule 5123 generally requires FINRA members and associated persons to provide disclosure to investors in private offerings describing the anticipated use of offering proceeds and the amount and type of offering expenses and offering compensation (either in the private placement memorandum or a separate term sheet). Rule 5123 requires FINRA members to file this disclosure with FINRA no later than 15 days after the document is provided to investors or indicate in the filing that no written documents were used. [303] Because of its numerous exemptions—which include most offerings to institutional investors (including offerings made pursuant to Rule 144A) and offerings pursuant to Regulation s under the Securities Act, as well as offerings of nonconvertible debt or preferred securities by issuers that meet the eligibility criteria for incorporation by reference in Forms S-3 and F-3)—from a practical perspective the Rule applies mainly to private placements of securities to natural persons in the United States.

Footnotes

293 *See* § 14.07[6][a].

294 *See* Fed. Res. Reg. Serv. ¶5-606.56 (staff opinion, Dec. 20, 1993) (Board staff does not regard the purchase of debt securities offered in a public offering as an extension of credit subject to the margin regulations, with the caveat that the public offering must not be structured "so that the sale in actual practice resembles a private placement.").

295 *See* Fed. Res. Reg. Serv. ¶5-606.4 (staff opinion, Dec. 11, 1984).

296 Where the proceeds of the debt securities will not be used for the purpose of purchasing, carrying or trading in securities, the broker-dealer may obtain a certification of the purpose of the credit on Board Form T-4 and extend and maintain the credit on a "good faith" basis. *See* 12 C.F.R. § 220.6(e); *see also* § 14.07[6][a][i]. Nonpurpose credit extended by a broker-dealer may be subject to applicable net capital charges. *See* FINRA Rules, Rule 4210(e)(7), FINRA MANUAL.

297 *See* Fed. Res. Reg. Serv. ¶5-470.1 (Board interp., July 16, 1990).

298 *See* 12 C.F.R. § 220.3(g). Purchases of privately offered debt securities by nonbroker-dealers, including in transactions under Rule 144A, are extensions of credit that may be subject to the Board's Regulation U (applicable to certain U.S. lenders other than broker-dealers) and Regulation X (applicable to certain U.S. and U.S.-controlled borrowers). For example, Regulation U limits extensions of credit to finance the purchase or carrying of "margin stock" (such credit referred to as "purpose credit") that are secured, directly or indirectly, by "margin stock." *See* 12 C.F.R. § 221.3. "Indirect" security may include, for example, restrictions on the sale, pledge or other disposition of assets where 25% or more of the assets subject to the arrangement consist of margin stock. *See* 12 C.F.R. § 221.2. "Margin stock" includes, among other securities, stock registered on a U.S. national securities exchange (including Nasdaq) and debt convertible into such stock. *See* 12 C.F.R. § 221.2. Accordingly, a U.S. person purchasing a privately offered note (including debt of a foreign issuer) any proceeds of which are used for "purpose credit" and the collateral for which includes "margin stock" may be subject to Regulation U, which among other requirements would limit the amount of credit that may be extended through the note. In addition, even where a privately placed note

is not "purpose credit" but is directly or indirectly secured by "margin stock," Regulation U may require the purchaser to register and make certain related filings with the Board, although the Board staff has by interpretation created an exception from this requirement for nonpurpose credit notes purchased under Rule 144A. *See* Fed. Res. Reg. Serv. ¶5-942.69 (staff opinion, Aug. 30, 1996).

299 *See supra* Note 296.

300 Rule 15c3-1(c)(2)(vii) under the Exchange Act; *see also* § 14.07[2][b][i].

301 [Reserved.]

302 *See* SEC Release No. 33-6862 (Apr. 23, 1990); *Securities Industry Association* (avail. July 27, 2000); *Securities Industry Association* (avail. Aug. 16, 1999); *Securities Industry Association* (avail. Mar. 30, 1996); *Securities Industry Association* (avail. June 12, 1992).

303 As of 2013 FINRA updated the form that firms must use to file offering documents and information pursuant to FINRA Rule 5123. The updated form includes six new questions that are designed to assist FINRA in prioritizing its review of private placement filings. The updated form is available on the FINRA website.

U.S. Regulation of the International Securities and Derivatives Markets, § 7.09, STATE SECURITIES LAW CONCERNS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 7.09 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Institutional private placements of the kind discussed in this chapter are structured primarily to comply with federal securities laws, but they may also be

p. 7-89

subject to state securities laws, traditionally referred to as "blue sky" laws. [304] For transactions in "covered securities," as described below, federal law expressly preempts state securities laws, making them inapplicable. For other transactions, including most private placements by foreign private issuers, there is no federal preemption of state law, and such transactions are typically conducted under exemptions from state law registration requirements.

The National Securities Markets Improvement Act of 1996 (the "NSMIA") [305] amended § 18 of the Securities Act to provide for federal preemption of state laws requiring registration of securities that are "covered securities" or transactions in "covered securities," as defined in § 18. [306] Several categories of preemption are potentially relevant to private placements: (i) where the securities are listed (or will be listed upon completion of the transaction) on a national securities exchange or are senior to listed securities of the same issuer (for example, debt securities of an issuer that has listed common equity), (ii) where the transaction is exempt from registration pursuant to regulations promulgated by the SEC under § 4(a)(2) of the Securities Act [307] and (iii) where the securities are exempt from registration pursuant to § 4(a)(7) of the Securities Act.

The private placement of debt or equity securities of a foreign private issuer with U.S.-listed equity falls squarely within the scope of federal preemption. Other Rule 144A offerings require a two-part analysis. First, the issuer's sale of securities to the initial purchasers is typically conducted in reliance on

p. 7-89

p. 7-90

§ 4(a)(2) and not on Regulation D, so it does not have the benefit of federal preemption. [308] However, all state securities laws provide for an exemption from state registration for offers and sales of securities to specified types of institutional investors. While the breadth of these exemptions varies from state to state, most states have adopted provisions similar to those contained in the various versions of the Uniform Securities Act, which exempt offers and sales specifically to broker-dealers or more generally to institutional investors, a term defined to include registered broker-dealers. [309]

Second, a participating financial institution's resale to investors will benefit from federal preemption if the securities are listed or are senior to listed securities. If federal preemption does not apply to the participating financial institution's resale, the placement can be conducted in most states under published interpretations or adopted statutory or regulatory provisions specifically to the effect that sales made in compliance with Rule 144A or to QIBs will be exempt under the applicable state securities laws. [310] Sales in states without specific Rule 144A or QIB exemptions may be made if the purchaser otherwise qualifies under the definition of statutorily specified types of institutions, which vary from state to state. [311]

p. 7-90

p. 7-91

An additional concern under state "blue sky" laws arose as a result of the amendments to Rule 144A permitting general solicitation. Broad-reaching general solicitation could constitute offers to noninstitutional investors—and only three states effectively exempt offers by nonreporting issuers to those investors in a Rule 144A context. [312] Accordingly, use of broad-reaching general solicitation in Rule 144A offerings by nonreporting issuers [313] could require registration under most state "blue sky" laws. [314]

Footnotes

304 *See* § 3.02[7] for a further discussion of state "blue sky" laws.

305 National Securities Markets Improvement Act of 1996, Pub. L. No. 104-290, 110 Stat. 3416 (1996).

306 The scope of preemption under the NSMIA also extends to state laws that prohibit, limit or impose conditions on (i) the use of an offering document prepared by or on behalf of the issuer, (ii) proxy statements, reports and other disclosure documents filed with the SEC or (iii) offers or sales based on the merits of the offering or the issuer, in each case, in connection with transactions in "covered securities." *See* § 18(a) of the Securities Act.

307 State securities laws are also preempted with respect to the securities of an investment company registered under the Investment Company Act. Moreover, the NSMIA provides for preemption with respect to offers or sales of securities to "qualified purchasers," as defined by the SEC. The SEC has never acted to provide a widely applicable definition of "qualified purchasers" for this purpose but, in connection with amendments made to Regulation A in 2015, did apply this designation to "any person to whom securities are offered or sold pursuant to a [Regulation A] Tier 2 offering." *See* 17 CFR 230.256. On two prior occasions, first in 2001 and then in 2007, the SEC proposed but did not adopt a definition of "qualified purchasers" that would preempt state securities regulations in connection with offers and sales to "accredited investors" and "large accredited investors," respectively, each as defined in Regulation D under the Securities Act. SEC Release No. 33-8041 (Dec. 19, 2001); SEC Release No. 33-8828 (Aug. 3, 2007) (withdrawn Oct. 1, 2009).

308 *See* § 7.02[2]. An issuer selling directly to investors will often do so in reliance on Rule 506 of Regulation D, rather than on § 4(2), specifically in order to have the benefit of federal preemption, particularly where the availability of state law exemptions is uncertain because not all investors are qualified institutional buyers.

309 For example, § 402(b)(8) of the Uniform Securities Act of 1956 defines the relevant exemption as "any offer or sale to a bank, savings institution, trust company, insurance company, investment company as defined in the Investment Company Act of 1940, pension or profit-sharing trust, or other financial institution or institutional buyer, or *to a broker-dealer*, whether the purchaser is acting for itself or in some fiduciary capacity" (emphasis added). Similarly, § 202(13) of the Uniform Securities Act of 2002 provides an exemption for "a sale or offer to sell to: (A) an institutional investor; (B) a federal covered investment advisor; or (C) any other person exempted by rule adopted or order issued under this [Act]."

310 California (CAL. CODE REGS. tit. 10, § 260.105.13.1 (2011)); Florida (FLA. STAT. ANN. § 517.061(7)); Louisiana (LA. REV. STAT. ANN. § 51:709(4)); Maryland (MD. CODE REGS. 02.02.04, § Rule.04); (MASS. CODE REGS. tit. 950, § 14.401 (2011)); Michigan (MICH. COMP. LAWS § 451.2102a); New Jersey (NEW JERSEY STAT. ANN. § 49:3-49 (West); New York (N.Y. GEN. BUS. LAW § 359-e(a)); Ohio (OHIO ADMIN. CODE § 1301:6-3-02(D) (2003)); Texas (7 TEX. ADMIN. CODE § 109.4); Wisconsin (WIS. STAT. § 551.102); Blue Sky L. Rep. (CCH) ¶¶9,136 & 9695L (Arizona); 15,520 (Delaware); 16,758 (District of Columbia); 21,644 (Idaho); 24,675 (Indiana); 27,579 (Kentucky); 35,587 (Missouri); 36,517 (Montana); 39,623 (New Hampshire); 44,527 (North Dakota); 47,667, 47,668 (Oregon); 49,602 (Puerto Rico); 50,505 (Rhode Island); 57,468 (Utah); 58,414 (Vermont); 61,810U (Washington); 63,641 (West Virginia); and 66,464 (Wyoming).

311 Occasionally, underwriters request that counsel prepare a "blue sky" survey describing the criteria for the state-law exceptions, so as to provide specific guidance to sales personnel. However, this practice, which was standard in public offerings prior to the enactment of the NSMIA, is virtually unheard of in private placements today, at least where they are conducted under Rule 144A or otherwise limited to QIBs.

312 California, Louisiana and Vermont exempt from their registration requirements offers and sales made in compliance with Rule 144A as in effect from time to time. *See supra* Note 310.

313 This could also include Rule 144A offerings by reporting issuers with nonreporting guarantors.

314 It remains to be seen whether any of those states would pursue an enforcement action in such a case. Practitioners may ask the SEC to use its authority under § 18 of the Securities Act to preempt "blue sky" laws for all offers and sales made pursuant to Rule 144A, which would align them with the existing preemption for all offers and sales made pursuant to Rule 506, but this request has been made before, and the SEC has yet to address it.

U.S. Regulation of the International Securities and Derivatives Markets, § 7.10, APPLICATION OF REGULATION M TO PRIVATE PLACEMENTS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 7.10 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Regulation M under the Exchange Act [315] governs the market activities of issuers, selling securityholders, underwriters and other participants in securities offerings, and certain of their affiliates. [316] Regulation M consists of six rules, including a definitional rule (Rule 100). Rules 101 and 102 regulate bids for and purchases of securities in "distribution" in the United States (and certain related securities) by participants in the distribution and certain of their affiliates. Rule 101 regulates bids and purchases by underwriters, prospective underwriters and other distribution participants, and affiliates of such persons that fall within the definition of "affiliated purchaser." Rule 102 regulates bids and purchases by issuers, selling securityholders and their affiliated purchasers. Rule 103 governs passive market making by Nasdaq market-makers participating in a distribution. Rule 104 regulates stabilization to facilitate an offering. Rule 104 also adds disclosure and reporting requirements regarding certain post-distribution activities, including purchases to cover syndicate short positions and the imposition of "penalty bids." Finally, Rule 105 restricts short selling in connection with a registered offering.

The determination whether an offering constitutes a distribution in the United States for purposes of Regulation M is based on the "magnitude of the offering" and the "presence of special selling efforts and selling methods." [317]

p. 7-92

Offerings subject to Rule 101 include private offerings where the indicia of a distribution are present.

Regulation M, however, by its terms has only limited application to transactions under Rule 144A. In particular, Rule 101 and 102 contain exemptions for distributions of Rule 144A-eligible securities of any issuer, U.S. or non-U.S., if such securities are sold in the United States only to QIBs or persons reasonably believed to be QIBs in transactions exempt from registration under § 4(a)(2), Rule 144A or Regulation D under the Securities Act. [318] The exemption also applies if the distribution includes certain persons in the United States not deemed to be "U.S. persons" for the purposes of Regulation s under the Securities Act. [319] Rule 104, which governs stabilizing transactions, contains comparable exemptions. [320] The exemptions would not, however, be available for a distribution of securities that are not Rule 144A-eligible, for example because of the fungibility or information delivery requirement of the Rule, [321] or that are not sold only to QIBs, for example because sales were also made to institutional accredited investors. [322]

Footnotes

315 SEC Release No. 34-38067 (Dec. 20, 1996) (the "Regulation M Release").

316 For a discussion of Regulation M in the context of global offerings and enforcement, see §§ 3.02[8][a] and 11.05[3][c], respectively.

317 Rule 100 of Regulation M under the Exchange Act.

318 Rules 101(b)(10)(i) and 102(b)(7)(i) of Regulation M under the Exchange Act. As a result of the mandate of § 201(a)(2) of the JOBS Act, the SEC amended the exemptions under Rules 101, 102 and 104 of Regulation M to conform to the amendments to Rule 144A by eliminating references to "offered" and "offerees."

319 Rules 101(b)(10)(ii) and 102(b)(7)(ii) of Regulation M under the Exchange Act.

320 Rule 104(j)(2) of Regulation M under the Exchange Act. However, unlike the exemptions provided in Rules 101 and 102 for securities eligible for resale under Rule 144A, the exemption contained in Rule 104(j)(2) is currently limited to the subject security. The SEC has stated that, when Rule 104 was adopted, the scope of the private placement exemption under it was intended to be identical to that provided in Rules 101 and 102. SEC Release No. 33-8511 (Dec. 9, 2004). Accordingly, the SEC proposed to extend the Rule 144A-eligible securities exemption in Rule 104 to reference securities (that is, any security into which a subject security may be converted, exchanged or exercised (whether immediately or not), or which, under the terms of the subject security, may in whole or significant part determine the value of the subject security). *See* SEC Release No. 33-8511 (Dec. 9, 2004). As a consequence of this extension, in the context of an offering of Rule 144A-eligible convertible bonds, for example, Rule 104 would not apply to transactions in the underlying equity securities. This proposal was never adopted. For a discussion of Rule 104 generally, *see* § 3.02[9][b].

321 *See* § 7.02[3][c] and [d].

322 For a further discussion of Regulation M, *see* § 3.02[8][a].

U.S. Regulation of the International Securities and Derivatives Markets, § 8.01, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 8.01 (11th and 12th Editions 2014-2017)
11th and 12th Editions

p. 8-3

The Securities Act does not provide an exemption for offers and sales of securities outside the United States. Section 5 of the Securities Act requires, in effect, that any offer or sale of a security made by U.S. "means or instruments of transportation or communication in interstate commerce or of the mails"—the so-called "jurisdictional means"—be registered with the SEC unless an exemption is available. [1]

Historically, the U.S. courts have generally applied the concept of jurisdictional means broadly, and in certain contexts a single telephone call into or from the United States may be enough to establish their use. [2] Moreover, even if the issuer and the underwriters do not use jurisdictional means but others do, and that use by others was reasonably foreseeable, courts may conclude that this contact with the United States is enough to make the registration provisions of the Securities Act applicable. [3] As a theoretical matter, a public offering outside the United States by a U.S. issuer may be subject to the registration requirements of the Securities Act since jurisdictional means would almost certainly be used, at least in a limited way. It is also theoretically possible that a public offering outside the United States by a foreign issuer may be subject to the registration requirements of the Securities Act if U.S. jurisdictional means are used in the offering; however, recent court decisions in the United States suggest that this is unlikely. [4]

The Securities Act also does not provide an exemption for a public offer or sale of a security by an issuer or underwriter or for a dealer in securities unless certain conditions are met. [5] Section 4(a)(3) of the Securities Act affords an

p. 8-3

p. 8-4

exemption for offers and sales by U.S. and foreign securities dealers that are not "underwriters," unless the offers or sales occur prior to 40 days after the date the securities in question were first offered to the public or unless the securities are part of an "unsold allotment."

The term "underwriter" is defined in § 2(a)(11) of the Securities Act as "any person who has purchased from an issuer with a view to … the distribution of any security, or participates or has a direct or indirect participation in any such undertaking." The term "distribution" is not defined, and securities lawyers have been unable to conclude that offerings abroad are not distributions for this purpose. This uncertainty arises in part because the SEC, unlike other regulators, has made clear its belief that flowback of securities into the United States after a distribution abroad, even in a recognized international market, can be an indirect distribution in the United States and therefore subject to registration. Thus, members of an underwriting syndicate for an offering of securities outside the United States may be "underwriters" within the meaning of § 2(a)(11) of the Securities Act, especially if the securities are subsequently sold into the United States, and the exemption from the registration requirements afforded by § 4(a)(3) would not be available for offers and sales by such dealers. Moreover, the broad concept of a "direct or indirect participation" in a distribution raises the question whether dealers (other than syndicate members) that participate in the offering, for example, simply by purchasing and reselling the securities being offered, may, depending on their manner of compensation, be "underwriters" whose offers and sales must be registered. [6]

The term "unsold allotment" has been interpreted broadly and includes, at least as a theoretical matter, securities purchased directly or indirectly from an issuer in a chain of transactions between securities dealers not involving a sale to an end-investor. Thus, offers and sales by a dealer that purchased the securities from an underwriter, or from another dealer that purchased the securities from an underwriter, are not exempt from the registration requirements of the Securities Act by virtue of § 4(a)(3), whether or not the 40-day period has elapsed. In any event, offers and sales by dealers that purchased the securities in

p. 8-4
p. 8-5

true secondary market transactions are not exempt until 40 days after the securities were first offered to the public. It is generally believed that the concept "offered to the public" for purposes of the 40-day limitation of § 4(a)(3) is not limited to offerings in the United States.

There is thus no express exemption in the Securities Act for offers and sales that are made outside the United States by an issuer, an underwriter or a dealer if there is any use of jurisdictional means in connection with the initial issue or subsequent resales.

[1] Release 4708

Although the registration requirements of the Securities Act apply by their terms whenever jurisdictional means are used to offer and sell securities, the SEC, after public pressure, interpreted their scope less broadly. The SEC first announced its view of the extraterritorial reach of the registration requirements of the Securities Act in 1964 when it published SEC Release No. 33-4708 ("Release 4708"). In that release, the SEC acknowledged that the securities laws were "primarily intended to protect American investors" and concluded that debt securities could be issued by U.S. companies without registration if "the offering is made under circumstances reasonably designed to preclude distribution or redistribution of the securities within, or to nationals of, the United States" or in circumstances that would result in the securities "coming to rest" abroad. [7] This formulation was characteristic of the U.S. approach to regulation at the time—a desire to prohibit doing indirectly what could not be done directly—which led to imprecise general statements such as "coming to rest" that raised as many questions as they purported to answer.

On the basis of Release 4708, and no-action letters issued under it, U.S. securities lawyers developed detailed contractual provisions and related procedures designed to ensure that securities being offered abroad would not flow into the United States or wind up in the hands of U.S. persons as part of their distribution. For debt securities, these provisions typically included: (i) procedures to ensure that securities in definitive form were not available until 90 days after the distribution had been completed, and then only upon certification that the owner was not a U.S. person, (ii) agreements by the underwriters that they would not sell unsold allotments in the United States or to U.S. persons at any time, or other securities sold in the offering and acquired subsequently in the market until the 90-day period had passed, and (iii) agreements by the underwriters that they

p. 8-5
p. 8-6

would deliver "confirmations" to other dealers imposing the same selling restrictions on them. [8] The concept of completion of the distribution was integral to these procedures, and the definition of "U.S. person" embraced U.S. nationals resident abroad.

[2] Problems That Emerged Under Release 4708

While the cooperative efforts of the SEC, the private bar and market participants provided a degree of certainty as to whether particular international offerings were required to be registered, certain difficulties emerged. First, as the international securities markets broadened and developed, issues arose that were not contemplated at the time of Release 4708. These included fundamental questions such as the application of the release (which had been addressed specifically to debt offerings by U.S. issuers) to international offerings by foreign issuers, including in particular international equity offerings. Indeed, for equity securities, lockup and certification procedures were not practicable, so the steps taken were limited to variants of (ii) and (iii) described above for debt securities. There were also technical questions— *e.g.*, the application of the registration requirements to "continuous" offerings, such as medium-term note programs in which discrete tranches of debt securities are issued from time to time with varying degrees of frequency, sometimes as often as daily. [9]

Second, the growing internationalization of the securities markets, and in particular the desire of U.S. institutional investors to acquire foreign securities as part of their diversified worldwide portfolios, focused attention on whether the registration requirements of the Securities Act should be subject to a more rigorous territorial limitation. For example, while Release 4708 stated that the registration requirements of the Securities Act were intended to protect U.S. nationals, it was not clear whether as a matter of law such persons were or should be entitled to the protections of the registration requirements when purchasing unregistered securities from abroad in markets outside the United States.

Finally, there was some uncertainty as to when securities offered and sold abroad could be resold in the United States pursuant to the exemptions from the registration requirements afforded by § 4(a)(1) or § 4(a)(3) of the Securities Act. The difficulty was that the registration requirements clearly apply to offers and sales that are part of a distribution, but the Securities Act is silent as to when a distribution is over. While the procedures developed under Release 4708 were reasonably designed to ensure that the securities being offered "came to rest"

p. 8-6

p. 8-7

abroad, and thus were adequate to ensure that offers and sales made in accordance with them did not have to be registered, neither the SEC nor the private bar was able to say precisely when securities offered abroad could trade back into the United States under § 4(a)(1) or § 4(a)(3), since there was no definitive answer to the question of whether any particular seller was still participating in a distribution. It also was unclear as a matter of law whether each distribution participant was required to avoid resales until all distributors had sold their allotments or only until it had sold its allotment.

Other exemptions from registration suggested a cautious approach in the absence of official guidance— *e.g.*, the exemption provided by § 3(a)(11) for intrastate offerings if, among other things, there are no resales outside the state in question for a period of nine months, or the exemption provided by Rule 144 under the Securities Act, which at that time restricted resales of privately placed securities for three years. Securities lawyers generally advised that 90 days after completion of the distribution should be allowed before debt securities and equity securities offered abroad with respect to which there was no active U.S. market could be considered to be freely tradable into the United States under § 4(a)(1) or § 4(a)(3). [10] However, the staff of the SEC indicated informally its belief that up to nine months or a year should be allowed for equity and convertible debt of all U.S. issuers and for foreign issuers whose shares were actively traded in the United States.

Footnotes

1 The term "interstate commerce" extends to commerce between the United States and other countries. § 2(a)(7) of the Securities Act.

2 There is limited jurisprudence regarding the application of the registration requirements to offerings outside the United States. The cases so broadly interpreting the concept of jurisdictional means have generally involved efforts by issuers and underwriters to qualify for the intrastate offering exemption of § 3(a)(11) of the Securities Act, often in rather dubious circumstances. It is doubtful that the doctrines articulated in those cases would be applied in full to international offerings by foreign issuers, where considerations of comity would be weighty. Moreover, even if a court were to conclude that jurisdictional means had been used, it would still be possible to find a lack of subject matter jurisdiction. *See infra* Note 4.

3 *See, e.g.*, *United States v. Wolfson*, 405 F.2d 779, 783–84 (2d Cir. 1968) (discussing reasonably foreseen use of the mails).

4 A non-U.S. person who purchased securities outside the United States would have a right to rescission if the registration requirements were violated. In light of recent U.S. court decisions, it is, however, doubtful whether U.S. courts would adopt this position, and unlikely that they would do so in the case of an offering by

a foreign issuer. *See* § 11.10[3] for a discussion of the extraterritorial reach of the U.S. securities laws and the recent court decisions in the United States following the Supreme Court's decision in *Morrison v. National Australia Bank*, 130 S. Ct. 2869 (2010).

5 *See* §§ 4(a)(1) and 4(a)(3) of the Securities Act. There are exemptions from Securities Act registration based on types of offerings, such as for certain offerings of one security for another issued by the same company (*see* § 3(a)(9) of the Securities Act) or for offerings of securities that receive court approval following a fairness hearing (*see* § 3(a)(10) of the Securities Act). These exemptions can apply to offerings of securities outside the United States. *See* § 10.06[2], Note 114 and accompanying text; § 9.05[3][b], Note 149 and accompanying text. In addition, there are exemptions for certain types of securities, such as those issued or guaranteed by U.S. banks or U.S. branches or agencies of foreign banks (*see* § 3(a)(2) of the Securities Act and § 3.05[2]), that are also available for offerings of securities outside the United States.

6 The definition of "underwriter" in § 2(a)(11) of the Securities Act states explicitly that the term "shall not include a person whose interest is limited to a commission from an underwriter or dealer not in excess of the usual and customary distributors' or sellers' commission."

7 29 Fed. Reg. 9828 (July 22, 1964). This release dealt only with the registration requirements of § 5 of the Securities Act and not with the scope of the antifraud provisions of the securities laws. The same is true of Regulation S under the Securities Act, the successor to Release 4708, discussed later in this chapter.

8 For a discussion of the practices developed on the basis of Release 4708, *see* Alan L. Beller & Gail S. Berney, *Eurobonds*, 19 REV. SEC. COMM. REG., No. 4 (1986).

9 *See* § 10.02[2].

10 Over time, some members of the securities bar became relatively comfortable with a 40-day seasoning period in certain circumstances, since 40 days is the period specified in § 4(a)(3)(A) of the Securities Act.

U.S. Regulation of the International Securities and Derivatives Markets, § 8.02, SAFE HARBOR PROVISIONS OF REGULATION S

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 8.02 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

In response to the difficulties and uncertainties discussed in § 8.01 above, in 1990 the SEC adopted Regulation S under the Securities Act—a comprehensive approach to the various issues relating to offerings of securities outside the United States that undid or superseded many of the concepts that had previously applied. [11] Regulation S consists of a general statement—which declares simply

p. 8-8

that the registration requirements apply only to offers and sales of securities made in the United States—and two safe harbors. A "safe harbor" under U.S. law is, generally speaking, a set of detailed procedures for ensuring that a general principle is observed. If the detailed procedures are followed, any doubts about how the general principle will be applied can be eliminated.

The general statement does not often serve as a basis for planning offerings outside the United States. Because the consequences of violating the registration requirements are so severe, issuers and underwriters often wish to receive the legal opinion of U.S. counsel that registration is not required. [12] While the territorial principle was a helpful and sensible advance in defining the scope of the registration requirement, in view of the difficulties of applying that principle to transactions that are by definition international in character, U.S. counsel is likely to be reluctant to provide opinions with respect to transactions not covered by one of the safe harbors.

The safe harbors are for (i) offers and sales by issuers, other participants in a distribution and their affiliates, and (ii) resales by others, such as investors that acquire securities in a U.S. private placement (including in a transaction exempt from the registration requirements under Rule 144A). [13]

In 1998, the SEC adopted amendments to Regulation S intended to prevent certain abusive practices by U.S. issuers that developed in connection with equity offerings purportedly made pursuant to the Regulation's safe harbors. [14] The release stated that the amendments to Regulation S were designed to prevent “abuses in connection with sales of domestic equity securities [which] have been common … especially schemes involving the securities of thinly capitalized or ‘microcap’ companies.” [15] These schemes were viewed by the SEC as having been a "guise for distributing securities into the U.S. markets without the protections of § 5 of the Securities Act." [16]

[1] Issuer and Distributors

p. 8-8

p. 8-9

In order to fall within the first safe harbor, an offer or sale by an issuer, by distributors—underwriters, dealers and others who participate pursuant to a contractual arrangement in a distribution—or by their affiliates or anyone acting on their behalf, must meet two basic conditions: (i) the securities must be sold in an "offshore transaction" and (ii) there can be no "directed selling efforts" in the United States by the issuer or any distributor (or any of their affiliates).

[a] Offshore Transaction

An offer or sale is an "offshore transaction" if the offer is made outside the United States and either (i) the buyer (who may be a U.S. person) is (or is reasonably believed by the seller to be) outside the United States when the buy order is originated or (ii) the transaction is executed on the physical trading floor of a foreign securities exchange. [17] For purposes of alternative (i) of the definition of

p. 8-9

p. 8-10

"offshore transaction," the general rule is that the buyer itself, rather than its agent, must be outside the United States. However, if the buyer is a corporation, partnership or investment company, it is enough that an authorized person employed by it or, in the case of an investment company, by its investment adviser, places the buy order while outside the United States. [18] Offers and sales in the United States to certain U.S. fiduciaries acting for foreign investors, [19] or to certain international organizations, are also considered offshore transactions. [20]

[b] Directed Selling Efforts

"Directed selling efforts" are any activities undertaken for the purpose, or that reasonably could be expected to have the effect, of conditioning the U.S. market for the securities being offered. [21] They include mailing printed material to U.S. investors, conducting promotional seminars in the United States or placing advertisements in publications with a general circulation in the United

p. 8-10

p. 8-11

States. [22] The distribution or publication in the United States of information, opinions or recommendations concerning the issuer or any class of its securities—including research reports sent out by a participant in the distribution (or any of its affiliates)—could also constitute directed selling efforts, depending on the circumstances. [23] However, marketing efforts in connection with a registered U.S. public offering, or with a transaction that is exempt from the registration requirements of the Securities Act, such as a U.S. private placement (including general solicitation and general advertising in Rule 506(c) and Rule 144A offerings), [24]

p. 8-11

p. 8-12

generally will not be treated as directed selling efforts for a simultaneous offering outside the United States. [25]

The prohibition on directed selling efforts is not intended to interfere with routine corporate communications, news stories or other *bona fide* journalistic activities. Thus, the dissemination by an issuer of routine corporate communications of the kind normally published by companies, such as press releases regarding financial results or the occurrence of material events, will not be deemed to be directed selling efforts. [26] In addition, access by journalists to press conferences and general meetings with company spokesmen, and to notices released to the press, need not be limited, even when the foreign offering is being discussed and the journalists work for publications with a general circulation in the United States, so long as: the press conference or meeting is held, and the notice is released, outside the United States; the information to be disseminated is made available to the foreign and U.S. press generally; and the press conference or release is not intended to induce purchases of securities by persons in the United States. [27]

The requirement that the information be made generally available to the press created uncertainty with respect to the common practice in Europe of granting one-on-one interviews to a limited number of financial publications— *The Financial Times* in particular—in connection with or in anticipation of an offering. If the publication had a general circulation in the United States or, as in the case of *The Financial Times*, a U.S. edition that may also run the interview, one-on-one interviews were discouraged by securities lawyers in the absence of definitive SEC guidance on the question. Uncertainty, some of it unwarranted, also arose as to the ability of the U.S. press to attend general presentations.

Partly in response to these uncertainties, the SEC adopted Rule 135e under the Securities Act, which provides a "safe harbor" to enable members of the press, including the U.S. press and publications with a general circulation in the United States to participate in offshore press activities conducted by or on behalf of non-U.S. issuers. [28] Rule 135e reaffirms the SEC's previous guidance regarding the ability of journalists to obtain access to issuers outside the United States; it allows one-on-one interviews, including "exclusive" interviews, to be granted to U.S. journalists; and it permits the U.S. journalists to participate in meetings with the issuer or specially arranged visits to the issuer, so long as the issuer either holds a general press conference to which both the U.S. and foreign journalists are given access before or after those interviews or meetings or gives foreign journalists the opportunity to conduct similar interviews or to participate in similar meetings. [29]

In general, Regulation S is not intended to interfere with any lawful and customary activities, selling or otherwise, that are conducted outside the United States. [30] Advertising campaigns for an offering outside the United States, including on television and radio, as occurred regularly in European privatizations, are therefore consistent with Regulation S. [31] Care should still be taken as to the information disseminated through such activities about the issuer and the securities being offered, particularly in relation to the consistency of such information with the offering document. [32]

Finally, while dissemination in the United States of a broker-dealer's quotations for a security being offered and sold outside the United States could be deemed directed selling efforts, the dissemination of a foreign broker-dealer's quotations by third-party systems (*e.g.*, a system operated by a foreign marketplace or by a private vendor that disseminates such quotations primarily

p. 8-13

p. 8-14

in foreign countries) will not be deemed directed selling efforts, provided that (i) securities transactions cannot be executed between foreign broker-dealers and persons in the United States through the system and (ii) the issuer, distributors, their respective affiliates, persons acting on behalf of any of the foregoing, foreign broker-dealers and other participants in the system do not initiate contacts with U.S. persons or persons within the United States beyond those contacts permitted under Rule 15a-6 under the Exchange Act. [33]

The prohibition on directed selling efforts in the United States applies to each participant in the distribution during any "distribution compliance period" under Regulation S [34] and for so long as such participant is offering an unsold allotment. Because the prohibition on directed selling efforts can extend past the closing date, a number of questions have arisen as to when "tombstone" advertisements [35] can be published in a publication having a general circulation in the United States and when research reports can be circulated in the United States.

Tombstone advertisements in a publication with a general circulation in the United States will not be viewed as directed selling efforts, no matter when publication occurs, so long as less than 20% of the publication's aggregate circulation (including U.S. and foreign editions if they are substantially the same) is in the United States and the advertisement contains an appropriate legend and only the limited information specified by Regulation S. [36] If those requirements are not met, a participant in the distribution should not publish a tombstone advertisement in a publication with a general circulation in the United States until any distribution compliance period under Regulation S has expired and the person publishing the tombstone has disposed of its allotment.

Similarly, research reports may be circulated in the United States at any time if they meet the requirements of Rules 138 and 139 under the Securities Act. [37] If they do not meet those requirements, a participant in the distribution should not circulate research reports in the United States until the expiration of

p. 8-14

p. 8-15

any distribution compliance period under Regulation S and the disposition of its allotment. [38]

[c] Additional Requirements

The offshore transaction and directed selling efforts requirements apply to any offering made in a manner that is intended to fall within a safe harbor of Regulation S under the Securities Act. However, in order to qualify for the safe harbor for issuers, distributors, their affiliates and persons acting on their behalf, certain additional requirements may need to be met as well. These requirements vary depending principally on the status of the issuer. [39] In general, the safe harbor provisions are least restrictive when it is least likely that securities offered abroad will flow into the U.S. market (Category 1) and most restrictive when adequate information about the issuer is not publicly available in the United States and existing or potential U.S. market interest is sufficient to suggest that offerings of the issuer's securities outside the United States may not come to rest abroad (Category 3). When adequate information about the issuer is publicly available in the United States (Category 2), the concerns about securities flowing into the U.S. market are reduced, and the restrictions fall between these two extremes. As a result of the amendments to Regulation S adopted in 1998, equity offerings by all U.S. issuers are subject to additional restrictions because of the SEC's concerns about flowback, regardless of availability of information.

The following table provides an overview of offerings that fall under each category: [40]

p. 8-15

p. 8-16

TABLE 8-1

Category 1	*Category 2* [41]	*Category 3*
• Equity securities of a foreign issuer, [42] if there is no “substantial U.S. market interest” [43] in that class of equity. • Debt securities of a foreign issuer, if there is no “substantial U.S. market interest” in the issuer's total debt securities. • Any “overseas directed offering.” [44] • Securities backed by the full faith and credit of a foreign government.	• Equity securities of a foreign issuer that is a reporting issuer, [45] if there is “substantial U.S. market interest” in that class of equity. • Debt securities of a foreign issuer, if there is “substantial U.S. market interest” in the issuer's total debt securities. • Debt securities of a U.S. issuer [46] that is a reporting issuer.	• Equity securities of a foreign issuer that is not a reporting issuer, if there is “substantial U.S. market interest” in that class of equity securities. • Equity securities of any U.S. issuer. • Debt securities of a U.S. issuer that is not a reporting issuer.

41 Market practice has developed to apply additional restrictions to two types of offerings of equity securities of reporting foreign issuers that fit within Category 2: certain offerings of equity securities where substantially all of the trading takes place in the United States, whether in ADR form or otherwise; and offerings of ADRs, irrespective of the trading level of the underlying securities in the United States. Some market participants refer to such offerings as “Category 2 ½” offerings. For a further discussion of “Category 2 ½,” *see infra* § 8.02[1][c][ii].

42 Defined in as a “foreign government” or “foreign private issuer” (each as defined in Rule 405 under the Securities Act).

43 For a discussion of “substantial U.S. market interest,” *see* § 8.02[1][c][i].

44 *See* Note 56 and accompanying text.

45 The definition of “reporting issuer” excludes investment companies registered or required to register under the Investment Company Act of 1940. For a discussion of the meaning of “reporting issuer” under Regulation S, *see* Note 57.

46 The technical term used in Regulation S is “domestic issuer,” which means any issuer other than a “foreign government” or “foreign private issuer” (each as defined in Rule 405 under the Securities Act).

The following table provides an overview of the restrictions that apply to offerings that fall under each category:

p. 8-16

p. 8-17

TABLE 8-2

Category 1	*Category 2* [47]	*Category 3 Debt*	*Category 3 Equity*

• Offshore transaction. • No directed selling efforts.	• Offshore transaction. • No directed selling efforts. • Offering restrictions. • 40-day distribution compliance period. • Notice to distributors.	• Offshore transaction. • No directed selling efforts. • Offering restrictions. • 40-day distribution compliance period. • Notice to distributors. • Temporary global note.	• Offshore transaction. • No directed selling efforts. • Offering restrictions. • 6-month to 1-year distribution compliance period. • Notice to distributors. • Investor certification of non-U.S. person status • Purchaser agreement on resales and hedging. • Transfer refusal procedures. • Legend (for domestic issuers only).

47 The following restrictions are typically imposed in a "Category 2 ½ " offering:

- offshore transaction;
- no directed selling efforts;
- offering restrictions;
- 40-day distribution compliance period;
- notice to distributors;
- investor certification of non-U.S. person status;
- purchaser agreement on resales and hedging; and
- transfer refusal procedures.

For a further discussion of "Category 2 ½," *see infra* § 8.02[1][c][ii].

[i] *Category 1 Offerings*

p. 8-17

p. 8-18

Category 1 offerings include all offerings of securities of a foreign government (or of a governmental body that would be eligible to file Securities Act registration statements on Schedule B), [48] and offerings of a foreign private issuer if there is no "substantial U.S. market interest" in the type of security being offered. As a practical matter, particularly in the case of equity securities, there will be a "substantial U.S. market interest" for very few foreign issuers. Even foreign companies that have offered their shares to the public and obtained a listing on a securities exchange in the United States are, in most cases, unlikely to find that there is a substantial U.S. market interest in their equity securities. [49]

There is no substantial U.S. market interest in a foreign company's *debt* securities if the issuer reasonably believes that when the offering began: (i) its debt securities were held of record by fewer than 300 U.S. persons, *or* (ii) less than $1 billion in aggregate principal amount of its debt securities was held of record by U.S. persons, *or* (iii) less than 20% in aggregate principal amount of its debt securities was held of record by U.S. persons. [50] Commercial paper that

p. 8-18
p. 8-19

is exempt from registration pursuant to § 3(a)(3) of the Securities Act need not be counted when applying these tests. [51]

It is important to note that, in the case of debt securities that are guaranteed by the parent of the issuer, the definition of substantial U.S. market interest applies only to the debt securities of the parent company. [52] If, however, the debt securities are guaranteed by an entity other than the parent of the issuer, for example, by a foreign bank, the definition applies to the debt securities of both companies considered separately, and if there is a substantial U.S. market interest for the debt securities of either of them, the offering of the bonds must be treated as falling into Category 2. If a foreign bank has guaranteed a large number of debt securities in bearer form or has its own debt securities outstanding in a pattern that suggests Category 2 treatment is appropriate, the simplest and most prudent course would be to treat an offering of debt securities guaranteed by that bank as falling into Category 2. [53]

There is no substantial U.S. market interest in a foreign company's equity securities if the issuer reasonably believes that in its most recent fiscal year (i) the securities exchanges and inter-dealer quotation systems [54] in the United States did not constitute the single largest market for the class of equity securities being offered *and* (ii) either (a) less than 20% of all recorded trading in that class of securities took place on securities exchanges and inter-dealer quotation systems in the United States or (b) at least 55% of such recorded trading took place on securities markets of a single foreign country. [55]

p. 8-19
p. 8-20

Category 1 also includes any "overseas directed offering"— *i.e.*, an offering by a foreign issuer that is directed to the residents of a single foreign country in accordance with local laws and practices, or any offering of straight debt securities by a U.S. issuer that is made in the same manner, but only if the securities of the U.S. issuer are denominated in a foreign currency. [56]

No requirements beyond those relating to offshore transactions and directed selling efforts are required for Category 1 offerings. Some market participants treat offerings of securities of foreign issuers as falling into Category 2 as a matter of course. Where it is possible to determine clearly that an offering falls into Category 1, it does not seem necessary to demand compliance with the additional requirements of Category 2.

[ii] *Category 2 Offerings*

Category 2 offerings consist of all debt offerings of foreign issuers that do not fall into Category 1, all non-Category 1 equity offerings of foreign issuers that are subject to (and in compliance with) the periodic reporting requirements of the Exchange Act [57] and all debt offerings (other than overseas directed offerings) of U.S. issuers subject to and in compliance with the periodic reporting requirements of the Exchange Act.

For Category 2 offerings, certain steps are required beyond satisfying the offshore transaction and directed selling efforts requirements. These may be described as the "distribution compliance period," "offering restrictions" and "notice" requirements.

p. 8-20
p. 8-21

Under the "distribution compliance period" requirement, [58] distributors generally may not offer or sell securities sold in the offering to or for the account or benefit of U.S. persons until 40 days after the later of (a) the date the securities are first offered to the public and (b) the closing date for the offering. [59] Unsold allotments may not be sold to or for the account or benefit of U.S. persons at any time. With a number of exceptions, "U.S. person" is defined to include individuals resident in the United States and corporations and other entities organized there. [60] It does not include U.S. nationals resident abroad. [61]

p. 8-21
p. 8-22

Except in the case of continuous offerings, which are discussed in Chapter 10, the "distribution compliance period" under Regulation S is not tied to the completion of the distribution of the securities in question (as it was pursuant to Release 4708). This allows distributors to sell securities other than allotment securities free of the restrictions of Regulation S (i) at any time, in the case of securities that were not sold in the offering, or (ii) once the 40-day distribution compliance period has elapsed, in the case of securities sold in the offering and repurchased in the market, even when allotments remain unsold either by them or by other participants in the distribution. [62] It is, however, important to recall in this regard that allotment securities include securities acquired in stabilization activities or in an uninterrupted chain of transactions between dealers (as well as securities acquired directly from the issuer). Accordingly, except in clear cases, it may be difficult as a practical matter to distinguish allotment securities from other securities for the purpose of taking advantage of this provision of Regulation S.

The issuer and the distributors must also comply with the requirement that "offering restrictions" be adopted. [63] The underwriters and selling group members must agree in writing that they will make offers and sales of the securities during the distribution compliance period only in accordance with Regulation S or pursuant to an exemption from the registration requirements of the Securities Act. [64] Moreover, any offering materials or documents used in connection with the offer or sale of the securities during the "distribution compliance period"

p. 8-22

p. 8-23

must include statements to the effect that the securities have not been registered under the Securities Act and may not be sold in the United States or to U.S. persons (other than distributors) unless the securities are registered under the Securities Act or an exemption from the registration requirements is available. [65] In particular, these statements must appear in the prospectus or offering circular and in summary form in any advertisement relating to the offering. [66]

Regulation S also requires each distributor that sells securities to a distributor, U.S. or foreign securities dealer or other person receiving remuneration in connection with the sale during the distribution compliance period (or allotment securities at any time) to deliver a confirmation or other "notice" stating that the purchaser is subject to the same restrictions on offers and sales as a distributor. However, the purchaser receiving the notice need not observe the offering restrictions requirements or deliver a similar notice to others unless the purchaser is a dealer or person receiving selling concessions, fees or other remuneration in respect of the securities offered or sold. [67]

In addition, in light of the concerns expressed by the SEC in the 1998 Release with respect to equity issuances by foreign issuers under Regulation S, [68] market practice has developed to apply additional restrictions to two types of

p. 8-23

p. 8-24

Regulation S offerings of securities of foreign issuers that are reporting companies under the Exchange Act: certain offerings of equity securities where substantially all of the trading takes place in the United States, whether in American depositary receipt ("ADR") form or otherwise; and offerings of ADRs, irrespective of the trading level of the underlying securities in the United States. Such offerings are referred to by some market participants as "Category 2 ½" offerings, in reference to the fact that although the offerings technically meet the requirements of Category 2, the trading profile of the securities would suggest that some of the policy considerations underlying the additional restrictions contained in Category 3 are relevant to such securities as well.

For these offerings, modified Category 3 procedures are considered appropriate to limit the flowback of such securities into the United States for some period of time, thereby rebutting the suggestion that the securities are merely being parked overseas on a temporary basis in order to avoid the registration requirements of the Securities Act. These procedures are generally structured to include transfer restrictions that apply for 40 days, rather than six months, as would be the case in a Category 3 offering. [69] In addition, other procedures that might be implemented include requiring each investor to certify that it has not engaged in hedging activities with regard to the securities in anticipation of the offering or during the distribution compliance period and, if the issuer has a registered ADR facility (and underlying shares are being offered rather than ADRs), that it will not deposit the offered securities into the registered ADR facility during the distribution compliance period. A registered ADR facility may also be closed to new deposits during the distribution compliance period to police the transfer restrictions; alternatively, new depositors into the facility may be required during the distribution compliance period to certify that the securities they are depositing were acquired by them before the offering. It may also be necessary to have the securities represented by some form of nonfungible security during the distribution compliance period, or held through some form of custodial facility to allow policing of the transfer restrictions. This would be most likely when ADRs are being offered or when common shares are being offered and it is not possible to close the ADR program to new deposits or there is no ADR program and the securities being offered trade in the same form as the securities traded in the United States. When bonds convertible into these types of securities are offered, precluding conversion for 40 days from issuance would be a prudent means of policing the transfer restrictions with respect to the underlying securities. Category 2 offerings of convertible bonds, in particular, have also raised difficult questions regarding the availability of an exemption from SEC registration requirements in connection with hedging activities (for example, a purchase of the convertible bond and then a sale of the underlying security on

p. 8-24

p. 8-25

a U.S. exchange) by distributors on behalf of investors and by investors acting for themselves.

[iii] *Category 3 Offerings*

Category 3 offerings consist of (i) equity offerings of foreign issuers not subject to the periodic reporting requirements of the Exchange Act if there is a "substantial U.S. market interest" for the class of securities being offered; (ii) equity offerings of all U.S. issuers; and (iii) debt offerings of U.S. issuers not subject to the periodic reporting requirements of the Exchange Act. [70] Very few offerings of foreign issuers will fall into this category. [71]

There are more elaborate procedural requirements for Category 3 offerings. For both debt and equity offerings, the "distribution compliance period," "offering restriction" and "notice" requirements apply. [72] In addition, in the case of debt offerings, when issued the securities must be represented by a temporary global security that cannot be exchanged for securities in definitive form until the expiration of the 40-day distribution compliance period and then only upon certification of beneficial ownership of the securities by either (i) a non-U.S. person or (ii) a U.S. person who purchased the securities in a transaction that did not require registration under the Securities Act. [73]

In the case of equity offerings, the distribution compliance period is extended to six months [74] (one year if the issuer is a nonreporting issuer), and the following additional conditions apply during the distribution compliance period: [75]

- the purchaser of the securities must certify that it is not a U.S. person and is not acquiring the securities for the account or benefit of any U.S. person, or

  p. 8-25

  p. 8-26

  is a U.S. person who is purchasing securities in a transaction that does not require registration under the Securities Act;
- the purchaser of the securities must agree to resell such securities only in accordance with the provisions of Regulation S, pursuant to registration under the Securities Act or pursuant to an available exemption from registration, and must agree not to engage in hedging transactions with regard to such securities unless in compliance with the Securities Act;
- the securities of a U.S. issuer must contain a legend to the effect that transfer is prohibited except in accordance with the provisions of Regulation S, pursuant to registration under the Securities Act or pursuant to an available exemption from registration, and that hedging transactions involving those

securities may not be conducted unless in compliance with the Securities Act; and

- the issuer is required, either by contract or a provision in its bylaws, articles, charter or comparable document, to refuse to register any transfer of the securities not made in accordance with the provisions of Regulation S, pursuant to registration under the Securities Act or pursuant to an available exemption from registration; provided, however, that if the securities are in bearer form or foreign law prevents the issuer of the securities from refusing to register securities transfers, other reasonable procedures (such as legends) are implemented to prevent any transfer of the securities not made in accordance with the provisions of Regulation S.

Moreover, the "offering restrictions" requirement is expanded in equity offerings by U.S. issuers to include an agreement by all distributors not to engage in hedging transactions with regard to the securities during the distribution compliance period unless in compliance with the Securities Act and a requirement that all offering materials and documents state that hedging transactions involving these securities may not be conducted unless in compliance with the Securities Act. [76]

p. 8-26

p. 8-27

The Category 3 restrictions, as applied to U.S. companies, have led to significant difficulties. In 1999 and 2000, three exchanges, initially the European Association of Securities Dealers Automated Quotation N.V./S.A. ("EASDAQ") [77] and, subsequently, the Australian Stock Exchange and the OM Stockholm Exchange, wrote to the staff saying that smaller, privately held, nonreporting, growth-oriented U.S. companies wished to list their shares on their respective exchanges in connection with offerings made in reliance on the safe harbor provisions of Regulation S without simultaneous registration under the Securities Act. However, because of the manner in which securities listed on these exchanges were traded and settled, it was not possible for the offerings to comply strictly with some of the requirements of Regulation S. In particular, the certification, agreement, monitoring and stop-transfer requirements of Rule 903(b)(3)(iii)(B)(1), (2) and (4) under the Securities Act could not be implemented due to the book-entry trading systems they operated, and the notice requirements contained in Rules 903(b)(3)(iv) and 904(b)(1)(ii) could not be met by exchange members or participants because their computer systems were not configured in a way that would allow them to comply. [78]
