Noting that (i) U.S. firms are not permitted to participate in the markets in question, either as brokers or as market-makers, and (ii) no trading screens would be placed in the United States, the SEC staff issued a series of no-action letters in 1999 and 2000 [79] permitting reliance by nonreporting U.S. issuers on certain alternative procedures for initial public offerings under Regulation S that are made in conjunction with listings on these markets.

p. 8-27

p. 8-28

However, it is no longer clear that these no-actions letters can be relied upon. [80] More recently, some European exchanges have considered seeking similar no-action positions, but no relief has been granted. It would be advisable to seek and obtain clearance, formal or informal, before proceeding, rather than relying on the procedures developed specifically for these three exchanges. Even if these procedures are available, some non-U.S. exchanges may be unwilling to impose on their members restrictions regarding transactions with or for the account of U.S. persons.

There have been a number of Category 3 offerings in recent years by U.S. issuers, many of them seeking a listing on alternative markets, such as the Alternative Investments Market of the London Stock Exchange ("AIM"). In 2014 and 2015, the London Stock Exchange issued a series of notices in connection with the enactment of the EU Regulation on Central Securities Depositories. The regulation introduced the requirement for electronic settlement of securities on European trading venues, including securities issued under Category 3. As a result, the UK central securities depository ("CREST") developed procedures to allow the electronic settlement of securities issued under Category 3, which were published by CREST in May 2015. Effective September 1, 2015, the London Stock Exchange adopted amendments to its rules on electronic settlement of

Category 3 securities in line with the EU regulation and CREST's procedures. These amendments removed the exclusion of "Regulation S, Category 3" securities from the rule that requires securities to be recorded in electronic form, and updated the London Stock Exchange's guidance to establish revised procedures for the electronic settlement of these securities while meeting the restrictions imposed under Category 3. [81] Although the SEC staff has not approved these procedures, we understand they have been used in a number of offerings.

p. 8-28

p. 8-29

A second difficulty in complying with Category 3 restrictions for offshore U.S. equity offerings relates to the application of the Category 3 restrictions to convertible bond offerings by U.S. companies. This difficulty and the SEC staff's solution to it are discussed in § 10.06[4].

A third difficulty has arisen out of the relationship between Regulation S and Rule 802 under the Securities Act in the context of exchange offers by U.S. companies for the shares of foreign acquisition targets. Rule 802, described in detail in § 9.05[9][c], permits an exchange offer by a U.S. company for shares of a foreign target on the basis of an exemption from the registration requirements of the Securities Act so long as less than 10% of the target's publicly held shares (calculated in the manner specified in the rule) are held of record by U.S. holders. The exemption is not conditioned on compliance with any resale restrictions, such as those contained in Category 3 of Regulation S. Thus, shares of U.S. companies that are sold offshore to foreign target shareholders in transactions that are exempt from registration under Rule 802 may flow back immediately into the U.S. market, subject to the availability of the general exemptions afforded by §§ 4(a)(1) and 4(a)(3) of the Securities Act. This result has been accepted by the SEC, at least where there are some shares in the target that are held by U.S. holders. The SEC staff does not agree, however, that Rule 802 is available when there are no U.S. shareholders in the target. [82] In these circumstances, U.S. companies seeking to avoid registration must rely on the exemption afforded by Regulation S, and the resale restrictions of Category 3 will apply.

The onerous restrictions imposed by Category 3 significantly reduce the value of shares in U.S. companies as acquisition currency. Accordingly, where Rule 802 is not available, U.S. acquirors of foreign companies will likely seek to register their exchange offers with the SEC. However, the applicable registration statement could require the inclusion of financial information about the target, reconciled to U.S. generally accepted accounting principles ("GAAP"), and this may not be readily available. [83] Moreover, the registration process can be time-consuming and costly. In these circumstances, *i.e.*, when Rule 802 is not available because the target has no U.S. shareholders, consideration should be given to approaching the SEC staff in order to seek a relaxation of the Category 3 requirements. Arguments in favor of such a relaxation are that: (i) U.S. issuers report regularly under the Exchange Act, (ii) information about the acquisition will be reported in the ordinary course on Form 8-K, so the market will be appropriately informed, (iii) it is unlikely that the shares will be valued at a discount,

p. 8-29

p. 8-30

thus rendering Category 3 restrictions largely superfluous because the incentive for immediate resale to lock in a discount will not be present and (iv) the rigorous application of Category 3 restrictions would place U.S. companies at a disadvantage in relation to competing foreign bidders to which Category 3 restrictions generally do not apply.

[d] Use of the Internet in Regulation S Offerings

As in the case of public and private offerings in the United States, issuers regularly use the Internet in connection with Regulation S offerings, and offering-related materials are often posted on the websites of issuers or other distribution participants. In 1998, the SEC outlined certain procedures that can be used to solicit non-U.S. purchasers over the Internet to ensure compliance with the relevant Regulation S restrictions. [84] First, the website should contain a prominent "meaningful" disclaimer making it clear that the offer is directed only to countries other than the United States. In the case of Category 2 and 3 offerings, the disclaimer should also make clear that the offer is not open to U.S. persons. Second, steps should be implemented that are reasonably designed to guard against engaging in actual sales in the United States or, where applicable, to U.S. persons. [85]

Third, it should be confirmed that there are no indirect indications—such as payment drawn on a U.S. bank—that purchasers are in the United States or, in a Category 2 or Category 3 offering, U.S. persons. Fourth, measures should be taken to ensure that the content of the solicitation does not appear to be targeted to persons in the United States or, where applicable, to U.S. persons. [86]

Issuers also often limit online access to offering materials by imposing an access filter that requires a user to provide residence information confirming that it has a non-U.S. address and, where applicable, that it is a non-U.S. person, before it can access offering material on the issuer's website. The SEC's 1998 outline of the steps that should be taken to guard against sales to U.S. persons did not require such an access filter for a Regulation S offering, but it did say an access filter should be used if there was a concurrent exempt placement in the United States. Also, in the context of SEC-registered offerings, the SEC stated

p. 8-30

p. 8-31

that an access filter is necessary [87] in order to rely on Rule 135e for Internet dissemination of press materials:

> Securities Act Rule 135e … permits a foreign private issuer and other offering participants to provide journalists with access to offshore press activities that discuss a present or proposed offering of securities. Rule 135e requires that press-related materials be released only outside the United States and that press conferences be held outside the United States. As a result, we believe that dissemination through the Internet by the issuer or other person covered by Rule 135e of these materials or press conferences will not comply with Rule 135e *unless procedures are implemented to assure that only permitted recipients under the rules are able to access the information.* [88]

Based on informal communications with the SEC staff, we understand that the requirement of access filters for reliance on Rule 135e in an SEC-registered offering, discussed in the April 2000 release, was not intended to apply more generally to require them as a condition to posting offering-related materials on the Internet in any Regulation S offering. We do not believe access filters are required in order to post offering-related materials on the Internet in a Regulation S offering, as long as the other circumstances of the offering do not suggest that the posting could be conditioning the U.S. market. In particular, there should be no sales to U.S. persons and no disclosures suggesting a U.S. marketing focus. The issuer's past practices in posting similar materials, and any applicable local regulatory obligations to do so, would also support the view that the posting is not conditioning the U.S. market.

Where a Regulation S offering is being made in conjunction with a private placement in the United States, access filters have routinely been imposed because of the language in the 1998 release. Now that the prohibition on general solicitation and general advertising has been eliminated for private placements in reliance on Rule 506(c) or Rule 144A, practitioners may question whether access filters are still required in such offerings. For other private placements, for

p. 8-31

p. 8-32

example under § 4(a)(2), additional protective measures may be necessary. [89] These matters are described in greater detail in § 7.04.

[e] Impact of U.S. Sales

With two exceptions, the availability of the safe harbor is determined separately for the issuer and each distributor, so that a failure by one of them to comply will not affect the availability of the safe harbor for the others. [90] Directed selling efforts in the United States by the issuer or any distributor will cause the safe harbor to be lost for all of them, and the failure by the issuer or any distributor to adopt offering restrictions in connection with Category 2 and Category 3 offerings will also result in a loss of the safe harbor for all. [91]

Offshore transactions made in compliance with Regulation S will not be integrated with U.S. offerings that are registered under the Securities Act or are exempt from the registration requirements, for example, in accordance with Rule 144A under the Securities Act. [92] Accordingly, offerings outside the United States under Regulation S may be made in conjunction with registered public offerings or exempt offers and sales, including private placements, in the United States. [93]

p. 8-32

p. 8-33

Like Release 4708, Regulation S does not say when securities offered outside the United States may be sold into the United States under § 4(a)(1) or § 4(a)(3) of the Securities Act. It is, however, generally understood, and the SEC staff appears to have confirmed, that securities other than unsold allotments [94] and equity securities of U.S. issuers [95] may be sold into the United States immediately, subject in the case of sales by dealers to the 40-day requirement under § 4(a)(3), and subject in the case of sales by distributors and their affiliates in Category 2 and Category 3 offerings to the expiration of the applicable distribution compliance period.

However, the SEC has cautioned that Regulation S does not provide an exemption for resales into the United States by purchasers of securities placed offshore under Regulation S. [96] As a result, "persons who would be considered underwriters under § 2(a)(11) of the Securities Act are not permitted to make unregistered public resales of these securities in the United States in reliance on the § 4(a)(1) exemption from registration." [97] The determination whether a person is an underwriter, particularly in the case of an entity that is not a securities professional, is often based on an analysis of the facts and circumstances involved.

Investors who are not securities dealers and who do not receive a selling concession or similar discount are generally thought to be free to sell securities into the United States at any time under § 4(a)(1) of the Securities Act, subject to any applicable contractual limitations. The same should be true of non-U.S. shareholders, including affiliates, of a non-U.S. target who receive shares in an exchange offer conducted pursuant to Regulation S or Rule 802 under the Securities Act as part of a business combination, so long as the recipients of the shares are not affiliates of the acquiror. [98]

[2] Resales

The second safe harbor of Regulation S under the Securities Act is for resales of securities outside the United States by persons other than the issuer, a

p. 8-33

p. 8-34

distributor, any of their affiliates (except any officer or director who is an affiliate solely by virtue of holding such position) or any person acting on their behalf. Under this safe harbor, securities that are initially offered abroad, or in the United States in a private placement (including in a transaction exempt from the registration requirements under Rule 144A), can be resold immediately abroad so long as the "offshore transaction" requirement is met and there are no directed selling efforts in the United States in connection with the resale. [99] In the case of resales by dealers, officers and directors of the issuer, and certain other persons, additional conditions must be met in certain circumstances. [100]

For purposes of the resale safe harbor, the "offshore transaction" requirement is met if the offer is made outside the United States and either (i) the buyer (who may be a U.S. person) is (or is reasonably believed by the seller to be) outside the United States when the buy order is originated [101] *or* (ii) the transaction is executed on a foreign securities exchange or market designated by the SEC (a "designated offshore securities market" [102]). In contrast with the requirement of

p. 8-34

p. 8-35

the safe harbor for offers and sales by distributors, there is no need for the sale to take place on a physical trading floor. [103]

p. 8-35

p. 8-36

The 1998 amendments to Regulation S added Rule 905 under the Securities Act (and made conforming changes to Rule 144 under the Securities Act) to classify as "restricted securities" within the meaning of Rule 144 equity securities of U.S. issuers that are offered and sold under Regulation S. Thus, equity securities of U.S. issuers originally sold pursuant to Regulation S may be resold, after the expiration of a six-month holding period (or a one-year holding period for a nonreporting issuer), to a U.S. person by a nonaffiliate of the issuer in reliance on the safe harbor provided by Rule 144. [104]

Rule 905 also dealt with abuses of Regulation S where the offshore purchaser used a promissory note to pay all or a portion of the purchase price of equity securities of U.S. issuers and then repaid the promissory note only with the proceeds from the sale of the securities into the United States upon the expiration of the Regulation S distribution compliance period. As the SEC recognized, under such an arrangement, "in economic substance, the issuer is raising funds from the U.S. public markets." [105] The SEC's classification of domestic equity securities as Rule 144 "restricted securities" eliminates this problem by applying the Rule 144 requirement that its restricted period will not begin in the case of domestic equity securities purchased with promissory notes unless and until the promissory note (i) provides for full recourse against the purchaser of the securities, (ii) is secured by sufficient collateral other than the securities purchased and (iii) shall have been discharged by payment in full prior to the sale of the securities. [106]

Rule 905 also provides that the offshore resale under Regulation S of restricted securities that are equity securities of a U.S. issuer will not "wash off" the restricted status of those securities and allow them to be resold freely into the United States by the purchaser. Rather, the securities remain "restricted securities" under Rule 144 until the expiration of the applicable holding period under that rule no matter how many times the securities are resold outside the United States. [107] However, the SEC also noted that it was taking a targeted approach to

p. 8-36

p. 8-37

addressing the abuses prompting the 1998 amendments to Regulation S and declined to extend Rule 905 to the securities of foreign private issuers. [108] Accordingly, once resold outside the United States, securities other than equity securities of domestic issuers are unrestricted and generally can be freely resold, including into the United States, subject in the case of sales by dealers to the 40-day requirement under § 4(a)(3) and, in the case of sales by dealers and persons receiving selling concessions, fees or other remuneration in respect of the securities offered in Category 2 and Category 3 offerings, to the expiration of the applicable distribution compliance period. [109]

The resale safe harbor, even as tightened up by Rule 905, was a significant expansion of the position taken by the SEC in no-action letters issued under Release 4708. [110] In those letters, issued in connection with the French privatizations, the SEC staff permitted immediate "regular way" resales on the Paris Bourse of equity securities that were privately placed in the United States in circumstances where there was no U.S. public market for the issuer's securities (other than commercial paper) at the time of the U.S. placement. Based on subsequent statements by SEC staff members, securities lawyers generally believed that this approach to resales should be limited to exchanges where participation by U.S. investors was no greater than on the Paris Bourse. In particular, given the extent of U.S. participation in transactions on the London Stock Exchange, the approach derived from these no-action letters was not thought to be available for resales on that exchange. Resales on other European exchanges were considered by U.S. counsel on a case-by-case basis.

Regulation S extended this approach to debt securities and to all resales outside the United States that satisfy the requirements of the resale safe harbor, without regard to whether there is a U.S. market for the securities in question. One significant effect of this safe harbor is that U.S. investors can resell immediately outside the United States foreign equity securities that they acquired in private placements in the United States (including placements on the basis of Rule 144A). [111] The resale safe harbor thus significantly increased the attractiveness of privately placed securities of foreign issuers because the liquidity of such securities was no longer impaired—resales may be made immediately outside the

p. 8-37

p. 8-38

United States into the principal trading market for the securities. [112] Securities lawyers may still look to the doctrines contained in the no-action letters obtained in connection with the French privatizations [113] when considering whether resales on a securities exchange that is not a designated offshore securities market nonetheless have the benefit of an exemption from the registration requirements of the Securities Act.

Footnotes

11 The regulation was first proposed for comment in June 1988, a revised version was proposed for comment in July 1989 and a further revised version was adopted in April 1990. For a discussion of the regulation as originally proposed, *see* Leslie N. Silverman & Daniel A. Braverman, *Registration Requirements for Securities Offered Abroad*, 21 REV. SEC. COMM. REG., No. 22 (Dec. 21, 1988). The SEC received 89 comment letters on Regulation S as originally proposed, and these are outlined in the SEC's Outline of Commentators' Remarks dated April 21, 1989. The following discussion of the regulation draws on Adam Fleisher & Peter Castellon, *Regulation S Selling and Transfer Restrictions: A Basic User's Guide*, *available at* http://www.cgsh.com/cgsh/Regulation-S-Selling-and-Transfer-Restrictions.pdf (July 18, 2012).

12 Issuers and underwriters that violate the registration requirements of the Securities Act are subject to enforcement actions brought by the SEC and investors' right to rescission or damages. *See* § 11.02.

13 For a discussion of U.S. private placements, *see* Chapter 7.

14 *See* SEC Release No. 33-7505 (Feb. 17, 1998).

15 63 Fed. Reg. 9632 (Feb. 25, 1998).

16 63 Fed. Reg. 9632 (Feb. 25, 1998). Many of the abuses were first highlighted by the SEC in a 1995 interpretive release discussing certain "problematic practices" involving the purported offering under Regulation S of equity securities of U.S. issuers and requesting comment as to whether Regulation S should be amended to curb such perceived abuses. SEC Release No. 33-7190 (June 27, 1995). In 1997, the SEC issued a second release that proposed certain amendments to Regulation S and responded to comments received on the 1995 interpretive release, recommending among other things that equity securities of U.S. issuers, as well as equity securities of non-U.S. issuers if more than 50% of the trading volume for those securities takes place in the United States, be classified as "restricted securities" within the meaning of Rule 144 under the Securities Act. The SEC proposed treating such securities of non-U.S. issuers in the same way as equity securities of U.S. issuers despite substantial criticism from commenters on the prior release that the 50% test would be too broad. SEC Release No. 33-7392 (Feb. 20, 1997).

Although the SEC adopted most of the amendments proposed in its 1997 release in 1998, in order to "avoid undue interference with offshore offering practices of foreign companies," the amendments adopted did not apply to equity securities of foreign issuers. SEC Release No. 33-7505 (Feb. 17, 1998). The SEC nonetheless expressed continuing concern about the potential for abusive practices in offerings of equity securities by foreign issuers: "Although the abusive practices under Regulation S have not been evident in offerings by foreign issuers, the [SEC] was concerned that abusive practices might develop in the future since the economic incentives for indirect distributions and resales into the United States are the same for equity offerings by both domestic companies and foreign companies where the principal market for their securities is the U.S." SEC Release No. 33-7505 (Feb. 17, 1998), 63 Fed. Reg. 9632, 9633 (Feb. 25, 1998). The 1998 adopting release points out many of the considerations voiced by commenters that influenced the SEC's decision not to apply the amendments to foreign issuers, but the SEC left open the possibility of changing its position should abusive practices develop in the context of offshore equity offerings by foreign issuers. *See infra* Note 68. The SEC has also brought a number of enforcement actions against entities and individuals believed to be abusing the Regulation S safe harbor. *See, e.g.*, *Zacharias v. SEC*, 569 F.3d 458 (D.C. Cir. 2009); *In re Carley*, SEC Admin. Proc. File No. 33-8480 (Sept. 1, 2004); *In re Robert G. Weeks*, SEC Admin. Proc. File No. 3-9952 (Feb. 4, 2002); *SEC v. Cohen*, SEC Litigation Release No. 16583 (June 5, 2000); *SEC v. Softpoint, Inc.*, 958 F. Supp. 846 (S.D.N.Y. 1997), *aff'd without op.*, 159 F.3d 1348 (2d Cir. 1998); *United States v. Sung*, SEC Litigation Release No. 14500 (May 15, 1995).

17 Over the years since this reference was included in Regulation S, most foreign securities exchanges moved away from using a physical trading floor. Electronic systems have replaced the trading floor in many of these markets. Dealer-to-dealer systems involve transactions that cannot easily be analogized to those occurring on a physical trading floor, insofar as they involve transactions with known counterparties. Electronic "black-box" trading systems, however, maintain the anonymity of the buyers and sellers. So long as the buyer remains anonymous, we believe the seller should be able to form a reasonable belief that the buyer is not in the United States, provided the seller does not otherwise believe (due to, for example, independent knowledge of the identities of persons acting as buyers) that such persons are in the United States.

18 55 Fed. Reg. 18,306, 18,310 n.39 (May 2, 1990). Although neither Regulation S nor the adopting release deals expressly with offshore transactions involving U.S. pension funds, an offer or sale to a fiduciary outside the United States acting with discretion for the fund should qualify as an offshore transaction. There remains some uncertainty, however, as to the appropriate treatment of certain offshore accounts of U.S. pension funds under the "U.S. person" definition. *See infra* Note 61.

19 This codifies the no-action position taken by the SEC staff in *Baer Securities Corp*. (avail. Oct. 12, 1979). Although the rule speaks of U.S. fiduciaries who act on a discretionary basis for foreign investors, the principle applies all the more to U.S. fiduciaries who act for them on a nondiscretionary basis. The TEFRA antibearer bond rules, however, generally prohibit offers and sales in the United States of unseasoned debt securities in bearer form, even when the buyer is a fiduciary for a foreign investor. *See* § 8.04.

20 Sales in the United States pursuant to certain employee benefit plans, permitted by Rule 903(b)(1)(iv) of Regulation S, are also considered offshore transactions. *See Cleary, Gottlieb, Steen & Hamilton* (avail. July 24, 1990).

21 Rule 902(c)(3)(vi) under the Securities Act provides that the publication by an issuer of a notice announcing a foreign offering will not constitute "directed selling efforts" if the notice complies with Rules 135 or 135c under the Securities Act. Rule 135 covers notices issued in the context of a U.S. public offering prior to the filing of a registration statement. The notice may only contain certain specified information, including the name of the issuer, the title, amount and basic terms of the securities, the anticipated timing of the offering and a brief statement of the manner and purpose of the offering, but not including a description of the issuer's business or the names of the underwriters. Rule 135c applies to notices with a similar content issued in the context of an offering that is exempt from registration under Regulation S (or otherwise, for example under one of the private placement exemptions), but only if the issuer is subject to the periodic reporting requirements of the Exchange Act or exempt from those requirements pursuant to Rule 12g3-2(b) thereunder and certain other conditions are met. *See also* §§ 7.02[4] and 7.06 for a discussion of publicity considerations in exempt offerings involving both sales outside the United States under Regulation S and in the United States as private placements.

22 SEC Release No. 33-6863 (Apr. 24, 1990). In general, a publication has a "general circulation" in the United States if it "is printed primarily for distribution in the United States, or has had, during the preceding twelve months, an average circulation in the United States of 15,000 or more copies per issue." Rule 902(c)(2) under the Securities Act. The U.S. editions of *The Financial Times* and *The Economist*, and perhaps the U.S. editions of other foreign newspapers and magazines as well, will fall within the definition of a publication with a "general circulation" in the United States. The non-U.S. editions of such newspapers and magazines, however, are not affected. For a discussion of Regulation S offerings utilizing the Internet, *see* § 8.02[1][d].

23 Research reports could be viewed as directed selling efforts, or as inconsistent with an offshore transaction, which would make the Regulation S exemption unavailable. It is common for counsel to prepare one or more memoranda when work on the transaction begins, describing the restrictions in detail. These memoranda serve multiple purposes: they alert offering participants to the existence of restrictions; they

establish a written record of attention to the restrictions, which can be useful in the event a lapse occurs; and they are sometimes used (particularly where the offering is a debut offering in the home market) to implement an understanding among the participating financial institutions about guidelines for research reports.

The distribution of pre-deal research outside the United States in an offering by a foreign private issuer does not usually present the same concerns. In the typical Regulation S -only equity offering, or a typical Regulation S and Rule 144A equity offering in connection with a debut offering in the home market, the principal trading market for its equity is, or is expected to be, outside the United States. In connection with such an offering, the Global Research Settlement and FINRA rules would not prohibit a foreign underwriter (even one affiliated with an SEC-registered broker-dealer and FINRA member) from preparing and distributing pre-deal research to persons outside the United States in a manner that does not involve U.S. jurisdictional means or the participation of any SEC-registered broker-dealer (or analysts associated with that broker-dealer). If the principal trading market is, or is expected to be, in the United States, however, caution is appropriate due to heightened concern in the United States and other jurisdictions about conflicts of interest.

For a further discussion of research reports, *see* text accompanying *infra* Note 37; §§ 3.02[3][e], 7.02[4], Notes 142–143.

24 SEC Release No. 33-9415 (July 10, 2013). While restrictions on general solicitation and general advertising were recently lifted for certain types of private placements, the prohibition on directed selling efforts in a Regulation S -only offering— *i.e.*, where there is no contemporaneous registered or exempt U.S. offering that permits general solicitation and general advertising (*e.g.*, pursuant to Rule 144A)—remains unchanged. *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 138.04 (Nov. 13, 2013). For a discussion of when general solicitation and general advertising are permissible in a private placement, *see* Chapter 7.

25 *See* 55 Fed. Reg. 18306, 18320 (May 2, 1990); 78 Fed. Reg. 44,771, 44,786 (July 24, 2013). This is consistent with the SEC's view that "offshore transactions" made in compliance with Regulation S will not be integrated with registered domestic offerings or domestic offerings that satisfy the requirements for an exemption from registration under the Securities Act, even if undertaken contemporaneously. *See infra* text accompanying Notes 90–91. Ironically, more care may have to be taken when there is no concurrent offering in the United States, since efforts in the United States to generate secondary market interest in securities being distributed abroad could constitute directed selling efforts, and it would be difficult to establish that such efforts were directly associated with exempt offers and sales.

While it should also be the case that selling efforts in the United States following the public filing of a registration statement would not constitute "directed selling efforts" if the registration statement were subsequently withdrawn and the public offering abandoned in favor of a private placement or no U.S. offering at all, the SEC staff could take the view that the determination depends on the facts and circumstances, including the extent to which the transaction was marketed prior to withdrawal and the amount of time between withdrawal and the offshore offering. A prudent approach would be to permit at least 30 days between withdrawal of a registration statement and the commencement of an offering under Regulation S. It may be possible, however, to shorten the time between withdrawal of the registration statement and launch of a Regulation S offering if no marketing had been conducted in the United States and a considerable time had passed since filing of the registration statement, or if there had been marketing efforts but a considerable amount of time had passed since they were conducted. *See* the discussion of Rule 155 under the Securities Act in § 7.02[6].

26 SEC Release No. 33-6863 (Apr. 24, 1990).

27 Preliminary Note 7 to Regulation S under the Securities Act; SEC Release No. 33-6863 (Apr. 24, 1990). Rule 902(c)(3)(vii) also requires that the conditions of Rule 135e be satisfied. For a discussion of Rule 135e, *see* text accompanying *infra* Notes 28–29; §§ 3.02[3][c] and 7.02[4].

28 SEC Release No. 33-7470 (Oct. 10, 1997). The SEC also adopted a safe harbor from the tender offer rules

for certain offshore press activities. Rule 14d-1(e).

29 *See* §§ 3.02[3][c] and 7.02[4].

30 Preliminary Note 7 to Regulation S under the Securities Act and SEC Release No. 33-6863 (Apr. 24, 1990).

31 Although publications with U.S. editions—such as *The Financial Times*—as a matter of policy will not agree to restrict news or editorial coverage to certain editions, they will agree to restrictions on where advertisements appear. Accordingly, an issuer can ensure that advertisements relating to an offering do not appear in the United States.

32 *See* § 3.02[3][c].

33 SEC Release No. 33-6863 (Apr. 24, 1990). Similarly, the provision of international offering circulars through an online database will not be deemed to be directed selling efforts so long as the online provider, itself a nondistributor, implements certain measures, including the placement of an initial cautionary screen containing a legend stating, among other things, that the documents on the site relate to securities that have not been registered under the Securities Act, and the use of subscription agreements restricting users from distributing documents obtained from the database outside their respective organizations. *See Europrospectus.com Ltd.* (avail. Apr. 28, 2004); *Perfect Information* (avail. Dec. 22, 2000).

34 *See* § 8.02[1][c][ii].

35 As used in this context, a "tombstone" advertisement is a brief announcement of the completion of a transaction. Offering advertisements under Rule 134 are also sometimes referred to as "tombstone" advertisements. *See* § 3.02[3][d].

36 Rule 902(c)(3)(iii) under the Securities Act.

37 SEC Release No. 33-6863 (Apr. 24, 1990); SEC Release No. 33-7606 (Nov. 3, 1998), *as amended* by SEC Release No. 33-7606A (Nov. 13, 1998), SEC Release No. 33-8591 (July 19, 2005). For a further discussion of research reports, and a detailed consideration of Rules 138 and 139, *see* §§ 3.02[3][e], 7.02[4], Notes 142–143.

38 Section 4(a)(3) of the Securities Act also restricts the circulation of research reports in the United States. *See* § 8.03 and text accompanying Note 115.

39 In the case of securities guaranteed by the parent of the issuer, the category of the offering is determined by reference to the status of the parent guarantor rather than that of the issuer. *See* text accompanying Note 52. In addition, certain nonparticipating preferred stock and asset-backed securities are treated as debt for purposes of determining the appropriate category. Rules 902(a)(1) and 902(a)(2) under the Securities Act.

The SEC staff has also indicated that the category of offering under Regulation S is determined at the time the issuer makes a securities offering in reliance on Regulation S. If changes occur in the issuer's circumstances after it makes the offering that would permit the issuer to qualify for a different category of the safe harbor in the future, the SEC staff has clarified that there would be no change in the distribution compliance period applicable to any outstanding securities issued in reliance on Regulation S. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 277.01 (Jan. 26, 2009).

40 The following tables are based closely on Adam Fleisher & Peter Castellon, *Regulation S Selling and Transfer Restrictions: A Basic User's Guide*, *available at* https://www.clearygottlieb.com/~/media/cgsh/files/publication-pdfs/regulation-s-selling-transfer-restrictions-a-basic-users-guide.pdf (July 18, 2012).

48 For a discussion of the eligibility requirements of Schedule B, *see* § 3.05[1].

49 An important exception to this general rule is that certain emerging market issuers have relatively extensive U.S. shareholder bases. This situation has arisen in a number of cases because the issuer's home market infrastructure is not sufficiently well-developed to accommodate sizable equity offerings or to provide for a stable and liquid aftermarket in such securities. For instance, a number of Latin American, Chinese and other emerging market issuers have more than half of their equity securities held in the United States. Most of these issuers are subject to the reporting requirements of the Exchange Act, which, since there is

substantial U.S. market interest in their equity securities, results in their being treated as Category 2 issuers for purposes of Regulation S. Certain other emerging market issuers, such as Russian companies that have offered equity securities in the United States under Rule 144A and separately established unrestricted ADR programs, may find that there is a substantial U.S. market interest in their shares in circumstances where they are not subject to the reporting requirements of the Exchange Act. As a result, they may be treated as Category 3 issuers for purposes of Regulation S.

50 Rule 902(j)(2) under the Securities Act. For purposes of Rule 902(j)(2), "held of record" has the same meaning as in Rule 12g5-1. *See* § 4.11[2][b], Note 653 and accompanying text for a discussion of Rule 12g5-1.

Although Regulation S refers to debt securities being "held of record," that term is defined to include debt securities that are held in bearer form. It is not clear how a "reasonable belief" should be formed with respect to bearer debt securities. In the absence of official guidance, a foreign issuer should consider the following:

- if the issuer has less than $1 billion of debt securities (excluding commercial paper) outstanding worldwide, there is *per se* no substantial U.S. market interest;
- if the issuer has more than $1 billion of debt securities (excluding commercial paper) outstanding worldwide, but (i) has not offered any securities in the United States (other than commercial paper), (ii) does not have debt or equity securities listed on a securities exchange in the United States or a sponsored ADR program and (iii) does not know of significant holdings of its debt securities by U.S. investors, it would be reasonable to conclude that there is no substantial U.S. market interest for its debt securities; and
- in other circumstances, the offering should be treated as falling into Category 2.
- *See* § 8.04 for a discussion of certain U.S. tax rules that apply to bearer securities.

51 Rule 902(j)(3) under the Securities Act.

52 In the case of debt securities that are guaranteed by subsidiaries of the issuer, the SEC staff has informally advised us that a subsidiary guarantor may rely on the status of its issuer parent under Regulation S as long as the subsidiary guarantor meets the requirements of Rule 3-10 of Regulation S-X, *i.e.*, the subsidiary guarantor is wholly owned by the issuer parent and the subsidiary fully and unconditionally guarantees the issuer parent's securities.

53 Substantial U.S. market interest in the debt securities of a foreign bank or any other entity that guarantees debt securities must be measured by reference to all securities that are issued or guaranteed by the bank or other entity. Letters of credit should be treated as guarantees under Regulation S, and it would be prudent to treat support or "keep well" agreements in the same way. Since the procedures for Category 2 are relatively easy to apply, being prudent does not entail incurring any substantial additional cost.

54 These include the "pink sheets." *See* § 3.01, Note 32.

55 Rule 902(j)(1) under the Securities Act. In determining the category of a particular offering, distributors are entitled to rely on a representation by the issuer that it reasonably believes that there is no substantial U.S. market interest for the kind of security being offered. Where a foreign or U.S. market does not record all trading in a security, only the trading that is otherwise known to the issuer, or can be reasonably measured or approximated, need be considered. Where a substantial market for the issuer's equity securities does not record trading volume, the issuer may reasonably believe that there is not substantial U.S. market interest in that class of securities where less than 20% of the class is held of record by persons for whom a U.S. address appears on the records of the issuer, its transfer agent, voting trustee, depositary or person performing similar functions. SEC Release No. 33-6863 (Apr. 24, 1990).

56 The requirement that the offering be directed to the residents of a single foreign country is not inconsistent with making a U.S. private placement at the same time. The principle that an offering under Regulation S is not to be "integrated" with a contemporaneous registered or exempt U.S. offering applies to overseas-directed offerings just as it does to other foreign offerings. *See infra* text accompanying Notes 92–93.

57 For a discussion of these requirements, *see* Chapter 5. In order to be a Regulation S "reporting issuer," an issuer must file all required Exchange Act reports in the twelve months (or such shorter period as the issuer was required to file reports) before the offer or sale of securities is made in reliance on Regulation S. An issuer that has not filed a report required to be filed under the Exchange Act in the 12 months or such shorter period as the issuer was required to file reports (before the offer or sale) would fail to satisfy the definition of a "reporting issuer" for purposes of Rule 902(i) until the delinquent report in question has been filed.

58 These requirements are set out in Rule 903(b)(2) under the Securities Act. For a discussion of how the distribution compliance period is determined in continuous offerings, *see* § 10.02.

59 *See* Rule 903(b)(2)(ii) under the Securities Act. In the event an issuance of debt securities is re-opened at a later date, market practice is to use temporary global notes to represent, and assign temporary security identifiers (*i.e.*, Committee on Uniform Security Identification Procedures ("CUSIP") and International Securities Identification Number ("ISIN") numbers) to, the securities issued in the re-opening until the distribution compliance period has ended. The securities issued in the re-opening then become fungible with, and assume the CUSIP and ISIN numbers of, the securities issued in the initial offering and the temporary global notes are exchanged for interests in the permanent global notes bearing those numbers.

60 Rule 902(k)(1) under the Securities Act. The definition also includes any nondiscretionary account or similar account (other than an estate or trust) held by a dealer or other fiduciary for the benefit or account of a U.S. person; any discretionary account or similar account (other than an estate or trust) held by a dealer or other fiduciary organized, incorporated or (if an individual) resident in the United States; and any partnership or corporation incorporated under the laws of any foreign jurisdiction and formed by a U.S. person principally for the purpose of investing in securities not registered under the Securities Act, unless it is organized or incorporated, and owned, by accredited investors (as defined in Rule 501(a) under the Securities Act, *see* § 7.02[2], Note 35) that are not natural persons, estates or trusts.

Rule 902(k) under the Securities Act specifically excludes the following additional entities from the definition of a U.S. person: certain U.S. fiduciaries acting for non-U.S. investors; any estate of which the professional fiduciary acting as executor or administrator is a U.S. person if the estate also has a non-U.S. executor or administrator who has sole or shared investment discretion and the estate is governed by foreign law; any employee benefit plan established and administered in accordance with the laws of a country other than the United States; and certain foreign branches and agencies of U.S. banks and insurance companies. Rule 902(k)(2) under the Securities Act. Notwithstanding the exclusion of certain U.S.-based entities from the definition of U.S. person, issuers and distributors should nevertheless consider liability issues that could arise from the use of U.S. jurisdictional means in connection with the offer or sale of securities.

61 Rule 902(k) under the Securities Act. As noted earlier, it is not clear whether offshore accounts of U.S. pension funds should be viewed as U.S. persons. *See supra* Note 18. It is clear from the terms of Regulation S itself that a discretionary account (other than an estate or trust) held by a dealer or other fiduciary organized in the United States is a U.S. person (unless held for the account of a non-U.S. person as described below) and that a nondiscretionary account (other than an estate or trust) held by a dealer or other fiduciary for the benefit or account of a U.S. person is also a U.S. person. Conversely, it is also clear that a discretionary account (other than an estate or trust) held by a dealer or other fiduciary organized outside the United States (a "foreign fiduciary") is not a U.S. person. According to the adopting release for Regulation S, "where a non-U.S. person makes investment decisions for the account of a U.S. person, that account is not treated as a U.S. person." SEC Release No. 33-6863 (Apr. 24, 1990), 55 Fed. Reg. 18,306, 18,316 (May 2, 1990). Moreover, a foreign fiduciary is not itself a U.S. person. Therefore, an offer or sale to a foreign fiduciary for the discretionary account of a U.S. pension fund would appear not to breach the "distribution compliance period" requirement of Regulation S, which prohibits offers and sales to, or for the account or benefit of, U.S. persons.

This, however, may not be the case. The relevant portion of the definition of U.S. person referred to above does not apply to accounts of "estates" or "trusts," and U.S. pension funds are generally organized as trusts. Under Regulation S, trusts having a U.S. trustee are considered to be U.S. persons unless "a trustee who is not a U.S. person has sole or shared investment discretion with respect to the trust assets, *and no beneficiary of the trust … is a U.S. person.*" Rule 902(k)(2)(iii) under the Securities Act (emphasis added). It would thus appear that a discretionary account of a U.S. pension fund held by a foreign fiduciary would be a U.S. person because the trustee of the fund can be expected to be a U.S. person and the "beneficiaries" of the fund— *i.e.*, the employees—will also generally be U.S. persons. Although it is unlikely that the SEC had U.S. pension funds in mind when it crafted the rule with respect to trusts, unless the position is clarified, it would be prudent for distributors not to offer or sell securities to offshore accounts of U.S. pension funds in Category 2 or Category 3 offerings or to fiduciaries acting for such accounts.

62 A distributor holding an unsold allotment of securities in a segregated identifiable account may sell other securities of the same class as if it were not a distributor, so long as such other securities are not borrowed from and will not be replaced by securities that are part of the unsold allotment. SEC Release No. 33-6863 (Apr. 24, 1990).

63 Rule 903(b)(2)(i) under the Securities Act.

64 Rule 902(g)(1)(i) under the Securities Act.

65 Rule 902(g)(2) under the Securities Act. This requirement does not apply to press releases that are not advertisements. For a discussion of legends required for press releases that are advertisements, *see* § 7.02[4]. For offers and sales of equity securities of U.S. issuers, the offering materials or documents must also state that hedging transactions involving those securities may not be conducted unless in compliance with the Securities Act. *See* § 8.02[1][c][iii], Note 75 and accompanying text.

66 Rules 902(g)(2)(i), 902(g)(2)(ii) and 902(g)(2)(iii) under the Securities Act.

67 SEC Release No. 33-6863 (Apr. 24, 1990). For a description of the requirements imposed by Regulation S on resales by a dealer or person receiving selling concessions, fees or other remuneration, *see* Note 100. In addition, dealers are subject to the requirements imposed by § 4(a)(3) of the Securities Act. For a discussion of § 4(a)(3), *see* § 8.03.

68 As noted in *supra* Note 16, the 1998 amendments, as originally proposed, would have moved out of Category 2 and into Category 3 all offerings of equity securities of foreign issuers with principal markets in the United States. The SEC had proposed that the "principal market" for a foreign issuer's securities would be in the United States if "more than 50 percent of all trading in such class of securities took place in, on or through the facilities of securities exchanges and inter-dealer quotation systems in the United States in the shorter of the issuer's prior fiscal year or the period since the issuer's incorporation." *See* SEC Release No. 33-7392 (Feb. 20, 1997), 62 Fed. Reg. 9258, 9264 (Feb. 28, 1997). Many of those commenting on the original proposals had strongly opposed applying the amendments to foreign issuers, arguing that the imposition of Category 3 restrictions would impede both public offerings and trading in those securities in offshore public markets. After considering these comments, the SEC decided that additional restrictions on equity securities of foreign issuers with principal markets in the United States were unwarranted at the time in the absence of a showing that offerings of these securities had in fact abused Regulation S. The SEC noted in the release adopting the 1998 amendments, however, that it "will monitor practices in this area, and will revisit the issue if abuses occur." SEC Release No. 33-7505 (Feb. 17, 1998), 63 Fed. Reg. 9632, 9633 (Feb. 25, 1998).

69 *See* § 8.02[1][c][iii].

70 Equity offerings by U.S. reporting issuers were added to Category 3 as a result of the 1998 amendments to Regulation S.

71 *See supra* Note 49 for a discussion of possible exceptions to the general rule. In addition, a nonreporting foreign subsidiary of a U.S. company may be treated as a U.S. issuer falling within Category 3 if the majority of its executive officers or directors are U.S. citizens, more than half of its assets are in the United States, or its business is administered principally from the United States. *See* the definition of "foreign issuer" in Rule 902(e) of Regulation S under the Securities Act. *See also supra* text at Note 68 for a discussion of market practice for certain offerings of securities of foreign issuers that are subject to the reporting requirements of the Exchange Act, especially where substantially all of their securities trade in the United States.

72 Rule 903(b)(3) under the Securities Act.

73 Rule 903(b)(3)(ii)(B) under the Securities Act. A similar procedure and certification are required in the case of offerings of bearer debt securities as a result of U.S. tax rules. *See* § 8.04.

74 The distribution compliance period was shortened from one year to match the shortened holding period for restricted securities of reporting companies in the amendments to Rule 144. *See* SEC Release No. 33-8869 (Dec. 6, 2007).

75 Rule 903(b)(3)(iii) under the Securities Act.

76 The limitation on hedging derives from the SEC's concern, highlighted in its 1995 interpretive release on "problematic practices" under Regulation S, that hedging during the distribution compliance period could serve to shift the economic benefits and risks back to the United States or to U.S. persons, and thus breach the distribution compliance period requirement in substance if not in form. *See* SEC Release No. 33-7190 (June 27, 1995). The SEC also expressed concern in that release about the issuance of nonrecourse promissory notes for all or almost all of the purchase price, where the expectation of repayment stems from the resale of the equity securities into the U.S. market, or the issuance of recourse notes where the entity providing the notes is unknown to the seller of the securities or has no, or minimal, assets and where, again, the expectation of repayment stems from the resale of the equity securities in the U.S. market. The 1998 amendments to Regulation S did not prohibit the use of promissory notes as consideration for a purchase under Regulation S, as had been proposed originally, but rather dealt with this problem through Rule 905 under the Securities Act, which applies to the resale under Regulation S of equity securities of U.S. issuers. *See* § 8.02[2].

The limitation applies to short selling and other hedging transactions such as option writing, equity swaps or other types of derivative transactions, where the counterparties to the hedging transaction transfer the benefits and burdens of ownership back to the U.S. market during the distribution compliance period in a transaction that does not benefit from an exemption from the registration requirements of the Securities Act, such as Rule 144A. For a discussion of hedging in the context of private placements, *see* § 7.04[2][a].

77 EASDAQ was subsequently acquired by Nasdaq and operated under the name "Nasdaq Europe." However, in 2003 the market ceased operations.

78 EASDAQ and the OM Stockholm Exchange stated that there was no field in which the required language could be placed and that the programming changes that would be required to create such a field would be expensive and time-consuming. Letter from Dirk P. Tirez, General Counsel, European Association of Securities Dealers Automated Quotation N.V./S.A., to Paul M. Dudek, Chief, SEC, Office of International Corporate Finance (July 22, 1999); Letter from Ulf Lindgren, Chief Legal Counsel, OM Stockholm Exchange SE, to Paul M. Dudek, Chief, SEC, Office of International Corporate Finance (Sept. 27, 2000).

79 *OM Stockholm Exchange* (avail. Oct. 11, 2000); *Australian Stock Exchange Limited* (avail. Jan. 7, 2000); *European Association of Securities Dealers Automated Quotation N.V./S.A.* (avail. July 27, 1999).

80 In 2011, the staff granted no-action relief from certain requirements of Category 3 to a domestic reporting issuer which allowed it to obtain a secondary listing of depositary receipts representing its common stock on the Stock Exchange of Hong Kong ("SEHK"). In granting relief, the staff noted that U.S. entities may not participate on SEHK; no SEHK trading terminals may be placed in the United States and that alternative restrictions and procedures would be implemented. The alternative restrictions and procedures implemented were similar to those adopted by the three exchanges discussed in Notes 77 to 79. In addition to those procedures, persons depositing shares in the Hong Kong depositary are required to certify either that they are not, and are not acting on behalf of, a U.S. person or an affiliate of the issuer and will receive the depositary receipts outside the United States; or that they are not, and are not acting on behalf of, a distributor or an affiliate of a distributor or the issuer, are depositing the shares in connection with a sale of depositary receipts under Rule 904 and will not be issued any depositary receipts. *Coach, Inc. & J.P. Morgan Chase Bank N.A.* (avail. Nov. 28, 2011).

81 *See* Guidance to Rule 1550 of the Rules of the London Stock Exchange (Mar. 21, 2016), and the Whitebook published by Euroclear UK & Ireland on May 11, 2015 relating to its proposed "Euroclear UK & Ireland:

Regulation S Category 3 Settlement Service." Physical settlement is no longer available for Category 3 Securities trading on the London Stock Exchange.

82 *See* SEC, Division of Corporation Finance, Manual of Publicly Available Telephone Interpretations, Third Supplement, Section II, Cross-Border Release, Part C, Question 1 (July 2001) (stating that the exemptions are intended to create an incentive to include U.S. securityholders in a particular offering, not to provide an exemption for offerings made only to foreign securityholders).

83 *See* § 9.05[9][c] (discussing information to be provided for an SEC-registered exchange offer).

84 SEC Release No. 33-7516 (Mar. 23, 1998). Compare this approach with the procedures set forth in the *Europrospectus.com and Perfect Information* no-action letters, *supra* Note 33, where the entity making offering documents available over the Internet was not distributing securities.

85 The SEC staff has informally noted to us that in the context of a Regulation S -only offering, such steps need not be more extensive than procedures generally implemented to ensure compliance with the requirement under Regulation S that purchasers be outside the United States.

86 For example, providing disclosure on the U.S. tax consequences of investing in the securities, or naming U.S. broker-dealer affiliates of the underwriters, would suggest that the material is targeted to the United States or to U.S. persons.

87 Certain information can be disseminated through the Internet without the use of an access filter prior to the filing of a registration statement with the SEC under Rule 135 and following the filing of a registration statement under Rule 134. For a discussion of Rules 134 and 135, *see* § 3.02[3].

88 SEC Release No. 33-7856 (Apr. 28, 2000), 65 Fed. Reg. 25,843, 25,850 n.68 (May 4, 2000) (emphasis added). For a discussion of Rule 135e under the Securities Act, *see* §§ 3.02[4][c] and 7.04.

89 Rule 135c allows reporting issuers and issuers that are exempt from reporting pursuant to Rule 12g3-2(b) under the Exchange Act to disseminate certain public announcements of unregistered offerings through the Internet without use of an access filer. For a discussion of Rule 135c, *see* § 7.04.

90 SEC Release No. 33-6863 (Apr. 24, 1990).

91 SEC Release No. 33-6863 (Apr. 24, 1990).

92 55 Fed. Reg. 18,306, 18,320 (May 2, 1990); 78 Fed. Reg. 44,771, 44,786 (July 24, 2013).

93 When an offering outside the United States is made in conjunction with a public offering in the United States, a question arises as to how much of the global offering should be registered. For a foreign issuer, it is customary to register the U.S. tranche as well as about 10% to 15% of the offering overseas to cover transfers between underwriting syndicates and trading of the securities into the United States (although consideration should be given to registering a higher percentage if the primary trading market for the foreign issuer's securities is or is expected to be the United States). For a U.S. issuer, it will, as a practical matter, be necessary to register the entire global offering because of Rule 905 under the Securities Act, in the case of equity securities, and because of the likelihood of flowback into the United States, in the case of debt securities. For a further discussion of these issues, *see* § 3.02[3][a]. If an appropriate amount of securities is registered to cover the "flowback" into the United States of the securities offered and sold abroad, the prohibition against directed selling efforts and, in Category 2 and Category 3 offerings, the "distribution compliance period," "offering restrictions," "notice" and other requirements are inapplicable because resales into the United States and to U.S. persons have, in fact, been registered. In connection with such resales, any broker or dealer, whether U.S. or foreign, must comply with Rules 173 and 174 under the Securities Act. *See* § 3.02[1][e], Notes 92 and 94 and accompanying text (discussing when sales by dealers, whether or not acting as underwriters, need to be made on the basis of a prospectus on file with the SEC). With respect to offers and sales made outside the United States pursuant to Regulation S, whether a final offering document will be required to be delivered to investors will depend on local laws and will not be required under U.S. law.

94 *See infra* Note 114.

95 Equity securities of U.S. issuers that are offered and sold under Regulation S are classified as "restricted

securities" within the meaning of Rule 144 under the Securities Act and are subject to additional restrictions on resale. *See* Rule 905 under the Securities Act and *infra* Notes 104–109 and accompanying text.

96 SEC Release No. 33-7392 (Feb. 20, 1997), 62 Fed. Reg. 9258, 9263 (Feb. 28, 1997), stating that "purchasers must determine whether an exemption for resales into the United States is available."

97 SEC Release No. 33-7392 (Feb. 20, 1997), 62 Fed. Reg. 9258, 9263 n.41 (Feb. 28, 1997). Sections 2(a)(11) and 4(a)(1) of the Securities Act are discussed in § 7.02.

98 *See* §§ 9.05[7][c] and 9.05[8].

99 The SEC has cautioned that "[a]ny arrangement to return the restricted securities to U.S. markets may indicate, as suggested by SEC Release No. 33-7190 (June 27, 1995), an evasive scheme to avoid registration, which would invalidate any safe harbor claim." SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Interpretation 528.02 (Jan. 26, 2009).

100 For resales by dealers and persons receiving selling concessions, fees or other remuneration in respect of the securities offered or sold prior to the expiration of the applicable distribution compliance period, Rule 904(b)(1) under the Securities Act requires that the seller must not know that the buyer of the securities is a U.S. person and, if the seller knows that the buyer of the securities is a dealer or person receiving a selling concession, that the seller must send the buyer a confirmation setting out the applicable transfer restrictions. For resales by an officer or director of the issuer who is an affiliate of the issuer solely as a result of being an officer or director, Rule 904(b)(2) under the Securities Act requires that no selling concession, fee or other remuneration be paid in connection with the resale other than a customary broker's commission as would be received by a person executing the sale as an agent.

101 If the buyer is a corporation, partnership or investment company, it is enough that an authorized person employed by it or, in the case of an investment company, by its investment adviser, places the buy order while outside the United States. 55 Fed. Reg. 18,306, 18,310 n.39 (May 2, 1990).

102 Designated offshore securities markets now include the Eurobond market as regulated by the International Securities Market Association, the Australian Stock Exchange Limited, the Bahamas International Securities Exchange (*see The Bahamas International Securities Exchange* (avail. Oct. 20, 2011)), the Barcelona Stock Exchange (*see Barcelona Stock Exchange, Bilbao Stock Exchange, Madrid Stock Exchange and Valencia Stock Exchange* (avail. Mar. 11, 2003) (the "Spanish Stock Exchange Letter")), the Berlin Stock Exchange (*see Berlin Stock Exchange* (avail. Sept. 26, 2000)), the Bermuda Stock Exchange, the Bilbao Stock Exchange (*see* Spanish Stock Exchange Letter), the Bursa Malaysia Securities Berhad and for the limited purpose of permitting the secondary market trading of certain bonds, Bursa Malaysia Bonds Sdn Bhd (*see Bursa Malaysia Securities Berhad and Bursa Malaysia Bonds Sdn Bhd* (avail. Sept. 10, 2010)), the Canadian National Stock Exchange and Pure Trading (*see CNSX Markets Inc*. (avail. Feb. 24, 2010)), the Canadian Venture Exchange Inc. (*see Canadian Venture Exchange* (avail. Mar. 17, 2000) and *Alberta Stock Exchange* (avail. Mar. 9, 1993)), the Cairo and Alexandria Stock Exchanges (*see Cairo and Alexandria Stock Exchanges* (avail. Apr. 16, 2003)), the Channel Island Stock Exchange (*see Channel Island Stock Exchange (CASE)* (avail. Sept. 6, 2002)), the Copenhagen Stock Exchange (now NASDAQ OMX Copenhagen A/S) including First North (*see First North and NASDAW OMX Stockholm AB, NASDAQ OMX Copenhagen A/S and NASDAQ OMX Helsinki Ltd.* (avail. Apr. 24, 2014) (the "First North Letter")), the Eurolist Market and the Alternext Market as operated by Euronext Paris (*see Eurolist and the Alternext Market* (avail. Mar. 16, 2007)), Euronext Amsterdam (*see Euronext Amsterdam* (avail. Apr. 7, 2006)), Euronext Brussels (*see Euronext Brussels* (avail. Nov. 10, 2004)), the Frankfurt Stock Exchange, the OM Helsinki Stock Exchange (now NASDAQ OMX Helsinki Ltd.) including First North (*see* First North Letter), the Stock Exchange of Hong Kong Limited (including the Growth Enterprises Market, *see The Stock Exchange of Hong Kong Limited* (avail. Aug. 20, 2004))), the Toronto Stock Exchange, the Valencia Stock Exchange (*see* Spanish Stock Exchange Letter), the Vienna Stock Exchange (*see Wiener Börse* (avail. Dec. 14, 2004)) and the Warsaw Stock Exchange. The SEC originally designated certain of these exchanges pursuant to no-action letters, and subsequently codified those designations when it amended Regulation S in 1998. SEC Release No. 33-7505 (Feb. 17, 1998). The SEC may designate other foreign securities exchanges if requested to do so.

103 We have considered whether trades made using the International Order Book of the London Stock Exchange constitute "trades on" a designated offshore securities market. Based on discussions with the SEC, we are of the view that they do, whether or not the securities in question have been admitted to the Official List of the U.K. Listing Authority. The International Order Book is the central trading mechanism for the most liquid depositary receipts representing shares of non-U.K. companies, including both depositary receipts that have been admitted to the Official List and those that have not been so admitted. We rely on two theories in reaching our conclusion. First, the International Order Book could be considered simply a part of the London Stock Exchange, based on the no-action letters issued with respect to the AIM and SEAQ International, which confirm (rather than designate) each to be a designated offshore securities market because it is part of the London Stock Exchange, and the close working relationship and ongoing information exchanges between the International Order Book and the London Stock Exchange. Second, language contained in the release adopting Regulation S supports the view that trades in the International Order Book should constitute trades on a designated offshore securities market because they are reported to the London Stock Exchange. The release states that transactions executed "in, on or through the facilities of a designated offshore securities market" include all transactions reported to that market, and that trades executed between sessions, reported to the exchange and included in exchange trading volume, will be deemed to occur on that market. *See* SEC Release No. 33-6863 (Apr. 24, 1990).

104 For a discussion of Rule 144 and its amendments, *see* § 7.04[2].

105 SEC Release No. 33-7505 (Feb. 17, 1998), 63 Fed. Reg. 9632, 9637 (Feb. 25, 1998).

106 Rule 144(d)(2) under the Securities Act.

107 Since resales of equity securities of U.S. issuers under Regulation S do not "wash off" the Rule 144 restricted status, standard Rule 144 procedures (including legending) should be applied during the applicable restricted period. These procedures, however, may be incompatible with the trading practices of many offshore markets, particularly those that accommodate only uncertificated securities and those with rules prohibiting the listing of legended securities. *See supra* Notes 77–81 and accompanying text. *See also* § 7.04[2] for a discussion of Rule 144 and the amendments that significantly shortened the Rule 144 holding period for nonaffiliate holders of restricted securities.

108 *See* SEC Release No. 33-7505 (Feb. 17, 1998).

109 *See supra* Note 100 for a discussion of the restrictions application to dealers and persons receiving selling concessions, fees or other remuneration in respect of the securities offered or sold.

110 *See, e.g.*, *College Retirement Equity Fund* (avail. Feb. 18, 1987).

111 For a discussion of the restrictions on resale in the United States of privately placed securities, including

securities sold under Rule 144A, *see* Chapter 7.

112 When securities are offered and sold outside the United States under Regulation S and in the United States on a private placement basis (under Rule 144A or otherwise), there are in effect two classes of securities until the restrictions applicable to the privately placed securities end upon resale outside the United States or the expiration of the applicable Rule 144 holding period for unrestricted resale by nonaffiliates. This distinction can result in lack of fungibility of the two classes of securities. This lack of fungibility may not, however, prove to be particularly problematic where there is little or no U.S. trading in those securities, which is often the case in the context of equity securities where the only or principal trading market for the securities is outside the United States.

113 *See* text accompanying *supra* Note 108.

U.S. Regulation of the International Securities and Derivatives Markets, § 8.03, SECURITIES ACT § 4(a)(3)

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 8.03 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Regulation S is only part of the regulatory scheme that applies to offerings of securities outside the United States. In order to appreciate its implications fully, Regulation S must be taken in context, which includes § 4(a)(3) of the Securities Act, discussed below, and the antibearer bond rules of the Internal Revenue Code, which are discussed in § 8.04.

Section 4(a)(3) of the Securities Act exempts from the registration provisions of the Securities Act offers and sales of securities by U.S. and foreign securities dealers, subject to compliance with certain requirements. In the context of a Regulation S offering, these requirements have the effect of prohibiting all U.S. and foreign securities dealers (whether or not they are participants in the distribution) from offering or selling in the United States unsold allotments at any time, [114] and other securities sold in the offering until 40 days after the commencement of the offering. [115] Thus, even in the case of a Category 1 offering, to

p. 8-39

which the "distribution compliance period" does not apply, dealers are subject to the requirements of § 4(a)(3) of the Securities Act. [116]

In addition, because a research report with respect to a company's shares may be viewed as an offer of those shares, § 4(a)(3) may prevent the distribution of research reports in the United States during the 40-day period by both participants and nonparticipants in the offering. Broker-dealers that are not participating in the offering generally ignore this risk. Broker-dealers that are participating in the offering generally refrain from distributing research reports in the United States during the 40-day period, except perhaps in circumstances where they have sold their allotments and there was a significant preexisting trading market for the shares; in these circumstances, the report could be said to relate to the outstanding shares trading in the market, and not to the shares being distributed. In addition, the broker-dealer must take care to deliver only the preexisting shares, rather than the shares sold in the offering, at least during the 40-day period, to satisfy any orders that may have been stimulated by the research report. It should also be permissible for a broker-dealer participating in the offering to distribute in the United States research reports where Rule 138 or Rule 139 is available. [117]

Even where Rule 138 and Rule 139 are unavailable, underwriters can still distribute research reports outside the United States notwithstanding the unavailability of the § 4(a)(3) exemption, as long as they take measures to prevent the reports from being delivered in the United States. These measures include limiting the persons and locations to which reports are addressed, including legends on the reports themselves, providing separate warnings to recipients against redissemination, and monitoring how and to whom the reports are distributed. [118]

p. 8-39

p. 8-40

When there is already an active market for the issuer's securities outside the United States, these limited-distribution research practices are rarely relied on, because they are often inconsistent with the way ongoing research is distributed; but in such cases the Rule 138 and Rule 139 safe harbors are often available.

Footnotes

114 The SEC staff has indicated that an underwriter may resell an unsold allotment of securities from a public offering, provided that six months have elapsed since the closing of the last sale under the relevant

registration statement and the underwriter complies with the volume and manner of sale restrictions of Rule 144 under the Securities Act (although the resale would not technically be under Rule 144 and no Form 144 need be filed). SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, Question 128.02 (Jan. 26, 2009). We believe the same analysis should apply to allotment securities from offshore transactions conducted pursuant to Regulation S.

115 The restrictions of § 4(a)(3) of the Securities Act will not have the effect of precluding U.S. sales when the "flowback" into the United States of securities originally offered and sold abroad has been registered with the SEC, in connection with a concurrent U.S. public offering or otherwise. *See supra* Note 93. Nor will the restrictions of § 4(a)(3) preclude Rule 144A resales (if available) or other private placements into the United States.

116 It is important to remember that for purposes of § 4(a)(3), unsold allotments include any securities purchased directly from an issuer, or indirectly in a chain of transactions between securities dealers that has not been interrupted by a sale to an end-investor. This raises the practical question, referred to earlier, of how to distinguish allotment securities from others. *See* Note 62 and accompanying text.

117 *See* Rule 138 and Rule 139 under the Securities Act. For a further discussion of the distribution of research reports, *see* §§ 3.02[3][e] and 7.02.

118 Banks acting as initial purchasers or placement agents may also broadly disseminate research reports in the United States in connection with a Rule 144A or Rule 506(c) placement and not jeopardize the private placement exemption or the Regulation S exemption, even where Rules 138 and 139 are unavailable. However, if the private placement is part of an initial public offering outside the United States where by definition there is no pre-existing market for the issuer's shares, the unavailability of the § 4(a)(3) exemption for the 40 days following that offering would make a broad U.S. distribution of research problematic. This limitation on the broad U.S. distribution of research in international IPOs has little impact as a practical matter, because banks generally restrict the distribution of research in the United States in those offerings in any event for the reasons discussed in § 3.03[3][e]. Banks may distribute research reports to accredited investors in the United States in connection with a Rule 506(b) or § 4(a)(2) private placement, although if the offering is a distribution for purposes of Regulation M, this would not be permitted during the Regulation M restricted period. By contrast, Rule 101 of Regulation M provides an exemption for offerings to qualified institutional buyers in transactions exempt from registration under § 4(a)(2) of the Securities Act, Rule 144A or pursuant to Regulation D, and an exemption for research satisfying the conditions of Rules 138 or 139.

U.S. Regulation of the International Securities and Derivatives Markets, § 8.04, INTERNAL REVENUE CODE ANTIBEARER BOND RULES

U.S. Regulation of the International Securities and Derivatives Markets

The antibearer bond rules (generally referred to as Tax Equity and Fiscal Responsibility Act of 1982 ("TEFRA")) of the U.S. Internal Revenue Code of 1986, as amended (the "Internal Revenue Code" or "I.R.C."), impose additional regulatory restrictions on offerings of debt securities that are treated as *bearer-form* [119] debt obligations for U.S. tax purposes. [120]

p. 8-41

Section 502 of the Hiring Incentives to Restore Employment Act, [121] which was enacted on March 18, 2010 (the "HIRE Act"), imposes significant restrictions on U.S. issuers' ability to issue debt securities in bearer form. Those restrictions generally apply only to debt securities issued after March 18, 2012.

Section 8.04[1] below describes the application of the TEFRA restrictions to debt securities issued after March 18, 2012. Section 8.04[2] then describes the application of the TEFRA restrictions to debt securities issued on or before March 18, 2012.

[1] Application of TEFRA Restrictions to Issuances After March 18, 2012

The TEFRA restrictions, as amended by the HIRE Act for debt securities issued after March 18, 2012, [122] impose certain sanctions on issuers and holders of debt obligations in bearer form. [123] These sanctions are designed to restrict access by U.S. investors to debt obligations in bearer form and therefore apply to obligations issued by both U.S. and foreign issuers. [124] As a result of the amendments made by the HIRE Act, the sanctions apply even if all of the investors are located outside the United States, subject to the limited exception discussed below.

[a] Issuer Consequences

Under the TEFRA restrictions, U.S. issuers that issue debt in bearer form after March 18, 2012 will be denied deductions for interest paid on the debt. [125] The interest also will not qualify for the "portfolio interest" exemption from U.S.

p. 8-41

p. 8-42

withholding tax, although other withholding tax exemptions, such as those applicable under an income tax treaty, will continue to apply. [126] In addition, both U.S. and non-U.S. issuers may be subject to a substantial excise tax. [127]

The excise tax is the only TEFRA-related penalty that typically is imposed on a non-U.S. issuer that issues bearer-form debt obligations. [128] The excise tax rules provide, however, that a debt security will not be subject to the excise tax if (i) it is issued under "arrangements reasonably designed to ensure" that it will be issued only to non-U.S. persons, (ii) interest on the obligation is payable only outside the United States and its possessions and (iii) the face of the obligation contains a notice that any holder who is a U.S. person will be subject to limitations under the U.S. income tax laws (collectively, the "foreign-targeted" requirements). [129] Accordingly, the HIRE Act generally does not eliminate non-U.S. issuers' ability to issue debt in bearer form. Although the HIRE Act does not specify the requirements necessary to satisfy the "arrangements reasonably designed" standard, the IRS has announced that it intends to issue rules "identical to" the TEFRA "C" and "D" regulations that apply to debt issued on or before March 18, 2012 and which are discussed in detail in § 8.04[2]. [130] Regulations have not yet been issued.

[b] Holder Consequences

A holder of a debt obligation that is issued in bearer form will not be allowed to deduct losses incurred with respect to the obligation [131] and will be required to treat gain on the sale of the obligation as ordinary income (and not capital gain). [132] However, these consequences do not apply to debt obligations meeting certain exceptions in the applicable Treasury Regulations, [133] or if the

p. 8-42

p. 8-43

issuer was subject to the excise tax in connection with the issuance of the debt obligation. [134]

In addition to the restrictions on offerings of debt obligations in bearer form discussed here, it should be noted that obligations issued directly (or through affiliated entities) by the U.S. government, government-owned agencies and government-sponsored enterprises and obligations backed by any such securities (where more than 50% of the income or collateral supporting the obligations consists of interest on or principal of such U.S. government securities) have been required to be issued in registered form for many years. [135]

Debt obligations that (i) are issued by a natural person, (ii) are not of a type offered to the public or (iii) have a maturity of not more than one year are not "registration-required" obligations and may be issued in bearer form without incurring U.S. tax sanctions. [136] However, U.S. issuers (but not foreign issuers) of commercial paper must comply with the U.S. tax law restrictions to ensure that their obligations are not subject to U.S. information reporting requirements and backup withholding tax and, in the case of obligations with maturities of more than 183 days, that interest on such obligations is "portfolio interest" that is exempt from U.S. withholding tax. [137]

U.S. issuers of debt obligations in registered form must receive a statement—which generally must be signed by the beneficial owner of the obligation under penalties of perjury—to the effect that the beneficial owner is not a U.S. person in order for interest on the obligations to qualify as "portfolio interest" that is exempt from U.S. withholding tax. [138] Although short-term commercial paper generally is not subject to this requirement, [139] documentation of a holder's non-U.S. status generally is required in order to establish an exemption from U.S. information reporting requirements and backup withholding tax. It is impractical, however, to obtain certification of non-U.S. beneficial ownership from purchasers of short-term commercial paper. Accordingly, the applicable Treasury Regulations provide that, solely for purposes of establishing an exemption from information reporting requirements and backup withholding tax, original issue discount obligations having a maturity of 183 days or less will not be subject to a certification requirement, provided the commercial paper is issued in accordance with certain specified requirements, including compliance with the

p. 8-43

p. 8-44

"foreign-targeting" rules. [140] Certification is required for commercial paper issued by a U.S. issuer with a maturity of more than 183 days.

[c] Application of Post-March 18, 2012 Rules to Non-U.S. Issuers

In some foreign markets, debt securities may be offered and sold in bearer form to satisfy local custom or market preferences and, in a small and decreasing minority of cases, to comply with local law. Non-U.S. issuers may continue to use the foreign-targeting procedures described in § 8.02[1][c] above to issue bearer-form debt securities without being subject to issuer sanctions. Alternatively, in most bond offerings by a non-U.S. company, [141] it is possible to avoid the application of the TEFRA restrictions by structuring the offering in a manner that causes the bonds to qualify as registered-form obligations for U.S. tax purposes, [142] while nevertheless allowing the bonds to be denominated as bearer obligations, in which case they generally are treated as such for purposes of local market preferences or customs. For instance, as discussed above, bonds that are represented by a bearer-form global note nonetheless will be considered registered-form securities for U.S. tax purposes so long as the global note is held throughout its term by a depositary and physical securities in bearer form are made available to investors only in certain limited circumstances. [143] The difference between the market's view of what constitutes a bearer instrument (which depends principally on the designation of the instrument as a bearer bond) and the technical U.S. tax definition (which depends on the manner in which an interest in the instrument may be transferred) makes it possible to structure offerings

p. 8-44

p. 8-45

that are considered in bearer form from a non-U.S. perspective but nevertheless qualify as registered-form obligations for TEFRA purposes.

In substantial global bond offerings by non-U.S. issuers, depositary banks frequently enter into book-entry registration agreements with the issuer, pursuant to which they agree to hold the global note in a manner that causes the bonds to qualify as registered-form obligations for U.S. tax purposes. [144] These measures are routinely adopted in global bond offerings in which significant U.S. demand is anticipated from the outset. [145] The fact that book-entry agreements currently are an optional addition to, rather than a standard feature of, global bond documentation in the context of offerings by non-U.S. companies has restricted their use in contexts not involving a clear U.S. nexus. Even if a global bond offering is not thought to be of interest to U.S. investors, however, the use of book-entry arrangements can produce significant benefits and minimize exposure to costs or risks. Such arrangements normally will have no substantial non-U.S. consequences. [146]

[2] Application of TEFRA Restrictions to Issuances on or Before March 18, 2012

This section discusses the TEFRA rules that apply to debt securities issued on or before March 18, 2012. A principal difference in these rules as compared to the rules for debt securities issued after March 18, 2012 is that they provided U.S. issuers with a general exemption from U.S. tax sanctions for bearer-form debt securities that met the following three general requirements, which were intended to establish that the issuance was targeted at foreign investors [147]:

p. 8-45

p. 8-46

- issuers and dealers must offer and sell bearer obligations pursuant to arrangements that are reasonably designed to ensure that the obligation will be sold (or resold in connection with the original issue) only to non-U.S. persons (the "arrangements reasonably designed" requirement);
- interest on bearer obligations must be payable only outside the United States and its possessions; and
- a statement must appear on the face of bearer obligations, including any bearer coupons, to the effect that any U.S. person who holds the obligation will be subject to limitations under the U.S. tax laws. [148]

[a] “Arrangements Reasonably Designed”

Treasury Regulations under the Internal Revenue Code provide procedures for offering debt obligations in bearer form in compliance with the "arrangements reasonably designed" requirement. [149] For obligations issued on or before September 7, 1990, the regulations were linked to the U.S. securities laws and provided that the obligations satisfied the requirement if they were not required to be registered under the Securities Act because they were intended for distribution to non-U.S. persons. [150]

The IRS ceased to rely on the securities laws in May 1990 when it adopted Treasury Regulation § 1.163-5(c)(2)(i)(D) (which is generally referred to as "TEFRA D" or the "D Rules"). [151] Under the D Rules, obligations issued after September 7, 1990 are subject to independent U.S. tax law requirements that go beyond those imposed by the U.S. securities laws. These requirements impose restrictions on offers and sales of bearer-form debt obligations and on delivery

p. 8-46

of such obligations in definitive form and require certification of non-U.S. beneficial ownership.

The D Rules were adopted by the IRS in response to the adoption of Regulation S under the Securities Act by the SEC. Regulation S by and large embodies a territorial approach to the application of U.S. rules: many offers and sales of securities may be made without registration under the Securities Act to persons outside the United States regardless of their nationality. The antibearer bond provisions of the I.R.C., however, continue to restrict offers and sales of bearer debt securities to U.S. persons wherever they may be. As a result, additional U.S. tax law restrictions on offers and sales of bearer debt securities were deemed necessary. In addition, the IRS continued to require certification of non-U.S. beneficial ownership by purchasers of bearer debt securities.

[i] *The D Rules*

The D Rules restrict offers and sales of bearer-form debt obligations in connection with their original issuance, require obligations sold during the applicable "restricted period" to be delivered only outside the United States and require certification of non-U.S. beneficial ownership.

The D Rules provide that an issuer (or, subject to the safe harbor rule discussed below, a distributor) of bearer-form debt obligations may not offer or sell such obligations to a U.S. person or to a person within the United States during an applicable "restricted period." [152] The restricted period for an obligation commences on the earlier of the closing date and the first date on which the obligation is offered to persons other than distributors and ends 40 days following the closing date. [153] However, the offering and sale limitations imposed during the restricted period will apply to the unsold allotment of a distributor until the distributor actually sells the securities. [154]

A "distributor" with respect to any obligation is: (i) any person who offers or sells the obligation during the restricted period pursuant to a written contract with the issuer, (ii) any person who offers or sells the obligation during the restricted period pursuant to a written contract with a person described in (i), or (iii) any person who acquires the obligation from an affiliate for purposes of offering or selling the obligation during the restricted period, if that affiliate is the issuer or a distributor described in (i) or (ii). [155]

p. 8-47

p. 8-48

The D Rules contain an important safe harbor for offers and sales by distributors. Under the safe harbor, if the distributor (i) agrees to comply with the offering and sale restrictions of the D Rules and (ii) has in effect procedures reasonably designed to ensure that its employees or agents who are directly engaged in selling the obligation are aware that the obligation cannot be offered or sold during the restricted period to a U.S. person or to a person within the United States, the distributor will be deemed to satisfy the D Rules' restrictions on offers and sales. [156] Thus, an issuer will not be subject to U.S. tax sanctions as a result of an inadvertent sale of a bearer-form debt obligation to a U.S. person by a distributor that has satisfied the requirements of the safe harbor.

The D Rules do not elaborate on the type of procedures that will be considered reasonable for purposes of the safe harbor provision. However, many market participants have established policies to ensure that their sales employees are aware of applicable sales restrictions, to identify securities that are subject to such restrictions and to document their procedures regarding compliance with the restrictions. The measures appropriate for a particular market participant will depend on its circumstances. Issuers generally require dealers to represent to the issuer that they have reasonable procedures in effect with respect to the offering.

Notwithstanding the general restrictions, the D Rules permit issuers and distributors to sell bearer-form debt obligations during the restricted period to: (i) distributors purchasing for resale, (ii) foreign branches of U.S. financial institutions [157] purchasing for their own account or for resale, (iii) U.S. persons purchasing through foreign branches of U.S. financial institutions and holding the obligation through U.S. financial institutions, (iv) international organizations and (v) foreign central banks. [158] However, securities generally may not be *offered* for sale to U.S. persons (other than those listed in (i) and (ii) above). [159] In light of this restriction, the practical significance of the rule permitting U.S. persons to acquire securities through foreign branches of U.S. financial institutions may be limited.

p. 8-48

p. 8-49

As described above, the D Rules generally prohibit an offer to a person who is within the United States. Consequently, while Regulation S preserves the securities law exemption for offers and sales in the United States to U.S. professional fiduciaries acting on a discretionary basis for non-U.S. persons, the D Rules do not permit offers of bearer-form debt obligations to a U.S. office of such a fiduciary.

In addition to restricting offers and sales, the D Rules prohibit delivery of a definitive obligation in bearer form in the United States at any time in connection with a sale of the obligation made during the restricted period. [160] The D Rules also provide that in order to take delivery of an obligation in definitive bearer form (or to receive a payment of interest prior to delivery in definitive form), a holder or a financial institution acting on the holder's behalf must provide certification to the issuer stating that:

- the obligation is owned by a person that is not a U.S. person;
- the obligation is owned by a foreign branch of a U.S. financial institution, or by a U.S. person that acquired the obligation through a foreign branch of a U.S. financial institution and holds the obligation through a U.S. financial institution, and such financial institution has agreed to comply with the information reporting requirements and other rules for bearer-form debt obligations held by or through financial institutions; or
- the obligation is owned by a financial institution (U.S. or foreign) for purposes of resale during the restricted period and has not been acquired for purposes of resale directly or indirectly to a U.S. person or to a person in the United States. [161]

A limited exception to this certification requirement is available for obligations issued in a qualifying offering intended principally for sale in the local markets of a single foreign country. [162] This rule was intended to permit U.S. issuers to obtain access to markets where local law or practice makes it impossible

p. 8-49

p. 8-50

to obtain certification. However, the exception is available only for countries specifically designated by the IRS as jurisdictions in which certification is not permissible. [163] To date, the IRS has designated Germany and Switzerland as local markets that qualify for this special rule. [164]

An obligation targeted for sale in a country designated by the IRS must satisfy additional requirements relating to the terms of the obligation and the manner in which it is distributed. Under these requirements, principal and interest on the obligation must be denominated only in the currency of a single foreign country [165] and must be payable only within that country. In addition, the obligation must be offered and sold in accordance with customary local practices and documentation, the issuance of the obligation must be subject to guidelines or restrictions imposed by the country's governmental, banking or securities authorities, and the obligation may not be listed or be the subject of an application for listing on an exchange located outside the country. Finally, the distributors of the obligation must covenant to use reasonable efforts to sell the obligation within the country and more than 80% of the issue must be offered and sold to nondistributors by distributors maintaining an office located in the foreign country. [166]

The following table outlines the certifications and distribution compliance period that apply to standard underwritten offerings of debt and equity securities under the TEFRA D Rules. "Category" refers to the category of transaction under Regulation S. "S" means Regulation S ; "D" means the D Rules. Except where noted, the distribution compliance period lasts for 40 days and, under the TEFRA D Rules, any certification regarding non-U.S. status will generally be given at the end of such period. [167]

Certification	D*	D*	S/D*	S**	D*	D*			S**
Distribution Compliance/ Restricted Period	D	S/D	S/D	S**	D	S/D		S	S**

* There is no certification requirement for an offering that qualifies for the local offering exemption of TEFRA D. Generally, these will be overseas-directed offerings in respect of countries specifically designated by the IRS that fall within Category 1 of Regulation S. Thus far, the IRS has designated only Germany and Switzerland. [169]

** The distribution compliance period is for six months (one year if the issuer is a nonreporting issuer) and special rules apply.

[ii] *The C Rules*

Treasury Regulation § 1.163-5(c)(2)(i)(C) ("TEFRA C" or the "C Rules") provides alternative procedures that non-U.S. issuers may use to satisfy the "arrangements reasonably designed" requirement. [170] Under the C Rules, the requirement will be met if a debt obligation is issued only outside the United States and the issuer does not significantly engage in interstate commerce with respect to the issuance of the obligation, either directly or through an agent, an underwriter or a member of the selling group. The C Rules define "interstate commerce" as trade or commerce in obligations or any transportation or communication relating thereto between a foreign country and the United States. [171]

An issuer that uses the means of interstate commerce in connection with the issuance of an obligation will, in most cases, be significantly engaged in

p. 8-51

p. 8-52

interstate commerce with respect to the issuance. [172] The C Rules provide by way of illustration that an issuer will be significantly engaged in interstate commerce if:

- there are negotiations or communications regarding the sale of the obligation between the issuer or an underwriter or member of the selling group and the purchaser while either of them is in the United States;
- the U.S. office of an underwriter or the issuer is involved in the offer or sale of the obligation, either directly with the prospective purchaser or through the issuer in a foreign country;
- the obligation is delivered in the United States; or
- the obligation is advertised in the United States. [173]

The C Rules impose fewer procedural restrictions than the D Rules on the issuance by a foreign issuer of bearer debt obligations. In particular, the C Rules do not require certification of non-U.S. beneficial ownership on delivery of definitive bearer obligations, and debt obligations issued under the C Rules need not bear the TEFRA legend (discussed below). However, the requirement that payments of interest on bearer debt obligations be made outside the United States does apply. [174]

The comparative disadvantage of the C Rules is that, unlike the D Rules, they do not provide safe harbor protection against a distributor's inadvertent noncompliance with the selling restrictions applicable to an issue. The broadly worded requirements of the C Rules—that an issuer "not significantly engage in interstate commerce with respect to the issuance … either directly or through its agent, an underwriter, or a member of the selling group" [175]—have also been of concern to issuers. The regulations indicate that any communication between an underwriter and a prospective purchaser with respect to a sale while either of

p. 8-52
p. 8-53

them is located in the United States can constitute engaging in interstate commerce for this purpose. [176] Many issuers have concluded that the benefit of safe harbor protection under the D Rules, in view of the broad market acceptance of the procedures required by these rules, outweighs the procedural advantages available under the C Rules.

Whether the C Rules should be used for an offering of bearer debt obligations of a foreign issuer should be determined on a case-by-case basis in light of the relevant facts and circumstances. Certain offerings, however, are more obvious candidates for the C Rules than others. For example, it may be sufficient to use the C Rules if the debt obligations are privately placed outside the United States with a limited number of foreign investors purchasing for their own account or in the case of non-U.S. dollar-denominated debt obligations that are issued only in local markets. On the other hand, the C Rules may be less suitable for a public offering of debt obligations in the Euromarket, especially in the case of U.S. dollar-denominated obligations. The C Rules should not be used if there is a concurrent placement of debt obligations in the United States under Rule 144A or otherwise.

[b] Interest Payable Outside the United States

The requirement (applicable whether the C or D Rules are followed) that interest be payable only outside the United States and its possessions will be met if payments of interest can be made only upon presentation of a coupon (or upon making of a demand for payment) outside the United States and its possessions. [177] In addition, if the issuer is a U.S. issuer or a foreign issuer with significant U.S. connections, [178] payments generally may not be made by transfer of funds to the payee in the United States or mailed to an address in the United States. The regulations permit other issuers to make payments on bearer-form debt obligations in this manner, but (perhaps to avoid confusion) bond documentation typically uses payment terms appropriate for U.S. issuers.

[c] Legend Requirement

The following statement in English (referred to as the "TEFRA legend") must appear on the face of each bearer-form debt obligation and coupon:

p. 8-53
p. 8-54

Any United States person who holds this obligation will be subject to limitations under the United States income tax laws, including the limitations provided in §§ 165(j) and 1287(a) of the Internal Revenue Code. [179]

Footnotes

119 A debt obligation will be treated as a bearer obligation for U.S. tax purposes if it is not considered registered for such purposes. A debt obligation will be registered for U.S. tax purposes if it either (i) is registered with the issuer or its agent, and the transfer of the debt obligation may be effected only by surrender of the old obligation and either the reissuance of the old obligation to the new holder or the issuance of a new obligation to the new holder, or (ii) may be transferred only through a book-entry system maintained by the issuer or its agent. Treas. Reg. § 5f.103-1(c).

For debt obligations issued after March 18, 2012, an obligation also will be treated as being in registered form if it is held through a "dematerialized book entry system" or any other book-entry system specified by the Secretary of the Treasury. Although the Internal Revenue Code does not define "dematerialized book entry system," Notice 2012-20 (2012-13 I.R.B. 574 (Mar. 7, 2012)) provides that Treasury and the Internal Revenue Service intend to issue regulations that will provide that an obligation will be treated as in registered form if it is held through (i) a dematerialized book-entry system in which beneficial interests are transferable only through a book-entry system maintained by a clearing organization (or by its agent); or (ii) a clearing system in which the obligation is effectively immobilized. For this purpose, an obligation is treated as "effectively immobilized" if: (i) it is represented by one or more global securities in physical form that are issued to and held by a clearing organization (or by a custodian or depositary acting as its agent) for the benefit of purchasers of interests in the obligation under arrangements that prohibit the transfer of the global securities except to a successor clearing organization subject to the same terms; and (ii) beneficial interests in the underlying obligation are transferable only through a book-entry system maintained by the clearing organization (or its agent). Notice 2012-20 further provides that an obligation is treated as transferable only through a book-entry system even if holders are permitted to obtain physical certificates in bearer form in the following limited circumstances: (i) the termination of the clearing organization's business without a successor, (ii) a default by the issuer or (iii) at the issuer's request upon a change in tax law that would be adverse to the issuer but for the issuance of physical securities in bearer form. The Treasury Department and IRS have yet to issue such regulations. However, the Department of the Treasury 2016–2017 Priority Guidance Plan (Aug. 15, 2016) now includes "[r]egulations relating to the definition of registered form under §§ 149(a) and 163(f)" (item 1 under "Financial Institutions and Products").

120 In some foreign markets, debt securities typically are offered and sold in bearer form. As discussed in more detail below, however, in many bond offerings the rules relating to immobilized obligations may make it possible to avoid the application of these TEFRA restrictions by structuring the offering in a manner that causes the bonds to qualify as registered-form obligations for U.S. tax purposes, while nevertheless denominating the bonds as bearer obligations, which generally is sufficient to satisfy local market preferences.

121 Hiring Incentives to Restore Employment Act, Pub. L. No. 111-147, 124 Stat. 71 (2010).

122 HIRE Act § 502(a), amending I.R.C. § 163(f)(2).

123 Debt obligations that are not "registration-required" obligations, as discussed below, may be issued in bearer form without incurring the sanctions. I.R.C. § 163(f)(2)(A).

124 *See* Joint Committee on Taxation, General Explanation of the Revenue Provisions of the Tax Equity and Fiscal Responsibility Act of 1982 (JCS-38-82), Dec. 31, 1982, p. 190.

125 I.R.C. § 163(f)(1).

126 I.R.C. §§ 871(h)(2) and 881(c)(2). *See* Joint Committee on Taxation, General Explanation of Tax Legislation Enacted in the 111th Congress (JCS-2-11), Mar. 2011, p. 222.

127 I.R.C. § 4701. The amount of the excise tax is 1% of the principal amount of the obligation multiplied by the number of calendar years (or portions thereof) from the issue date to the maturity date of the obligation. As discussed below, the "arrangements reasonably designed" exception will continue to apply for purposes of the TEFRA excise tax. Thus, notwithstanding the sanctions described in the text, a U.S. or non-U.S. issuer that issues debt in bearer form after March 18, 2012 in compliance with the TEFRA D rules generally will not be subject to the excise tax.

128 I.R.C. § 4701.

129 I.R.C. § 4701(b)(1), as amended by HIRE Act § 502(e).

130 Notice 2012-20, § 6, 2012-13 I.R.B. 574 (Mar. 7, 2012).

131 I.R.C. § 165(j)(1).

132 I.R.C. § 1287(a).

133 Treas. Reg. §§ 1.165-12(c) (exceptions from loss deduction denial) and 1.1287-1(c) (exceptions from ordinary income treatment).

134 I.R.C. §§ 165(j)(1) and 1287(a).

135 § 163(f)(2)(A); Treas. Reg. § 1.163-5(c)(1); *see* Letter from Donald T. Regan, Secretary of the Treasury, to Robert Dole, Chairman of the Senate Committee on Finance (Sept. 7, 1984); *see also* 31 U.S.C. § 3121(g), as amended by HIRE Act § 502(d).

136 I.R.C. § 163(f)(2)(A).

137 Interest on obligations with maturities of 183 days or less generally is not subject to U.S. withholding tax. *See* I.R.C. § 871(g)(1)(B)(i).

138 I.R.C. §§ 871(h)(2)(B) and 881(c)(2)(B).

139 *See supra* Note 137.

140 Treas. Reg. § 1.6049-5T(b)(10)(i). The foreign-targeted requirements are discussed in the text accompanying Note 129 and in § 8.02[1][c]. The regulations also require that the obligation on its face include the following statement:

> By accepting this obligation, the holder represents and warrants that it is not a United States person (other than an exempt recipient described in section 6049(b)(4) of the Internal Revenue Code and regulations thereunder) and that it is not acting for or on behalf of a United States person (other than an exempt recipient described in section 6049(b)(4) of the Internal Revenue Code and the regulations thereunder).

141 The structure discussed in this paragraph may not suitable for offerings by U.S. companies, because, as discussed above, non-U.S. investors may be unwilling to provide the investor-specific U.S. tax certifications that are required to receive interest payments free of U.S. withholding tax on bonds that are treated as registered-form obligations for U.S. tax purposes.

142 Bonds that are considered to be in *registered form* for U.S. tax purposes are not subject to the TEFRA restrictions discussed above.

143 *See supra* Note 119. If the depositary agrees to maintain a book-entry system recording the ownership of the global note on the issuer's behalf, the notes also generally would be treated as in registered form. This structure, however, is unlikely to provide significant additional flexibility, given the "effectively immobilized" rule described *supra* in Note 119. Alternatively, it typically is possible to satisfy any local law or market preferences for physical securities by providing for the availability of registered-form (as opposed to bearer-form) physical securities in those circumstances.

144 Such arrangements should be designed such that the bonds are treated as "effectively immobilized" as described in Note 119.

145 A number of substantial non-U.S. issuers relied on a similar technique to facilitate the sale in the United States of instruments that were required to be denominated as bearer obligations for non-U.S. reasons, under the U.S. tax rules in effect prior to the HIRE Act. *See* IRS Private Letter Rulings 9343018 and 9343019 (both July 29, 1993), which deal with debt offerings by the World Bank and by a U.K. bank. New debt offerings using this technique generally should be designed in accordance with Notice 2012-20, as discussed in Note 119, rather than in accordance with these older Private Letter Rulings.

146 There may continue to be circumstances in which the arrangements do not make sense in the context of a particular offering, but that is likely to be the case in only a very small proportion of international bond offerings. Following the adoption of standardized documentation, the only such likely circumstances are where the documentation of an existing facility immutably requires that physical bearer-form securities be made available, or where the offering is targeted to one of the few remaining markets where local market practice requires that definitive bearer securities be made available in definitive bearer form, in circumstances other than those specified by Notice 2012-20.

147 As discussed in § 8.02[1], *supra*, non-U.S. issuers may continue to rely on the procedures described in this section in connection with the issuance of debt securities in bearer form.

148 Pre-HIRE Act I.R.C. § 163(f)(2)(B). As discussed in § 8.04[1], the rules for debt securities issued after March 18, 2012 provide that the otherwise applicable excise tax will not apply to bearer-form debt securities

that are issued according to procedures that meet requirements substantially identical to these three requirements.

149 Treas. Reg. § 1.163-5(c)(2)(i). The IRS has announced that it intends to issue regulations providing that rules "identical to" the rules in these regulations will apply to debt securities issued after March 18, 2012 for purposes of establishing an exemption from the otherwise applicable excise tax. Notice 2012-20, § 6. The IRS has not yet issued these regulations. *See supra* Note 130 and accompanying text.

150 Treas. Reg. § 1.163-5(c)(2)(i)(A). The regulations adopted the U.S. securities law definition of "U.S. person" and provided that an opinion of counsel could be relied on in determining that obligations were not "registration-required" because they were intended for distribution to non-U.S. persons. The obligations also had to be offered for sale and delivered in connection with their original issuance only outside the United States and its possessions. Treas. Reg. § 1.163-5(c)(2)(i)(B) prescribed rules for satisfying the "arrangements reasonably designed" requirement in cases where the obligations were registered under the Securities Act and in certain other cases.

151 T.D. 8300, 55 Fed. Reg. 91, 19622 (May 10, 1990).

152 Treas. Reg. § 1.163-5(c)(2)(i)(D)(1).

153 Treas. Reg. § 1.163-5(c)(2)(i)(D)(7).

154 Treas. Reg. § 1.163-5(c)(2)(i)(D)(7). The securities must be sold to someone who is neither related to the distributor nor another member of the selling group.

155 Treas. Reg. § 1.163-5(c)(2)(i)(D)(4). A confirmation or other notice of the transaction is not a written contract for purposes of this rule. Two corporations are affiliates for these purposes if one of them owns, directly or indirectly, stock possessing 50% or more of the voting power and value of the stock of the other or if a third corporation owns, directly or indirectly, stock possessing 50% or more of the voting power and value of the stock of each corporation.

156 Treas. Reg. § 1.163-5(c)(2)(i)(D)(1)(ii)(B).

157 For this purpose, "financial institutions" include banks, broker-dealers, insurance companies, finance companies, mutual funds, pension plans and investment advisers. Treas. Reg. § 1.165-12(c)(1)(iv).

The exemption for securities purchased by or through a foreign branch of a U.S. financial institution requires the financial institution to certify that it will comply with the information reporting requirements and other rules for bearer-form debt obligations held by or through financial institutions. This certification can be made on a blanket basis and renewed every three years.

158 Treas. Reg. § 1.163-5(c)(2)(i)(D)(1)(iii)(B), (C) and (c)(2)(i)(D)(5).

159 Treas. Reg. § 1.163-5(c)(2)(i)(D)(1)(iii)(C) refers to the "sale" of an obligation, while Treas. Reg. § 1.163-5(c)(2)(i)(D)(1)(iii)(B) refers to "an offer or sale" of an obligation.

160 Treas. Reg. § 1.163-5(c)(2)(i)(D)(2).

161 Treas. Reg. § 1.163-5(c)(2)(i)(D)(3). A temporary global security generally is not a definitive obligation for this purpose. If definitive obligations are not made available for delivery within a reasonable period of time after the end of the restricted period, the issuer will be deemed to have failed to satisfy the certification requirement. A "permanent" global security exchangeable for definitive obligations would be viewed as a definitive obligation for these purposes. However, U.S. issuers generally took steps to ensure that obligations in definitive bearer form could be withdrawn from such a "permanent" global security in order to avoid exposure to arguments that the obligations should be considered to be in registered form (which would trigger additional tax certification requirements as a prerequisite to obtaining the portfolio interest exemption from U.S. withholding tax).

162 Treas. Reg. § 1.163-5(c)(2)(i)(D)(3)(iii).

163 Treas. Reg. § 1.163-5(c)(2)(i)(D)(3)(iii)(F).

164 Notice 90-55, 1990-2 C.B. 344.

165 Although the IRS has not ruled on the question, it would appear that Germany's adoption of the euro may

have eliminated the ability of German-targeted issues to rely on this exemption.

166 Treas. Reg. § 1.163-5(c)(2)(i)(D)(3)(iii).

167 For a discussion of the certifications required under Regulation S, *see* § 8.02[1][c][ii] and [iii].

169 Issues targeted to Germany may no longer be eligible for this special rule. *See supra* Note 165 and accompanying text.

170 The C Rules are not available with respect to obligations guaranteed by, convertible into a debt or equity interest in, or substantially identical to an obligation issued by, a U.S. person that owns 10% or more of the combined voting power of the issuer. Treas. Reg. § 1.163-5(c)(2)(ii).

171 Treas. Reg. § 1.163-5(c)(2)(iii).

172 *See, e.g.*, Treas. Reg. § 1.163-5(c)(2)(iii). Examples 3 and 4 make clear that a single telex originating in the United States and that is related to the issuance of the bearer instrument is sufficient to be "significantly engaged in interstate commerce" with respect to the issuance of the obligation.

However, the means of interstate commerce may be used without violation of the C Rules in connection with certain activities that are merely of a "preparatory or auxiliary character" and that do not involve communication between a prospective purchaser and the issuer or an underwriter while either of them is in the United States. The C Rules provide examples of such activities. *See* Treas. Reg. § 1.163-5(c)(2)(iii)(A).

173 Treas. Reg. § 1.163-5(c)(2)(iii)(B).

174 *See* § 8.04[2][a].

175 Treas. Reg. § 1.163-5(c)(2)(i)(C).

176 *See supra* Note 172.

177 Treas. Reg. § 1.163-5(c)(2)(v).

178 Such issuers include non-U.S. issuers that are "controlled foreign corporations" or that have significant income effectively connected with the conduct of a U.S. trade or business. Treas. Reg. § 1.163-5(c)(2)(v)(A).

179 Treas. Reg. § 1.163-5(c)(1)(ii)(B). Temporary global notes and obligations issued under the C Rules need not contain this legend.

U.S. Regulation of the International Securities and Derivatives Markets, § 9.01, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 9.01 (11th and 12th Editions 2014-2017)
11th and 12th Editions

p. 9-5

This chapter discusses a variety of issues relating to the acquisition of significant interests in companies whose securities trade in the United States or that conduct business in the United States—by investors, by acquirors and by companies themselves (of their own securities). [1]

Section 9.02 discusses what constitutes a tender offer and sets forth the rules applicable to tender offers generally. While the term "tender offer" is not defined in the Exchange Act or any rule thereunder, the SEC has developed a list of eight factors, discussed in this section and known as the "Wellman factors," to be taken into account in determining whether a tender offer for securities exists. If a course of conduct related to the acquisition of securities rises to the level of a tender offer, § 14(e) of the Exchange Act and Regulation 14E thereunder will apply—regardless of whether the relevant security is classified as equity or debt and regardless of whether it (or any other security of the relevant issuer) is registered under § 12 of the Exchange Act [2]—and govern disclosure, timing and other procedural requirements and prohibit certain types of activities.

Section 9.03 addresses issuer repurchases of its own equity securities, both through open market repurchase programs and issuer tender offers. It begins with a discussion of insider trading considerations and how the possession of material nonpublic information affects the timing and procedures (including with respect to the use of Rule 10b5-1 plans and accelerated share repurchase ("ASR") transactions) for an issuer's repurchase of its own equity securities. The section then discusses how issuers can minimize the risk that their equity security repurchases will not be challenged as involving manipulative practices, including through reliance on the nonexclusive safe harbor from liability for manipulation provided by Rule 10b-18 under the Exchange Act. Lastly, this section discusses when an issuer's repurchase of its own equity securities, registered under § 12 of the Exchange Act, is subject to regulation as a tender offer under § 13(e) of the Exchange Act and Rules 13e-4 and 13e-3 thereunder (the latter insofar as an issuer tender offer may result in an issuer "going private"), which set forth the disclosure, filing and other procedural requirements applicable to those issuer self-tenders.

Section 9.04 discusses liability management, which broadly encompasses the tools issuers use to manage their ongoing contractual obligations with respect to their debt securities, including consent solicitations (modification and amendment of the terms of debt securities with the consent of a specified

p. 9-5

p. 9-6

percentage of the holders), open market repurchases of debt securities, privately negotiated buy-back programs for debt securities and debt tender and exchange offers. A liability management transaction will be most extensively regulated if it involves the issuance of a new security, in which case the registration requirements of the Securities Act will apply, or a tender offer, in which case certain of the Exchange Act provisions regulating tender offers (excluding those applicable only to equity securities) will apply, as discussed in this section.

Section 9.05 covers the regulation of tender and exchange offers for equity securities by third-party bidders under the U.S. securities laws. Any person that makes a tender or exchange offer (a tender offer involving the issuance of bidder securities) and, after consummation, would be the direct or indirect beneficial owner of more than 5% of any class of equity securities registered under § 12 (whether or not entitled to vote), must comply with the procedural and disclosure requirements of § 14(d) of the Exchange Act and the rules adopted by the

SEC thereunder. Unlike the laws of many countries, the Exchange Act does not contain a "mandatory bid" requirement—an obligation to make a tender offer to all shareholders once a specific ownership level is reached. This section also addresses the registration requirements, proxy solicitation rules (which do not apply to foreign private issuers [3]) and limitations on communications applicable to business combinations—where an acquisition or merger is effected through a statutory transaction involving a shareholder vote, instead of a tender or exchange offer.

The U.S. tender offer rules, absent an exemption, generally apply to tender and exchange offers by bidders for the securities of foreign target companies if the target securities are registered under the Exchange Act. Even if the securities are not registered under the Exchange Act, some of the U.S. tender offer rules apply absent an exemption if the offer is made to holders who are U.S. residents. These rules thus differ from the rules of many other countries, the application of which turns not on the residence of the investor but rather on the jurisdiction of incorporation (or sometimes the jurisdiction of listing) of the target company. This difference reflects the fundamental goal of the U.S. securities laws, which is protection of U.S. investors regardless of the nationality of the bidder or the target or of the investor protections afforded by their regulators in their home markets. As a consequence of the SEC's approach, there are often conflicts between its rules and the rules imposed on a bidder by the target's jurisdiction of incorporation or listing.

The SEC has adopted a number of rules to mitigate these conflicts when the target's U.S. shareholder base is less significant. The SEC's rules (i) exempt from its tender offer regulation tender and exchange offers for the securities of foreign targets if U.S. ownership of the target is 10% or less, (ii) provide limited relief from certain provisions of the tender offer rules in such tender or exchange offers if U.S. ownership is 40% or less and (iii) exempt from Securities Act registration the securities issued in such exchange offers if U.S. ownership of the target is 10% or less. The exemption from Securities Act registration is also available for business combinations requiring a shareholder vote involving foreign issuer target companies with U.S. ownership of 10% or less. In each case, ownership levels must be determined in accordance with SEC rules.

In addition, the Exchange Act contains margin regulations that regulate the use of credit in financing positions in securities, including for purposes of tender offers. These regulations are also discussed in § 9.05.

Chapter 9 then covers two other important statutes (and related rules) applicable to the acquisition of substantial stock positions or entire businesses. Section 9.06 discusses the antitrust reporting requirements under the Hart-Scott-Rodino Antitrust Improvements Act of 1976 (the "HSR Act"). These rules apply even to acquisitions by one foreign company of an interest in another foreign company if certain tests relating to the companies' U.S. revenues or assets are satisfied. Section 9.07 discusses the reporting and review requirements applicable to acquisitions of U.S. businesses by foreign persons that may affect U.S. national security under the Exon-Florio provision of the Defense Production Act of 1950. [4]

The chapter concludes with a brief examination of U.S. country- and person-specific sanctions regimes in § 9.08. Although the scope of sanctions such as those administered by the Office of Foreign Assets Control and imposed pursuant to the Iran Sanctions Act encompasses much more than business combinations and similar transactions, violation of these sanctions can carry substantial penalties, making it crucial for persons contemplating such transactions involving sanctioned countries or persons, or companies doing business in such countries, to consider their exposure to the sanctions in advance.

Footnotes

1 Chapter 6 separately addresses the disclosure requirements applicable to investors' ownership, post-acquisition and on a continuing basis, of significant equity interests in companies that are public in the United States.

2 There is one exception, Rule 14e-5, which applies only to tender offers for equity securities and is discussed in § 9.05.

3 The U.S. proxy solicitation rules, applicable to shareholder votes to approve business combinations, do not apply to foreign private issuers, regardless of whether their shares are registered under the Exchange Act. Rule 3a12-3 under the Exchange Act.

4 Additional industry-specific approval or reporting requirements apply to certain significant acquisitions of securities or assets (including acquisitions taking the form of business combinations). These most typically arise in regulated industries, such as telecommunications, television, radio, railroad, airline, banking and insurance. These industry-specific requirements are beyond the scope of this book.

U.S. Regulation of the International Securities and Derivatives Markets, § 9.02, EXCHANGE ACT REGULATION OF TENDER OFFERS

U.S. Regulation of the International Securities and Derivatives Markets

p. 9-8

[1] What Is a Tender Offer?

The Williams Act, [5] adopted in 1968, amended the Exchange Act to add provisions regulating the accumulation of securities. [6] Key provisions of the Williams Act apply only to accumulations that constitute "tender offers" within the meaning of the Williams Act.

The term "tender offer" is, however, not defined in the Exchange Act or any rule thereunder. While the SEC has declined to promulgate a definition of "tender offer," [7] it has developed a list of eight factors to be taken into account in determining whether a course of conduct related to the acquisition of securities rises to the level of a tender offer under the Williams Act. These factors are generally known as "*Wellman* factors," after the U.S. district court decision in which they were first discussed. [8] The *Wellman* factors are:

- active and widespread solicitation of public shareholders;
- solicitation for a substantial percentage of the target's outstanding stock;
- an offer price representing a premium over prevailing market price;
- firm rather than negotiable terms;
- solicitation contingent on a minimum number of shares or subject to a fixed maximum;
- an offer open for a limited period of time;
- pressure on public shareholders to sell; and
- public announcements preceding or accompanying purchases. [9]

Although the SEC has indicated that the *Wellman* factors are relevant to determining whether acquisitions constitute a tender offer, it has not specified how to

p. 9-8

p. 9-9

weigh the respective factors or how many factors must be satisfied to constitute a tender offer.

Courts have generally considered the *Wellman* factors relevant to the analysis of whether a tender offer is present; at the same time, however, they have emphasized that the Williams Act was intended to protect the public from undue pressure, and accordingly, should not ordinarily be applied to purchases in the open market or in privately negotiated transactions with sophisticated investors. [10] In *SEC v. Carter Hawley Hale Stores, Inc.*, for example, the court affirmed a lower court decision holding that an issuer that repurchased approximately 55% of its shares in the open market had not made a tender offer when only the first two of the eight factors were present. [11] In *Hanson Trust PLC v. SCM Corp.*, the defendant bought 25% of the stock of the issuer through one open market purchase and five privately negotiated transactions—four with institutional holders and one with a professional individual investor. [12] The defendant had previously made a tender offer for the issuer's stock, but had withdrawn its offer hours before commencing the private and open market purchases. [13] The court in

Hanson held that because the five private sellers were highly sophisticated professionals, knowledgeable in the marketplace and informed of the facts necessary to exercise their professional skills and appraise the offer, the protection of the tender offer regulations was not necessary. Additional factors influencing the

p. 9-9

p. 9-10

court's decision included: (i) there was no active or widespread advance publicity or public solicitation for shares, (ii) the price at which the defendant bought was not a premium over market price, and (iii) the defendant was obligated to buy the shares once agreement was reached with each individual seller, and the purchases were not contingent on the defendant's acquisition of a fixed number of shares. [14]

As previously noted, [15] the leading cases on determining whether acquisitions constitute a tender offer involve equity securities, [16] and the application in the context of debt securities of the standards that have been developed in those cases remains unelaborated.

[2] Provisions Applicable to Tender Offers for Any Type of Security

Section 14(e) of the Exchange Act and, with one exception, Regulation 14E thereunder apply to tender offers for any security [17] by any person, including the issuer (but excluding sovereign issuers as discussed below in this paragraph), regardless of whether the relevant security is classified as equity or debt and whether it (or any other security of the relevant issuer) is registered under § 12 of the Exchange Act. Rule 3a12-3(a) under the Exchange Act provides an exemption from § 14 of the Exchange Act for sovereign issuers.

Section 14(e) of the Exchange Act, a broadly worded antifraud provision, makes it unlawful for any person "to make any untrue statement of a material fact or omit to state any material fact necessary in order to make the statements made, in the light of the circumstances under which they are made, not misleading, or to engage in any fraudulent, deceptive or manipulative acts or practices, in connection with any tender offer." Thus, even if specific disclosure requirements [18] do not apply to a particular tender offer, all of the facts and circumstances relating to the proposed tender offer should be examined against the general standard of § 14(e) to determine what disclosures should be made in the offering documents. There also is a specific insider trading rule under § 14(e) applicable in connection with tender offers. [19]

p. 9-10

p. 9-11

Regulation 14E under the Exchange Act largely shapes the timing of all tender offers in the United States. Under Rule 14e-1, the bidder must hold the tender offer open for (i) at least 20 business days from the date when the tender offer is first published or sent or given to securityholders and (ii) at least ten business days from the date when the notice of an increase or decrease in the percentage of the class of securities being sought or the consideration offered is first published or sent or given to securityholders. [20] In addition, according to the SEC's announced interpretation of the rule, the tender offer must remain open for at least five to ten business days (depending on the level of materiality) from the date of any other material change in the terms of the offer or waiver of any material conditions of the offer. [21] For example, the SEC has interpreted the waiver or reduction of a minimum tender condition as a material change to an offer that could require an extension of the tender offer such that the offer must remain open for five U.S. business days following the date of the announcement of the waiver or reduction. [22]

In tender offers subject to a financing condition, the SEC has stated that "when an offer is not financed, or when a bidder's ability to obtain financing is uncertain, a material change will occur in the information previously disclosed when the offer becomes fully financed," [23] requiring an amendment to the bidder's disclosure filing on Schedule TO (if applicable) [24] and extension of the offer for an additional five U.S. business days. [25] The SEC takes the view that such a condition to the offer exists (the satisfaction of which is a material change) even where bidders have obtained commitments from third-party financing sources

p. 9-11

p. 9-12

and any resulting conditions to the offer relate only to the eventual funding of such committed financing. [26]

The bidder must pay the consideration offered or return the securities deposited by or on behalf of securityholders "promptly" after the termination or withdrawal of the tender offer. [27] The SEC has confirmed that prompt payment in U.S. offers is generally understood to mean payment within three business days of expiration of the offer. [28] In the event that the tender offer is extended, the bidder must issue a notice of such extension (including disclosure of the approximate number of securities deposited to date) by the earlier of (i) 9:00 A.M. Eastern time on the next business day after the scheduled expiration date of the offer, and (ii) if the class of securities is registered on one or more national securities exchanges, the first opening of any one of such exchanges. [29]

The target company is also required to publish certain information, including a recommendation to its securityholders to accept or reject the bid or an expression of its neutrality and the reasons for that recommendation or neutrality, within ten business days following commencement of the offer. [30]

Rule 14e-4 provides that, in a tender offer for less than all of the securities of a given class (a partial tender), short tenders (*i.e.*, tenders by persons who do not own the subject security) are prohibited.

p. 9-12

p. 9-13

Finally, Rule 14e-8 prohibits a bidder from announcing an offer without an intention to commence and complete it, as a means to manipulate stock prices, or without a reasonable belief that it will have the means to purchase the subject securities in order to consummate the offer. [31]

Beyond the specifically enumerated requirements of the Williams Act and the rules thereunder, the SEC has developed doctrines regarding permissible practices in tender offers that should also be borne in mind in structuring a tender offer, including the illusory offer doctrine and the prohibition on conditions subsequent.

Under the illusory offer doctrine, a bidder's offer must have clear terms and conditions such that an outside observer at the expiration date can determine, based on objective facts that are not within the bidder's control, whether the offer is successful or not. As a corollary, the conditions to a tender offer must be objective conditions that are outside the control of the bidder.

The prohibition on conditions subsequent means that all conditions to tender must be satisfied or waived at expiration (with limited exceptions, including for regulatory approvals).

Additional restrictions apply to (a) third-party tender offers in respect of equity securities that are registered under § 12 of the Exchange Act and (b) issuer tender offers in respect of equity securities if the relevant issuer has registered any class of its equity securities under § 12 of the Exchange Act (whether or not the class being tendered for is so registered). These include requirements regarding the filing of disclosure for the tender offer (covering specifically enumerated items) with the SEC, the provision of withdrawal rights to tendering holders, [32] extension of the tender offer to all holders of the subject class of securities, payment of the same price for all purchases of the security that is the subject of the tender offer, and a prohibition on purchases of the subject security outside the tender offer, as discussed in § 9.03[2] and § 9.05.

Footnotes

5 Williams Act of 1968, Pub. L. No. 90-439, 82 Stat. 454.

6 The Williams Act added provisions to §§ 13 and 14 of the Exchange Act related to beneficial ownership disclosure requirements, and the regulation of tender offers and changes in control. The beneficial ownership disclosure requirements are discussed in Chapter 6.

7 In 1979, the SEC proposed a definition of "tender offer," *see* SEC Release No. 33-6159 (Nov. 29, 1979), but no definition of the term was ever adopted.

8 *Wellman v. Dickinson*, 475 F. Supp. 783 (S.D.N.Y. 1979), *aff'd*, 682 F.2d 355 (2d Cir. 1982), *cert. denied*, 460 U.S. 1069 (1983).

9 *See Wellman v. Dickinson*, 475 F. Supp. 783 (S.D.N.Y. 1979), *aff'd*, 682 F.2d 355 (2d Cir. 1982), *cert. denied*, 460 U.S. 1069 (1983).

10 *See Hanson Trust PLC v. SCM Corp.*, 774 F.2d 47 (2d Cir. 1985); *SEC v. Carter Hawley Hale Stores, Inc.*, 760 F.2d 945 (9th Cir. 1985); *Stromfeld v. The Great Atlantic & Pacific Tea Co.*, 484 F. Supp. 1264 (S.D.N.Y. 1980); *see also Clearfield Bank & Trust Company v. Omega Financial Corp.*, 65 F. Supp. 2d 325 (W.D. Penn. 1999); *Anago Inc. v. Tecnol Medical Products, Inc.*, 792 F. Supp. 514 (N.D. Tex. 1992).

In the cross-border context, one court has noted in *dictum* that "[c]aution in finding that an unconventional tender offer has occurred is particularly necessary 'in the context of cross-border buying programs, where a foreign buyer may be acting in compliance with the laws of its own jurisdiction and the home jurisdiction of the issuer and unwittingly run afoul of a broadly interpreted tender offer rule in [the United States].'" *E.ON AG v. Acciona, S.A.*, No. 06 Civ. 8720 (DLC), 2007 WL 316874, at *12 (S.D.N.Y. Feb. 5, 2007) (citing *E.ON AG v. Acciona, S.A.*, 468 F. Supp. 2d. 559 (S.D.N.Y. 2007)).

It should also be noted that the eight-factor test was developed by the SEC to determine whether there has been a creeping tender offer in the context of common stock, and all of the court decisions regarding creeping tender offers have been in that context. Because the market for debt securities generally is more institutional in nature than the market for common stock, courts may well be even more reluctant to find that substantial open market purchases of debt securities constitute creeping tender offers.

11 *SEC v. Carter Hawley Hale Stores, Inc.*, 760 F.2d 945, 953 (9th Cir. 1985).

12 *Hanson Trust PLC v. SCM Corp.*, 774 F.2d 47 (2d Cir. 1985).

13 Purchases of large blocks of stock accumulated by arbitrageurs and other investors during the pendency of a bid are commonly known as "street sweeps." The use of state takeover statutes and modern poison pill rights plans has largely eliminated street sweeps for common stock. *See* § 9.05[12][a] and § 9.05[12][b] for a detailed discussion of these takeover defenses.

14 *Hanson Trust PLC v. SCM Corp.*, 774 F.2d 47, 57–59 (2d Cir. 1985).

15 *See supra* Note 10.

16 Including *Wellman v. Dickinson*, 475 F. Supp. 783 (S.D.N.Y. 1979), *aff'd*, 682 F.2d 355 (2d Cir. 1982), *cert. denied*, 460 U.S. 1069 (1983). *Hanson Trust PLC v. SCM Corp.*, 774 F.2d 47 (2d Cir. 1985); and *SEC v. Carter Hawley Hale Stores, Inc.*, 760 F.2d 945 (9th Cir. 1985).

17 Rule 14e-5 applies solely to equity securities. *See* § 9.05[2][a].

18 In particular, those applicable to equity tender offers that are subject to disclosure requirements under the Williams Act (*See* § 9.03[2] and § 9.05) and to exchange offers that are registered under the Securities Act.

19 Rule 14e-3 under the Exchange Act; *see* § 11.06[4]. These rules are in addition to the more generally applicable insider trading prohibitions of Rule 10b-5 under the Exchange Act, which are discussed in §§ 11.05[2] and 4.10[1].

20 Rules 14e-1(a) and 14e-1(b) under the Exchange Act. For discussion of relief the SEC has granted from these minimum time periods, *see* § 9.04 (discussing relief in the context of tender offers for debt securities) and § 9.03[2] (discussing relief in the context of tender offers for equity securities).

21 Although Rules 14d-4(d)(2) and 13e-4(e)(3) under the Exchange Act, establishing a five business day requirement for dissemination of material changes, apply by their terms only to equity securities, the SEC views the five to ten business day dissemination requirement described in the sentence above as applying to all tender offers, including those subject only to Regulation 14E. *See* SEC Release No. 34-24296 (Apr. 3, 1987) and SEC Release No. 33-7760 (Oct. 22, 1999).

22 *See* SEC Release No. 34-24296 (Apr. 3, 1987).

23 P.F. Chang's China Bistro, Inc., CIK # 0001039889, SEC Comment Letter, dated May 21, 2012, Re: P.F. Chang's China Bistro, Inc. Schedule TO-T filed May 15, 2012 by Wok Acquisition Corp., Wok Parent LLC, Wok Holdings Inc., and Centerbridge Capital Partners II, L.P., SEC File No. 005-54977.

24 Rule 14d-3(b)(1) under the Exchange Act.

25 *See*, *e.g.*, A.C. Moore Arts & Crafts, Inc., CIK # 0001042809, SEC Comment Letter, dated October 21, 2011 Re: A.C. Moore Arts & Crafts, Inc. Schedule TO-T filed October 18, 2011 by Nicole Crafts LLC, Sbar's

Acquisition Corporation and Adolfo Piperno, SEC File No. 005-53645.

26 *See*, *e.g.*, MModal, Inc., CIK # 0001441567, SEC Comment Letter, dated July 21, 2012 Re: MModal, Inc. Schedule TO-T filed by One Equity Partners V, L.P., *et al*. filed on July 17, 2012, and Schedule TO-T/A filings submitted by One Equity Partners V, L.P., *et al*. filed on July 24 and July 25, 2012, SEC File No. 005-86102.

27 Rule 14e-1(c) under the Exchange Act. *See* § 9.05[9][b] with respect to an exception to this requirement under the Tier II rules in connection with certain foreign offers made in accordance with home country requirements.

28 SEC Release No. 33-8917 (May 6, 2008), 73 Fed. Reg. 26,876, 26,890 n.143 (May 9, 2008) (citing SEC Release No. 34-43069 (July 24, 2000)). *But see infra* Notes 128-132 and accompanying text for cross-border requirements. The SEC has proposed an amendment to Rule 15c6-1(a) under the Exchange Act that would shorten the standard settlement cycle in the United States for most securities transactions from three business days after the trade date (T+3) to two business days (T+2). SEC Release No. 34-78962 (Sept. 28, 2016). If adopted, this rule change would be suggestive, by analogy, that prompt settlement within the meaning of Rule 14e-1(c) might be read to require an equivalently shortened settlement cycle for tender offers.

29 Rule 14e-1(d) under the Exchange Act. In the context of foreign offers made in accordance with home country requirements, the SEC has granted relief from the extension announcement requirements where there is a conflict between SEC regulations and the securities laws of another nation. *See VimpelCom Ltd*. (avail. Feb. 5, 2010) (Russia); *EGS Acquisition Co. LLC* (avail. Nov. 5, 2008) (Philippines).

30 Rule 14e-2 under the Exchange Act. The SEC will not generally enforce Rule 14e-2 against a foreign target company unless the company has a separate obligation, as a result of the Exchange Act registration of the target securities, to take a position regarding the tender offer. *See* the discussion of Rule 14d-9 under the Exchange Act in the text accompanying *infra* Notes 118-120.

31 In practice, Rule 14e-8 tends to be enforced only in egregious situations. *See, e.g.*, *SEC v. Weintraub*, 2011 WL 6935280 (S.D. Fla. Dec. 30, 2011).

32 Although withdrawal rights are not generally required in "Regulation 14E-only" exchange offers, in order to commence an exchange offer that is registered under the Securities Act prior to effectiveness of the related registration statement, the offeror must provide withdrawal rights to the same extent as would be required if the exchange offer were subject to the requirements of Rule 13e-4 or Rules 14d-1 through 14d-11 even if those rules do not apply by their terms. *See* Rule 162 under the Securities Act.

p. 9-14

[1] Open Market Repurchase Programs for Equity Securities

[a] Insider Trading Considerations

Purchases of equity securities by an issuer are subject to the general prohibitions against insider trading contained in the U.S. federal securities laws, particularly Rule 10b-5 under the Exchange Act. [33] An issuer may be, or may be alleged to be, in violation of these prohibitions if it purchases any equity securities (either as part of an established program (other than a 10b5-1 plan as described below in § 9.03[1][b][iii]) or in an isolated transaction) prior to the public announcement of information about the issuer that might reasonably be expected to have a positive effect on the price of such securities. Accordingly, an issuer should either (i) disclose any such nonpublic information before initiating a repurchase program or (ii) refrain from repurchasing securities (other than with respect to purchases made by an agent on its behalf in accordance with an established 10b5-1 plan) when corporate developments (for example, developments regarding litigation matters, major new clients, acquisitions or divestitures) have occurred that may be reasonably likely to cause the price of the securities to increase but have not yet been announced to the public. There are four measures many issuers take to reduce the risk that repurchases of securities may be claimed to violate the prohibition against insider trading.

[b] Reducing the Risk of Violating Prohibitions on Insider Trading

[i] *Verification Procedures*

Many issuers establish an internal procedure under which an officer or committee is expressly charged with monitoring when repurchases may be conducted or when they should be suspended, for example due to an emerging, but as of yet undisclosed, development. Practices in this respect vary widely and should be tailored to an issuer's other internal procedures for compliance and risk management.

[ii] *Window Periods*

Many issuers limit repurchases to regular "window periods" tied to the release of interim and annual earnings reports and other material information and the public filing of such information with the SEC and any relevant securities

p. 9-14

p. 9-15

exchange. This approach is not mandatory under U.S. securities law, but it is widely used. An issuer that takes a more ad hoc approach should be sure that it has robust verification procedures. Typically a window period begins when two full trading days (or in some cases, one full trading day) have passed after the release of earnings (or other material information), in order to ensure that the information has effectively reached the market. Practices vary more widely as to when the window period closes, but typically an issuer will cease repurchases at some point before the release of earnings each quarter when it has begun to develop knowledge of its performance for the period. In any case, an issuer will immediately close a window period and cease repurchasing upon acquiring any material nonpublic information.

[iii] *10b5-1 Plans*

Rule 10b5-1 under the Exchange Act provides an affirmative defense against insider trading liability for transactions conducted under a "contract, instruction or plan" that meet certain conditions designed to ensure that the transactions are not made on the basis of material nonpublic information. [34] Issuers often establish a Rule 10b5-1 trading plan to better shield repurchases, including repurchases intended to comply with Rule 10b-18 under the Exchange Act (described below), from potential insider trading liability and to permit repurchase programs to continue following the close of window periods.

In a typical 10b5-1 repurchase plan, the issuer gives instructions to a broker, at a time when it has no material nonpublic information, to conduct repurchases pursuant to specific parameters, and the broker then conducts repurchases pursuant to those instructions without any further issuer involvement.

[iv] *Accelerated Share Repurchase Transactions*

Accelerated share repurchase ("ASR") transactions vary in their details and complexity, depending on an issuer's objectives. Under a simple ASR, the issuer enters into a contract with a bank, under which the bank delivers shares to the issuer at inception in exchange for payment by the issuer of the amount the issuer wants to spend to effect repurchases. At final settlement, the bank may deliver additional shares to the issuer or the issuer may deliver shares or cash to the bank, with the amount of the delivery generally determined by comparing the number of shares the bank originally delivered to a number of shares equal to the amount initially paid by the issuer divided by the average market price of the issuer's shares during the contract term.

p. 9-15

p. 9-16

The bank would typically borrow shares from lenders for the initial delivery to the issuer, and during the contract term, the bank would typically purchase shares in the open market to return to securities lenders and for any further delivery to the issuer at settlement.

An ASR has the advantage of allowing the issuer to retire the shares it receives at the inception of the transaction. However, it also requires an upfront cash outlay, and depending on the structure, an issuer may be required to return shares or pay an additional amount at settlement. In addition, it is difficult to suspend once launched.

ASRs are typically structured to qualify as 10b5-1 plans on the basis that market purchase decisions are made by the bank without the involvement of the issuer. [35] Although the issuer's repurchases under an ASR and the bank's related market activity are not eligible for the Rule 10b-18 safe harbor (discussed in § 9.03[1][d]) [36], ASRs are often structured consistent with many of the safe harbor's requirements.

[c] Disclosure

[i] *Form 20-F Issuer Repurchase Disclosure Requirements*

The SEC requires that periodic and annual reports, including Form 20-F, disclose information on issuer repurchases in a tabular format. [37] This disclosure requirement covers all repurchases of equity securities registered under § 12 of the Exchange Act for the relevant period, generally including the total number of securities purchased (reported on a monthly basis), the average price paid per security, the total number of securities purchased as part of a publicly announced repurchase plan or program and the maximum number (or approximate dollar value) of securities that could yet be purchased under such plans or programs. [38]

[ii] *Exchange Requirements*

An issuer with securities listed on the NYSE is required to notify the NYSE in connection with its repurchase or disposal of issued and listed securities within

p. 9-16
p. 9-17

ten days after the close of the fiscal quarter in which the repurchases occur. [39] The notice must state the total amount of shares repurchased during that quarter and the balance held by the issuer at the end of the quarter. If there are both repurchases and dispositions of securities during a quarter, both the total amount reacquired and the total amount disposed of should be disclosed. However, the NYSE has indicated that foreign issuers with listed ADRs will not separately need to furnish notification of repurchases of their ADRs. If securities that were previously repurchased are subsequently resold, an issuer is required to provide notice to NYSE of its plans to increase the outstanding amount of listed securities. [40]

Nasdaq does not have a similar notification obligation in connection with repurchases of securities. However, it would typically require pre-notification in the event that an issuer determined to issue a press release or make an SEC filing regarding a repurchase program, [41] and might separately require notification (no later than ten days after the occurrence) of any aggregate decrease of any class of securities listed on Nasdaq that exceeds 5% of the amount of securities of the class outstanding. [42]

[d] Market Manipulation Considerations and Rule 10b-18

If an issuer repurchases its equity securities on the open market, it must ensure that such purchases do not involve fraudulent or manipulative practices. Rule 10b-18 under the Exchange Act [43] provides a nonexclusive, limited safe harbor from liability for manipulation under §§ 9(a)(2) and 10(b) of the Exchange Act [44] in connection with purchases of common equity securities in the market

p. 9-17
p. 9-18

by or for issuers or affiliated purchasers [45] so long as they adhere to the following requirements of Rule 10b-18: [46]

Manner: On any given day, all bids and repurchases by the issuer and its affiliated purchasers must be made through only one broker or dealer. The single broker or dealer restriction does not, however, apply to repurchases that were not solicited by or on behalf of the issuer or its affiliated purchasers.

Timing: On any given day, repurchases by the issuer and its affiliated purchasers must not: (a) constitute the opening transaction, (b) for a security that has an ADTV [47] of at least $1 million and a public float value of at least $150 million, be made during the 10 minutes before the scheduled close of the primary trading session in the security's principal market, and during the 10 minutes before the scheduled close of the primary trading session in the market where the purchase is made, and (c) for all other securities, be made during the 30 minutes before the scheduled close of the primary trading session in the security's principal market, and the 30 minutes before the scheduled close of the primary trading session in the market where the purchase is made. This timing provision does not apply for a certain period following a market-wide trading suspension.

Volume: On any given day, the total volume of repurchases by the issuer and its affiliated purchasers must not exceed 25% of the purchased security's ADTV. However, once every calendar week, in lieu of purchasing under 25% of

p. 9-18
p. 9-19

the ADTV limit for that day, the issuer or an affiliated purchaser is permitted to effect one "block" [48] purchase, provided that no other purchases under Rule 10b-18 are effected that day and the block purchase is not included when calculating the security's four-week ADTV. During the trading session following a market-wide trading suspension, this volume provision is modified to permit repurchases not exceeding 100% of the ADTV for the security.

Price: The issuer and its affiliated purchasers must not repurchase securities at a price that exceeds the highest independent bid or the last independent transaction price (whichever is higher) quoted or reported in the consolidated system at the time the purchase is made.

A failure to meet any one of the four conditions by the issuer and any affiliated purchasers on any day will result in the loss of the safe harbor for all repurchases made on that day.

Rule 10b-18's safe harbor is unavailable for issuer repurchases effected (i) during the restricted period under Regulation M [49], (ii) as a purchase of a fractional interest in a security evidenced by a script certificate, order form, or similar document, (iii) pursuant to Rule 13e-1 during a third-party tender offer [50] or (iv) pursuant to a tender offer subject to Rule 13e-4 (or specifically excepted from Rule 13e-4) under the Exchange Act [51] or § 14(d) of the Exchange Act [52]. In addition, except as described below, Rule 10b-18's safe harbor is unavailable for repurchases during the period from the time of public announcement of a merger, acquisition or similar transaction involving a recapitalization [53] until the earlier of the completion of such transaction or the completion of the vote by target shareholders. In order to allow certain ordinary course repurchases not related to the merger (or other covered transaction) during this period, the exclusion from the Rule 10b-18 safe harbor does not apply to purchases effected after the announcement of a merger (or other covered transaction) so long as the total amount of the issuer's repurchases effected on any single day does not exceed

p. 9-19

p. 9-20

the lesser of 25% of the security's ADTV and the issuer's average daily purchases under Rule 10b-18 during the three full calendar months preceding the date of the announcement of the merger (or other covered transaction) and certain other conditions are met. [54] In addition, the issuer may effect a block purchase pursuant to paragraph (b)(4) of Rule 10b-18, provided that the issuer does not exceed the average size and frequency of block purchases effected during the three full calendar months preceding the date of the announcement of such transaction.

Although Rule 10b-18 is a nonexclusive safe harbor, and in theory there are other ways for an issuer to make nonmanipulative repurchases, issuers may be reluctant to conduct such repurchases without the benefit of Rule 10b-18's protection. It should be noted that the Rule 10b-18 safe harbor applies only to repurchases effected in the United States and not to repurchases effected in markets outside the United States.

[2] Issuer Tender Offers for Equity Securities

A company, including a foreign company, that repurchases its securities from U.S. residents is subject to regulation under the Williams Act if its repurchases rise to the level of a tender offer. [55] Additionally, disclosure in connection with repurchases of securities is subject both to Rule 10b-5 under the Exchange Act, in terms of completeness and accuracy, and to §§ 9(a)(2) and 10(b) of the Exchange Act, in terms of possible market manipulation. [56]

The Exchange Act provisions that the Williams Act introduced impose special obligations in the context of tender offers for equity securities. [57] These are additional to the requirements that apply to tender offers in general. While § 14(e) and Regulation 14E under the Exchange Act (which include an antifraud provision and various procedural requirements for tender offers) apply to all tender offers, [58] §§ 14(d) and 13(e) of the Exchange Act and the rules promulgated under them apply only to tender offers for equity securities. Section 14(d) and the rules thereunder apply in the context of third-party equity tender offers (which are discussed in § 9.05). Those rules, however, do not apply to issuer self-tenders for equity securities, which are instead governed by § 13(e) and

p. 9-20

p. 9-21

Rule 13e-4 thereunder generally, and Rule 13e-3 insofar as an issuer tender offer may result in the issuer "going private."

Rule 13e-4, which substantially parallels the rules for third-party tenders under § 14(d), applies to any tender or exchange offer by an issuer with a class of equity securities registered under § 12 of the Exchange Act for its own equity securities (whether or not the subject class is itself so registered). [59] Rule 13e-4 imposes substantial filing and disclosure obligations on the issuer. When an issuer that has equity securities registered under the Exchange Act makes a tender offer for any class of its equity securities (whether or not registered under the Exchange Act), it is required by Rule 13e-4(b)(2) to file with the SEC, as soon as practicable on the day that the tender offer commences, a statement on Schedule TO providing disclosure about, *inter alia*, the terms of the offer, the issuer, the securities sought, the source of the funds used to purchase the securities, the purpose of the offer and, if material, the financial condition and results of the issuer. The issuer must also disseminate certain information to the holders of the securities for which the offer is made and comply with certain procedural rules relating to the timing of the offer, withdrawal of tendered securities by their holders, pro rata acceptances of tendered securities and payment of the best price to all tendering holders. [60] In addition, before an issuer may purchase, by way of tender offer or otherwise, any of its equity securities (whether or not registered under the Exchange Act) while a third-party's tender offer for equity securities of the issuer that are registered under the Exchange Act is outstanding, the issuer must file certain additional information with the SEC. [61]

Rule 13e-3 under the Exchange Act imposes additional requirements, beyond those set out in Rule 13e-4, on certain issuer self-tenders for equity securities (generally referred to as "going private transactions"). Under Rule 13e-3, any issuer that has registered a class of equity securities under the Exchange Act and that purchases or makes a tender offer for any of its equity securities (and any affiliate of such an issuer that makes such purchase or offer) will be subject to additional restrictions if the purchase or tender offer has a reasonable likelihood of causing, or is intended to cause, (i) the class of equity securities to cease to be registered under the Exchange Act, (ii) such issuer's periodic reporting

p. 9-21

p. 9-22

obligations under the Exchange Act to be suspended or terminated or (iii) the class of equity securities, if listed on a national securities exchange, to cease to be so listed. [62] The issuer (or affiliate) must file with the SEC a statement on Schedule 13E-3, which requires disclosure about, *inter alia*, the terms of the offer, the issuer or affiliate, the subject company, the securities sought, the source of funds used to purchase the securities, the purpose of the offer, alternatives to the transaction and the fairness of the transaction. The issuer (or affiliate) must also include most of the Schedule 13E-3 information in any related registration statement or tender offer disclosure document distributed to holders of the securities. [63] These requirements do not apply to certain transactions (i) by a person that became an affiliate of the issuer as a result of a tender offer within the prior year or (ii) involving an exchange of equivalent securities. [64]

One area in which the SEC staff has approved significant relief from Williams Act provisions governing issuer self-tenders relates to the use of a formula to price a tender offer. An issuer is generally required to specify a fixed price for the subject securities over the 20-business day period during which a tender offer must remain open under the Williams Act, [65] and to hold the offer open for at least 10 business days following any change in the consideration offered or the percentage of the subject class that is sought for purchase. [66] In a series of no-action letters over the years, the SEC staff has permitted the use of formula pricing mechanisms based on average trading data over a specified period of time to determine offer consideration. The SEC staff first permitted formula pricing to be used for equity tender offers in the context of third-party exchange offers for equity securities, pursuant to the no-action letter it issued *Lazard Freres & Co.* (avail. Aug 11, 1995). [67] This relief was subsequently extended to issuer cash offers in a letter for *TXU Corp.* (avail. Sept. 13, 2004), where the staff granted no-action relief relating to Rules 13e-4(d)(l), 13e-4(f)(l)(ii) and 14e-1(b) when TXU used a pricing formula to determine the purchase price it offered for its outstanding equity-linked securities and convertible notes. [68]

p. 9-22

p. 9-23

Conditions to reliance on the no-action letters permitting formula pricing for issuer self-tenders for equity securities generally include that: (1) the offer document discloses the pricing mechanism for determining the final consideration; [69] (2) the trading price of the subject securities is closely correlated to the trading price of the reference common stock; [70] (3) the issuer's common stock is listed on a national securities exchange; (4) the formula is fixed throughout the offer period and tied to the volume weighted average trading prices of the relevant common stock over a specified period; (5) the offer materials disclose a minimum and maximum offer price; (6) if there is a change in the formula or in the minimum and maximum price, the offer will remain open for at least 10 business days; (7) the daily indicative calculated purchase prices per subject security are published on a webpage and a toll-free number is provided for securityholders to obtain pricing related information; (8) printed materials for withdrawal are made available and procedures for withdrawal are disclosed in the offering materials; and (9) the final price is published on the offer webpage and in a press release at the time specified.

Historically, the SEC staff has held the view that there should be a two-day window between determination of the final price (through application of the pricing formula announced at the launch of the offer) and the expiration of the offer, so that the final price would be required to be determined no later than the 18th business day of a 20-business day tender offer. [71] The staff has also favored an averaging period of no less than 10 trading days for determining the reference price used in the pricing formula. [72] The SEC staff has become more flexible on these parameters over time, issuing no-action relief in respect of structures in which the final price is determined on the expiration date for the tender offer [73]

and structures utilizing a three trading day averaging period to determine the reference price used in the pricing formula. [74]

Other notable relief has been granted in the context of issuer self-tenders relating to employee compensation. The SEC has issued an exemptive order regarding employee stock option exchanges that permits issuers to make such exchange offers in order to reprice outstanding employee stock options without complying with the rules requiring tender offers to be extended to all securityholders of a class at the same price. The order contains conditions designed to ensure that this relief is only given in the context of compensatory offers and that adequate disclosure is provided to employees. [75] Similar relief has been extended on a case-by-case basis to issuer tender offers for compensatory purposes, such as where the issuer seeks to repurchase "out of the money" employee stock options that are not expected to regain value. [76] The SEC staff has provided relief from prompt payment requirements in such offers where consideration included a deferred right to cash payment contingent on continued employment. [77]

35 If the ASR provides the issuer an option the exercise of which might affect the bank's market activity, the bank may require the issuer to represent it has no material nonpublic information as a condition to exercising that option.

36 SEC, Division of Market Regulation, Answers to Frequently Asked Questions Concerning Rule 10b-18 ("Safe Harbor" for Issuer Repurchases) (Nov. 17, 2004), Question 13.

37 There is no U.S. federal securities law requirement to disclose issuer share repurchases on a more current basis. However, many issuers routinely disclose the adoption of programs for repurchase of their shares in press releases in the interest of informing the market of their share repurchase plans.

43 17 C.F.R. § 240.10b-18. *See also* Securities Exchange Act Release No. 19244 (Nov. 17, 1982), 47 Fed.

Reg. 53,333, 53,334 (Nov. 26, 1982).

44 Some repurchase activity that meets the safe harbor conditions may still violate the antifraud and anti-manipulation provisions of the Exchange Act. "[R]egardless of whether an issuer's repurchases technically satisfy the conditions of the Rule, the safe harbor is not available if the repurchases are fraudulent or manipulative, when viewed in the totality of the facts and circumstances surrounding the repurchases (*i.e.*, facts and circumstances in addition to the volume, price, time, and manner of the repurchases)." *See* SEC Release No. 34-48766 (Nov. 10, 2003), 68 Fed. Reg. 64,952, 64,953 n.5 (Nov. 17, 2003). *See also SEC v. Wachovia Corp.*, SEC Litigation Release No. 18958 (Nov. 4, 2004). In connection with First Union Corp.'s stock-for-stock friendly bid for Wachovia Corp. in 2001, both First Union Corp. and Wachovia Corp. carried out significant purchases of First Union Corp. stock during May and June 2001, including, in particular, following the making of a competing hostile offer by SunTrust Banks Inc. Neither First Union nor Wachovia disclosed the repurchases until after the shareholders voted on the merger, when Wachovia disclosed the repurchases in its second quarter Form 10-Q. On November 4, 2004, without admitting or denying any allegations in the SEC's complaint, Wachovia consented to entry of a judgment alleging violations of §§ 13(a) and 14(a) of the Exchange Act and Rules 12b-20, 13a-13 and 14a-9 thereunder, enjoining Wachovia from future violations of the federal securities laws and requiring Wachovia to pay a $37 million penalty. In discussing the judgment, the SEC cited its 2003 Rule 10b-18 release. The SEC argued that Wachovia knew that its First Union purchases could have had the effect of supporting the price of First Union common stock and making the offer appear more attractive to Wachovia shareholders.

For a discussion of §§ 9(a)(2) and 10(b) of the Exchange Act in the context of market manipulation, *see* § 11.05[3].

45 Rule 10b-18(a)(3). An affiliated purchaser is a person acting, directly or indirectly, in concert with an issuer for the purpose of acquiring the issuer's securities or an affiliate of the issuer who, directly or indirectly, controls the issuer's purchases or whose purchases are controlled by or under common control with those of the issuer. However, an affiliated purchaser does not include (i) any broker, dealer or other person solely by reason of its effecting purchases on behalf of the issuer or for its account, or (ii) an issuer's officer or director solely by reason of such person's participation in the decision to authorize purchases by or on behalf of the issuer.

46 Rule 10b-18(b)(1)–(4). Purchases pursuant to Rule 10b-18 do not include purchases effected by or for an issuer plan by an agent independent of the issuer (as defined in Rule 100(b) of Regulation M) and, as a result, do not need to be taken into account for compliance with these requirements. If an issuer plan will be making purchases in the market, it is important for the issuer to determine whether or not the person directing those purchases would be considered an agent independent of the issuer for purposes of both Rule 10b-18 and Regulation M. *See* § 3.02[9][a].

47 "ADTV" is defined in Rule 10b-18(a)(1) as the average daily trading volume reported for the securities during the four calendar weeks preceding the week in which the purchase under Rule 10b-18 is to be effected.

48 "Block" is defined in Rule 10b-18(a)(5) and, in general, (i) has a purchase price of U.S. $200,000 or more, (ii) is at least 5,000 shares and has a purchase price of at least U.S. $50,000, or (iii) is at least 20 "round lots" of the security and totals 150 percent or more of the trading volume of the security, or, in the event that trading volume data is unavailable, is at least 20 "round lots" of the security and totals at least one-tenth of one percent of the outstanding shares of the security, exclusive of any shares owned by an affiliate.

49 *See* § 3.02[9] for a discussion of Regulation M under the Exchange Act generally.

50 *See* § 9.05[2][b].

51 *See* § 9.03[2].

52 *See* § 9.05[1].

53 This exclusion does not apply to repurchases during a merger, acquisition or recapitalization in which the consideration is solely cash and there is no valuation period. Rule 10b-18(a)(13)(iv)(A) under the Exchange Act.

54 Rule 10b-18(a)(13)(iv)(B) under the Exchange Act.

55 Significant relief from the rules referenced in this paragraph as applied to cross-border tender offers (embodied in the 2008 Cross-Border Amendments) is discussed in § 9.05[9].

56 *See* § 9.03[1].

57 Convertible debt securities are equity securities for purposes of the Exchange Act pursuant to § 3(a)(11), and tender offers for them will thus be subject to the additional provisions of the Williams Act that apply to equity securities.

58 Excepting Rule 14e-5, which applies solely to tender offers for equity securities. Section 14(e) and Regulation 14E are discussed in § 9.02[2].

59 Thus, for example, a tender offer for convertible bonds originally sold on an exempt basis under Regulation S and Rule 144A under the Securities Act would nevertheless be subject to Rule 13e-4 if the issuer of those bonds has a class of equity securities registered under the Exchange Act (as convertible bonds constitute "equity securities" within the meaning of § 3(a)(11) of the Exchange Act), even though the bonds themselves are not so registered.

An affiliate that makes a tender offer for a class of the issuer's registered equity securities will be subject to the provisions of § 14(d) of the Exchange Act and Regulation 14D thereunder rather than the rules for issuer self-tenders. *See* the discussion of those provisions in § 9.05[1].

60 Rule 13e-4(f) under the Exchange Act.

61 Rule 13e-1 under the Exchange Act.

62 Rule 13e-3(a)(3) under the Exchange Act. *See* the discussion of termination of Exchange Act registration under Rule 12h-6 in § 5.05[9].

63 Rule 13e-3(e) under the Exchange Act.

64 Rule 13e-3(g) under the Exchange Act. Even if an issuer satisfies these going private requirements of the Exchange Act (and, if applicable, the self-tender rules), it would have to comply with exchange requirements to delist shares from an exchange. *See* § 4.11.

65 Rules 13e-4(d)(1), 13e-4(f)(1)(i) and 14e-1(a) under the Exchange Act.

66 Rules 13e-4(f)(1)(ii) and Rule 14e-1(b).

67 *See also* staff letters for *AB Volvo* (avail. May 16, 1997) and *Epicor Software Corporation* (avail. May 13, 2004).

68 *See also* staff letters for issuer cash tender offers to purchase convertible notes in *GenCorp Inc*. (avail. Dec. 19, 2014), *Group 1 Automotive* (avail. May 16, 2014), *CNO Financial Group, Inc.* (avail. Feb. 11, 2013), *Textron, Inc*. (avail. Oct. 7, 2011), and for combined cash and common stock offers for convertible notes in *Sonic Automotive, Inc*. (avail. July 24, 2012) and *American Equity Investment Life Holding Company* (avail. Aug. 23, 2013).

Note that while the line of staff letters pertaining to pricing formulas for setting exchange ratios often involve common stock, those pertaining to issuer cash tender offers relate only to convertible debt.

69 In the case of cash tenders, the offer document typically also includes an illustrative table showing calculations of the purchase price.

70 Use of a third party's common stock as a reference for formula pricing (rather than the issuer's own common stock) has been approved under appropriate circumstances. *See*, *e.g.*, *The Procter & Gamble Company Exchange Offer* (avail. Sept. 1, 2016) and *Lockheed Martin Corporation* (avail. July 11, 2016) (using proxy pricing based on the common stock of other party to merger agreement).

71 The structure was first given relief in *Lazard Freres & Co.* (avail. Aug. 11, 1995).

72 *Lazard Freres & Co.* (avail. Aug. 11, 1995). *See also BBVA Privanza International (Gibraltar) Limited* (avail. Dec. 23, 2005), *TXU Corporation* (avail. Sept. 13, 2004), *Epicor Software Corp*. (avail. May 13, 2004) and *AB Volvo* (avail. May 16, 1997).

Click to open document in a browser

[1] Introduction

Liability management is an umbrella term describing a family of transactional tools used to manage the ongoing contractual obligations of an issuer with respect to its existing debt securities. These tools include consent solicitations, open market purchase programs, cash tender offers and exchange offers.

The degree to which a given liability management transaction is regulated depends largely on whether it (1) involves the issuance of a new security and thus requires compliance with, or exemption from, the registration requirements of the Securities Act, [78] and (2) is a "tender offer" under the Williams Act. As discussed above in § 9.02, the Williams Act imposes significant restrictions on transactions that qualify as "tender offers" under that act, with certain provisions

p. 9-25

(including the act's general antifraud provision and regulations relating to the duration of offers) applying to all tender offers and other provisions (including provisions requiring the filing of disclosure on Schedule TO) applying only to certain tender offers in respect of equity securities.

[2] Consent Solicitations

The terms of most debt securities allow modification and amendment with the consent of the holders of a specified percentage of those securities. The customary way to obtain consents in respect of widely held debt securities is through a consent solicitation. The issuer generally prepares a consent solicitation statement, outlining the provisions to be modified, and circulates it to the holders. In most cases, the holders are offered a consent fee in exchange for agreeing to the proposed modification. A consent solicitation may be combined with a cash tender offer (creating an "exit tender") or with an exchange offer (creating an "exit exchange").

Consent solicitations are generally lightly regulated, although they may be subject to common law requirements of good faith and fair dealing as well as state antifraud provisions. [79] In two prominent decisions, the Delaware Court of Chancery (construing New York law) indicated in dictum that failure to extend a consent solicitation related to an exit tender to all holders, thereby giving all interested holders the ability to receive the related fee, could violate the covenant of good faith and fair dealing that is implied under New York law. [80] A subsequent decision of that court, however, held that such payments are permissible (at least under the circumstances presented in that case). [81] The English High Court, in contrast, has construed analogous common law principles as applied under English law to prohibit exit tenders whose terms have coercive effect. [82] While contemporary English cases have no precedential effect for U.S. purposes, this decision could nonetheless have persuasive value for future U.S. plaintiffs challenging the terms of particularly aggressive exit tenders.

p. 9-25

p. 9-26

Additional considerations affecting the structuring of a consent solicitation arise in the context of debt securities issued under an indenture that has been qualified under the Trust Indenture Act (or that contains a contractual provision equivalent to the provision of the Trust Indenture Act described below, as is common in debt offerings in the Rule 144A market). In *Marblegate Asset Management v. Education Management Corp.*, [83] the U.S.

District Court for the Southern District of New York gave an expansive interpretation to the prohibition within § 316(b) of the Trust Indenture Act against "impairment," without the consent of all affected holders, of the holders' right "to receive payment of the principal of and interest on [a qualified] indenture security, … or to institute suit for the enforcement of any such payment." Marblegate involved a debt restructuring outside bankruptcy in which a majority of holders tendered their existing notes with an exit consent to modifications including release of the collateral for the subject class of securities, substantially reducing the likelihood, as a factual matter, that securities of the subject class that were not exchanged would ultimately be repaid. [83.1] Although no term explicitly governing the right of the holders to receive interest or principal on a certain date was modified, the court nonetheless held that the restructuring had violated § 316(b) by effectively undercutting the protections that would make such payment occur in practice. In response to the *Marblegate* decision and another Southern District decision applying similar analysis, [84] 28 law firms issued an opinion white paper noting that the cases "contain language that suggests a significant departure from the widely understood meaning of Trust Indenture Act § 316(b) that has prevailed among practitioners for decades" and laying out guidelines for rendering legal opinions in light of that development. [85] On January 17, 2017, the Second Circuit Court of Appeals (the "Second Circuit") overturned the *Marblegate* decision.

Consideration of the so-called new security doctrine also may affect the structuring of a consent solicitation. If the modifications sought in a consent solicitation would be so fundamental as to effectively create a new "security" for purposes of the Securities Act, the transaction will be regulated as a deemed exchange offer rather than being subject only to the light regulatory regime applicable to consent solicitations. [86] Treatment of a consent solicitation as a deemed offer to exchange (x) the security as modified by the proposed amendments for

p. 9-26

p. 9-27

(y) the outstanding security in its existing form results in the need for registration under, or exemption from, the Securities Act and compliance with the Trust Indenture Act. Additionally, if the existing security is widely held, a consent solicitation that is treated as a deemed exchange offer would generally become subject to regulation as a tender offer under the Williams Act. Existing guidance on the new security doctrine is limited and does not establish a bright line for what changes transform a consent solicitation into a deemed exchange offer. In general, however, amending covenants that do not affect basic financial terms (such as the principal amount, interest rate, redemption premium and maturity) should not create a deemed exchange, while amendments to the basic financial terms generally should. [87]

[3] Open Market Purchase and Privately Negotiated Buy-Back Programs for Debt Securities

Purchases of debt securities in open market transactions or privately negotiated buy-back programs can be used to accumulate substantial positions in a debt security (or to retire a substantial portion of the amount outstanding, in the case of purchases by the issuer) without triggering the tender offer provisions of the Williams Act so long as the purchases are made in accordance with appropriate procedures. Open market purchase programs are typically implemented by the acquiring party (most commonly the issuer) giving instructions to a broker-dealer to purchase a limited amount of debt securities at prevailing market prices in accordance with stipulated procedures and limits. The broker will typically post bids on a screen based trading system, but to limit the risk that an open market purchase program will be treated as a "creeping," or de facto, tender offer, the program will include a limitation on the percentage of the subject securities to be purchased, limitation of the bid price to within the prevailing bid and ask spread and the exclusion of publicity and of cross conditioning of purchases. Other than posting bids, the broker's role in an open market program is necessarily passive and such programs typically result in relatively small purchases (less than 25%) of the outstanding debt of the target series. Privately negotiated buy-back programs include a more active role by the broker, generally including direct calls to a small number of holders. Due to the active inquiries by the broker, additional limitations are typically imposed to prevent the occurrence of a tender offer. The calls are limited to a small number of holders having great sophistication (such as qualified institutional buyers within the meaning of Rule 144A under the Securities Act), a limit on the percentage of a

p. 9-27
p. 9-28

series that may be purchased and exclusion of publicity and of cross conditioning of purchases. Because, as discussed above, the SEC has not defined the term "tender offer" and evaluation of whether a tender offer is present is based on facts and circumstances, [88] the procedures applied to an individual open market purchase program or buy-back program require specific analysis based on the relevant facts.

[4] Cash Tender Offers for Debt Securities

As discussed above, a cash tender offer for nonconvertible debt securities is subject to regulation under Regulation 14E under the Exchange Act, imposing requirements (modified as described below) including a minimum 20 business day duration and the requirement that the offer remain open for at least 10 business days following any change in the consideration offered or the percentage of the subject class that is sought for purchase. [89] A cash tender offer does not, however, require procedures limiting execution of the kind necessary for buy-back programs (described in § 9.04[3]). Cash tender offers for nonconvertible debt securities are typically made to all holders (although making the offer to all holders is not required unless relying on relief that is conditioned on an offer to all holders or tendering for a security the terms of which require that any offer be made to all holders).

Given the dynamics of market pricing of debt securities (which generally trade on the basis of a constantly changing reference rate, such as a benchmark U.S. Treasury security rate or LIBOR, plus a spread to reflect credit quality), it is difficult, as a practical matter, to hold an offer to purchase debt securities open for 20 business days at a given price, extending as necessary to ensure the offer remains open for at least 10 business days after any change in the price offered. To respond to this difficulty, beginning in 1990 the SEC staff issued a series of no-action letters allowing "short-dated" tenders for debt securities, executed on a shorter time frame and with floating pricing. On January 23, 2015 the SEC staff issued a no-action letter (the "short-dated tender offer relief letter") revising and harmonizing its previous guidance and indicated that previous no-action letters regarding short-dated tenders were superseded. [90] The short-dated tender offer relief letter allows issuers, and in some cases their affiliates, to hold a tender offer for the issuer's debt securities open for only five business days rather than

p. 9-28
p. 9-29

the 20 business days specified by Rule 14e-1 under the Exchange Act and to base the consideration offered on a fixed spread to a benchmark rate. Conditions to the relief, which applies only to tender offers for debt securities made by the issuer or an affiliate that qualifies under the letter's terms, include immediate widespread dissemination of the offer on a timely basis, tender for any-and-all outstanding subject securities (*i.e.*, without any limit on who may participate or the maximum amount to be accepted), provision of required withdrawal rights, no use of early or rolling settlement, no use of a contemporaneous consent solicitation (a so-called exit consent), the lack of an existing default, event of default or bankruptcy or restructuring event, timely announcement of changes to the offer and the offer consideration, provision of a "guaranteed delivery" mechanism that allows a certifying holder to deliver a notice during the offer period and deliver the subject securities by the close of business on the second business day after expiration of the offer, and no use of indebtedness that is effectively senior to the subject securities (whether as a result of ranking, structural subordination or shorter weighted average life to maturity) to finance the offer. Additionally, if the issuer is a reporting company, it must furnish the press release announcing the offer on a Form 8-K with the SEC prior to noon, Eastern time, on the first business day of the offer. Although filing obligations of reporting foreign private issuers are not addressed in the incoming letter to the SEC staff, the SEC staff has subsequently clarified that those issuers should furnish announcement press releases on Form 6-K within the foregoing time frame. [91] Cash tender offers pursuant to the short-dated tender offer relief letter must be made to all record and beneficial holders in order to qualify for relief under the short-dated tender offer relief letter.

The conditions enumerated in the short-dated tender offer relief letter limit the circumstances under which it may be relied upon. In particular, tender offers that include a consent solicitation, are made to less than all holders or for less than the full outstanding amount of the subject securities, or that are made by third parties that are not a qualifying affiliate of the issuer do not benefit from the letter.

One alternative approach to tender offers for debt securities that would not fall within the short-dated tender offer relief letter that effectively shortens the period of market risk for the issuer involves the use of an early tender fee. Because Regulation 14E does not require that all holders that accept a tender offer receive the same price for their securities, [92] the bidder can offer holders that accept a tender offer prior to a set time preceding the expiration of the offer an

p. 9-29

p. 9-30

"early tender premium." By encouraging early participation, an early tender fee effectively shortens the time a bidder must wait for meaningful evidence of the level of participation in the offer (and thus of the potential need to amend) and limits the period during which market prices might undercut the offer's success. Given the requirement that a tender offer must be open for at least 10 business days following any change in the consideration offered, tender offers that provide for an early tender fee customarily set the deadline for tenders eligible to receive that fee at the 10th business day of a 20-business day offer (this is sometimes referred to as a 10/10 structure). In a similar vein, tender offers with an exit consent often include a deadline (also generally the 10th business day of a 20-business day offer) by which tenders must be received in order to be eligible to receive a consent fee (subject to extension if the requisite consents necessary to approve the proposed amendments are not received prior to the initial deadline).

Another alternative approach to tender offers for debt securities that would not fall within the short-dated tender offer relief letter that involves a shorter period of market risk for the issuer is a tender offer that is open for 20 business days, during which time the price floats for the first 18 business days and is fixed for the last two business days (that is, expressed as a fixed spread over U.S. treasuries to be set after the close on the 18th day). Although this structure does not comply with the requirements of Rule 14e-1, the staff has approved this structure on a case-by-case basis following an informal review process. This structure was first used by the Times Mirror Company and was memorialized in a no-action letter. [93] In the past, in order to receive informal approval to use this structure, issuers have approached the staff with a written request prior to commencing the tender offer, among other things, describing the structure and making certain representations about the trading characteristics of the securities compared to U.S. treasury trading, the number of market makers who make an active market in the securities and the types of investors holding the securities. This structure has now become sufficiently common that prior staff approval should no longer be necessary so long as the representations that would have been made to the staff are applicable. [94] It remains, however, significantly less common than the early tender fee structure described in the preceding paragraph.

Additionally, because Regulation 14E does not require mandatory withdrawal rights in tender offers, [95] in tender offers for debt securities the bidder can purchase the subject securities as they are tendered rather than waiting until the

p. 9-30

p. 9-31

offer expires (unless relying on relief that excludes rolling settlement of purchases, including the short-dated tender offer relief letter and Rule 162 under the Securities Act (which permits early commencement of registered tender offers)).

[5] Debt Exchange Offers

In an exchange offer, the bidder offers to purchase outstanding securities in exchange for another security rather than in exchange for cash. From a regulatory perspective, every exchange offer has embedded within it an offering of new securities (with associated Securities Act issues) and a potential tender offer (with associated Williams Act issues).

[a] Williams Act Considerations

The fact that the consideration offered in an exchange offer consists of securities rather than cash does not materially affect the analysis as to whether the exchange offer is a tender offer under the Williams Act. An exchange offer will generally qualify as a tender offer unless appropriate procedures limiting the scope and manner of the exchange offer are put in place (comparable to those described for buy-back programs in § 9.04[3]).

If an exchange offer for debt securities is classified as a tender offer, it may qualify for relief from Williams Act requirements under the short-dated tender offer relief letter so long as it meets the requirements described in that letter (outlined in § 9.04[4]) and two additional requirements. The first requirement is that the consideration offered in the exchange offer must consist of "qualified debt securities" as defined in the letter and, if desired, cash. "Qualified debt securities" means debt securities that (a) are identical to the subject securities in all material respects other than maturity date, interest payment and record dates, redemption provisions and interest rate, (b) pay interest solely in cash (no payment in kind) and (c) have a weighted average life to maturity that is longer than the subject securities. The second requirement is the debt exchange offer must be limited to qualified institutional buyers (within the meaning of Rule 144A under the Securities Act), non-U.S. persons (within the meaning of Regulation S under the Securities Act) or both, and all excluded holders must be given a concurrent option to receive cash in a fixed amount determined by the bidder, in its reasonable judgment, to approximate the value of the qualified debt securities offered in the exchange offer.

[b] Securities Act Considerations

An exchange offer may be registered under the Securities Act or it may be structured to be exempt from registration under § 4(a)(2) of the Securities Act,

p. 9-31

p. 9-32

Regulation S under the Securities Act or § 3(a)(9) of the Securities Act. Because they involve an offer and sale of securities, exchange offers are subject to the antifraud prohibitions in Rule 10b-5 under the Exchange Act and, in the case of registered exchange offers, §§ 11 and 12 of the Securities Act and, in the case of § 3(a)(9) exempt exchange offers, § 12 of the Securities Act.

[i] *Registered Exchange Offers*

In a registered exchange offer, the bidder prepares and files with the SEC a registration statement on Form F-4 or S-4. Like a registered offering for cash, a registered exchange offer triggers Exchange Act reporting obligations for the bidder.

[ii] *Private/Offshore Exchange Offers*

If registration is impractical or undesirable, an exchange offer can be structured to be exempt from registration under § 4(a)(2) of the Securities Act (a private exchange offer) or Regulation S under the Securities Act (an offshore exchange offer). While it is possible to include accredited investors (as defined in Rule 501 of Regulation D under the Securities Act) in a private offering, private exchange offers for debt securities are generally limited to qualified institutional buyers (within the meaning of Rule 144A under the Securities Act).

As a first step for a private/offshore exchange offer, issuers generally issue a press release regarding the potential for a transaction and send a letter of inquiry (sometimes referred to as a "pathfinder letter") to all holders of the subject securities to determine which holders are eligible to participate. The press release and the pathfinder letter should be carefully drafted to avoid rising to the level of an "offer" for purposes of § 5 of the Securities Act. Only after a holder has established its eligibility to participate by return of a completed pathfinder letter (or the making of representations equivalent to those in a pathfinder letter electronically) does that holder receive documentation for the exchange offer.

Advantages of a private/offshore exchange offer over a registered exchange offer are that a private/offshore exchange offer does not trigger Exchange Act reporting requirements, is more lightly regulated, is subject to less stringent disclosure liability and is usually possible to execute more quickly. Advantages of a private/offshore exchange offer over a § 3(a)(9) exchange offer are that there are no limitations on the services that a financial advisor or investment bank may provide and that the issuer of the new securities need not be the same as the issuer of the subject securities. Disadvantages of a private/offshore exchange offer are that a private offer will not reach ineligible holders and will result in the new securities being subject to transfer restrictions that may not be required for a § 3(a)(9) exchange offer.

[iii] *Section 3(a)(9) Exchange Offers*

p. 9-32
p. 9-33

Section 3(a)(9) of the Securities Act provides that an offer of "any security exchanged by the issuer with its existing securityholders exclusively where no commission or other remuneration is paid or given directly or indirectly for soliciting such exchange" is exempt from the registration requirements of the Securities Act. The SEC staff has confirmed that an issuer and its employees may solicit and recommend exchanges in a § 3(a)(9) offer of securities without rendering the offer ineligible for the exemption, provided that the employees do not receive special compensation for their efforts and that the issuer does not hire extra employees for solicitation purposes. [96]

If a financial advisor or investment bank is engaged to assist in a § 3(a)(9) exchange offer, that party will be limited in the compensation it may receive and in the activities it may perform. In a series of no-action letters, the SEC staff has indicated that financial advisors or investment banks assisting in § 3(a)(9) exempt transactions may generally receive compensation that is fixed as a flat fee (and not contingent on the consummation of the transaction or the amount of securities tendered in the exchange) without affecting availability of the § 3(a)(9) exemption. [97] Although compensation should not be structured as a success-based fee or tied to the amount of securities exchanged, it may be based on the number of holders targeted or contacted in the transaction. [98] Financial advisors or investment banks assisting in § 3(a)(9) exempt transactions may also be reimbursed for their reasonable out-of-pocket expenses, including fees for legal counsel, and compensation may be paid on a fixed date or in fixed monthly fees. [99] The no-action letters also provide specific examples of activities that financial advisors or investment banks can perform without rendering the transaction ineligible for the § 3(a)(9) exemption. [100]

Although § 3(a)(9) provides an exemption from registration under the Securities Act, it does not exempt an exchange offer from Trust Indenture Act qualification requirements, including the filing of a Form T-3 (which is used to qualify a debt indenture under the Trust Indenture Act in the context of an

p. 9-33
p. 9-34

unregistered offering). [101] Where Trust Indenture Act qualification is required, § 306(c) of the Trust Indenture Act prohibits offers until the appropriate application for qualification has been filed with the SEC.

101 The exemptions to Trust Indenture Act qualification requirements set forth in § 304 of the Trust Indenture Act include offerings exempt from Securities Act registration pursuant to § 4(a)(2) of the Securities Act and Rule 144A under the Securities Act, but do not include offerings exempt from Securities Act registration pursuant to § 3(a)(9) of the Securities Act.

U.S. Regulation of the International Securities and Derivatives Markets, § 9.05, TENDER AND EXCHANGE OFFERS FOR EQUITY SECURITIES; BUSINESS COMBINATION TRANSACTIONS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 9.05 (11th and 12th Editions 2014-2017)
11th and 12th Editions

[1] Tender Offers for Registered Equity Securities

A tender offer where the bidder, after consummation of the offer, would be the direct or indirect beneficial owner of more than 5% of any class [102] of equity securities (whether or not entitled to vote) registered under § 12 of the Exchange Act is subject to the tender offer provisions of § 14(d) of the Exchange Act and Regulation 14D thereunder, as well as the provisions of § 14(e) and Regulation 14E, as discussed in § 9.02 above and § 9.05[2] below. [103] A tender offer formally commences on the date on which the bidder first publishes, sends or gives securityholders the means to tender (normally called a "letter of transmittal"). [104] A bidder can express an intention to launch an offer, but there is no prescribed time period by which the offer must commence following the announcement. [105] All communications to securityholders by bidders and by targets are permitted prior to formal commencement of the tender offer. All pre-commencement written communications [106] by bidders or targets must be filed with the SEC on the

p. 9-35

date of first use [107] and must include a prominent legend-advising shareholder to read the tender offer statement when it becomes available because it will contain important information. [108]

A bidder is prohibited from announcing an offer without an intention to commence and complete it, as a means to manipulate stock prices, or without a reasonable belief that it will have the necessary cash to consummate the offer. [109] Normally, a commitment letter should be sufficient to satisfy this last requirement, although even that is not always required. [110]

The bidder must also file with the SEC, as soon as practicable on the day its tender offer formally commences, a statement on Schedule TO making detailed disclosure as to, *inter alia*:

- the identity of the target and the securities sought in the offer;
- the identity of the bidder, and its management, directors and controlling entities;
- the source and amount of funds to be used to purchase securities in the tender offer, including the specific sources of financing, all conditions to the financing and the bidder's ability to finance the offer if the primary source of financing falls through;

p. 9-35

p. 9-36

- the purpose of the offer, including any plans or proposals of the bidder for any major corporate transaction affecting control of the target;
- the background of the offer, including a description of any discussions between the parties with respect to any extraordinary transaction during the current year or the two previous years;
- the amount and percentage of target securities held by the bidder and details about transactions in such securities during the 60 days prior to commencement of the offer; and

- if material to a selling shareholder, current and adequate financial information concerning the bidder.

In addition, in a negotiated two-step transaction (a first-step cash tender offer for less than 100% of the outstanding target shares, to be followed by a second-step statutory merger), if the acquisition will be "significant" to the bidder at or above the 20% level, *pro forma* financial information must be included in the first-step tender offer materials. [111]

The bidder in a cash tender offer is not required to provide financial statements if (i) there is no financing or funding condition to the tender offer *and* (ii) either (a) the bidder files reports with the SEC under § 13(a) or § 15(d) of the Exchange Act *or* (b) the offer is for all outstanding target shares. If financial statements are required, only two years' statements need be provided. [112]

In a cash tender offer, the bidder must also provide a so-called "Offer to Purchase," which must begin on the first or second page of the offer document. The Offer to Purchase must include a bullet-point, cross-referenced "plain English" summary term sheet highlighting the most important aspects of the transaction. [113] The Offer to Purchase also sets forth the information expressly called for by Schedule TO, as well as all material conditions to the offer and various procedural and timing provisions (*e.g.*, a description of withdrawal rights and the bidder's right to extend or amend the offer.) The Offer to Purchase also generally includes a summary of any material nonpublic information about the target (such as target management's projections) that were furnished by the target to the bidder. [114] An Offer to Purchase is *not* required in a stock-for-stock tender offer ("exchange offer"), but its offer document is required to be in plain English. [115]

Generally, a bidder has great flexibility in setting conditions on its obligation to consummate the tender offer. However, these conditions must be based on objective criteria and not be within the bidder's control. [116]

Any material change in the information previously disclosed to securityholders must be promptly disclosed in additional tender offer materials, filed as amendments to the bidder's Schedule TO. [117]

Management of the target company is required to notify its shareholders and file with the SEC a Schedule 14D-9 pursuant to which it must state whether or not it has taken a position with respect to the bid, and if so, what that position is and the reasons for that position (or the reasons for not taking a position). [118] Management must also disclose generally what steps it plans to take in response to the bid and any conflicts that management or the target's board of directors may have (including by reason of employment or severance agreements). [119] The Schedule 14D-9 must be filed on the date, on or after the formal commencement of the offer, that the target first publishes its recommendation, which must be within ten business days of such commencement. [120]

p. 9-37

p. 9-38

Holders of equity securities registered under the Exchange Act also benefit from certain significant procedural rights under Regulation 14D, as well as those that apply to all tender offers under Regulation 14E. All tender offers, [121] including tender offers for registered equity securities, must be kept open for at least 20 business days and, under certain circumstances, must be extended from time to time, as discussed in § 9.02. [122] In the case of a tender offer for registered

p. 9-38

p. 9-39

equity securities, any person who has tendered may withdraw his or her tendered shares at any time prior to the expiration of the offer and, accordingly, tendered shares may not be purchased before the offer expires. [123]

A tender offer must be open to all holders of the class of registered equity securities sought in the offer (the so-called "all-holders rule") and the same price must be paid in respect of all equity securities of that class that are purchased (the so-called "best-price rule"). [124] Tender offers can be made for less than 100% of the outstanding shares. [125] In such an offer, if more of the securities of the specified class are tendered than the bidder has offered to purchase, the securities must be accepted by the bidder on a *pro rata* basis. [126]

A bidder in a tender or exchange offer for all outstanding shares will sometimes want to extend the offer to allow for the tender of additional shares even after all conditions of the offer have been satisfied. This is particularly common

p. 9-39

p. 9-40

where the bidder seeks to reach the 90% threshold of ownership required in most states to effect a short-form merger (a merger not requiring a shareholder meeting or shareholder vote). [127] To facilitate achieving this goal, a bidder conducting a tender or exchange offer for 100% of the outstanding shares of a class of equity securities registered under § 12 of the Exchange Act is permitted to allow shareholders to tender shares during a "subsequent offering period" [128] that *follows* the expiration of the initial offer (as it may have been extended) if the bidder concurrently accepts and promptly pays for all shares tendered during the initial offering period. [129] With respect to tender offers for the shares of non-U.S. companies whose shares trade in their home markets and are also registered under § 12 of the Exchange Act, a bidder may launch a subsequent offering period if it accepts and pays for all shares tendered during the subsequent offering period within 20 business days of the date of tender if payment may not be made on a more expedited basis under the home jurisdiction law or practice. [130] Withdrawal

p. 9-40

p. 9-41

rights are not available during the subsequent offering period. [131] Tendered shares must promptly be accepted and purchased for the same form and amount of consideration as was offered in the initial offering period, except in tender offers for non-U.S. companies whose shares trade in their home markets and are also registered under § 12 of the Exchange Act, where separate offset and proration pools are permitted for securities tendered during the initial and subsequent offering periods. [132]

[2] Tender Offers for Any Equity Security

[a] Rule 14e-5

In addition to the provisions of § 14(e) and Regulation 14E discussed in § 9.02 above, a tender offer for any equity security (regardless of whether it is registered under the Exchange Act) is also subject to Rule 14e-5. Under Rule 14e-5, a bidder who makes such a tender offer is prohibited from directly or indirectly purchasing (or arranging to purchase) any of the equity securities for which the tender offer is being made, or any "related securities," except pursuant to the offer. [133] The prohibition extends from the first public announcement of the

p. 9-41

p. 9-42

offer until the offer has expired. [134] Because of the "directly or indirectly" language, the rule is generally interpreted to apply to purchases by the bidder's dealer-manager or other financial advisor unless an exemption is available. [135]

Exceptions to Rule 14e-5 include the following:

- purchases pursuant to the exercise of previously owned options or convertible securities;
- certain purchases by employee benefit plans of the bidder;
- purchases in connection with certain "basket" transactions;
- purchases pursuant to unconditional contractual obligations entered into before the public announcement of the tender offer;
- unsolicited agency or riskless principal [136] purchases by or through the bidder's dealer-manager or affiliates of the dealer-manager made in the ordinary course of business; [137]
- purchases made by certain affiliates of the dealer-manager [138] that have appropriate firewalls in place to prevent the sharing of nonpublic information with

p. 9-42

p. 9-43

the dealer-manager and that are not made for the purpose of facilitating the tender offer (this exception is most relevant for the investment management affiliates of the dealer-manager);

- certain purchases by U.K. market makers; [139]
- purchases in cross-border tender offers qualifying as Tier I offerings; [140]
- purchases of securities of a foreign private issuer pursuant to a foreign tender offer made in accordance with home country requirements where there are separate, concurrent or substantially concurrent U.S. and non-U.S. offers; [141] and
- in the case of a tender offer that the bidder reasonably expects to meet the conditions for reliance on the Tier II exemption, [142] purchases of securities of a foreign private issuer by an offeror or its affiliates or by an affiliate of a

p. 9-43

p. 9-44

financial advisor [143] outside a tender offer, and conducted in accordance with the foreign private issuer's home jurisdiction laws. [144]

p. 9-44

p. 9-45

If no exemption applies, Rule 14e-5's restrictions can be unduly burdensome to transaction participants as a result of their extraterritorial reach. The rule applies to tender offers containing a U.S. component even when neither the bidder nor the target are registered under the Exchange Act or maintain ADR programs, despite the fact that such bids would otherwise be fully regulated by non-U.S. law. French law, for example, permits a number of trading activities by the

p. 9-45

p. 9-46

financial advisors to a bidder that would be impermissible under Rule 14e-5. [145] In a bid by one French company for another where the bidder decides to include U.S. shareholders (even limiting participation to qualified institutional buyers) in order to avoid discrimination against them and to encourage maximum acceptance of the offer, Rule 14e-5 would cover the trading activities of such advisors in France. The relief that might otherwise be afforded by virtue of the Tier I exemption is often unavailable with respect to French targets, because of the difficulty of determining beneficial ownership under the Tier I rules within the French ownership system.

[b] Rule 13e-1

Under Rule 13e-1, before an issuer may purchase, by way of tender offer or otherwise, any of its equity securities (whether or not registered under the Exchange Act) while a third-party's tender offer for equity securities of the issuer that are registered under the Exchange Act is outstanding, the issuer must file certain additional information with the SEC. The additional information includes, among other things, the title and number of securities to be purchased, the names of the persons from whom the securities will be purchased, the purpose of the purchase, the source and amount of consideration to be used, and whether the issuer will retire the purchased securities, hold them in its treasury or dispose of them. [146]

[3] Business Combination Transactions and Exchange Offers

[a] Introduction

In many jurisdictions, a business combination can be effected through a statutory transaction involving a shareholder vote, instead of utilizing a tender offer or an exchange offer. In general, such a "business combination transaction" involves a combination of companies, effected pursuant to the requirements of local law, in which the shares of the acquired company are cancelled as a matter of law and then represent only the right to receive the specified consideration—whether stock, cash or a mix of stock and cash—or to exercise dissenters' appraisal rights, if provided for by such law. Examples of business combination transactions include mergers under U.S. and German law, amalgamations and plans of arrangement under Canadian law and schemes of arrangement under English law. A business combination generally requires approval by both

p. 9-46

p. 9-47

constituent companies' boards of directors and shareholders (and may also require regulatory or court approval, as do schemes of arrangement in the United Kingdom and plans of arrangement in Canada). In the United States, the required vote is established by the corporate law of the state of the company's incorporation unless the company's certificate of incorporation requires a higher vote. Under Delaware corporate law (and the law of most other states), a merger requires board approval and the affirmative vote of a majority of the outstanding shares. [147] The tender offer provisions of the Exchange Act are not applicable to mergers or other business combination transactions because no purchase offer is being made directly to individual shareholders.

In the United States, a merger may be structured in various ways: for example, as a "direct" merger of the target into the acquiror (which is generally not feasible for foreign acquirors of U.S. companies), a "forward subsidiary merger" in which the target is merged into a new wholly owned subsidiary of the acquiror, or a "reverse subsidiary merger" in which a new wholly owned subsidiary of the acquiror merges into the target (with the target's outstanding shares being cancelled in exchange for the specified consideration, even though the target is the "surviving" company in the merger). Both subsidiary merger structures can be utilized by foreign acquirors through the establishment of a U.S. subsidiary. As discussed below, in most cases the shareholders of a U.S. target must vote to approve a merger; whether the acquiror needs shareholder approval will generally be a question of its home country law and stock exchange rules, and may depend on the structure of the transaction and the size of the acquisition compared to the acquiror's size. In many cases, if the acquiror is a U.S. company, it will not need shareholder approval for a merger. [148] The selection of a merger structure is generally determined based on tax considerations and the terms of existing target (and sometimes acquiror) contracts and licenses.

[b] One-Step Mergers and Two-Step Tender Offer and Short-Form Mergers

Mergers of the types described above are often referred to as one-step mergers. But mergers are also often utilized as the second step following a

p. 9-47

p. 9-48

successful cash tender offer or exchange offer for a U.S. target to acquire any shares not tendered. [149] This is because an acquiror generally finds it undesirable to leave even a small minority of target shares outstanding after a tender offer due to the fiduciary duties to minority shareholders imposed on the target's board. Furthermore, in a friendly acquisition, the parties' merger agreement generally obligates the acquiror to effectuate a second-step merger after completion of a tender or exchange offer and specifies that the merger consideration will be equivalent to the consideration offered in the tender or exchange offer. If the remaining shares represent a sufficiently small percentage of the outstanding shares of each class (usually less than 10%), the second-step merger can often be accomplished as a "short-form" merger without a shareholder vote.

Under Delaware law, the affirmative vote of the holders of a simple majority of the target's outstanding shares is required to approve a merger. [150] Prior to 2013 amendments to the Delaware General Corporation Law (the "DGCL"), acquirors that acquired a simple majority but less than 90% of the target's outstanding shares in a tender offer were required to go through the process of holding a shareholder vote to approve the second-step merger, even though the result of the vote was assured.

To simplify this process, in 2014, Delaware adopted a new § 251(h) of the DGCL ("DGCL § 251(h)") that, subject to certain exceptions, allows the parties to an acquisition agreement to forgo the vote of the target's shareholders to approve a "short-form" merger if the following conditions are met:

- The target's shares are listed on a U.S. national securities exchange or held of record by more than

2,000 holders immediately prior to the execution of the acquisition agreement;

- The target's certificate of incorporation does not expressly require a shareholder vote in order to approve a "short-form" merger;
- The acquisition agreement expressly permits or requires the "short-form" merger to be effected under DGCL § 251(h) and shall be effected as soon as practicable following the consummation of the tender offer if such merger is effected under DGCL § 251(h);
- The acquiror consummates the applicable tender or exchange offer for any and all of the outstanding stock of the target that, but for DGCL § 251(h),

p. 9-48

p. 9-49

would otherwise be entitled to vote on the adoption or rejection of the merger, which offer may exclude outstanding stock of the target that, at the commencement of such tender or exchange offer, is owned by (i) the target, (ii) the acquiror, (iii) any person or parent entity that directly or indirectly owns all of the outstanding stock of the acquiror, or (iv) any direct or indirect wholly owned subsidiary of any of the foregoing;

- Following the consummation of the tender or exchange offer, the stock irrevocably accepted for purchase or exchange pursuant to such offer and received by the depository appointed to facilitate consummation of the offer prior to such offer's expiration, plus the stock otherwise owned by the acquiror equals at least such percentage of the stock, and of each class or series thereof, in the target that would otherwise be required to approve the merger pursuant to Delaware law and the target's certificate of incorporation;
- The acquiror merges with or into the target pursuant to the acquisition agreement; and
- Each outstanding share of each class or series of stock of the target that is the subject of but not irrevocably accepted for purchase or exchange in the tender or exchange offer is to be converted into the same amount and kind of consideration to be paid for the shares of such class or series of stock of the target irrevocably accepted for purchase or exchange in the tender or exchange offer. [151]

The overall effect of DGCL § 251(h) is to reduce the minimum number of shares required to be purchased in a tender offer in order for an acquiror of a Delaware corporation to avail itself of a statutory "short-form" merger (thereby avoiding the time delay of a shareholder vote to approve the second-step merger) from 90% of the target's outstanding shares to a simple majority.

As a general matter, the tender offer and "short-form" merger structure has the advantage of speed as compared to the one-step merger. Since the second-step merger can be accomplished very quickly after the consummation of the tender offer, acquirors can plan on an interim period between signing of the acquisition agreement and closing of the acquisition of approximately five to six weeks, [152] whereas a one-step merger can only be completed after a shareholder

p. 9-49

p. 9-50

vote. [153] Both parties to a merger are likely to favor the timing advantages that a two-step transaction structure can provide since the acquiror benefits by reducing the period during which the deal is subject to interloper risk, while the target reduces market risk and the period during which it could suffer a material adverse effect. [154]

DGCL § 251(h) also makes the tender offer and short-form merger structure more attractive to acquirors that finance the purchase price of the acquisition with third-party financing secured by the target's stock and assets. Before DGCL § 251(h), acquirors did not have sufficient certainty that they would receive the minimum number of shares in the tender offer to permit a short-form merger. As a result, there was a substantial risk that the acquiror would have voting control but not sole ownership of the target. As sole ownership of the target would be required for an acquiror to obtain secured third-party financing, the acquiror using third-party financing risked having to obtain unsecured bridge financing in order to purchase the shares, thereby increasing the cost of borrowing to the acquiror. Such bridge financing would remain in place until the target could hold a shareholder vote and close the acquisition. As DGCL § 251(h) makes it easier for an acquiror to purchase sufficient shares to force a statutory short-form merger with the target, the risk of third-party lenders not providing permanent, secured financing at the closing of the tender offer is in turn reduced. [155]

p. 9-50

p. 9-51

However, the SEC still takes the view that a financing condition to the offer exists even if such condition to the offer relates to the eventual funding of an otherwise committed financing. Thus, acquirors are required to provide five business days' notice of the funding of the financing before closing the offer. [156] Acquirors either have to require their potential lenders to fund into escrow five business days prior to the closing of the offer or waive the funding condition five business days in advance of the offer's expiration and accept the risk of the financing not being available to close the transaction even though the conditions to the offer were satisfied.

[c] Exchange Offers

Substantially all negotiated acquisitions in the United States in which Company A acquires the shares of Company B in exchange for shares of Company A have been accomplished through statutory mergers, not exchange offers in which a bidder's securities are directly offered in exchange for those of a target. Exchange offers have generally been used only in the relatively rare hostile stock-for-stock bids. As a result of changes to the SEC rules to facilitate and accelerate exchange offers, and the elimination of pooling of interest accounting under U.S. GAAP in 2001, [157] it was expected that exchange offers would begin to be used more often in negotiated stock-for-stock acquisitions. Such a trend, however, has not materialized, and exchange offers in negotiated transactions involving U.S. companies remain rare.

Exchange offers for U.S. target companies or non-U.S. target companies with U.S. shareholders are extensively regulated under both the tender offer rules described above [158] and the registration requirements for offerings of securities described below. [159]

[4] Registration of Securities in Business Combination Transactions and Exchange Offers

[a] Introduction

A business combination or exchange offer involving the issuance of acquiror securities to the target's shareholders constitutes an offer and sale of

p. 9-51

p. 9-52

those securities and is subject to the registration requirements of the Securities Act unless an exemption is available. [160]

The same exemptions from registration under the Securities Act available generally are also available for business combinations and exchange offers. For example, in the context of a closely held target whose shares are not publicly traded, the private placement exemption under § 4(a)(2) of the Securities Act or Regulation D thereunder may be available. [161] Similarly, the exemption under Regulation S may be available if the target shareholders receiving acquiror securities are outside the United States. [162]

In addition, as discussed below, Rule 802 under the Securities Act provides an exemption from the registration requirements for securities issued in business combinations or exchange offers to shareholders of non-U.S. companies where U.S. ownership is 10% or less (computed in accordance with the SEC's rules). [163]

Section 3(a)(10) of the Securities Act provides an exemption from the registration requirements of the Securities Act for an exchange of securities approved by a court after a hearing on the fairness of the exchange open to all parties to whom securities will be issued in the exchange. This exemption would be available, for example, for shares issued in a scheme of arrangement under U.K. company law, as well as under similar mechanisms in other countries. [164]

p. 9-52

p. 9-53

Finally, a vendor placement may be possible with respect to U.S. target shareholders. [165]

Because of the cost of registration and the delay inherent in the registration process, Securities Act registration would, in many circumstances, be burdensome if not wholly impracticable for a foreign company that was not already registered and reporting under the Exchange Act [166] or substantially ready to

p. 9-53

p. 9-54

register. [167] Thus, in many cases it will not be feasible for such a foreign company to use stock consideration in an acquisition of a U.S. company or, unless an exemption is available or U.S. shareholders are excluded, [168] of a non-U.S. company with shares registered under the Exchange Act.

If registration is required in connection with a business combination transaction or exchange offer, typically the registration statement must be publicly filed [169] and is subject to SEC review. [170] However, the Jumpstart Our Business Startups Act (the "JOBS Act") may entitle the acquiror to confidential treatment of a registration statement in certain limited circumstances. In guidance relating to the application of the JOBS Act to mergers and exchange offers, the SEC staff acknowledges that emerging growth companies (or "EGCs") may use the confidential submission process set forth in § 6(e) of the Securities Act to submit draft registration statements for an exchange offer or merger that is its initial public offering of common equity securities. [171] Still, even when using the confidential treatment process, the registration statement must eventually be made publicly available. [172]

Once the registration statement becomes effective, the prospectus (in the case of an exchange offer) or proxy statement/prospectus (in the case of a business combination transaction), which is the principal part of the registration

p. 9-54

p. 9-55

statement, is mailed to the target's shareholders. [173] In most mergers, this must be done at least 20 business days prior to the shareholder meeting at which shareholders vote on the transaction. [174]

[b] Registration of Securities of Foreign Issuers

Securities of foreign issuers offered in connection with the acquisition of a U.S. publicly traded company must be registered on Form F-4. [175] The key information that must be provided in the registration statement on Form F-4 [176] includes a business description of both companies, a description of the securities offered by the acquiror (and a comparison of the rights of holders of those securities with the securities of the target) and audited financial statements of the acquiror (reconciled to U.S. GAAP, except that such reconciliation is not required in the case of financial statements prepared in accordance with International Financial Reporting Standards ("IFRS"), as issued by the International Accounting Standards Board ("IASB") [177]) [178] and, in most cases, the target, in

p. 9-55

p. 9-56

each case for the three most recent fiscal years. [179] If either the acquiror or the target company qualifies to use short-form registration statements (Form F-3 or, for domestic issuers, Form S-3), which permit incorporation of information by reference to previously filed documents, [180] the Form F-4 may likewise incorporate by reference with respect to the qualifying company. Otherwise, all required information must be set forth in the registration statement. In the context of a hostile exchange offer, the SEC is generally accommodating with respect to information on the target's business (even if incorporation by reference is not

p. 9-56

p. 9-57

available) and the requirement (if otherwise applicable) that a reconciliation be provided of target financials to U.S. GAAP. If financial statements for the target are required, a *pro forma* income statement of the acquiror for the most recent fiscal year (and for any interim period for which the acquiror is required to include financial statements), [181] giving effect to the acquisition, must also be included, together with a *pro forma* balance sheet as of the year end (and the end of any such interim period). [182]

An exchange offer subject to Regulation 14D under the Exchange Act may be commenced upon the filing of the registration statement (or such later time as selected by the acquiror). [183] In order to so commence prior to the effectiveness of the registration statement, the preliminary prospectus must include all material information, including pricing information (which can be formula pricing), and must be disseminated to all shareholders. The acquiror is not permitted actually to purchase any shares until the registration statement is declared effective. The SEC has committed that the staff will review registration statements on an expedited basis during the pendency of an exchange offer, but the staff notes that offerings involving novel or unusually complex issues may result in a somewhat longer review period. In certain circumstances, there will be a need to supplement the prospectus and extend the offer. [184]

The SEC takes the view that a merger or acquisition transaction is a continuous offering requiring the acquiror to update its (and the target's) financial

p. 9-57

p. 9-58

statements until shareholder approval has occurred. [185] However, if the acquiror or target, as the case may be, is a reporting company eligible for full incorporation by reference on Form F-3 or Form S-3, the Form F-4 or Form S-4 can state that it incorporates in advance future filings. In that event, the updating requirement can be satisfied by the relevant company filing the new financial statements on a Form 10-K, Form 10-Q or Form 8-K (for domestic companies) or a Form 20-F or Form 6-K (for foreign private issuers). [186] Normally no additional mailing will be required.

In the case of a merger transaction in which the target's shareholders have a right to elect between forms of consideration (*e.g.*, the right to elect shares or cash subject to an overall limit), the parties should not have to update their proxy statement/prospectus following the shareholder vote even if the election period has not expired (which may be months later, after all regulatory approvals have been received); however, the SEC has not given any specific guidance on this issue and the matter is not free from doubt. [187]

Lock-up agreements given by major target shareholders to the acquiror committing to vote in favor of a merger (or other business combination) and entered into prior to the registration of the securities to be issued in the merger may raise issues under § 5 of the Securities Act because such shareholders have arguably made their investment decisions regarding the merger prior to registration. Despite this general presumption, and recognizing the legitimate business reasons for seeking lock-up agreements in the course of business combination

p. 9-58

p. 9-59

transactions, the SEC staff has indicated that so long as the lock-up agreements (i) involve executive officers, directors, affiliates, founders or their family members, or shareholders owning 5% or more of the target shares, (ii) the shares subject to the lock-up agreements do not represent in the aggregate 100% of the outstanding target shares, and (iii) votes will be solicited from holders of the securities who are not locked up, the staff will not view such lock-up commitments as "gun jumping" and will allow the acquiror securities to be issued to such shareholders to be included in the subsequently filed registration statement. [188] However, where such shareholders also delivered written consents at the time of the lock-up agreements, approving the merger or other business combination transaction, the SEC staff has objected to the subsequent registration on Form S-4 or F-4 of the securities to be issued because the staff takes the position that offers and sales have already commenced privately, and thus the exchange must end privately. [189]

[c] Proxy Solicitation Rules

p. 9-59
p. 9-60

As noted above, an acquisition of a publicly traded U.S. target corporation through a merger will require a vote of the shareholders of the target. The SEC's proxy solicitation rules will apply if the U.S. target's shares are registered under the Exchange Act. (A foreign target company with shares registered under the Exchange Act that does not qualify as a foreign private issuer [190] is also subject to the proxy rules in connection with a business combination.)

Pursuant to Regulation 14A under the Exchange Act, if the U.S. target company's shares are registered under § 12 of the Exchange Act and the target is soliciting proxies, it may not begin actual solicitation [191] of proxies until it mails shareholders a written proxy statement containing specified types of information. [192] This requirement applies to mergers in which target shareholders will receive acquiror shares or other securities for their shares (where the Securities Act registration requirements will apply), as well as to mergers where target shareholders will receive only cash (where such registration requirements will not apply).

The proxy statement must be filed with the SEC by the target company in advance of its use and is subject to prior SEC review, and generally must be mailed to target shareholders at least 20 business days prior to the shareholder meeting. [193] In an all-cash merger, very little information concerning the acquiror is required in the proxy statement; acquiror financial statements are required only if such information "is material to an informed voting decision," such as where the acquiror's financing is not assured. [194] By contrast, in a merger involving the acquiror issuing stock or other securities, the acquiror must file a registration statement under the Securities Act, and the same document will constitute both the target's proxy statement and the acquiror's prospectus.

p. 9-60
p. 9-61

In both all-cash and mergers involving stock (or other securities) as some or all of the consideration, detailed financial and business information about the target company is required to be disclosed to the shareholders of the target company voting on the transaction, but substantially all of this disclosure can often be incorporated by reference from existing annual and quarterly reports rather than repeated in the proxy statement. As in the case of cash tender offers, proxy statements for cash mergers must include a summary term sheet in plain English, [195] and as in the case of exchange offers, proxy statements for stock-for-stock mergers need not include such a term sheet but must be in plain English. [196]

The proxy statement must also describe the background of the negotiations, the terms of the merger agreement and any related agreement, [197] reasons for the target board of directors' recommendation of the merger, a description of

p. 9-61
p. 9-62

any severance, employment or similar arrangements that will affect the target's executive officers or directors in connection with the merger, a description of any fairness opinion obtained by the target board of directors from its investment bankers (including a detailed description of the underlying analysis), [198] a description of dissenters' appraisal rights (if any), a description of any required regulatory approvals, and a description of the tax consequences to shareholders resulting from the merger. [199] If, in the course of negotiations of the merger, the target furnished material projections or similar nonpublic information to the acquiror, the SEC staff will often take the position that such projections must be summarized, even if the acquiror chose not to rely on them. [200]

[5] Communications Issues

p. 9-62
p. 9-63

[a] Gun Jumping and Proxy Solicitation Safe Harbors

When companies announce a business combination or exchange offer there has historically been a significant tension between the desire to avoid "gun jumping" [201] violations of § 5 of the Securities Act (in stock-for-stock mergers and in exchange offers) and to avoid premature solicitation of proxies in violation of the proxy rules (in mergers or other business combinations subject to the proxy rules [202]), on the one hand, and the need promptly to explain an important and potentially complex transaction to the market and to both companies' existing shareholders, on the other hand. [203]

p. 9-63

p. 9-64

The SEC has provided a safe harbor under the Securities Act and under the Exchange Act's proxy rules to permit free communications in the context of exchange offers and business combinations *before* the filing of a registration statement or proxy statement that exempts such communications from "gun jumping" and premature proxy solicitation restrictions. [204] This safe harbor applies to both oral and written communications. All written communications [205] relating to the transaction, however, must be filed on the day first used [206] in order to assure equality of information to all investors. [207] Investor slides and electronic, computer and video communications generally must also be filed. [208] This filing requirement applies from the first public announcement of the proposed

p. 9-64

p. 9-65

transaction [209] and continues at least until the vote is taken or the exchange offer is consummated or terminated. [210]

Under the JOBS Act, new Securities Act § 5(d) allows an acquiror to make confidential "test-the-waters" communications to "qualified institutional buyers" or institutional accredited investors prior to the filing of the registration statement in connection with an exchange offer or merger. However, the acquiror must make any required filings under the Exchange Act for any written communications made in connection with or relating to the exchange offer or merger. [211]

Written materials must contain a prominent legend urging recipients to read the full proxy statement or exchange offer circular when available. [212] New

p. 9-65

p. 9-66

materials that are substantially identical to prior materials need not be filed. These same filing and legending requirements apply after the registration statement is filed and after it is declared effective. [213]

In the context of mergers involving acquiror securities and exchange offers, the written materials filed are considered pre-filing prospectuses subject to § 12(a)(2) liability. Such written communications will not be subject to § 11 liability because they are not required to be incorporated by reference in the subsequent registration statement. [214] The SEC staff sometimes insists, however, that potentially material information (*e.g.*, figures relating to synergies and other projections) included in a pre-filing prospectus also be included (or incorporated by reference) in the registration statement before the registration statement is declared effective. [215]

Notwithstanding the safe harbor for free communications, in the context of a merger involving a target shareholder vote, a proxy card (by which shareholders can vote) cannot be furnished to shareholders prior to delivery of the definitive proxy statement. [216] In addition, in the context of mergers, if the proxy statement incorporates by reference other SEC filings, [217] there is a 20-business day minimum solicitation period. [218] Moreover, unlike exchange offers for equity securities, which generally can be commenced prior to SEC review, [219] the minimum time period for a proxy solicitation for a stock-for-stock merger subject to the proxy rules cannot begin until the registration statement is declared effective.

[b] Non-GAAP Financial Measures in the Business Combination Context

p. 9-66

p. 9-67

The Sarbanes-Oxley Act directed the SEC to adopt rules covering the disclosure of "*pro forma*" financial information by public companies. [220] Despite the wording of this mandate, the legislative history of the act indicated that the provision aims to cure the use of misleading non-GAAP information and not the use of *pro forma* GAAP financial information in a business combination context. [221] Accordingly, the SEC's final rules on the use of non-GAAP financial measures exclude presentations of financial measures where they are subject to the SEC's communications rules on business combinations. [222] These rules cover communications such as certain public announcements made in a merger context, as well as disclosure relating to independent appraisals and fairness opinions received by issuers in self-tender offers. Without such protection, acquirors would be prevented from presenting measures that assume cost savings or other synergies that cannot be calculated in accordance with GAAP in any meaningful way. Acquirors also would be unable to use historical non-GAAP measures to argue that target management is underperforming, an ability that can be particularly important in the hostile tender context.

[6] Regulation M Issues

Acquirors in an exchange offer or business combination in which securities will be offered in the United States are subject to the antimanipulation provisions of Regulation M under the Exchange Act. [223] Whereas Rule 14e-5 under the Exchange Act generally prohibits bidders in a tender or exchange offer from purchasing securities of the *target* outside the offer, Rules 101 and 102 of Regulation M are designed to prevent interested parties from engaging in activities that could raise artificially the price of the securities of the *acquiror* (the "subject securities") proposed to be distributed to target shareholders in an exchange

p. 9-67

p. 9-68

offer or business combination. Under Rule 102, it is unlawful for issuers and "affiliated purchasers" [224] to engage in any activities involving, directly or indirectly, bidding for, purchasing or inducing others to bid for or purchase any subject security or any other covered security [225] during the applicable restricted period. [226]

In the context of business combinations or exchange offers, there can be two restricted periods. The first restricted period begins on the day of mailing of the proxy solicitation materials or the formal commencement of the exchange offer and continues through the end of the period in which the target shareholders can vote on the merger or tender their shares for exchange. [227] There will be a separate second restricted period during any time period in which (i) the market price of the acquiror's security is used to determine the consideration to be paid to securityholders in connection with the merger or exchange offer (*e.g.*, each target share is to be exchanged for acquiror stock having a market value of $20, as so determined) or (ii) target shareholders in a business combination may make an election as to the consideration to be received (*e.g.*, the right to elect to receive cash or shares, whether or not subject to an overall limit, and *pro rata* or other allocation procedures). The prohibitions of Regulation M begin to apply one or five [228] business days prior to the commencement of each restricted period. [229]

p. 9-68

p. 9-69

Rule 102 should not be construed to prohibit an acquiror's shareholder communications in the ordinary course of business (such as normal quarterly earnings calls or routine presentations to investors consistent with past practice) or its communications with target shareholders. However, nonordinary course presentations to the acquiror's existing shareholders or other investors (for example, to try to prop up a falling share price) could be subject to this prohibition. [230] In addition, programs implemented prior to closing to facilitate expected flowback of shares issued to target shareholders to the issuer's home market should be feasible, but consultation with the SEC staff may be advisable. Violations of Regulation M could delay the timing of the proposed transaction or require violating issuers to supplement their proxy solicitation materials or prospectus to reflect the information disseminated in violation of Regulation M and distribute the supplement to the shareholders.

The parties' financial advisors are also subject to the provisions of Regulation M. Unlike the acquirors (and their affiliated purchasers), however, who are subject to Rule 102, financial advisors should be eligible for the exemptions [231] in Rule 101 from the restrictions of Regulation M applicable to distribution participants. [232]

[7] Exempt Offshore Transactions

p. 9-69
p. 9-70

[a] Introduction

As discussed above, tender offers or exchange offers made to U.S. holders of a foreign target generally must comply with the U.S. rules, even if those rules are different from or conflict with the rules applied to the bidder by the foreign target's regulators. Although bidders in friendly or agreed bids have negotiated compromises with the SEC to minimize or eliminate such conflicts, [233] bidders in hostile bids have tended to structure offers so that they cannot be accepted from the United States, thereby effectively excluding U.S. holders. [234] Despite the initial acquiescence of the courts and the SEC in this practice, the SEC subsequently expressed concern about the effects of this exclusion on the large number

p. 9-70
p. 9-71

of U.S. shareholders who own shares in foreign targets. In 1999, the SEC adopted a number of exemptions to the tender offer rules and registration requirements of the U.S. securities laws to encourage bidders to extend their tender and exchange offers and offers of securities in connection with business combinations to the U.S. securityholders of non-U.S. companies. This section discusses how bids have been structured in the past (and continue to be structured when these exemptions are not available or are considered inadequate) to exclude U.S. holders; the subsequent section discusses the 2008 Cross-Border Amendments [235] and related rules.

[b] Historical Context

Because the most active takeover market outside the United States is in the United Kingdom, efforts by U.K. bidders to arrange bids for U.K. targets with U.S. shareholders so that the U.S. rules would not apply have provided the backdrop for development of much of the law in this area. The theory that U.K. bidders have relied on is that the registration requirements of the Securities Act and the tender offer rules under the Exchange Act should not apply if the bidder avoids, to the extent possible, making use of U.S. jurisdictional means. This avoidance is accomplished by not making the offer documentation relating to the offer available in the United States, rejecting acceptances mailed from the United States and minimizing any other direct communication of the offer into the United States. [236]

p. 9-71
p. 9-72

In the bid by the General Electric Company plc ("GEC") in 1985 for the Plessey Company plc ("Plessey"), a U.S. District Court held that the bidder did not have to comply with the tender offer rules under the Exchange Act. [237] That case involved a request by Plessey for a preliminary injunction to require GEC to comply with Regulations 14D and 14E under the Exchange Act. The court noted that 98.4% of Plessey's shares were held outside the United States. However, Plessey had 1.2 million ADRs held by approximately 3,000 persons in the United States that traded on the NYSE. The offer by GEC was made to all holders of Plessey ordinary shares but certain restrictions were imposed to avoid the application of U.S. rules. The court found it doubtful that GEC had used U.S. jurisdictional means to make its tender offer and noted that to find use of jurisdictional means would raise serious questions of comity. The court concluded

p. 9-72
p. 9-73

that "it would be a perversion of the principles of the [Exchange] Act to delay the processes of a quintessentially British takeover when American investors and interests are but barely touched." [238]

In 1986, when it adopted a rule requiring equal treatment of shareholders, [239] the SEC commented on the *Plessey* case as follows:

> As a result of the decision in *The Plessey Company plc v. The General Electric Company plc*, a decision with which the [SEC] concurs, the [SEC] believes the law is clear with respect to the application of § 14(d) of the Exchange Act to tender offers by bidders who are not citizens or residents of the United States and who do not employ the jurisdictional means of the United States. Accordingly, the [SEC] reiterates its position that the all-holders requirement is not intended to affect tender offers not otherwise subject to the [Exchange] Act.… [240]

In an unsuccessful bid by Hoylake Investments Ltd. ("Hoylake") in 1989 for B.A.T. Industries plc ("B.A.T."), the bid was made only for B.A.T.'s ordinary shares, and not for its ADRs; the offer documents were not made available in the United States; the bid could not be accepted by anyone from the United States; and the cash and securities offered in the bid would not be sent into the United States. In order to avoid the registration requirements of § 5 of the Securities Act, restrictions also would have been imposed on subsequent transfers into the United States of the securities being offered ("flowback") for a six-month period running from the last date shares were issued in the offer. [241]

p. 9-73

p. 9-74

The SEC asked the U.K. Panel on Takeovers and Mergers whether the effective exclusion of U.S. shareholders was consistent with the requirement of the U.K. City Code on Takeovers and Mergers that the offer be made to all shareholders, and was given assurances that the offer was in compliance. Subsequently, questions were raised by the U.S. Congress as to whether the U.S. rules were applicable, and David Ruder, then-Chairman of the SEC, sent a letter to the Congress to the effect that the structure of the bid was such that the U.S. rules could not be applied on behalf of the U.S. holders.

Subsequently, the SEC issued a concept release (the "Concept Release") concerning the conflicts involved in tender offers with a multijurisdictional dimension. [242] In the Concept Release, the SEC took the position that use of jurisdictional means occurs whenever it is reasonably foreseeable that U.S. shareholders of a foreign issuer that have been excluded from an offshore offer will sell their shares into the secondary market in response to that offer. Clearly, the SEC's position in the Concept Release, confirmed by statements made by the SEC staff subsequently, was inconsistent with the statements made in former Chairman Ruder's letter and the SEC's prior statements regarding the *Plessey* case cited above. Notwithstanding the SEC's position in the Concept Release, if an offer for equity securities that are not registered under the Exchange Act is made on the basis of the restrictions imposed in the Hoylake bid [243] and that offer is challenged by the target company, its shareholders, holders of its ADRs or the SEC, a U.S. court would likely hold that the registration requirements of the Securities Act and the rules under the Exchange Act are not applicable because of insufficient use of jurisdictional means.

The Adopting Release for the 2008 Cross-Border Amendments provides additional guidance on how acquirors in cross-border business combination transactions legitimately may avoid the application of U.S. registration and tender offer rules. Whether U.S. tender offer rules apply in the context of a cross-border tender offer depends on whether the bidder uses U.S. jurisdictional means in making a tender offer. The SEC has provided guidance on measures acquirors may take to avoid using U.S. jurisdictional means through previously issued

p. 9-74

p. 9-75

releases. [244] The SEC reiterated that a legend or disclaimer stating that the offer is not being made into the United States, or that the offer materials may not be distributed there, is not likely to be sufficient in itself, because if the acquiror wants to support a claim that the offer has no jurisdictional connection to the United States, it also will need to take special precautions to prevent sales to or tenders from U.S. target holders.

The SEC also pointed out that bidders may require a representation or certification from tendering holders that they are not U.S. holders to avoid application of U.S. law. The SEC recognized the possibility that target securityholders could misrepresent their status in order to be permitted to tender into an exclusionary offer. The SEC has previously stated that where this occurs, bidders will not be viewed as having targeted U.S. investors, thereby invoking U.S. jurisdictional means. However, the SEC clarified that this position is premised on the bidder's having taken adequate measures reasonably designed to guard against purchases from and sales to U.S. holders. It is also premised on the absence of indicia, such as payment drawn on a U.S. bank or provision of a U.S. taxpayer identification number that would or should put the bidder on notice that the tendering holder is a U.S. investor.

[c] The Problem of Flowback

Where, as discussed above, a foreign acquiror offers to exchange its securities for target shares in an exchange offer or business combination not subject to Securities Act registration in reliance on Regulation S, [245] the question can arise as to when those target shareholders may resell the acquiror securities into the United States. The principal issue is whether, in making these resales, target shareholders are entitled to rely on the registration exemption in § 4(a)(1) of the Securities Act for transactions "by any person other than an issuer, underwriter or dealer." [246] The only uncertainty regarding the availability of the exemption for target shareholders (assuming they are not securities dealers) is whether, having received the acquiror securities directly from the acquiror, the target shareholders should be treated as underwriters and thus not eligible to rely on § 4(a)(1).

Target shareholders that are neither securities dealers nor affiliates of the acquiror should be able to rely on § 4(a)(1) of the Securities Act for resales in the United States of acquiror securities received in Regulation S exchange offers

p. 9-75

p. 9-76

or business combinations. [247] For Category 1 and Category 2 offers, [248] the Regulation S safe harbor provides an exemption from Securities Act registration of the exchange offer without imposing resale restrictions on investors receiving securities in the offer, [249] so long as the issuer (and its affiliates and distributors, if any) conduct the exchange offer through "offshore transactions" without "directed selling efforts" in the United States. [250] The additional Category 2 offering restrictions, 40-day distribution compliance period and notice requirements do not apply to resales of securities received by such investors unless the recipient is deemed to be a distributor (or an affiliate of either the issuer or a distributor). [251] In the exchange offer or business combination context, there is often no party, other than the issuer, acting as a distributor of the securities. In cases where an investment bank or other agent acts to solicit acceptances, such an agent of the issuer should generally be treated as a distributor, in which case it should not sell into the United States or to U.S. persons any securities it receives from the issuer pursuant to the exchange offer and it should observe the Category 2 offering restrictions and notice requirements during the 40-day distribution compliance period (measured, in this context, from the close of the exchange offer or business combination) with respect to any securities issued in the offer. [252]

p. 9-76

p. 9-77

In contrast, Category 3 offerings under Regulation S, including, among others, [253] all offers of U.S. equity securities, do not permit subsequent unrestricted resales by recipients of securities because the Category 3 resale restrictions [254] apply to all investors during the applicable distribution compliance period. [255] As a result, except in the case of exchange offers and business combinations qualifying for an exemption under Rule 802 under the Securities Act, U.S. issuers of equity securities and other Category 3 issuers are effectively forced to file with the SEC a registration statement covering either the initial exchange offer or the possible flowback into the United States of the securities issued in the offer or business combination. [256]

A flowback registration statement [257] would theoretically offer a considerable advantage over registering the initial exchange offer or business combination because it may be filed on Form S-3 or Form F-3 rather than on Form S-4 or Form F-4, and, as a result, in most cases information with respect to the target would not be required. [258] The SEC, however, has to date been unwilling to accept a flowback registration statement in this context unless each selling securityholder is listed in the prospectus, which is not likely to be practical.

[d] Compulsory Acquisition

p. 9-77
p. 9-78

In the United Kingdom, if the bidder receives acceptances in respect of 90% of the shares that are the subject of the tender offer, it can acquire the balance of the shares that are the subject of the offer in a compulsory acquisition pursuant to which the shares are acquired without the consent of the holders. The bidder should not be required to register under the Securities Act the securities issued as part of the compulsory acquisition. [259]

[8] Resales of Securities Acquired in an Exchange Offer or Business Combination

The resale of securities received in an exchange offer or business combination is (like the offer and sale of any securities) subject to the registration requirements of the Securities Act unless an exemption is available.

[a] Resales by Recipients of Registered Securities

In a registered exchange offer or business combination, unless the recipient of the acquiror securities is an affiliate of the acquiror, the recipient receives freely tradable securities (*i.e.*, those eligible for resale under the exemptions from Securities Act registration provided by § 4(a)(1) or § 4(a)(3) of the Securities

p. 9-78
p. 9-79

Act), even if it was an affiliate of the target or held restricted securities in the target prior to the transaction.

[b] Resales by Recipients of Unregistered Securities

If the target is closely held and the issuance of acquiror securities pursuant to the business combination transaction is structured as a private placement exempt from registration under § 4(a)(2) of the Securities Act or Regulation D thereunder, the recipient will receive restricted securities that it may resell only pursuant to another exemption. [260] In negotiating the transaction, the shareholders of a closely held target will often request resale registration rights that obligate the acquiror to register such securities for resale. [261]

[c] Resales by Affiliates of the Acquiror

In any exchange offer or business combination, if the recipient of the acquiror securities is an affiliate [262] of the acquiror, or becomes an affiliate of the acquiror in connection with the exchange offer or business combination, the acquiror securities held by the recipient will be "control securities" subject to the resale restrictions of Rule 144. [263]

[d] Resales of Securities Received in Exempt Offshore Transactions and the Problem of Flowback

For a discussion of the resale into the United States of acquiror securities received by target shareholders in an exchange offer or business combination not subject to Securities Act registration in reliance on Regulation S, *see* § 9.05[7][c].

[e] Registration Rights Agreements in the Business Combination Context

p. 9-79
p. 9-80

If the acquiror securities issued in an exchange offer or business combination are unregistered, substantial shareholders of the target sometimes negotiate in order to obtain specific contractual rights with respect to registration of the shareholders' securities in order to permit their public sale. Such registration rights may take the form of the issuer's commitment either to register the shares within a specified period, upon demand (generally referred to as "demand rights"), or to include the shareholder's shares as one portion of any contemplated sale involving the filing of a registration statement within a specified period. The latter category is usually referred to as "piggyback rights" because the shareholder's offering is, in a sense, carried along as part of the primary offering contemplated by the issuer.

[9] Exemptions for Certain Tender and Exchange Offers and Business Combinations

As noted above, in late 2008 the SEC adopted amendments to the tender offer and Securities Act exemptive rules adopted in 1999 for cross-border tender offers, business combinations and rights offerings (the "1999 Rules"). [264] The 1999 Rules established two tiers of exemptions. As described below, Tier I provides an exemption from most SEC tender offer rules, while Tier II provides limited relief from certain provisions that may be inconsistent with rules or practices outside the United States. [265]

[a] Tier I Exemption for Tender Offers

The "Tier I exemption" [266] provides that tender offers for the securities of foreign private issuers, [267] whatever the consideration, are exempt from the U.S. tender offer rules (other than general antifraud rules) if 10% or less of the class of securities subject to the tender offer is owned by U.S. persons and certain conditions are satisfied. In making this computation, the securities held by the

p. 9-80
p. 9-81

bidder are excluded from the outstanding securities of the class (*i.e.*, such securities are excluded from both the numerator and the denominator). [268]

In determining U.S. ownership, the bidder is required to "look through" the record ownership of certain brokers, dealers, banks or nominees appearing on the books of the issuer or transfer agents, depositaries or others acting on the issuer's behalf. [269] Securities underlying ADRs must be included in determining the amount of securities outstanding of the class subject to the offer. [270] However, other types of securities that are convertible into or exchangeable for subject securities, such as warrants, options and convertible securities, should not be taken into account in calculating U.S. ownership. The bidder's calculation of U.S. ownership must generally be made as of a date no more than 60 days before and no later than 30 days after the "public announcement" [271] of the transaction. [272]

If an acquiror is "unable to conduct" the look-through analysis described above, the SEC rules provide an alternative eligibility test based in part on a comparison of the ADTV of the subject securities in the United States to the worldwide ADTV. [273] The SEC does not define what "unable to conduct" entails,

p. 9-81
p. 9-82

leaving such inability to be assessed based on the facts and circumstances of the particular transaction. The SEC has noted, however, that the need to dedicate time and resources to the look-through process would be an insufficient reason, and stated that concerns about completeness or accuracy of available information would not be sufficient reasons without additional hindering circumstances. In each instance, the acquiror must make a good faith effort to conduct a reasonable inquiry into ascertaining the level of U.S. beneficial ownership.

The alternate eligibility test consists of three prongs. First, ADTV for the subject securities in the United States over a 12-month period ending no more than 60 days before the announcement of the transaction must be no more than 10% (or 40% for Tier II) of ADTV on a worldwide basis. [274] In the case of negotiated transactions, there also must be a "primary trading market" for the subject securities in order for the acquiror to rely on the alternate test. [275] "Primary trading market" means that at least 55% of the trading volume in the subject securities takes place in a single foreign jurisdiction, or no more than two foreign jurisdictions, during a 12-month period ending no more than 60 days before the announcement of the transaction. [276] In addition, if the trading of the subject securities occurs in two foreign markets, the trading in at least one of the two must be larger than the trading in the United States for that class of securities. [277]

Second, the acquiror must consider information about U.S. ownership levels that appears in the most recent annual report or other annual information filed by the issuer with the SEC or with the regulator in its home jurisdiction [278] or any jurisdiction in which the subject securities trade before the public announcement of the offer. [279] If those reports indicate U.S. ownership in excess of the allowed limits, the cross-border exemption may not be permitted.

Third, if the acquiror "knows or has reason to know" that U.S. beneficial ownership exceeds the permitted percentages, the exemption is unavailable, even where all other elements of the alternate test are met. An acquiror is deemed to have reason to know information about U.S. ownership of the subject class that

appears in any filing [280] with the SEC or any regulatory authority in the issuer's home country or (if different) the jurisdiction in which its primary trading market is located. [281] If the acquiror and the target enter into an agreement pursuant to which the acquiror has the right to obtain information from the target, including information about U.S. ownership, it will be deemed to know any such information known to the target. [282] An acquiror is required to take into account only that information it has reason to know before public announcement of the transaction. Knowledge or reason to know acquired after public announcement will not disqualify the acquiror from relying on the exemption.

To level the playing field for competing offers, if a subsequent bidder commences a tender or exchange offer during an ongoing offer for securities of the same class, the subsequent bidder will be eligible to use the same exemption as the first bidder (Tier I, or as described below, Tier II or Rule 802) even if U.S. ownership thresholds are exceeded at the time of the subsequent bid. [283] The subsequent bidder will not, however, be entitled to rely on any exemption not also relied upon by the first bidder unless all conditions of such exemption are satisfied.

If, but for the Tier I exemption, the tender offer would have been subject to Regulation 14D under the Exchange Act, in order to utilize the exemption the bidder must submit to the SEC an English translation of the offering materials on Form CB. [284] Form CB, which consists of a cover page, the attached offering

materials and exhibits containing any information provided to the home jurisdiction or incorporated by reference in the home jurisdiction documents, must be received by the SEC no later than the first business day after the publication or dissemination of such informational document by the bidder in the home jurisdiction. Any subsequent offering materials must be similarly filed. If the acquiror is a foreign company, it must also appoint a process agent in the United States on Form F-X for six years from the date of filing. Form F-X requires the non-U.S. acquiror to appoint an agent upon whom process, pleadings, subpoenas or other papers can be served in connection with any SEC investigation or administrative proceeding (whether or not arising out of the offering) and any civil action predicated on an offering of securities covered by Form CB. [285]

In any Tier I offer, offering materials must be disseminated to U.S. holders, in English, on a comparable basis to that provided to shareholders in the issuer's home jurisdiction and in a manner reasonably calculated to inform U.S. holders of the offer. [286] The offering materials disseminated to U.S. holders must include all of the information included in the materials disseminated to holders in the issuer's home jurisdiction, including responsibility statements, such as "lead manager statements" setting forth representations about due diligence, even though such statements are usually excluded from U.S. offering documents in the context of conventional equity offerings.

The bidder in a Tier I-exempt tender offer is required to give U.S. holders the right to participate on terms at least as favorable as those offered non-U.S. holders of the same class, [287] subject to the following exceptions for exchange offers:

- bidders may offer cash in the United States while offering securities offshore without violating the equal treatment requirements so long as they have a reasonable basis to believe that the cash being offered to U.S. securities holders is substantially equivalent to the value of the consideration being offered to non-U.S. holders; [288]

p. 9-84

p. 9-85

- with respect to U.S. holders residing in a state where "blue sky" laws do not provide an exemption from registration requirements, [289] a bidder may offer a cash alternative or, if it does not offer a pure cash alternative in any other jurisdiction, exclude such holders; [290] and
- a bidder is not required to offer U.S. holders "loan notes" offered to non-U.S. holders in jurisdictions where those securities afford certain tax advantages under non-U.S. tax laws and the loan notes are not listed on an organized securities market or registered under the Securities Act. [291]

The SEC's specific tender offer disclosure requirements and the numerous U.S. procedural rules (relating principally to timing, withdrawal rights and, in the case of partial offers, pro-rationing) do not apply to a tender offer qualifying for the Tier I exemption. Moreover, subject to certain conditions, Rule 14e-5 under the Exchange Act does not apply. Rule 14e-5 prohibits, in connection with a tender offer for equity securities, a covered person from purchasing or arranging to purchase any subject securities or any related securities except as part of the tender offer. [292] The conditions to the exemption from Rule 14e-5 [293] include that:

- the offering documents furnished to U.S. holders prominently disclose the possibility that purchases or arrangements to purchase may be made outside the tender offer;
- the offering documents disclose the manner in which any information about any such purchases or arrangements to purchase will be disclosed;

p. 9-85

p. 9-86

- the purchases or arrangements to purchase are disclosed in the United States in the same manner as in the target's home country; and
- the rules of the target's home country permit such purchases.

The SEC has not exempted Tier I transactions (or transactions qualifying for the Tier II exemption or exemptions under Rule 802) from Regulation M under the Exchange Act. [294] Regulation M restricts certain bids and purchases and solicitations of offers to purchase a security that is the subject of a distribution. The SEC has stated that it will continue to evaluate the need for exemptions from Regulation M in these transactions, having received very few requests for such relief in the past. [295]

[b] Tier II Exemption for Tender Offers

The "Tier II exemption" [296] provides more limited relief from the U.S. tender offer rules than that provided by the Tier I exemption, to accommodate practices outside the United States. The Tier II exemption applies in circumstances where the target company is a foreign private issuer and 40% or less of the class of securities subject to the tender is owned by U.S. holders. [297] Although the Tier II exemption is not available where U.S. ownership exceeds 40% of the target, the SEC has expressed its willingness to consider on a case-by-case basis applications for exemption from the tender offer rules where there is a direct conflict between U.S. and foreign laws or practice. [298] By delegating this authority to the

p. 9-86

p. 9-87

Directors of the Divisions of Corporation Finance and Trading and Markets, the SEC has also provided for more expedited review of such cases.

The 2008 Cross-Border Amendments codify certain exemptions that were provided through no-action letters under the 1999 Rules. The amendments provide for "multiple" rather than "dual" offers, as were provided for in the 1999 Rules. [299] This allows multiple offers in multiple jurisdictions and for securityholders located both in the United States and outside the United States, as well as to offer "loan notes" or similar securities to non-U.S. holders only. [300] The 2008 Cross-Border Amendments also codify the commonly used structure of (i) an offer to securityholders resident in the United States and to all holders of ADRs, wherever resident, and (ii) a simultaneous offer to securityholders outside the United States. Some multiple offers are structured to allow U.S. holders to tender in both the U.S. offer and the non-U.S. offer in order to comply with home jurisdiction rules prohibiting the exclusion of U.S. holders from the non-U.S. offer. [301]

The rules continue to allow the announcement of an extension of an offer in accordance with home-country practice rather than the U.S. rules, [302] allow a bidder to provide a subsequent offering period, if the bidder announces the results of the offer and pays for the tendered securities in accordance with the requirements of home country law or practice, and provide a relaxation of the prompt payment rules to permit a bidder to pay for securities in accordance with the requirements of the target's home country. [303]

p. 9-87

p. 9-88

In addition to the exemptions codified in Rule 14d-1(d), in the adopting release for the 1999 Rules, the SEC stated that it would allow a bidder meeting the requirements of the Tier II exemption to reduce or waive the minimum tender condition "without extending withdrawal rights during the remainder of the offer" if certain disclosure, procedural and timing requirements are met. [304] In the 2008 Cross-Border Amendments, the SEC limited this interpretation further noting that there must exist "a requirement of law or practice in the home country justifying a bidder's inability to extend the offer after a waiver or reduction in the minimum offer condition" as long as the minimum offer condition is not reduced beyond a majority or percentage threshold required for control in the home jurisdiction. [305]

Bidders relying on the Tier II exemption in offers for equity securities registered under § 12 of the Exchange Act remain subject to the SEC's disclosure and filing obligations, certain other procedural obligations and, if applicable, the "going-private" disclosure and procedural requirements of Rule 13e-3 under the Exchange Act. [306] For example, such bidders are still required to keep an offer

p. 9-88

p. 9-89

open for 20 business days; to file a Schedule TO; to disseminate the offering documents; and to provide holders withdrawal rights until the offer becomes wholly unconditional, except in certain situations. [307] So-called "back-end" withdrawal rights, [308] however, may be suspended while tendered securities are counted where (i) the Tier II exemption is available, (ii) there is an offering period, which includes withdrawal rights, of at least 20 U.S. business days, (iii) all offer conditions have been suspended when the withdrawal rights are suspended, and (iv) withdrawal rights are only suspended during the necessary counting process period and are reinstated immediately thereafter, to the extent they are not terminated by the acceptance of tendered securities. [309]

[c] Securities Act Exemption for Exchange Offers and Business Combinations

Rule 802 provides an exemption from Securities Act registration for securities issued in cross-border exchange offers or business combinations (*e.g.*, mergers, amalgamations, schemes of arrangement and consolidations) to holders

p. 9-89

p. 9-90

of securities in foreign private issuers with limited U.S. ownership. [310] This Rule 802 exemption may be relied on by any acquiror, whether a U.S. or a non-U.S. issuer. [311]

Under Rule 802, the securities issued in an exchange offer or business combination are exempt from registration under the Securities Act if 10% or less of the target securities are owned by U.S. holders, calculated as described above with respect to the Tier I exemption from the tender offer rules. [312] The offer must generally be made available to U.S. holders on the same basis as to other securityholders, except that the acquiror may offer a cash alternative. If it does not offer a cash alternative in any other jurisdiction, an acquiror may exclude U.S. holders in a state where the "blue sky" laws do not provide a corresponding exemption from registration. [313] If the target securities are "restricted securities" within the meaning of Rule 144 under the Securities Act in the hands of a U.S. investor (*e.g.*, because they were acquired in a private placement), then the securities acquired by that investor in the Rule 802 transaction are restricted securities; otherwise, they are freely tradable. [314]

Rule 802 does not require that any specific disclosure be sent to U.S. holders, except that they must be provided contemporaneously the same information that is made available to non-U.S. holders (translated into English). [315] If the issuer (acquiror) disseminates information solely by publication in its home

p. 9-90

p. 9-91

country, publication of the exchange offer or business combination is also sufficient in the United States if the information is published in a manner reasonably calculated to inform U.S. holders of the offer. [316] In addition, an issuer (acquiror) is required to provide the disclosure documents to the SEC on Form CB and, if it is a foreign company, to appoint an agent for service of process in the United States on Form F-X. [317] A legend must be included in the U.S. offer document advising U.S. offerees that the offer is being conducted in accordance with foreign disclosure and accounting requirements, that those requirements may differ from requirements applicable in the United States and that investors may have difficulties enforcing rights against the issuer and its officers and directors. [318]

The securities issued under Rule 802 may be debt or equity securities, convertible or nonconvertible. In the case of debt securities, the SEC adopted a corresponding exemption from the provisions of the Trust Indenture Act of 1939, which requires that, absent an exemption, debt securities sold to U.S. holders be issued pursuant to a trust indenture qualified under that Act. [319]

Rule 802 greatly simplified the requirements for all qualifying exchange offers and business combination transactions, but its efficacy in promoting inclusion of U.S. shareholders in acquisitions of foreign targets has been limited by the difficulty in determining the beneficial ownership of those shareholders in the manner required by the Rule. The exemption, if applicable, applies to all offers of securities, whether inside or outside the United States, so long as there are at least some U.S. shareholders of the target company and U.S. shareholders are not excluded. [320] Such offers inside the United States would therefore not need to comply with the requirement that the acquiror file a registration statement on Form S-4 (or Form F-4 in the case of a foreign acquiror) or obtain financial information about the target company reconciled to U.S. GAAP. Such offers outside the United States also would not need to comply with the requirements of Regulation S under the Securities Act, which imposes burdensome restrictions upon the ability of U.S. issuers to offer equity securities outside the United States consistent with the Regulation, including the treatment of those securities as "restricted securities." [321]

p. 9-91

p. 9-92

Despite its many advantages, acquirors contemplating reliance on Rule 802 to purchase Exchange Act-registered securities of a target using securities that are not so registered should note that they will be required to succeed to the target's Exchange Act registration obligations (including compliance with the Sarbanes-Oxley Act) unless (i) the acquiror securities are (a) exempt from registration *other than* pursuant to Rule 12g3-2 (which provides certain exemptions from Exchange Act registration) or (b) held of record by fewer than 300 persons or (ii) the successor issuer is a Canadian corporation meeting certain additional requirements. [322] Despite the requirement that an acquiror succeed to the target's Exchange Act registration obligations, the successor issuer may benefit from the de-registration rules applicable to foreign private issuers. A foreign private issuer is permitted under Rule 12h-6(d)(2) under the Exchange Act to take into account the reporting history of the issuer whose reporting obligations it assumed pursuant to Rule 12g-3 for purposes of determining whether it is eligible to deregister pursuant to Rule 12h-6(a) under the Exchange Act. [323]

[10] The Internet

The SEC has articulated certain guidance regarding disclosure over the Internet of information about tender and exchange offers conducted outside, and not including or directed to any persons resident in, the United States without triggering U.S. tender offer and securities registration requirements. [324] The SEC provided this guidance to increase the information available to U.S. investors about offshore offerings, as U.S. securityholders may benefit from timely and reliable information about foreign corporate activities even if they are not able to participate in the transactions.

The SEC has expressed concern that, in tender and exchange offers, U.S. holders of the securities subject to the offer are likely to be familiar with the issuer in question and are apt to be alerted to internet disclosure relating to such offer. In addition, the SEC has indicated that U.S. investors in such cases have a particular incentive to find indirect means to participate in the offer, even if the offer is not being made in the United States. Consequently, the SEC has advised bidders using a website to publicize a tender or exchange offer or rights offering otherwise conducted outside the United States to take "special care" that the site is not used as a means to induce indirect participation by U.S. holders of subject securities.

p. 9-92

p. 9-93

The SEC has noted two (nonexclusive) ways in which a bidder may take such "special care." First, in responding to inquiries and processing letters of transmittal, bidders may seek to obtain adequate information to determine whether the holder is a person in the United States or a U.S. person. Second, bidders may obtain representations by the investor, or anyone tendering or exchanging on the investor's behalf, that the investor is not a person in the United States or a U.S. person. In addition, in disseminating the cash or securities consideration to tendering or exchanging investors, bidders should avoid mailing such consideration into the United States. Furthermore, even with these precautions, bidders should take care that the web page is not clearly designed to induce U.S. investors to find an indirect means to participate in the offer through offshore nominees or by other means.

In the context of an offshore exchange offer over the Internet concurrent with an exempt private offering in the United States, the SEC has given additional specific guidance. In such cases, special precautions should be instituted to ensure that the internet offering is not used as general solicitation [325] to find qualified investors in the private offering. [326] The nonexclusive list of recommended measures includes:

- not including U.S. investors who respond to the offshore internet offering in the U.S. private offering;
- extending the U.S. offer only to U.S. investors who were solicited before, or independently from, the posting of offering materials on the Internet;
- using separate contact persons for the Internet solicitation and the U.S. offering; and
- not referring to the private U.S. offering in the website materials, except to the extent mandated by foreign law. [327]

[11] Federal Margin Regulations

p. 9-93

p. 9-94

If a tender offer (or other proposed acquisition of stock of a U.S. publicly traded company) is financed through borrowings, the loan transactions [327.1] may be subject to the margin regulations promulgated by the Federal Reserve Board under the Exchange Act. The margin regulations are designed to restrict the use of credit in financing positions in securities.

There are three margin regulations, Regulations T, U and X. [328] Regulation T applies to U.S. broker-dealers. [329] Regulation U applies to U.S. banks (including U.S. agencies or branches of foreign banks) and U.S. lenders [330] other than

p. 9-94

p. 9-95

banks and broker-dealers. Regulation X applies to borrowers that are U.S. persons or foreign persons controlled by or acting on behalf of or in conjunction with U.S. persons. Regulation X precludes the borrower from obtaining financing outside the United States for the acquisition of a U.S. company if the financing would violate the Federal Reserve Board's margin rules were it obtained within the United States. Unless covered by Regulation X, foreign persons that obtain financing outside the United States are not themselves subject to the margin regulations but their lenders may be.

Regulation U limits the amount of loans that are (i) used for the purpose of purchasing or carrying any margin stock (which includes most equity securities publicly traded in the United States [331]) and (ii) directly or indirectly secured by margin stock. [332] These loans are permissible only if the loan value of the collateral is not less than the amount of the loan at the time the loan is made. Because the loan value of margin stock is limited to 50% of its market value, lenders in transactions subject to Regulation U generally may not finance more than 50% of the cost of an acquisition unless they do so on an unsecured basis or on the basis of sufficient [333] additional collateral other than the margin stock, such as the operating assets or the stock of wholly owned subsidiaries of the acquiring company.

A loan is directly secured by margin stock, and therefore subject to Regulation U, if a security interest is granted to the lender. However, even if a security interest is not granted to the lender, a loan may be indirectly secured by margin stock, and thus subject to Regulation U, if, as a legal or practical matter, the margin stock assets of the borrower are more readily available to the lender than to the borrower's other creditors or if the borrower's right to dispose of the margin stock assets is restricted during the term of the loan, for example through a standard negative pledge clause. Moreover, in 1986, the Federal Reserve Board adopted an interpretation of Regulation U stating that a nominally unsecured loan made to a shell company that is used to finance the shell company's acquisition of margin stock is presumed to be indirectly secured by the acquired margin

p. 9-95

p. 9-96

stock, with the result that such a loan is subject to Regulation U. [334] The scope of this interpretation is somewhat unclear. The interpretation addressed a shell company that had substantially no assets other than margin stock and no significant business function other than the holding of such stock. At least one subsequent staff opinion suggests that whether the presumption of indirect security applies may depend not only on the amount of the borrower's assets in addition to margin stock and on the extent of the borrower's other business operations, but also on whether such assets and operations can reasonably support the loan in light of the borrower's other liabilities and its financial condition. [335] Consistent with this view, the Federal Reserve Board's interpretation regarding loans to shell companies provides that such loans are generally not presumed to be indirectly secured where the lenders could in good faith rely on assets other than the margin stock as collateral (*e.g.*, where there is a guaranty from the shell company's parent or another company with substantial non-margin stock assets or cash flow) or where lenders could rely on the assets of the target because the merger will take place promptly (*e.g.*, where the loans are contingent on the acquisition of sufficient shares to effect a merger without the approval of the target's shareholders or directors or where the loans are contingent on the existence of a binding merger agreement with the target and the tender of a sufficient number of shares to guarantee approval of the second-step merger). [336]

[12] Interaction of Federal and State Law

[a] State Takeover Statutes

If the target of a bid is a foreign corporation with U.S. shareholders, the only relevant U.S. laws will normally be the federal securities laws and SEC rules discussed above. [337] However, if the target is a U.S. corporation, the bidder will have to contend with federal and state law, and the uneasy tension that exists between the two. [338] As indicated in the discussion above, the federal rules affecting takeover bids are limited principally to procedural and disclosure rules that the SEC believes are designed neither to encourage nor discourage bids but to

p. 9-96

p. 9-97

enhance shareholder protection. The SEC characterizes its policy as one of neutrality. The U.S. courts have, however, held that the federal system, as embodied in the Exchange Act and the tender offer rules adopted under it (the "Federal Rules"), does not preempt state activity, even if that activity seeks to inhibit hostile offers, so long as there is no material interference with a bidder's ability to comply with the Federal Rules. Thus, states are free to amend their corporate statutes to correct any perceived imperfections in the federal system, subject to certain constitutional considerations. [339] Some of these statutes are discussed below.

Hostile takeovers were quite rare prior to the late 1970s. In the latter part of that decade and the early 1980s, however, bidders began to be more aggressive in attempting to exploit the gap between the "private market" value of a target and the public trading price for its securities. In an effort to capture as much of this "value gap" for themselves as possible, bidders sought to acquire control of targets as rapidly as possible. Bidders often tried to stampede shareholders into accepting hostile offers by, among other techniques, leaving offers open for a very short period of time, making partial offers with a very limited proration period and limiting withdrawal rights to the maximum extent possible. By the middle of the decade, however, most of these practices had been limited by SEC rules designed to give all shareholders an adequate opportunity to evaluate and, if desired, to participate in tender offers. [340]

The Federal Rules, even as amended, do not, however, place any substantive limits on takeovers, and at the end of the 1980s, there were an increasing number of leveraged takeovers by financial bidders whose goal was to break up the target and sell it in pieces in order to fund acquisition costs. These bids, often launched before financing was even in place, [341] put well-known and respected companies "in play," and led to new outcries at the state and, to a lesser extent,

p. 9-97

p. 9-98

the federal level. There were different and conflicting responses to this activity. The U.S. Congress was unable to agree about any change to the federal structure despite the introduction of numerous legislative alternatives. The SEC continued to take the position that its role was to promote neutrality, not to frustrate hostile activity, whatever the results of that hostile activity might be for certain companies. The action the SEC did take in the form of new rules or amendments to existing rules was justified as necessary for shareholder protection and informed shareholder choice in the corporate control market. [342] Its primary thrust was to achieve fair and equal treatment of shareholders and to provide a measured time for shareholders to respond.

State legislatures were not altogether comfortable with the response of the Congress or the SEC, and felt compelled to respond to the fears expressed by local corporations, which often were significant employers in the states involved. Thus, state legislation was enacted, both restricting bidder action and investing directors with broader discretion to fight unwanted suitors. The primary types of statutes that developed as a result of these efforts were "control share statutes" and "business combination statutes." Approximately 40 states (including Delaware and New York) have adopted one or both types of statutes. [343] Most of these statutes apply to any corporation incorporated under the laws of such state. Some of these statutes, however, do not apply unless the corporation chooses to "opt in" to their coverage, while others apply unless and until the corporation chooses to "opt out" of their coverage.

The typical control share statute allows a target company that meets the statute's jurisdictional nexus requirements to deny voting rights to certain of its shares that are classified as "control shares," unless such voting rights are "restored" by the vote of a majority of disinterested shares. "Control shares" are generally defined as shares owned by an acquiring person, which exceed specified percentage thresholds, usually 20%, 33% or 50%. These statutes, intended to help targets, arguably benefit bidders more because, in an era where most public companies have adopted or can adopt a poison pill (discussed below), the statute gives the bidder the ability to force a shareholder vote that target management will likely lose, thereby increasing the pressure on the target board of directors to negotiate with the bidder or put the target up for sale to the highest bidder. Accordingly, if relevant state law permits, a company resisting a hostile takeover will often "opt out" of such statutes.

p. 9-98

p. 9-99

Business combination statutes restrict mergers and other "business combinations" (usually defined extremely broadly) with a person who has made a substantial (usually 10%, 15% or 20%) share acquisition without prior board approval. If a hostile bidder does not get such approval, it is typically forced to wait for three to five years before it can engage in a second-step merger, other business combination with the target company or certain other types of transactions. Also, following the expiration of the specified waiting period, many business combination statutes require the acquiror to comply with complex "fair price" provisions when engaging in a cash-out merger.

In addition to these types of statutes, about 30 states have also adopted provisions permitting directors to consider various factors and constituencies in addition to shareholders in making takeover-related decisions. These provisions are typically referred to as "expanded constituency" statutes. Although the substance of these statutes varies somewhat from state to state, all are primarily designed to provide added protection for corporate directors who choose to oppose a takeover.

Most of these statutes authorize directors making takeover-related decisions (and in some states, other types of decisions) to consider both the long-term and short-term interests of the corporation and its shareholders, including the benefits from long-term plans and the possibility that these interests may best be served by the corporation's continued independence. Most of these statutes also contain a list of constituencies (in addition to shareholders) that directors may consider the interests of, or the effects of actions on, in evaluating a potential change in control of the corporation. The constituencies listed in many of these statutes include current employees, retired employees, suppliers, the corporation's customers, and the communities in which the corporation is located. Corporate statutes also were amended to permit corporations to eliminate director liability to disgruntled shareholders frustrated in their attempts to realize the highest price for their shares, unless the directors are found to have breached their duty of loyalty.

Statutes have also been adopted in Pennsylvania, South Dakota and Maine requiring persons acquiring 20% (a simple majority in the case of South Dakota, 25% in the case of Maine) or more of the voting power of a target corporation to offer to purchase the remaining shares for the "fair value" of those shares as determined by a court. [344] There is substantial question about the validity of these statutes under the U.S. Constitution, but there have been no court decisions to date addressing their constitutionality. Ohio and Pennsylvania have also adopted "profit recapture" statutes, which permit the target company to recover profits

p. 9-99

p. 9-100

from a bidder who makes an acquisition offer and then disposes of its holdings within a specified time. [345]

[b] Poison Pills

During the 1980s, management was not content to rely entirely upon state action. Most members of management view hostile bids for their companies as anathema. They and their advisors also do not view compliance with the Federal Rules as a deterrent to a bidder. Thus, management was constantly looking for defensive measures that could either block unwelcome bidders outright or force bidders to deal directly with them. Shareholder rights plans (or so-called "poison pills") are an effective mechanism to achieve these objectives.

Poison pills are, in effect, warrants or rights that are issued as a dividend on existing shares and that trade as a unit with the shares. In the absence of a takeover attempt, the rights have no economic significance. Typical poison pills are designed to penalize severely (and thereby, as a practical matter, prevent) bidders acquiring more than a specified percentage of the issuer's shares without target board approval. They provide that, upon the acquisition of beneficial ownership of a specified percentage of an issuer's stock, all shareholders (other than the acquiror and its affiliates and transferees) receive the right to purchase additional shares of the issuer's stock at half the market price. This would significantly dilute both the acquiror's percentage ownership and the value of the investment. Over time, issuers have become increasingly aggressive at setting the percentage of ownership that will cause the rights to "flip-in"; and while the first "flip-in" pills had triggers of 50%, now most rights plans have triggers in the range of 10 to 15%. [346] In addition, it has become common for rights plans to define "beneficial ownership" more broadly than the definition under § 13(d) of the Exchange Act, [347] so as to effectively prevent multiple activists from teaming up and potentially obtaining at least negative control. [348]

For many years, a significant majority of major public companies had poison pills in effect. However, in recent years, because of criticism by institutional investors, proxy voting services and governance professionals, most companies

p. 9-100

p. 9-101

have terminated their poison pills or allowed them to expire. [349] In most cases, however, a company can adopt a poison pill quickly by board action, without shareholder approval, if and when faced with a takeover attempt that the board of directors considers coercive or at an inadequate price.

Once a poison pill has been implemented, a takeover is, as a practical matter, impossible without board approval. As a result, unless the board is removed after a proxy solicitation by the bidder [350] or a court orders the redemption of the rights (which they are generally unwilling to do), the board can "just say no" to an unsolicited offer. [351] Accordingly, the usual tactic of bidders to get around a poison pill is to run a proxy contest to replace the target's board of directors. If the target has a staggered board, with only one-third of the directors up for election each year and directors not being removable in the absence of good "cause" (which is extremely difficult to demonstrate), a proxy contest can generally only change one-third of the directors in a given year.

[c] Litigation

The desire by both management and state legislators to curb hostile takeovers placed the courts in a difficult dilemma. One of the characteristics of the U.S. system is the involvement of the courts in takeovers. Confronted with both parties claiming numerous violations of law in order to obtain a tactical advantage, courts had a choice: take a hands-off approach and let the market and shareholders discipline the participants, or intervene and set certain ground rules.

In the early days of hostile takeovers, courts usually dismissed claims that defensive actions by targets in hostile takeovers violated the target directors'

p. 9-101

p. 9-102

fiduciary duties. Courts generally viewed defensive tactics as a normal exercise of directors' business judgment and thus refused to hear claims challenging such tactics unless an absence of good faith could be established. [352]

This somewhat cavalier approach was rejected in 1985 by the Delaware Supreme Court. [353] Under its decision in the *Unocal* case, a board of directors' adoption of defensive measures will be protected only if the board can establish that it has reasonable grounds for believing that a danger or a threat to corporate policy and effectiveness exists, and that the defensive measures adopted were reasonable in relation to the threat posed. [354] This is generally the test that boards try to meet today in responding to bids. Despite this shift in the burden of proof, however, the key point remains that directors continue to enjoy considerable discretion to adopt poison pills and implement other structural defenses against hostile takeovers, including "lock-up" provisions, "break-up" fees and "no-shop" clauses in agreements with successful bidders. [355] However, any lock-up or similar provision must not preclude other bids and must be reasonable. [356] Furthermore, in approving an acquisition of the company in which shareholders receive cash for all or many of their shares (or receive stock of a company that has a

p. 9-102
p. 9-103

controlling shareholder [357]), the board of directors has additional duties under *Revlon*, a 1986 Delaware Supreme Court case. Once a takeover becomes inevitable, Revlon requires directors to take steps reasonably designed to attempt to maximize short-term shareholder value. [358]

[13] Vendor Placements

Another method of using securities of a foreign company to purchase a U.S. company is a so-called "vendor placement." In a vendor placement, the bidder typically employs a third party to sell in offshore transactions the securities to which tendering U.S. target holders would be entitled in the offer. The bidder or third party then remits the proceeds of the resale to the U.S. target holders. In several no-action letters, the staff of the SEC took the position that if a foreign company offers and issues to U.S. persons securities that are immediately resold outside the United States for the account of the U.S. person, no offer or sale (as those terms are defined in the Securities Act) to the U.S. person occurs. [359] Accordingly, the securities issued to and sold on behalf of the U.S. persons need not be registered under the Securities Act.

The no-action letters and other guidance provided by the SEC include a number of factors that the SEC looks to in deciding whether a vendor placement structure triggers the registration requirements under the Securities Act. These factors include:

- the level of U.S. ownership in the target company;
- the number of bidder securities to be issued in the business combination transaction as a whole compared to the amount of bidder securities outstanding before the offer;

p. 9-103
p. 9-104

- the amount of bidder securities to be issued to tendering U.S. holders and subject to the vendor placement, compared to the amount of bidder securities outstanding before the offer;
- the liquidity and general trading market of the bidder's securities;
- the likelihood that the vendor placement can be effected within a very short period of time (*i.e.*, within a few business days) after the termination of the offer and the bidder's acceptance of shares tendered in the offer;
- the likelihood that the bidder plans to disclose material information, such as earnings results, forecasts or other financial or operating information, around the time of the vendor placement sales; and
- the process used to effect the vendor placement sales, such as whether the vendor placement involves special selling efforts by brokers or others acting on behalf of the bidder.

The SEC has indicated that it will no longer issue no-action letters for vendor placements, but reiterated that vendor placements may be used, provided bidders follow the guidance in previous no-action letters. [360] The SEC indicated that the two most important factors in the analysis are the liquidity of the market for the securities and the relative amount of securities going to U.S. holders. [361]

Footnotes

102 For purposes of calculating beneficial ownership of securities to determine whether the tender rules are applicable, ADRs are not considered a separate class of equity securities. SEC Release No. 33-6894 (May 23, 1991).

103 Tender offers by an issuer with a class of equity securities registered under § 12 of the Exchange Act for its

own equity securities are separately regulated. *See* § 9.03.

104 Rule 14d-2 under the Exchange Act. The bidder must deliver to the target, and any other bidder, a copy of the first such communication. Rule 14d-3(a) under the Exchange Act.

105 In contrast with the U.S. approach, a U.K. offer document must be mailed to target shareholders within 28 days of the public announcement of a firm intention to make an offer. (However, the U.K. Panel on Takeovers and Mergers may grant extensions to this period, which are sometimes required to accommodate the needs of bidders registering securities under the Securities Act.) *See* U.K. City Code on Takeovers and Mergers, Rules 24.1 and 30.2.

106 "Written communications" include all information disseminated other than orally, including electronic communications and other future applications of changing technology. For example, video, audio and other electronic presentations made available for replay on a website, through a dial-in telephone number or otherwise constitute written communications and must be filed with the SEC by means of a transcript. Newspaper articles about a transaction that are disseminated by one of the parties (*e.g.*, on a company website) or arranged or paid for by one of the parties must also be filed with the SEC. In addition, a script for a speech about the transaction that is disseminated publicly (*e.g.*, given to an audience or attached to a press release) or widely distributed throughout the company so that the speech can be given many times (analogous to a "proxy solicitation script") must also be filed with the SEC. *See* SEC Release No. 33-7760 (Oct. 22, 1999), 64 Fed. Reg. 61,408, 61,412 n.37 (Nov. 10, 1999); SEC, Division of Corporation Finance, Manual of Publicly Available Telephone Interpretations, Third Supplement (July 2001) (hereinafter, " Regulation M-A and Cross-Border Release Interpretations"); and § 9.05[5][a] for further discussion of this issue.

107 Rules 14d-2(b)(2) and 14d-9(a)(2) under the Exchange Act. These filings are made on Schedules TO and 14D-9, respectively, on which the "preliminary communications" box is checked. When used for pre-commencement communications, however, only the cover page of the respective schedule is filed with the attached communication; the complete schedules are filed only on (in the case of Schedule TO) or after (in the case of Schedule 14D-9) formal commencement of the offer as described below. "Stop-look-and-listen" communications, which are communications by the target board to its shareholders that merely identify the bidder, state that the tender offer is under consideration, state that the board will advise the shareholders of its recommendation regarding the offer and request that shareholders defer their decision to accept or reject the tender offer until the board publishes its recommendation, do not have to be filed or include a legend. Rule 14d-9(f) under the Exchange Act.

108 Instruction 3 to Rule 14d-2(b)(2) and Instruction 3 to Rule 14d-9(a)(2) under the Exchange Act.

109 Rule 14e-8 under the Exchange Act; *see also* § 9.02[2].

110 By contrast with the SEC, the U.K. Panel on Takeovers and Mergers and the takeover regulators in each other European Economic Area state require that a bidder should only announce a firm intention to make an offer once it has arranged its financing. *See* U.K. City Code on Takeovers and Mergers, General Principle 5 and Rule 2.7; the EU's Directive of the European Parliament and of the Council on Takeover Bids of Apr. 21, 2004 (Directive 2004/25/EC), Art. 3(1)(e).

111 *See* Schedule TO, Instruction 5 to Item 10; *see also* § 9.05[3][b] for a discussion of second-step mergers and § 4.05[5][a] for a discussion of significance tests, which reflect the "significance" of an acquired business by comparing to the acquiror's most recent audited financial statements (i) the amount of the acquiror's proposed investment in the business to be acquired, (ii) the total assets of the business to be acquired and (iii) the pre-tax income of the business to be acquired. This *pro forma* information must be included because the effective investment decision is being made at the time shareholders decide whether to tender or to wait for the second-step merger and remain as shareholders in the combined business. This requirement does not apply to hostile two-step transactions. The stated reason for its inapplicability in hostile transactions is that the bidder may not have adequate access to target information to prepare reliable *pro forma* financial statements. *See* SEC Release No. 33-7760 (Oct. 22, 1999). Nonetheless, subject to Rule 409 under the Securities Act, which provides that a registrant need only include information

in its registration statement insofar as it is known or reasonably available to the registrant, the SEC has long required *pro forma* financial statements in hostile exchange offers, and bidders have managed to prepare them.

112 Such financial information may be included or, if the bidder is eligible, incorporated by reference in Schedule TO; if, however, the financial information is incorporated by reference, at least summarized financial information must be disseminated to securityholders. *See* Schedule TO, Instruction 6 to Item 10; Regulation M-A and Cross-Border Release Interpretations, Question I.H.7.

113 *See* Item 1001 of Regulation M-A under the Securities Act.

114 In the context of reviewing a Schedule TO (utilized in the context of an offer for registered equity securities), the SEC staff is likely to inquire as to whether target management provided its projections to the bidder and, if so, require them to be disclosed. *See infra* Note 200 and accompanying text.

115 *See* SEC Release No. 33-7760 (Oct. 22, 1999). The plain English requirement also applies to proxy statements/prospectuses for stock-for-stock mergers.

116 *See* SEC Release No. 34-43069 (July 24, 2000). If the conditions are not objective or are within the bidder's control (*e.g.*, the offer may be terminated for any reason or may be extended indefinitely), in the SEC's view, the offer would be illusory and may constitute a "fraudulent, deceptive or manipulative" practice within the meaning of § 14(e) of the Exchange Act.

117 Rule 14d-3(b) under the Exchange Act.

118 Rules 14e-2 and 14d-9 under the Exchange Act; Schedule 14D-9, Item 4.

119 Rules 14e-2 and 14d-9 under the Exchange Act; Schedule 14D-9, Items 3 and 7.

120 Rules 14e-2 and 14d-9 under the Exchange Act; Schedule 14D-9. Prior to the time when a full Schedule 14D-9 is filed, all management's pre-commencement communications must generally be filed on Schedule 14D-9 no later than the date of their first use, except "stop-look-and-listen" communications, which are exempt from filing. *See supra* Note 107.

121 *See* § 9.02 for a description of procedural rules applicable to all tender offers.

122 Rule 14e-1 under the Exchange Act. The SEC interprets Rule 14d-4(d)(2) under the Exchange Act, which sets forth minimum time periods necessary for dissemination of material changes in a registered securities offer (*i.e.*, a tender offer in which the consideration consists solely or partially of securities registered under the Securities Act) that commences early, as applying to all tender offers, including those subject only to Regulation 14E. *See* SEC Release No. 33-7760 (Oct. 22, 1999). The SEC has stated that if a bidder intends to reduce the offer price by any cash or other distributions to securityholders by the target, the bidder should disclose this prospective offer price reduction in its description of the offer price and that if a distribution occurs and the offer price is reduced, the bidder must extend the tender offer, if required under Rule 14e-1(b), so that the offer remains open for at least ten business days following the date of the notice of the change in the offer price. *See* SEC Release No. 34-43069 (July 24, 2000).

Prior to the 2008 Cross-Border Amendments, the staff of the SEC granted exemptive relief from Rule 14e-1(b) to permit a material change to the offer to be made by the bidder even if the offer would not remain open for at least ten business days from the date that notice of such change was first published, sent or given to securityholders. For example, in January 2006, the SEC staff issued exemptive relief from Rule 14e-1(b) in a cross-border offer for a Danish company, listed on the NYSE with securities registered under § 12 of the Exchange Act, to permit the offer price to potentially decrease as a result of a dividend payment or other distribution made by the target without the tender offer remaining open for at least ten days from the date of notice of any such potential decrease. *See Nordic Telephone Company ApS* (avail. Jan. 3, 2006); *see also Axel Springer AG* (avail. Sept. 12, 2005) and *BCP Crystal Acquisition GmbH & Co.* (avail. Feb. 3, 2004), in which the SEC granted relief from Rule 14e-1(b) to allow the bidders to extend the initial offering period for only the maximum two-week period required under German law in the event of a material change to the terms of the offer during the last two weeks of the offer; and *Bayer Entities* (avail. June 29, 2006), in which the SEC granted relief from Rule 14e-1(b) to allow the bidder to rely on a mandatory two-week subsequent offering period rather than extend the offer if market purchases at a price higher than the offer price resulted in a mandatory increase of the offer price under German law. The offer in *Nordic Telephone* was eligible for the Tier II exemption; the offer in *Axel Springer* could have been eligible for the Tier II exemption but for the fact that the target was not a foreign private issuer; and the offer in *BCP Crystal* was not eligible for the Tier II exemption. *See* § 9.05[9][b] for a discussion of the Tier II exemption.

The SEC has also provided no-action relief from Rule 14e-1(b) to permit an increase in the offer price in the event a certain percentage of target securities are tendered as an incentive to target securityholders. *See STATS ChipPAC Ltd.* (avail. Mar. 15, 2007) (permitting an incentive payment if 90% tender threshold was reached if, among other things, a subsequent offering period is provided or extended so that the offer including the subsequent offering period remains open for ten U.S. business days after the announcement of the increase in the offer consideration); *Alcan, Inc.* (avail. Oct. 7, 2003) (permitting an incentive payment if 95% tender threshold was reached without an extension of the offering period or a subsequent offering period).

The SEC has also granted no-action relief from Rule 14e-1(b) where the exact number of shares and the offer price were not disclosed in the tender offer, but the terms of a pricing methodology to determine the number of shares and offer price were fully disclosed at the time of the commencement, despite the fluctuation in share price that could result from using a pricing methodology rather than a set offer price. *See Lloyds Banking Group plc* (avail. May 28, 2010); *see also Towers Watson & Co.* (avail. May 17, 2010).

123 Rule 14d-7 under the Exchange Act. For these purposes, a "subsequent offering period," described below, is not an extension of the expiration of the offer and is disregarded. Thus, shares tendered during the original offer can, and (subject to the offer's conditions) must, be purchased at the end of the main offer and prior to the commencement of a "subsequent offering period."

124 Rule 14d-10 under the Exchange Act. Following its adoption in 1986, the best-price rule required that "the consideration paid to any security holder pursuant to the tender offer is the highest consideration paid to any other security holder during the tender offer." SEC Release No. 34-23421 (July 17, 1986), 51 Fed. Reg. 25,873, 25,878 (July 17, 1986). This language resulted in a significant number of shareholder class actions, claiming that amounts paid to target executives as retention bonuses or pursuant to golden parachutes or similar arrangements actually constituted additional payments for the executive's shares, to which all of the target company's public shareholders were entitled. In 2006, the SEC unanimously approved amendments that modified the basic language of the best-price rule to require that "[t]he consideration paid to any security holder *for securities tendered in* the tender offer is the highest consideration paid to any other security holder *for securities tendered in* the tender offer." Rule 14d-10 under the Exchange Act (emphasis added). By eliminating the previous references to consideration paid "pursuant to the tender offer" and "during the tender offer," the SEC clarified that the best-price rule applies only with respect to the consideration offered and paid for securities tendered in a tender offer. SEC Release No. 34-54684 (Nov. 1, 2006), 71 Fed. Reg. 65,393, 65,407 (Nov. 8, 2006). The adopting release also explicitly confirmed the SEC's view that the best-price rule is not applicable to arrangements between a bidder (or the target) and target shareholders where the shareholders do not tender their shares in the tender offer. SEC Release No. 34-54684 (Nov. 1, 2006).

125 A bidder for ADRs or the underlying shares will be required under the all-holder provision of Rule 14d-10 under the Exchange Act to make a tender offer for both the ADRs and the underlying shares, unless the SEC provides exemptive relief.

126 Rule 14d-8 under the Exchange Act. The SEC staff has granted relief from this requirement where certain non-pro rata purchases are required under local law. *See Advanced Semiconductor Engineering, Inc.* (avail. Dec. 28, 2015) (granting relief where Taiwanese law required the tender offer to include an odd-lot provision).

127 *See* § 9.05[3][b].

128 Rule 14d-11 under the Exchange Act. Prior to the 2008 Cross-Border Amendments, the subsequent offering period was between 3 and 20 business days. The amendments now permit the period to be longer

than 20 business days.

129 Rule 14d-11 under the Exchange Act. Following the effectiveness of Rule 14d-11, the SEC staff initially took the position that a decision to have a subsequent offering period is itself a material change requiring disclosure five business days before expiration of the initial offering period. The result was that most bidders chose not to use a subsequent offering period because announcing this intention five business days before the close of the initial offering period created a risk of holdouts to the initial offer. In 2001, the SEC staff stated that a subsequent offering period does not require the five-business day advance notice if the bidder announces in its initial offer (or during the course of the offer but at least five business days before the expiration) that it may include a subsequent offering period, explains what a subsequent offering period is and announces the commencement of the subsequent offering period in the required notice announcing the results of the initial offer (by 9:00 A.M. Eastern time on the business day after the expiration date). Rule 14d-11(d) under the Exchange Act; Regulation M-A and Cross-Border Release Interpretations, Question I.J.1.

130 Rule 14d-1(d)(2)(iv) under the Exchange Act. In particular, the SEC staff has granted exemptions from Rule 14d-11(d) under the Exchange Act where such a tender offer is not a Tier II offer (and thus ineligible for the codified relief under the 2008 Cross-Border Amendments) but applicable laws in the home jurisdiction would allow the bidder to delay the commencement of the subsequent offering period. *See China National Chemical Corporation and CNAC Saturn (NL) B.V.* (avail. Mar. 21, 2016) (granting no-action relief where Swiss law permitted bidders to pay for shares tendered in the subsequent offering period after the expiration of that period, even if more than 20 business days after the date of tender); *Acorda Therapeutics, Inc.* (avail. Mar. 8, 2016) (granting no-action relief where, in accordance with customary Finnish market practice, bidders were permitted to accept shares tendered in the subsequent offering period on a periodic basis (approximately every week) and make payment for such shares up to five Finnish banking days after acceptance); *Oak Leaf B.V., Acorn B.V and Acorn Holdings B.V.* (avail. May 21, 2013) (granting no-action relief where Dutch law permitted bidders to determine within three Dutch trading days whether to declare the conditions to the tender offer satisfied or to instead commence a subsequent offering period); and *Echo Pharma Acquisition Limited* (avail. May 1, 2013) (granting no-action relief where Irish law permitted bidders to pay for shares tendered within 14 calendar days from the end of the initial offering period or from the date of tender in the subsequent offering period).

131 Rule 14d-7(a)(2) under the Exchange Act. Even before the introduction of subsequent offering periods in the United States, the SEC had allowed withdrawal rights to be terminated in tender offers for non-U.S. companies whose shares trade in their home markets and are also registered under § 12 of the Exchange Act in order to allow compliance with U.K. rules. The SEC has codified its practice of granting exemptions from the withdrawal rights provisions of Rule 14d-7 in connection with certain tender offers for foreign private issuer targets. *See* § 9.05[9].

132 Exchange Act Rule 14d-1(d)(2)(viii) under the Exchange Act. Prior to the 2008 Cross-Border Amendments, the staff of the SEC had granted exemptions from Rule 14d-11(f) in the cross-border context where Brazilian law required an incremental interest payment for shares tendered during the subsequent offering period (also granting relief from the requirement in Rule 14e-1(b) under the Exchange Act that an offer be extended in the event of an increase in the offer price). *See Telemar Participaçöes S.A.* (avail. Oct. 9, 2007). After the adoption of the 2008 Cross-Border Amendments, the staff of the SEC has continued to grant exemptions from compliance with Rule 14d-11(f) on a case-by-case basis where the tender offer in question is not a Tier II offer (and thus ineligible for the codified relief) but where the conflict between foreign law and U.S. tender offer rules still remains. *See Empresa Brasileira de Telecommunicacoes* (avail. Oct. 15, 2010) and *GTIS Partners LP and GP Capital Partners IV, L.P.* (avail. Mar. 27, 2015). *See also Kraft Foods, Inc.* (avail. Dec. 9, 2009) (granting no-action relief where U.K. law required a "mix and match facility" allowing shareholders to receive either additional shares or a cash payment in Kraft's tender offer for Cadbury). *See also Alamos Gold Inc*. (avail. Mar. 7, 2013) (granting no-action relief where Canadian law required that the bidder be permitted to use a proration mechanism during its subsequent offering period).

133 The term "related securities" is defined as "securities that are immediately convertible into, exchangeable

for, or exercisable for" securities of the same class as securities for which the tender offer is being made. Rule 14e-5(c)(6) under the Exchange Act.

134 Rule 14e-5 under the Exchange Act. The prohibition does not apply to purchases or arrangements to purchase during a subsequent offering period as provided in Exchange Act Rule 14d-11 so long as the form and amount of consideration for such purchases are the same as that offered in the tender offer. For a discussion of subsequent offering periods, *see supra* Note 123.

135 In the context of a friendly offer, the SEC has clarified that the target company is considered to be "acting in concert" with the bidder and, accordingly, is a "covered person" falling within the Rule 14e-5 prohibition on purchases outside a tender offer. *See* SEC Release No. 33-7760 (Oct. 22, 1999). Because the definition of "covered person" includes "any person acting, directly or indirectly, in concert with any … other covered persons," SEC Release No. 33-7760 (Oct. 22, 1999), 64 Fed. Reg. 61,408, 61,431 at n.242 (Nov. 10, 1999), Rule 14e-5 may also extend to the target company's financial advisors in this context.

136 The exemption does not apply to all riskless principal purchases, but rather only to purchases "[a]s principal for its own account if the dealer-manager or its affiliate is not a market maker, and the purchase is made to offset a contemporaneous sale after having received an unsolicited order to buy from a customer who is not a covered person." Rule 14e-5(b)(4)(ii) under the Exchange Act.

137 Rule 14e-5 applies to any financial advisor to a bidder if the advisor's compensation is dependent on completion of the offer, even if it is not acting as dealer-manager for the tender offer. However, as drafted, this exception is only available to the dealer-manager. Nonetheless, the SEC staff has informally indicated that it is willing to read the term "dealer-manager" broadly to pick up entities performing similar functions but denominated "financial advisors" or the like.

138 As drafted, this exemption does not cover affiliates of a financial advisor not acting as dealer-manager. Rule 14e-5(b)(8) under the Exchange Act. *But see supra* Note 135. Although Rule 14e-5(b)(8) provides a potentially broad exemption for purchases made by certain affiliates of the dealer-manager that have appropriate firewalls in place to prevent the sharing of nonpublic information with the dealer-manager and that are not made for the purpose of facilitating the tender offer, this exemption has proved of limited use in cross-border tender offers, because the staff of the SEC has interpreted the requirements of this exemption to mean that the dealer-manager relying on the exemption must be an SEC-registered broker-dealer, a requirement that many non-U.S. financial advisors do not meet, and that all dealer-managers in the transaction or persons performing similar roles be broker-dealers registered under § 15 of the Exchange Act. *See* Regulation M-A and Cross-Border Release Interpretations, Question I.L.7; § 9.05[9][a].

139 Rule 14e-5(b)(9) exempts purchases or arrangements to purchase if (i) the tender offer is for the securities of a foreign private issuer, (ii) the tender offer is subject to the U.K. City Code on Takeovers and Mergers, (iii) the purchases or arrangements to purchase are effected by a connected exempt market maker or a connected exempt principal trader (as those terms are used in the City Code), (iv) such market maker or trader complies with the applicable provisions of the City Code and (v) certain required disclosure is included in the tender offer documents.

140 *See* Rule 14e-5(b)(10) under the Exchange Act. *See* § 9.05[9][a] for a discussion of the Tier I exemption.

141 *See* Rule 14e-5(b)(11) under the Exchange Act, codifying the class-wide no-action relief granted to Mittal in its acquisition of Arcelor. *See Mittal Steel* (avail. June 22, 2006). *See* § 9.05[9][b] for a discussion of the Tier II exemption. For exemption under Rule 14e-5(b)(11), (i) the tender offer must qualify as a Tier II tender offer under Rule 14d-1(d), (ii) the economic terms and consideration in the U.S. tender offer and foreign tender offer(s) must be the same, provided that any cash consideration to be paid to U.S. securityholders may be converted from the currency to be paid in the foreign tender offer(s) to U.S. dollars at an exchange rate disclosed in the U.S. offering documents, (iii) the procedural terms of the U.S. tender offer must be at least as favorable as the terms of the foreign tender offer(s), (iv) the intention of the offeror to make purchases pursuant to the foreign tender offer(s) must be disclosed in the U.S. offering documents, and (v) purchases must be made solely pursuant to the foreign tender offer(s) and not pursuant to an open market transaction(s), a private transaction(s) or other transaction(s). The SEC has issued no-action letters

granting exemptive relief for tender offers under Rules 14e-5(b)(11) and (12) despite the nonavailability of Tier II exemptive relief. *See America Movil* (avail. Apr. 23, 2010); *VimpelCom Ltd.* (avail. Feb. 5, 2010). In both cases, Tier II exemptive relief was unavailable solely because the percentage of outstanding shares held by U.S. residents was greater than 40%. *See also Enersis Americas S.A. and Endesa Americas S.A.* (avail. Aug. 24, 2016) (granting relief for the solicitation of shareholder approval for a merger involving a target company, the shares of which were then subject to a pending tender offer).

142 *See* § 9.05[9][b] for a discussion of the Tier II exemption.

143 For purchases by an affiliate of a financial advisor, (i) the financial advisor and the affiliate must maintain and enforce written policies and procedures reasonably designed to prevent the transfer of information between the financial advisor and affiliate that might result in a violation of U.S. federal securities laws and regulations through the establishment of information barriers, (ii) the financial advisor must have an affiliate that is registered as a broker or dealer under § 15(a) of the Exchange Act, (iii) the affiliate must have no officers (or persons performing similar functions) or employees (other than clerical, ministerial or support personnel) in common with the financial advisor that direct, effect or recommend transactions in the subject securities or related securities who also will be involved in providing the offeror or subject company with financial advisory services or dealer-manager services, and (iv) the purchases or arrangements to purchase must not be made to facilitate the tender offer.

The SEC acknowledged in the Adopting Release for the 2008 Cross-Border Amendments that the level of normal business activity may fluctuate once a tender offer is announced, but noted that if purchasing activity after the announcement of a tender offer far exceeds the usual or expected level of activity, it could potentially be a red flag of improper facilitation. In so noting, it acknowledged potential implications of a focus in the 2008 Cross-Border Amendments on the level of activity rather than the nature of activity, where the prior focus was on the nature of the activity. *See* Adopting Release for the 2008 Cross-Border Amendments, Section II.C.7.b, 73 Fed. Reg. 60,050, 60,069 (Oct. 9, 2008).

Prior to the 2008 Cross-Border Amendments and the adoption of Rule 14e-5(b)(12), the SEC staff informally indicated that it did not view the then-available exemptive relief covering trading activities of financial advisors and their affiliates as encompassing risk arbitrage activities, and the SEC's initial proposal for the 2008 Cross-Border Amendments included specific language to expressly exclude risk arbitrage from Rule 14e-5(b)(12)'s scope. *See* SEC Release No. 33-8917 (May 6, 1998). Although this language was not included in the final version of the rules, the SEC stated directly in the Adopting Release for the 2008 Cross-Border Amendments that purchasing activity by an affiliate of a financial advisor, including risk arbitrage, made to facilitate the tender offer will not be eligible for the exception. *See* Adopting Release for the 2008 Cross-Border Amendments, Section II.C.7.b, 73 Fed. Reg. 60,050, 60,069 (Oct. 9, 2008). Regarding the exemptive relief available prior to the 2008 Cross-Border Amendments, *see the Cleary Gottlieb Letter* (*see infra* Note 144).

Financial advisors to the bidder or target may be subject to Rule 14e-5 under the Exchange Act because they are acting in the capacity of "dealer-manager" to the bidder, because their compensation is dependent on the completion of the offer or because they are considered to be acting directly or indirectly in concert with a covered person (*e.g.*, the target in a friendly transaction). The exemptions described above are meant to allow a financial advisor's ordinary course trading activities to continue notwithstanding the restrictions imposed by Rule 14e-5 under the Exchange Act during a tender offer in which the financial advisor is involved.

The SEC staff has previously provided relief where the bidder, target or an affiliate of the bidder or target is in the banking or financial services sector to permit trading activities involving target securities by such entities on both a proprietary basis and on behalf of their customers, notwithstanding the fact that the rule would otherwise preclude such trading activities. *See*, *e.g.*, *Barclays PLC and ABN Amro Holdings N.V.* (avail. Apr. 24, 2007).

144 *See* Rule 14e-5(b)(12) under the Exchange Act, codifying the class-wide relief granted to Sulzer AG in its acquisition of Bodycote International plc and to Goldman Sachs International and similarly situated financial

advisors (and their affiliates and separately identifiable departments). *See Sulzer AG* (avail. Mar. 2, 2007); *see also the Cleary Gottlieb Letter*.

For this exemption to be available, (i) the covered person must reasonably expect that the tender offer meets the conditions for reliance on the Tier II cross-border exemptions of Rule 14d-1(d) (*see* paragraph 3 and 4 of this Note for further discussion), (ii) no purchases or arrangements to purchase outside the tender offer may be made in the United States, (iii) the U.S. offering materials must prominently disclose the possibility of, or the intention to make, purchases or arrangements to purchase subject securities or related securities outside the tender offer, and if there will be public disclosure of purchases of subject or related securities, the manner in which information regarding such purchases will be disseminated, and (iv) there is public disclosure made in the United States, to the extent that such information is made public in the subject company's home jurisdiction, of information regarding all purchases of subject securities and related securities otherwise than pursuant to the tender offer from the time of public announcement of the tender offer until the tender offer expires. For purchases by an offeror or its affiliates, there is a requirement that the tender offer price will be increased to match any consideration paid outside the tender offer that is greater than the tender offer price. This condition is satisfied if the laws of the relevant home jurisdiction or the terms of the tender offer provide for matching the higher consideration and the offeror complies with such provision. *See* Adopting Release for the 2008 Cross-Border Amendments, Section II.C.7.b, 73 Fed. Reg. 60,050, 60,069 (Oct. 9, 2008).

See § 9.05[9][b] for a discussion of the Tier II exemption. The SEC, since the 2008 Cross-Border Amendments went into effect, has granted no-action letters for companies that have complied with all the conditions of Rule 14e-5(b)(12)(i) except for the requirement that the financial advisor reasonably expects the tender offer to meet the requirements of the Tier II cross-border exemption. In these cases, the SEC has granted no-action relief, subject to a number of trading restrictions and disclosure requirements. *See Braas Monier Building Group* (avail. Oct. 25, 2016); *Songbird Estates PLC* (avail. Dec. 19, 2014); *VimpelCom Ltd.* (avail. Feb. 5, 2010); *Kraft Foods, Inc.* (avail. Dec. 9, 2009).

Prior to the 2008 Cross-Border Amendments and the changes to Rule 14d-1 under the Exchange Act, a letter from Cleary Gottlieb included the following note regarding the financial advisors' reasonable belief that an offering would be Tier II eligible: "[I]n many jurisdictions it may be difficult or impossible to 'look through' record ownership to determine beneficial ownership or to 'look back' to determine ownership percentages as of the date 30 days before the commencement of the tender offer, tests contained in Rule 14d-1 to ascertain the availability of the Tier II exemption. … Financial [a]dvisors and other transaction participants will make a determination of the percentage of the target held by U.S. shareholders … based upon information to the extent known or which can be obtained without unreasonable effort or expense, and will exclude the bidder and greater than 10% holders from such calculations as prescribed in the instructions to Rule 14d-1, notwithstanding the lack of literal compliance with the counting rules of Rule 14d-1 to ascertain Tier II eligibility." *Cleary Gottlieb Steen & Hamilton LLP* (avail. Apr. 4, 2007) (the "*Cleary Gottlieb Letter*"). This may serve as useful guidance in assessing whether the requirements of Rule 14e-5(b)(12) are satisfied, though the rule has been modified, as discussed. Note that the reference to 10% holders no longer applies, as such holders no longer must be excluded from calculations of U.S. ownership.

145 A separate issue is whether the non-U.S. financial advisor is acting in the same capacity as a "dealer-manager," the term used in Rule 14e-5(b)(8).

146 Rule 13e-1 under the Exchange Act.

147 *See* DEL. CODE ANN. tit. 8 § 251 (2016).

148 Generally in an acquisition for cash, a U.S. acquiror does not need shareholder approval. In an acquisition for stock, a U.S. acquiror will need shareholder approval if it lacks sufficient authorized-but-unissued shares under its certificate of incorporation or if such approval is required by applicable stock exchange requirements. Both Nasdaq and NYSE-listed U.S. companies generally need shareholder approval to issue more than 20% of their outstanding shares in connection with an acquisition. Both Nasdaq and NYSE, however, generally waive the requirement for foreign private issuers. *See* § 5.05[6] for a discussion of the

NYSE's corporate governance requirements and waiver policy and § 5.05 for a discussion of Nasdaq's requirements and policies.

149 As a general matter, U.S. corporate law does not have a compulsory acquisition provision following a successful tender offer. However, as discussed in greater detail below, an acquiror may be required to consummate a second-step merger following successful completion of a tender offer effected pursuant to an acquisition agreement that contemplated such a merger under § 251(h) of the Delaware General Corporation Law.

150 *See* DEL. CODE ANN. tit. 8 § 251(c) (2014).

151 *See* DEL. CODE ANN. tit. 8 § 251 (Supp. 2016).

152 This estimated timing between signing and closing assumes that the tender offer will be launched within one to two weeks after signing the acquisition agreement and that all regulatory approvals and conditions to closing in the merger agreement can be achieved while the tender offer remains outstanding. If consummation of the transaction will be subject to regulatory approval that is not likely to be received prior to the consummation of the tender offer (*e.g*., under applicable antitrust or competition laws), acquirors will typically prefer the one-step merger as the timing advantage afforded by a two-step tender offer and statutory merger cannot be realized and receipt of the shareholder approval required in a one-step merger may serve to deter interlopers during the period following the shareholder vote when the required clearances remain pending.

153 For U.S. public company targets, a shareholder vote requires preparing a proxy statement, filing it with the SEC and circulating it to shareholders, which process typically takes two to three months or longer if the SEC determines to review the "preliminary" proxy statement initially filed.

154 DCGL § 251(h) also eliminates the need for work-arounds developed by practitioners in the United States to manage the risk of failing to receive 90% of the target's shares in the tender offer. For example, in a typical non-§ 251(h) tender offer and second-step merger, the target will issue to the acquiror a "top-up option" to purchase the amount of the target's authorized but unissued shares that results in the acquiror owning one share more than 90% of the target's outstanding shares, which option is exercisable if the acquiror receives in the tender offer the minimum number of shares required to approve the transaction in a shareholder vote. However, the feasibility of using a top-up option depends on both the number of shares acquired in the tender offer and the number of authorized and unissued shares available for issuance upon exercise of the top-up option.

155 It should be noted, however, that in timing the tender offer and short-form merger, parties must take care to structure the transaction to avoid violating the Federal Reserve Board's margin rules that limit a lender's ability to lend money where such obligation is secured by margin stock, which includes any U.S. publicly traded equity security. Generally, the margin rules limit the amount of borrowing against margin stock to 50% of the value of such stock. Thus, parties must either limit the amount of debt financing used for the purchase or structure the transaction in such a way so that the debt financing is never secured, directly or indirectly, by margin stock. The margin rules are discussed in greater detail in § 9.05[11].

156 *See* § 9.02[2].

157 Pooling of interest accounting treatment for mergers under U.S. GAAP was eliminated in 2001 pursuant to the Financial Accounting Standards Board's Statement 141, Business Combinations. Since that time, mergers accounted for under U.S. GAAP must use purchase accounting treatment.

158 *See* § 9.02, § 9.05[1] and § 9.05[2].

159 *See* § 9.05[4].

160 *See* Rule 145 under the Securities Act with respect to Securities Act registration requirements in the context of a shareholder vote regarding a business combination and § 9.05[7][c] and § 9.05[8] with respect to Securities Act registration requirements relating to the resale of securities received originally in an offer exempt from registration; *see also* § 3.04[10], Note 81 (discussing Exchange Act current reporting obligations in the context of transactions, including business combinations, in which a shell company

reporting under the Exchange Act ceases to be a shell company).

161 *See* § 7.02[1] and [2] for a discussion of § 4(a)(2) of the Securities Act and Regulation D thereunder.

162 *See* § 8.02 for a discussion of Regulation S under the Securities Act. The use of the Regulation S exemption by acquirors that are U.S. issuers in this context may not be practical, however, as equity securities of U.S. issuers acquired pursuant to a Regulation S offering are "restricted securities" under Rule 144(a)(3) under the Securities Act. *See* § 7.03[2] for a discussion of restricted securities and Rule 144 under the Securities Act.

163 *See* § 9.05[9][c].

164 *See*, *e.g.*, *Flamel Technologies S.A.* (avail. July 14, 2016) (Ireland); *Nabi Biopharmaceuticals/Biota Holdings Limited* (avail. June 20, 2012) (Australia); *AngloGold Limited* (avail. Jan. 15, 2004) (Ghana); *Constellation Brands, Inc.* (avail. Jan. 29, 2003) (Australia); *Gilat Satellite Networks Ltd.* (avail. Dec. 19, 2002) (Israel); *Ashanti Goldfields Company Limited* (avail. June 19, 2002) (Cayman Islands); *Xyratex Group Limited* (avail. May 29, 2002) (England and Wales); *ICICI Bank Limited* (avail. Dec. 13, 2001) (India); *John Wood Group PLC* (avail. Mar. 1, 2001) (Scotland); *Galen Holdings PLC* (avail. Aug. 7, 2000) (Ireland); *The Development Bank of Singapore Ltd.* (avail. Aug. 12, 1999) (Singapore); *Source Media, Inc.* (avail. Dec. 3, 1996) (Ontario, Canada); *National-Oilwell, Inc*. (avail. July 30, 1997) (Alberta, Canada); *Buffelsfontein Gold Mining Co. Limited* (avail. Apr. 9, 1996) (South Africa). However, compulsory acquisition provisions that (as in the case of § 974 of the U.K. Companies Act 2006) only allow access to a court by a disgruntled minority holder would not satisfy the requirement of § 3(a)(10) of the Securities Act that a court rule on the fairness of the exchange. If an issuer submits a no-action request very close to the fairness hearing date, the Division of Corporation Finance may not have adequate time to consider the issues presented and respond before the hearing.

The SEC staff has issued guidance on the application of § 3(a)(10), clarifying a number of key practical and interpretive issues, including the following:

- The SEC's Division of Corporation Finance will not issue no-action relief after a § 3(a)(10) fairness hearing has been held.
- Although an issuer's solicitation of votes by securityholders on a transaction prior to a fairness hearing constitutes an offering, this should not prevent § 3(a)(10) from being available, so long as the issuer submits to the court or relevant government entity the disclosure materials pursuant to which the securities are offered before sending them to the offerees.
- When options, warrants or other convertible securities are issued in a § 3(a)(10) transaction, § 3(a)(10) does not exempt their later exercise or conversion.
- Following the amendments to § 18 of the Securities Act (*exempting* certain securities from state registration or qualification laws) effected by the Securities Litigation Uniform Standards Act of 1998 excluding securities issued in a § 3(a)(10) transaction from the coverage of the § 18 *exemption*, fairness hearings conducted under state securities law may now be relied upon for § 3(a)(10) purposes. (Conversely, securities issued in a § 3(a)(10) transaction are no longer exempt from state registration or qualification requirements.)
- Hearings held in foreign courts may suffice for § 3(a)(10) purposes, provided that they satisfy all the requirements applicable to exchanges approved by U.S. courts and the issuer provides the SEC's Division of Corporation Finance with an opinion of counsel licensed to practice in the relevant foreign jurisdiction stating that before the court can give its approval of the transaction, it must consider its fairness to the persons receiving the securities.
- Holders reselling securities received in § 3(a)(10) transactions must resell them in the manner permitted by clauses (c) and (d) of Rule 145 under the Securities Act (governing the sale of securities in connection with reclassifications of securities, mergers, consolidations and asset acquisitions). *See* § 9.05[8] and § 9.05[7][c]. Following amendments to Rule 145(c), which eliminated the presumptive underwriter provision except in transactions involving a shell company,

securities received in a Rule 145(a) transaction not involving a shell company and meeting the § 3(a)(10) exemption may generally be resold without regard to Rule 144 under the Securities Act if the sellers are (i) not affiliates of the issuer of the § 3(a)(10) securities and (ii) have not been affiliates within 90 days of the date of the exempt transaction.

See SEC, Division of Corporation Finance, Staff Legal Bulletin No. 3A (CF) (June 18, 2008), Fed. Sec. L. Rep. (CCH) ¶60,003.

165 *See* § 9.05[13] for a discussion of vendor placements.

166 Even if the acquiror is registered and reporting under the Exchange Act, if financial statements complying with Item 18 of Form 20-F have not been filed, it would be difficult to avoid delay. *See* § 4.07[11] for a discussion of Item 18 financial statements. In addition, financial information would have to be included for the target unless certain conditions are met. *See infra* Note 179; *see also* Rule 3-05(b)(2) of Regulation S - X.

167 Of course, in a friendly context, the target company may be willing to allow the bidder sufficient time to complete the registration process. For example, in Stora Enso Oyj's acquisition of Consolidated Paper, Inc. in 2000, Stora Enso's registration statement on Form F-4 also served as its initial U.S. public offering document.

168 For a discussion of the exclusion of U.S. shareholders, *see* § 9.05[7].

169 It is likely, however, that the SEC would be willing to afford a foreign issuer's Form F-4 registration statement confidential treatment if it contains the issuer's initial public offering prospectus.

170 *See* § 3.02[3] for a general discussion of the timing of the registration process.

171 SEC, Division of Corporate Finance, Generally Applicable Questions on Title I of the JOBS Act, Question 43 (Dec. 21, 2015).

172 In the context of an exchange offer, if an EGC uses the confidential submission process to submit a draft registration statement and does not commence its exchange offer before the effectiveness of the registration statement, it must publicly file the registration statement (including the initial confidential submission and all amendments) at least 15 days before the earlier of the road show, if any, or the anticipated date of effectiveness of the registration statement. An EGC that commences its exchange offer before the effectiveness of the registration statement pursuant to Rule 162 under the Securities Act must publicly file the registration statement (including the initial confidential submission and all amendments thereto) at least 15 days before the earlier of the road show, if any, or the anticipated date of effectiveness, but in no event later than the date of commencement of the exchange offer. SEC, Division of Corporate Finance, Generally Applicable Questions on Title I of the JOBS Act, Question 44 (Dec. 21, 2015).

173 In a merger involving the acquiror issuing stock or other securities, the target's proxy statement also constitutes the prospectus that is part of the acquiror's registration statement under the Securities Act. Issuers that file proxy statements for business combination transactions are no longer permitted to do so on a confidential basis, unless the participants do not avail themselves of the free communications safe harbor discussed in § 9.05[5][a] and disclose *only* the very limited information permitted by Rule 135 under the Securities Act. This Rule 135 standard applies even for cash merger proxy statements.

174 *See* Form F-4, General Instruction A.2. This 20-business day requirement only applies if the proxy statement is incorporating other SEC filings by reference, as is generally the case. The requirement is designed to afford the securityholders time to retrieve the information incorporated by reference. In cases where this option is not chosen by the registrant, the timing requirements in respect of delivering proxy statements are governed purely by state law, the registrant's charter and bylaws and applicable stock exchange requirements. *See*, *e.g.*, NYSE LISTED COMPANY MANUAL § 401.03, which recommends that a minimum of 30 days be allowed between the record date and meeting date for a shareholders' meeting to give ample time for the solicitation of proxies.

175 In rare circumstances, registration may also be required under applicable state securities (or "blue sky") laws in connection with a merger. *See* § 3.02[8] for a discussion of "blue sky" laws. Section 18 of the

Securities Act contains an exclusion for "covered securities," which include securities traded on a major U.S. securities exchange. Also, many states' "blue sky" laws provide that registration of a merger is not required if the shareholders have voted as a class to approve the merger because a "sale" for purposes of such laws has not occurred or it is a merger transaction exempt from registration.

176 Additional information is required to be included in order to comply, in the case of an exchange offer, with the tender offer rules described in § 9.02 and § 9.05[1] and, in the case of a business combination, with the proxy solicitation rules described in § 9.05[4][c].

177 For a discussion concerning IFRS relief, *see* § 4.05[1].

178 Registrants that do not report financial statements in accordance with U.S. GAAP (or IFRS, as issued by the IASB) may use the "pooling of interest" (or "merger") method of accounting for business combinations in circumstances where it would not be permitted under U.S. GAAP (or IFRS, as issued by the IASB), provided that its use is permitted by the accounting principles under which the registrant's financial statements are prepared and certain other conditions are met. SEC Release No. 33-7119 (Dec. 13, 1994).

179 Form F-4 requires that financial information be included for the target unless the *acquiror's* shareholders are not voting on the transaction, the target is not significant to the acquiror at the 20% level and the target is not a reporting issuer. Form F-4, Item 17(b)(5). For a discussion of the significance tests, *see* § 4.05[5][a]. Form F-4 also provides that the target company's financial statements for the latest fiscal year need be audited only to the extent practicable and that the financial statements for the fiscal years before the latest fiscal year need not be audited if they were not previously audited. *See* Form F-4, Item 17(b) and Instruction 1 to Item 17(b)(6). The target's financial statements generally must be reconciled to U.S. GAAP unless they are IASB IFRS financial statements or unobtainable without unreasonable cost or expense and, at a minimum, a narrative description of all material differences between U.S. GAAP and the relevant non-U.S. GAAP (other than IASB IFRS) is disclosed. If the target is a nonreporting company and the acquiror's shareholders are not voting on the transaction, only the most recent fiscal year financial statements need be provided. It is likely to be impossible to obtain the consent of a hostile target's auditors to the use of their audit opinion, but such consent need not be obtained if it is impracticable to do so and application to this effect is made to the SEC pursuant to Rule 437 under the Securities Act.

Although the SEC considers the inclusion of reconciled financial information of the target to be necessary to allow target shareholders to compare what they get in an exchange offer to what they give up, this requirement is onerous if the target is not a U.S. company, and it has led to U.S. holders being excluded from some offers to avoid registration of those offers. Nevertheless, the requirement that financials be included and reconciled as to nonreporting issuers only when the target is significant at the 20% level or the acquiror's shareholders are voting on the transaction is an improvement over the prior rule requiring inclusion and reconciliation irrespective of the target's materiality with respect to the acquiror. Where the target does not report in the United States, however, 20% may still be too low a significance threshold, leading, we suggest, to the unnecessary exclusion of U.S. holders in some offers. *See* § 9.05[7].

The disclosure requirements for a registered exchange offer are more onerous than the disclosure requirements applicable to registered securities offerings for cash to finance an acquisition, particularly with respect to the provision of target company financial information. For example, no financial statements of the target are required in a registration statement for an offering to raise cash to finance an acquisition of that target unless the acquisition is material to the acquiror at the 50% significance level, not the 20% significance level applicable to a registered exchange offer. Rule 3-05(b)(4) of Regulation S -X. Similarly, if the acquiror's shares are issued privately to shareholders of the target, and the acquiror registers such shares on Form F-3 for resale by such selling shareholders, no financial statements of the target are necessary unless the acquisition is material to the acquiror at the 50% significance level.

180 For a discussion of short-form registration statements, *see* § 3.02[1][b].

181 *See* § 4.05[2] for a discussion of requirements for interim period financial statements.

182 Such *pro forma* financial information must be reconciled to U.S. GAAP (unless prepared in accordance with IFRS, as issued by the IASB) whether or not the target's financials are so reconciled. *See supra* Note 179

as to when target financial statements are not required and thus *pro forma* information is not required. In such circumstances, the staff also will not object to the omission of comparative per share information and financial and related information required under certain Items of Regulation S -K. *See* Regulation M-A and Cross-Border Release Interpretations, Question I.H.2.

183 Rule 162(a) under the Securities Act. Such early commencement is also available in the context of an issuer tender offer under Rule 13e-4. In Rule 13e-3 "going-private" transactions and roll-up transactions, the offer cannot commence until the registration statement is declared effective by the SEC. "Going-private" transactions are transactions in which the public shareholders are being asked to (or forced to) exchange their shares for something other than full-voting common shares, instituted by controlling shareholders of a public company with the aim of eliminating its outstanding equity and thereby returning it to private ownership. A roll-up transaction is a transaction involving the combination of one or more partnerships in which some or all of the partners receive new securities or securities in another entity. *See* § 9.03[2] for a discussion of Rules 13e-3 and 13e-4 under the Exchange Act.

184 Rule 14d-4(d) under the Exchange Act. Following effectiveness, a comprehensive final prospectus reflecting all supplements must be filed. However, unless the preliminary prospectus was materially deficient, a comprehensive final prospectus does not need to be delivered to shareholders so long as a preliminary prospectus and prospectus supplements have been delivered in accordance with Rule 14d-4(b) under the Exchange Act. *See* Rule 162(b) under the Securities Act, which provides an exemption from the prospectus delivery requirements of § 5(b)(2) of the Securities Act.

185 *See* SEC, Division of Corporation Finance, Financial Reporting Manual, Topic 6230.1 (Mar. 17, 2016). For a discussion of delayed and continuous offerings, *see* § 3.02[2].

186 The JOBS Act also provides some additional relief to EGC acquirors in presenting financial statements of the acquiror and the target. If the acquiror is an EGC that is not a shell company and has presented only two years of financial statements in its registration statement for the exchange offer or merger, the SEC has indicated that it would not object if such an acquiror includes only two years of financial statements for the target company in the registration statement. *See* SEC, Division of Corporate Finance, Generally Applicable Questions on Title I of the JOBS Act, Question 45 (Dec. 21, 2015).

187 Following the shareholder vote, such updating should no longer be necessary, as there should be no "sale" triggering the applicability of the Securities Act's registration requirements, even where shareholders later make an election with respect to whether they will receive acquiror shares, cash or a combination of both. The SEC staff has taken the position, in the related context of the application of the registration requirements of the Securities Act to stock/cash dividend elections and dividend reinvestment and bonus plans providing for a dividend payable at the option of the shareholder in securities or cash, that no registration is required. This is because such election does not involve the surrender of "value," which, under § 2(3) of the Securities Act, is the principal characteristic of a "sale." *See*, *e.g.*, *JDN Realty Corporation* (avail. Oct. 26, 1999); *Greencore Group plc* (avail. July 3, 1996); *Medeva plc* (avail. Jan. 31, 1995); *Burns, Philp & Company Limited* (avail. Sept. 2, 1994). The same analysis should apply in the case of elections by target shareholders to receive merger consideration in the form of cash, acquiror shares or a combination of both, though there is no SEC guidance directly on point. If the companies qualify for incorporation by reference (and thus benefit from forward incorporation), however, this updating question often may not be significant.

188 *See* SEC Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Sections, § 239.13 (Nov. 26, 2008).

189 *See* SEC Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Sections, § 239.13 (Nov. 26, 2008). Acquirors should consider carefully whether to obtain such written consents from the target shareholders given the interplay between disclosure requirements under the Exchange Act and existing Delaware case law. In *OmniCare, Inc. v. NCS Healthcare, Inc.*, 818 A.2d 914 (Del. 2003), the Delaware Supreme Court held that where shareholders holding the requisite number of shares needed to approve a deal have irrevocably committed to vote to approve such deal, the board may

not agree to other restrictions that prevent it from considering a superior proposal from another potential acquiror. There, the Delaware Supreme Court found that irrevocable consents obtained from target shareholders, when taken together with provisions in the acquisition agreement that prohibited the board from discussing superior proposals with other potential acquirors and that required the target to hold a shareholder vote (regardless of whether the board changed its recommendation to shareholders to approve the transaction) absolutely precluded other potential acquirors from coming forward with a superior proposal. In the court's view, consents that would absolutely "lock up" a transaction are therefore impermissible under Delaware law. *Omnicare*, 818 A.2d 914, 934–938. *See also* § 9.05[12][c] for a discussion of Delaware case law regarding defensive measures.

Despite the holding in *Omnicare*, in certain instances, it is still possible to effectively "lock up" a transaction by obtaining the requisite number of written consents from shareholders immediately after the board of directors approves the transaction. Since *Omnicare*, Delaware courts have held that there is no required minimum period of time between obtaining board approval for a transaction and the shareholder vote. *See Optima International v. WCI Steel*, C.A. No. 3833-VCL (Del. Ch. June 27, 2008). By obtaining the shareholder approval at essentially the same time as the approval of the board of directors and closing the acquisition shortly thereafter, the period of time during which a superior proposal may emerge (and therefore the period of time during which the target's board of directors must be free to consider a superior proposal per *Omnicare*) is effectively eliminated.

190 *See* § 3.01[1], Note 1 for a discussion of the definition of a foreign private issuer.

191 The concept of solicitation is very broad and includes any oral or written statement intended to lead to the grant of a proxy. However, as discussed in § 9.05[5][a], SEC rules permit free communications to be made prior to the furnishing of a proxy statement, provided that a proxy card is not furnished and certain other requirements are met.

192 If fewer than ten shareholders hold the necessary number of votes to assure approval of the merger and the solicitation of proxies is done by the acquiror (not the target), a written proxy statement may not be necessary. Rule 14a-2(b)(2) under the Exchange Act. In those circumstances, however, Regulation 14C requires delivery of an "information statement" to any shareholders from whom proxies are not solicited at least 20 days prior to consummation of the merger. Rule 14c-2(b) under the Exchange Act. The information statement requires substantially the same information as a proxy statement and, in a stock-for-stock merger, can also constitute the acquiror's prospectus included in its registration statement.

193 Schedule 14A, Note D.3 (Rule 14a-101 under the Exchange Act); *see supra* Note 174 in respect of the 20-business day requirement.

194 Schedule 14A, Instruction 2.a. to Item 14.

195 *See* Item 1001 of Regulation M-A under the Securities Act; § 9.05[1].

196 *See* SEC Release No. 33-7760 (Oct. 22, 1999); § 9.05[1].

197 When describing the terms of a merger agreement or any related agreement in a disclosure document (or including such an agreement as an exhibit to a disclosure document), an issuer must consider whether additional disclosure is necessary to put into context the information contained in, or otherwise incorporated by reference into, the document so that the information is not false or misleading.

In 2005, in connection with settling a separate enforcement action against The Titan Corporation alleging violations of the Foreign Corrupt Practices Act of 1977 (the "FCPA"), the SEC issued a Report of Investigation on potential liability under §§ 10(b) and 14(a) of the Exchange Act. In Titan's proxy statement for its (subsequently abandoned) merger with Lockheed Martin Corporation, Titan had disclosed that the merger agreement contained representations and warranties by Titan expiring on completion of the merger "as to, among other things … Titan's compliance with the [FCPA]," and the merger agreement containing the unqualified FCPA representation was appended to the proxy statement filed with the SEC and distributed to Titan's shareholders. Although the report does not allege that Titan violated Rules 10b-5 and 14a-9 under the Exchange Act in respect of its merger proxy statement, the report highlights for issuers their responsibility to ensure the accuracy of disclosure of material contractual provisions, such as representations and covenants, contained in agreements disclosed in or appended to public filings, whether or not the agreements containing such provisions were themselves prepared as disclosure documents or the issuer intended public shareholders to rely on such provisions. *See* SEC Release No. 34-51283 (Mar. 1, 2005).

In 2010, Bank of America Corporation settled charges brought by the SEC that the proxy materials in connection with Bank of America's acquisition of Merrill Lynch & Co. represented that Merrill Lynch had agreed it would not pay bonuses to its executives prior to the closing of the merger without Bank of America's consent. The SEC's complaint alleged that the disclosure on bonuses was rendered materially false and misleading by the omission of disclosure of an exception permitting payments of certain bonuses that was reflected in a confidential disclosure schedule to the merger agreement, and that Bank of America was in violation of § 14(a) of the Exchange Act and Rule 14a-9 thereunder. In connection with the settlement, Bank of America acknowledged that an evidentiary basis existed for certain factual matters underlying the SEC's complaint but did not ultimately admit or deny any alleged wrongdoing. *SEC v. Bank of America Corp.*, SEC Litigation Release No. 21407 (Feb. 4, 2010).

Issuers filing agreements as exhibits to public SEC filings should consider including disclosure in their filings to the effect that (i) the representations and warranties in such agreements (a) were made solely for the benefit of the parties thereto, (b) may have been used for the purpose of allocating risk between the parties, rather than establishing matters of fact, and (c) may have been qualified by disclosure contained in separate disclosure schedules (which, in accordance with Item 601(b)(2) of Regulation S -K, may be omitted from the filing in the case of merger and similar agreements) or by materiality standards that differ from what may be viewed as material for securities law purposes, (ii) certain representations may have been made as of a specified date and may no longer continue to be true as of a later date, and (iii) the agreement is not intended to provide any other factual or financial information about the issuer other than the terms of such agreement and should be read in conjunction with the other information contained in the issuer's other SEC filings. At the same time, issuers should be sensitive to the need to disclose any material information about the transaction, including any condition that reasonably could be anticipated to be difficult to satisfy.

198 In 2008, the SEC approved a proposal by FINRA to adopt a rule on fairness opinion disclosures. SEC Release No. 34-58643 (Sept. 25, 2008); FINRA Rules, Rule 5150, FINRA MANUAL. The rule requires FINRA members, when rendering a fairness opinion that the member knows or has reason to know, at the time it issues the fairness opinion, will be provided or described to public shareholders, to make certain specified disclosures in the fairness opinion, including (i) whether the member has acted as a financial advisor to any party to the transaction and whether any compensation that the advisor will receive, for rendering the fairness opinion or serving as an advisor, is contingent upon the successful completion of the transaction, (ii) whether the member will receive any other significant payment or compensation contingent upon the successful completion of the transaction, (iii) any material relationship that existed between the advisor and any party to the transaction during the past two years or is mutually understood to be contemplated in which any compensation was received or intended to be received, (iv) any information that formed a substantial basis for the fairness opinion that was supplied to the member by the company requesting the opinion and whether any such information has been independently verified by the member, (v) whether or not the fairness opinion was approved or issued by a fairness committee and (vi) whether or not the fairness opinion expresses an opinion about the fairness of the amount or nature of the compensation to any of the company's officers, directors or employees, or a class of such persons, relative to the compensation to the public shareholders of the company. In addition, the rule requires a FINRA member to adopt and maintain written procedures with respect to the composition of its fairness committee and the circumstances in which the member will use a fairness committee and a process to determine the appropriateness of the valuation analyses used FINRA Rules, Rule 5150, FINRA MANUAL.

199 *See* Schedule 14A, Item 14.

200 The Delaware courts as part of their review of a target board's compliance with Delaware judicial "full disclosure" requirements also appear to be moving toward requiring more disclosure of projections

provided to the acquiror or a target's investment banks and valuation methods used by the target's investment banks in preparing a fairness opinion where those methods are key to understanding the value of the target company; note, however, that this is a highly fact-specific inquiry. *See Koehler v. NetSpend Holdings, Inc.*, C.A. No. 8373-VCG, 2013 WL 2181518 (Del. Ch. May 21, 2013) (noting that where a board of directors elects to engage in a single-bidder process, the court will more closely scrutinize the quality of an investment bank's fairness opinion in order to determine whether the board engaged in "a process reasonably designed to maximize price" despite the absence of an external market check); *Maric Capital Master Fund, Ltd. v. PLATO Learning, Inc.*, 11 A.3d 1175 (Del. Ch. 2010) (holding that exclusion of free cash flow estimates provided to the advisory investment bank by the target constituted a material omission because, in the context of a cash-out merger, the "value of stock should be premised on the expected future cash flows"); *In re Netsmart Technologies, Inc. Shareholders Litigation*, 924 A.2d 171 (Del. Ch. 2007) (failing to disclose projections used by financial advisors to perform a discounted cash flow evaluation establishes a probability that disclosure is materially incomplete). *But see In re BioClinica, Inc. Shareholder Litigation*, Consol. C.A. No. 8272-VCG, 2013 WL 5631233 (Del. Ch. Oct. 16, 2013) (holding that shareholders are entitled to "a 'fair summary' of the inputs and procedures used to construct the fairness opinion [but] are not entitled to the granular details of why certain inputs were selected or rejected"); *In re Micromet, Inc. Shareholders Litigation*, C.A. No. 7197-VCP, 2012 WL 681785 (Del. Ch. Feb. 29, 2012) (noting that a target is not obligated to disclose speculative information "which would tend to confuse shareholders or inundate them with an overload of information"); *In re Checkfree Corporation Shareholders Litigation*, C.A. No. 3193-CC, 2007 WL 3262188 (Del. Ch. Nov. 1, 2007) (noting that even in a cash-out merger, a company is not required to provide all estimates of future results); *In re PNB Holding Co. Shareholders Litigation*, No. Civ. A. 28 N, 2006 WL 2403999 (Del. Ch. Aug. 18, 2006) (same).

201 "Gun jumping" involves offers made prior to the filing of a registration statement, and written offers (other than by means of a preliminary prospectus) made after filing but before the registration statement is effective. *See* § 3.02[3].

202 Foreign private issuers are exempt from the proxy rules. Rule 3a12-3 under the Exchange Act. However, as discussed in § 9.05[4][c], if a U.S. issuer (or a foreign company that does not qualify as a foreign private issuer) is being acquired in a merger (or other business combination requiring shareholder approval), the proxy rules will be applicable.

203 For further discussion of communications issues arising in the merger context, *see* §§ 4.07[7] (discussing disclosure of preliminary merger negotiations) and 4.10 (discussing communications with financial analysts).

204 *See* Rules 165 and 425 under the Securities Act and Rule 14a-12 under the Exchange Act.

205 *See supra* Note 106.

206 Although communications released after 5:30 P.M. Eastern time can be filed on the next business day as early as practicable, the filing requirement creates difficulties for press releases issued late in the afternoon. Unintentional or immaterial delays will not, however, preclude reliance on the exemption.

207 Even if the acquiror were to limit its public statements to what is permitted under Rule 135 under the Securities Act as not constituting an offer, a copy of the Rule 135 notice must be filed under Rule 425 under the Securities Act. Rule 425(b) under the Securities Act. Domestic issuers disclosing information relating to the business combination transaction on a Form 8-K may use the Form 8-K simultaneously to satisfy their reporting obligations under Rule 425, provided that the Form 8-K filing meets all the substantive requirements of Rule 425 (other than Rule 425(c)) and the issuer checks the appropriate box on the cover sheet of the Form 8-K. Information voluntarily filed on a Form 8-K by a domestic issuer or on a Form 6-K by a foreign private issuer does need to be filed under Rule 425 even if it relates to the business combination. *See* Regulation M-A and Cross-Border Release Interpretations, Question I.B.13.

Information that is required to be disclosed in an annual or other Exchange Act report need not be filed under Rule 425, so long as the information is being disclosed solely to satisfy the requirements of the report. The SEC staff has also clarified that "business information that is factual in nature and relates solely to ordinary business matters, and not the pending transaction, does not need to be filed." SEC Release No. 33-7760 (Oct. 22, 1999), 64 Fed. Reg. 61,408, 61,412 (Nov. 10, 1999). It also explained that it expected "that filing persons [would] apply traditional legal principles in determining whether a particular written communication is made in connection with or relating to a proposed business combination transaction." SEC Release No. 33-7760 (Oct. 22, 1999), 64 Fed. Reg. 61,408, 61,412 (Nov. 10, 1999); *see also* Regulation M-A and Cross-Border Release Interpretations, Question I.D.1.

208 Transcripts of oral presentations also need to be filed if the presentations are made available through audio or visual recordings after their initial live presentation, *e.g.*, through a website or a call-in telephone number. Similarly, scripts for presentations need to be filed if they were distributed to investors or widely distributed throughout the company so that the speech can be given many times. *See* Regulation M-A and Cross-Border Release Interpretations, Questions I.B.2-4; *see also supra* Note 106 and accompanying text.

209 Thus it appears that press releases announcing "bear hugs" or similar offers to a target board involving the proposed issuance of acquiror securities, and subsequent press releases by the potential acquiror, need to be filed even if no exchange offer is threatened or contemplated. *See* Regulation M-A and Cross-Border Release Interpretations, Question I.A.2. (A bear hug involves an offer to the target board that the potential acquiror publicly announces in order to put pressure on the target board to negotiate.)

210 The SEC Release adopting Rule 165 states that filings are required until "the close of the proposed transaction." SEC Release No. 33-7760 (Oct. 22, 1999), 64 Fed. Reg. 61,408, 61,413 (Nov. 10, 1999). This would be illogical in the context of a transaction subject to regulatory or other delays. Once shareholders have made their investment decision by voting, filings generally should not be required between the date of the meeting and receipt of regulatory approvals. The SEC staff has indicated that it agrees with this position, as evidenced by its statement that communications required by Rule 165 under the Securities Act must be filed only "until the offering period is over." *See* Regulation M-A and Cross-Border Release Interpretations, Question I.B.17.

211 *See* SEC, Division of Corporate Finance, Generally Applicable Questions on Title I of the JOBS Act, Question 42 (Dec. 21, 2015).

212 The SEC has provided guidance regarding the requirement of a legend for electronic communications made through platforms that limit the number of characters or amount of text that can be included in such communication, such as those made available through certain social media websites. The SEC has stated that it will not object to the use of an active hyperlink to a legend to satisfy the requirements of Rules 134(b) or 134(d) under the Securities Act in the following limited circumstances:

- The electronic communication is distributed through a platform that has technological limitations on the number of characters or amount of text that may be included in the communication;
- Including the required statements in their entirety, together with the other information, would cause the communication to exceed the limit on the number of characters or amount of text; and
- The communication contains an active hyperlink to the required statements and prominently conveys, through introductory language or otherwise, that important or required information is provided through the hyperlink.

Where an electronic communication is capable of including the required statements, along with the other information, without exceeding the applicable limit on the number of characters or amount of text, the use of a hyperlink is inappropriate. *See* SEC Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, § 110.01 (Apr. 21, 2014).

In addition, where an electronic communication platform permits the user to re-transmit a posting or message received from another party, such re-transmission is not attributable to the issuer so long as the transmitting party is neither an offering participant nor acting on behalf of the issuer or an offering participant and the issuer has no involvement in the transmitting party's transmission beyond having initially prepared and distributed the communication in compliance with either Rules 134 or 433 under the Securities Act. *See* SEC Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Rules, § 110.02 (Apr. 21, 2014).

213 *See* Rules 165 and 425 under the Securities Act and Rule 14a-6(b) under the Exchange Act; Regulation M-A and Cross-Border Release Interpretations, Question I.D.4.

214 Section 11 of the Securities Act imposes absolute liability on the registrant for materially misleading written disclosure in a registration statement at the time it becomes effective. Section 12 (a)(2) of the Securities Act incorporates a negligence standard to impose liability for materially misleading written or oral communications in connection with the public sale of a security. *See* § 11.03[1] and [2] for a detailed discussion of §§ 11 and 12(a)(2) of the Securities Act.

215 *See* SEC Release No. 33-7760 (Oct. 22, 1999), 64 Fed. Reg. 61,408, 61,413 n.57 (Nov. 10, 1999).

216 Rule 14a-12(a)(2) under the Exchange Act.

217 Material may generally be incorporated by reference in a proxy statement if (i) it is contained in an annual report or a previously filed statement and (ii) (a) that statement is delivered to securityholders with the proxy statement or (b) the proxy statement identifies the information incorporated by reference and the information is not otherwise required to be included in the proxy statement.

218 *See supra* Note 194.

219 Exchange offers for equity securities that are not registered under the Exchange Act may not commence prior to SEC review, unlike exchange offers for equity securities registered under the Exchange Act. *See* Rule 14d-4(b) under the Exchange Act; § 9.05[4][b].

220 § 401(b) of the Sarbanes-Oxley Act; *see* § 3.06[1] for a discussion of these rules.

221 *See* S. REP. NO. 107-205, at 28–29 (2002).

222 *See* SEC Release No. 33-8176 (Jan. 22, 2003). The business combination disclosure rules identified by the release are Rules 165 and 425 under the Securities Act and Item 1015 of Regulation M-A under the Securities Act and Rules 14a-12 and 14d-2(b)(2) under the Exchange Act. The SEC noted in a subsequent Compliance & Disclosure Interpretation that Rule 14d-9(a)(2) was also intended to be included therein. *See* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Non-GAAP Financial Measures, Question 101.01 (Jan. 11, 2010). *See also* § 4.09.

223 *See* § 3.02[9] for a discussion of Regulation M under the Exchange Act generally. However, if the exchange offer or business combination involves only Rule 144A-eligible securities and is open only to qualified institutional buyers, then there is an exemption from Regulation M. Rule 102(b)(7) of Regulation M under the Exchange Act.

224 *See* Rule 100 of Regulation M under the Exchange Act for the definition of "affiliated purchasers." The staff has stated that once a merger agreement has been signed between an acquiror and a target, the target should be viewed as an "affiliated purchaser" in connection with purchases of acquiror securities for purposes of applying Rule 102. SEC, Division of Market Regulation (now, Division of Trading and Markets), Staff Legal Bulletin No. 9, Fed. Sec. L. Rep. (CCH) ¶60,009 (Oct. 27, 1999); SEC, Division of Market Regulation, FAQ About Regulation M (Sept. 10, 2010) ("Staff Bulletin No. 9").

225 A covered security is any security that is the subject of a distribution (the "subject security") and any security into which a subject security may be converted, exchanged or exercised (whether immediately or not), or which, under the terms of the subject security, may in whole or significant part determine the value of the subject security. Rule 100 of Regulation M under the Exchange Act.

226 The staff has clarified the application of these restrictions in the context of concurrent distributions of the same securities by an issuer, *e.g.*, an offering of common stock for cash and an exchange offer for the shares of another company. Absent additional factors, *bona fide* offers to sell or the solicitation of offers to buy the securities being distributed in one distribution should not constitute impermissible inducements with respect to a concurrent distribution. Staff Bulletin No. 9.

227 Rule 100 of Regulation M under the Exchange Act; Staff Bulletin No. 9.

228 The restricted period commences one business day prior to pricing or such time that a person becomes a distribution participant if the subject security has an average daily trading volume of at least $100,000 and

the issuer had a public float value of at least $25 million. In all other cases, the restricted period commences five business days prior to pricing, unless the distribution involves a merger, acquisition or exchange offer, in which case the period commences on the day proxy solicitation or offering materials are first disseminated to securityholders. *See* Rule 100 of Regulation M under the Exchange Act.

229 Staff Bulletin No. 9. The SEC staff has updated Staff Bulletin No. 9 to clarify that when a third party seeking also to acquire a target company for its stock solicits proxies in opposition to the target's preferred merger, a restricted period may be triggered. Assuming that the third-party alternative bid is sufficiently specific so as to constitute an "offer" for purposes of the Securities Act, then a restricted period in respect of the third party's distribution would commence at the time its proxy materials are distributed and continue until the third party's bid is voted on or abandoned.

Target companies should exercise caution in connection with purchasing acquiror securities in the context of a friendly merger, even in advance of the commencement of applicable Regulation M restricted periods. *See supra* Note 44 and accompanying text.

230 Similarly, where a target has become an "affiliated purchaser" for purposes of Regulation M following the signing of a merger agreement with the acquiror, its ordinary course communications should not be prohibited (*see supra* Note 224). As is the case with the acquiror, however, nonordinary course communications by the target in the context of a falling acquiror stock price could raise questions under Regulation M.

231 *See* § 3.02[9] for a discussion of these exemptions, including the significant exemption applicable in the case of securities with an average daily trading volume at or above a specified level.

232 A financial advisor's ability to rely on these exemptions would depend on its being classified as a "distribution participant" within the meaning of Rule 100 of Regulation M. The term "distribution participant" includes "an underwriter, prospective underwriter, broker, dealer, or other person who has agreed to participate or is participating in a distribution." Financial advisors generally should be viewed as distribution participants eligible for the exemptions in Rule 101 rather than being subject to the more restrictive Rule 102 as affiliated purchasers (defined to include "a person acting, directly or indirectly, in concert with a distribution participant, issuer, or selling securityholder"), particularly when the financial advisor is participating in a proxy solicitation effort or is acting as a dealer-manager in an exchange offer.

In the context of an acquiror with an affiliated purchaser that is a broker-dealer, but not a distribution participant, the SEC has granted no-action relief allowing the affiliated purchaser to continue certain of its brokerage and related activities, subject to a number of restrictions. In connection with the merger of UBS AG ("UBS") with PaineWebber Group, Inc., the staff permitted UBS's brokerage arm, UBS Warburg ("Warburg"), to continue, among other activities, making a market in UBS shares on the Swiss Stock Exchange and elsewhere outside the United States, as well as to engage in certain market making and hedging activities in derivatives linked to UBS shares. In granting relief, the staff noted, among other things, the significance of UBS shares and derivatives to the Swiss market and the role of Warburg as the principal market maker in these shares and derivatives; the operation of Warburg behind a "Chinese wall" and the compliance of its activities with Swiss law; the harm that could befall the Swiss and U.S. markets in respect of the liquidity and volatility of UBS shares by the cessation of Warburg's activities during a restricted period of approximately eight to ten weeks; that UBS's U.S. brokerage activities were conducted by a separate U.S. subsidiary, registered as a broker-dealer with the SEC and a member of the NASD (now known as FINRA), which would engage only in unsolicited brokerage activities in the normal course of its business with customers; and that the merger consideration was fixed and not dependent on the market price of UBS shares. *UBS AG* (avail. Sept. 22, 2000); *see also Lloyds Banking Group plc* (avail. Nov. 2, 2009).

233 *See*, *e.g.*, SEC Release No. 34-38030 (Dec. 9, 1996) (relating to tender offers undertaken to combine the U.K. cable television and telecommunications businesses of Cable & Wireless plc, NYNEX Corporation and Bell Canada International Inc.); SEC Release No. 34-27425 (Nov. 7, 1989) (Exemption Order regarding Ford Motor Company's agreed offer for Jaguar plc); SEC Release No. 34-27671 (Feb. 2, 1990) (Exemption Order relating to exchange and cash tender offers by Procordia Aktiebolag and Aktiebolaget Volvo for the

securities of Pharmacia Aktiebolag).

234 In the business combination context, non-U.S. offerors may also structure their offers to preclude U.S. target shareholders from voting on a proposed merger, thereby attempting to avoid the burdens of complying with U.S. securities laws. Because the SEC has taken the view that the issuance of securities in short-form mergers— *i.e.*, mergers not requiring the consent or vote of the recipients of the securities—also would constitute an "offer," "offer to sell," "offer for sale" or "sale" within the meaning of § 2(3) of the Securities Act, thereby triggering an obligation to register such securities under the Securities Act or to find an exemption from registration, SEC Release No. 33-5316 (Oct. 6, 1972), it is not clear whether this attempt would be successful.

In the 1999 release adopting exemptions from registration in the cross-border business combination context, however, the SEC stated:

> Business combinations present different issues from tender or exchange offers because participation by U.S. holders is not voluntary. In order to attempt to avoid U.S. jurisdiction, offerors often do not provide U.S. investors an opportunity to vote on the transaction. It is neither practicable nor desirable to treat U.S. holders differently from other securityholders when their company is merged out of existence. No special precautions should be taken to prevent U.S. holders from receiving the merger consideration in a business combination involving a foreign company merely because the proxy statement/prospectus was posted on a web site available in the United States.

SEC Release No. 33-7759 (Oct. 22, 1999), 64 Fed. Reg. 61,382, 61,395 (Nov. 10, 1999).

Accordingly, in the context of a business combination involving the distribution of securities to U.S. shareholders of a non-U.S. target that have been precluded from voting, it should be reasonable for the acquiror to conclude that it need not register its securities under the Securities Act. *See also infra* Note 259; § 9.05[9][c]; Regulation M-A and Cross-Border Release Interpretations, Question II.F.1.

235 SEC Release No. 33-8957 (Sept. 19, 2008), referred to herein as the "2008 Cross-Border Amendments" or, in reference to the guidance provided therein, the "Adopting Release for the 2008 Cross-Border Amendments."

236 In a U.K. takeover offer, in order for the bidder to ensure that it can invoke statutory compulsory acquisition (or "squeeze-out") rights under § 974 of the U.K. Companies Act 2006, the bidder must make a takeover offer to all shareholders on the same terms. However, the bidder may modify its offer to take account of issues created by the existence of foreign shareholders if it qualifies for certain exemptions under both the U.K. Companies Act 2006 and the U.K. City Code on Takeovers and Mergers.

Under the squeeze-out provisions, the bidder may exclude a particular territory or country outside the United Kingdom if it is able to conclude that the exclusion was made in order "not to contravene" the laws of that territory or country. Although not a formal pre-condition to the exercise of compulsory acquisition rights, the requirements of the U.K. City Code on Takeovers and Mergers as to documents being made available to shareholders must be complied with as a matter of law. Under these requirements, a bidder must send offer documentation to all shareholders of the target company, including those located in other jurisdictions, unless there is "sufficient objective justification" for not doing so. The U.K. Panel on Takeovers and Mergers will not normally allow a bidder to avoid the requirement to post the offer documentation to a European Economic Area jurisdiction. However, it will permit the bidder to avoid the posting requirement in respect of a non-European Economic Area jurisdiction if, at the date of posting, less than 3% of the shares of the target are held by shareholders located in that jurisdiction and there is a significant risk of civil, regulatory or criminal exposure if the documentation is sent to shareholders in that jurisdiction. (It is expected that U.S.

registration requirements would meet this test.) If more than 3% of the target company shareholders are located in a particular non-European Economic Area jurisdiction, the U.K. Panel on Takeovers and Mergers has discretion to waive the posting requirement in respect of that jurisdiction (having regard to, for example, the cost involved, any potential delays to the transaction timetable and the number of target shareholders in that jurisdiction). *See* U.K. City Code on Takeovers and Mergers, Rule 30.4 and the note therein.

In addition, the compulsory acquisition provisions in the U.K. Companies Act 2006 also recognize the difficulties that bidders may face in making certain forms of non-cash consideration available to overseas shareholders (*e.g.*, because of foreign registration requirements relating to the distribution or admission to trading of non-cash consideration). The variation of an offer to exclude certain shareholders from participating in non-cash consideration alternatives on the grounds that it may be unduly onerous to make such alternatives available does not prevent a takeover offer from benefiting from the U.K. squeeze-out provisions. This is not explicitly recognized in the City Code on Takeovers and Mergers, although it is longstanding market practice and, as such, is tolerated by the U.K. Panel on Takeovers and Mergers despite being inconsistent with the fundamental requirement for equal treatment of shareholders.

As a technical matter, U.K. offers are made to all shareholders, including U.S. persons. However, because the offer precludes acceptance from the United States in order to avoid jurisdictional means, U.S. holders as a practical matter cannot accept the offer unless they arrange for an advisor in London to act on their behalf. *See* text accompanying *infra* Note 241.

237 *Plessey Co. plc v. General Electric Co. plc*, 628 F. Supp. 477 (D. Del. 1986).

238 *Plessey Co. plc v. General Electric Co. plc*, 628 F. Supp. 477, 497 (D. Del. 1986).

239 Rule 14d-10 under the Exchange Act.

240 SEC Release No. 33-6653 (July 11, 1986), 51 Fed. Reg. 25,873, 25,877–78 (July 17, 1986). The *Plessey* case did not involve a claim for breach of the antifraud provisions of the U.S. securities laws. It is generally thought that fewer contacts with the United States are required for a court to assert jurisdiction under the antifraud provisions, and there is always a risk that a claim will be made that an offer document is fraudulent in certain respects.

For example, Consolidated Gold Fields PLC sued Minorco S.A. in 1988 in a U.S. District Court on the basis that Minorco's offer violated the U.S. antitrust laws and the antifraud provisions of the U.S. securities laws. On the antifraud claim, the SEC, in an amicus brief, took the position that the court had subject matter jurisdiction over the dispute but nevertheless argued that the court should refuse to grant an injunction for reasons of international comity. The key factor influencing the SEC's position that U.S. jurisdictional means were used seemed to be that Minorco sent offering documents to U.K. nominees notwithstanding that "it was surely foreseeable" that the nominees would forward the offering documents to their U.S. principals. Brief for the SEC as *Amicus Curiae*, *Consolidated Gold Fields PLC v. Minorco, S.A.*, 871 F.2d 252 (2d Cir.), *cert. denied*, 492 U.S. 939 (1989).

241 For a further discussion of "flowback" restrictions, *see* § 9.05[7][c].

242 SEC Release No. 33-6866 (June 6, 1990).

243 It may not be necessary for all the restrictions imposed in the Hoylake bid to be applied. For example, the SEC issued a no-action letter to Reuters in 1990 making it clear that representatives of the U.S. press need not be excluded from press conferences abroad during which a bid is announced in a manner customary in the market. *Reuters Holding PLC* (avail. Mar. 6, 1990). In addition, the result should be the same if the restrictions to prevent flowback are modified as discussed in § 9.05[7][c]. Although the court might not apply the procedural requirements for tender offers in Regulation 14E under the Exchange Act, it might nevertheless be willing to review any claims alleging fraud. *See supra* Note 241 and accompanying text.

With respect to U.K. companies, the U.K. City Code on Takeovers and Mergers restricts target companies from taking any action that may result in an offer being frustrated (including instituting litigation) without the approval of a majority of the target shareholders in a general meeting.

244 *See generally* Statement of the SEC Regarding Use of Internet Web Sites to Offer Securities, Solicit

Securities Transactions or Advertise Investment Securities Offshore, SEC Release No. 33-7516 (Mar. 23, 1998); SEC Release No. 33-7759 (Oct. 22, 1999) (adopting the 1999 Rules (as defined below)).

245 For a detailed discussion of Regulation S under the Securities Act, *see* § 8.02.

246 For a discussion of § 4(a)(1) of the Securities Act, *see* § 7.02.

247 A target affiliate that is, or becomes, an acquiror affiliate on completion of the exchange offer cannot rely on § 4(a)(1) or § 4(a)(3).

Although Regulation S contemplates distributions of securities through underwriting syndicates, practitioners believe its safe harbor should be available for exchange offers if the requirements of Regulation S are followed.

248 Category 1 offerings include offerings by a foreign issuer if there is no "substantial U.S. market interest" in the type of security being offered. Category 2 offerings consist of all debt offerings of foreign issuers that do not fall into Category 1, all non-Category 1 equity offerings of foreign issuers that are subject to the periodic reporting requirements of the Exchange Act, and most debt offerings of U.S. issuers subject to the periodic reporting requirements of the Exchange Act. *See* § 8.02[1][c][i] and [ii] for detailed descriptions of Category 1 and Category 2 offerings.

249 Although Regulation S imposes no restrictions on resales by recipient investors, their ability to resell into the United States will effectively be limited by the unavailability of the dealer exemption in § 4(a)(3) of the Securities Act for the 40-day period following commencement of the exchange offer. To facilitate market compliance with this 40-day restriction, issuers with public ADR programs generally prohibit deposits into those programs during this 40-day period or require certification by depositors during this period that the securities being deposited were not issued in the exchange offer, or in the case of a business combination, proxy solicitation. *See* §§ 7.02 and 8.03[1] for further discussion of § 4(a)(3) of the Securities Act.

250 *See* Rules 902(g) and 903 under the Securities Act.

251 In the context of Regulation S, a "distributor" is defined as any underwriter, dealer or other person who participates, pursuant to a contractual arrangement, in the distribution of securities offered or sold in reliance on Regulation S. Rule 902(d) under the Securities Act. Recipients of securities in exchange offers should not, without more, be deemed to be "distributors" under Regulation S.

252 If other outstanding securities of the issuer are fungible with those issued in the exchange offer, a distributor may sell the fungible securities into the United States or to U.S. persons so long as the securities being distributed in connection with the exchange offer are held in a segregated identifiable account and the fungible securities are not borrowed from and will not be replaced by the securities being distributed in the exchange offer. *See* SEC Release No. 33-6863 (Apr. 24, 1990); § 8.02[1][c][ii].

253 In addition to U.S. equity securities, Category 3 offerings include (i) equity offerings by foreign issuers not subject to the periodic reporting requirements of the Exchange Act if there is a "substantial U.S. market interest" for the class of securities being offered and (ii) debt offerings by U.S. issuers not subject to such periodic reporting requirements. *See* Rule 903(b)(3) under the Securities Act.

254 For a detailed description of the Category 3 requirements, *see* § 8.02[1][c][iii].

255 In Category 3 offerings, debt securities are subject to a 40-day distribution compliance period and equity securities are subject to a one-year distribution compliance period (or a six-month distribution compliance period if the issuer is a reporting issuer). *See* Rule 903(b)(3) under the Securities Act; § 8.02[1][c][iii]. In addition, U.S. equity securities sold under Regulation S are designated "restricted securities" under Rule 144 and may only be sold in the United States in accordance with Rule 144 requirements until the end of a one-year restricted period (or until the end of a six-month restricted period for securities of reporting issuers). *See* § 7.04[2] for a discussion of Rule 144.

256 *See* § 9.05[9][c].

257 The registration statement would have to be effective for one year, in the case of U.S. equity securities and Category 3 foreign equity securities, and 40 days, in the case of Category 3 debt securities.

258 For a discussion of Securities Act registration procedures for the initial exchange offer, including problems

that can arise in hostile offers, *see* § 9.05[4]. For a discussion of when target financial statements are required in a registration statement in connection with an offering being used to raise cash to finance an acquisition, *see supra* Note 179.

259 *See supra* Note 234, which discusses analogous circumstances in the cross-border business combination context in which an acquiror should not be required to register under the Securities Act the securities issued as part of the business combination to target shareholders in the United States that have been precluded from voting on the transaction. In November 1979, Thorn Electrical Industries Ltd., a U.K. company ("Thorn"), offered to exchange its ordinary shares ("Thorn Ordinary Shares") and convertible preference shares ("Thorn Preference Shares") for outstanding ordinary stock units ("EMI Shares") of EMI Ltd., another U.K. company. ADRs representing EMI Shares ("EMI ADRs") were not subject to the offer, and U.S. holders of EMI Shares were not permitted to accept the offer. The Thorn Ordinary Shares and Thorn Preference Shares were not registered under the Securities Act. An investment bank, on behalf of Thorn, offered to acquire Thorn Ordinary Shares (but not Thorn Preference Shares) for cash for a limited period during the offer, thus providing a partial cash alternative. In January 1980, Thorn announced that the holders of more than 90% of the EMI Shares had accepted its offer and that it intended to compulsorily acquire the remaining EMI Shares pursuant to the applicable U.K. statutory procedure. In a no-action letter, the SEC permitted Thorn and the depositary for the EMI ADRs to make arrangements for the withdrawal of EMI Shares from the ADR program, the delivery of withdrawn EMI Shares to Thorn and the subsequent delivery of cash or Thorn Ordinary Shares plus Thorn Preference Shares to former holders of EMI ADRs. The SEC permitted these arrangements without registration of the Thorn Ordinary Shares or Thorn Preference Shares under the Securities Act, and despite the fact that U.S. holders of EMI ADRs would receive unregistered Thorn shares, in large part because the acquisition procedure was compulsory under U.K. law. *EMI Ltd*. (avail. Apr. 21, 1980).

260 For a discussion of the principal exemptions from registration for the resale of restricted securities, *see* § 8.02 for a discussion of Regulation S under the Securities Act, §§ 7.04[3] and [4] for a discussion of the private resale exemptions, § 4(a)(7) of the Securities Act and "Section 4(1 ½)," and § 7.04[2] for a discussion of the public resale exemption, Rule 144 under the Securities Act.

261 *See* § 9.05[8][e] for a discussion of registration rights.

262 For purposes of Rule 144, the term "affiliate" means "a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with" the issuer. The term "control" is defined broadly as "the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract, or otherwise." The SEC staff has also indicated that a person is generally presumed to "control" an issuer if such person is an executive officer or director or owns more than 10% of the voting securities of the issuer, but this presumption is not absolute and can be rebutted. Rule 405 under the Securities Act; *American Standard* (avail. Oct. 11, 1972).

263 *See* § 7.04[2].

264 For the 1999 Rules, *see* SEC Release No. 33-7759 (Oct. 22, 1999).

265 The Tier I exemption and the Tier II exemption are codified as part of Regulation 14D under the Exchange Act. The 2008 Cross-Border Amendments clarify that the exemptions also apply to offers subject only to § 14(e) of the Exchange Act and Regulation 14E thereunder.

266 Rule 14d-1(c) under the Exchange Act.

267 *See* § 3.01, Note 1 for a discussion of the definition of a foreign private issuer.

268 The various calculation rules discussed in this section apply to all the exemptions discussed in this § 9.05[9].

269 These "look through" requirements apply only to securities held of record (i) in the United States, (ii) in the issuer's home jurisdiction and (iii) in the primary trading market for the issuer's securities if different from the issuer's home jurisdiction. If after reasonable inquiry the bidder is unable to obtain information, the bidder may presume that the customer accounts are held in the nominee's principal place of business. It is also

clear that, especially if there is a large number of nominees in such jurisdictions, a bidder need not look through every last nominee, so long as it has conducted a diligent investigation at a minimum of all institutions believed reasonably likely to hold shares on behalf of U.S. persons.

As originally proposed, the SEC had based the exemption threshold calculations on the number of "U.S. record holders." The adopted approach, which grounds such calculations instead on the concept of "U.S. ownership" requiring bidders to "look through" to beneficial owners of shares, more closely reflects the approach adopted by the SEC in the current definition of a "foreign private issuer." SEC Release No. 34-41936 (Sept. 28, 1999). The SEC recognized that focusing on beneficial ownership rather than record ownership limits the applicability of the exemptions.

270 The SEC did not adopt a proposed rebuttable presumption that persons holding through ADR facilities are U.S. holders.

271 The SEC generally considers the "public announcement" to be any oral or written communication by the acquiror or any party acting on its behalf, which is reasonably designed to inform or has the effect of informing the public or securityholders in general about the transaction. *See generally* Instruction 5 to Rules 13e-4(c) and 14d-2(b)(2) under the Exchange Act.

272 *See* Rule 800(h) under the Securities Act. If an acquiror in a business combination is unable to accomplish the look-through analysis as of a date between 60 days prior to and 30 days after announcement, a date no more than 120 days before the public announcement may be used. *See* Instructions to Rules 14d-1(c) and 13e-4(h)(8) under the Exchange Act; *see also* Regulation M-A and Cross-Border Release Interpretations, Question I.L.2.

273 Rule 800(h)(7) under the Securities Act.

274 *See* Rule 800(h)(7)(i) under the Securities Act, Instruction 3.1 to Rules 13e-4(h)(8) and (i) under the Exchange Act and Instruction 3.1 to Rule 14d-1(c) and (d) under the Exchange Act.

275 The SEC considers the primary trading market important because it ensures there is a primary foreign regulator with oversight over the transaction.

276 *See* Rule 12h-6(f)(5)(i) under the Exchange Act.

277 *See* Rule 12h-6(f)(5)(ii) under the Exchange Act.

278 "Home jurisdiction" is defined as both the jurisdiction of the target company's organization and the principal foreign market where the target company's securities are listed or quoted. Rule 800(f) under the Securities Act.

279 *See* Rule 800(h)(7)(ii) under the Securities Act, Instruction 3.ii to Rule 13e-4(h)(8) and (i) under the Exchange Act and Instruction 3.ii to Rule 14d-1(c) and (d) under the Exchange Act.

280 This includes not only filings of the issuer, but also filings by third parties, such as beneficial ownership reports. It also picks up information "readily available" through other sources, such as advisors or third-party information providers that can provide the information at no or limited cost. The rule, however, does not require that the bidder or target engage third parties in order to qualify for eligibility.

281 *See* Rule 800(h)(7)(iii) under the Securities Act and Instruction 3.iii to Rules 14d-1(c) and (d) under the Exchange Act.

282 *See* Rule 800(h)(7)(iii) under the Securities Act and Instruction 3.iii to Rules 14d-1(c) and (d) under the Exchange Act. *See also* Rules 13e-4(h)(8) and (i) under the Exchange Act.

283 In the context of a two-step transaction (*e.g.*, a tender offer followed by a merger), the U.S. ownership calculation may be made for the first step only so long as (i) the disclosure document discloses the intent to conduct the second-step merger and (ii) the second step is completed within a reasonable time after the first step. *See* Regulation M-A and Cross-Border Release Interpretations, Question II.E.9.

284 The SEC staff has stated that a late filing of Form CB may result in a loss of a bidder's ability to seek relief under the Tier I exemption. Because Form CB is furnished to, rather than filed with, the SEC, the bidder has no potential liability for the offering materials under § 18 of the Exchange Act (although the bidder is potentially liable under the other antifraud provisions of the U.S. securities laws, including §§ 10(b) and

14(e) of the Exchange Act, and must comply with the informational requirements of Rule 12b-20 under the Exchange Act, which requires disclosure of any material information necessary to make the information expressly required to be included in the report, in the light of the circumstances under which it is made, not misleading).

285 Rule 14d-1(c)(3)(iii) under the Exchange Act.

286 Rule 14d-1(c)(3)(i) and (ii) under the Exchange Act; Form CB.

287 Rule 14d-1(c)(2) under the Exchange Act. Equal treatment requires not only equal consideration, but also that the procedural terms of the tender offer, such as duration, pro-rationing and withdrawal rights, be the same for all holders. SEC Release No. 33-7759 (Oct. 22, 1999).

288 Rule 14d-1(c)(2)(iii) under the Exchange Act. The determination of whether the cash consideration is "substantially equivalent" to consideration offered offshore should be made as of the commencement of the offer. The SEC has stated that the amount of cash consideration must be adjusted during the term of the offer only if the bidder no longer has a reasonable basis to believe the cash is substantially equivalent to the value of the consideration offered to non-U.S. holders, such as if the bidder increases the offer price to non-U.S. holders. SEC Release No. 33-7759 (Oct. 22, 1999), 64 Fed. Reg. 61,382, 61,385 n.26 (Nov. 10, 1999).

If the offered security is not a "margin security" within the meaning of Regulation T promulgated by the Board of Governors of the Federal Reserve System (the "Federal Reserve Board") under the Exchange Act, the bidder must provide upon the request of the SEC or a U.S. securityholder an opinion from an independent expert stating that the cash-only consideration is substantially equivalent to the consideration offered outside the United States. The opinion must address the relative value of consideration offered to U.S. and non-U.S. securityholders, but does not need to address the fairness of either form of consideration in relation to the value of the subject securities. *See* Rule 14d-1(c)(2)(iii)(B) under the Exchange Act.

289 In addition to the U.S. federal securities laws, which regulate U.S. securities offerings at the national level, "blue sky" laws regulate U.S. securities offerings at the state level. Under many such state laws, the registration procedure for a securities offering can be as onerous and time consuming as that under the Securities Act at the federal level. *See* § 3.02[8] for a detailed discussion of state "blue sky" laws.

290 Rule 14d-1(c)(2)(i) under the Exchange Act.

291 Rule 14d-1(c)(2)(iv) under the Exchange Act.

292 *See* § 9.05[2] for a detailed discussion of Rule 14e-5 under the Exchange Act.

293 Rule 14e-5(b)(10) under the Exchange Act.

294 *See* § 3.02[9] for further discussion of Regulation M under the Exchange Act.

295 *See* § 9.05[6] for a further discussion of Regulation M in the context of exchange offers and business combinations.

296 Rule 14d-1(d) under the Exchange Act.

297 *See* § 9.05[9][a] for a discussion of the method of calculating U.S. ownership.

298 *See* SEC Release No. 33-7759 (Oct. 22, 1999), 64 Fed. Reg. 61,382, 61,387 n.41 (Nov. 10, 1999). The staff has granted relief in a number of cases where the Tier II exemption was not available where U.S. ownership either exceeded 40% or was not calculable. *See*, *e.g.*, *Acorda Therapeutics, Inc.* (avail. Mar. 8, 2016); *Songbird Estates PLC* (avail. Dec. 19, 2014); *Gemalto S.A., Wavecom S.A*. (avail. Nov. 7, 2008); *AstraZeneca PLC* (avail. May 23, 2006); *Harmony Gold Mining Company Limited* (avail. Nov. 19, 2004). In addition to granting relief where U.S. ownership exceeds 40%, the staff may in some circumstances be willing to grant relief from the U.S. tender offer rules where the Tier II exemption is not available solely because the target is a foreign issuer that does not qualify as a "foreign private issuer" as defined in Rule 3b-4(c) under the Exchange Act. *See Axel Springer AG* (avail. Sept. 12, 2005) (extending Tier II-type relief from Rules 14e-1(b), (c) and (d) under the Exchange Act where the target, ProSiebenSat.1 Media AG, failed to qualify as a "foreign private issuer" because its controlling shareholders were several private equity investors resident in the United States, although its operations were located in Germany, its securities were

not registered under the Exchange Act or listed on a U.S. exchange and it did not file reports with the SEC under §§ 13(a) or 15(d) of, or furnish information to the SEC pursuant to Rule 12g3-2(b) under, the Exchange Act); *see also TMX Group Inc*. (avail. June 14, 2011); *Chemoil Energy Limited* (avail. Dec. 14, 2009).

299 Rules 13e-4(i)(2)(ii) and 14d-1(d)(2)(i) and (ii) under the Exchange Act.

300 Rules 13e-4(i)(2)(ii) and 14d-1(d)(2)(i) and (ii) under the Exchange Act provide that ADRs and underlying securities are treated as a single class for purposes of the tender offer, and a U.S. offer can be made to U.S. holders of the subject securities and all holders of ADRs, including foreign holders. However, unlike the Tier I exemption, the Tier II exemption does not grant relief to bidders seeking to offer cash-only alternatives to U.S. holders. Requests for such relief are treated on a case-by-case basis.

Under the 1999 Rules, the SEC resolved the mismatch between the exemption and the practical needs of issuers making dual offers by routinely granting no-action relief from the application of the all holders rule set forth in Rule 14d-10(a)(1) under the Exchange Act to permit dual offers structured in this way rather than as set forth in the Tier II exemption (including when bidders cannot demonstrate that the U.S. ownership levels are within the limits set forth in the Tier II exemption). *See*, *e.g*., *Harmony Gold Mining Company Limited* (avail. Nov. 19, 2004); *Sanofi-Synthelabo S.A*. (avail. June 10, 2004); *Alcan, Inc*. (avail. Oct. 8, 2003); *Serono S.A.* (avail. Sept. 12, 2002); *Saipem SpA* (avail. July 29, 2002).

301 Rules 13e-4(i)(2)(ii) and 14d-1(d)(2)(ii) under the Exchange Act. Prior to the 2008 Cross-Border Amendments, the SEC routinely granted no-action relief from Rule 14d-10(a)(1) under the Exchange Act to permit this structure. *See*, *e.g.*, *CANTV* (avail. Apr. 6, 2007) (Venezuela); *E.ON Aktiengesellschaft* (avail. Dec. 6, 2006) (Spain); *Gas Natural SDG, S.A.* (avail. Mar. 2, 2006) (Spain); *Koninklijke Ahold N.V.* (avail. Sept. 10, 2002) (Chile); *Telefonica S.A*. (avail. June 5, 2000) (Brazil and Peru).

302 Rule 14d-1(d)(2)(iii) under the Exchange Act.

303 Rule 14d-1(d)(2)(iv) and (v) under the Exchange Act; *see supra* Notes 128 to 132 and accompanying text.

304 SEC Release No. 33-7759 (Oct. 22, 1999), 64 Fed. Reg. 61,382, 61,387 (Nov. 10, 1999). As discussed above, *see supra* Note 122, the SEC interprets Rule 14d-4(d)(2) under the Exchange Act, which sets forth minimum time periods necessary for dissemination of material changes in a registered securities offer (*i.e.*, a tender offer in which the consideration consists solely or partially of securities registered under the Securities Act) that commences early, as applying to all tender offers, including those subject only to Regulation 14E under the Exchange Act. Thus, in tender offers for U.S. registered equity securities and those for non-U.S. registered equity securities, bidders are required to extend the offer in the event of a material change to the offer. The SEC considers the reduction or waiver of a minimum tender condition to be a material change for purposes of the dissemination requirements of Rule 14d-4(d)(2). SEC Release No. 34-24296 (Apr. 3, 1987). Thus, unless the bidder qualifies for the exception to this rule, if the bidder waives or reduces a minimum tender condition it must hold the offer open for a minimum of five U.S. business days following announcement of the reduction or waiver, or, if there are fewer than five U.S. business days remaining prior to expiration of the offer, the bidder must extend the offering period. Bidders will be required to disclose fully and discuss all implications of waiver or reduction in the offering materials.

However, under the interpretation of the 2008 Cross-Border Amendments set forth in the Adopting Release for the 2008 Cross-Border Amendments, certain changes to the minimum acceptance condition may be made without providing withdrawal rights in the time remaining for the tender offer. Section II.C.5 of the Adopting Release for the 2008 Cross-Border Amendments, 73 Fed. Reg. 60,050, 60,066 (Oct. 9, 2008). This relief requires that the bidder undertake not to waive or reduce the minimum acceptance condition below a majority or such percentage threshold required to control the target company under applicable foreign law, and the relief is limited to circumstances under the home jurisdiction law that justify the bidder's inability to extend the offer or afford withdrawal rights. This relief does not apply to extensions under U.S. law due to changes in offer consideration, the amount of securities sought in the offer or the dealer's soliciting fee.

305 Rule 14d-1(d)(2)(viii) under the Exchange Act; 2008 Cross-Border Amendments.

306 *See* § 9.03[2]. If the offer were subject only to § 14(e) of the Exchange Act and Regulation 14E thereunder, a bidder relying on the Tier II exemption would only need to comply with the requirements of Regulation 14E not modified by Tier II, since the disclosure and other requirements of Regulation 14D and Rule 13e-3 would not be applicable. *See supra* Note 265.

307 Rule 14d-7 under the Exchange Act requires that withdrawal rights be provided to tendering holders as long as the offer remains open, and § 14(d)(5) of the Exchange Act provides that securities tendered may be withdrawn at any time after 60 days from the date of the original offer. We understand that the staff of the SEC takes the position that all conditions to an offer must be satisfied or waived prior to the expiration date of the offer and the offer must be declared wholly unconditional before a bidder can terminate the withdrawal rights of tendering securityholders. *See* Regulation M-A and Cross-Border Release Interpretations, Question II.A.1. Thus, an offer that remains subject to a post-expiration condition may be deemed to remain open and securityholders may be entitled to withdrawal rights under Rule 14d-7. Prior to the 2008 Cross-Border Amendments, the staff of the SEC had granted no-action relief from Rule 14d-7 under the Exchange Act and § 14(d)(5) of the Exchange Act to allow termination of withdrawal rights prior to receipt of regulatory approval. *See Bayer AG* (avail. Apr. 28, 2006). In addition, non-U.S. jurisdictions do not always provide for the extended withdrawal periods that may result from § 14(d)(5) and Rule 14d-7. In some jurisdictions, withdrawals are prohibited after the expiration date of the tender offer. In addition, permitting withdrawals during the period specified by local law for tabulating the results of the offer might conflict with local tender offer procedures, as well as potentially frustrate any minimum tender condition. No-action relief must be sought in such cases. *See*, *e.g.*, *Grand Chip Investment GmbH* (avail. Aug. 17, 2016); *Top Alpha Capital S.M. Ltd.* (avail. Feb. 16, 2016); *Pepsi-Cola (Bermuda) Ltd.* (avail. Mar. 18, 2011); *Barclays PLC* (avail. Aug. 7, 2007); *Serono S.A.* (avail. Sept. 12, 2002); *TotalFina* (avail. Oct. 15, 1999).

308 Rule 13e-4(f)(2)(ii) under the Exchange Act and § 14(d)(5) of the Exchange Act require bidders to provide "back-end" withdrawal rights if tendered securities have not been accepted for payment within a certain date after the commencement of a tender offer (40 business days following commencement in the case of an issuer tender offer subject to Rule 13e-4 under the Exchange Act and 60 days following commencement in the case of a third-party tender offer subject to § 14(d)(5) of the Exchange Act).

309 § 14(d)(5) of the Exchange Act and Rules 13e-4(i)(2)(v) and 14d-1(d)(2)(viii) thereunder.

310 Even if the Rule 802 exemption is not available, a transaction approved as a scheme of arrangement in the United Kingdom would be exempt from Securities Act registration under § 3(a)(10) thereof. *See supra* Note 164 and accompanying text.

311 None of the exemptions from the tender offer rules and registration requirements is available for any securities transaction that technically qualifies under the rules but is part of a plan or scheme to evade the registration requirements of the Securities Act or the tender offer rules under the Exchange Act. An example of a sham, according to the SEC, would be if an initial offer were commenced solely as a pretext for making a subsequent offer automatically eligible for the exemptions. SEC Release No. 33-7759 (Oct. 22, 1999), 64 Fed. Reg. 61,382, 61,389 n.51 (Nov. 10, 1999).

312 *See* § 9.05[9][a] for a discussion of the method of calculating U.S. ownership.

313 *See* Rule 802(a)(2) under the Securities Act. "Blue sky" laws generally provide an exemption from registration for offers to certain qualified institutions and generally exempt offers of securities (and securities senior to them) listed on a U.S. national securities exchange. "Blue sky" laws do not, however, include general exemptions from state registration requirements analogous to Rule 802. Consequently, to avoid registration requirements at the state level, tender offers and business combinations exempt from registration at the federal level under Rule 802 must qualify for alternative state law exemptions. As a result, an issuer may be forced to offer shares only to certain qualified institutional investors and exclude or offer cash alternatives to other holders in certain states to avoid registration under "blue sky" laws.

314 General Note 8 to Rules 800, 801 and 802 under the Securities Act.

315 Rule 802(a)(3)(ii) under the Securities Act. In certain cases it may be possible to distribute an equivalent English-language document, such as a Form 20-F, instead of a translation of a home country document,

such as an annual report, so long as the documents provide similar information in all material aspects.

316 Rule 802(a)(3)(iii) under the Securities Act.

317 Rule 802(a)(3)(i) under the Securities Act.

318 Rule 802(b) under the Securities Act.

319 SEC Release No. 33-7759 (Oct. 22, 1999); *see* § 3.05[4] for a discussion of the Trust Indenture Act of 1939.

320 Regulation M-A and Cross-Border Release Interpretations, Question II.C.1.

321 *See* § 8.02[1][c][iii] for a discussion of Category 3 restrictions under Regulation S and the restrictions applicable to an offering of equity securities by a U.S. issuer, and § 9.05[7][c] for a discussion of the resale of securities offered pursuant to Category 3.

322 *See* Rule 12g-3 under the Exchange Act; § 4.02[3].

323 *See* § 4.11[2] for a discussion of the de-registration rules applicable to successor issuers.

324 Generally, with respect to offshore tender and exchange offers, the SEC has indicated that the guidance in its 1998 release relating to the Internet is applicable. *See* SEC Release No. 33-7516 (Mar. 23, 1998); SEC Release No. 33-7759 (Oct. 22, 1999).

325 *See* § 7.02[4] for a discussion of the prohibition on "general solicitation and general advertising" in private placements.

326 The SEC has stated that no special precautions need be taken to prevent U.S. holders from receiving the merger consideration in a business combination (other than a tender or exchange offer) involving a foreign company merely because the proxy statement/prospectus was posted on a website available in the United States. Because shareholder participation in business combinations is not voluntary, general solicitation restrictions that give rise to the need for special precautions in the private placement context generally are less relevant. *See supra* Note 234. Accordingly, in the context of a business combination, the ability to establish a private placement exemption should not depend on taking the kind of special precautions described above for private placements generally. SEC Release No. 33-7759 (Oct. 22, 1999); Regulation M-A and Cross-Border Release Interpretations, Question II.F.1.

327 *See* § 7.02[5].

327.1 The margin regulations would not apply to an acquisition financed by the issuance of debt securities in a *bona fide* public offering, including under Regulation S, though they may apply to privately offered debt securities. *See* Fed. Res. Serv. ¶5-606.56 (staff opinion, Dec. 20, 1993) (the Board and its staff does not regard the purchase of debt securities offered in a public offering as an extension of credit subject to the margin regulations, with the caveat that the public offering must not be structured "so that the sale in actual practice resembles a private placement"), *see also* 51 Fed. Reg. 1771, 1775 (Jan. 15, 1986) (describing a particular registered offering of debt securities with minimum denominations of $2.5 million as resembling a private placement). The Board and its staff have provided interpretive guidance that facilitates issuances of debt securities pursuant to Rule 144A in compliance with the margin regulations, including characterizing a broker-dealer's purchase of an unregistered debt security for resale under Rule 144A as "arranging" rather than extending credit, *see* Fed. Res. Reg. Serv. ¶5-470.1 (Board interp., July 16, 1990), and by providing some relief from the registration requirements of Regulation U that would otherwise be applicable to purchasers of Rule 144A securities that are secured by margin stock. *See* Fed. Res. Reg. Serv. ¶5-942.69 (staff opinion, Aug. 30, 1996). *See* §7.06 for a more detailed discussion of the application of Regulation T to broker-dealer intermediation of Rule 144A offerings. The extent to which regulations otherwise apply to private securities offerings (and public securities offerings that are subject to the margin regulations because the offering in actual practice resembles a private placement) are generally described in this §9.05[11].

328 12 C.F.R. Parts 220, 221 and 224.

329 Because of Regulation T and applicable regulatory capital requirements, broker-dealers generally do not serve as a source of financing for acquisition transactions, although they may, in an investment banking

capacity, arrange for such financing, including from affiliates that are not broker-dealers and thus may be subject to Regulation U. For a general description of the restrictions applicable to broker-dealers under Regulation T, *see* § 14.07[6] and § 7.06[1].

330 For this purpose, a U.S. lender is one that has a principal office in a Federal Reserve District. *See* Fed. Res. Reg. Serv. ¶5-942.65 (staff opinion, Mar. 24, 1989) (Regulation G, which is now incorporated into Regulation U, "does not apply unless the lender has a principal place of business in a Federal Reserve District"); *Metro-Goldwyn-Mayer, Inc. v. Transamerica Corp.*, 303 F. Supp. 1354 (S.D.N.Y. 1969). Federal Reserve Districts cover the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, American Samoa, Guam and the Commonwealth of the Northern Mariana Islands. Regulation U requires U.S. lenders other than broker-dealers and banks that have a principal office in a Federal Reserve District to register with the Federal Reserve Board if they extend or maintain credit secured, directly or indirectly, by any margin stock in the ordinary course of business and the amount of credit meets certain monetary thresholds. 12 C.F.R. § 221.3(b)(1).

331 "Margin stock" is (i) any equity security listed or traded on a U.S. securities exchange, (ii) any security underlying American Depositary Shares listed on a U.S. securities exchange, (iii) any debt security convertible into, or carrying warrants or rights to subscribe to or purchase, margin stock, (iv) any warrant or right to subscribe to or purchase margin stock and (v) shares in most U.S. mutual funds and other companies registered under the Investment Company Act. 12 C.F.R. § 221.2; Fed. Res. Reg. Serv. ¶5-919.14 (staff opinion, Mar. 18, 1998).

332 Regulation U thus permits a loan used for the purpose of purchasing or carrying margin stock so long as the loan is not directly or indirectly secured by margin stock.

333 The loan value for collateral that is not margin stock (and not puts, calls, or combinations of puts and calls) is the collateral's "good faith" value, which is the amount (not exceeding 100 percent) of the current market value of the collateral that the lender, exercising sound credit judgment, would lend to a customer, without regard to the customer's other assets held as collateral in connection with unrelated transactions. 12 C.F.R. § 221.2.

334 Fed. Res. Reg. Serv. ¶5-805.1, 72 Fed. Res. Bull. 195 (1986).

335 Fed. Res. Reg. Serv. ¶5-917.192 (staff opinion, Dec. 23, 1988).

336 Fed. Res. Reg. Serv. ¶5-805.1, 72 Fed. Res. Bull. 195 (1986).

337 Of course, U.S. antitrust laws and foreign investment laws may be applicable. *See* § 9.06 and § 9.07. If the target is in a regulated industry (such as banking, aviation and television/radio), federal or (in the case of insurance) state regulatory approval will generally be required.

338 The discussion in this § 9.05[12] is based on Edward F. Greene, *Regulatory and Legislative Responses to Takeover Activity in the 1980s: The United States and Europe*, 69 TEX. L. REV. 1539 (1991).

339 *See Edgar v. Mite Corp.*, 457 U.S. 624 (1982).

340 The SEC adopted (i) Rule 14e-1(a) under the Exchange Act in 1979, requiring tender offers to remain open for at least 20 business days, SEC Release No. 34-16384 (Nov. 29, 1979); (ii) Rule 14d-8 under the Exchange Act in 1982, requiring that all partial offers be prorated over the entire period the offer was open, thus eliminating any incentive to tender early in the offering period, SEC Release No. 34-19446 (Dec. 15, 1982); (iii) Rule 14d-7 under the Exchange Act in 1986, requiring withdrawal rights to be available during the entire period an offer was open, SEC Release No. 34-23421 (July 11, 1986); and (iv) Rules 14d-10 and 13e-4 under the Exchange Act in 1986, requiring that a bidder's or issuer's tender offer be open to all holders of the class of securities subject to the tender offer and that each securityholder be paid the highest consideration paid to any other securityholder during the tender offer, SEC Release No. 34-23421 (July 11, 1986).

341 Whereas the SEC permits a bidder to launch a bid that is subject to the condition that adequate financing be obtained, requiring only that there be a reasonable basis for the bidder to believe that there will be financing available, the U.K. Panel on Takeovers and Mergers does not permit financing conditions in U.K.

takeover bids (although, if the bidder is likely to require a significantly long period (*e.g.*, more than 12 months) to obtain a necessary, material regulatory clearance, the U.K. Panel on Takeovers and Mergers may permit a financing condition if it would be unreasonable for the bidder to maintain committed financing throughout the period). *See* U.K. City Code on Takeovers and Mergers, Rule 13.4; Rule 14e-8(c) under the Exchange Act; *see also supra* Note 110.

342 *See supra* Note 340.

343 *See*, *e.g.*, N.Y. BUS. CORP. LAW § 912 (McKinney 2003); DEL. CODE ANN. tit. 8 § 203 (2012).

344 15 PA. CONS. STAT. ANN. §§ 2541–2548; S .D. CODIFIED LAWS §§ 47-33-8 to 47-33-16; ME. REV. STAT. ANN. tit. 13-C, § 1110.

345 OHIO REV. CODE ANN. § 1707.043; 15 PA. CONS. STAT. ANN. §§ 2571–2576.

346 The Delaware Supreme Court has upheld a board's reduction of a pill trigger to 4.99%, and its subsequent implementation of a dilutive exchange provision under such pill, in a circumstance in which the pill was designed to preserve the availability of the company's net operating loss carryforwards. *See Selectica, Inc. v. Versata, Inc.*, C.A. No. 4241-VCN, 2010 WL 703062 (Del. Ch. Feb. 26, 2010), *aff'd*, 5 A.3d 586 (Del. 2010). *But see Yucaipa American Alliance Fund II, L.P. v. Riggio*, 1 A.3d 310 (Del. Ch. 2010), *aff'd*, 15 A.3d 218 (Del. 2011) (expressing concern about net operating loss pills with triggers of 4.99% and interpreting "preclusive" in a broader manner than *Selectica*).

347 *See* Rule 13d-3(d) under the Exchange Act.

348 *See generally Third Point LLC v. Ruprecht, et al.*, 2014 WL 1922029 (Del. Ch. 2014).

349 Institutional investors generally dislike poison pills, particularly because they are adopted without shareholder approval. Accordingly, they sometimes put informal pressure on boards to redeem them. Each year a number of companies also face shareholder resolutions (which are generally nonbinding) requesting the board to redeem the poison pill, which often receive a majority of support of the shares actually voted.

350 Poison pills cannot, in Delaware, contain provisions to prevent or delay newly elected directors from redeeming the poison pill. *See Quickturn Design Systems v. Shapiro*, 721 A.2d 1281 (Del. 1998); *Carmody v. Toll Brothers*, 723 A.2d 1180 (Del. Ch. 1998). In some other states, however, the courts have upheld such "dead hand" provisions. *See Invacare Corp. v. Healthdyne Technologies*, 968 F. Supp. 1578 (N.D. Ga. 1997); *AMP Inc. v. Allied Signal*, 1998 U.S. Dist. LEXIS 15617 (E.D. Pa. Oct. 8, 1998), *rev'd on other grounds*, 168 F.3d 649 (3d Cir. 1999).

351 The Delaware courts confirmed this principle in *Air Products & Chemicals, Inc. v. Airgas, Inc.*, 16 A.3d 48 (Del. Ch. 2011). There, the board of the target (Airgas, Inc.) elected to keep the company's poison pill in place in the face of a tender offer by Air Products, despite several price increases and extensions of the offer. The *Air Products* court noted that, while a target board cannot blindly refuse to consider a tender offer for the company, if the board is properly informed and is found to be acting in good faith, it may reject such an offer in its business judgment, assuming that the defensive measures adopted by the board are found to be reasonable in relation to the threat posed by a hostile offer to purchase the company at an inadequate price.

352 This view was clearly expressed by the Seventh Circuit in *Panter v. Marshall Field & Co.*, 646 F.2d 271 (7th Cir.), *cert. denied*, 454 U.S. 1092 (1981). In *Panter*, the court considered a challenge to defensive tactics adopted by directors of Marshall Field in response to a hostile offer by Carter Hawley Hale. The court affirmed the district court's directed verdict in favor of Marshall Field, finding that "[i]n the absence of fraud, bad faith, gross overreaching or abuse of discretion" the courts should not interfere with directors' judgment. *Panter v. Marshall Field & Co.*, 486 F. Supp. 1168, 1194 (N.D. Ill. 1980).

353 *Unocal Corp. v. Mesa Petroleum Co.*, 493 A.2d 946 (Del. 1985); *see also Unitrin, Inc. v. American General Corp.*, 651 A.2d 1361 (Del. 1995). Delaware law is important because many large U.S. companies are Delaware corporations, and because much of the law concerning directors' obligations has been determined in proceedings in the Delaware courts.

354 The first part of the test can be satisfied by directors demonstrating that they acted in good faith and with

reasonable investigation.

355 "Lock-ups" are options granted to a bidder on target securities or assets that become exercisable if another bidder acquires the target at a higher price. "Break-up" fees are fees payable to the original bidder in the event another bidder acquires the target at a higher price. "No-shop" clauses are covenants that restrict a target from soliciting or accepting other offers to acquire the company.

356 *See OmniCare, Inc. v. NCS Healthcare, Inc.*, 818 A.2d 914 (Del. 2003). *But see Orman v. Cullman*, Civ. Act. No. 18039, 2004 Del. Ch. LEXIS 150 (Del. Ch. Oct. 20, 2004) (declining to apply the *Omnicare* decision to a case in which the shareholders that approved the merger were fully informed and the deal protection mechanisms at issue (principally an 18-month lock-up agreement with the majority shareholders requiring them to not sell their shares and to vote against any alternative transaction) were not tantamount to *a fait accompli* because the merger agreement provided the target's board with a meaningful and effective fiduciary out and required approval of a majority of the minority shareholders before the merger could be consummated).

357 If, following the acquisition, the combined company has a controlling shareholder, the target shareholders will have given up their opportunity to obtain a control premium.

358 *See Revlon, Inc. v. MacAndrews & Forbes Holdings, Inc*., 506 A.2d 173 (Del. 1986); *see also Paramount Communications, Inc. v. QVC Network Inc*., 637 A.2d 34 (Del. 1994); *Arnold v. Society for Savings Bancorp, Inc*., 650 A.2d 1270 (Del. 1994), *aff'd*, 678 A.2d 533 (Del. 1996). *Lyondell Chemical Co. v. Ryan*, 970 A.2d 235, 242 (Del. 2009) (*Revlon* duties are triggered when a company "embarks on a transaction … that will result in a change in control" not merely when the company is "in play.").

359 *See* the definitions of the terms "offer" and "sale" in § 2(3) of the Securities Act. For examples of vendor placement no-action letters, *see*, *e.g.*, *Singapore Telecommunications Limited* (avail. May 15, 2001), *Airline Industry Revitalization Co. Inc*. (avail. Sept. 9, 1999), *TABCORP Holdings Ltd.* (avail. Aug. 27, 1999), *Durban Roodepoort Deep, Ltd.* (avail. June 22, 1999), *AMP Ltd.* (avail. Sept. 17, 1998), *Oldcastle, Inc.* (avail. July 3, 1986), *Hudson Bay Mining and Smelting Co., Ltd.* (avail. June 19, 1985) and *Electrocomponents PLC* (avail. Sept. 23, 1982).

360 2008 Cross-Border Amendments.

361 2008 Cross-Border Amendments, 73 Fed. Reg. 60,050, 60,078 (Oct. 9, 2008) ("Unless the market for the bidder's securities to be sold through the vendor placement process is highly liquid and robust and the number of bidder securities to be issued for the benefit of U.S. target holders relatively small compared to the total number of bidder securities outstanding, a vendor placement arrangement in a cross-border exchange offer would in our view be subject to Securities Act registration under Section 5.") A vendor placement may be subject to the equal treatment provisions of Rules 13e-4(f)(8) and 14d-10 under the Exchange Act; however, the SEC has stated that it generally believes cross-border tender offers eligible to be conducted under the Tier I exemption, and therefore not subject to the equal treatment rules, are the appropriate situation for vendor placements. SEC Release No. 33-8957 (Sept. 19, 2008). In light of the SEC's position, if U.S. ownership exceeds the limits of the Tier I exemption, it would be advisable to approach the SEC staff for a no-action letter before proceeding with a vendor placement. *See TABCORP Holding Ltd.* (avail. Aug. 20, 1999) (granting no-action relief from the equal treatment provisions for an offer by an Australian company, approximately 17% of the ordinary shares of which was beneficially owned by U.S. holders).

U.S. Regulation of the International Securities and Derivatives Markets, § 9.06, REPORTING REQUIREMENTS UNDER THE HART-SCOTT-RODINO ANTITRUST IMPROVEMENTS ACT

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 9.06 (11th and 12th Editions 2014-2017)

p. 9-105

The HSR Act [362] and the rules promulgated under it (the "HSR Rules") [363] require parties contemplating most large mergers and acquisitions with a significant U.S. connection to notify the Federal Trade Commission (the "FTC") and the Department of Justice (the "DOJ") and to observe a waiting period before closing. [364] The purpose of the HSR Act is to enable the FTC and the DOJ to review transactions for antitrust issues before closing and, where necessary, to seek a federal court injunction to prevent them from closing. [365]

[1] Jurisdictional Tests

p. 9-105

p. 9-106

Acquisitions of assets, voting securities, and non-corporate interests, as well as mergers, tender offers, or the formation of joint ventures are all potentially reportable if the value of any party's acquisition exceeds $78.2 million (as adjusted). [366] Acquisitions valued at $78.2 million or less are not reportable under the HSR Act under any circumstances, [367] although the DOJ or FTC can still challenge such a transaction on substantive grounds under § 7 of the Clayton Act. [368] Acquisitions of debt instruments or other securities that do not carry voting rights are also never reportable.

The value of a transaction for HSR Act purposes is generally the greatest of the stated acquisition price, the market price of any traded voting securities to be acquired, and the fair market value of the assets or any untraded voting securities to be acquired. [369] The acquiring person must generally aggregate all voting securities or non-corporate interests of the target company that it will hold after

p. 9-106

p. 9-107

the transaction, including holdings from previous purchases (unless those previous purchases were reported under the HSR Act in the last five years and the acquiring person is not crossing a higher notification threshold), and it must generally aggregate any assets of the target that it has purchased (or has signed an agreement or letter of intent to purchase) within 180 days of the execution of the present transaction agreement (unless those previous acquisitions were reported under the HSR Act). [370]

Unlike the European Commission's Merger Regulation, an acquisition of voting securities may be reportable under the HSR Act if valued at more than $78.2 million even where the transaction would not confer control of the issuer of the voting securities. [371] Moreover, an acquisition of additional voting securities of the same issuer may require an additional HSR Act filing if the subsequent acquisition would cause the acquiring person's holdings to meet or exceed one of the following notification thresholds (as adjusted at the time of the subsequent acquisition): (i) $78.2 million, (ii) $156.3 million, (iii) $781.5 million, (iv) 25% of the issuer's outstanding voting securities if valued greater than $1.563 billion and (v) 50% of the issuer's outstanding voting securities. [372]

After the HSR Act waiting period expires, an acquiring person has one year from the date of expiration to consummate an acquisition at the reported notification threshold. If the acquiring person's holdings of the target's voting securities do not meet or exceed the notification threshold reported within that one-year period, then any further acquisition will again be subject to the HSR Act. [373] However, once the acquiring person does meet or exceed the reported notification threshold within a year of the date that the initial waiting period expired, it may then acquire additional voting securities of the target until five years after that initial expiration date—provided that it does not meet or exceed a higher notification threshold. [374] Any acquisitions following the end of this five-year period, even an acquisition of one additional share of the target's voting securities, may trigger a new notification requirement. [375]

Reportable acquisitions are subject to a multi-tiered filing fee structure. Acquisitions valued at more than $78.2 million but less than $156.3 million have a filing fee of $45,000. For transactions valued at $156.3 million or more but less

p. 9-107
p. 9-108

than $781.5 million, the filing fee is $125,000. For transactions valued at $781.5 million or more, the filing fee is $280,000. The waiting period does not begin to run until the filing fee has been received, typically by wire transfer. [376]

[2] Exemptions

The HSR Act and HSR Rules exempt a number of transactions that satisfy the jurisdictional tests. Several exemptions apply to acquisitions involving assets outside the United States or involving non-U.S. persons or issuers. [377] (These exemptions do not apply to acquisitions of voting securities of a U.S. issuer or assets located in the United States regardless of the nationality of the acquiring person.) The following categories of transactions involving non-U.S. parties or assets are exempt:

- acquisitions of assets located outside the United States (regardless of the nationality of the acquiring person), unless those assets generated more than $78.2 million of sales into the United States during the seller's most recent fiscal year; [378]
- acquisitions by a non-U.S. acquiring person of voting securities of a non-U.S. issuer, unless the acquisition confers control of the issuer *and* the issuer (including all entities controlled by the issuer) either holds assets located in the United States with a total value of more than $78.2 million or it had sales in or into the United States of more than $78.2 million in its most recent fiscal year; [379]
- acquisitions by a U.S. acquiring person of voting securities of a non-U.S. issuer, unless the issuer (including all entities controlled by the issuer) either holds assets located in the United States with a total value of more than $78.2

p. 9-108
p. 9-109

  million or it had sales in or into the United States of more than $78.2 million in its most recent fiscal year; [380] and
- acquisitions involving an entity controlled by a foreign state, foreign government or agency thereof, provided that the acquisition is of (i) assets located within that foreign state or (ii) voting securities of an issuer organized under the laws of that state. [381]

There are a number of other exemptions under the HSR Rules that do not focus on the connection with the United States. [382] For example, a person's acquisition of goods or realty in the ordinary course of business—such as an airline's acquisition of an aircraft—is exempt. [383] Similarly, acquisitions of voting securities by an underwriter (including a broker-dealer) for the purpose of resale in the ordinary course of the underwriter's business are also exempt. [384] In addition, acquisitions in foreclosure or upon default (or in connection with a lease financing) are exempt if they result from a transaction that was made for the purpose of providing credit in the ordinary course of the creditor's business. [385] Another financing exemption applies to acquisitions of control of a new or existing unincorporated entity. This exemption applies if the acquiring person contributes only cash to the unincorporated entity for the purpose of providing financing and the terms of the financing agreement are such that the acquiring person will no longer control the entity after it realizes its preferred return. [386]

There is also a broad exemption for transactions involving entities that are controlled by the same ultimate parent entity known as the "intra-person" exemption. [387] This exemption may also apply to certain acquisitions of voting securities or certain acquisitions of a controlling interest in an unincorporated entity that are made in exchange for a contribution of assets. [388] This exemption further

p. 9-109
p. 9-110

applies to the buyout of one 50-50 joint venture partner by the other partner, since both partners are considered ultimate parent entities of the venture. [389]

Institutional investors, such as savings banks, trust companies, insurance companies and finance companies, may be exempt from HSR notification requirements provided that the acquisition of voting securities is: (1) made directly by the institutional investor; (2) made in the ordinary course of business; (3) made solely for the purpose of investment (meaning the investment is passive) and (4) the institutional investor does not hold more than 15% of the issuer's outstanding voting securities. [390]

Transactions involving "investment rental property assets" may also be exempt under HSR Rule § 802.5. However, in 2015 the FTC announced its repudiation of its previous informal interpretations of the exemption, which had "expanded the rule's application well beyond the original intent." [391] The FTC's narrower interpretation moving forward emphasizes the requirement "that the property [must] be held solely for rental or investment purposes." [392] In determining whether a transaction falls into this category, the FTC analyzes whether the buyer is acting as a landlord that solely intends to profit from the investment in the real estate and is therefore exempt, or whether the buyer is participating in the business conducted on the property and intends to profit from the business activity, in which case the exemption under § 802.5 does not apply.

Currently, the Premerger Notification Office ("PNO") at the FTC exempts a broad range of acquisitions by real estate investment trusts ("REITs") of real property or other REITs from the HSR Act under the theory that they are "in the ordinary course of business," even if they would not otherwise be exempt. [393] To be exempt a REIT must act in conformity with a REIT's special tax status under the IRS rules and regulations. Recent public statements by PNO officials, however, suggest that the exemption may soon be revised and likely narrowed. At an American Bar Association event in January 2016, a PNO official stated that a REIT holding an operating company is "perhaps not in the ordinary course" of

p. 9-110
p. 9-111

business and that the office was reevaluating the scope of this exemption, but provided no details about the timing of any official action. [394]

Finally, the HSR Act creates an exemption for acquisitions of less than 10 percent of a company's outstanding voting securities if that acquisition is made "solely for the purpose of investment." [395] This is known as the "investment-only exemption." The FTC narrowly construes the investment purpose required to fall within the exemption, emphasizing that the acquiring person's sole purpose in making the acquisition must be passive investment. There must be "no intention of participating in the formulation, determination, or direction of the basic business decisions of the issuer." [396]

Recent enforcement actions by the DOJ and the FTC under the investment-only exemption have tested what activity counts as "participation" in the issuer's business decisions. On July 12, 2016 ValueAct Capital ("ValueAct"), an activist hedge fund, agreed to settle a civil antitrust lawsuit brought by the DOJ for improperly relying on the investment-only exemption when it acquired approximately $2.5 billion in shares of Baker Hughes Inc. and Halliburton Co. in 2014 and 2015 shortly after the companies announced their plan to merge. The DOJ claimed that ValueAct had intended to influence the issuers' business decisions by pressuring directors and officers of each company to take certain actions during the antitrust review of the Baker Hughes/Halliburton transaction. As part of the settlement, ValueAct agreed to pay a record $11 million fine under the HSR Act.

ValueAct had a history of alleged failures to make required HSR Act notifications. [397]

To prove ValueAct's intentions to influence the companies' business decisions, the DOJ relied on communications between the fund and senior executives at Halliburton and Baker Hughes as well as the fund's marketing and advertising materials. The complaint focused on the numerous steps ValueAct allegedly took to pressure directors and officers of each company to adopt a course of action during the difficult antitrust review process. The DOJ also placed particular significance on ValueAct's website and advertising materials, which promoted its strategy of "active, constructive involvement," and explained, "[t]he goal in each investment is to work constructively with management and/or the company's board to implement a strategy or strategies that maximize returns for all shareholders." [398]

p. 9-111
p. 9-112

In an earlier enforcement action, the DOJ (acting on behalf of the FTC) filed suit against another activist fund, Third Point LLC, for wrongfully avoiding HSR premerger reporting requirements through its reliance on the investment-only exemption. [399] In its civil complaint in 2015, the FTC alleged that Third Point was acquiring Yahoo shares while simultaneously trying to influence Yahoo's business decisions, specifically taking concrete steps to change the composition of Yahoo's senior management and board. The FTC described some of ValueAct's actions that were inconsistent with the intent of a passive investor:

- contacted certain individuals to gauge their interest and willingness to become the CEO of Yahoo or a potential board candidate of Yahoo;
- assembled an alternative slate for the Yahoo Board;
- drafted correspondence to Yahoo announcing that Third Point was prepared to join the Yahoo Board;
- internally discussed the possible launch of a proxy battle for directors of Yahoo; and
- stated publicly that it was prepared to propose a slate of directors at Yahoo's next annual meeting. [400]

Because this was Third Point's first violation, the FTC only sought injunctive relief. [401] Shortly after the suit, Third Point came into compliance by filing the required HSR notification and on August 24, 2015, it settled the charges.

The high profile ValueAct and Third Point cases generated a series of questions about the scope of the investment-only exemption, the direction of enforcement actions, and its implications for activist funds and other investors. The recent enforcement actions may hinder activist funds by impeding their ability to buy shares "under the radar" and consequently increasing their upfront investment costs. Another key implication is that behavior once considered commonplace for investors who relied on the investment-only exemption, such as conveying opinions about governance reforms or other strategic courses of

p. 9-112
p. 9-113

action, may be treading into territory that requires HSR notification. The ValueAct case also provides a lesson on how a fund's self-promotion may later serve as evidence of non-passive intent. Still, in the aftermath of these two cases, several ambiguities remain as to what qualifies as non-passive intent.

In an effort to clarify the scope of the investment-only exemption, the FTC director of the Bureau of Competition, Debbie Feinstein, and her staff, published a blog post titled "‘ *Investment-only’ means just that*." In it, the FTC firmly asserts that the investment-only exemption is a "narrow" one and lists conduct it considers "inconsistent" with the intent to be a passive investor such as: "nominating a candidate for the board of directors, holding a board seat or being an officer, proposing corporate action that requires shareholding approval, soliciting proxies, or being a competitor of the issuer." [402] This list, which was derived from the rule's Statement of Basis and Purpose, is by no means exhaustive. The FTC's announcement ends with a broad warning: "[A]ny investor who is considering engaging with management or any person considering taking a board seat should proceed with caution when relying on the investment-only exemption." [403] As to CEOs, board members, and other managing members of companies, the FTC believes these actors should "be aware of the requirements of the HSR Act, should take steps to determine the applicability of the Act to their transactions, and should conduct routine compliance audits as necessary." [404]

[3] Notification and Report Form

Whenever a transaction is reportable, the acquiring person and acquired person must each file an HSR Act Notification and Report Form ("HSR Form") with the DOJ and FTC. The HSR Form requires detailed information about the party's revenues from U.S. operations, the party's subsidiaries and minority stock holdings and copies of certain documents. The buyer must provide information on the basis of its ultimate parent entity, all controlled entities and any "associates" (generally any other entity under common management). On the other hand, the seller must provide certain information only with respect to the entities or assets that will be sold. [405]

p. 9-113
p. 9-114

In particular, each party must submit all documents prepared by or for any officer or director (of the ultimate parent entity or any entity it controls) for the purpose of evaluating or analyzing the acquisition with respect to market shares, competition, competitors, markets, potential for sales growth or expansion into product or geographic markets, synergies or efficiencies. [406] Parties must supply these documents even when they were created by unsolicited third parties, such as investment banks, and must submit all confidential information memoranda, regardless of content. These documents are called for by Items 4(c) and 4(d) of the HSR Form. These documents often have information directly related to competition and the parties' view of the relevant markets, so they are often the most important aspect of the HSR Form. [407]

The DOJ and FTC maintain in strict confidentiality all information in an HSR Form and the accompanying documents, none of which is subject to disclosure under the Freedom of Information Act. [408] Such materials may not be revealed except in response to a request from the U.S. Congress or as evidence in an administrative or judicial proceeding relating to the underlying transaction. [409] (As discussed below, also note that if the parties request early termination of the waiting period and the request is granted, the FTC will disclose the names of the ultimate parent entities, the acquired entity, and the fact that early termination has been granted.)

An HSR Act filing can be withdrawn voluntarily by written notification to the DOJ and the FTC. If a filing with the SEC under the Exchange Act [410] publicly announces the expiration, termination or withdrawal of a tender offer or the termination of an agreement or letter of intent, then the acquiring person or acquired person must send a letter to the FTC and the DOJ notifying them of the SEC filing, and that letter serves as a withdrawal of the HSR Act filing. [411] Subject to certain conditions, a notification may be resubmitted with no additional filing fee after a withdrawal, resetting the waiting period. [412] This tactic is commonly known as "pull and re-filing" and is typically done in an effort to avoid an in-depth investigation. [413]

In 2016, the FTC and DOJ announced new instructions for submitting HSR filings to clarify language and allow for the use of DVD filings. Although the FTC classified these changes (which were published in the Federal Register) as

p. 9-114
p. 9-115

merely procedural and non-substantive—in order to avoid the need for notice and comment under the Administrative Procedure Act—a comparison with the previous instructions reveals some changes may be substantive after all. [414] For example, under Item 3(b) the FTC now requires the acquiring person produce "agreements not to compete *and other agreements between the parties*." Under the previous instructions acquirors provided documents that "constituted the agreement and non-competes." Under the new rule it remains unclear what "other agreements" may be required, though there is suspicion that the new language was intended to capture the use of privileged "side letters" between parties allocating the risk of an antitrust challenge. The new HSR filing form also creates additional requirements for withholding or redacting privileged materials. If the filing person withholds or redacts portions of any document responsive to Items 4(c) or 4(d), a "privilege log" must explain the reasons for noncompliance and also state the factual basis with enough detail to support the claim and to be evaluated for its validity. The HSR form also creates a new item, 7(c)(iv)(c), which adds several new industries (furniture, electronics, recreational vehicle parks and camps, rooming and boarding houses, and personal and household good repair and maintenance) for which filers must provide the state, or portion thereof, in which the person filing the notification conducts such operations.

[4] Waiting Periods

As discussed above, the HSR Act requires that parties to a reportable acquisition observe a waiting period before closing the transaction. For tender offers (and other acquisitions of voting securities, such as open market purchases, from a holder that is not included within the same ultimate parent entity as the issuer), the waiting period begins once the acquiring person alone completes its filing (including the payment of the applicable fee) with the FTC and the DOJ. [415] The acquired person is then required to make its filing no later than the fifteenth (or, in the case of a cash tender offer, the tenth) day following the notification by the acquiring person. [416] For acquisitions for which there is a

p. 9-115

p. 9-116

signed agreement between the acquiring person and the acquired person, the initial waiting period begins to run only after both have filed their respective HSR Forms with the FTC and the DOJ and paid the appropriate fee. [417]

The length of the waiting period varies depending on the form of the transaction and the course of the reviewing agency's investigation. For cash tender offers [418] and acquisitions out of bankruptcy subject to 11 U.S.C. § 363(b), the initial waiting period is 15 days. [419] For other transactions, the initial waiting period is 30 days. The parties may request early termination of the initial waiting period, which is often granted in cases raising no significant competitive issues. In the event that early termination is granted, notice is published in the Federal Register and on the FTC's website identifying the ultimate parent entities, the acquired entity and the fact that early termination was granted. [420] If any waiting period would otherwise end on a Saturday, Sunday or holiday, the waiting period is automatically extended to the next business day. [421]

Before the initial waiting period expires, the FTC or the DOJ can request additional information and documentary material concerning the proposed transaction. [422] Such requests for additional information are commonly referred to as "second requests." A second request is essentially a civil subpoena requiring the recipient to collect and submit a wide range of documents and data. When a second request is issued, the waiting period is extended until each of the parties (or, in the case of a tender offer, the acquiring person) substantially complies with the second request and an additional waiting period has expired. [423] For cash tender offers and acquisitions out of bankruptcy subject to 11 U.S.C. § 363(b), this additional waiting period is ten days; for all other transactions, the additional waiting period is 30 days. [424] Alternatively, at any time before the parties substantially comply with the second request, the reviewing agency may end the waiting period by granting early termination, *i.e.*, if it concludes that the competitive issues it was investigating will not be a problem, or the parties and the reviewing agency may enter into a consent decree requiring a remedy to resolve the reviewing agency's competitive concerns.

The reviewing agency may, at any time prior to the consummation of the transaction, seek a preliminary injunction blocking the transaction in federal court. The standards for obtaining such an injunction differ for the DOJ and the

p. 9-116

p. 9-117

FTC. Whereas the DOJ seeks a preliminary injunction under the same standards as other litigants, the FTC must demonstrate that a preliminary injunction is in the public interest (albeit considering the equities and the likelihood of success). [425] Courts have traditionally treated the DOJ and FTC similarly in practice, notwithstanding some decisions that suggest the FTC's standard may be less onerous. [426] In either case, the likelihood of the agency's success on the merits is judged under § 7 of the Clayton Act because it would substantially lessen competition or tend to create a monopoly in a line of commerce. [427] However, the DOJ presents its merits case in the same federal court in which it seeks its preliminary injunction, while the FTC presents its merits case before an internal administrative tribunal.

Because the parties are free to consummate the transaction at any time after the waiting period expires, the reviewing agency often requests additional time from the parties to make its decision on whether to challenge the transaction in court. Parties often find it is in their interest to grant such requests, as this can give the parties more time to demonstrate that the transaction is not anticompetitive or enable the parties and the reviewing agency to negotiate a mutually acceptable settlement of the case such as a divestiture.

[5] Gun Jumping

The parties to a transaction must maintain their separate and independent existence until the HSR Act waiting period expires and the transaction closes. When parties fail to observe these requirements, they are said to engage in "gun jumping." Gun jumping may violate the HSR Act (if the parties effectively transfer beneficial ownership to the buyer before the HSR Act waiting period expires) or § 1 of the Sherman Act (if the parties coordinate their competitive behavior before closing). Enforcement actions by the DOJ and FTC have generally focused on three types of gun jumping behavior: (i) implementing integration plans or asserting management control over the company to be acquired, (ii) sharing competitively sensitive information or coordinating competitive behavior, and (iii) transferring to the buyer an excessive amount of the economic risk associated with the company to be acquired. Although gun-jumping analysis is slightly different under the HSR Act than the Sherman Act, enforcement

p. 9-117

p. 9-118

actions based on either statute have generally been brought only in the most flagrant cases, where it was obvious that the parties simply "acted as if the merger had already occurred." [428]

[6] Penalties

Failure to comply with the HSR Act may result in civil penalties. Violation of the HSR Act may subject any person, or any officer, director, or partner of such person, to a civil penalty of up to $40,000 per day from the day of closing to the day the party complies. [429] Such penalties have been imposed for failing to file, submitting incomplete or inaccurate files [430] and engaging in gun jumping while the waiting period is running. [431] The HSR Act also authorizes federal courts to order compliance, grant other discretionary equitable relief and extend the statutory waiting periods until there has been substantial compliance, [432] although these procedures have seldom been used.

Footnotes

362 Hart-Scott-Rodino Antitrust Improvements Act, Pub. L. No. 94-435, tit. II, § 201, 90 Stat. 1383 (1976) (codified as amended at 15 U.S.C. § 18a). The HSR Act was most recently amended in December 2000. District of Columbia Appropriations Act, 2001, Pub. L. No. 106-553, § 630, 114 Stat. 2762 (2000). References in this section to the HSR Act are to the statute as most recently amended.

363 The HSR Rules are codified at 16 C.F.R. § 801–03.

364 Proper application of the HSR Rules requires an understanding of a few key terms. "Person" is defined by reference to an "ultimate parent entity," meaning an individual or a legal entity not controlled by an individual or any other entity. *See* HSR Rules § 801.1(a)(3). An acquiring person includes all the entities controlled by the ultimate parent entity. *See* HSR Rules § 801.1(a)(1). "Control" means: (i) holding 50% or more of the outstanding voting securities of an issuer, (ii) having the contractual power presently to designate 50% or more of the directors of a corporation, or in the case of trusts, the trustee of such trust or (iii) in the case of an unincorporated entity, having the right to 50% or more of the profits of the entity (or, on dissolution, the right to 50% or more of the assets of the entity). HSR Rules § 801.1(b). "Voting security" means any security that presently or upon conversion gives its holder the ability to vote for the election of

directors of the issuer of the security or an entity in the same person as the issuer. HSR Rules § 801.1(f)(1)(i). "Non-corporate interest" means an interest in any unincorporated entity that gives the holder the right to any profits of the entity or the right to any assets of the entity in the event of the dissolution of that entity. HSR Rules § 801.1(f)(ii).

365 H.R. Rep. No. 94-1373, at 8 (1976). The HSR Act is strictly procedural and does not affect the FTC's or DOJ's jurisdiction to challenge any transaction, even those that are not reportable under the HSR Act or those for which the HSR Act waiting period has expired. Nonetheless, companies generally interpret expiration of the HSR Act waiting period as an indication that the FTC and DOJ will not challenge a transaction. In 2003, however, the FTC obtained an order from an FTC Administrative Law Judge requiring Chicago Bridge & Iron Works Co. to divest assets it acquired from Pitt-Des Moines Inc. in a reported transaction that had closed over two years before the ruling. The FTC commissioners then reviewed the case, issuing an opinion in 2004 that largely upheld the administrative law judge's findings and also required a divestiture (although a slightly modified one) as a remedy. This appears to be the first challenge of a consummated transaction after expiration of the waiting period (there was no indication that the parties' HSR Act filings did not give the FTC the intended opportunity to assess potential competitive harm). It is worth noting, however, that the FTC began investigating before the acquisition closed, giving the parties notice of a possible challenge despite the expiration of the HSR Act waiting period. In light of this case, companies should not necessarily interpret expiration of the HSR Act waiting period as a guarantee that the FTC or DOJ will not challenge their transaction, especially where the reviewing agency launches an investigation after the waiting period has expired but before the parties have consummated their transaction. *See In the Matter of Chicago Bridge & Iron Company, N.V.*, 2004 FTC LEXIS 250 (Dec. 21, 2004).

366 The HSR Act reporting thresholds are adjusted annually based on the change in U.S. gross national product. The reporting threshold increased from $76.3 million for 2015 to $78.2 million for 2016. *See* Revised Jurisdictional Thresholds For Section 7A of the Clayton Act, 81 Fed. Reg.16, 4299 (Jan. 26, 2016).

367 This threshold is known as the "size-of-transaction" test. For transactions valued at more than $78.2 million (as adjusted) but not more than $312.6 million (as adjusted), an additional jurisdictional threshold—called the "size-of-person" threshold—must be met for the transaction to be reportable. Specifically, such a transaction is not reportable unless one of the following three conditions is satisfied: (i) voting securities or assets of a person engaged in manufacturing with annual net sales or total assets of $15.6 million (as adjusted) or more will be acquired by a person with total assets or annual net sales of $156.3 million (as adjusted) or more, (ii) voting securities or assets of a person not engaged in manufacturing with total assets of $15.6 million (as adjusted) or more, will be acquired by a person with total assets or annual net sales of $156.3 million (as adjusted) or more; or (iii) voting securities or assets of a person with annual net sales or total assets of $156.3 million (as adjusted) or more will be acquired by a person with total assets or annual net sales of $15.6 million (as adjusted) or more. HSR Act § 18a(a)(2)(B). Annual net sales and total assets must include all net sales and assets, whether foreign or domestic, of the "ultimate parent entity" (and all entities it controls).

368 Clayton Act, ch. 223, § 7, 38 Stat. 730 (1914) (codified as amended at 15 U.S.C. § 18); FTC Act, Act of September 26, 1914, ch. 311, § 5, 38 Stat. 717, 719 (codified as amended at 15 U.S.C. §§ 41–58). On January 10, 2013, the DOJ filed lawsuit in the U.S. District Court for the Northern District of California seeking to unwind Bazaarvoice's June 2012 acquisition of PowerReviews. The transaction was not reportable under the HSR Act, but the DOJ challenged the merger on the grounds that it allegedly eliminated Bazaarvoice's only significant rival, in violation of § 7 of the Clayton Act. The DOJ began its investigation shortly after the transaction closed. The trial was held in September 2013, and in January 2014, the U.S. District Court for the Northern District of California ruled in favor of the DOJ, finding that the transaction violated § 7 of the Clayton Act. *United States v. Bazaarvoice, Inc.*, Trade Cas. (CCH) ¶78,641 (N.D. Cal. Jan. 8, 2014).

369 HSR Rules § 801.10.

370 HSR Rules § 801.13.

371 HSR Rules § 801.1(h). On the other hand, the formation of an unincorporated entity or the acquisition of noncorporate interests is only reportable if the acquiring person would control the entity as a result of the transaction. HSR Rules § 801.50, § 801.2(f).

372 HSR Rules § 801.1(h).

373 HSR Rules § 803.7.

374 HSR Rules § 802.21.

375 However, another notification requirement may only be triggered by another acquisition. *See* HSR Act § 18a(a). An increase in the market price of voting securities such that the value held by the acquiring person would exceed a notification threshold (or a higher notification threshold than previously reported during the five-year period) does not require notification under the HSR Act.

376 HSR Rules § 803.10(b)(2) (although there is no specific rule regarding receipt of the filing fee, the FTC will consider a notification "deficient" until the filing fee is received).

377 A non-U.S. person or issuer is one that (i) is not incorporated in the United States, (ii) is not organized under the laws of the United States, (iii) does not have its principal offices within the United States and (iv) in the case of an individual, is neither a citizen nor resident of the United States. HSR Rules § 801.1(e)(2)(i)–(ii). Conversely, a U.S. person or issuer is one that (i) is incorporated in the United States, (ii) is organized under the laws of the United States, (iii) has its principal offices within the United States, or (iv) in the case of an individual, is a citizen or resident of the United States. HSR Rules § 801.1(e)(1)(i)–(ii).

378 HSR Rules § 802.50.

379 HSR Rules § 802.51(b). If controlling interests in multiple foreign entities are being acquired, the sales and assets of all the non-U.S. entities are aggregated to determine whether either of the $78.2 million thresholds is met. Even if these thresholds are exceeded, the acquisition will still be exempt if it is valued at $312.6 million or less and the parties' combined U.S. assets and combined sales in or into the United States in their most recent fiscal years are both less than $171.9 million.

380 HSR Rules § 802.51(a). If voting securities of multiple foreign issuers are being acquired, the sales and assets of all the non-U.S. issuers (and the sales and assets of any unincorporated foreign entities in which a controlling interest is being acquired) are aggregated to determine whether either of the $78.2 million thresholds is met.

381 HSR Rules § 802.52.

382 *See* 15 U.S.C. § 18a(c); HSR Rules § 802 (listing various exemptions). The full range of HSR Act exemptions is beyond the scope of this treatise. Parties to potentially reportable transactions should review the available exemptions carefully to determine if an exemption applies to the particular transaction.

Foreign investors in U.S. companies must also consider the potential applicability of the Exon-Florio Amendment to the Defense Production Act of 1950 (the "Exon-Florio Amendment") [433] and the regime it establishes to review foreign investment in U.S. companies from a national security perspective. The

p. 9-119

Exon-Florio Amendment grants the President the authority to suspend or prohibit [434] acquisitions, mergers or takeovers by foreign persons [435] of U.S. businesses [436] that threaten to impair the national security of the United States. [437] To exercise this authority, the President must find that (i) there is credible evidence that the foreign interest exercising control [438] "might take action that threatens to impair the national security" and (ii) other laws do not, in the President's judgment, provide "adequate and appropriate authority" to protect the national security. [439] Both "control" and "national security" are interpreted expansively and give CFIUS considerable discretion to review transactions of interest.

The Exon-Florio Amendment establishes CFIUS to review transactions. [440] CFIUS is a committee comprised of representatives from various government agencies and offices, including the heads of the Departments of Defense, Justice, State, Commerce, Energy and Homeland Security and of the Offices of the U.S. Trade Representative and Science and Technology Policy, and it is chaired by the Secretary of the Treasury. The Exon-Florio Amendment sets forth a procedure under which parties to a transaction wishing to obtain assurances regarding the absence of national security issues can file a voluntary notification, which is confidential, that triggers a national security review. [441] If CFIUS determines at the conclusion of an initial 30-day review period (following a pre-notification review and acceptance of the filing) that the transaction raises no national security concerns or does not fall within the statute, no further investigation will occur. If CFIUS decides that a full investigation is necessary, it has 45 days to conduct the investigation. At the end of the investigation period, CFIUS can clear the transaction or clear it with conditions (including so-called "mitigation agreements" imposing future obligations on the acquiror, described below). If CFIUS finds that the transaction should be blocked or it cannot come to a conclusion about the transaction, CFIUS submits a report to the President, [442] who has 15 days thereafter to announce a decision. [443]

p. 9-120

p. 9-121

Parties to an acquisition are presented with a difficult decision: notification to CFIUS is voluntary in the absence of a government-initiated review, the statutory standards for evaluating threats to "national security" are vague and the process is unpredictable and subject to political risk. On the one hand, if the transaction is notified to CFIUS, while the parties are technically free to proceed while CFIUS review is underway, as a practical matter, an ongoing review is likely to impede consummation of the transaction. The timing of reviews, particularly the pre-notification and acceptance periods, is becoming more uncertain. Moreover, notification may draw attention to a transaction of marginal interest that otherwise might pass unaffected, may impose burdensome requirements on parties to provide additional information to CFIUS, and may lead to pressure from U.S. government agencies to make changes in the transaction that might not be made in the absence of a request for clearance. On the other hand, if no notice is given, the parties may be at some disadvantage if the government initiates its own review, and the parties will be exposed to the fairly remote but indefinite risk that CFIUS might in the future review the transaction and the President impose conditions or order divestiture. The parties may also be more vulnerable to political criticism of the transaction and subject to the timing risk that the target, a rival bidder or another interested party may seek to generate controversy and demands for a CFIUS review at a late stage.

[1] Acquisitions by Entities Controlled by Foreign Governments

If a transaction that would result in control of a U.S. person by "a foreign government or an entity controlled by or acting on behalf of a foreign government" is notified, a second-stage 45-day investigation is presumptively required. [444] The 45-day investigation may, however, be waived if the Treasury Department and the agency leading the review make a specific determination at a senior level (Deputy Secretary or Secretary) that the transaction will not impair national security.

[2] Approvals Conditioned on Mitigation Agreements

CFIUS may enter into or impose (and enforce) "any agreement or condition" with any party to a transaction in order to mitigate any national security threat that arises in connection with the transaction, and CFIUS may refuse to

p. 9-121
p. 9-122

approve a transaction until a satisfactory agreement is in place. [445] Mitigation agreements have become increasingly prevalent in CFIUS reviews, particularly for transactions involving classified contracts or "critical infrastructure" sectors such as energy, telecommunications and transportation. Typical agreements might require a security plan, restrictions on foreign personnel, restrictions on locating assets outside the United States, reserving certain matters to U.S. management and reporting or cooperation obligations. In more difficult cases, a sensitive business may have to be segregated in a subsidiary with an independent board.

Senior officials of the CFIUS agencies may unilaterally reopen a transaction that had previously been approved if any party to the transaction or entity resulting from the deal "intentionally materially breaches a mitigation agreement or condition." [446] Such a breach must be certified by the lead agency monitoring the mitigation arrangement, and CFIUS must determine that there are "no other remedies or enforcement tools" available to address it. The agreements may also provide monetary penalties for breach.

[3] Exempted Transactions

Certain types of transactions are exempted from CFIUS review. The regulations specifically exempt from CFIUS review acquisitions of 10% or less of the outstanding voting interest in a U.S. business (regardless of the dollar value of the interest so acquired) if the transaction is "solely for the purpose of passive investment." [447] A transaction meets the passive criterion if the investor "does not plan or intend to exercise control, does not possess or develop any purpose other than passive investment, and does not take any action inconsistent with holding or acquiring [the interest] solely for purposes of passive investment." [448] It is important to note that this exemption does *not* create a "safe harbor" for investments of 10% or less–the key element for applying the exemption is passivity. Equally, exceeding the 10% benchmark does not create a presumption that an acquisition of control has taken place, although in controversial cases the likelihood of review increases significantly.

Also exempt from CFIUS review is the acquisition of assets in the United States that do not constitute a business in the United States at the time of the acquisition. [449] Thus, a foreign person will not be deemed to have acquired a U.S.

p. 9-122
p. 9-123

business if it acquires from separate and distinct U.S. persons the individual elements of a business such as inventory, real estate, production equipment or a license to manufacture a particular product. [450]

A lending transaction generally is exempt from CFIUS review because it is not considered a "transaction" except where "the foreign person acquires economic or governance rights in the U.S. business characteristic of an equity investment, but not of a loan." [451] Absent such a finding, typical loan covenants giving the lender negative rights over certain decisions of the borrower do not implicate CFIUS jurisdiction. However, a loan or other financing arrangement whereby the lender acquires an interest in profits, a right to appoint directors or other financial or governance rights characteristic of equity investments may constitute a covered transaction potentially subject to review. [452] Furthermore, a secured lending transaction may create a notifiable acquisition if the lender forecloses on collateral. The acquisition of collateral may only be notified for review when default is imminent, not at the time of the initial secured loan. [453]

Finally, an acquisition by the same foreign person of an additional interest in a U.S. business, where the foreign person's prior acquisition of an interest in the same entity was a covered transaction that underwent a complete CFIUS review following notification, is not a new covered transaction subject to review. [454] In other words, if an earlier transaction was found to be an acquisition of "control" and cleared, subsequent transactions need not be notified; however, if (as sometimes happens) a minority investment were found *not* to be an acquisition of control, future transactions would still be potentially subject to CFIUS review.

Footnotes

433 50 U.S.C. app. § 2170. The Exon-Florio Amendment was most recently amended by the Foreign Investment and National Security Act of 2007, Pub. L. No. 110-49, 121 Stat. 246 (hereinafter "FINSA"). In 2008, the Department of the Treasury extensively revised its regulations under the Exon-Florio Amendment to implement FINSA, 31 C.F.R. pt. 800, and issued guidance describing certain factors that the Committee on Foreign Investment in the United States ("CFIUS"), established under the Exon-Florio Amendment (and more fully described below), considers in assessing potential national security concerns. U.S. Department of the Treasury, Office of Investment Security; Guidance Concerning the National Security Review Conducted by the Committee on Foreign Investment in the United States, 73 Fed. Reg. 74,567 (Dec. 8, 2008).

Additional industry-specific reporting requirements apply to certain significant acquisitions of securities or assets (including acquisitions taking the form of business combinations). These most typically arise in regulated industries, such as telecommunications, television, radio, railroad, airline, banking and insurance. The particular requirements are beyond the scope of this book.

434 In addition, completed transactions not submitted to the voluntary review process described below are subject to divestiture following a post-closing review. 50 U.S.C. app. § 2170(d)(3).

435 A "foreign person" is defined to mean "any foreign national, foreign government or foreign entity" or "any entity over which control is exercised or exercisable by a foreign national, foreign government, or foreign entity." 31 C.F.R. § 800.216. As discussed below, "control" is a very broad concept.

436 A "U.S. business" is defined to include "any entity engaged in interstate commerce in the United States [regardless of the nationality of the persons that control it], but only to the extent of its activities in interstate commerce." 31 C.F.R. § 800.226. The definition thus includes not only U.S.-owned or -controlled corporations but also branches, subsidiaries, offices or operations owned by foreign interests doing business in the United States. A foreign entity that is owned by a U.S. entity and does not have a branch office, subsidiary or fixed place of business in the United States is not a U.S. business, even if it exports to the United States. However, a foreign corporation that is owned by foreign nationals and has a branch or subsidiary in the United States that engages in business in the United States would be, to the extent of its U.S. operations, a "U.S. business" for purposes of the Exon-Florio Amendment. Thus, mergers and acquisitions by non-U.S. entities taking place outside the United States are potentially subject to the Exon-Florio Amendment if either party has operations in the United States. In theory, as described below, a sale of assets (*e.g.*, licensing or sale of technology with no production facility) may not constitute a "business";

in practice, CFIUS has considerable discretion to make that determination.

437 The regulations implementing the Exon-Florio Amendment deliberately do not define "national security," allowing for considerable discretion in its interpretation. However, FINSA specifically clarified that homeland security, including its application to "critical infrastructure," is part of "national security," 50 U.S.C. app. § 2170(a)(5), with the regulations further defining critical infrastructure as "a system or asset, whether physical or virtual, so vital to the United States" that its incapacity or destruction "would have a debilitating impact on national security." 31 C.F.R. § 800.208. CFIUS engages in a two-stage assessment: "whether a foreign person has the capability or intention to exploit or cause harm (*i.e.*, whether there is a threat) and whether the nature of the U.S. business, or its relationship to a weakness or shortcoming in a system, entity, or structure, creates susceptibility to impairment of U.S. national security (*i.e.*, whether there is a vulnerability)." U.S. Department of the Treasury, Office of Investment Security; Guidance Concerning the National Security Review Conducted by the Committee on Foreign Investment in the United States, 73 Fed. Reg. 74,567, 74,569 (Dec 8, 2008). Many recent reviews have focused on transactions in industries deemed "critical infrastructure," including energy, telecommunications and transportation.

438 There is no bright line test for "control"; rather, it is evaluated on a case-by-case basis, considering the level of ownership interest, extent of rights and restrictions on them, and other circumstances, and it is defined in general terms as the power, direct or indirect, whether or not exercised, through a majority or dominant minority voting interest or other means, "to determine, direct, or decide important matters affecting an entity." 31 C.F.R. § 800.204(a). However, in practice CFIUS's analysis of "control" does not require anything close to *de jure* control and may be understood informally as "substantial influence." As a formal matter, the regulations identify a number of decision-making rights beyond equity ownership that factor into the analysis of control. 31 C.F.R. § 800.204(a). On the other hand, the regulations list certain minority shareholder protections that are not in themselves deemed to confer control and state that other minority shareholder protections will be considered on a case-by-case basis. 31 C.F.R. § 800.204(c)–(d). Where a number of different foreign persons hold an interest in a U.S. person (even if, taken together, they hold the majority of the stock), the question of whether any one foreign person or group controls the entity will be examined using factors such as whether the foreign persons are related or whether they act in concert. 31 C.F.R. § 800.204(b).

439 50 U.S.C. app. § 2170(d)(4).

440 50 U.S.C. app. § 2170(k)(1).

441 50 U.S.C. app. § 2170(b)(1). Voluntary notices can be withdrawn with the consent of CFIUS, but the relevant transactions are monitored and may be subject to "interim measures" imposed by CFIUS pending resubmission. 50 U.S.C. app. § 2170(b)(1)(C)(ii), (l)(2). CFIUS also retains the right to review in the future any acquisition not notified to it, and has in fact reviewed a number of non-notified transactions post-closing. 50 U.S.C. app. § 2170(b)(1)(D).

442 31 C.F.R. § 800.506(b).

443 50 U.S.C. app. § 2170(d)(2).

444 50 U.S.C. app. § 2170(b)(2)(B)(i)(II) (mandating an investigation); 50 U.S.C. app. § 2170(a)(4) (defining "foreign government-controlled transaction").

445 50 U.S.C. app. § 2170(l)(1)(A). The lead agency is charged with negotiating, modifying, monitoring and enforcing the mitigation agreement, and it must also report on any material modifications.

446 50 U.S.C. app. § 2170(b)(1)(D)(iii).

447 31 C.F.R. § 800.302(b).

448 31 C.F.R. § 800.223.

449 31 C.F.R. § 800.302(c).

450 Such investments in assets are distinguished from the acquisition of assets that are or could readily be operated as businesses (*e.g.*, branches or operational warehouse facilities that are not separate legal entities at the time of the acquisition)—such acquisitions can be subject to CFIUS review. 31 C.F.R. §

800.301(c).

451 73 Fed. Reg. 70,702, 70,710 (Nov. 21, 2008) (discussing 31 C.F.R. § 800.303(a)).

452 31 C.F.R. § 800.303(b).

453 31 C.F.R. § 800.303(a).

454 31 C.F.R. § 800.204(e).

U.S. Regulation of the International Securities and Derivatives Markets, § 9.08, COUNTRY- AND PERSON-SPECIFIC INVESTMENT SANCTIONS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 9.08 (11th and 12th Editions 2014-2017)

[1] Office of Foreign Assets Control Sanctions

While foreign investors in U.S. companies must consider the application of the Exon-Florio Amendment to such investments, all parties with a relationship to the United States must determine the relevance to their transactions and operations (including those located outside the United States) of U.S. economic

p. 9-124

sanctions administered by the Office of Foreign Assets Control ("OFAC") of the U.S. Department of the Treasury. [455] Through regulations (the "OFAC Regulations") issued under authority of the International Emergency Economic Powers Act [456] and other statutes, OFAC administers a range of complex sanctions programs that generally restrict persons acting within U.S. jurisdiction—including U.S. citizens and residents, entities formed under U.S. law (including their non-U.S. branches and, in some cases, non-U.S. entities controlled by such persons), any individual or entity located in the United States, and, importantly, foreign persons taking or causing actions within U.S. jurisdiction (including the supply of U.S. origin services, including U.S. dollar payment clearing)—from some or all dealings with: (i) governments (including government-controlled entities) of, or persons in, sanctioned countries or areas, [457] and (ii) certain individuals and entities ("*sanctioned persons*") specifically designated by OFAC as sanctions targets (as well as entities 50% or more owned by sanctioned persons in the aggregate). [458] While neither SEC registration nor operations in the United States (through a subsidiary or otherwise) require a non-U.S. company to comply globally with OFAC Regulations, as a practical matter they may both make it more likely that U.S. jurisdictional contact may exist (for example, services provided by a U.S. subsidiary that directly support potentially sanctioned activities) and make it more likely as a practical matter that any sanctions violations will come to the attention of the U.S. authorities and result in enforcement action.

In general, the broader OFAC Regulations restrict not only exports to and imports from sanctioned countries, but also equity investments in, business combinations with, sales of securities to and other financial transactions with any

p. 9-124

p. 9-125

government of, or person or entity based in, or controlled from, such a country. [459] Violation of OFAC regulations may result in substantial civil and criminal penalties, including imprisonment.

Of particular interest to non-U.S. SEC-reporting companies is the potential obligation to disclose business activities involving countries and persons subject to OFAC sanctions. In 2001, then-Acting SEC Chairman Laura Unger, confirming the SEC's policy requiring SEC reporting companies to disclose their material business activities involving sanctioned countries and persons, stated in a letter to a U.S. Congressman that "[t]he fact that a foreign company is doing material business with a country, government, or entity on OFAC's … sanctions list is, in the SEC staff's view, substantially likely to be significant to a reasonable investor's decision about whether to invest in that company." [460]

More recently, § 13(r) of the Exchange Act added a requirement for all companies issuing annual or quarterly reports under the Exchange Act to specifically disclose certain Iran-related dealings either by the issuer or by any of the issuer's affiliates. [461] Most important, the issuer must disclose any dealings by it or any of its affiliates with any entity controlled by the Iranian government or any entity subject to U.S. sanctions in connection with terrorism or weapons of mass destruction (which includes many major Iranian institutions), as well as certain activities subject to secondary sanctions (see below). Any disclosable activity must be described in detail, including the nature and extent of the activity, gross revenues and net profits associated with the activity, and whether the issuer intends to continue the activity.

[2] Sectoral Sanctions

p. 9-125
p. 9-126

OFAC also administers targeted financial and economic sanctions on designated entities in the Russian financial, energy and defense sectors, known as sectoral sanctions. The U.S. Treasury Department issued four directives on July 16, 2014 and September 12, 2014 that identified the Russian financial, energy and defense sectors for sanctions pursuant to Executive Order 13662. [462] Pursuant to sectoral sanctions, specifically designated entities within the identified sectors (not all entities) are subject to limited sanctions that do not prohibit all dealings with the listed entities ("SSIL Targets") but instead target certain new equity, long-term debt, and oil development transactions.

As with other U.S.-sanctioned persons, all entities 50% or more owned by SSIL Targets are SSIL Targets themselves and are subject to the same restrictions applicable to their parent entities. Principles of aggregation and attribution of ownership interests likewise apply. The SEC has not taken a public position regarding whether material dealings that would be prohibited by sectoral sanctions were they conducted within U.S. jurisdiction should be disclosed, but issuers may wish to consider the possibility.

[3] Secondary Sanctions

In recent years, the United States has increasingly used sanctions regimes that may be triggered by acts entirely outside U.S. jurisdiction. These "secondary sanctions" do not technically involve violations of U.S. law; rather, the United States has authority to impose U.S. economic sanctions on persons (domestic or foreign) that engage in the targeted activities.

Under most of these secondary sanctions, which are administered primarily by the State Department and, to a lesser extent, by the Treasury Department, the United States has the authority to impose a variety of sanctions on persons engaging in the targeted conduct, ranging from fairly minor (such as disqualification from U.S. export assistance) to severe (designation as a blocked person, or "SDN," subject to full U.S. sanctions freezing all property and barring all transactions within U.S. jurisdiction). Secondary sanctions do not apply automatically once sanctionable conduct becomes known; further administrative action to designate the relevant parties is required, and as a practical matter the decision to impose sanctions is more political than enforcement of OFAC sanctions.

p. 9-126
p. 9-127

The full range of targeted conduct and the corresponding sanctions available is extensive and complex, and a full inventory is beyond the scope of this chapter. To summarize briefly, prior to "Implementation Day" of the Joint Comprehensive Plan of Action ("JCPOA") between Iran and the P5+1 powers, secondary sanctions targeted a wide range of dealings with Iran, focusing particularly on the energy and financial sectors. [463] However, as a result of the JCPOA, the majority of U.S. secondary sanctions against Iran were lifted, other than those targeting dealings with the remaining U.S.-designated SDNs, nuclear proliferation, and terrorism. [464] Secondary sanctions also continue to apply to "deceptive transactions" with Iran or Syria designed to conceal the interest of U.S. sanctioned persons as well as to transactions linked to ongoing human rights violations in Iran and Syria, "trafficking" in expropriated Cuban property to which a U.S. person has a claim, financial transactions with Hizballah, persons violating U.S. sanctions but evading prosecution, and a variety of arms proliferation activities. [465] There are secondary sanctions that target persons involved in the destabilization of Ukraine, but the United States has indicated that it does not currently intend to enforce them. [466]

Footnotes

455 31 C.F.R. pts. 500–599. At present, the OFAC regime prohibits U.S. persons from certain dealings (to a greater or lesser extent) related to: (i) Cuba, (ii) Iran, (iii) Sudan, (iv) Syria, (v) Burma (Myanmar) and (vi) North Korea, as well as specified individuals and organizations (and entities 50% or more owned or, in some cases, controlled by sanctioned persons in other jurisdictions (including, but not limited to, Belarus, Russia and Ukraine, and Zimbabwe) or with no fixed jurisdiction).

456 International Emergency Economic Powers Act, Pub. L. No. 95–223, 91 Stat. 1625 (1977) (codified as amended at 50 U.S.C. §§ 1701-07).

457 *See*, *e.g.*, 31 C.F.R. § 515.201(d) (prohibiting persons subject to the jurisdiction of the United States from dealing with Cuba). As of the date of publication, the countries subject to territorial restrictions include Crimea, Cuba, Iran, North Korea, Sudan and Syria.

458 The lists of sanctioned persons change frequently and may be found on the OFAC website at https://sanctionssearch.ofac.treas.gov. The lists are often referred to as the "SDN List" (for the list of specially designated nationals and blocked persons, or "SDNs"), though technically there are now several lists subject to varying restrictions. The persons designated are not necessarily located in or even related to countries that are the subject of OFAC sanctions programs. For example, the lists include individuals and entities designated under various activity-based OFAC programs as, *inter alia*, "specially designated global terrorists," "foreign terrorist organizations," "specially designated narcotics traffickers" and proliferators of weapons of mass destruction.

459 *See*, *e.g.*, 31 C.F.R. § 515.570. The full range of the sanctions regimes described in this § 9.08 is beyond the scope of this book. Given the substantial penalties that may be imposed under them, however, U.S. persons contemplating investments, business combinations or other transactions in or involving nationals of any sanctioned country or area, or any sanctioned person (whether designated under a country- or activity-based program), should carefully evaluate their potential applicability in advance.

460 Letter from Laura Unger, Acting SEC Chairman, to Rep. Frank Wolf (May 8, 2001). In 2007, the SEC briefly implemented a "web tool" that would allow investors to directly pull information about a public company's dealings with certain sanctioned countries from its SEC disclosures. Press Release, SEC, SEC Adds Software Tool for Investors Seeking Information on Companies' Activities in Countries Known to Sponsor Terrorism (June 25, 2007). After criticism regarding, among other issues, the tool's lack of access to updated information, the SEC temporarily suspended the tool and issued a concept release requesting comment on how best to provide investors access to information about companies' dealings with sanctioned countries. Press Release, SEC, Statement by SEC Chairman Christopher Cox Concerning Companies' Activities in Countries Known to Sponsor Terrorism (July 20, 2007); SEC Release No. 33–8860 (Nov. 16, 2007).

p. 10-3

Chapter 10 describes the practical issues encountered in certain common or challenging types of cross-border securities offerings, particularly those involving non-U.S. issuers. The key underlying legal concerns are discussed in other chapters: Chapter 3 for the regulatory regime applicable to a foreign private issuer making a registered offering (the U.S. public market), and Chapters 7 and 8 for the rules applicable to offerings exempt from registration (the private and offshore markets). [1]

Continuous offering programs provide flexibility for issuers to offer various types of securities in various forms of transactions. These programs allow issuers to take advantage of market opportunities as they arise by tailoring the terms of the securities offered to the needs of the issuer or the demands of potential purchasers identified by the dealers. The following forms of continuous offering programs are discussed in this section: at-the-market equity offerings; and debt issuance programs, including medium-term note ("MTN") programs, Euro Commercial Paper ("ECP") programs and warrants. With respect to continuous offerings of securities to investors in the United States, an issuer may register such a program on a shelf registration statement to the extent it is eligible to register securities for primary issuance on Form S-3 or F-3 (the procedures and process of which are discussed in Chapter 2), or conduct such offerings in reliance on an exemption from the registration requirements of the Securities Act (such as so-called "Reg S/144A programs" or "Reg S only" programs).

[1] At-the-Market Equity Offerings

[a] Overview

Equity "dribble-out" programs, also known as equity distribution "programs" or "arrangements," [2] involve sales by an issuer, from time to time on a continuing basis, of equity securities at market prices through an agent (typically an investment bank acting in that capacity). Offers and sales made pursuant to these programs must comply with the provisions of Rule 415(a)(4) under the Securities Act, which governs at-the-market offerings and limits them to companies eligible to use Form S-3 or Form F-3 to offer securities on their own

p. 10-4

behalf. [3] Other regulatory concerns will generally limit participation in equity distribution programs to issuers with a public market float of $150 million or more. [4]

For eligible issuers, equity distribution programs offer certain advantages over traditional fixed-price underwritten equity offerings. Most importantly, equity distribution programs offer significant flexibility by giving an issuer the right to ask the agent to make sales under the program from time to time without obligating the issuer to sell at any other time. This allows the issuer to control the amount and timing of each drawdown, and also enables it to set a minimum sales price. In addition, using an equity distribution program may help an issuer minimize disruptions to its share price by curtailing the market impact of sales under the program, since large blocks of stock need not be sold at any one time and the issuer need not offer a discount to the stock's market price in connection with those sales. [5] Accordingly, by making sales pursuant to an equity distribution program, the issuer can opportunistically take advantage of stock price movements (so long as it does not possess material non-public information). Such offerings also may be attractive because of the potentially lower risk of perceived failure if the issuer is unable to sell all of the securities it has registered (thereby avoiding the detrimental market impact of announcing a transaction that then falls short).

The at-the-market offering structure is not new, but was developed long after the Securities Act was first adopted. Indeed, prior to the adoption of Rule 415 under the Securities Act in 1982, continuous offerings of equity securities on a primary basis were not permitted. [6] As a result of subsequent amendments to rules under the Securities Act over time, however, such offerings are now relatively commonplace. [7]

p. 10-4

p. 10-5

Historically, certain categories of issuers, particularly those with predictable but significant capital requirements, have used at-the-market offerings more frequently than other issuers. [8] These programs frequently involved sales of only small volumes of equity at any one time, which generally made them less attractive to larger, well-capitalized issuers. [9] More recently, however, equity distribution programs—while still used frequently by issuers with ongoing capital needs, such as utility, mining and energy companies—have also become attractive to other U.S. and non-U.S. issuers, particularly in times of significant volatility in the global equities trading markets. Programs have ranged in size up to as large as $1.5 billion with the time required to complete sales under each program varying widely and, in some cases, measured in days rather than weeks or months.

[b] Documentation and Process

The documentation used in an at-the-market offering of equity securities, which is discussed in more detail below, is in many respects similar to that used in a standard fixed-price underwritten offering. The primary documents include a shelf registration statement, a related prospectus and a sales agency/distribution agreement, [10] as well as various supporting documents from accountants, lawyers and other parties. The offering process, however, varies from the

p. 10-5

p. 10-6

paradigm of a standard underwritten offering in certain respects due to the continuing nature of the offering process, which requires (among other things) the issuer to keep its registration statement and prospectus up to date and the agent to continually update its "due diligence" procedures with respect to the issuer.

Corporate Authorization. The issuer must have in place all necessary corporate authorizations to permit sales to be made under the program on an episodic basis. In the United States, corporate governance and other state law requirements relating to equity issuance may, however, in some cases create additional complexities. Under the laws of some jurisdictions, for example, the issuer's board of directors (or a committee thereof) might be required to authorize each separate equity issuance. [11] While it should generally be possible to address these concerns (for example in the instance above, by establishing a pricing committee whose members can act independently to approve sales on any particular day and an appropriate process by which that approval can be given as needed), it is important to bear in mind that such complexities may arise. In jurisdictions outside the United States, it will be necessary to address local law considerations, such as the existence of preemptive rights.

Shelf Registration Statement. In order for an issuer to proceed with an at-the-market equity offering, the offering must come within Rule 415(a)(1)(x) under the Securities Act, [12] meaning that the issuer must have registered the equity securities in question on a shelf registration statement on Form F-3 or Form S-3. Frequently, particularly in the case of companies with larger market capitalizations, the issuer will already have a shelf registration statement on file.

p. 10-6

p. 10-7

If that is not the case, however, or if the issuer's existing shelf does not contemplate the issuance of common stock, the issuer must file a shelf registration statement in connection with the at-the-market offering. [13] If the issuer intends to use an existing shelf registration statement, the plan of distribution included in the prospectus that is part of the registration statement need not specify that it can be used for at-the-market offerings as, pursuant to Rule 430B, the issuer can amend that plan of distribution simply using a prospectus supplement and without the need to file a post-effective amendment to the registration statement. [14]

Prospectus. The shelf registration statement described above will include a prospectus setting out the terms of the securities and the means by which they can be offered. In many cases, this will be a base prospectus that sets forth such information in only general terms. If so, the base prospectus will need to be accompanied by a prospectus supplement providing additional detail about the at-the-market offering. [15] If an issuer files a registration statement solely in connection with the at-the-market offering, however, the prospectus may "stand alone" without the need for a prospectus supplement.

In either case, the prospectus will need to contain detailed information about the at-the-market offering, including in particular the maximum number of shares to be sold, and the identities of the designated sales agent or agents under the equity distribution program. [16] The issuer will be able to amend the plan of distribution in the prospectus at any time while sales under the program are ongoing by means of a prospectus supplement (meaning, for example, the issuer can add or remove agents, or provide for the sale of securities registered for sale under the program *via* a firm commitment underwriting, without filing a

post-effective amendment to the registration statement). [17] The prospectus will also incorporate by reference the issuer's Exchange Act filings and must be kept up to date to ensure it is current each time the issuer sells shares under the program. Both Form F-3 and Form S-3 permit filings to be incorporated by reference to Exchange Act filings, including on Form 6-K [18] (for foreign private issuers) and Form 8-K (for U.S. issuers).

When making purchases under an equity distribution program, investors should have the same information they would have in any other offering registered under the Securities Act. Rule 159 under the Securities Act makes clear that § 12(a)(2) of the Securities Act requires an assessment of the information that has been conveyed to investors at the time of sale in determining any potential liability thereunder, and specifies that information conveyed after that time should not be taken into account. Insofar as sales under an equity distribution program take place over a securities exchange or alternative trading system, neither the issuer nor the sales agent will have any direct communication with investors. Accordingly, such information must be provided by means of public dissemination into the market from time to time, including filings on Forms 6-K and 8-K. The amount of time prudentially required between the initial dissemination of any such information and subsequent sales under the program will depend on various factors, including the materiality of any particular development and the liquidity of the market for the issuer's securities.

Sales Agency/Distribution Agreement. In connection with commencement of an equity distribution program, the issuer will enter into a sales agency/distribution agreement with one or more broker-dealers who will act as agents for the shares being sold under the program. [19] Under the terms of that agreement, on each trading day (or as otherwise specified in the agreement) the issuer will identify to an agent the number of shares that it would like the agent to sell on its behalf on that day. The issuer may also choose to specify a minimum sales price or otherwise limit the agent's discretion to make sales. The agent will then attempt to sell those shares to purchasers generally on a best efforts, agency basis. [20] The issuer will pay the agent a commission with respect to the shares it

sells (generally up to 2–3% of the purchase price). In addition, the agreement will generally provide that the agent can act as a principal on a firm commitment basis for sales, subject to agreeing to the terms of that sale in a separate terms agreement (and the issuer filing a prospectus supplement describing that change to the Plan of Distribution).

Many of the other provisions of a sales agency/distribution agreement are generally similar to those in a standard underwriting agreement. [21] This is in part because, as noted above, the agent will be considered an "underwriter" for purposes of the Securities Act and will want to obtain the same protections that an underwriter would typically receive. These provisions, including the delivery of accountants' comfort letters and opinions of counsel (including Rule 10b-5 negative assurance letters), will assist the agent in establishing a due diligence defense under the Securities Act. Certain provisions of the sales agency/distribution agreement will, however, differ from those in a traditional underwriting agreement. The most significant difference relates to the sales agent's need to update its due diligence on an ongoing basis so long as sales continue under the program.

The terms of the sales agency/distribution agreement will typically require issuers to provide bring-down accountants comfort letters and opinions of counsel (including Rule 10b-5 negative assurance letters) on a quarterly basis in connection with the filings of the issuer's Form 10-Qs and Form 10-K (or, for foreign private issuers, the filings of the issuer's Form 20-F and possibly any Form 6-Ks that contain interim financial statements), although at least some programs require that agent's counsel provide these only at launch, and not on an ongoing basis. The issuer also will be deemed to repeat its representations and warranties in connection with each takedown, and be required to provide bring-down officers' certificates and to make management available for due diligence discussions on at least a quarterly basis. In practice, issuers are generally asked to provide bring-down officers' certificates more frequently, and, depending on the level of program activity, to make available one or more members of senior management for bring-down due diligence calls on a weekly or bi-weekly basis. These additional steps will typically be agreed between the agent and the issuer when they are setting up the program, but they may not be set forth in detail in the sales agency/distribution agreement. The agreement generally will also provide that the agent has the right to require the issuer to produce comfort letters, opinions, certificates and such other information as it may need for due diligence purposes upon reasonable request. Such a request might, for example, be made in connection with material developments involving the company, its

p. 10-9

p. 10-10

operations or the industry in which it operates, a large sale under the program, or a resumption of sales under the program following a temporary hiatus.

Sales agency/distribution agreements also generally do not include lock-up provisions that would bind the company, directors or officers, given the continuing nature and potentially lengthy duration of the offering. Instead, the company will typically be required to notify the agent some period of time, usually three to five business days, before engaging in transactions in respect of its equity securities, [22] and the agreement will not impose any restrictions on directors or officers. [23] Accordingly, issuers will be able to engage in ordinary-course activity while a program is ongoing, but the notification provision will protect the agent from being surprised by unanticipated issuances or purchases.

A third difference between traditional underwriting agreements (at least with U.S. domestic issuers) and equity sales agency/distribution agreements relates to the payment of expenses. Issuers have, in many instances, agreed to pay at least a portion of the agent's expenses, including legal fees (both in connection with launching the program and, to the extent required, for ongoing work relating to it), particularly if the agreement is terminated by the issuer before all or some portion of the securities registered under the program are sold; such reimbursements are, however, frequently subject to a cap or range.

Public Announcements. Issuers typically announce the launch of an equity distribution program *via* press release, largely we believe because they view it as important to advise the market of their ability to raise additional capital through the program. In addition, issuers will often want to provide the market a short but easily understood explanation of the program concurrently with the filing of the program prospectus with the SEC. These press releases typically are drafted to comply with Rule 134 under the Securities Act, so they will not constitute free writing prospectuses. [24] During the life of the program, the issuer will typically

p. 10-10

p. 10-11

rely on the information included in, in the case of foreign private issuers, its Form 20-F and possibly Form 6-K filings (or, in the case of U.S. issuers, its Form 10-K, Form 10-Q and any Form 8-K filings), together with any prospectus supplements filed to update the prospectus, to advise investors of the status of the program. [25]

Marketing. Equity distribution programs generally will not involve any special marketing efforts resembling those used in a traditional underwritten offering. There are three principal reasons for this. First, both agents and issuers will want to avoid engaging in special marketing efforts as part of minimizing the possibility that the offering would be considered a distribution for purposes of Regulation M under the Exchange Act. [26] Second, as sales under the program often take place in transactions between broker-dealers on an exchange or through an alternative trading facility, the utility of any such marketing efforts is likely minimal. Finally, as discussed in more detail below, publicity in connection with a registered offering is generally subject to significant restrictions, and it would be potentially burdensome for an issuer to constantly review any proposed marketing materials in addition to otherwise monitoring communications to ensure compliance with the securities laws.

Sales Orders. Once the program has commenced, the issuer will advise the agent from time to time when it would like the agent to sell securities on the issuer's behalf. These sales orders are typically given orally (subject to prompt confirmation via e-mail). The issuer will dictate the timing, frequency and, to a limited extent, the terms of sales under the program. [27] Certain limitations may also be imposed by the relevant board authorization (*e.g.*, a mandated minimum sales price). Issuers can change the terms of future sales at any time, or revoke a previously given authorization to sell (at least to the extent such sales have not yet taken place).

Settlement. After the close of trading on each day equity securities are sold, the agent will generally be required to advise the issuer how many shares have

p. 10-11
p. 10-12

been sold, the gross and net proceeds to the issuer relating to such sales, and the compensation payable to the agent in connection therewith. [28] Settlement will typically occur on a T+3 basis, with shares delivered on the settlement date against payment therefor by the agent. Although similar in many respects to settlement in a traditional underwritten offering, the mechanics for an equity distribution program vary in certain respects. For example, since sales are being made on a continuing basis, the company's transfer agent likely will not receive on each settlement date the documents it might typically receive in a traditional underwritten offering, such as an opinion of counsel as to the validity of the securities being issued. In order to ensure that everything will flow smoothly at settlement, the transfer agent should be brought into the equity program process as early as possible.

[c] Issues of Particular Interest to Issuers and Agents

Continuing at-the-market equity offerings present a number of legal and practical concerns for both issuers and agents. Most of these arise simply because the issuer is selling securities on a continuing basis, which requires the disclosure in its prospectus to be constantly monitored and updated as necessary. Questions also arise, however, as to whether sales under a program will constitute a "distribution" of securities for purposes of Regulation M under the Exchange Act (and, if so, the extent to which that might impose limitations on the activities of both agents and issuers). Some of the principal issues of note are discussed in detail below.

Due Diligence and Updating. Both the issuer and the agent will need to ensure that the prospectus at the time of sale is current. If at any time the issuer possesses material non-public information, it must either suspend use of the program or update the prospectus and the marketplace by filing information with the SEC to keep the program prospectus current. [29] Updates may also be required for the shelf registration statement to comply with the disclosure requirements of Form F-3 or S-3 (*e.g.*, if the financial statements included or incorporated by reference in the registration statement are not current). [30] Accordingly, the issuer will

p. 10-12
p. 10-13

need to consider carefully on any day it decides to sell securities whether its existing public disclosure is complete and accurate in all material respects. [31] In some cases, this may require the issuer to accelerate filings of its Form 6-Ks or Form 8-Ks—although the requirements of the form itself may permit an issuer several days to make a particular filing, the program prospectus will nonetheless be deficient if the information is material and the filing has not yet been made.

Disclosure of Proceeds. Issuers participating in equity distribution programs have generally taken steps to update the market regarding the number of shares they have sold and the proceeds generated from those sales on a periodic basis, generally by providing updated information in each annual or quarterly periodic report filing made after commencement of a program until either all the securities registered for sale have been sold or the program has been terminated. So long as there is no change in what the proceeds will be used for from what is described in the prospectus supplement for the program—typically, for general corporate purposes—no further prospectus supplement regarding proceeds need be filed.

Prospectus Delivery. Insofar as sales under an equity distribution program are made in compliance with Rule 153 under the Securities Act, [32] neither the issuer nor the agent will be required to deliver a physical or electronic prospectus to investors in connection with those sales for purposes of § 5(b)(2) of the Securities Act. Rule 153 provides that a prospectus is deemed to have been delivered for those purposes with respect to any transaction taking place on a national securities exchange (or facility thereof), a trading facility of a national securities association or on an alternative trading system, so long as (i) securities of the same class as those that are the subject of the transaction in question are trading on that exchange, facility or system, (ii) a registration statement relating to the offering is effective and (iii) the issuer has filed or will file a prospectus satisfying the requirements of § 10(a) of the Securities Act with the SEC.

p. 10-13
p. 10-14

Regulation M and Other Distribution-Related Concerns. Regulation M strictly prohibits stabilization activities during an at-the-market offering. [33] Accordingly, neither the issuer nor the agent may engage in any stabilizing activities with respect to the shares being sold pursuant to a sales agency/distribution agreement. Regulation M similarly prohibits passive market-making on Nasdaq during an at-the-market offering. [34]

The agent and issuer may in some cases also face additional restrictions on their respective activities when sales are taking place under an equity distribution program. The question to be considered is whether a "distribution" of the equity securities in question is taking place for purposes of Regulation M. In considering shelf registration generally, the SEC has indicated participants must individually examine each shelf takedown to determine whether it is a distribution (*i.e.*, whether it satisfies the "magnitude of the offering" and "special selling efforts and selling methods" criteria of a distribution). The SEC has indicated that ordinary trading transactions into an independent market, which do not involve special selling efforts, generally will not be considered a "distribution." [35] If, however, an agent enters into an agreement with an issuer that provides for "unusual transaction-based" compensation, that may suggest a distribution is occurring even if the sales are being made in ordinary trading transactions. [36] Accordingly, while parties to any particular equity distribution program might reasonably conclude that sales thereunder do not constitute a distribution, in other cases (particularly programs involving a large volume of stock or commissions higher than those for ordinary secondary market transactions) a

p. 10-14
p. 10-15

distribution could be deemed to be taking place. A cautious agent might accordingly choose to treat any reasonably active ongoing equity distribution program as a distribution for purposes of Regulation M, even if that approach were overly restrictive, simply to avoid a case-by-case analysis of the question.

If a distribution is deemed to be taking place, as noted above, that will affect certain activities of the agent and issuer. Rules 101 and 102 of Regulation M generally prohibit any participant in a distribution from bidding for, purchasing or attempting to induce any person to purchase a "covered security" during the restricted period applicable to the offering. In most cases for issuers participating in an equity distribution program that restricted period will likely be only one business day prior to pricing. However, given the nature of the at-the-market program—which provides for sales potentially every day—if an agent is required to comply with Rule 101, it would be essentially precluded from trading the securities in question so long as the program was ongoing, unless the issuer were to agree to provide the agents advance notice of an offering equal to the applicable restricted period. [37]

Most equity distribution programs are structured to avoid this potential concern by requiring the issuer to represent its equity securities fall within the exception for actively-traded securities set forth in Rule 101(c)(1) of Regulation M (this exemption applies to distribution participants such as underwriters, but not to issuers). That exemption requires the securities to have an average daily trading value ("ADTV")—essentially, the worldwide ADTV over a recent 60-day period—of at least $1 million and the issuer to have a "public float value"—

essentially, the value of the company's equity securities held by non-affiliates—of at least $150 million. [38] The sales agency/distribution agreement

p. 10-15
p. 10-16

will also typically contain a mutual covenant providing that if either party believes the issuer is no longer eligible for the exemption, it will promptly notify the other party and suspend sales under the program. Because the ADTV exemption will generally be available, the activities of the agent should not be unduly constrained by Regulation M while program sales are ongoing, whether or not such sales would be deemed a distribution.

Issuers, however, will face more significant restraints on their activities. Rule 102 of Regulation M, which applies to the issuer in a distribution, is generally more restrictive than Rule 101, and would limit in certain respects the ability of an issuer to engage in transactions involving the securities that were the subject of the equity distribution program. An issuer would not, however, be precluded from market activities relating to certain other equity securities. For example, nothing in Regulation M would prohibit an issuer from repurchasing convertible debt securities while sales of the underlying common stock were taking place pursuant to an equity distribution program, as those convertible debt securities would be neither a "covered security" nor a "reference security" for purposes of Regulation M. Similarly, an issuer may be able to engage in other, separate distributions of its equity securities at the same time it is making sales under the program, although confirming this may require consideration of the relevant facts and circumstances. [39]

Research Publication. If an agent (or any of its affiliates) distributes research about an issuer while the issuer's equity distribution program is ongoing, it must abide by the Securities Act restrictions governing distribution of research by underwriters during a registered securities offering. As a practical matter, in the case of an equity distribution program, the agent and its affiliates will generally be permitted to continue publishing equity research pursuant to the exemption provided by Rule 139(a) under the Securities Act, as that safe harbor

p. 10-16
p. 10-17

largely depends on whether the issuer is a seasoned Exchange Act reporting company (*i.e.*, eligible to use Form S-3 or Form F-3 in a primary offering), which must be the case for issuers with equity distribution programs. Whether the other requirements of Rule 139(a) are met will depend on the extent of the agent's prior research-related activities involving the issuer. [40] Rule 139(a) research reports need not be limited as to content. [41]

In addition, irrespective of the availability of Rule 139, many investment banks internally impose prudential restrictions on the issuance of research about an issuer when involved in an ongoing distribution of that issuer's securities. [42]

p. 10-17
p. 10-18

Conflict Clearance and Other Internal Procedures of the Agent. Any agent participating in an equity distribution program will need to consider how best to address any conflicts of interest that it may have or that may arise while the program is ongoing. Such conflicts could, for example, arise in connection with other securities offerings by the issuer, or if the agent acts as an advisor to the issuer or another party in connection with a merger or other strategic transaction.

Publicity. Because any equity distribution program will involve a continuing offering of securities registered for sale with the SEC, the issuer and the agent will need to observe publicity guidelines of the sort that would be appropriate for any other registered offering while the program is ongoing. In particular, they usually will take appropriate steps to ensure they are not conditioning the market, and cannot engage in unusual publicity activities that might be deemed an "offer" of securities under the program, because that could result in related written materials (such as press releases or articles) being deemed a prospectus, trigger a requirement to file a free writing prospectus with the SEC and impose liability on the contents of the free writing prospectus. Reporting issuers of the sort that will be able to use an equity distribution program should, however, be able to take full advantage of the publicity safe harbors available under the Securities Act, particularly the ones provided by Rule 168 for regularly released factual business information and forward-looking information and by Rule 134 with respect to certain limited information about the offering. [43]

FINRA and Other Regulatory Concerns. Even though equity distribution programs involve securities registered for sale on Form F-3 or Form S-3 by issuers with a public float of at least $150 million, if the issuer in question has an Exchange Act reporting history of less than 36 months, the agent and issuer may be required to file the equity distribution program for clearance by FINRA, even if the issuer is a well-known seasoned issuer, unless it is also an issuer of investment-grade long-term debt. [44] This will also be the case if the issuer has a public float of less than $150 million, as FINRA Rule 5110(b)(7)(C) currently requires that issuers must comply with the requirements of Form S-3 or Form F-3

p. 10-18
p. 10-19

applicable to primary offerings by registrants as in effect prior to October 21, 1992 in order to be exempt from FINRA filing requirements.

Since offerings under equity distribution programs will generally involve securities that are listed on a U.S. national securities exchange, U.S. state "blue sky" laws relating to state registration and review should be preempted. [45]

Specific Concerns for Foreign Private Issuers. As noted above, several foreign private issuers have entered into equity distribution programs. From a U.S. securities law perspective, such issuers face concerns generally similar to those faced by domestic U.S. issuers, as the rules applicable to continuous at-the-market offerings are generally the same in both cases. In considering issues relating to Regulation M, an agent may rely on the trading of the foreign private issuer's common equity securities outside the United States in determining whether that issuer meets the ADTV and public float value tests under Rule 101. [46]

Foreign private issuers may, however, face additional challenges with respect to some of the other, more procedural aspects of an equity distribution program. For example, in the case of an issuer whose U.S.-traded equity securities consist of American Depositary Shares rather than the underlying equity securities, on each settlement date the issuer will be required to issue shares, deposit those shares with a depositary and then cause the depositary to credit the agent so that the agent can credit the purchasers. Therefore, a foreign private issuer's ADR depositary will need to be involved in establishing and administering an equity distribution program. Furthermore, the corporate approvals required in the issuer's local jurisdiction to permit equity securities to be sold in a series of transactions at varying prices over a potentially lengthy period of time may differ from those typically required under U.S. state law.

[2] Debt Issuance Programs

Continuous offerings include debt issuance programs, such as medium-term note programs, commercial paper programs and warrant offerings. Registered debt issuance programs may be established under the shelf registration rules, and commercial paper programs may be set up to comply with the exemption from the registration requirements pursuant to § 3(a)(3) of the Securities Act. Unregistered debt issuance programs may be established pursuant to the exemptions provided under Regulation S, with respect to sales of securities issued under the program outside the United States, and Rule 144A, which would allow

p. 10-19
p. 10-20

offerings and sales of securities issued under the program to qualified institutional buyers in the United States.

[a] MTN Programs

A medium-term note or "MTN" program is an uncommitted arrangement between an issuer and one or more dealers for the issuance from time to time of notes with varying terms. Under the program, the dealers purchase notes from the issuer, if and when agreed, or they solicit purchasers of notes as agents for the issuer. Flexibility is crucial because the purpose of an MTN program is to take advantage of market opportunities as they arise by tailoring the terms of the notes to the needs of the issuer or the demands of potential purchasers identified by the dealers. Accordingly, the terms of the notes may vary as to maturity (typically from nine months or one year to 30 or more years), interest rate basis (fixed or floating), currency (U.S. dollar or foreign) and other matters.

The special feature of an MTN program is not the type of security that may be issued under the program, but its uncommitted nature. Because the purpose of these programs is to take advantage of market opportunities, they establish a framework under which securities can be issued rapidly in accordance with predetermined conditions. The period between an agreement to issue under a program and closing of an issuance is generally two to five business days. In establishing a program, neither the issuer nor any of the dealers commit in advance to a particular issuance or issuances or purchase of any particular securities, but having a framework in place facilitates prompt access to the market. This makes MTN programs, like commercial paper programs for shorter maturities, an attractive approach to raising capital.

For MTN programs, the requirements of Regulation S or Rule 144A apply to each tranche of an MTN program in the same way that they apply to standard underwritten offerings of debt securities, except that the distribution compliance period requirement under Regulation S is applied differently. Section 4(a)(3) of the Securities Act and the requirements of the Tax Equity and Fiscal Responsibility Act of 1982 ("TEFRA") also apply to each tranche in the same way that they apply to standard underwritten offerings of debt securities.

In a Category 1 MTN program, where there is no distribution compliance period requirement, U.S. sales restrictions will apply only to unsold allotments (although the dealer exemption in § 4(a)(3) of the Securities Act will not be available for resales in the United States for 40 days after closing). In a program that falls into Category 2 or Category 3 of Regulation S, the distribution compliance period is applied to each "identifiable tranche" separately, and it begins not at the closing date but upon the completion of the distribution of the securities comprising the tranche in question. Because of the uncommitted nature of

p. 10-20
p. 10-21

MTN programs, it can be expected that the distribution will in most cases be completed immediately.

For a Rule 144A MTN program, issuers and dealers must comply with the requirements and procedures of Rule 144A as they would apply to a standard underwritten offering, including eligibility of securities for resale pursuant to Rule 144A and information delivery requirements. Securities issued under MTN programs and sold in reliance on Rule 144A are restricted securities under the Securities Act for purposes of resales in the United States, although resales may be made outside the United States in reliance on Regulation S.

[b] ECP Programs

Euro-commercial paper, or "ECP," programs are similar in structure to MTN programs but provide for the issuance of notes with maturities of 365 days or less. The rules for ECP programs are in general the same as for MTN programs, although the TEFRA restrictions generally do not apply. However, notes of U.S. issuers with maturities of greater than 183 days are subject to the certification requirements imposed under the "portfolio interest" rules. Because certification is inconsistent with practice in the ECP market, U.S. issuers generally limit the maturities of their ECP to 183 days or less. U.S. companies that fall within Category 3 of Regulation S and issue ECP without the benefit of a guarantee by a parent falling into Category 1 or 2 of Regulation S generally arrange for their programs to be exempt from the registration requirements of the Securities Act other than under Regulation S, for example under § 3(a)(3) or § 4(a)(2) of the Securities Act, because the applicable safe harbor under Regulation S would require certification. An issuer may also arrange for its ECP programs to comply with § 3(a)(3) or § 4(a)(2) of the Securities Act, or Rule 144A, in order to allow for offers and sales of ECP in the United States without the requirement to register the securities under the Securities Act.

[3] Warrants

Warrant offerings are viewed as continuous offerings of the underlying securities, as well as offerings of the warrants themselves. As with other securities, warrants and the underlying securities may be offered and sold outside the United States in reliance on Regulation S and inside the United States pursuant to an effective registration statement or an exemption from the registration requirements of the Securities Act, such as in reliance on the exemption provided by § 4(a)(2) of the Securities Act and/or the resale exemption provided by Rule 144A thereunder.

[a] Warrant Offerings Under Regulation S

p. 10-21
p. 10-22

Generally, the category of an offering of warrants for securities under Regulation S will be the same as that of the underlying securities, although it would be prudent to treat the warrants themselves as a debt security of the issuer of the warrants if such treatment would result in the offering falling into a more restrictive category, even when the warrants provide for the possibility of physical settlement. The length of the distribution compliance period, if any, and the procedures required to exercise the warrants will depend on the kind of underlying securities to be issued upon exercise of the warrants and the category of the offering.

In the case of warrants (i) for securities of the issuer of the warrants, (ii) for securities of a company that is an affiliate of the issuer of the warrants or (iii) for securities the offer and sale of which are not otherwise exempt from the registration requirements of the Securities Act, the distribution compliance period, if any, for the underlying securities will also apply to the warrants and both will be measured from the completion of the distribution of the warrants. In a Category 2 offering, this will generally be 40 days after the completion of the distribution of the warrants, provided that certain requirements are met. These are (i) that the warrants bear a restrictive legend, (ii) that the person exercising a warrant certify in writing that it is not a U.S. person or exercising the warrant on behalf of a U.S. person (or furnish an opinion of counsel as to the availability of an exemption from the registration requirements of the Securities Act) and (iii) that procedures be implemented to ensure that the warrants are not exercised, or the securities delivered, in the United States. In a Category 1 offering, where there is no distribution compliance period requirement, U.S. sales restrictions will apply only to warrants that are unsold allotments, and certification on exercise will be limited to a representation that the person exercising the warrants is outside the United States.

In the case of warrants that are exercisable for outstanding and freely transferable securities of a company that is not an affiliate of the issuer of the warrants, the underlying securities will not be subject to U.S. sales restrictions upon delivery and no certification on exercise will be required because the "sale" of the underlying securities will be exempt from registration generally under § 4(a)(1) of the Securities Act. In this case, the warrants themselves should be subject to whichever category of Regulation S would apply to debt offerings by the warrant issuer.

Warrants on an index do not fit easily into the framework of Regulation S, but to the extent such warrants are settled only in cash, they should be viewed as debt securities (although they generally are not so viewed for purposes of TEFRA). Moreover, because the issuer will not be obliged to deliver securities upon exercise, an offering of such warrants should not be considered a continuous

p. 10-22
p. 10-23

offering of the securities that comprise the index. Accordingly, an offering of warrants on an index should be treated in the same way under Regulation S as an offering of debt securities.

[b] Warrant Offerings Under Rule 144A

Sales of warrants in the United States can be made in reliance on Rule 144A. For purposes of determining whether the warrants are eligible for resale under Rule 144A, in addition to the requirement that the warrants, when issued, may not be of the same class as warrants listed on a national securities exchange in the United States or quoted on a U.S. automated inter-dealer quotation system, the securities underlying physically [47] settled warrants may not, at the time such warrants are issued, be of the same class as securities listed on a national securities exchange in the United States or quoted on a U.S. automated inter-dealer quotation system unless the warrants have at least a three-year term and an effective exercise premium at the time of issuance of at least 10%. [48]

Where warrants have been sold to U.S. persons in reliance on Rule 144A, and the underlying securities are unseasoned at the time of exercise, U.S. persons may only exercise physically settled warrants if:

- they certify on exercise they are qualified institutional buyers;
- the underlying securities are eligible for resale under Rule 144A (see above) at each time of exercise; and
- the issuer of the underlying securities is a reporting company under the Exchange Act, or is subject to and complies with the requirements of Rule 12g3-2(b) under the Exchange Act or agrees to satisfy the information furnishing requirement of Rule 144A in another way for so long as the warrants are exercisable.
- The ordinary procedures for conducting a Rule 144A placement also apply in the context of warrants, such as the broker-dealer registration requirements of the Exchange Act.

Footnotes

2 We refer to such programs collectively as "equity distribution programs."

3 This will require companies to have a public float held by non-affiliates of at least $75 million and have been timely filers under the Exchange Act for at least one year. In 2007, the SEC liberalized the eligibility requirements for Forms S-3 and F-3 for primary offerings to allow companies with a public float of less than $75 million to use the forms, so long as, among other things, the aggregate market value of securities sold by the issuer in the offering and during the preceding 12 months did not exceed one-third of the company's public float. *See* SEC Release No. 33-8878 (Dec. 19, 2007); Form S-3; Form F-3.

4 *See* § 3.02[9] discussing Regulation M and other distribution-related concerns.

5 Although individual takedowns should be minimally disruptive, the establishment of the program itself could create market "overhang" and have a negative effect on the stock price.

6 SEC Release No. 33-6334 (Aug. 6, 1981), 46 Fed. Reg. 42,001, 42,002 (Aug. 18, 1981) (noting that the proposed rule "would permit, for the first time, primary offerings of equity securities on a continuous basis").

7 Rule 415 proposed permitting for the first time at-the-market primary offerings of equity securities (which, at the time, was a novel idea). The SEC implemented Rule 415 on a temporary basis in March 1982, and subsequently adopted it permanently in November 1983. Based on its experience during that period, the SEC imposed several restrictions on at-the-market offerings in order to address its concerns and the concerns of market participants regarding the need to maintain orderly trading markets. SEC Release No. 33-6383 (Mar. 3, 1982); SEC Release No. 33-6499 (Nov. 17, 1983).

In July 2005, as part of its extensive Securities Offering Reform initiative, the SEC further revised Rule 415 to eliminate several of these restrictions. *See* SEC Release No. 33-8591 (July 19, 2005). These rule changes became effective December 1, 2005. Rule 415(a)(4) currently requires only that, in the case of a registration statement that pertains to an at-the-market offering of equity securities by or on behalf of an issuer, "the offering must come within paragraph (a)(1)(x) of this section," which requires that securities to be offered and sold on a continuous or delayed basis by or behalf of the registrant be registered on Form S-3 or Form F-3 (and, accordingly, that the issuer be qualified to register securities on that form for a primary offering). Rule 415(a)(4) defines an at-the-market offering as "an offering of equity securities into an existing trading market for outstanding shares of the same class at other than a fixed price."

8 For example, the SEC identified utility companies as one of the principal early users of at-the-market offerings of equity securities. *See* SEC Release No. 33-6470 (June 9, 1983), 48 Fed. Reg. 27,768, 27,769–27,770 (June 17, 1983) (noting that, from March 1982 to May 1983, 3,516 shelf registration statements were

filed, of which 115 provided for delayed sales of equity securities (35% of which were made by utility companies), and that 19 of those 115 registration statements specified "at-the-market" offerings as one of the potential distribution methods (including seven for dribble-out programs offered by utility companies).

9 Prior to July 2005, Rule 415(a)(4) limited the amount of securities that could be registered for sale in an at-the-market offering to no more than 10% of the aggregate market value of the registrant's outstanding voting stock held by non-affiliates.

10 The various investment banks have different names for the agreement between the issuer and the agent. Examples include "sales agency agreements," "equity distribution agreements," "distribution agency agreements" and "distribution agreements." Despite the different names, however, these agreements are generally similar in scope and substance. In this book, we refer to such agreements collectively as "sales agency/distribution agreements."

11 Many U.S. companies are incorporated in Delaware. On June 24, 2015, 80 Del. Laws, c. 40, § 6 amended § 152 of the General Corporation Law of the State of Delaware (effective Aug. 1, 2015) to provide additional flexibility for authorization of stock issuances. As the Synopsis to the Senate Bill states:

> The amendment to Section 152 clarifies that the board of directors may authorize stock to be issued in one or more transactions in such numbers and at such times as is determined by a person or body other than the board of directors or a committee of the board, provided the resolution of the board of directors or committee of the board authorizing the issuance fixes the maximum number of shares that may be issued, the time frame during which such shares may be issued and establishes a minimum amount of consideration for which such shares may be issued. The minimum amount of consideration cannot be less than the consideration required pursuant to Section 153. The amendment further clarifies that a formula by which the consideration for stock is determined may include reference to or be made dependent upon the operation of extrinsic facts, such as, without limitation, market prices on one or more dates or averages of market prices on one or more dates. Among other things, without limitation, the amendment is intended to make clear that the board of directors may authorize stock to be issued pursuant to "at the market" programs without having to separately authorize each individual stock issuance pursuant to such program.

12 Rule 415(a)(4) under the Securities Act.

13 If the issuer meets the criteria to be considered a "well-known seasoned issuer," it will be able to file a Form S-3 or Form F-3 that will be automatically effective upon filing. § 3.02[2][c]. If, however, the issuer is not a well-known seasoned issuer, it must file a new shelf registration statement and take the steps necessary to have it declared effective (which may include going through an SEC review process).

14 Rule 430B, which covers immediate, delayed, and continuous primary offerings by primary shelf eligible issuers pursuant to Rule 415(a)(1)(x), permits an issuer to amend the prospectus included in a registration statement by means of a post-effective amendment, a prospectus supplement filed pursuant to Rule 424, or *via* incorporation from the issuer's Exchange Act reports. *See* SEC Release No. 33-8591 (July 19, 2005).

15 Note that the base prospectus need not specifically provide for at-the-market offerings, as the plan of distribution in the base prospectus can be amended using a prospectus supplement.

16 Any agent who enters into an agreement with the issuer in connection with an at-the-market offering will be considered an underwriter; accordingly, the agent should be named in the prospectus. SEC Release No. 33-6334 (Aug. 6, 1981), 46 Fed. Reg. 42,001, 42,011 (Aug. 18, 1981) ("The [SEC] believes that any market professional … who purchases a registered security as principal from the registrant or who sells that security for the registrant as agent ordinarily would be deemed a statutory underwriter under Section 2(11)

of the Securities Act even in the absence of a specific written agreement between the issuer and that market professional.").

17 *See* Rule 430B(d) under the Securities Act.

18 For a discussion of information that must be filed on Form 6-K, *see* § 4.02[3][c]. If a foreign private issuer intends to update a shelf registration statement and prospectus by means of disclosures in a Form 6-K, then it will need to designate that Form 6-K (or the relevant portion thereof) as having been incorporated by reference into the shelf registration statement and prospectus.

19 The SEC has eliminated the historical requirement that a registrant conduct an at-the-market offering through an underwriter, but in most cases an issuer will face significant practical difficulties in attempting to sell equity securities directly to investors without acting through a broker.

20 Even in situations where the issuer has entered into sales agency/distribution agreements with more than one broker-dealer, those agreements will typically provide that only one agent can be instructed on any particular day, to avoid situations where a prospective purchaser would be able to take advantage of more than one agent selling simultaneously by using a multiple bid strategy to get the lowest possible price (since each agent would be, at least in certain respects, incentivized to sell as many securities as it could at any price above any minimum floor price in order to maximize the portion of the commission it would receive relative to the other agent).

21 *See* § 3.02[5].

22 For possible restrictions on the ability of a company or its directors or officers to purchase equity securities during the pendency of an equity distribution program, see below under " Regulation M and other related concerns."

23 Much like the lock-up in a traditional underwriting agreement, this notification provision will include standard exceptions permitting a company, for example, to issue shares without notice if and when outstanding convertible securities are converted, or in connection with an existing employee stock option plan.

24 Even if any such release was deemed a free writing prospectus, however, it generally would not need to be filed so long as it was issued concurrently with or after the filing of the program prospectus with the SEC and did not contain substantive changes from or additions to the prospectus. *See* Rule 433(d)(3) under the Securities Act.

U.S. issuers will also generally file program launch press releases on Form 8-K to ensure compliance with the requirements of Regulation FD. In addition, since the sales agency/distribution agreement would be considered an "underwriting agreement" for purposes of Item 601(b)(1) of Regulation S-K, it should be filed (together with a legality opinion relating to the securities to be issued) on Form 8-K (or 6-K, as applicable) and incorporated into the registration statement relating to the shares being issued. Since, however, the sales agency/distribution agreement in our view should not be considered a "material definitive agreement" (as by its terms it neither obliges the issuer to sell any securities nor requires the agent to purchase any securities from the issuer), we believe, in the case of U.S. issuers, these items should be filed under Item 9.01 of Form 8-K (Financial Statements and Exhibits).

25 At completion, issuers will sometimes issue a press release that serves to update the market as to the total amount of securities sold under the program, which will be relevant to investors insofar as it means the company has completed a capital-raising exercise and should also help allay any investor concern regarding potential overhang relating to the program. In addition, if the offering was particularly successful, or was completed rapidly, the issuer may want to issue an announcement in order to benefit from any positive investor reaction.

26 *See* § 3.02[9] discussing Regulation M and other distribution-related concerns.

27 For example, an issuer may specify a maximum sales volume or a minimum sales price for any particular day, and may also be able to specify certain other sales terms (*e.g.*, providing that each sale could not exceed a specified number of securities).

28 The issuer may be required to disclose the net proceeds from the offering in its periodic reports filed with the

SEC (as discussed in more detail below).

29 For a discussion of an issuer's potential liabilities under §§ 11 and 12(a)(2) of the Securities Act, *see* § 11.03[1] and [2].

30 To ensure the ability to continue use of an active program, a foreign private issuer will need to update the shelf registration statement on a timely basis by filing its Form 20-F within three months after the end of the fiscal year (as opposed to the four-month period currently applicable to such issuers) and update its financial statements with interim financial information by filing a Form 6-K incorporating that information into the shelf registration statement and prospectus no later than nine months after its fiscal year-end. *See* Form 20-F, Item 8.A.5.

31 Some equity distribution programs prohibit sales when the issuer's directors and officers are subject to a "black-out" period under the company's insider trading policy. While useful as a prudential matter, the underlying question is actually whether the issuer will be in possession of any material non-public information when sales would be taking place. If not, the issuer and agent should be comfortable in going forward with sales under an equity distribution program, even during a black-out period.

32 In order to ensure the ability to rely on this rule, the sales agency/distribution agreement will require that sales by the agent comply with Rule 153. Equity distribution programs generally rely on the exemption from prospectus delivery provided by Rule 153, rather than Rule 172 under the Securities Act, because Rule 153 does not require a notice to purchasers pursuant to Rule 173 in connection with such sales.

33 Rule 104(e) of Regulation M under the Exchange Act. Although the definition of an "at-the-market" offering under Regulation M is broader than the definition set forth in Rule 415, any offering that falls within the definition for purposes of Rule 415 will also fall within the definition contained in Regulation M. For a discussion of the restrictions of Regulation M more generally, *see* § 3.02[9].

34 Rule 103(a) of Regulation M under the Exchange Act. Passive market-making typically permits broker-dealers to engage in market-making transactions in covered securities that are Nasdaq securities while engaging in a distribution without violating the provisions of Rule 101, so long as those market-making activities are being made pursuant to the restrictions set forth in Rule 103.

35 *A fortiori*, an issuer with a "dormant" at-the-market program (*i.e.*, one that has not been used for some time) generally should not be deemed to be engaged in a distribution during that dormant period by analogy to the treatment of individual shelf takedowns under Regulation M. *Cf.* SEC Release No. 34-38067 (Dec. 20, 1996).

36 SEC Release No. 34-38067 (Dec. 20, 1996), 62 Fed. Reg. 520, 526 (Jan. 3, 1997) ("[W]here a broker-dealer sells shares on behalf of an issuer … in ordinary trading transactions into an independent market (*i.e.*, without any special selling efforts) the offering will not be considered a distribution and the broker-dealer will not be subject to Rule 101. A broker-dealer likely would be subject to Rule 101, however, if it enters into a sales agency agreement that provides for unusual transaction-based compensation for the sales, even if the securities are sold in ordinary trading transactions." (footnote omitted)).

37 For a general discussion of the restrictions of Regulation M, *see* § 3.02[9]. The SEC has described in some detail how at-the-market offerings should be considered for purposes of Regulation M. SEC Release No. 34-38067 (Dec. 20, 1996), 62 Fed. Reg. 520, 527 (Jan. 3, 1997):

> In an at-the-market offering, sales prices are established during the course of the offering based upon market conditions at the time of individual sales. Accordingly, the restricted period for such an offering would commence one or five business days before the pricing of each sale and continue until the person's participation in the distribution is completed. In practice, the application of Rule 101 will essentially be the same as in the case of a fixed price offering … because the activities of distribution participants are restricted during the entire course of offers and sales, whether the securities are sold at fixed or varying prices.

Rule 105(a) of Regulation M, which prohibits purchasers of securities in a public offering from covering certain short sales with those securities, does not apply to at-the-market offerings (since they are not conducted on a firm commitment basis), meaning that investors will be permitted to cover short sales using securities purchased through the program.

38 Rule 101(c)(1) provides that the provisions of Rule 101 of Regulation M will not apply to such securities, so long as the agent or an affiliate of the agent did not issue the securities in question. The terms "ADTV" and "public float value" are both defined in Rule 100 of Regulation M.

39 For example, an issuer would potentially be able to participate in an exchange offer involving its equity securities while selling shares under an equity distribution program. *See* SEC, Division of Market Regulation, Staff Legal Bulletin No. 9 (Oct. 27, 1999; *revised* Apr. 12, 2002), Fed. Sec. L. Rec. (CCH) ¶60,009:

> For example, Company A conducts an offering of A common stock for cash. At the same time, Company A conducts an exchange offer in which it distributes A common stock and purchases Company B's common stock. Assuming the cash offering and exchange offer are distributions of A's common stock, Company A may solicit offers to purchase the common stock in the cash offering at [the] same time it solicits offers to exchange securities in the exchange offer, and vice versa. However, a distribution may rise to the level of an impermissible inducement to purchase when a distribution participant engages in sales efforts that go beyond *bona fide* offers to sell or the solicitation of offers to buy the securities in distribution.

The issuer would of course also be required to comply with any other rules or regulations applicable to such an offering.

40 *See* § 3.02[3][a][iii] for a general discussion of the availability of the Rule 139(a) safe harbor. The SEC eliminated the requirement that Rule 139(a) research be published with "reasonable regularity" in July 2005, but made clear that, in order to take advantage of the Rule 139(a) safe harbor, the broker or dealer in question must have previously distributed or published at least one research report about the issuer or its securities, or have distributed or published at least one such report after discontinuing coverage. SEC Release No. 33-8591 (July 19, 2005). We generally believe that, in most cases, an agent acting for an issuer in connection with an equity distribution program (or one of that agent's affiliates) will have previously published at least one research report about that issuer. If, however, that requirement cannot be met, the agent (or its affiliates) could in the alternative potentially rely on the safe harbors provided by Rule 139(b) (permitting publication of industry research reports containing information about the issuer, subject to certain conditions) or by Rule 138.

41 Rule 101 of Regulation M also generally restricts dissemination of research about a company when an underwriter is involved in a "distribution" of the issuer's securities, subject to exceptions certain of which are likely to be applicable to most equity distribution programs. The securities being offered will generally fall within the exception for actively-traded securities set forth in Rule 101(c)(1) of Regulation M, and accordingly, the restrictions of Rule 101 of Regulation M will not apply to the agent or its affiliates. In addition, Rule 101(b)(1) of Regulation M would separately permit the publication and dissemination of research pursuant to Rules 138 and 139 under the Securities Act even if the ADTV exemption were not available.

Other regulations may also affect the ability of agents or their affiliates to publish research while an equity distribution program is active. Financial Industry Regulatory Authority ("FINRA") Rule 2241(b)(I)(ii), for example, requires FINRA members to adopt policies and procedures that, at a minimum, prohibit the member from publishing or distributing research regarding a subject company for which the member acted as manager or co-manager of a "secondary" offering for three calendar days following the date of the offering (subject to certain exceptions for reports relating to significant news or events). This prohibition will not apply, however, to publication of a research report in compliance with Rule 139 (or to public appearances by a research analyst) relating to an issuer with "actively-traded securities" as defined in Regulation M. *See* FINRA Rules, Rule 2241(b)(I)(ii). Accordingly, for the reasons discussed above, this restriction generally will not apply to companies using an equity distribution program as a practical matter (assuming the other conditions of Rule 139 are satisfied).

42 We understand that, in some cases, agents have chosen not to apply such restrictions, principally based on the diminished incentives for sales personnel in connection with an equity distribution program, and the potentially long period during which the restrictions would apply. The analysis of whether any particular communication should be restricted, however, should also take into account the identity of the person who is distributing the information, opinions or recommendations in question. For example, while publication by research analysts generally should not be problematic, the dissemination of similar issuer-specific information by sales personnel might be of potentially greater concern, depending on facts and circumstances (as the latter is more likely to be subject to stricter scrutiny in this regard than a traditional research report, because of the likelihood that Rule 139 was intended principally to address the distribution of traditional research reports).

43 Rule 168 generally permits an issuer, at any time during the offering process, to issue regularly released "factual business information" and "forward-looking information." Factual business information (i) excludes information about the offering, (ii) may not be released as part of offering activities, and (iii) is limited to information about the company and its business, advertisements and other information about the company's products and services, and dividend information. Notably, the Rule 168 safe harbor is available only to the issuer, not the agent.

44 FINRA Rules, Rules 5110(b)(7)(C) and 5110(b)(7)(A), FINRA MANUAL. Although a filing may be required, FINRA's Public Offering System automatically handles well-known seasoned issuer shelf registration filings, which generally results in a same-day or in some cases immediate turnaround for such filings.

45 *See* The National Securities Markets Improvement Act of 1996, Pub. L. No. 104-290, 110 Stat. 3416 (1996).

46 *See* SEC, Division of Market Regulation, Staff Legal Bulletin No. 9 (Oct. 27, 1999; *revised* Apr. 12, 2002) Fed. Sec. L. Rep. (CCH) ¶60,002.

47 Where equity-linked securities—whether in the form of convertibles, exchangeables or warrants—are cash settled only, they are eligible for sale under Rule 144A irrespective of whether the linked security is listed on a U.S. exchange. That is because there is no underlying security being offered, so the issuer of the overlying security need not rely on Rule 144A (or any other exemption from Securities Act registration) for any security other than the overlying security. *See Mandatorily Exchangeable Issuer Securities* (avail. Oct. 18, 1999).

48 The other requirements of Rule 144A must also be met. *See* Chapter 7.

U.S. Regulation of the International Securities and Derivatives Markets, § 10.03, BLOCK TRADES

U.S. Regulation of the International Securities and Derivatives Markets

p. 10-24

Block trades are placements of large blocks of equity securities by an issuer or selling stockholder. In block trades, unlike traditional underwritten securities offerings, an underwriter commits to purchase the securities without the benefit of a marketing and book-building process, often after a competitive bidding process. [49] Accordingly, an underwriter in a block trade will typically contact investors and market the resale of the securities only after it and the issuer or selling stockholder have agreed upon a certain purchase price. [50]

[1] SEC Registered Blocks

Registered block trades as an alternative to traditional underwritten offerings provide issuers and selling stockholders a number of benefits. These benefits primarily include speed of execution in terms of due diligence and documentation as described further below and, since the block trade is a "bought deal," greater certainty regarding the consummation of the transaction prior to public announcement. This certainty generally comes at a cost, however, requiring the issuer or selling stockholder to accept a greater discount to the prevailing market price.

The fact that an underwriter in a registered block trade first commits to purchase securities creates immense timing pressure for that underwriter in terms of publicly announcing and launching a block trade, as any delay in the underwriter's ability to resell the securities will increase the risk of fluctuations in the market price of the securities, which could result in adverse economic consequences for the underwriter. As a result of this timing pressure, block trades are generally executed shortly after the underwriter is chosen.

Despite this timing pressure, the issuer and the underwriter need to manage the risk of liability for disclosure in a registered offering in the United States under §§ 11 and 12(a)(2) of the Securities Act and Rule 10b-5 under the

p. 10-24

p. 10-25

Exchange Act. [51] Prospective underwriters will often be able to conduct due diligence, including due diligence calls with management, simultaneously with other prospective underwriters during the bid process or, in certain circumstances, in separate, parallel sessions. To a large extent, since an underwriter will not be chosen in the bid process until just prior to launch, the underwriter will need to rely significantly on the issuer's designated underwriter's counsel and the issuer's auditors to establish its due diligence defense and prepare documentation in advance of launch. In addition, because of the limited time available to the underwriter to conduct due diligence, block trades will ideally launch shortly after the issuer's earnings release in order to reduce the risk that the issuer or selling stockholders have material, non-public information that would need to be disclosed to investors.

Issuers and selling stockholders typically offer securities in a registered block trade using a prospectus supplement filed in connection with a shelf takedown, so long as the issuer meets certain eligibility requirements. [52]

[2] Rule 144 Blocks

Selling stockholders that are affiliates [53] of the issuer may also offer securities in block trades pursuant to the exemption from registration provided by Rule 144 under the Securities Act. Rule 144 block trades allow an affiliate to resell securities to the public without SEC registration, typically providing even faster execution and lower costs than a registered block trade. Securities purchased in a Rule 144 block trade, like securities purchased in a registered block trade, are not restricted and are thus freely transferable by non-affiliates.

Reliance on Rule 144, however, is subject to certain requirements, including holding periods for restricted securities and availability of information regarding the issuer. In addition, affiliates are subject to certain volume and manner of sale restrictions. Under Rule 144, affiliates may sell in any three-month period the greater of (i) 1% of the outstanding securities of the same class and (ii) average weekly trading volume on a U.S. exchange or automated interdealer

p. 10-25

p. 10-26

quotation system or the consolidated tape during the prior four weeks. [54] With regard to the manner of sale restrictions, Rule 144 block trades are made directly to a market maker. [55] Although the market maker generally may not solicit interest in the block before it commits to purchase it, once the block is purchased, the market maker is free to solicit buy side investors. [56]

Footnotes

49 Underwriters in block trades, whether registered, Rule 144 eligible or of freely tradable securities, should be conscious of the requirements of the underwriting and market-making exemptions in the Volcker Rule (Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. No. 111-203, § 619, 124 Stat. 1376, 1620 (2010) [codified at 12 U.S.C. § 1851]); in particular, taking into account the "reasonably expected near term demands of clients, customers, or counterparties," which are characterized differently for purposes of the two exemptions.

50 Block trades will often be made on a variable price reoffer basis. Instead of the offering documents providing a single, fixed price at which the securities are offered to investors, they will state that the underwriter has agreed to purchase the securities at a certain fixed price per share and that the underwriter will reoffer the securities from time to time at market prices or at negotiated prices that may vary. Underwriters often prefer this approach since they have very little time to market the resale of the securities after the launch of a block trade to determine a single, fixed price.

51 *See* § 11.03.

52 *See* § 3.02[2] for a discussion of shelf registration statements and shelf takedowns. In order to prepare the registered block trade as a shelf takedown, the issuer will need to be eligible to file a shelf registration statement on Form S-3 or F-3. Because of timing issues, the issuer will ideally have an effective shelf registration statement in advance of the block trade. An issuer that is a well-known seasoned issuer has greater flexibility since it is eligible to file an automatic shelf registration statement that is immediately effective upon filing.

53 An "affiliate," with respect to an issuer, is "a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, such issuer." Rule 144(a)(1) under the Securities Act.

54 *See* § 7.03[2] for a more detailed discussion of the requirements of Rule 144.

55 For a definition of market maker, *see* § 7.03[2], Note 85.

56 *See* SEC Release No. 33-6099 (Aug. 2, 1979), 44 Fed. Reg. 46,752, 46,760, 46,762 (Aug. 8, 1979). Note that certain Rule 144 block trades may be determined to constitute a distribution in the United States for purposes of Regulation M, depending on the "magnitude of the offering" and the "presence of special selling efforts and selling methods." *See* § 7.10 for a discussion of Regulation M.

Click to open document in a browser

A practice, not uncommon in Europe and Asia, has developed of effecting certain securities offerings, often by affiliates, and occasionally by the issuer itself, without providing a prospectus or other formal offering document to potential investors ("Undocumented Offerings"). Undocumented Offerings in Europe [57] and Asia are generally marketed exclusively to institutional investors, typically through telephone calls. Because secondary sales by affiliates do not trigger special requirements in most jurisdictions outside the United States, they can be conducted in a manner resembling other secondary market transactions, such as block trades. [58] The steps taken are largely dictated by the size of the transaction and the desire for speed of execution. The offerings generally are timed to coincide with (or follow closely on) an earnings release by the issuer and may be undertaken in conjunction with a road show or other presentation intended for the limited purpose of allowing potential investors to ask questions about the issuer. Salespeople involved in such marketing efforts use a "selling script" or other approved "fact sheet" intended to reduce the risk of investors receiving information other than that contained in the issuer's earnings release. Research reports, either already existent or prepared in contemplation of the Undocumented Offering, are sometimes provided to prospective investors. A purchaser is often asked to execute a letter (an "investor letter") acknowledging, among other things, that the offering is not being registered under the Securities Act, the investor has not received a prospectus or any other information about the issuer from the seller other than the earnings release and it is not relying on

p. 10-27

the seller in making its investment decision. The investor letter may also contain confirmation of the purchaser's status as an institutional investor. Finally, while the purchase agreement between the entity selling the securities and the broker-dealer is not of the scope of a typical underwriting agreement, "bare-bones" representations and warranties (and indemnification) are typically obtained from the seller, including a representation that the seller is not aware of any material nonpublic information about the issuer.

Although Undocumented Offerings provide a high degree of flexibility and efficiency, there is a risk of U.S. liability for material misstatements or omissions under Rule 10b-5. Oral statements by salespeople, research reports by distribution participants and press releases and, sometimes, statements at any road shows by the issuer can be sources of liability under Rule 10b-5 and take on added significance in the absence of a written prospectus. Due primarily to the risk of Rule 10b-5 liability, many U.S. banks in particular have been reluctant to engage in Undocumented Offerings in the United States. [59]

Those banks that do include U.S. investors in Undocumented Offerings typically have a screening process that analyzes each potential Undocumented Offering and its related risks. Not only is approval required before work on an Undocumented Offering can begin, [60] but also such offerings must be undertaken in accordance with established guidelines (including due diligence guidelines). Generally, the level of diligence performed and other measures taken will depend on the nature of the offering, with standard block trades on behalf of unaffiliated shareholders generally requiring only minimal diligence efforts and significant capital raising exercises by issuers and large sales by affiliates (especially those involving road shows and other marketing efforts) demanding more extensive diligence procedures.

The same considerations that apply to Rule 144A offerings and to traditional private placements relating to, among other things, research, publicity, the application of Regulation M and the Investment Company Act also apply to Undocumented Offerings.

Footnotes

57 The Prospectus Directive (Directive 2003/71/EC, as amended, including by Directive 2010/73/EU), as implemented by member states of the European Union, provides exemptions from the requirement to publish a prospectus for certain public offers or for the admission to trading of securities on an EEA regulated market under certain circumstances.

58 *See* § 10.05.

59 Undocumented Offerings in the United States by an issuer, an affiliate or of restricted securities must be exempt from registration under the Securities Act. For a discussion of the relevant exemptions, *see* Chapter 7.

60 In determining whether an Undocumented Offering is appropriate, the following issues, among others, may be relevant: (i) the identity of the seller, (ii) the contractual arrangements with the seller, (iii) the investment bank's relationship with the issuer, (iv) the nature of the market for the issuer's securities and the amount of publicly available current information about the issuer, such as in relation to any significant recent corporate transactions involving the issuer, and (v) the nature of the selling efforts.

p. 10-28

When raising additional capital through the sale of equity, many foreign companies elect or are required under their home-country laws to offer existing shareholders rights to purchase additional shares in proportion to their current percentage of share ownership. Rights offerings have provided a means for companies to raise additional capital to, among other things, fund acquisitions or to support liquidity. During the financial crisis in 2008 and 2009, rights offerings were a popular means of raising capital. [61] European financial institutions, such as The Royal Bank of Scotland, HBOS, Société Générale and UBS in particular, sought to bolster liquidity and capital ratios through new issuances of shares in the wake of significant losses on bad debts and complex debt securities. [62] In the case of HBOS, the rights offering proved unsuccessful, and the company was later acquired by Lloyds TSB. [63]

A foreign company with U.S. shareholders generally has the following options with respect to shares offered to U.S. shareholders through rights offerings: register the shares offered to U.S. shareholders, utilize the exemption from the registration requirements provided by Rule 801 under the Securities Act (if available) or exclude some or all U.S. holders from participating. [64] Which course of action a foreign company follows is influenced by the requirements of its home-country laws and by whether it is already a reporting company under the Exchange Act. The laws of many countries, for example those of the United

p. 10-28

p. 10-29

Kingdom, require that rights to shares be offered to all shareholders, on a preemptive basis in proportion to their existing holdings, unless the shareholders have disapplied their statutory preemption rights. [65] In circumstances where statutory preemptive rights have not been disapplied in the context of a U.K. issuer, such issuer may choose, by means of a notice published in the London Gazette, to offer rights only to shareholders that have a registered address in the European Economic Area or have provided the issuer with an address in the European Economic Area. [66] This manner of offering rights should permit compliance with U.K. statutory requirements while not constituting an offer of securities in the United States requiring registration under the Securities Act. In contrast, Russian law requires that new shares issued by a joint-stock company be allocated to every shareholder that provides a completed subscription form for new shares, which is likely to involve offers and sales that would not be consistent with the private placement exemption provided by § 4(a)(2) of the Securities Act. [67] Where U.S. holders hold shares in the form of depositary receipts, however, it is possible to exclude ineligible U.S. holders through instructions to the Depositary regarding the distribution of rights and new shares to holders of depositary receipts. [68]

[1] Registration Under the Securities Act

The advantage of registering shares offered to U.S. shareholders in a rights offering is that rights may be extended to, and exercised by, all U.S. shareholders, including retail holders, which in turn means this option creates the least tension with home-country laws that may require equal treatment of shareholders. If the foreign issuer is a reporting company under the Exchange Act, then it may, if it has been required to file reports with the SEC under the Exchange Act for

p. 10-29
p. 10-30

at least 12 months (providing that all reports required to be filed have been filed in a timely fashion) and otherwise meets certain eligibility requirements, register the offering on Form F-3, a short-form registration statement that incorporates by reference the company's business description and financial statements from its annual report on Form 20-F. [69] The company would need to include or incorporate in a registration statement covering a rights offering financial statements with the financial information called for by Item 18 of Form 20-F. [70] Thus, registration is much easier for a reporting company, provided that the registration statement is not reviewed by the SEC or can be reviewed and declared effective prior to the beginning of the offering period. [71] In particular, the registration process for rights offerings by foreign issuers that qualify as well-known seasoned issuers is facilitated by the use of automatic shelf registration statements, which are not subject to SEC review and are immediately effective upon filing. Accordingly, without the prospect of SEC review of the registration statement and the timing implications this review can create for rights offerings on a short timetable under home-country laws (as discussed further below), an important structural obstacle to registering a rights offering is removed for foreign well-known seasoned issuers.

Registration solely for the purpose of conducting a rights offering is not often an attractive option for foreign issuers that are not already reporting companies, as the registration process is time-consuming, labor-intensive and expensive. Registration entails potentially onerous continuing obligations for the issuer. [72] Further, the liability regime is stricter in a registered offering than a private placement, with strict liability for the issuer with regard to material misstatements in or omissions from disclosure, and also a higher level of liability exposure for directors and management of the issuer and other offering participants. [73] If the issuer's home country laws can accommodate exclusion of U.S.

p. 10-30
p. 10-31

retail holders, the benefit of including those holders is often perceived to be outweighed by the costs of registration (both actual, in terms of the registration process, and potential, in terms of increased liability). For these reasons, multi-jurisdictional rights offerings by non-U.S. companies are rarely conducted as registered offerings in the United States unless the issuer is already a U.S. reporting company. Differences in home-country and U.S. disclosure standards, such as with regard to non-GAAP financial measures, disclosure requirements related to business combinations and complexities with supplemental disclosures not required by Form 20-F (*e.g.*, inclusion of projections as mandated by local law), may also make a registered offering unattractive.

Non-U.S. companies, even if they are U.S. reporting companies, may also face challenges of coordinating timing and settlement as a result of different regulatory regimes and clearing systems in the United States and their home country. Under New York Stock Exchange rules, for example, notice of a rights offering must be provided to the Exchange and written notice must be sent to holders of NYSE-listed shares at least ten days in advance of the proposed record date [74] and the subscription period must extend at least 16 days after mailing of the rights offering prospectus to holders of record. [75] In situations in which issuers do not mind providing the ten-day advance notice and having the minimum subscription periods mandated by the applicable U.S. securities exchange, such as where home-country laws are more demanding, these rules generally do not present a problem. [76] However, in situations where advance notice requirements or minimum subscription and settlement periods are shorter or non-existent under home-country laws and exchange requirements, well-known seasoned issuers may conclude that the potential benefits of extending their rights offerings to U.S. investors are outweighed by the potential inconvenience and market risk associated with complying with the timing requirements applicable in the

p. 10-31
p. 10-32

United States. [77] In such cases, issuers may decide to prohibit the exercise of subscription rights by U.S. shareholders, reasoning that the interests of U.S. shareholders will be sufficiently protected through the sale for cash in the market by ADR depositaries of the rights belonging to U.S. shareholders. [78] Separate procedural complications would apply if the issuer wishes to have the rights themselves traded on an exchange in the

United States as well as on its home market exchange.

As markets move away from the delivery of paper rights offering subscription materials and rely more heavily on "access equals delivery" concepts, [79] rules and practices in the United States governing rights offering timetables may come to be revisited, particularly for foreign private issuers that qualify as well-known seasoned issuers. [Approaches seeking to ensure that the least sophisticated U.S. investors receive paper notification of an opportunity to participate in a non-U.S. rights offering—and thus continue to impose burdensome requirements on the issuer—may eventually be revised if the conclusion is that, in practical terms, they are resulting in all U.S. investors being excluded from participation in rights offerings by foreign issuers. [80]

[2] Rights Offerings in Reliance on Rule 801

In 1999, the SEC adopted a new exemption to its registration requirements in order to facilitate cross-border rights offerings by non-U.S. companies, and in September 2008, the SEC adopted changes expanding and enhancing the cross-border exemptions adopted in 1999. [81] Rule 801 under the Securities Act provides foreign private issuers [82] with a nonexclusive exemption from the

p. 10-32

p. 10-33

registration requirements of the Securities Act for rights offerings of equity securities in the United States if 10% [83] or less of the class of securities being issued is held of record by U.S. holders. [84]

Rule 801 is available only for all-cash rights offerings made on a *pro rata* basis to all holders of the same class of securities, including holders of ADRs evidencing those securities. [85] The rights granted to U.S. shareholders in an offering in reliance on Rule 801 are not freely transferable except outside the United States pursuant to Regulation S under the Securities Act, [86] but the securities to be purchased through the exercise of rights are freely transferable in the United

p. 10-33

p. 10-34

States to the extent the underlying securities that gave rise to the rights are unrestricted securities. [87] The exemption is also available to issuers only, and is therefore not available for underwriters in connection with a placement of shares for which the corresponding rights are not exercised by shareholders, commonly referred to as "rump" shares.

Rule 801 does not require that any specific disclosure be delivered to U.S. shareholders, except that U.S. shareholders must be provided contemporaneously the same information the issuer provides to offerees in its home jurisdiction translated into English. If the issuer disseminates information solely by publication in its home country, publication of the rights offering is also sufficient in the United States if the information is published in a manner reasonably calculated to inform U.S. shareholders of the offer.

In addition, any materials used abroad must be submitted to the SEC on Form CB. [88] Because Form CB is submitted to, rather than filed with, the SEC, the issuer does not have liability for the offering materials under § 11 of the Securities Act or § 18 of the Exchange Act, although the issuer and offering participants remain liable under § 12(a)(2) of the Securities Act and § 10(b) of the Exchange Act and the other antifraud provisions of the U.S. securities laws. The issuer is also required to appoint an agent for service of process in the United States on Form F-X.

In principle, the foreign issuer will also have to comply with applicable state securities laws, including antifraud provisions under state securities laws. State securities laws ordinarily require that an issuer register with state authorities any offering of securities made to state residents. It is likely, however, that one or more exemptions from registration will be available in many states to an issuer making a Rule 801 rights offering, such as the exemption for offers to institutions.

[3] Private Placements Under Section 4(a)(2) of the Securities Act

For those foreign companies for which registering shares is not practicable or for which the Rule 801 exemption is unavailable, the offer of shares to existing shareholders in the United States may be structured as a private placement under § 4(a)(2) of the Securities Act, limiting participation, to the extent permitted by home-country law, in the United States to institutional shareholders

p. 10-34

p. 10-35

generally that can certify they are qualified institutional buyers. [89] In such rights offerings, ineligible U.S. holders do not receive rights or new shares and instead, where permitted, their rights (if transferable) are sold in the market and the net proceeds are allocated to the ineligible holders. The new shares received upon exercise by eligible U.S. holders are "restricted securities" for purposes of Rule 144 under the Securities Act and cannot be resold in the United States for the applicable restricted period thereunder except pursuant to an effective registration statement or an exemption from the registration requirements.

[a] Non-Fungible Securities

If the new shares issued upon exercise of the rights are not fungible with a class of shares listed on a U.S. exchange or quoted on a U.S. automated inter-dealer quotation system, the private placement of rights to U.S. holders will be analogous to an offering in reliance on Rule 144A under the Securities Act, with some additional procedures based on the procedures developed for private placements in reliance on Regulation D under the Securities Act to ensure the offering is limited to eligible U.S. holders. [90] Some of these procedures may not be needed if the placement is limited to qualified institutional buyers only. Eligible U.S. holders must first be identified through pre-certification by U.S. holders (*i.e.*, by obtaining pre-screening letters from U.S. holders confirming their status as qualified institutional buyers before the holders are provided with any information or documentation for the offering) and/or pre-identification by the issuer with assistance from the underwriters (if any) to the offering (*i.e.*, by comparing a list of registered holders to pre-screened lists of qualified institutional buyers maintained by an investment bank). Only those U.S. holders that provide an executed investor letter certifying their status as qualified institutional buyers along with a subscription form may exercise rights. Where possible, an issuer and/or rights offering subscription agent will need to work with the relevant clearing agencies

p. 10-35

p. 10-36

and other intermediaries to prevent the distribution of rights and offering documentation to ineligible holders. In certain jurisdictions, such as Denmark, the clearing system may not be able to prevent the distribution of rights to holders' accounts identified as ineligible for participation in the rights offering, but may be able to prevent the distribution of shares to ineligible holders' accounts should those holders exercise rights.

[b] Fungible Securities and ADRs

A private placement of rights for shares that are of the same class as shares listed on a U.S. exchange or quoted on a U.S. automated inter-dealer quotation system may follow the same procedures as those outlined above for rights offerings of non-fungible securities. However, the rights (if transferable) and new shares will not be eligible for resale under Rule 144A, and eligible U.S. holders must undertake to resell the rights and new shares only in offshore transactions in reliance on Regulation S.

If the foreign company has a sponsored ADR program in the United States and decides not to register the shares, it usually will instruct the Depositary to allocate rights to ADR holders that provide certifications as to their eligibility to participate in the rights offering (*i.e.*, the same certifications as included in the investor letter described above), and sell, on behalf of excluded ADR holders, the rights to which such ADR holders would have been entitled, and to remit to them the net proceeds, after deducting any costs incurred in connection with the sale. [91] If the shares or ADRs are listed on a stock exchange in the United States, the exchange's consent may be needed if some or all U.S. holders are to be excluded. [92] Such consent has not been difficult to obtain in the past.

Holders receiving new shares upon exercise of rights in a private placement will be restricted from depositing the new shares for ADRs for so long as the shares are "restricted securities" for purposes of Rule 144 under the Securities Act. Accordingly, ADR holders exercising rights will receive new shares in the form of shares, not in the form of ADRs. In addition, for 40 days after the start of the subscription period for the rights offering, any shareholder wishing to deposit shares for ADRs will be required to certify that the shares to be deposited were not acquired on or after the date the new shares were issued in the

p. 10-36

p. 10-37

rights offering (*i.e.*, that the shares are not the "new," restricted shares). Alternatively, the Depositary may close the ADR facility to new deposits for 40 days after the start of the subscription period for the rights offering. [93]

[c] Publicity

While the amendments to Rule 144A eliminating the prohibition on "general solicitation and general advertising" liberalized restrictions on publicity in the context of offerings in reliance on Rule 144A, these new rules do not change the prohibition on "general solicitation and general advertising" in the context of a private placement in reliance on § 4(a)(2) of the Securities Act. [94] Accordingly, publicity restrictions will need to be implemented by the issuer and offering participants in order to ensure no "general solicitation or general advertising" with respect to the rights offering in the United States. [95] The issuer should be able to continue to issue press releases and make disclosures to the market in the ordinary course; however, restrictions on the content and distribution of such releases will be required to the extent a press release or announcement includes information regarding the offering. The content of websites (*i.e.*, the issuer's website, the rights offering subscription or information agent's website or any other offering participant's website on which information and materials regarding the offering are posted) should be similarly monitored, and access from the United States or by U.S. persons, as appropriate, to press releases and other materials relating to the offering posted to websites restricted. [96]

If the foreign company is a reporting company under the Exchange Act, special consideration must be given to disclosures in the United States regarding the rights offering, given the requirements, on the one hand, of Form 6-K, and, on the other hand, the prohibition on "general solicitation and general advertising" applicable to private placements in the United States conducted in reliance on § 4(a)(2) of the Securities Act. Form 6-K requires a foreign issuer to furnish to the SEC on Form 6-K significant information about the issuer and its

p. 10-37

p. 10-38

subsidiaries that (i) must be made public in its country of domicile or incorporation pursuant to the law of that country, (ii) is filed with any foreign stock exchange on which its securities are listed and made public by such exchange or (iii) is distributed to its securityholders. [97] A public announcement of a rights offering made by a foreign issuer in its home country and also the rights offering prospectus distributed to its shareholders would fall within these categories. However, furnishing the press release (to the extent the announcement includes information beyond the scope of Rule 135c under the Securities Act) and the rights offering prospectus on Form 6-K would make information about the offering publicly available to persons not eligible to participate in the rights offering in the United States. [98] To address this potential conflict between the requirements of Form 6-K and restrictions on publicity in the private placement context, a common approach is for foreign issuers to (i) prepare and release in the United States, and furnish to the SEC on Form 6-K, a separate announcement of the rights offering in accordance with Rule 135c under the Securities Act and (ii) furnish on Form 6-K information included in the rights offering prospectus that may be material to investors in the United States and that has not been previously made public by the issuer, but excluding offering-specific information included in the prospectus and relevant only to offerees, such as the terms and conditions of the offering and subscription process. [99]

[4] Exclusion of U.S. Holders

Where the options described above are not available or feasible for a foreign company conducting a rights offering, the company may elect to exclude all

p. 10-38
p. 10-39

U.S. holders from participating. In this case, generally, the rights, if transferable, or new shares allocable to the excluded U.S. holders are sold in the open market and the net proceeds remitted to such holders. [100] This may be disadvantageous to the excluded U.S. holders. Not only are their interests in the company diluted, but also the cash received may not be equivalent in value to the lost opportunity to subscribe.

If U.S. holders are excluded, the rights offering may be structured in reliance on Regulation S. Rights offerings by foreign issuers are not dealt with specifically in Regulation S but can be made to fit into its framework. The only complicating feature is that there are no "distributors" because the issuer offers the new securities directly to holders of outstanding securities. [101] Accordingly, in the case of offerings under Category 1 of Regulation S, the issuer itself must ensure that the "offshore transaction" requirement is met, and in addition, in those rare instances where a rights offering by a foreign issuer falls into Category 2 or Category 3 of Regulation S, that the purchasers are not U.S. persons. This generally can be done by requiring persons taking up their rights to make an appropriate certification, unless such a requirement is inconsistent with foreign laws requiring that all shareholders be treated the same. Publicity restrictions, identical to those described above in § 10.07[3][c], will need to be implemented in order to ensure no "directed selling efforts" in the United States. [102]

Because there are no distributors, the prohibitions on U.S. offers and sales during any applicable distribution compliance period become moot. Therefore, the securities offered and sold outside the United States pursuant to the exercise of the rights (but not the rights themselves) should trade freely into the United States, subject to the 40-day limitation of § 4(a)(3) of the Securities Act in the case of sales by dealers. [103]

[5] Additional Practical Considerations

In the rights offerings of 2008 and 2009, certain trends emerged reflecting the financial distress of issuers and a risk-averse underwriting environment.

p. 10-39
p. 10-40

"Soft" underwriting agreements entered into prior to announcement of the rights offering became commonplace. These agreements, often in the form of a letter, are a commitment by the underwriters to enter into an underwriting agreement to purchase and conduct a placement of any "rump" shares, subject to certain conditions being met and termination rights. For an issuer in financial distress, the underwriting commitment is an important message to shareholders that the capital to be raised by the rights offering is in place regardless of the level of subscription by shareholders. This "soft" underwriting commitment is replaced by a full underwriting agreement at the launch of the rights offering. One of the conditions included in these agreements may be that certain principal shareholders subscribe for, and exercise, rights allocated to them and/or take up all or part of the "rump" shares. The underwriters then may agree to purchase the remainder of the "rump" shares not attributable to the principal shareholders.

The underwriters' termination rights, [104] and the length of the period in which the underwriters may exercise their termination rights, has been a particular point of focus in rights offerings. While it is in the underwriters' interest to maintain the ability to exercise their termination rights for as long as possible (*i.e.*, up until the date on which any "rump" shares are delivered to the underwriters), it is in the issuer's interest to have this period be as short as possible. Principal shareholders who have committed to subscribe for, and exercise, their rights, may not view favorably arrangements in which the underwriters may terminate their commitment after the point at which shareholders' subscription rights are irrevocable (which is usually the end of the subscription period, depending on home-country law). If the rights are traded on an exchange, home-country regulators and stock exchange rules may also influence the length of the period during which the underwriters may terminate their underwriting commitment. For example, regulators in the United Kingdom have taken the view that once the rights, referred to as "nil paid shares" (as rights are received by the shareholder at no cost to the shareholder), are listed and begin trading, the rights

p. 10-40

offering cannot be revoked because securities are not eligible for listing on a conditional basis. Accordingly, in underwriting agreements for rights offerings of shares admitted to trading in the United Kingdom, the underwriters' termination rights may not be exercised after the rights have been admitted to trading. Outside the United Kingdom there is some variability in practice with respect to the length of the period in which the underwriters may exercise their termination rights, although the period typically ends on a date between the end of the subscription period and the date on which the shares are delivered to holders.

A common feature of rights offerings in certain countries, in particular the United Kingdom, is the use of "sub-underwriters" in relation to underwritten rights offerings. Underwriters of such offerings often seek to obtain the commitment of large institutional investors to assume a portion of the underwriting risk and enter into sub-underwriting agreements with such investors before a rights offering is announced, typically in exchange for a fee. These arrangements would raise a number of issues if made in the United States, especially in relation to a rights offering that will be registered in the United States (*e.g.*, issues under the registration requirements of the Securities Act, such as the inability to contact investors before a public filing is made in the United States, and under the Exchange Act, such as whether the sub-underwriters might be considered to be engaging in broker-dealer activities as a result of performing a sub-underwriting role (an issue to consider even if the rights offering is being conducted privately in the United States), as well as several other potential regulatory issues).

Footnotes

61 Due to the volume of rights offerings in the U.K. market in the spring and summer of 2008, the Chancellor of the Exchequer commissioned an industry group, known as the Rights Issue Review Group (the "U.K. Rights Issue Review Group"), co-chaired by the Financial Services Authority and HM Treasury, to review the rights offering process and issue a report with proposals for reform, which the U.K. Rights Issue Review Group did in November 2008. The U.K. Rights Issue Review Group estimated that £23 billion was raised through rights offerings in the United Kingdom in 2008, of which £16.9 billion was by companies in the financial industry. THE RIGHTS ISSUE REVIEW GROUP, A REPORT TO THE CHANCELLOR OF THE EXCHEQUER BY THE RIGHTS ISSUE REVIEW GROUP, at 3, 5 (Nov. 2008) (the "Rights Issue Review Group Report").

62 *See* Peter Thal Larsen, *Response to Rights Issues Turns Lukewarm*, FINANCIAL TIMES, May 14, 2008.

63 *See* Jane Croft, *HBOS Suffers Big Blow Over Rights Issue*, FINANCIAL TIMES, July 22, 2008. Only 8.29% of shareholders subscribed for new shares in the HBOS rights offering. The Rights Issue Review Group Report, at 6.

64 If some of the U.S. holders are institutions, and it is permissible under local law to treat shareholders differently, the issuer may allow the U.S. institutions to receive and exercise rights, relying on the private placement exemption provided by § 4(a)(2) of the Securities Act. The institutions can then, if they wish, resell the securities abroad under Regulation S. *See* § 10.07[3].

Rights are not typically offered to existing shareholders for value. Accordingly, their issuance should not be considered an "offer" or "sale" requiring registration under the Securities Act. The exercise of such rights and the receipt of new shares, which typically is for value, do however require registration or exclusion of U.S. holders.

65 §§ 560 to 577 of the Companies Act 2006.

66 §§ 562(3) of the Companies Act 2006.

67 In particular, according to Article 40 of the Federal Law of the Russian Federation "On Joint-Stock Companies" No. 208-FZ, dated December 26, 1995 (as amended), each shareholder has a pre-emptive right to purchase a number of additional shares or securities convertible into shares issued by way of open subscription (*i.e.*, placement of securities among an unlimited number of investors) *pro rata* to its existing shareholding in the company. Even if the shares or securities convertible into shares are issued by way of closed subscription (*i.e.*, placement of securities among a limited group of investors), existing shareholders will have similar pre-emptive rights unless they vote for the issue or disapply their pre-emptive right. Due to

these requirements of Russian law, it may not be possible to exclude U.S. shareholders completely from participating in a rights offering by a Russian company. A joint-stock company may not be able to refuse to sell shares or securities convertible into shares to a shareholder that duly exercised its pre-emptive rights, and prior to expiry of the pre-emptive right period, a company may not be able to offer such securities to other investors. Article 41 of the Federal Law of the Russian Federation "On Joint-Stock Companies" No. 208-FZ, dated December 26, 1995 (as amended).

68 *See* § 10.07[3][b].

69 *See* § 3.02[2][b].

70 Form F-3, General Instruction I.B.4. If the rights offering registration statement was going to be used in connection with standby underwriting arrangements, under which one or more broker-dealers agree with the issuer to purchase and distribute any shares not acquired from the issuer through the exercise of rights, the issuer must also meet the $75 million public float requirement . *See* Form F-3, General Instruction I.B.1.

71 The elimination of the ability of foreign issuers to make confidential filings with the SEC, other than in limited circumstances, has further discouraged the inclusion of U.S. holders in such issuers' rights offerings, as issuers are reluctant to signal to the market impending rights offerings through the U.S. public filing and review process. The SEC is hopeful that foreign well-known seasoned issuers will use automatic shelf registration for rights offerings. However, a potential rights issuer in financial distress may not be able to meet the $700 million common equity worldwide market value requirement for well-known seasoned issuers.

72 [Add cross-ref to discussion of ongoing obligations of being a U.S. public company.]

73 § 11(a) of the Securities Act *; see also* § 11.03[1].

74 NYSE LISTED COMPANY MANUAL § 703.03(B) and (C). Requests for an abbreviated notice period are considered on a case-by-case basis. *See also* Rule 10b-17(b) under the Exchange Act, which sets the basic standards for prior notice of record dates. The NASDAQ listed company rules do not include notice requirements to holders, although at least 15 calendar days' notice to the Exchange is required for issuances of common stock in a transaction that may result in the potential issuance of common stock greater than 10% of either the total shares outstanding or voting power outstanding on a pre-transaction basis (except for a company solely listing ADRs). *See* NASDAQ Listing Rule 5250(e)(2)(D), NASDAQ M ANUAL.

75 NYSE LISTED COMPANY MANUAL § 703.03(E). The Exchange allows for shorter subscription periods of 14 days if arrangements are made to expedite the distribution of rights and to facilitate their exercise. The NASDAQ listing rules do not specify a minimum subscription period.

76 The NYSE rules also require that all known terms of a proposed rights offering be publicly released immediately after an issuer's Board of Directors has taken action, and that additional terms be publicly released as soon as they are determined. NYSE LISTED COMPANY MANUAL § 703.03(B).

77 In the United Kingdom, for example, the U.K. listing rules do not require that there be ten days' prior notice of the record date for a rights offering, and the minimum subscription period is ten U.K. business days. As a result, a rights offering limited to following the U.K. rules can be completed more quickly from date of announcement than it can be if it is extended to the United States. In our experience, the NYSE has been receptive to discussion with foreign private issuers of ways of reconciling differing timing requirements.

78 This reasoning does not apply if the rights are non-transferable. Limitations on the exercise of rights by particular groups of holders may require an analysis of shareholder equal treatment rules applicable to an issuer in its home country or under the rules of other relevant exchanges. *See supra* Notes 65–67 and accompanying text; *see also* § 10.07[4].

79 *See* Rule 173 under the Securities Act; SEC Release No. 33-8591 (July 19, 2005).

80 In the United States, traditional shareholder communications channels tend to be constructed with proxy communications in mind, which typically move at a more languid pace than price-sensitive capital markets transactions. For a variety of reasons, rights offerings have not been as popular with investors in the United

States as they have been in Europe over the past several decades, with the result that there is less impetus for the acceleration of procedures.

81 Rule 801 under the Securities Act; *see* SEC Release No. 33-7759 (Oct. 22, 1999) and SEC Release No. 33-8957 (Sept. 19, 2008) (the "2008 Cross-Border Amendments").

82 *See* § 3.01, Note 1 for the definition of foreign private issuer.

83 For purposes of calculating the percentage of outstanding shares held by U.S. holders, effective with the 2008 Cross-Border Amendments, shares held by any U.S. or non-U.S. holder owning 10% or more of the class of shares are now included in the number of shares outstanding. Treasury shares are excluded from the calculation of shares held by U.S. holders and the total number of securities outstanding. Securities underlying ADRs must be included in determining the amount of securities outstanding of the class subject to the rights offering, as well as in the calculation of U.S. holders. The SEC did not adopt a proposed rebuttable presumption that persons holding through ADR facilities are U.S. holders. Other types of securities that are convertible into or exchangeable for subject securities, such as warrants, options or convertible securities, are not taken into account in calculating U.S. ownership. Rule 800(h)(2) under the Securities Act.

84 In determining U.S. ownership, the issuer is required to "look through" the record ownership of certain brokers, dealers, banks or nominees appearing on the issuer's books or transfer agents, depositaries or others acting on the issuer's behalf. These "look through" requirements apply only to securities held of record (i) in the United States, (ii) in the issuer's home jurisdiction or (iii) in the primary trading market for the issuer's securities if different from the issuer's home jurisdiction. The issuer's calculation of U.S. ownership may be made as of any date that is no more than 60 days before, and no more than 30 days after, the record date of the rights offering. Rule 800(h)(1) under the Securities Act. The focus on a range of dates reflects the difficulties offering participants had under the prior rules obtaining information as of a specific date. The SEC also adopted an alternative eligibility test in the 2008 Cross-Border Amendments, if the issuer is "unable to conduct" the look-through analysis described above, based on a comparison of the average daily trading volume of the subject class of securities in the United States to worldwide average daily trading volume. Rule 800(h)(7) under the Securities Act. The SEC did not define what is meant by the phrase "unable to conduct," indicating that the inability would need to be assessed based on the facts and circumstances of the particular transaction, but noted that the need to dedicate time and resources to conducting the look-through analysis and concerns about the completeness and accuracy of the information obtained from the analysis would not necessarily justify the use of the alternate test. In each instance, the issuer must make a good faith effort to conduct a reasonable inquiry into ascertaining the level of U.S. beneficial ownership. In addition, in certain jurisdictions, nominees may be prohibited by law (such as bank secrecy laws) from disclosing information about the beneficial owners on whose behalf they hold. Where nominees are prohibited by law from disclosing the country of residence of the beneficial owners of the subject securities, the SEC noted that the alternate test for determining eligibility should be available. SEC Release No. 33-8957 (Sept. 19, 2008), 73 Fed. Reg. 60,050, 60,057 (Oct. 9, 2008). *See* § 9.05[9][a].

85 The issuer need not, however, make the rights offering available to U.S. holders in a state that would require the rights to be registered. Rule 801(a)(3) under the Securities Act.

86 Rule 801(a)(6) under the Securities Act. This rule permits a U.S. recipient of the rights to sell them, for example, through a "designated offshore securities market" pursuant to Rule 904 under the Securities Act. *See* § 8.02[2].

87 Conversely, to the extent the underlying securities are "restricted securities" within the meaning of Rule 144 under the Securities Act, the securities purchased through the exercise of rights are also "restricted securities."

88 Form CB consists of a cover page, the attached offering materials and exhibits containing any information provided in the home jurisdiction or incorporated by reference in the home jurisdiction documents. The exhibits are not required to be sent to U.S. shareholders, unless they are sent to shareholders in the home jurisdiction.

89 While a private placement of rights structured in reliance on Regulation D would allow offers to U.S. holders who are "accredited investors"—a broader category of investors than qualified institutional buyers—this flexibility is rarely used in rights offerings, likely because the additional burden of complying with Regulation D is not justified as a practical matter.

Foreign companies should consider the need to comply with the broker-dealer registration requirements under the Exchange Act in relation to contacts in rights offerings with U.S. investors that are not intermediated by a U.S. registered broker-dealer. This may arise, for example, where investment banks involved in a rights offering elect not to be involved in any U.S. portion of an offering due to liability considerations (*e.g.*, where due diligence procedures customary for a U.S. offering may not be possible due to timing or other considerations). In this context, the safe harbor from the broker-dealer registration requirements contained in Rule 3a4-1 under the Exchange Act might be available.

90 *See* § 7.02[2].

91 Under the laws of some jurisdictions, rights may not be transferable. Under Mexican law, for example, preemptive rights may not be traded separately from the underlying shares that give rise to such rights. In this situation, ADR holders will not receive anything if the foreign company decides not to register the shares.

92 Listing agreements entered into by foreign issuers with the NYSE may direct such issuers to adhere to the NYSE's policy of not excluding U.S. holders from rights offerings while indicating that the NYSE has granted relief from this policy in the past and will continue to consider such relief on a case-by-case basis.

93 The 40-day period derives from § 4(a)(3) of the Securities Act. In a rights offering, the 40-day period of § 4(a)(3)(A) begins the day that existing shareholders are *first able* to apply to subscribe for the shares.

94 *See* § 7.02[3][b]. In the adopting release for the rule changes permitting "general solicitation and general advertising" in the context of offerings in reliance on Rule 144A, the staff stated that "an issuer relying on Section 4(a)(2) outside of the Rule 506(c) exemption will be restricted in its ability to make public communications to solicit investors for its offering because public advertising will continue to be incompatible with a claim of exemption under Section 4(a)(2)." SEC Release No. 33-9415 (July 10, 2013), 78 Fed. Reg. 44,771, 44,774 (July 24, 2013).

95 *See* § 7.02[3][b]. As mentioned below, similar restrictions will apply in respect of the portion of the offering outside the United States pursuant to Regulation S.

96 *See* § 7.02[5].

97 *See* § 4.02[3][c][iii].

98 Note that in the context of an offering pursuant to Regulation S, publication by an issuer of a notice in accordance with Rule 135c under the Securities Act does not constitute directed selling efforts. Rule 902(c)(3)(vi) under the Securities Act. Further, advertisements required to be published under foreign law or the rules of any foreign regulatory or self-regulatory authority do not constitute directed selling efforts for purposes of Regulation S. Rule 902(c)(3)(i) under the Securities Act. *See* § 8.02[1][b].

99 Prior to the amendments to Rule 144A that eliminated the prohibition on "general solicitation and general advertising" in the context of offerings in reliance on Rule 144A, the SEC staff took the position that the filing of the complete offering memorandum used in connection with an exempt offering under Regulation S and Rule 144A on Form 8-K during the exempt offering period would be inconsistent with the exemptions. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Sections, Question 139.32 (Mar. 4, 2011). This position likely still applies to private placements in reliance on § 4(a)(2) of the Securities Act, given that "general solicitation and general advertising" are still prohibited in such transactions.

100 This process may be managed by an investment bank appointed by the issuer to act as "rights offering agent" for the purpose of coordinating distribution and collection of subscription forms, liaising with clearing systems and selling the rights and shares allocable to ineligible holders.

101 In the case of an underwritten rights offering, the restrictions of Regulation S apply to the underwriting just

as they do to any standard underwritten offering. Furthermore, in a case where an underwriter has contractually agreed to purchase any "rump" shares, those shares will also constitute allotment securities and (unless registered under the Securities Act or otherwise subject to an exemption from the registration requirements thereof) will be subject to restrictions on distribution.

102 *See* § 8.02[1][b].

103 *See supra* Note 93.

104 The scope of termination rights for material adverse changes in the business and financial condition of the issuer received considerable attention in the rights offerings of 2008 and 2009, given the volatility of the markets and the high risk that the circumstances of the company may change between the launch of the rights offering and the end of the subscription period. For these reasons, underwriters were considerably risk averse and sought to expand the definition of "material adverse change" in underwriting agreements, in some cases including ratings downgrades and non-routine engagements between the issuer and regulators and central banks. The U.K. Rights Issue Review Group identified concerns by issuers of the "creeping scope" of such clauses, although noting that the substance of an underwriting agreement is fundamentally a commercial matter and not a regulatory matter. Rights Issue Review Group Report, at 37–38.

U.S. Regulation of the International Securities and Derivatives Markets, § 10.06, CONVERTIBLE AND EXCHANGEABLE SECURITIES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 10.06 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Convertible and exchangeable securities are equity-linked financial instruments that generally involve the issuance of a debt security convertible or exchangeable into common stock, or its cash equivalent. [105] The distinction between convertible and exchangeable securities is that convertible securities are issued by and convertible into common stock of the same issuer, and exchangeable securities are issued by an issuer that is different from the issuer of the common stock into which the securities are exchangeable. The debt security may be convertible or exchangeable at the option of the holder into a specified number of shares or, in certain cases, into a combination of shares and cash equal to the value of the balance of the shares at the issuer's election. Alternatively, the debt

p. 10-42

security may be mandatorily convertible or exchangeable, meaning that the security is automatically converted into or exchanged for the underlying common stock (or a cash equivalent) on the maturity date or upon the occurrence of certain specified events. The holder of a mandatorily convertible or exchangeable security would take delivery of a variable number of shares of common stock or the cash equivalent of those shares as determined by a formula. [106] During the term of the security, the holder also receives a current (generally) fixed coupon. [107] The issuer of the convertible or exchangeable security usually has the right to elect to cash settle the security by delivering, in lieu of shares, cash in an amount equal to the value of the underlying stock deliverable at maturity. [108]

During the term of an exchangeable security, the issuer retains all shareholder rights over the underlying shares and generally is not required to pledge the shares to the holders; the exchangeable security also imposes no limitations on the issuer's right to dispose of the shares to other purchasers. [109] In some cases,

p. 10-42

p. 10-43

the issuer of the exchangeable security does not own the underlying shares. These issuers (typically financial institutions) may be accommodating (through a back-to-back transaction) a shareholder that cannot issue an exchangeable security directly to the public (*e.g.*, because it is not an SEC-reporting company), or may simply perceive a market for the exchangeable security with respect to a particular stock. [110]

Underwriters generally view issuances of convertible and exchangeable securities as if there are two parallel offerings, and thus typically seek representations and opinions with respect to both the convertible or exchangeable security and the underlying shares and the related disclosure where both the convertible or exchangeable security and the underlying shares are required to be registered. [111] In addition, underwriters will generally seek indemnification with respect to disclosure relating to both the convertible or exchangeable security and the underlying shares. [112]

[1] Mandatory vs. Optional Conversion or Exchange

Because of the mandatory conversion or exchange feature, the offer and sale of a mandatorily convertible or exchangeable security is viewed as a simultaneous offer and sale of the underlying shares involving a single "investment decision." [113] As a result, there is a single distribution of two securities at the time of issuance of the mandatorily convertible or exchangeable securities. In contrast, in the case of optional convertible or exchangeable securities there are two distributions, one when the convertible or exchangeable securities are issued and one involving a continuous offering of the underlying shares.

[2] Registered Offerings of Convertible and Exchangeable Securities

p. 10-43
p. 10-44

The issuance of a convertible or exchangeable security is considered by the SEC to involve parallel offerings of the convertible or exchangeable security and the underlying shares, and thus both the security and the underlying shares must either be registered or offered pursuant to an exemption from registration. In most cases, the manner in which the offering of the convertible or exchangeable securities is conducted determines the manner in which the underlying shares are offered and sold pursuant to the embedded option (*i.e.*, both transactions will occur pursuant to a registration statement under the Securities Act, in a resale under Rule 144A, pursuant to a traditional private placement, etc.). With respect to convertible securities, the issuance of the underlying shares usually qualifies under § 3(a)(9) of the Securities Act, which affords an exemption from the registration requirements for the issuance of securities upon the conversion of other securities of the same issuer, [114] except where a commission or other remuneration is paid or given for soliciting the conversion.

In the case of exchangeable securities (optional or mandatory), the SEC requires that the prospectus include comprehensive information regarding the issuer of the underlying shares unless the issuer of the underlying shares is not an affiliate of the issuer of the exchangeable securities and either (i) is eligible to offer its securities using Form S-3 or F-3 or (ii) meets all of the listing criteria, both with respect to the issuer and with respect to the securities being issued, that an issuer of the underlying shares would have to meet if the exchangeable security were to be listed on a national securities exchange as an equity-linked security. [115] If the issuer of the shares meets either of these criteria, then the exchangeable security prospectus need only include a brief description of the issuer's business, reference to other publicly available information about the issuer filed with the SEC and information concerning market prices of the shares. [116] Where the issuer of the underlying shares does not meet either of these criteria, or is an affiliate of the

p. 10-44
p. 10-45

issuer of the exchangeable securities, and if the underlying shares are "restricted securities" for purposes of Rule 144, the SEC's disclosure requirements would mandate, in effect, the preparation of two registration statements, one for each of the issuer of the exchangeable securities and the underlying shares, respectively. The cooperation of the issuer of the underlying shares would be required in connection with this process, which is often difficult to obtain absent registration rights or similar contractual obligations. [117]

[3] Private Placements of Convertible and Exchangeable Securities in the United States

Most offerings of convertible and exchangeable securities are structured as private placements pursuant to Rule 144A or traditional private placements under the Securities Act, often, in the case of exchangeable securities, with resale registration rights. [118] U.S. investors in these transactions take "restricted securities" subject to limitations on resale in the United States pursuant to Rule 144. [119]

In the case of mandatorily convertible and exchangeable securities, the requirements and procedures of a Rule 144A transaction or a traditional private placement only need to be considered and implemented at the time of the initial issuance of the convertible and exchangeable securities, including obtaining any certifications and representations from investors in the form of investor letters. However, the SEC staff has taken the position that, where the underlying security is U.S. exchange-listed or quoted on an automated interdealer quotation system and, thus, fungible under Rule 144A, the transaction does not qualify for Rule 144A (unless the specific underlying shares that will be delivered on exchange, when originally issued, were not U.S. exchange-listed or quoted on an automated interdealer quotation system (so-called "founder's stock") [120] or are exempt from registration because they are not "restricted securities" and can be

p. 10-45

p. 10-46

resold in reliance on Rule 144 [121]) because the purchase of the mandatorily exchangeable security is also the sole investment decision in respect of the underlying shares. The SEC takes this position whether or not the 10% premium test specified in Rule 144A for exchangeable securities is satisfied. The SEC's position would not apply where the mandatory "conversion" or "exchange" can by the terms of the security only be effected by payment of the cash equivalent and not by delivery of the physical securities. [122] In addition, the SEC's position relates only to Rule 144A, and most transactions can still be carried out as traditional private placements under § 4(a)(2) with resales under § 4(a)(7) or § 4(1 ½) (although in either case there may be complications because of the unavailability of DTC for clearance and settlement and because compliance will be required with margin regulations). [122.1]

For optional convertible and exchangeable securities, the requirements and procedures of a Rule 144A transaction or traditional private placement must be followed both at the time of initial issuance of the convertible or exchangeable security, and at the time the option to convert or exchange is exercised. [123] To the extent certifications and representations are obtained from investors in the form of investor letters, these will need to be obtained from each investor at issuance of the convertible or exchangeable securities, and, until the underlying shares become freely transferable pursuant to Rule 144, upon distribution of the underlying shares following conversion or exercise, as well as from subsequent U.S. transferees. However, as a practical matter, because issuance of the underlying shares under convertible securities generally will be exempt under § 3(a)(9) of the Securities Act and thus the holding period of those shares for purposes of Rule 144 will tack to the original issuance of the convertible securities, shares issued on exercise of the conversion option generally will be freely tradable by non-affiliates of the issuer.

Offering participants also need to consider whether the issuer of the convertible or exchangeable security and/or the issuer of the underlying shares is an "investment company" for purposes of the Investment Company Act. [124] The procedures for the private placement of the convertible or exchangeable securities, and the distribution of the underlying shares pursuant to the conversion or

p. 10-46

p. 10-47

exchange option in the case of optional convertible and exchangeable securities, may need to include representations from investors and subsequent transferees of their status as "qualified purchasers," to the extent the private placement is structured in reliance on § 3(c)(7) of the Investment Company Act. [125]

[4] Offerings of Convertible and Exchangeable Securities in Reliance on Regulation S

For purposes of offerings of convertible and exchangeable securities outside the United States in reliance on Regulation S, the offerings are generally subject to the same restrictions as offerings of straight debt, except for certain Category 3 offerings. Due to the way in which the category is determined for offerings by foreign issuers and the way in which the length of the distribution compliance period is determined for offerings of convertible and exchangeable securities, this exception will generally only affect offerings of convertible and exchangeable securities by U.S. issuers.

The category for an offering of convertible or exchangeable securities under Regulation S is the more restrictive of the categories for offerings of those securities and of the underlying securities. [126] The category of an offering by a foreign issuer will depend on whether there is a substantial U.S. market interest in the kind of securities being offered. [127] To determine whether there is a substantial U.S. market interest in the convertible or exchangeable securities of a foreign issuer, market interest must be tested for both the convertible or exchangeable securities and the underlying securities. If substantial U.S. market interest exists in either, there is substantial U.S. market interest in the convertible or exchangeable securities. [128] With respect to offerings of convertible securities by foreign issuers, and offerings of exchangeable securities for underlying securities of foreign issuers, because debt offerings of foreign issuers will fall, at worst, into Category 2, and relatively few equity offerings of foreign issuers will fall into Category 3, offerings of convertible securities by foreign issuers, and

p. 10-47
p. 10-48

offerings of exchangeable securities for underlying securities of foreign issuers, will generally not fall into Category 3. [129]

To determine the appropriate distribution compliance period, convertible and exchangeable securities are generally treated like the underlying securities. Where, however, the securities are convertible or exchangeable only after any applicable distribution compliance period would have ended if the underlying securities were themselves being offered and sold under the safe harbor of Regulation S, an exception to the general rule allows the distribution compliance period to be determined by reference to the convertible or exchangeable securities themselves. Because there is no distribution compliance period for a Category 1 offering, and the distribution compliance periods for debt and equity offerings that fall into Category 2 are the same, the general rule and the exception to it have significance only in an offering of securities that are convertible or exchangeable into Category 3 equity, and Category 3 is unlikely to apply to the equity of a foreign issuer. As a result of the 1998 amendments to Regulation S, [130] all convertible securities offerings by U.S. issuers, and offerings of securities exchangeable into equity securities of U.S. issuers, will fall into Category 3. Moreover, because convertible and exchangeable securities are considered to be equity securities rather than debt securities, [131] the full panoply of Category 3 restrictions will apply, and the distribution compliance period will be six months (one year if the issuer is a nonreporting issuer) unless the securities are convertible or exchangeable only after six months (one year if the issuer is a nonreporting issuer), in which case the distribution compliance period will be 40 days. [132]

The 1998 amendments applying Category 3 restrictions to convertible securities offerings by U.S. reporting issuers raised concerns because a very high volume of convertible securities are sold by U.S. reporting companies under Rule 144A and Regulation S, constituting a significant proportion of all sales of convertible securities by U.S. reporting companies. [133] The concerns arose mainly because convertible securities are customarily held in global form and traded

p. 10-48
p. 10-49

through book-entry clearance facilities, such as the Euroclear System, Clearstream or DTC. For this reason, compliance with the certification, agreement, monitoring and stop-transfer requirements of Rules 903(b)(3)(iii)(B)(1), (2) and (4) was impracticable, and solving the problem by altering market practice to provide for the issuance of securities in definitive, registered form would be costly and impose additional settlement risk.

The SEC staff recognized these concerns and accepted that book-entry systems are desirable settlement and trading mechanisms. Accordingly, the staff adopted the following alternative procedures for convertible securities of U.S. reporting issuers that are eligible for resale under Rule 144A and that are held in global certificated form by a depository for a book-entry clearance facility:

- the convertible security must be identified by its CUSIP or other issuer identification number as restricted, so that participants in book-entry clearance facilities and others that trade the securities will have notice that transfers of the securities to U.S. purchasers are restricted and must qualify under an available exemption (absent registration);
- any information provided by the issuer or managing underwriters to publishers of publicly available databases about the terms of any new issuance of convertible securities must include a statement that the securities have not been registered under the Securities Act and are subject to restrictions under Rule 144A and Regulation S ;
- the offering circular must contain representations deemed to be made by purchasers in the offering regarding their non-U.S. status (or other exempt status, such as qualified institutional buyer status under

the Rule 144A exemption from registration), and must contain agreements deemed to be made by purchasers under Regulation S (and, where appropriate, Rule 144A) regarding restrictions on resale and hedging; and

- any certificated securities, including both global securities and any physical, certificated securities issued to holders prior to the expiration of the distribution compliance period, must bear an appropriate restrictive legend. Thereafter, those certificated securities must bear a restrictive legend to the extent required by Rule 144. Any certificated securities that are issued during the distribution compliance period (other than in a transaction subject to Rule 144A) must satisfy all of the requirements of Rule 903(b)(3)(iii)(B)(4), including the legending and certification requirements.

The SEC staff noted, however, that these alternative procedures were available only to the convertible securities themselves and not to any equity securities that are issued upon the conversion of the convertible securities during the distribution compliance period. They also confirmed that debt securities that are

p. 10-49

p. 10-50

exchangeable into equity securities of a person other than the issuer would be considered to be convertible securities for purposes of Regulation S, meaning that these same procedures described above could be followed in offerings of securities exchangeable for equity securities of a U.S. reporting issuer. [134]

In offerings of optionally exchangeable securities, and in offerings of optionally convertible securities in which the offering of the underlying securities is not exempt under § 3(a)(9), steps will have to be taken to ensure that both the offering of the convertible or exchangeable securities and the offering of the underlying securities represented thereby are made in compliance with Regulation S. The offering of the convertible or exchangeable securities will be subject to the ordinary selling restrictions that apply to straight debt, taking into account the complexities described above associated with determining the appropriate category and distribution compliance period. [135] In the case of optionally convertible and exchangeable securities, the issuance of the underlying securities on conversion or exchange will be subject to additional restrictions that will vary depending on the category applicable to the underlying securities. These additional restrictions are based on the requirements of Regulation S with regard to the exercise of warrants. [136]

When the underlying securities fall into Category 1, and, in the case of convertible securities, if the § 3(a)(9) exemption is unavailable, holders will only have to certify that they are outside the United States when they exercise their conversion or exchange rights. [137] When the underlying securities fall into Category 2 or 3, and, in the case of convertible securities, if the § 3(a)(9) exemption is unavailable, there are three additional requirements. First, the convertible or exchangeable securities must bear a legend stating (i) that the securities and the underlying shares have not been registered under the Securities Act and (ii) that the securities may not be converted or exchanged by or on behalf of U.S. persons unless the securities and the underlying shares are registered or an exemption from registration is available. [138] Second, each person converting or exchanging a security must be required either (i) to certify that it is not a U.S.

p. 10-50

p. 10-51

person and that the security is not being converted or exchanged on behalf of a U.S. person or (ii) to provide an opinion of counsel that the security and the underlying shares have been registered or that an exemption from registration is available. [139] Finally, procedures must be established to ensure that the securities may not be converted or exchanged within the United States and that the underlying shares may not be delivered unlawfully within the United States upon conversion or exchange. [140]

[5] NYSE Listing Requirements for Exchangeable Securities

The NYSE has specific requirements in connection with the listing of an exchangeable security that has been publicly offered in the United States. [141] It requires that the issuer of the exchangeable security either be a NYSE-listed company (or an affiliate thereof) in good standing or meet the general size and earnings requirements for listed companies. [142] In addition, either (i) the issuer must have a minimum tangible net worth of $250 million or (ii) the issuer must have a minimum tangible net worth of $150 million and the total original issue price of the securities, when combined with all other equity-linked securities of the issuer listed on a national securities exchange or otherwise publicly traded in the United States, must not be greater than 25% of the issuer's tangible net worth at the time of issuance. [143] The issue of the exchangeable security must involve a distribution of at least one million securities to at least 400 holders (provided that if the securities are traded in $1,000 denominations there is no minimum public distribution or minimum number of holders), and the exchangeable security offered must have a market value of at least $4 million and a minimum term of one year. [144]

With respect to the shares underlying the exchangeable security, the NYSE requires that the class of such shares: (i) represent a minimum market capitalization of $3 billion and during the 12 months preceding listing be shown to have had a trading volume of at least 2.5 million shares, (ii) represent a minimum market capitalization of $1.5 billion and during the 12 months preceding listing be shown to have had a trading volume of at least 10 million shares, or (iii) represent a minimum market capitalization of $500 million and during the 12 months preceding listing be shown to have had a trading volume of at least 15 million

p. 10-51

p. 10-52

shares. The issuer of the underlying shares must be an Exchange Act reporting entity and the shares must be listed on a U.S. national securities exchange or traded through the facilities of a national securities association and subject to last sale reporting. [145] In addition, the underlying shares to which the exchangeable security relates may not exceed 5% of the total number of shares outstanding. [146]

The NYSE requires (other than for foreign private issuers) [147] shareholder approval prior to, among other things, the issuance of securities convertible into or exercisable for common stock, if (1) the common stock has, or will have upon issuance, voting power equal to or in excess of 20% of the voting power outstanding before the issuance of such securities; or (2) the number of shares of common stock to be issued is, or will be upon issuance, equal to or in excess of

p. 10-52

p. 10-53

20% of the number of shares of common stock outstanding before the issuance of such securities. However, shareholder approval will not be required for any issuances of securities convertible into or exercisable for common stock involving: (1) any public offering for cash or (2) any "bona fide private financing," if such financing involves a sale of securities convertible into or exercisable for common stock, for cash, if the conversion or exercise price is at least as great as each of the book and market value of the issuer's common stock.

[6] “Pre-IPO” Convertible and Exchangeable Bonds

"Pre-IPO" convertible and exchangeable bonds (sometimes referred to as "going public" convertible or exchangeable bonds) are debt securities where the underlying shares are not listed at the time the convertible or exchangeable bonds are issued. These instruments are a means of introducing an issuer to the market, helping to build the equity story and momentum ahead of an initial public offering and allowing companies to secure cornerstone investors prior to an initial public offering of their shares. The terms of the convertible or exchangeable bonds are similar to traditional convertible and exchangeable securities in some respects, with the holders having the option to convert or exchange their bonds into the underlying shares upon an initial public offering [148] of the underlying shares. [149]

Pre-IPO convertible and exchangeable securities may be offered outside the United States pursuant to Regulation S under the Securities Act and in the United States pursuant to Rule 144A or in a traditional private placement. The same legal analysis and issues described above need to be considered with respect to the issuance of the convertible or exchangeable bonds and underlying shares (to the extent the exemption under § 3(a)(9) of the Securities Act is

p. 10-53

p. 10-54

unavailable [150]); however, pre-IPO convertible and exchangeable bonds also present unique practical and commercial considerations.

The terms of pre-IPO convertible and exchangeable bonds typically include conditions under which the underlying issuer is obligated to commence its public offering and the holders are entitled to request that the issuer commence its public offering, and the terms of the initial public offering itself. The terms of the convertible or exchangeable bonds include incentives for an issuer to conduct its initial public offering, provided certain conditions are met. As an initial incentive, the terms and conditions of the bonds usually include an increase or "step up" in the interest rate on the securities if the underlying issuer does not commence its public offering within a specified time following the issuance of the convertible or exchangeable bonds (typically three years). The holders' right to request that the underlying issuer commence its public offering may also be conditioned upon the satisfaction of certain business performance tests (such as achieving a threshold profit level during its last fiscal year, as measured by earnings before interest, taxes, depreciation and amortization ("EBITDA") or net profit) and meeting certain tests for market conditions based on volatility index measures or a certain number of IPOs of a specified size being completed during the relevant measurement period. If the issuer does not commence the initial public offering during a certain period following a valid request notice from the holders (usually within six to 12 months following the request), the holders may have a put option, with the redemption price of the bonds set at a specified equity return on their investment.

Given that the company is not publicly listed at the time the convertible or exchangeable bonds are issued, special considerations apply in structuring the terms of these instruments. As the underlying shares are not listed or quoted, an initial valuation of the company will need to be made (usually with the assistance of financial advisors and based on feedback from potential investors) and serve as a proxy for the underlying share price in determining the conversion

p. 10-54

p. 10-55

rate. This initial valuation may be subject to adjustment in the event of corporate actions that may increase or decrease the valuation (similar to anti-dilution adjustments for traditional convertible and exchangeable securities). There are also potential difficulties for the company following receipt of a request from the holders to commence an initial public offering. The business performance tests may be an imperfect measure of market receptivity to the company—for example, EBITDA disregards the company's levels of indebtedness and valuation multiples may be lower than expected. The company may also be in the process of undertaking corporate transactions that may be problematic for the timing of an initial public offering, such as a significant merger, acquisition or reorganization. Finally, market conditions may change following the receipt of the request notice, and the market conditions tests may also be imperfect measures of market stress.

Footnotes

105 Different securities firms have marketed economically equivalent securities under various service marks, including Debt Exchangeable for Common Stock ("DECS"), Automatic Common Exchange Securities ("ACES"), Premium Exchangeable Participating Shares ("PEPS"), Provisionally Redeemable Income Debt Exchangeable for Stock ("PRIDES"), Stock Appreciation Income Linked Securities ("SAILS") and Mandatorily Exchangeable Debt Securities("MEDS").

106 The payout formula customarily gives the holder all of the downside, and much of the upside, of owning the underlying equity. For example, if the underlying stock is trading at $50 per share, a typical convertible or exchangeable security might provide that at maturity of the security the holder will receive one share of stock if the stock is trading at $50 or lower at maturity; $50 worth of stock if the stock is trading between $50 and $60; and 5/6 of a share of stock if the stock is trading at $60 or higher.

Because its value is defined by reference to the future value of another security, a convertible or exchangeable security may be deemed to constitute a combination of a debt security with one or more embedded options or an embedded futures contract with respect to the underlying shares (and, where the underlying shares are denominated in a foreign currency, a foreign currency forward). Whether the embedded equity derivative is comprised of a combination of "options" or a "futures" contract may depend, in large part, on the specific economic terms of the instrument. *See* § 12.03[5]. In circumstances where the embedded equity derivative may be deemed to constitute a futures contract, the instrument should be structured in a manner that complies with the exclusion from the Central Excise Act ("CEA"), for qualifying hybrid instruments, CEA § 2(f). *See* § 12.03[5].

107 The interest component of a convertible or exchangeable security generally takes the form of a fixed periodic coupon that typically is substantially higher than the dividend on the underlying stock. As an economic matter, the difference between the coupon on the convertible or exchangeable security and the rate of return on a conventional debt instrument is determined in large part by the net premium value of the options embedded in the payout structure of the convertible or exchangeable security and the anticipated dividend yield on the underlying stock.

108 This cash settlement right is important for U.S. federal income tax purposes because it helps to confirm that the sale of the underlying shares, and recognition of any gain on that sale, does not take place until maturity. *See* IRS Revenue Ruling 2003-7, 2003-1 C.B. 363. Prior to the Commodity Futures Modernization Act of 2000 ("CFMA"), cash settlement could give rise to issues under state gaming or bucket shop laws if the exchangeable security was not listed on a national securities exchange or quoted on Nasdaq. Section 28(a) of the Exchange Act, as amended by the CFMA, now preempts state gaming and bucket shop laws with respect to these securities, whether or not listed.

109 For issuers of an exchangeable security that hold substantial stakes in the underlying company, the retention of shareholder rights can be an important advantage of the exchangeable structure, as compared to a current sale, because the exchangeable structure allows the issuer to continue to vote the stock and to exercise control over the management of the underlying company. If the underlying issuer is a U.S. issuer, sale of the underlying shares by a large shareholder may give rise to questions in respect of short sales under § 16 of the Exchange Act. *See* § 6.04[2].

110 Certain categories of investors, such as equity-income mutual funds, may be interested in a certain stock because of its growth potential, but may not be willing to invest in a stock that pays no dividends, or very low dividends. Those investors may be willing to give up some of the potential appreciation in the underlying stock in exchange for a current coupon.

Exchangeable instruments in particular are frequently issued through trust structures, whereby, for example, a statutory business trust publicly offers the exchangeable security and concurrently (i) purchases derivative debt securities (typically Treasury strips) from the market to be used to fulfill the interest obligation of the exchangeable security and (ii) enters into a forward purchase agreement with a selling shareholder for the underlying shares that is secured by a pledge of the shares. These trust issuers are generally required to register with the SEC as investment companies. *See* §§ 15.02 and 15.03.

111 *See* § 3.02[4].

112 *See* § 3.02[3][4][h], Note 317 and accompanying text.

113 *See Shearman & Sterling* (avail. Dec. 21, 1998).

114 However, in the case of securities of a finance subsidiary or wholly owned operating subsidiary that are guaranteed by its parent and convertible into the securities of its parent, the issuance of the securities on conversion will be exempt from the registration requirements of the Securities Act under § 3(a)(9). *See Section 3(a)(9) Upstream Guarantees* (avail. Jan. 13, 2010).

115 *See* § 10.06[5].

116 *See Morgan Stanley & Co., Inc.* (avail. June 24, 1996); *see also In re PaineWebber GOALS Securities Litigation*, 303 F. Supp. 2d 385 (S.D.N.Y. 2004) (dismissing alleged violation of § 11 of the Securities Act, brought on behalf of purchasers of securities issued by UBS AG linked to WorldCom common stock performance, when the prospectus supplement (i) provided an accurate listing of historical WorldCom stock prices, notwithstanding that such prices had been artificially inflated through another party's fraud, and (ii) specifically disclaimed any representation concerning such stock performance and made no representation

concerning WorldCom, the reliability of its financial statements, the accuracy of its public statements or the utility of its common stock performance as a predictor of future stock performance). The *PaineWebber GOALS* decision suggests that an issuer of equity-linked notes can, for purposes of § 11 of the Securities Act, rely on public disclosure about an unaffiliated underlying issuer without any investigation of such issuer, at least if the equity-linked notes issuer provides appropriate disclaimers about the lack of responsibility for, and makes no representations about, any information regarding the underlying issuer.

117 *See* § 10.03[1].

118 Resale registration generally is not considered necessary for investors in convertible securities in light of the 2008 amendments to Rule 144 that, *inter alia*, shortened the holding period for restricted securities generally to six months for SEC reporting issuers and to one year for other issuers. In the case of convertible securities, this holding period will begin on issuance of the convertible security (and not at the time of conversion). SEC Release No. 33-8869 (Dec. 6, 2007) (amendments effective commencing 2008). In the case of exchangeable securities, however, because the exchange generally will not be exempt under § 3(a)(9), it will create a new holding period for the common stock received upon exchange.

119 *See* § 7.03[2].

120 *See Shearman & Sterling* (avail. Dec. 21, 1998).

121 *See Mandatorily Exchangeable Issuer Securities* (avail. Oct. 25, 1999).

122 We understand that this position was orally confirmed in the context of mandatorily exchangeable securities to another law firm by the SEC's Office of International Corporate Finance of the Division of Corporation Finance.

122.1 *See* § 7.08[1].

123 Traditional private placement procedures, based on Regulation D, generally require restrictive legends to be placed on the underlying shares. These requirements substantially limit the types of investors that can accept delivery of the underlying shares and restrict the U.S. liquidity of the underlying shares in the period following the conversion or exercise date. The underlying shares may, however, be sold freely outside the United States in reliance on Regulation S. *See* § 10.08[4]. *But see* § 7.02[2].

124 *See* § 15.02.

125 *See* § 15.06[1].

126 If the securities are convertible or exchangeable into securities of a guarantor, the category into which the offering falls will depend on the nature of the guarantor and the categories applicable to its debt and the underlying securities, and in certain circumstances on the category applicable to the issuer's debt securities. If the guarantor is the parent of the issuer, the category applicable to offerings of the issuer's debt securities can be disregarded, and the offering will fall into the more restrictive of the categories for the guarantor's debt and the underlying securities. If the guarantor is not the parent of the issuer, the offering will fall into the most restrictive of the categories for offerings of the issuer's debt securities, the guarantor's debt securities and the underlying securities.

127 *See* § 8.02[1][c].

128 *See* SEC Release No. 33-6863 (Apr. 24, 1990), 55 Fed. Reg. 18,306, 18,313 (May 2, 1990).

129 *But see* § 8.02[1][c][i], Note 49 and accompanying text, and § 8.02[1][c][ii], Note 57 and accompanying text.

130 SEC Release No. 33-7505 (Feb. 17, 1998). *See* § 8.02, Note 14 and accompanying text.

131 *See* the definition of "debt security" in Rule 902(a) and the definition of "equity security" in Rule 405 under the Securities Act.

132 SEC Release No. 33-6863 (Apr. 24, 1990). Moreover, both the convertible or exchangeable securities and the underlying shares will be "restricted securities" within the meaning of Rule 144 under the Securities Act and will retain this status for the applicable Rule 144 holding period notwithstanding resales during this period outside the United States under Regulation S. *See* the discussion of Rule 905 under the Securities Act in § 8.02[2]; *see also* § 7.03[2].

133 In 1997, for example, an estimated $17 billion of convertible securities were sold by U.S. reporting companies under Rule 144A and Regulation S, constituting approximately 55% of all sales of convertible securities in that year by U.S. reporting companies. *See* Letter from William P. Rogers, Jr., Cravath, Swaine & Moore, to the SEC, Division of Corporation Finance (Aug. 24, 1998).

134 *See Sales of Convertible Securities of U.S. Reporting Companies Under Regulation S* (avail. Aug. 26, 1998).

135 In addition, the offering of exchangeable securities and, when § 3(a)(9) does not apply, the offering of convertible securities should be treated as a continuous offering of the underlying securities. This would require that in Category 2 and Category 3 offerings, the distribution compliance period should commence with the completion of the distribution of the exchangeable or convertible securities, rather than on the closing date.

136 *See* SEC Release No. 33-6863 (Apr. 24, 1990). *See* § 10.02[3][a].

137 The purpose of this certification is to ensure that the "offshore transaction" requirement is met; Regulation S does not itself set out the certification requirement for Category 1 offerings. Although the certification is not required by law, as a matter of market practice issuers generally request that it be provided.

138 Rule 903(b)(2)(i) or Rule 903(b)(3)(i) under the Securities Act.

139 Rule 903(b)(2)(ii) or Rule 903(b)(3)(ii)(A) under the Securities Act.

140 Rule 903(b)(3)(iii)(B) under the Securities Act. *See* § 8.02[1][c][ii], Note 57 and accompanying text for a discussion of the procedures applicable to conversion into underlying securities of foreign issuers substantially all of the trading of which takes place in the United States.

141 *See* NYSE LISTED COMPANY MANUAL § 703.21.

142 NYSE LISTED COMPANY MANUAL § 703.21.

143 NYSE LISTED COMPANY MANUAL § 703.21.

144 NYSE LISTED COMPANY MANUAL § 703.21.

145 In addition, if the issuer of the underlying shares is a foreign company and the shares are traded in the U.S. market (including trading through ADRs), either: (i) the NYSE must have in place an effective, comprehensive surveillance sharing agreement with the primary exchange on which the underlying shares are traded, or (ii) the ratio of (a) the combined trading volume of the shares and related securities in the United States and any other market with which the NYSE has in place an effective, comprehensive surveillance information sharing agreement to (b) the worldwide trading volume in such securities is at least 50%, or (iii) during the six-month period preceding the date of listing (a) the combined trading volume of the shares and related securities occurring in the U.S. market is at least 20% of the combined worldwide trading volume in such securities, (b) the average daily trading volume in the U.S. market is 100,000 or more shares and (c) the trading volume for the shares is at least 60,000 per day in the U.S. market on a majority of the trading days during such six-month period.

146 If the issuer of the underlying shares is a foreign company, then the shares may not exceed: (i) 2% of the total shares outstanding worldwide, provided that at least 20% of the worldwide trading volume during the six-month period preceding the date of listing is effected in the United States, (ii) 3% of the total worldwide shares outstanding, provided that at least 50% of the worldwide trading volume during the six-month period preceding the date of listing is effected in the United States, or (iii) 5% of the total worldwide shares outstanding, provided that at least 70% of the worldwide trading volume during the six-month period preceding the date of listing is effected in the United States. If less than 20% of the worldwide trading volume in the underlying linked security during the six-month period preceding the date of listing is effected in the United States, the exchangeable security may not be linked to such underlying security. *See* NYSE LISTED COMPANY MANUAL § 703.21.

If an issuer proposes to issue an exchangeable security that relates to more than the allowable percentages of the underlying security, the NYSE, with the concurrence of the staff of the Division of Trading and Markets of the SEC, will evaluate the maximum percentage that may be issued on a case-by-case basis. NYSE LISTED COMPANY MANUAL § 703.21.

147 NASDAQ Listing Rule 5635(d), NASDAQ MANUAL, requires (again, other than for foreign private issuers) shareholder approval for transactions, other than "public offerings," involving (1) the sale, issuance or potential issuance by an issuer of common stock (or securities convertible into or exercisable for common stock) at a price less than the greater of book or market value, which, together with sales by officers, directors or substantial shareholders of the issuer, equals 20% or more of the common stock or 20% or more of the voting power outstanding before the issuance, or (2) the sale, issuance or potential issuance by the issuer of common stock (or securities convertible into or exercisable for common stock) equal to 20% or more of the common stock or 20% or more of the voting power outstanding before the issuance for less than the greater of book or market value of the common stock.

148 This is usually referred to as a "qualifying IPO" or "QPO" in the terms and conditions of the bonds and defined as an offering of the underlying shares by the company, provided that (i) the offering results in a free float of at least a specified percentage of outstanding shares or a specified minimum market capitalization and (ii) the shares are listed on certain specified, international stock exchanges. The first element of the proviso is known as the "liquidity condition," as holders want to ensure sufficient liquidity in the underlying shares at the time of the initial public offering. The threshold free float and market capitalization amounts are usually based on the public float requirements of the exchange on which the company is likely to list its shares. The second element of the proviso ensures that the initial public offering is conducted on a reputable, international stock exchange with a sufficient volume of trading.

149 Two general structures have emerged for these transactions: (i) the holders have the right to convert into shares determined as the ratio of the bond principal amount to the initial valuation of the company, or (ii) the holders have the right to convert into shares valued at a discount to the initial public offering price of the shares. The second structure can create a perverse marketing message at the time of the initial public offering, as the convertible bond holders may seek to drive the price down in order to receive more shares. Accordingly, the first structure is more commonly used in these transactions.

150 Usually the conversion or exchange of the bonds into the underlying shares will be exempt under § 3(a)(9) of the Securities Act, as pre-IPO convertible or exchangeable bonds are typically issued by the issuer of the underlying shares or a finance subsidiary whose securities are guaranteed by the parent issuer of the underlying shares. *See supra* Note 114 and accompanying text. However, prior to an initial public offering, a company may be organized as a partnership or other form of close corporation the ownership of which is represented by ownership interests that are a proxy for common shares. In such cases, the company may be required to reorganize prior to the initial public offering into a new corporate form in order to issue shares, resulting in a different entity issuing shares in the initial public offering than the entity that issued the convertible or exchangeable bonds. In this case, the exemption under § 3(a)(9) of the Securities Act would be unavailable at the time of conversion or exchange of the bonds into the underlying shares (as most pre-IPO convertible and exchangeable bonds are convertible or exchangeable at the option of the holder) and the conversion or exchange into the underlying shares would need to be pursuant to a transaction registered under the Securities Act or an exemption therefrom.

U.S. Regulation of the International Securities and Derivatives Markets, § 10.07, SHARES IN LIEU OF CASH DIVIDENDS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 10.07 (11th and 12th Editions 2014-2017)
11th and 12th Editions

When foreign companies allow shareholders the right to receive shares in lieu of cash dividends, they must consider whether that is an offer and sale of their shares requiring Securities Act registration. [151] For some years, the SEC staff had made a formalistic distinction in interpreting the Securities Act. If the dividend was declared in shares, with an option to receive cash, then no Securities Act registration of the shares was necessary because there was no offer or sale of a security. However, if the dividend was declared in cash, with an option to purchase shares, an offer and sale was deemed to be involved because an investment decision was to be made, and, thus, the shares would have to be registered. [152] Most foreign companies previously declared dividends in cash with a share option, and usually excluded U.S. holders from the share option to avoid the cost of registration. Some companies allowed institutional shareholders to exercise the option to acquire shares where counsel is able to advise that the sale was exempt from registration under the Securities Act, because, for example, it qualified as a private placement.

A number of foreign companies have obtained no-action letters confirming that registration is not required where the right of a shareholder to receive a share dividend arises simultaneously with the shareholder's right to receive a cash

p. 10-56

payment. [153] Importantly, the staff stressed in each case that, in reaching its no-action position, it had noted that the dividend as declared would provide the alternative of payment in cash or shares, at the election of the shareholder. [154] While it is unclear whether these letters should be taken to indicate that the staff has changed its view on the applicability of the Securities Act registration requirement to share dividends in general, the letters do reveal how market practice has evolved in this area and provide guidance to companies in structuring their dividends.

Footnotes

151 The applicability of the Securities Act's registration requirements to share dividends is also raised when a parent company "spins off" a subsidiary by distributing its shares to parent company shareholders. Although such transactions do not appear to involve investment decisions that would trigger registration requirements, the SEC staff has traditionally taken a contrary view, at least unless certain conditions are satisfied. *See* SEC, Division of Corporation Finance, Staff Legal Bulletin No. 4 (CF) (Sept. 16, 1997), Fed. Sec. L. Rep. (CCH) ¶60,004, ("Staff Legal Bulletin No. 4") for a discussion of the staff's view . *See* § 10.09.

152 SEC Release No. 33-929 (July 29, 1936).

153 *See*, *e.g.*, *British Telecommunications plc* (avail. Oct. 13, 1999); *Greencore Group plc* (avail. July 3, 1996); *Medeva PLC* (avail. Jan. 31, 1995); *TNT Limited* (avail. Apr. 21, 1994); *Barclays de Zoete Wedd* (avail. Mar. 26, 1993); *Albert Fisher Group PLC* (avail. Apr. 9, 1991). In connection with any dividend program, it will be necessary to consider the impact of state securities laws, although recent federal legislation has greatly reduced the significance of such state laws. *See generally* § 2.04[8]. Certain states may view the option to receive a share dividend as an offer of the shares. Absent registration under state law or qualification for an exemption, shareholders in such states would need to be precluded from making an election between shares and cash, and would be entitled only to receive a cash dividend.

U.S. Regulation of the International Securities and Derivatives Markets, § 10.08, OFFERINGS OF SECURITIES TO EMPLOYEES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 10.08 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Foreign companies wishing to allow their U.S. employees [155] to participate in employee stock purchase plans or to otherwise offer securities to employees must ensure that those plans and other offerings comply with the requirements of the U.S. securities laws. In many cases, registration under the Securities Act and compliance with the reporting requirements of the Exchange Act would be required. As a result, foreign companies often structure employee stock purchase plans for U.S. employees to avoid such registration and reporting requirements. [156]

[1] Securities Act Considerations

p. 10-57

[a] Initial Offerings

As with any offering of securities in the United States, an offering of securities to U.S. employees of a foreign company must either be registered under the Securities Act or be exempt from registration. A foreign company may choose to register the shares being offered to its employees on a Form F-1 or Form F-3, but, unless the employee offering is part of a larger public offering of shares in the United States, such a course may well be impracticable. For companies that are already subject to the reporting requirements of the Exchange Act, one practical alternative to registration on such Forms is to use a Form S-8, the short-form registration statement available for certain offerings of securities to employees. Under Form S-8, the issuer is required to provide each plan participant with information about both the plan and the issuer, but almost all issuer information may be incorporated by reference from Exchange Act filings and the prospectus is not required to be filed with the SEC. [157] However, Form S-8 is not available to companies that are not subject to the periodic reporting requirements of the Exchange Act. [158]

There are several exemptions from registration under the Securities Act available for employee stock offerings. Rule 701 under the Securities Act expressly exempts offers and sales of securities "under a written compensatory benefit plan." [159] The requirements of the rule are minimal: offerings must be pursuant to a written plan, [160] the securities must form part of the employees' compensation [161] and plan participants must receive a copy of the plan. [162] Rule 701 is not available to companies required to file periodic reports under the Exchange Act. [163] The main drawbacks of Rule 701 relate to the amount of securities that can be sold. The aggregate sales price and amount of securities sold by an issuer in any consecutive 12-month period cannot exceed the greatest of $1 million, 15% of the issuer's total assets (or, in the case of a wholly owned subsidiary, its parent's assets, if the securities represent obligations that the parent fully and unconditionally guarantees), or 15% of the total number of outstanding shares of the class being offered and sold in reliance on Rule 701. [164] In addition, if sales of securities made in reliance on Rule 701 exceed $5 million during any consecutive 12-month period, Rule 701 requires additional disclosure to plan participants, including a summary of the material terms of the plan, a summary of risk factors associated with an investment in the securities being sold and financial statements (unaudited, unless the issuer prepares audited financial statements), which must be as of a date no more than 180 days before the sale of the securities. Most importantly, if sales exceed $5 million in any consecutive 12-month period, foreign companies are required to provide a reconciliation of their financial statements to U.S. GAAP if their financial statements are not otherwise prepared in accordance with U.S. GAAP or IFRS as issued by the IASB. [165]

Foreign issuers may also be able to offer securities to their U.S. employees by means of a private placement pursuant to § 4(a)(2) of the Securities Act or the "safe harbor" of Rule 506 of Regulation D thereunder. [166] Such an offering

p. 10-58
p. 10-59

must be made only to proper private placement investors, [167] but there is no limit on the amount of securities that may be offered.

Regulation D under the Securities Act provides two additional possible "safe harbors" for offers and sales to employees—Rules 504 and 505. The first, which is available only to companies that are not subject to the reporting requirements of the Exchange Act, allows offers of up to $1 million in any 12-month consecutive period in the United States. The second permits securities to be acquired by up to 35 purchasers [168] and allows offers of up to $5 million in any 12-month period. [169] The narrow scope of these limitations means the two rules may be of limited utility to issuers wishing to include their U.S. employees in employee stock purchase plans. [170]

[b] Resale Restrictions

Securities offered pursuant to § 4(a)(2), Regulation D (other than pursuant to Rule 504, in certain circumstances) or Rule 701 are "restricted securities," meaning they cannot be freely resold in the secondary market in the United

p. 10-59
p. 10-60

States. Securities acquired by employees pursuant to a plan that may not be deemed to involve any offer or sale to the employees (*e.g.*, a bonus plan) and thus not requiring registration are also required by the SEC to be treated as restricted securities. Generally, restricted securities may be resold in the United States only pursuant to Rule 144 under the Securities Act or in a private placement.

One important way in which the burden of the resale restrictions may be alleviated is the safe harbor permitting resale of securities outside the United States pursuant to Regulation S. [171] This safe harbor may be particularly useful for U.S. employees of foreign companies, since the primary market for the shares is likely to be outside the United States.

Resales may also be permitted if they satisfy the so-called "three-prong test." Under that test, which relates only to resales by nonaffiliate employees of securities acquired pursuant to bonus or similar employee benefit plans that do not involve a sale to the employee by the issuer, securities may be freely sold if the following three conditions are met:

- the issuer is subject to the periodic reporting requirements of the Exchange Act,
- the stock is actively traded on an open market (either within or outside the United States), and
- the number of shares being sold is relatively small in relation to the number of shares of that class outstanding. [172]

[2] Exchange Act and Sarbanes-Oxley Act Considerations

A foreign company will become subject to the continuing reporting requirements of the Exchange Act, and to the Sarbanes-Oxley Act, if it makes a registered public offering (to employees or otherwise) in the United States. [173]

[3] State Securities Laws Considerations

p. 10-60
p. 10-61

In addition to complying with the federal securities laws, a foreign issuer offering securities to its U.S. employees must consider the securities laws of the various states where its U.S. employees are located, although federal legislation has greatly reduced the significance of such state laws in the case of companies that file reports under the Exchange Act. [174] However, notably, the State of California does not recognize the "no sale" theory referred to above.

Footnotes

155 In determining what it means to be a "United States employee," consideration should be given to employees who are not U.S. nationals but who are in the U.S. on temporary assignment. The SEC has noted "[w]hether an employee is on 'temporary assignment' is a matter of facts and circumstances … [i]t depends on the nature of the assignment, the understanding between the employee and employer, and indicia that the employee will return to the home country. A written agreement helps establish the understanding regarding the nature of the assignment." *See* American Bar Association: Technical Session Between the SEC Staff and the Joint Committee on Employee Benefits—Questions and Answers, May 6, 2008, *available at* http://www.americanbar.org/content/dam/aba/migrated/2011_build/employee_benefits/sec_2008.authcheckdam.pdf.

156 *See*, *e.g.*, Compass Group plc (avail. May 13, 1999) and *Guinness plc* (avail. Apr. 9, 1993) in which U.K. "share saving schemes" were redesigned for U.S. employees in order to fit under a "no sale" theory for purposes of registration under the Securities Act. The structure approved in *Guinness plc* and *Compass Group plc* has, however, been complicated from a practical perspective by the informational requirements imposed under the PATRIOT Act for opening up bank accounts to large numbers of employees. *See* § 14.07[4][d] and [f] for a discussion of similar requirements under the PATRIOT Act in connection with the opening of accounts with SEC-registered broker-dealers.

157 Form S-8, Part I.

A well-known seasoned issuer can also use an automatic shelf registration statement to offer securities to its employees pursuant to Rule 415(a)(1)(ii), which allows the registrant to offer securities on a delayed or continuous basis as part of an employee benefit plan. Nonetheless, a well-known seasoned issuer would still need to comply with the informational, filing and other requirements of Form S-3 or F-3, whereas Form S-8 allows the issuer to omit certain information and benefit from special rules not applicable to Form S-3 or F-3. For example, an undertaking to include updated financial statements is required in a registration statement on Form F-3 but not on Form S-8.

158 Historically, some shell companies have abused Form S-8 by registering sales of securities to purported employees who actually have not rendered any services to the companies, which in turn has resulted in unregistered resales of those securities into the public market. In order to prevent such abuses, in July 2005 the SEC adopted rules prohibiting shell companies from using Form S-8. Under these rules, a former shell company (*e.g.,* a shell company that has acquired substantial assets and operations through a business combination) may use the form, but only 60 days after (i) it has ceased to be a shell company and (ii) it has filed with the SEC so-called "*Form 10* information"— *i.e.*, the information that would be required by Form 10, Form 10-SB or Form 20-F, as applicable, to register each class of securities to be registered on the Form S-8. The rules except from these 60-day waiting requirements (though not the Form 10 information requirement) shell companies formed in order to effect certain business combinations and change of domicile transactions. The prohibition on the use of Form S-8 by shell companies does not prevent them from registering offers and sales of securities, where permitted, on other forms (shell companies are similarly prohibited from using Forms S-3 and F-3) or from carrying out private placements. *See* SEC Release No. 33-8587 (July 15, 2005).

159 Rule 701(c) under the Securities Act.

160 Rule 701(c) under the Securities Act.

161 Rule 701(c) under the Securities Act and Preliminary Note 5 to Rule 701 under the Securities Act. This

requirement means that issuers cannot use Rule 701 for an offering designed to raise capital.

162 Rule 701(e) under the Securities Act.

163 Rule 701(b)(1) under the Securities Act.

164 Rule 701(d) under the Securities Act. In determining compliance with these limitations, sales during the relevant 12-month period in reliance on another exemption from the registration requirements of the Securities Act are not integrated with sales in reliance on the Rule 701 exemption. Accordingly, sales in reliance on exemptions such as Regulation D or Regulation S are not required to be taken into account in calculating compliance with the maximum sale limits under Rule 701. Also, while Rule 701 limits the amount of securities that can be sold, Rule 701 does not limit the amount of securities that can be offered to employees. However, securities subject to employee stock options must be treated as having been sold to employees on the date of grant of the options, regardless of exercisability.

165 Rule 701(e) under the Securities Act.

166 *See generally* § 7.02[1] and [2].

167 In 2005, the SEC brought a settled action against a company and its general counsel on the grounds that an offering to employees was not a valid private placement. *See In the matter of Google, Inc.*, SEC Release No. 33-8523 (Jan. 13, 2005).

168 For purposes of Rule 505, the term "purchaser" excludes, among others, natural persons with a net worth (alone or together with their spouse) at the time of purchase in excess of $1 million and natural persons with an individual income of more than $200,000 (or joint income with their spouse of more than $300,000) in the previous two years and a reasonable expectation of achieving the same income in the current year. *See* Rule 501(a) and (e) under the Securities Act. For this purpose, the SEC staff has said that W-2 income can be used as the measure of income for U.S. taxpayer employees. *See* "Eliminating the Prohibition Against General Solicitation and General Advertising in Rule 506 and Rule 144A Offerings: A Small Entity Guide," *available at* https://www.sec.gov/info/smallbus/secg/general-solicitation-small-entity-compliance-guide.htm. Rule 506(b) under the Securities Act provides another possible exemption, subject to the requirement that each purchaser who is not an "accredited investor" meet certain business and financial sophistication standards. In the context of employees, the term "accredited investor" includes persons who meet the net worth on income criteria noted above, or who are executive officers of the issuer of the securities being sold.

169 To see whether the limit has been reached, the amount of any offering under Rule 504 or Rule 505 must be aggregated with the amount of other securities offered pursuant to exemptions promulgated under § 3(b) of the Securities Act other than Rule 701. *See* Rule 701(d)(3)(iv) under the Securities Act.

170 The SEC staff has indicated that deferrals by employees of the receipt of compensation pursuant to deferred compensation plans could be treated as "sales" of debt securities to such employees by the employer/issuer. In that case, unless an exemption were available, such "sales" would need to be registered under the Securities Act. The same exemptions that are available with respect to employee stock purchase plans would presumably be available with respect to these "sales" of debt securities. *See* SEC, Division of Corporation Finance, Current Issues and Rulemaking Projects (Nov. 14, 2000). The staff has not provided definitive guidance as to this issue, and practices among companies vary.

171 Rule 904 under the Securities Act . *See* §§ 7.03[2] and 8.02[2]. Rule 904 may not be used by officers and directors who are affiliates of the issuer for reasons other than because they hold such positions (*e.g.*, officers and directors who are also controlling shareholders). In such cases, however, Rule 903 under the Securities Act may be available for sales outside the United States. *See* §§ 7.03[2] and 8.02[1].

172 SEC Release No. 33-6188 (Feb. 1, 1980). The SEC has stated that there will always be a "relatively small" amount of shares involved if no more than 1% of the outstanding securities of the class is distributed by the plan in any one year. SEC Release No. 33-6281 (Jan. 15, 1981). The three-prong test would not permit affiliates of the issuer, which generally includes officers and directors, to resell freely; such persons would still be subject to the restrictions in Rule 144 under the Securities Act applicable to shares held by affiliates that are not "restricted securities."

173 *See* § 4.02[2].

174 *See* § 3.02[8].

U.S. Regulation of the International Securities and Derivatives Markets, § 10.09, SPIN-OFFS, SPLIT-OFFS, EQUITY CARVE-OUTS AND TRACKING STOCK

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 10.09 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Spin-offs, split-offs, equity carve-outs and tracking stock are mechanisms by which a company can separate a subsidiary or line of business. These separation mechanisms allow companies to unlock value in a well-performing line of business, provide acquisition currency and tie management and employee incentives and compensation more directly to performance, among other advantages. While the mechanics and structure of spin-offs, split-offs, equity carve-outs and tracking stock may differ, each of these options can be employed to accomplish similar objectives.

[1] Spin-Offs

A "spin-off" is a mechanism by which a company (the "*parent company*") separates a line of business by distributing all shares in the separated business (the "*spun-off company*") to parent company shareholders. [175] Spin-offs can allow a previously unnoticed, well-performing division of the parent company an

p. 10-62

opportunity to garner higher valuations than the parent or, conversely, separate an underperforming and/or non-synergistic line of business in order to refocus and improve overall market performance of the parent company. They help companies to optimize their capital structures and shareholder distribution policies and to tailor their risk and growth profiles according to investor preferences. Spin-offs also help companies to improve their management alignment—the separation of a line of business can improve the effectiveness of equity-based compensation by more directly tying equity compensation awards to the performance of the business in which employees and executives are most involved. Finally, spin-offs can facilitate the acquisition by the spun-off company of another business, by creating attractive acquisition currency, or prepare a spun-off company for purchase by a third party, by creating a separate and attractive takeover target.

Spin-offs can often be effectuated with minimal to no tax costs for the parent company and its shareholders. To effectuate a spin-off, a parent company distributes all of the stock of an already existing or newly created subsidiary to shareholders on a *pro rata* basis in the form of a dividend, which will generally be eligible for tax-free treatment to the parent company and its shareholders if certain statutory conditions are met. Shareholder composition of the parent company does not change and shareholders of the parent company, as a result of the dividend, own shares in two separate, stand-alone corporations—the parent company and the former subsidiary that was spun off.

When considering a spin-off, the parent company must take many potentially complicating factors into account, including its ability, based on applicable corporate law, to declare a dividend, [176] and the extent to which there are third-party agreements that otherwise restrict corporate restructuring and/or dividends. [177] Shareholder approval may also be required. [178]

p. 10-62
p. 10-63

Another threshold question for a parent company that is a foreign private issuer is whether the spun-off company, if also a foreign private issuer, will become an SEC-reporting company. This, in turn, will depend on whether the parent company itself is an SEC-reporting company. If so, the spun-off company is likely to be required to become an SEC-reporting company as well. If, however, the parent company is not SEC-reporting, the spun-off company likely will not be required to become one either. [178.1]

Pursuant to SEC staff guidance, spin-offs are generally exempt from registration under the Securities Act. [179] Subject to the above discussion for foreign private issuers, spun-off companies will be required to register under the Exchange Act. [180] Under the Exchange Act, domestic companies must file a Form 10 while foreign issuers may file a Form 20-F. Both forms require substantial IPO-style disclosure about the spun-off business [181] and are subject to SEC review.

[2] Split-Offs

p. 10-63
p. 10-64

A "split-off" is a mechanism by which a company (the "parent company") separates a line of business by offering shares in the separated business (the "split-off company") to parent company shareholders in exchange for shares in the parent company. [182] By offering shareholders a choice of whether or not to exchange parent company shares, split-offs allow investors to express a preference for different types of companies and thus avoid the selloff of unwanted shares that can sometimes follow a spin-off. Like spin-offs, split-offs offer the opportunity to separate businesses that are over- or under-performing. They similarly help companies to optimize their capital structures, tailor their risk and growth profiles according to investor preferences, improve their management alignment and create acquisition currency. However, split-offs are much less typical than spin-offs because they are mechanically more complex and thus more difficult to execute.

To effect a split-off, a parent company, as noted above, makes an offer to its existing shareholders to exchange stock in the parent company for all or a portion of the stock of the split-off company. This structure reduces the number of outstanding shares of a parent company and gives shareholders the ability to choose whether they want shares in the split-off company. After the exchange, the parent company and the split-off company have distinct sets of public owners.

Like spun-off companies, split-off companies are stand-alone public companies and thus are subject to all of the same stock exchange independence and SEC reporting requirements. Unlike spin-offs, however, the split-off process requires registration under the Securities Act because the exchange offer constitutes a sale of the split-off company's stock to investors for consideration consisting of shares of the parent company. Companies must register the exchange offer using Form S-4, or Form F-4 for foreign issuers. Forms S-4 and F-4 require substantial IPO-style disclosure about the split-off company [183] but, assuming the parent company is eligible for short-form registration, rely on incorporation by reference of Exchange Act reports for the parent company. They each are subject to SEC review.

p. 10-64
p. 10-65

Split-off companies must also register under the Exchange Act, but they may take advantage of short-form registration by filing a Form 8-A [184] rather than a Form 10. The exchange offer in a split-off typically constitutes a tender offer by the parent company for its own shares as well, and therefore it is subject to the tender offer rules. [185]

[3] Equity Carve-Outs

An equity carve-out is a transaction in which a parent company sells a minority interest in one of its subsidiaries in an initial public offering ("IPO"). [186] Equity carve-outs often precede a spin-off or a split-off and, in such cases, provide a basis on which to determine the market value of the business that will later be spun or split off from the parent. Unlike spin-offs and split-offs, however, equity carve-outs raise capital. They can improve the balance sheets of the parent company and the subsidiary, highlight the subsidiary's value as a separate entity (and in so doing, potentially increase the parent company's value), provide acquisition currency, allow companies to tie management and employee incentives more directly to performance and allow the parent company and the subsidiary to share resources going forward while accommodating different capital needs.

To effectuate an equity carve-out, a parent company sells (or causes its subsidiary to sell) shares of the subsidiary to the public in a public offering. After the offering, the carved-out subsidiary is owned by the parent company and by new public shareholders. Commercial and tax considerations will play a role in

p. 10-65
p. 10-66

determining the appropriate stake to offer to the public, but the parent company typically retains a significant interest in the carved-out subsidiary for tax and accounting purposes—for U.S. companies, usually 80% or higher to permit continued tax consolidation.

Under the Securities Act, equity carve-outs must be registered like any other IPO, using Form S-1, or Form F-1 for foreign issuers. Forms S-1 and F-1 require substantial disclosure about the carved-out subsidiary and are subject to SEC review. [187] The carved-out subsidiary may utilize short-form registration under the Exchange Act by filing a Form 8-A.

Like a spun-off or split-off company, the carved-out subsidiary is a public company [188] that becomes subject to periodic reporting requirements and stock exchange listing rules. In contrast to a spun-off or split-off company, however, the carved-out subsidiary generally will remain under the control of the parent company. As a result, the carved-out subsidiary will not be subject to stock exchange independence requirements, though it will still be required to have an independent audit committee. [189]

While the carved-out subsidiary will have a separate board and management team, the parent company typically controls the board, and so will need to be mindful of protections for the new minority shareholders. In some cases, it is advisable to set up a special committee of disinterested directors to approve certain transactions, such as dividends and related party transactions. Additionally, some decisions and transactions—such as material transactions between the parent and subsidiary when there are overlapping directors—will likely be subject to higher levels of scrutiny in the event of any litigation. [190] Overlapping directors and the parent company (as the controlling shareholder) must also take care

p. 10-66
p. 10-67

not to appropriate business opportunities that rightfully belong to the carved-out subsidiary. [191]

[4] Tracking Stock

Tracking stock is a separate class of stock, generally common stock (but in the case of some foreign issuers a class of preferred stock), issued by a company (the "*issuing company*") to provide an equity return based on the financial performance of a particular subsidiary, division or group of assets of the company (the "*business*"). The issuance of tracking stock allows the financial markets to assign a separate valuation to the tracked business based on its individual financial performance, independent of the other businesses of the issuing company. A company that issues tracking stock typically has a business segment that is expected to grow more quickly, or otherwise receive a higher valuation, than the company as a whole, and the company issues the tracking stock to "unlock the value" of the tracked business in the belief that the total valuation of the tracking stock and the issuing company stock together will be higher than the existing issuing company stock in the absence of the tracking stock. [192] Tracking stock can be a valuable acquisition currency and may be used for stock-based management compensation programs. Tracking stock is particularly useful where a divestiture is not practical or desirable (*e.g.*, in the absence of sufficiently developed operations to be a fully-fledged spun-off company) and has attracted renewed interest

p. 10-67
p. 10-68

recently as activists and institutional investors continue to push conglomerates to engage in spin-offs. The issuance of tracking stock can also provide significant tax advantages compared to other capital raising structures, such as a carve-out or sale of the tracked business. [193] In addition, it permits the company and the tracked business to preserve operating synergies and administrative efficiencies and retain the same management and board of directors. [194]

Holders of tracking stock generally do not have a specific equity interest in the assets of the tracked business, but rather they share with the common stockholders an interest in the aggregate assets of the issuing company, including those of the tracked business. However, upon liquidation of the issuing company, the liquidation proceeds are generally distributed to holders of the tracking stock and of the issuing company's common stock in proportion to the relative market values of such stock during a specified period prior to liquidation. In addition, the issuing company may agree, when creating the tracking stock, to redeem it or to pay dividends in the event of a sale or other disposition of all or substantially all of the assets of the tracked business. Thus, tracking stock permits its holders to hold what is in substance an economic interest in the tracked business without actually owning an interest in the assets of such business (except as part of the aggregate assets of the issuing company).

Organizational documents creating tracking stock may permit it to be redeemed in certain circumstances at the option of the company's board of directors, either in exchange for shares of the company's common stock (often at a

p. 10-68

p. 10-69

premium) or in exchange for the stock of a subsidiary that holds all of the assets and liabilities of the tracked business. [195]

Tracking stock can have different, including limited or nonexistent, dividend and voting rights. Voting rights of tracking stock can range from a fraction of the vote attributable to a share of common stock of the issuing company (which is intended to approximate the value of the tracked business relative to the company as a whole and may float with changes in market valuation) to having complete voting parity with issuing company common stock. Dividend rights structures also vary, with some companies linking tracking stock dividends exclusively to the segregated pool of revenues from the tracked business, others allocating dividend rights according to fixed ratios and still others providing for no dividends at all. Dividends may typically only be declared out of the profits or surplus of the issuer as a whole, and cannot be paid to the shareholders of a profitable tracked business if there are insufficient retained earnings or surplus for the issuer itself.

A public offering of tracking stock in the United States requires the issuing company, as issuer, to file a registration statement with the SEC. The registration statement must contain (or incorporate by reference) all of the business and financial information required to be included in the applicable form with respect to the issuing company. [196] In addition, the registration statement must include separate disclosure of business and financial information specific to the tracked business, including a separate MD&A section relating to the tracked business, risk factors relating to both the tracked business and the tracking stock and consolidated historical financial statements of the tracked business. [197] Tracking

p. 10-69

p. 10-70

stock is generally listed and publicly traded, trades separately from the issuer's common stock, and has its own ticker symbol.

The issuance of tracking stock does not create separate ongoing reporting requirements for the tracked business under the Exchange Act. However, segment disclosure requirements applicable to U.S. issuers and foreign private issuers will result in the inclusion of segment information with respect to the tracked business in the issuer's annual reports on Form 10-K and Form 20-F, as the case may be. [198] In addition, an issuer may elect to provide additional information to the market regarding its tracked business. [199]

Footnotes

175 Examples of spin-offs include Brookfield Asset Management Inc.'s spin-off of Brookfield Business Partners,

Brookfield Business Partners L.P., Form F-1 (Oct. 27, 2015) (*as amended*); Darden Restaurants, Inc.'s spin-off of Four Corners Property Trust, Four Corners Property Trust, Inc., Form 10 (Aug. 11, 2015) (*as amended*); eBay Inc.'s spin-off of PayPal, PayPal Holdings, Inc., Form 10 (Feb. 25, 2015) (*as amended*); Ingersoll-Rand's spin-off of Allegion, Allegion plc, Form 10 (June 17, 2013) (*as amended*); Abbott Laboratories' spin-off of AbbVie, AbbVie Inc., Form 10 (June 4, 2012) (*as amended*); ITT's simultaneous spin-off of Exelis and Xylem, ITT WCO, Inc., Form 10 (July 11, 2011) (*as amended*) and ITT DCO, Inc., Form 10 (July 11, 2011) (*as amended*); Marathon Oil Corporation's spin-off of Marathon Petroleum Corporation, Marathon Petroleum Corporation, Form 10 (Jan. 25, 2011) (*as amended*); Motorola's spin-off of Motorola Mobility Holdings, Motorola SpinCo Holdings Corporation, Form 10 (July 1, 2010) (*as amended*); IAC/InterActiveCorp's simultaneous spin-off of TicketMaster, HSN, Tree.com and Interval Leisure Group, TicketMaster Entertainment LLC, Form 10 (May 13, 2008) (*as amended*), HSN, Inc., Form 10 (May 13, 2008) (*as amended*), Tree.com, Inc., Form 10 (May 13, 2008) and Interval Leisure Group, Inc., Form 10 (May 13, 2008) (*as amended*); and American Express' spin-off of Ameriprise, Ameriprise Financial, Inc., Form 10 (June 7, 2005).

176 Corporate laws generally require that most dividends be paid out of surplus or earnings. A dividend usually cannot be paid if the payment would render the parent company insolvent.

177 Such agreements may include loan agreements or indentures with restrictive covenants or change of control provisions, and anti-dilution adjustments in convertible debt.

A spin-off also requires consideration of such factors as the interconnectedness of the parent and the spun-off company pre- and post-separation; the organization and disentanglement of shared services, shared contracts, intellectual property, employee benefits and liabilities; internal process decisions such as whether members of the parent company board will serve on the board of the spun-off company; and the corporate governance and administrative duties that come along with the formation of new publicly traded companies.

178 Foreign issuers should look to home-country laws to assess whether they must obtain shareholder approval for a spin-off transaction. In the United States, state law determines whether companies must seek shareholder approval for a spin-off (and, consequently, shareholder approval requirements vary from jurisdiction to jurisdiction). Under the law of most jurisdictions, a shareholder vote is required for the sale or other disposition of all or substantially all of a company's assets. In Delaware, spin-off transactions have not traditionally been viewed as requiring stockholder approval since they do not constitute a sale, lease or exchange of assets but rather a dividend of stock. However, in other jurisdictions such as New York, statutes governing sales or transfers potentially apply to spin-offs and must be given careful consideration. DEL. CODE ANN. tit. 8, §§ 173 and 271; N.Y. BUS. CORP. LAW § 909.

178.1 *See* Staff Legal Bulletin, No. 4 and Rule 12g3-2(b) under the Exchange Act.

179 Staff Legal Bulletin No. 4 provides that a company does not have to register a spin-off under the Securities Act if it meets the following criteria: (1) the parent shareholders do not provide consideration for the spun-off shares; (2) the spin-off is pro-rata to the parent shareholders; (3) the parent provides adequate information about the spin-off and the subsidiary to its shareholders and to the trading markets; (4) the parent has a valid business purpose for the spin-off; and (5) if the parent spins-off "restricted securities," it has held those securities for at least two years. SEC, Division of Corporation Finance, Staff Legal Bulletin No. 4 (Sept. 16, 1997), Fed. Sec. L. Rep. (CCH) ¶60,004. We note that the SEC staff did not, after Rule 144 was amended to reduce the holding period requirements for "restricted securities" to a one-year maximum, amend Staff Legal Bulletin No. 4 to revise prong (5) above accordingly. We also are not aware of any SEC staff guidance permitting issuers to rely on Staff Legal Bulletin No. 4 in cases where they have held "restricted securities" for one year instead of two. We believe, however, that a one-year holding period requirement is consistent with the tenets of Rule 144 and issuers may want to consider seeking SEC staff guidance if they wish to rely on a one-year holding period rather than a two-year holding period and comply with Staff Legal Bulletin No. 4.

180 Staff Legal Bulletin No. 4 requires that the spun-off company be registered under the Exchange Act, although it permits foreign private issuers to seek no-action relief if they do not intend to register the spun-

off shares under the Exchange Act.

181 Both Form 10 and Form 20-F require substantial disclosure of financial data, including audited year-end financial statements (generally balance sheet information for the past two years and income statement, cash flow statement and shareholder equity information for the past three years), interim financial statements (current year quarter(s) and corresponding prior year periods) and five years of selected financial data. Although emerging growth companies are subject to less burdensome financial reporting requirements for Securities Act registration statements for their initial public offerings, that relief is not available for Form 10 or Form 20-F filings used for Exchange Act registration. *See* SEC, Division of Corporation Finance, Frequently Asked Questions, Generally Applicable Questions on Title I of the JOBS Act, Question 48 (Sept. 28, 2012).

182 Examples of split-offs include General Electric Company's split-off of Synchrony Financial, Synchrony Financial, Form S-4 (Oct. 19, 2015) (*as amended*); CBS Corp.'s split-off of its stake in CBS Outdoor Americas, CBS Outdoor Americas Inc., Form S-4 (June 11, 2014) (*as amended*), MetLife's split-off of its stake in Reinsurance Group of America, Reinsurance Group of America, Incorporated, Form S-4 (Aug. 6, 2008) (*as amended*) and Viacom's split-off of Blockbuster, Blockbuster Inc., Form S-4 (June 18, 2004) (*as amended*).

183 Like Forms 10 and 20-F, Forms S-4 and F-4 require extensive financial information. *See supra* Note 181.

184 Form 8-A may be used by domestic or foreign issuers that (i) are currently registered under the Exchange Act and are subject to the periodic reporting requirements, (ii) are in the process of concurrently registering securities under the Securities Act (as is the case in a split-off) or (iii) have securities listed on a national securities exchange like NYSE or NASDAQ.

185 The Williams Act (incorporated as an amendment to the Exchange Act in 1968) generally regulates tender offers. Rule 13e-4 under the Exchange Act more specifically regulates "issuer tender offers"—tender offers for any class of equity security made by the issuer of that class of security or by an affiliate of the issuer. In the event of a split-off, issuers must comply with all procedural, filing and disclosure requirements of both the relevant sections of the Williams Act and Rule 13e-4. Namely, the issuer must file a Schedule TO (tender offer statement), which requires disclosure of the material terms of the transaction as well as the filing of the offer to purchase, letter of transmittal and certain other materials. Rule 13e-4 also requires that the tender offer must be open to all holders of the class of stock and that the consideration paid to any shareholder is the highest consideration paid to any other shareholder. Rule 13e-4(f)(8).

186 Examples of equity carve-outs include the Royal Bank of Scotland's carve-out of Citizens Financial Group, Citizens Financial Group Inc., Form S-1 (May 12, 2014) (*as amended*), Santander's carve-out of Santander Consumer USA, Santander Consumer USA Holdings Inc., Form S-1 (Aug. 14, 2014) (*as amended*), Sunoco's carve-out of SunCoke Energy, SunCoke Energy, Inc., Form S-1 (Mar. 23, 2011) (*as amended*) and Morgan Stanley's carve-out of MSCI, MSCI Inc., Form S-1 (July 31, 2007) (*as amended*).

187 Like Forms 10 and 20-F, Forms S-1 and F-1 require extensive financial information. *See supra* Note 181.

188 The discussion in the text assumes the equity carve-out will be conducted as an initial public offering. It is possible, however, for it to be conducted as a Rule 144A offering (or other private placement) of subsidiary shares in the United States, together with an offering of those shares outside the United States under Regulation S.

189 NYSE and NASDAQ listing standards both contain a "controlled company" exemption from board and most board committee standards. Under NYSE and NASDAQ rules, a "controlled company" is a company where 50% of the voting power for the election of its directors is held by a single person, entity or group. A controlled company may choose not to comply with some or all of the governance rules that require a board to be comprised of a majority of independent directors and that require the establishment of a nominating/corporate governance committee and a compensation committee (and require such committees to be comprised entirely of independent directors). Controlled companies are still required to comply with other NYSE and NASDAQ listing standards, including the requirement for a fully independent audit committee. NYSE LISTED COMPANY MANUAL § 303A.00; NASDAQ Listing Rule 5615(c), NASDAQ MANUAL.

190 In most business scenarios, when a business decision is made by a board of directors of a U.S. company, courts will evaluate such decisions using the "business judgment rule," a generally permissive standard. When conflicts of interest exist, such as a situation where directors have a stake in both sides of a transaction, the decisions made by those directors may not be protected under the permissive "business judgment rule" standard but rather the higher "entire fairness" standard, which requires directors to establish both the procedural fairness (*i.e.*, the fairness of the process that resulted in approval of the conflict transaction) and the substantive fairness of the transaction. Given the inherent risk of overlapping roles in carve-out situations, carve-outs can be uniquely exposed to being subject to the "entire fairness" standard. *See* Christopher E. Austin & David I. Gottlieb, *Renouncing Corporate Opportunities in Spin-offs, Carve-Out IPOs and Private Equity Investments*, 17 INSIGHTS No. 12 (Dec. 2003).

191 There is no bright-line test for determining which opportunities belong to a carved-out subsidiary and which belong to the parent company, but under the "corporate opportunity" doctrine, courts might consider a number of factors, including the financial ability to undertake the opportunity, relationship of the opportunity to the line of business and expectations around the opportunity. *See* Austin and Gottlieb, *supra* Note 190.

192 Recent examples include tracking stock issued in connection with the reclassification of Liberty Media Corporation's common stock into three new tracking stocks, Liberty Media Corporation, Form S-4 (Dec. 22, 2015) (*as amended*); Dell Inc.'s acquisition of EMC Corporation, Denali Holding Inc., Form S-4 (Dec. 14, 2015) (*as amended*); Fidelity National Financial Inc.'s recapitalization of its common stock into two new tracking stock groups, Fidelity National Financial, Inc., Form S-4 (Apr. 1, 2014) (*as amended*). Depending on the terms of the issuing company's organizational documents, the issuance of the new class of tracking stock may require the consent of the existing shareholders. It may be possible, where a company is authorized to issue "blank check" preferred stock with terms fixed by the board of directors, to avoid a shareholder vote by using a specially designated class of preferred stock as the tracking stock.

193 The issuance of tracking stock generally will not be a taxable transaction for the issuing company (provided that the tracking stock is treated as stock of the parent company and not the actual or constructive subsidiary owning the tracked business), while the secondary sale of shares of a subsidiary would generally result in taxable gains for the issuing company.

194 A potential pitfall of the tracking stock structure is the conflicting fiduciary duties of directors that may arise with respect to the common stock and the tracking stock, *e.g.*, with respect to allocation of capital, management and business opportunities, payment of dividends and the conduct and terms of intragroup transactions. *See In re Staples, Inc. Shareholders Litigation*, 792 A.2d 934 (Del. Ch. 2001); *Solomon v. Armstrong*, 747 A.2d 1098 (Del. Ch. 1999), *aff'd*, 746 A.2d 277 (Del. 2000); *General Motors Class H Shareholders Litigation*, 734 A.2d 611 (Del. Ch. 1999); Jeffrey J. Hass, *Directorial Fiduciary Duties in a Tracking Stock Equity Structure: The Need for a Duty of Fairness*, 94 MICH. L. REV. 2089 (1996). An issuer should also be aware that its common stock would be deemed a "reference security" of the tracking stock under Regulation M. Thus, the issuer would be prohibited from trading in its tracking stock and its common stock during the restricted period surrounding any distribution of tracking stock. Finally, financial impacts resulting from the operations of one business that affect the company's overall financial condition may affect the market price of a tracking stock for another business. If one of the company's businesses is insolvent, the tracking stock of a different and better-performing division is not necessarily insulated, as assets and income attributed to a tracked business are typically available to all of the issuer's creditors. Similarly, losses in a tracked business can affect the credit rating of the company as a whole and may have adverse secondary effects on the market price of the remaining stock.

195 The SEC has taken the position that an exchange of shares of a tracked business (a subsidiary of the issuing company) for outstanding tracking stock relating to such business (*i.e.*, an exchange offer of the stock of the tracked business to holders of tracking stock) may constitute an "offer," "offer to sell," "offer for sale" or "sale" of the new subsidiary shares within the meaning of § 2(a)(3) of the Securities Act and therefore must be registered or exempt from registration. *Liberty Media Corp.* (avail. Feb. 7, 2001); *see also* SEC, Division of Corporation Finance, Staff Legal Bulletin No. 4 , *supra* Note 179 for the SEC staff's interpretation of the Securities Act registration requirements relating to spin-offs. The exchange of tracking

stock for common stock of the issuing company should be exempt from registration under § 3(a)(9) of the Securities Act where no commission or other remuneration is paid or given directly or indirectly for soliciting such exchange. However, the exchange of tracking stock for the stock of the tracked business issued by a subsidiary of the issuing company will likely not be exempt under § 3(a)(9) because the shares being exchanged are not of the same issuer. *See supra* Note 114 and accompanying text.

196 *See* § 3.02[1][b]. Note that an "initial public offering" of tracking stock may be made by a seasoned issuer eligible for Form S-3 (or F-3 in the case of foreign issuers) rather than the Form S-1 (or F-1 in the case of foreign issuers) typically required for an initial public offering.

197 In addition to the consolidated financial statements of the tracked business and the issuing company (including the tracked business), some issuers have included a third set of financial statements for the issuing company excluding the tracked business. *See, e.g.*, Ziff-Davis Inc.—ZDNet, Prospectus (Mar. 30, 1999).

198 However, the SEC discourages the inclusion in annual reports of anything more than condensed financial information of the tracked business because of the potential to confuse investors about the nature of the tracking stock. For the same reason, the SEC has urged issuers to avoid presenting business disclosure about the tracked business as if distinct from the issuing company. If, despite the SEC's recommendations, complete financial statements of the tracked business are furnished to investors, they must always be accompanied by financial statements of the issuing company. *See* SEC, Division of Corporation Finance, Frequently Requested Accounting and Financial Reporting Interpretations and Guidance, Section II.D (Mar. 31, 2001).

199 For example, Alcatel agreed to provide to its ADR depositary in the United States annual and quarterly reports in English for its tracked business. Alcatel, Prospectus (Oct. 20, 2000) at 136.

U.S. Regulation of the International Securities and Derivatives Markets, § 10.10, CONTINGENT VALUE RIGHTS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 10.10 (11th and 12th Editions 2014-2017)
11th and 12th Editions

[1] Overview

Contingent value rights, or ("CVRs"), are contractual rights that entitle the holder to payments when specified contingencies occur. Although CVRs were used in a number of high-profile transactions in the 1980s and 1990s [200], in recent years they have been relatively rare [201]. This is likely due to the relatively complex nature of CVRs, as well as difficulties in valuing them and potential ongoing obligations arising out of the issuance of certain types of CVRs. However, CVRs are highly customizable instruments and can be used for a variety of purposes, most notably to bridge valuation gaps in mergers and acquisitions or restructurings. They can also help an acquiror finance an acquisition by reducing the consideration required at closing.

To ensure that CVR holders' rights are adequately represented, CVR agreements typically appoint a trustee, rights agent or other representative on behalf

p. 10-71

of the CVR holders; the powers and obligations of such trustee or representative depend on whether the CVR agreement must be qualified under the Trust Indenture Act (the "TIA"). [202]

There are two principal types of CVRs; price-protection CVRs and event-driven CVRs. Some key features of each type of CVR are discussed below.

[2] Price-Protection CVRs

In an acquisition where publicly traded securities (normally, the acquiror's stock) make up all or part of the consideration, price-protection CVRs may be used to "protect" the value of that consideration as target stockholders receive additional consideration in cash or stock if the acquiror's stock (the "reference security") is below a specified target price on agreed-upon measurement dates. [203] The target price can be set above or below the pre-announcement trading price of the reference securities. The acquiror may negotiate a floor price that caps the payout obligation of the acquiror under the CVR if the value of the reference securities drops below the floor. A cap on the number of shares payable under the CVR achieves the same purpose when the CVR consideration takes the form of stock. The acquiror may also negotiate redemption rights or early termination rights. Price-protection CVRs typically are in effect for one to three years, but may include an extension right that would typically increase the target price and floor price. Finally, price protection CVRs may include certain acquiror covenants [204] and events of default [205] designed to protect the holders.

[3] Event-Driven CVRs

Event-driven CVRs are more commonly used in acquisitions than price-protection CVRs. [206] They provide additional consideration to the target

p. 10-71

p. 10-72

stockholders upon the occurrence of specified contingencies. Such CVRs may be tied to the financial performance of the target generally, but more typically are tied to the performance of particular products of the target. They are most popular in life sciences/pharmaceutical transactions, where the concept of milestones is already broadly used in licensing agreements and where the success or failure of one product can drastically affect the value of a target company.

Event-driven CVRs can help acquirors and targets reach a deal when there are different views as to, for example, the value of the target's pipeline products, future financial performance, pending litigation [207] and outstanding regulatory approvals. Such CVRs will contain one or multiple payment triggers; common examples are FDA approvals or minimum sales of a particular drug. The duration of event-driven CVRs depends on the nature of the trigger(s) and how soon after closing the contingency is expected to be resolved. CVRs that are tied to approvals or financial performance usually use multi-year periods. Payment amounts are determined *via* an agreed-upon formula and may be a simple set amount, or may be variable. Finally, obligations may be imposed on the acquiror post-acquisition in order to align acquiror and target stockholder incentives. For example, if the CVR provides for payouts tied to regulatory approvals or other product-based milestones, the acquiror is often required to take certain measures to achieve such milestones (e.g. using commercially reasonable efforts or "diligent" efforts to continue development of a particular product) [208].

[4] Securities Act Registration of CVRs

CVRs, even if payable in cash, may have to be registered under the Securities Act if they constitute a "security" under § 2(a)(1) of the Securities Act. In a series of no-action letters, notably *Minnesota Mining* (avail. Oct. 13, 1988) [209], the SEC staff indicated that the following five factors are required to conclude that a CVR is not a security (i) the CVRs are an integral part of the consideration in the merger; (ii) the holders of the CVRs have no rights common to stockholders (such as voting and dividend rights); (iii) the CVRs are non-interest bearing;

p. 10-72

p. 10-73

(iv) the CVRs are not assignable or transferable except by operation of law, and (v) the CVRs are not represented by any form of certificate or instrument. [210] If the CVR issuance must be registered, it (and in the case of a stock-settled CVR, the underlying shares) can normally be registered on the same form as any other acquiror securities issued in the transaction (on a Form S-4 or Form F-4).

[5] Exchange Act Considerations

The issuance of CVRs that are securities may give rise to registration and reporting obligations under the Exchange Act, for example where the CVRs are listed on a national securities exchange (§ 12(b)), or if the CVR constitutes an "equity security" as defined in § 3(a)(11) and the § 12(g) size thresholds are crossed. If an Exchange Act registration is required, it is usually done on a Form 8-A, incorporating information from the registration statement that was used to register the CVR issuance under the Securities Act.

CVR issuers should consider whether additional disclosure is needed in their periodic reporting under the Exchange Act. For example, if a CVR is linked to the settlement of a lawsuit, the issuer should consider whether to include ongoing disclosure of developments concerning that litigation even if it otherwise would not have been disclosed in the issuer's periodic reports.

Footnotes

200 *See, e.g.*, Quintiles Transnational Corporation/Pharmaceutical Marketing Service Inc., Quintiles Transnational Corporation, Form S-4 (Feb. 18, 1999); Viacom Inc./Paramount Communications Inc., Viacom Inc., Form S-4 (June 6, 1994); The Dow Chemical Company/Marion Laboratories Inc. (1989).

201 Recent examples of deals involving CVRs include Teva Pharmaceutical Industries Ltd./NuPathe Inc., NuPathe Inc., Schedule TO (Jan. 23, 2014) (*as amended*); Forest Laboratories, Inc./Clinical Data, Inc., Clinical Data, Inc., Schedule TO (Mar. 8, 2011) (*as amended*); and Sanofi-Aventis SA/Genzyme Corp., Genzyme Corporation, Schedule TO (Oct. 4, 2010) (*as amended*).

202 Qualification under the TIA is required in connection with certain debt securities; thus, the parties must make a determination as to whether the CVRs constitute debt securities. *See* § 3.05[4].

203 *See, e.g.*, Viacom Inc./Paramount Communications Inc., Viacom Inc., Form S-4 (June 6, 1994) and Viacom Inc./Blockbuster Entertainment Corp., Viacom Inc., Form S-4 (Aug. 29, 1994).

204 Such covenants may require the acquiror to reserve sufficient shares to satisfy the CVR obligations, or to use commercially reasonable efforts to list the CVRs. The acquiror and its affiliates may also be restricted from share repurchases, and the acquiror may be subject to further obligations if it engages in extraordinary transactions or certain dilutive transactions such as stock dividends or stock splits. Tailored covenants for particular deals may also be used.

205 Such events of default may include failure to make payments, certain bankruptcy and insolvency events, or other breaches of the CVR agreement.

206 *See, e.g.*, Valeant Pharmaceuticals/Synergetics USA, Inc., Synergetics USA, Inc., Schedule TO (Sept. 16, 2015) (*as amended*); Zeneca, Inc./Omthera Pharmaceuticals, Inc., Omthera Pharmaceuticals, Inc., Form 8-K (May 28, 2013); Sanofi-Aventis/Genzyme, Genzyme Corporation, Schedule TO (Oct. 4, 2010) (*as amended*); Celgene/Abraxis, Celgene Corporation, Form S-4 (July 29, 2010) (*as amended*); Fresenius Kabi Pharmaceuticals Holding/APP Pharmaceuticals, Fresenius Kabi Pharmaceuticals Holding LLC, Form S-4 (Aug. 1, 2008) (*as amended*).

207 For an example of a litigation-driven CVR, see Community Health Systems, Inc./Health Management Associates, Inc., Community Health Systems, Inc., Form S-4 (Sept. 25, 2013). Information Resources, Inc. Litigation Contingent Payment Rights Trust was formed to allow CVR holders to receive certain of the litigation proceeds under the CVR agreement. Information Resources, Inc., Schedule TO (July 14, 2003) (*as amended*) and Information Resources, Inc. Litigation Contingent Payment Rights Trust, Form S-4 (Sept. 8, 2003) (*as amended*).

208 *See, e.g.*, ViroPharma Incorporated/Lev Pharmaceuticals, Inc., ViroPharma Inc., Form S-4 (Aug. 19, 2008) (*as amended*); Indevus Pharmaceuticals, Inc./Valera Pharmaceuticals, Inc., Indevus Pharmaceuticals, Inc., Form S-4 (Jan. 29, 2007) (*as amended*).

209 *Minnesota Mining and Manufacturing Company* (avail. Oct. 13, 1988).

210 No-action letters have also suggested other factors that may help the conclusion that the CVR is not a security, but these factors have not been as commonly cited nor consistently applied: (i) the right is not dependent on the operating results of any party involved; (ii) almost all of the holders of the rights will continue with the surviving corporation as employees; (iii) the value of the payments resulting from the rights is a small fraction of the overall consideration. *See, e.g.*, *Genentech Clinic Partners III* (avail. Apr. 28, 1989) and *Northwestern Mutual Life Insurance Co*. (avail. Mar. 3, 1983).

U.S. Regulation of the International Securities and Derivatives Markets, § 11.01, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 11.01 (11th and 12th Editions 2014-2017)
11th and 12th Editions

p. 11-5

As the earlier chapters of this book indicate, the United States has a complex system of securities regulation. This chapter discusses a further important aspect of this system: how the rules and regulations are enforced. The financial crisis and collapse of several financial institutions, coming on the heels of several high-profile corporate scandals and the enactment of the Sarbanes-Oxley Act, along with public outrage and resulting Congressional pressure, including the enactment of the Dodd-Frank Act, created an environment for heightened enforcement in the United States. Particularly in the wake of the financial crisis, criminal prosecutors, the SEC and civil litigants brought and are continuing to bring actions with unprecedented speed against financial institutions, corporations, executives and, in some cases, their outside accountants and advisors. At the same time, state regulators have instigated a series of investigations and enforcement actions against financial institutions and other market participants.

Similar to the basic regulatory framework, the enforcement structure is multifaceted. In many instances, the same allegedly improper conduct can give rise to liability based on more than one statutory provision, and this liability can be enforced in legal actions brought by both governmental entities and private parties. Remedies and sanctions for improper securities activities can be sought in three basic ways: through civil litigation, administrative proceedings and criminal prosecutions. None of these mechanisms is exclusive. Thus, a party accused of violative conduct may be forced to defend itself in more than one type of proceeding.

In *civil litigation*, private parties seek to recover losses allegedly suffered as a result of the defendant's conduct, or request injunctive relief to compel or enjoin action by the defendant. These private rights of action either arise from express statutory provisions or are implied, *i.e.*, created by judges to provide remedies for violations of statutes or rules that are silent as to possible remedies for noncompliance. Government agencies, such as the SEC, may also bring civil actions to seek forfeiture of illegally obtained profits, civil monetary penalties (which may be greater or less than damages awarded in a private civil suit) and/or injunctive relief.

The SEC has an active enforcement program with substantial available resources.

Administrative proceedings are brought by government agencies such as the SEC and are conducted pursuant to rules promulgated by the relevant agency before administrative law judges it employs. An agency's determination in an administrative proceeding is subject to review by an appellate court, but the scope of review is limited. For certain violations of the federal securities laws, the SEC may bring administrative proceedings to impose civil penalties or to

p. 11-5

p. 11-6

obtain cease and desist orders mandating an immediate halt to the allegedly improper conduct.

Unlike civil litigation, *criminal proceedings* based on the federal securities laws may be brought only by the Department of Justice (the "DOJ"), either on its own initiative or as a result of a referral by the SEC. Defendants convicted in criminal proceedings face substantial fines and, in the case of individuals, terms of imprisonment. Increasingly, state authorities are seeking to use state criminal laws to prosecute perceived misconduct in the securities markets.

These enforcement mechanisms and remedies are, as a basic matter, applicable to conduct in the United States and to entities registered and regulated under the U.S. securities laws, such as broker-dealers and investment advisers. In addition, these enforcement mechanisms and remedies may reach certain conduct occurring or entities located outside the United States in connection with securities transactions on U.S. exchanges or in the United States.

This chapter deals with the most significant consequences of violating the U.S. securities laws. [1] Its focus is on enforcement of the securities laws as they

p. 11-6

p. 11-7

relate specifically to *securities transactions*; the principal enforcement mechanisms available for other regulatory schemes, such as the broker-dealer sections of the Exchange Act and the Advisers Act, are summarized in the chapters dealing with the subject matter to which they relate. [2]

Section 11.02 examines liability for failing to register securities. Section 11.03 discusses liability for disclosure improprieties connected with registered public offerings. Section 11.04 discusses disclosure liabilities connected with private offerings, including a separate discussion of offerings under Rule 144A. Section 11.05 reviews liabilities connected with secondary market transactions, including disclosure violations, insider trading, market manipulation and other fraudulent conduct. Section 11.06 considers liabilities connected with tender and exchange offers, including fraudulent or manipulative conduct and insider trading. Section 11.07 discusses the enforcement provisions of the Sarbanes-Oxley Act. Section 11.08 examines the Foreign Corrupt Practices Act, an important piece of legislation mandating certain accounting controls and prohibiting certain payments to foreign officials. Section 11.09 discusses various enforcement scenarios for violation of these laws, including the possibility of class action lawsuits, SEC enforcement actions, civil or criminal actions under the Racketeer Influenced and Corrupt Organizations Act ("RICO"), [3] or other criminal proceedings. Section 11.10 reviews the circumstances in which U.S. law will be applied, and the reach of the U.S. judicial system, to activities and entities outside the United States. Finally, § 11.11 discusses special litigation issues relating to derivatives.

Although the U.S. securities law enforcement process must be respected by those engaged in securities activities with U.S. aspects, it should be kept in perspective. Most important, the vast majority of carefully conducted transactions do not give rise to litigation of any sort, and it is sometimes possible, where securities litigation without merit has been started, for a defendant to secure a favorable judicial ruling dismissing the case at an early stage of its otherwise generally lengthy life. In addition, even in most cases where a case proceeds beyond its preliminary stages, there is a rational sense of proportionality regarding the eventual outcome. Governmental proceedings and civil litigation by private parties relating to relatively less serious alleged violations are often settled by negotiations and do not result in major adverse consequences.

p. 11-7

p. 11-8

More serious accusations of improper conduct (in terms of size, intent, the systematic nature of the violation or other factors) can result, whether settled or not, in more significant consequences. Further, SEC enforcement activity has increased in the wake of criticism the Enforcement Division of the SEC faced after its failure to prevent or detect various high-profile corporate scandals. In addition, the SEC has focused on gatekeepers, such as lawyers (both general counsel and outside counsel) and auditors.

The financial crisis of 2008—along with significant frauds and corporate misconduct—spurred a large volume of litigation that has and continues to generate notable decisions that reach into many of the subject matters of this chapter. In one example, plaintiffs attempted to sue all of the parties arguably involved in the sale of mortgage-backed securities—from the issuers, to underwriters, to rating agencies—under a number of theories that, in many ways, test the limits of the securities laws. These cases provide particularly important guidance to market participants, and they are a recurring theme of this chapter.

Footnotes

1 Although this chapter focuses on the consequences of violating the federal securities laws (most particularly, the Securities Act and the Exchange Act), actions that violate the securities laws may also violate other federal or state laws. *See* § 16 of the Securities Act ("[T]he rights and remedies provided by this subchapter shall be in addition to any and all other rights and remedies that may exist in law or in equity.") and § 28 of the Exchange Act ("[T]he rights and remedies provided by this chapter shall be in addition to any and all other rights and remedies that may exist at law or in equity.…"). Determining whether claims under the securities laws may coexist with claims under other statutory regimes sometimes presents a complicated statutory question. For example, the U.S. Supreme Court decided in *Credit Suisse Securities (USA) LLC v. Billing*, 551 U.S.264 (2007), that the securities laws preclude the application of the antitrust laws in the context of certain IPO underwriting practices. The Court reached this conclusion by applying a four-pronged test (derived from *Gordon v. New York Stock Exchange*, 422 U.S. 659 (1975)) to determine whether, "given context and likely consequences, there is a 'clear repugnancy' between the securities laws and the antitrust complaint [at issue in *Credit Suisse*]." After applying this analysis, the Court concluded that the securities laws are "clearly incompatible" with antitrust laws, at least in the context of the underwriting practices raised in the *Credit Suisse* action (the plaintiffs alleged that the nation's leading underwriting firms had participated in schemes to inflate the aftermarket prices of the stocks offered in certain IPOs through practices such as "tie-in" agreements, "laddering" arrangements and pre-committing analysts to issue positive reports about the relevant companies). Whereas the *Credit Suisse* plaintiffs framed these facts as violations of the antitrust laws (in particular § 1 of the Sherman Antitrust Act, § 2(c) of the Robinson-Patman Act, and state antitrust laws), the plaintiffs in *In re Initial Public Offering Securities Litigation*, 241 F. Supp. 2d 281, 293–94 (S.D.N.Y. 2003) (consolidated actions), had framed the facts as violations of the securities laws through the use of misleading statements and market manipulation.

In addition, as noted above, state laws may provide bases for state criminal authorities or civil plaintiffs to challenge alleged misconduct in securities transactions. *See, e.g.*, CAL. CORP. CODE §§ 25400 (outlining prohibited activities) (West 2010), 25500 (creating a private right of action), 25540 (establishing criminal liability) (West 2006 & Supp. 2011); DEL. CODE ANN tit. 6, §§ 7303 (Supp. 2010) (securities fraud), 7322 (criminal penalties), 7323 (civil liability) (2005); N.Y. GEN. BUS. LAW §§ 352–359-g (McKinney's 1996 & Supp. 2011) (granting broad investigative powers over suspected securities frauds to New York Attorney General and creating misdemeanor and felony offenses for securities fraud). Although this chapter considers certain jurisdictional aspects of the intersection of state and federal laws, *see* § 11.09[1][a] (discussing the jurisdictional issues raised by the Securities Litigation Uniform Standards Act of 1998 ("SLUSA"), Pub. L. No. 105-353, 112 Stat. 3227 (1998)), it does not address the substantive provisions of state law that these transactions may implicate.

2 Chapters 14 and 16 respectively.

[1] When Is Registration Required?

Section 5 of the Securities Act requires that every offer and sale of a security be registered with the SEC unless a specific exemption from registration applies. [4] The terms "offer" and "sale" have been broadly construed to include various preliminary activities that, while not normally thought of as offers, might be viewed as impermissibly affecting the market for the securities to be offered. Thus, unusual publicity about an intended offer, including circulation of press releases or publication of research reports, may be held to be a prohibited offer under § 5 of the Securities Act. [5]

If a security is being offered or sold without registration, the seller bears the burden of establishing an exemption from the registration requirement. As discussed in earlier chapters, several broad exemptions may apply to a proposed offer or sale. First, private offerings are generally exempt under § 4(a)(2) of the Securities Act and exempt in certain cases under Rule 144A under the Securities Act. [6] Secondary market transactions are generally exempt under a combination

p. 11-9

of four sections: § 4(a)(1) (exempting transactions by any person other than an issuer, underwriter or dealer), § 4(a)(3) (exempting dealers in most instances), [7] § 4(a)(4) (exempting unsolicited brokerage transactions) and § 4(a)(7) (a new, non-exclusive safe harbor exemption for resales of restricted or control securities other than by an issuer or one of its subsidiaries). Offers and sales of securities outside the United States may be exempt from the registration requirement under Regulation S.

The most important consequence of this structure is that offers and sales to the public in the United States by issuers and underwriters are always subject to registration absent an exemption. In addition, the term "underwriter" is defined more broadly in the Securities Act than its business sense. [8] For example, any kind of public offer or sale (including sales on an exchange, a block trade or a market-maker transaction) for an issuer, or by a person or entity that has acquired from or is selling for an issuer, is subject to registration. The registration requirement is not limited to what the business world refers to as "public offerings" or "underwritten offerings." Finally, because for certain purposes the Securities Act includes within the term "issuer" any person that controls, is controlled by, or is under common control with an issuer, offers and sales to the public by or for such persons (commonly referred to as "affiliates") also require registration. [9] There is no bright-line test to determine whether a person is an affiliate, and the determination depends on the facts of a particular case; common examples of affiliates of an issuer include large shareholders, subsidiaries and certain officers and directors. [10]

[2] Liabilities for Failure to Register

[a] Securities Act § 5

Issuers, underwriters or dealers that violate the registration requirements of § 5 of the Securities Act are subject to a variety of remedies in enforcement actions brought by the SEC. In the case of parties guilty of premature offering

p. 11-9
p. 11-10

activity (known as "gun-jumping"), the SEC can, as a practical matter, delay the offering for a substantial period of time by refusing to declare the registration statement effective. [11] In addition, the SEC may bring suit in federal district court to enjoin the acts or practices found to violate § 5, for disgorgement of any profits gained as a result of those acts, and for penalties ranging from $89,078 to $890,780 for corporate entities, depending on the egregiousness of the offending conduct and the harm that may have been caused to other parties. [12] In rare instances involving willful conduct, the SEC may also ask the DOJ to consider instituting criminal proceedings. [13]

[b] Securities Act § 12(a)(1)

Parties who improperly offer or sell securities to the public without complying with the registration requirements of § 5 of the Securities Act are also subject to civil suits by any purchaser of the securities. Under § 12(a)(1) of the Securities Act, the seller is strictly liable to the purchaser irrespective of whether the purchaser's loss was in any way related to the failure to register the securities or whether any material misstatement or omission was made in connection with the sale. The purchaser need only show that the securities were subject to registration but unregistered, that he or she bought the securities and that the defendant was the "seller" within the meaning of § 12(a)(1). [14]

Recovery under § 12(a)(1) is limited to rescission or, if the plaintiff no longer owns the security, damages based upon the difference between the purchase price and the plaintiff's resale price. [15] If the plaintiff obtains rescission, he or she recovers the purchase price plus interest. A § 12(a)(1) claim must be

p. 11-10
p. 11-11

brought within one year of the alleged violation. The period is not suspended ("tolled") pending the purchaser's discovery of the alleged violation. [16]

Besides rebutting the elements of the plaintiff's *prima facie* case, a defendant has only two defenses to § 12(a)(1) liability. [17] First, he or she may show that the transaction or the security was exempt from the registration requirements of § 5. [18] If no exemption applies, the defendant must show *both* (i) that the plaintiff was at least equally at fault for the violation, in the sense that he or she actively promoted the unregistered sale, [19] and (ii) that barring the plaintiff's suit does not frustrate the effective enforcement of the securities laws. [20] The Supreme Court has stated that, because the Securities Act is "specifically designed to protect investors, even where a plaintiff actively participates in the distribution of unregistered securities, his or her suit should not be barred where the promotional efforts are incidental to his or her role as an investor." [21]

[3] Preemption of State Securities Law Registration Requirements

Until 1996, issuers involved in most large interstate offerings subject to the registration requirements of U.S. federal law were also required to observe the

p. 11-11
p. 11-12

separate registration requirements of state securities (or "blue sky") laws. Most states have adopted the Uniform Securities Act, which among other things declares it unlawful for any person to offer or sell any security without registration unless specified exemptions, such as those for offers or sales of securities listed on one of the major U.S. securities exchanges, apply. [22] As in the federal Securities Act, the Uniform Securities Act provides for multiple remedies for violation of its registration provisions, including private civil suits, stop orders and injunctive proceedings by state regulatory authorities, and even criminal proceedings. [23]

This system of dual federal and state registration requirements was dismantled by the National Securities

Markets Improvement Act of 1996 (the "NSMIA"), [24] which among other things amended § 18 of the Securities Act to provide for federal preemption of state registration requirements. Section 18 now provides that, with respect to all "covered securities" (including securities listed on a national securities exchange and securities issued by registered investment companies), state rules requiring or regulating registration shall not apply, and such rules may not "directly or indirectly prohibit, limit or impose conditions" upon the use of offering documents, proxy statements or similar disclosure documents. [25]

Notably, the amendment to § 18 made clear that the federal preemption with respect to registration requirements did not extend to other areas of state securities regulation, including specifically state power "to investigate and bring enforcement actions with respect to fraud or deceit, or unlawful conduct by a broker or dealer." [26] Like the federal framework examined in §§ 11.03[2] and

p. 11-12

p. 11-13

11.04[2] below, the Uniform Securities Act prohibits sales of securities through fraud or misrepresentation and creates criminal and civil liability for violations of its provisions. These provisions of state law remain intact, except in the context of class actions, [27] and provide additional deterrence against malfeasance in connection with securities transactions.

Footnotes

4 *See* § 5 of the Securities Act. *See also* §§ 1.02 and 3.02 for a discussion of the statutory requirements for registered public offerings in the United States. Issuers should be aware that the registration requirement applies to both their sales of newly issued securities and their resales of securities that they have previously issued and later repurchased ("treasury securities").

5 *See* § 3.02[2] and § 7.02[4] for a discussion of the publicity permitted in connection with an intended offering.

6 *See* § 7.02 and § 7.04[1].

7 Registration is required for underwriter or dealer transactions in securities constituting the whole or part of an unsold allotment, and also is required for dealer transactions in securities within the first 40 days after those securities were first publicly offered. § 4(a)(3)(A) and (C) of the Securities Act. Transactions by a dealer include transactions as agent (or broker), as well as transactions as principal. *See* the definition of "dealer" in § 2(a)(12) of the Securities Act.

8 *See* § 2(a)(11) of the Securities Act.

9 *See* § 2(a)(11) of the Securities Act.

10 *See SEC v. Cavanagh*, 155 F.3d 129, 143 (2d Cir. 1998) ("A control person, such as an officer, director, or controlling shareholder, is an affiliate of an issuer and is treated as an issuer when there is a distribution of securities. Thus, an affiliate ordinarily may not rely upon the § 4(1) exemption—he must either re-register his shares or qualify for a different exemption before undertaking to sell them.").

11 *See* § 2(a)(11) of the Securities Act; *Investment Company Filing Guidance—1993* (avail. Feb. 2, 1993) (Premature offering activity "is commonly referred to as ‘gun jumping.’ In such a case, acceleration of the effectiveness of the registration statement may be delayed and a ‘cooling off’ period with a re-circulation of any preliminary prospectus may be required.").

12 *See* §§ 20(b) and 20(d) of the Securities Act; SEC Release No. 33-10104 (June 27, 2016). These provisions apply to all other violations of the Securities Act and its associated rules and regulations; they are not particular to § 5 of the Securities Act.

13 *See* §§ 20(b) and 24 of the Securities Act. Again, this remedy is available for all violations of the Securities Act and its associated rules and regulations.

14 A person is a seller under the statute if he or she (i) passes title to the security or (ii) solicits the purchase and has a financial interest in the sale. A person who solicits a sale must be "motivated at least in part by a desire to benefit his own financial interests or those of the securities owner" to be a statutory seller under § 12(a)(1) of the Securities Act. *Pinter v. Dahl*, 486 U.S.622, 647 (1988).

15 *See Myers v. Da Silva*, Fed. Sec. L. Rep. (CCH) ¶99,166 (E.D. Cal. Mar. 14, 1983) at 95,628 (noting that the proper remedy is determined by plaintiff's circumstances, not plaintiff's election: "if plaintiff still owns the tainted securities he may only sue for rescission").

16 In the circumstances where it is applicable, the principle of "tolling" delays or suspends the counting of time (a "limitations period") within which a securities action must be commenced. For example, if a one-year statute of limitations for a fraud claim is tolled until discovery of the fraud, the plaintiff has one year to bring a claim after such discovery even if the fraud occurred more than one year before. The principle of tolling does not apply under § 12(a)(1) of the Securities Act. *See Lampf, Pleva, Lipkin, Prupis & Petigrow v. Gilbertson*, 501 U.S.350, 363 (1991); *Gardner v. Investors Diversified Capital, Inc.*, 805 F. Supp. 874 (D. Colo. 1992); *Barton v. Peterson*, 733 F. Supp. 1482, 1490 (N.D. Ga. 1990).

17 These defenses are products of case law; they are not set forth in the statute.

18 The burden is on the defendant to establish that the sale of the security was exempt from registration. *See SEC v. Cavanagh*, 445 F.3d 105, 111 n.13 (2d Cir. 2006); *SEC v. North American Research & Development Corp.*, 424 F.2d 63, 71 (2d Cir. 1970).

19 It is not sufficient to show that the plaintiff knew the securities were not registered and that no registration exemption was available. The defendant must prove that the plaintiff's role in the offering was more as a promoter than an investor—for example, that he or she induced the issuer not to register the securities, or was equally involved with the defendant in developing and carrying out a plan to distribute unregistered securities.

20 This is the *in pari delicto* defense, and it is available as a defense against private actions under any of the securities laws. *Pinter v. Dahl*, 486 U.S.622, 635 (1988). The Court first held that the *in pari delicto* defense, as formulated above, was applicable to § 10(b) actions in *Bateman Eichler, Hill Richards, Inc. v. Berner*, 472 U.S.299, 310–11 (1985). In *Pinter v. Dahl*, 486 U.S. 662 (1988), the Court held that this defense applies to all private actions under the federal securities laws, including actions for rescission under § 12(a)(1).

21 *Pinter v. Dahl*, 486 U.S.622, 638–39 (1988).

22 *See* §§ 301 and 403(a)(8) of the Uniform Securities Act. At least 40 states have adopted the Act in whole or in part. Renee M. Jones, *Does Federalism Matter? Its Perplexing Role in the Corporate Governance Debate*, 41 WAKE FOREST L. REV. 879, 905 (2006). One notable exception is New York, which has never adopted the Uniform Securities Act, and whose current statute, the Martin Act, dates from 1921. N.Y. GEN. BUS. LAW § 352–359-g (McKinney's 1996 & Supp. 2011). *See infra* Note 584.

23 *See* §§ 306 and 408–410 of the Uniform Securities Act. As a practical matter, most state regulatory authorities have lacked the resources to enforce their "blue sky" laws effectively by injunctive or criminal proceedings, so such statutes have been principally enforced through private civil suits. The civil liability provisions of the Uniform Securities Act are patterned after § 12 of the Securities Act, with damage remedies available to the purchaser for offers and sales of securities made in violation of the registration provisions, as well as for other violations of the Act. *See* § 410 of the Uniform Securities Act.

24 *See* National Securities Markets Improvement Act of 1996, Pub. L. No. 104-290, 110 Stat. 3416 (1996).

25 *See* §§ 18(a) and 18(b) of the Securities Act. *See* § 2.04[8] for a further discussion of state securities laws.

26 § 18(c)(1) of the Securities Act.

27 In 1998, Congress passed the Securities Litigation Uniform Standards Act of 1998, Pub. L. No. 105-353, 112 Stat. 3227 (1998) which requires most private securities class action lawsuits alleging fraud to be pursued exclusively in federal court under federal law. *See* § 11.09[1][a].

U.S. Regulation of the International Securities and Derivatives Markets, § 11.03, LIABILITIES CONNECTED WITH DISCLOSURE IN REGISTERED PUBLIC OFFERINGS

U.S. Regulation of the International Securities and Derivatives Markets

For both U.S. and non-U.S. companies, one of the most important aspects of the U.S. securities enforcement process is related to remedies for allegedly improper disclosures (such as false statements) in connection with securities activities. Although improper disclosures can arise in a variety of other significant contexts, the most comprehensive framework of remedies for deficient disclosure applies in the case of registered public offerings of securities, including offerings of ADRs representing shares of non-U.S. issuers. [28] We first discuss, therefore, the various remedies and sanctions that exist to deal with asserted disclosure deficiencies in connection with U.S. public offerings, as well as steps that can be taken by issuers and others involved in the offering process to reduce the related risks. [29]

As in many other areas of the U.S. securities laws, remedies for disclosure deficiencies in public offerings are predicated on a variety of statutory provisions. The most important of these are §§ 11 and 12(a)(2) of the Securities Act, which are discussed below in § 11.03[1] and [2], respectively. The SEC's power under § 8 of the Securities Act to issue "stop orders" in response to disclosure violations is examined in § 11.03[3]. Two other liability provisions applicable to disclosure violations in registered public offerings, § 17 of the Securities Act and Rule 10b-5 under the Exchange Act, are addressed briefly in § 11.03[4] below, with further treatment in § 11.04 (disclosure liabilities in private offerings). Section 11.03[5] discusses safe harbors from liability under U.S. securities laws for certain projections and other forward-looking statements. Finally, § 11.03[6] notes the existence of similar enforcement provisions in the state securities laws.

[1] Securities Act § 11

p. 11-14

[a] Elements of Claim

Section 11 of the Securities Act imposes liability for certain types of deficient disclosure in a registration statement, including the prospectus. [30] Specifically, a § 11 claim arises when any part of the registration statement at the time it becomes effective either (i) contains an untrue statement of a material fact or (ii) omits mention of a material fact required to be included in the registration statement or otherwise necessary to make the included statements not misleading. A fact is material if there is a substantial likelihood that a reasonable purchaser would consider it important in making his purchase, or otherwise stated, if the reasonable investor would view it as "significantly alter[ing] the 'total mix' of information made available." [31]

If either of these deficiencies exists, any purchaser of the securities covered by the registration statement may bring a civil suit, whether he or she purchased the securities in the initial distribution or, as some courts have held, in the aftermarket where the securities are traceable to the initial offering. [32] The traceability requirement, however, effectively limits claims in follow-on offerings (*i.e.*, offerings that follow the issuer's initial public offering) to those who purchased in the offering. [33]

p. 11-14

p. 11-15

The plaintiff generally need not prove that he or she relied on the misstatement or omission in the registration statement in purchasing the securities. [34] The plaintiff also is not required to prove a causal relationship between the material misstatement or omission and the decline in the value of the security. [35] Finally, the plaintiff is not required to prove fraudulent intent ("*scienter*") on the part of the defendant.

[b] Who May Be Liable

Five basic categories of offering participants are subject to primary liability under § 11 of the Securities Act. [36] They are:

- the issuer;
- every person who signed the registration statement; [37]
- every director or partner of the issuer at the time of the filing, and every person who, with his consent, was named in the registration statement as about to become a director or partner; [38]
- every underwriter for the securities being registered; [39] and

p. 11-15
p. 11-16

- every "expert" named with its consent as having prepared a portion of the registration statement. [40]

p. 11-16
p. 11-17

In addition, under § 15 of the Securities Act, liability may be extended to any person who "controls" one of these primarily liable parties, in the sense that he or she has the power to direct or cause the direction of its management and policies, whether through the ownership of voting securities, by contract or otherwise. [41] Therefore, a large shareholder (or an officer not otherwise liable) may be liable for claims against the corporation he or she controls. [42] A controlling person may escape liability if that person can show that he or she had neither knowledge nor "reasonable ground to believe" in the existence of the facts giving rise to liability on the part of the person he or she controls. [43]

Because § 11 specifies the persons who are potentially liable thereunder for a disclosure violation, the courts have found that there is no additional liability for "aiding and abetting" a § 11 violation. [44]

[c] Defenses

All defendants, including the issuer, can escape liability by proving that the plaintiff knew of the material misstatements or omissions at the time he or she purchased the security. [45] If this difficult defense [46] cannot be sustained, the issuer is strictly liable for the disclosure violation.

Defendants other than the issuer bear the burden of proving that they have met a prescribed standard of care. [47] For purposes of this defense (commonly known as the "due diligence" defense), the registration statement is deemed to have two sets of sections: those prepared by experts ("expertized") and the others.

p. 11-17
p. 11-18

With respect to the nonexpertized portions of the registration statement, a potentially liable defendant [48] must prove that he or she had, after "reasonable" investigation, "reasonable" ground to believe that the included information was true and that no material facts were omitted. [49] The standard of reasonableness is "that required of a prudent man in the management of his own property." [50] Because of the investigation requirement, issuers and underwriters participating in an offering engage, together with their respective advisers, in a detailed examination of the issuer's business and finances. [51] Such an examination can last for weeks in the case of a first-time issuer with a complex business, or can involve a single meeting or conference call for an offering by a seasoned issuer off a "shelf" registration statement involving underwriters and counsel that regularly follow and are familiar with the issuer's affairs. Underwriters generally request that the issuer's accountants deliver "comfort letters" regarding financial information included in the registration statement and that their counsel and issuer's counsel deliver to them "negative assurance" letters indicating that counsel has made certain investigations in connection with preparation of the registration statement and confirming that counsel is not aware of any material misstatement or omission in the registration statement.

With respect to expertized portions of the registration statement, defendants other than the relevant expert must prove that, at the time that the registration statement was effective, they had no reasonable ground to believe, and did not believe, that there was a material misstatement or omission. [52] No reasonable investigation is required to establish the defense. This reduced standard of diligence applies most frequently to the audited financial statements in a registration statement, because such financial statements are included in reliance on the auditors' report thereon and upon the authority of the auditors as experts, as well as the auditors' consent to being named as experts. Although no reasonable

p. 11-18

p. 11-19

investigation is required to establish a reliance defense, courts have held that the existence of "red flags" can create a duty to investigate expertized information, including audited financial statements. [53] As a result, the examination of an issuer by underwriters and their advisers includes a thorough review of financial statements and other financial information with an issuer and its accountants.

The due diligence investigation necessary to establish a defense may depend upon the defendant's role in the transaction and his or her relationship to the issuer. In the first of the relatively few reported cases to analyze § 11 liability, [54] the court discussed factors relevant to whether a defendant had established a due diligence defense. The court stated that an underwriter must "make some reasonable attempt to verify the data submitted" to it and may not rely solely on statements or assurances of the issuer's officers and counsel. [55] The court distinguished the greater level of investigation required of a director who is a lawyer preparing the registration statement than of an outside director, *e.g.*, with respect

p. 11-19

p. 11-20

to legal and corporate documents. [56] The court also found that a corporate officer could not reasonably rely on expertized information when, based on the officer's own knowledge of the company's financial data, he or she had reason to know it was not correct. [57]

Rule 176 under the Securities Act provides some additional guidance on the factors that should be taken into account in determining the reasonableness of the due diligence investigation. [58] Under this rule, relevant factors include:

p. 11-20

p. 11-21

- the type of issuer;
- the type of security;
- the type of person (*e.g.*, whether a director, officer or underwriter);
- for officers, the type of office held;
- for directors, whether they have any other relationship with the issuer;
- for underwriters, the type of underwriting arrangement;
- reasonable reliance on officers, employees and others whose duties should give them knowledge of the facts in question; and
- whether, with respect to information incorporated by reference to another document, the person had any responsibility for preparation and filing of the incorporated document. [59]

An issuer faced with suit under § 11 may also be able to rebut allegations of material misstatements or omissions with respect to statements of opinion, including statements of belief, statements expressing uncertainty about a current matter, and predictions about the future, under certain circumstances. [60] In *Omnicare, Inc. v. Laborers Dist. Council Const. Indus. Pension Fund*, the Supreme Court identified three bases of liability for statements of opinion under § 11. [61]

p. 11-21
p. 11-22

First, because "every such statement explicitly affirms one fact: that the speaker actually holds the stated belief," a statement of opinion can be actionable as a misstatement of material fact if it was subjectively disbelieved by the defendant at the time it was expressed. [62] Second, a statement of opinion can be actionable as a misstatement if it is accompanied by "embedded statements of fact" that are untrue. [63] For example, if a speaker supports its opinion with a specific fact that is untrue, there can be liability for that misstatement. To avoid liability on this ground, an issuer can show that its challenged opinion did not contain embedded statements of facts or that any such facts were true. Third, "because a reasonable investor may, depending on the circumstances, understand an opinion statement to convey facts about how the speaker has formed the opinion," a statement of opinion can be actionable under § 11's omissions provision if it "omits material facts about the issuer's inquiry into or knowledge concerning a statement of opinion" and "those facts conflict with what a reasonable investor would take from the statement itself." [64] Thus, a statement of opinion about legal compliance (*i.e.*, "we believe our conduct is lawful") may be an actionable omission if the issuer made the statement without having consulted a lawyer because "an investor, though recognizing that legal opinions can prove wrong in the end, still likely expects such an assertion to rest on some meaningful legal inquiry—rather than, say, on mere intuition." [65] The Supreme Court has cautioned, however, that an opinion statement "is not necessarily misleading when an issuer knows, but fails to disclose, some fact cutting the other way." [66] Further, "whether an omission makes an expression of opinion misleading always depends on context," and requires consideration of the text surrounding the opinion, "including hedges, disclaimers, and apparently conflicting information," as well as "the customs and practices of the relevant industry." [67] An issuer may therefore be able to avoid omission liability for statements of opinion by disclosing the basis for its opinion or by establishing that an investor would not have been misled about that basis when the statements are viewed in context.

p. 11-22
p. 11-23

In *Tongue v. Sanofi*, the Second Circuit applied this standard in affirming the dismissal of claims regarding an issuer's optimistic statements of opinion concerning the expected timing of a drug's approval and launch, despite the issuer's alleged failure to disclose the FDA's negative feedback about the methodology used in the drug's trials. [68] In reaching that result, the Second Circuit concluded that the omitted facts did not "conflict with what a reasonable investor would take from the statement itself" because investors in a pharmaceutical company are aware of ongoing dialogue between the company and the FDA, as well as the FDA's previously disclosed concerns with the applicable methodology. [69] The Second Circuit also concluded that the issuer was not under an obligation to disclose the specific negative feedback it received from the FDA "merely because it tended to cut against their projections." [70]

Issuers can also defeat liability with respect to forward-looking opinions and other forms of "soft information," such as predictions and discussions of risk, by including appropriate cautionary language about the reliability of this information within the prospectus. Under the so-called "bespeaks caution" doctrine, which has been developed by the courts and incorporated into federal statutory law outside the initial public offering context, [71] cautionary language such as disclaimers may render certain alleged misrepresentations or omissions immaterial as a matter of law. [72] The idea is that a suitably warned purchaser cannot reasonably have relied on this information in making his or her investment decision.

p. 11-23
p. 11-24

Disclaimers, however, are not a failsafe; if the seller did not have at least a reasonable basis for making the predictive statements, the disclaimers will not be sufficient to defeat liability. [73]

The "bespeaks caution" doctrine only protects statements that are considered forward-looking. [74] Courts have at times struggled to define what makes a statement "forward-looking." The Second Circuit tackled the question in *Iowa Public Employees' Retirement System v. MF Global, Ltd.* [75] In *MF Global*, the plaintiffs complained that the defendant had failed to disclose that its risk management protocols, which limited trading in brokerage accounts in certain ways, were not always enforced upon the company's employees trading for their own accounts. The district court dismissed the allegations under the "bespeaks caution" doctrine, interpreting plaintiffs' complaint as an allegation that MF Global had failed to disclose that "the risk management system might be unable to prevent future negative outcomes" and was thus alleging that MF Global "had failed to disclose the risk of a future negative event." [76] The Second Circuit held that the district court had applied the "bespeaks caution" doctrine too broadly for failing to recognize that the "allegation specifies an omission of present fact" that was "ascertainable when the challenged statements were made." [77] Recognizing that the line between forward-looking statements and statements of present fact may be hard to draw, and that some statements may contain elements of both, the court explained that "[a] forward-looking statement expresses the issuer's inherently contingent prediction of risk or future cash flow" whereas "a non-forward looking statement provides an ascertainable or verifiable basis for the investor to make his own prediction." [78]

More recently, in litigation arising out of Facebook's initial public offering, a judge in the Southern District of New York concluded that the defendants were not sheltered from liability under the bespeaks caution doctrine, even

p. 11-24

p. 11-25

though the company made "significant disclosures" warning that it could lose revenue in the future as the use of its mobile products increased, because the plaintiffs adequately alleged that the defendants were aware that those trends were already occurring. [79] The court therefore concluded that Facebook had a duty to disclose that known trend under Item 303 of Regulation S-K under the Securities Act, and that the bespeaks caution doctrine did not apply to the alleged omission of that existing information. [80]

Cautionary language can also help an issuer rebut allegations of material misstatements or omissions in contexts other than those involving soft information. In *WorldCom Securities Litigation*, [81] the court held that an issuer unaffiliated with WorldCom did not violate § 11 when it made a registered offering of notes linked to WorldCom's equity. The historical prices for WorldCom's common stock listed in the prospectus supplement relating to the notes were artificially inflated as a result of WorldCom's wrongdoing and were therefore materially false and misleading. The court pointed to language in the issuer's prospectus supplement that clearly cautioned that the issuer did not know whether WorldCom had disclosed all events occurring before the date of the prospectus supplement, that the issuer had not participated in the preparation of any of WorldCom's public filings and that the issuer had not made any due diligence investigation or inquiry of WorldCom in connection with the equity-linked note offering. [82]

Finally, courts generally hold that expressions of "puffery" and corporate optimism do not give rise to securities violations, either because they are too general to cause a reasonable investor to rely upon them or because no investor would consider such statements to be material. [83] For example, the Second

p. 11-25

p. 11-26

Circuit recently dismissed claims alleging that an issuer made misstatements about its "culture of high ethical standards, integrity, operational excellence, and customer satisfaction" and "its reputation for upholding the highest standards of personal integrity and business conduct," notwithstanding the plaintiffs' allegation that the statements were "knowingly and verifiably false when made," because the statements' "generality … prevents them from rising to the level of materiality required to form the basis for assessing a potential investment" and "an investor would not depend on the statements as a guarantee that the company would never take a step that might adversely affect its reputation." [84]

[d] Remedies

A plaintiff who prevails on a § 11 claim may recover monetary damages, which are measured in one of three ways. [85] If the plaintiff still holds the security at the time of judgment, the plaintiff may recover the difference between the purchase price and its value at the time the suit was filed. [86] If the plaintiff sold the security before filing suit, he or she may recover the difference between the purchase and resale prices. Finally, if the plaintiff sold the security during the course of the litigation, the plaintiff may recover the difference between the purchase price and either the resale price or the price at the time the suit was filed, whichever is greater. In any of these contexts, the defendant may reduce the plaintiff's damages by proving that the decline in the value of the security is attributable to factors other than the material misstatement or omission. [87]

Defendants are jointly and severally liable to the plaintiff, meaning that any of them may be held responsible for the plaintiff's damages in full. [88] There is an exception for underwriters, whose liability generally is limited to the value

p. 11-26
p. 11-27

of their own underwriting commitment. [89] Outside directors are also exempt from joint and several liability, except in cases of "knowing" securities fraud. [90] Under certain circumstances, discussed below, defendants have a right to recover contribution from one another. [91]

[e] Indemnification, Contribution and Insurance

Indemnification, contribution and insurance are methods by which defendants seek to shift liability in whole or in part to fellow wrongdoers, or to insurance carriers who agree to cover their litigation costs and damages in exchange for regular premiums. While contribution and insurance payments are generally permissible under the securities laws, the SEC and the courts have strictly limited the availability of indemnification. These issues, which apply equally to the Securities Act and the Exchange Act, are addressed below.

[i] *Indemnification*

There are no express rights of indemnification under the Securities Act or the Exchange Act, and a majority of courts have held that such rights may not be implied. [92] The SEC takes the position that an issuer's agreement to indemnify its directors, officers and controlling persons for securities law violations is against public policy and unenforceable. [93] Courts have generally agreed, on the grounds

p. 11-27
p. 11-28

that indemnification agreements defeat the deterrent policies of the securities laws. [94]

The SEC policy by its terms does not apply to (i) the issuer's indemnification of underwriters for liabilities arising out of information in the registration statement not provided by the underwriters, [95] or (ii) a selling securityholder's indemnification of the issuer (or *vice versa*) in a secondary offering by such securityholder. [96] However, the courts may not enforce such agreements, particularly where the securities law violation involved intentional or reckless conduct. [97] The courts are divided as to whether indemnification is available when the underwriter has been merely negligent. [98] Because of this uncertainty, U.S. underwriting agreements generally provide for a contractual right of contribution if the indemnification provisions are not enforceable.

[ii] *Contribution*

p. 11-28
p. 11-29

Contribution is an equitable doctrine developed in response to the traditional regime of "joint and several liability," in which any single defendant could be held liable for the full extent of plaintiff's damages, even if multiple persons were in fact responsible for those damages. The right of the person who discharges the common liability to recover contribution from others who share fault is thought to promote both fairness and the deterrent policies of the securities laws, because all persons potentially liable to the plaintiff will have to bear a share of the loss rather than only those named as defendants. Section 11(f) of the Securities Act expressly provides for contribution among defendants who are jointly liable, although a person found liable for fraudulent misrepresentation cannot recover in contribution from a defendant who is not. [99] Under a 1995 amendment to the Securities Act, outside directors now are exempted from joint and several liability, except in cases of "knowing" securities fraud, and instead are liable only for a portion of the total damages based on the percentage of responsibility that the jury attributes to them. [100]

[iii] *Insurance*

Companies routinely purchase, and the SEC does not object to, liability insurance for directors and officers, although the SEC does require disclosure of the premium paid by the registrant or selling shareholder for any policy, obtained in connection with a registered public offering, that insures or indemnifies directors or officers against liabilities connected with the registration. [101]

[f] Statutes of Limitations and Repose

p. 11-29
p. 11-30

The statutes of limitations and repose (the periods in which a plaintiff must commence litigation) for claims brought pursuant to § 11 are "one year after the discovery of the untrue statement or the omission, or after such discovery should have been made by the exercise of reasonable diligence," but in no event more than three years after the security was first *bona fide* offered to the public. [102]

Many courts have held that the plaintiff bears the burden to plead and prove facts demonstrating compliance with the limitations periods. [103] Specifically, a complaint should set forth the (i) time and circumstances of plaintiff's discovery of the fraudulent statement, (ii) reasons why it was not discovered earlier if more than one year has elapsed since the statement was made, and (iii) diligent efforts that plaintiff undertook in seeking such discovery. [104] While ordinarily the plaintiff also bears the burden of pleading and establishing that it is entitled to tolling, [105] the Supreme Court has held that equitable tolling— *i.e.*, tolling in circumstances not contemplated by the statute—is not available. [106]

p. 11-30
p. 11-31

As noted above, § 13 provides a three-year repose period for claims under § 11. This period begins when the security is "*bona fide* offered to the public," but the statute is ambiguous as to the meaning of that phrase. In *P. Stolz Family Partnership L.P. v. Daum*, the Second Circuit held that in determining whether a *bona fide* offer was made, "the relevant question … is when was the stock really and truly (genuinely) offered to the public, as opposed to, say, a simulated offering." [107]

The court in *P. Stolz* further interpreted § 13 to mean that the statute of repose begins to run from the *first bona fide* offering of the security to the public, rather than from the *last* such offering. The court reasoned that this interpretation was appropriate because the entire purpose of a statute of repose is to

p. 11-31
p. 11-32

provide an easily ascertainable and certain date for the quieting of litigation, and using the last offered date would add uncertainty and fluidity to that calculation and prevent finality. It held as much notwithstanding its acknowledgement that the rule leaves open the remote possibility that a plaintiff's claim may in some instances become barred before it even accrues. [108]

[2] Securities Act § 12(a)(2)

[a] Elements of Claim

Section 12(a)(2) of the Securities Act provides a second basis for liability for deficient disclosure in connection with public offerings. [109] Unlike § 11, which is limited to disclosure in a registration statement, § 12(a)(2)'s remedy applies to both written and oral communications in connection with the offer or sale of a security. [110] The statute provides that any person who offers or sells a

p. 11-32
p. 11-33

security by means of a "prospectus or oral communication" [111] that contains a material misstatement, or fails to state a material fact that is "necessary in order to make the statements, in the light of the circumstances under which they were made, not misleading," is liable to the purchaser for damages. [112] An oral communication must relate to the prospectus for it to be actionable under § 12(a)(2). [113]

As in § 11, the plaintiff is not required to establish that the defendant acted with fraudulent intent (*scienter*), or that the plaintiff relied upon the misstatements or omissions in making his or her purchase—although the plaintiff must prove that he or she was not actually aware of these disclosure violations at the time. [114] The plaintiff also must demonstrate that the misstatement or omission somehow affected (though not necessarily prompted) the purchase, but this

p. 11-33
p. 11-34

showing has been presumed where the misleading information was in a written prospectus, since the dissemination of such information is deemed to affect the market price of the security. [115]

Unlike § 11, which establishes liability for a range of offering participants, § 12(a)(2) liability is expressly limited to those who offer or sell the securities. However, this provision has been construed to include not only the immediate seller, but also others who had a financial interest in the sale and actively participated in its solicitation. [116] Thus, directors, officers and principal shareholders of an issuer may be liable as "sellers" under § 12(a)(2) where they authorize the promotional efforts of the underwriters, help prepare the offering documents and work closely with the underwriters in conducting sophisticated "information" or "due diligence" meetings with retail and institutional sales personnel. [117]

Moreover, as in § 11, liability may be extended to "controlling persons," unless these persons can prove that they neither knew nor had a reasonable basis to know the facts giving rise to the liability of those they control. [118] The courts have held that there is no aiding and abetting liability under § 12(a)(2) of the Securities Act. [119]

[b] Defenses

A seller has an affirmative defense to § 12(a)(2) liability if he or she can prove that he or she "did not know, and in the exercise of reasonable care could not have known," of the untrue statement or omission. One court has interpreted

p. 11-34
p. 11-35

this standard as requiring the exercise of "ordinary care," with the determination of what this involves dependent on the circumstances of the transaction. [120]

Unlike the due diligence defense under § 11, § 12(a)(2) does not expressly impose a duty to investigate. However, some courts have implied such a duty under certain circumstances. [121] Accordingly, it has become customary for underwriting banks in public offerings exempt from SEC registration, such as offerings of commercial paper exempt under § 3(a)(3) of the Securities Act, to proceed as if the duties necessary to establish a defense under § 12(a)(2) are the same as those under § 11, and as if the same measures they use to protect themselves under § 11 also will protect them under § 12(a)(2).

The indemnification and contribution provisions in underwriting agreements for registered public offerings apply to liability arising from misleading misstatements or omissions in the preliminary and final prospectuses as well as the registration statement. As previously discussed, the courts may not always enforce these indemnification provisions, but generally will honor contractual provisions providing for contribution rights among offering participants. [122]

[c] Remedies

Section 12(a)(2) of the Securities Act provides an express measure of damages for disclosure violations. If the plaintiff still owns the security, he or she is entitled to rescind the sale and recover the purchase price, plus interest, less income earned. If the plaintiff no longer owns the security, he or she can recover

p. 11-35
p. 11-36

damages. Pursuant to the Litigation Reform Act, [123] damages for violations of § 12(a)(2) are limited to the depreciation in the value of the plaintiff's securities actually caused by the false statements or omission. [124]

[d] Statute of Limitations

Like § 11 suits, claims under § 12(a)(2) of the Securities Act are governed by the limitations and repose periods imposed by § 13 of the Securities Act. Such periods are one year after the plaintiff discovered or reasonably should have discovered the misstatement or omission, but in no event more than three years after the sale. [125] Because § 12(a)(2) is governed by the same statute of limitations as § 11 claims, the issues discussed in § 11.03[1][f] are also germane to limitations issues under § 12(a)(2). [126]

[3] Stop Orders

In addition to the civil damage remedies provided by §§ 11 and 12(a)(2), the Securities Act provides for various remedies by the SEC in response to improper disclosure in a registration statement. Chief among these remedies is the so-called "stop order" under § 8 of the Securities Act, by which the SEC may (i) deny effectiveness to a registration statement that will otherwise automatically become effective if it appears inaccurate or incomplete in any material respect, [127] or (ii) suspend the effectiveness of a previously filed registration statement if it contains a material misstatement or omission. [128] In both cases, the issuer is entitled to notice and a hearing before the SEC issues the stop order, and the stop order remains in effect until the registration statement has been amended in accordance with the SEC's instructions.

[4] Other Liability Provisions

p. 11-36
p. 11-37

Disclosure violations in registration statements may also implicate § 17 of the Securities Act and Rule 10b-5 under the Exchange Act, broad antifraud provisions that provide a variety of remedies, including civil or administrative proceedings by the SEC, criminal liability and, in the case of Rule 10b-5, civil damage suits by private parties. [129] These provisions, which also apply to fraudulent acts in connection with private placements and secondary market transactions, are discussed further in § 11.04[2] and [3].

[5] Special Liability Rules for Forward-Looking Statements

Projections and forecasts about an issuer and other forward-looking statements are by their nature uncertain and may prove to be incorrect, thus raising special liability concerns for an issuer, including a potential duty to correct or update them when they are no longer true. [130] With the adoption of Regulation FD, [131] these statements are required to be disclosed to a much wider audience when material, which will often (and for earnings, revenue or similar line item forecasts, always) be the case, with an attendant increase in the issuer's exposure to liability for such statements.

Special liability rules apply with respect to both written and oral forward-looking statements. Forward-looking statements may be protected as statements of opinion under certain circumstances. [132] Outside the initial public offering context, corporate issuers also generally now enjoy a qualified safe harbor for forward-looking statements, so long as these statements are accompanied by "meaningful cautionary statements" or were not made with actual knowledge of their falsity.

p. 11-37
p. 11-38

The Litigation Reform Act, enacted in 1995, provides issuers that are subject to the reporting requirements of the Exchange Act, their officers, directors and employees and their underwriters (with respect to information provided by such issuers or derived therefrom) the principal source of protection for projections and other forward-looking statements, whether written or oral, that turn out to be inaccurate or materially misleading. The Litigation Reform Act creates a two-pronged safe harbor from liability under the Securities Act and the Exchange Act where (i) a forward-looking statement [133] is identified as

p. 11-38
p. 11-39

such [134] and is accompanied by [135] meaningful cautionary statements identifying important factors that could cause actual results to differ materially from those in the forward-looking statement or is "immaterial" [136] *or* (ii) a plaintiff is unable to prove that the forward-looking statement was made with actual knowledge that it was materially false or misleading. [137] At least two issues have caused courts to differ in their applications of the first prong. Most courts have noted that the first prong, unlike the second prong, contains no reference to the defendant's state of mind. Thus, these courts have found that the first prong is satisfied irrespective of defendants' knowledge of the truth or falsity of their forward-looking statements. [138] This position, however, has not been uniformly adopted. [139]

p. 11-39
p. 11-40

Second, courts have struggled to define what makes a cautionary statement "meaningful" in order to benefit from the safe harbor. Courts have generally agreed that mere "boilerplate" cautionary language will not suffice, and the risk disclosures must be tailored to the defendant's actual business. [140] These principles, like much of the analysis of the safe harbor provision, have been borrowed from the "bespeaks caution" doctrine; [141] the House Conference Committee that adopted the Litigation Reform Act stated that the statutory safe harbor was based on—but not intended to replace—the common law doctrine. [142]

p. 11-40
p. 11-41

Disagreement among the courts has focused on how to apply the safe harbor at the pleadings stage in cases where the plaintiff alleges that an undisclosed contingency caused worse-than-predicted results. The Seventh Circuit's decision in *Asher v. Baxter* [143] suggests that it could be difficult for a defendant to prevail on a motion to dismiss in such a circumstance. In *Asher*, the court ruled that before a motion to dismiss can be granted, at least some discovery may be required to determine whether the defendant had actually disclosed the important risks that it "objectively faced when it made its forecasts." [144] At the pleadings stage, the court found no basis to conclude that the defendant had disclosed the "principal or important risks." [145] Courts following *Asher* may conclude that discovery is nearly always necessary where the contingency that causes worse-than-predicted results is not identical to the risks described in the forward-looking statement. [146]

In contrast, the Eleventh Circuit Court of Appeals in *Harris v. IVAX Corp*. [147] affirmed a ruling on motion to dismiss in the defendant's favor. The plaintiff had alleged that the safe harbor would not protect a press release that disclosed an anticipated quarterly loss of $43 million when the defendant's actual loss turned out to be $179 million, of which $104 million was a "goodwill write-down" that the company had never disclosed. The court concluded that the "failure to include the particular factor that ultimately causes the forward-looking statement not to come true will not mean that the statement is not protected by the safe harbor. [W]hen an investor has been warned of risks of a significance similar to that actually realized, she is sufficiently on notice of the investment to make an intelligent decision about it." [148] While the *Harris* analysis permits a broader application of the safe harbor at the pleading stage, companies can increase their chances of qualifying for the safe harbor by updating their risk disclosures to follow corporate developments. [149]

The Litigation Reform Act sets forth specific procedures for complying with the safe harbor with respect to oral forward-looking statements. Pursuant to these procedures, it is sufficient for an issuer (or its director, officer or employee) making an oral forward-looking statement to (i) state that the discussion or presentation will contain forward-looking statements, (ii) state that actual results could differ materially from those projected in such forward-looking statements and (iii) refer the audience to a "readily available" written document where the "meaningful cautionary statements" can be found. [150] Documents filed with the SEC or publicly disseminated are considered "readily available." [151]

While the Litigation Reform Act safe harbor has generally been an effective safe harbor from liability for forward-looking statements in certain contexts, it has a number of qualifications. First, it applies only in private civil suits [152] alleging liability under the Securities Act or the Exchange Act. [153] Second, as previously mentioned, it is available only for issuers that are subject to the reporting

p. 11-42
p. 11-43

requirements of the Exchange Act. [154] Third, it does not apply to statements made in the context of an initial public offering, a tender offer or a going private transaction, in financial statements or in beneficial ownership reports under § 13(d) of the Exchange Act. [155]

Finally, the language of the safe harbor does not affect the scope of any duty to update specific forward-looking statements that fall within it. [156] The Litigation Reform Act explicitly declined to resolve the question whether an issuer making projections must update them when they appear no longer to be accurate, providing only that nothing in the Act shall impose such a duty. [157] In the absence of clarity on the extent and scope of a duty to update that may be imposed by the courts, issuers have continued to be cautious about making public projections, despite the safe harbor, in light of the significant possibility that they will be compelled to update them in circumstances in which they would otherwise prefer to refrain from making additional public disclosures. [158]

p. 11-43
p. 11-44

Other factors may also dissuade issuers from offering more forward-looking disclosure. In a report to the President and Congress summarizing the practical impact of the Litigation Reform Act a year after its enactment, the SEC indicated that the "quality and quantity of forward-looking disclosure [had] not significantly improved," despite the formal safe harbor. [159] The SEC identified a number of factors underlying corporate reluctance to increase disclosure, including:

- the lack of judicial guidance as to the sufficiency of the required "meaningful" cautionary language;
- the potential exposure to liability under state law, where comparable safe harbors may not exist;
- fear of liability in SEC enforcement actions, where the federal safe harbor is unavailable;
- a concern that including a complete list of cautionary statements might prove cumbersome or "water down" the company's disclosures; and
- fear of damaged credibility should projections prove wrong. [160]

p. 11-44
p. 11-45

Some commentators have suggested that more recent developments have addressed at least some of the concerns outlined by the SEC. [161] For example, case law has offered some guidance on the definition of "meaningful" disclosures, and the Securities Litigation Uniform Standards Act ("SLUSA") has precluded most state law securities class actions. [162] The SEC staff indicated that it would continue to study the safe harbor and consider whether additional steps might be desirable to encourage more disclosure and improve the quality of the accompanying cautionary language, but it has not released any updated reports to date. [163]

[6] State Securities Laws

In addition to federal securities laws, state "blue sky" laws also prohibit sales of securities by means of material misstatements or omissions. The Uniform Securities Act disclosure provision is patterned after § 12(a)(2) of the Securities Act, proscribing the use of untrue statements and material omissions in connection with an offer or sale of securities. [164] The civil damages remedies in the Uniform Securities Act likewise are modeled on those in the Securities Act. [165] In 1996, Congress expressly reaffirmed its intention that state remedies with respect to securities fraud or misrepresentation should remain intact, despite recent legislation pre-empting state law with respect to registration and related matters. [166] Two years later, however, Congress severely limited the ability of private parties to bring securities fraud class actions in state court by passing SLUSA. [167]

Footnotes

28 *See* §§ 3.02 and 3.04.

29 Liabilities connected with deficient disclosure in private offerings and secondary market transactions are discussed in §§ 11.04 and 11.05[1], respectively.

30 As discussed in Chapter 3, sales of securities to the public require preparation of a prospectus, which is part of a registration statement filed with, and declared effective by, the SEC. The prospectus must contain detailed financial and other information specified by the SEC.

31 *TSC Industries, Inc. v. Northway, Inc.*, 426 U.S. 438, 449 (1976); *Basic Inc. v. Levinson*, 485 U.S. 224, 231–32 (1988) (applying the *TSC Industries* standard of materiality to action brought under § 10(b) of the Exchange Act and Rule 10b-5 thereunder). For a discussion of the "bespeaks caution" doctrine, under which cautionary language in a prospectus may render alleged misstatements or omissions immaterial as a matter of law, *see* § 11.03[1][c]. For a discussion of certain qualitative considerations in assessing materiality, *see* § 11.04[2][a].

32 *See Barnes v. Osofsky*, 373 F.2d 269 (2d Cir. 1967); *see also DeMaria v. Andersen*, 318 F.3d 170, 178 (2d Cir. 2003) (finding § 11 standing for aftermarket purchasers).

33 *See In re Global Crossing, Ltd. Securities Litigation*, 313 F. Supp. 2d 189 (S.D.N.Y. 2003) (plaintiffs in aftermarket purchaser suits pursuant to § 11 were required to plead and to prove that their shares were traceable to the initial distribution, although a mere good faith allegation that the shares were traceable was sufficient); *see also Krim v. Pcorder.com, Inc.*, 402 F.3d 489 (5th Cir. 2005) (rejecting investors' attempt to satisfy the tracing requirement through statistical evidence that demonstrated the high probability (over 99%) that at least some of their stock was traceable to the tainted public offering, and reasoning that this type of statistical standing would expand the scope of potential § 11 claimants beyond the statutory language or intent); *In re FleetBoston Financial Corp. Securities Litigation*, 253 F.R.D. 315, 347–51 (D.N.J. 2008) (following *Global Crossing* and *Krim* and holding that plaintiff has no standing to bring a § 11 claim unless he can satisfy the tracing requirement, and further holding that this showing must be made with respect to a sufficient number of plaintiffs to satisfy the numerosity requirement for class action certification).

34 *See Westinghouse Electric Corp. v. ‘21' International Holdings, Inc.*, 821 F. Supp. 212, 218 (S.D.N.Y. 1993). A statutory exception exists for situations in which the purchaser bought the securities after the issuer made available to its securities holders an earnings statement covering at least 12 months after the effective date of the registration statement. *See* § 11(a) of the Securities Act. Under these circumstances, the plaintiff must show actual reliance on the alleged misstatements or omissions in the registration statement. *See In re Petrobras Securities Litigation*, 116 F. Supp. 3d 368, 386 (S.D.N.Y. 2015). For this reason, it has become customary practice for underwriting agreements to include an issuer commitment to make such an earnings statement generally available. *See* § 3.02[5][b], Note 323. Reasoning based on this exception, and disagreeing with the general statements in *Westinghouse*, the Eleventh Circuit in *APA Excelsior III L.P. v. Premiere Technologies, Inc.*, 476 F.3d 1261, 1271–77 (11th Cir. 2007), held that a plaintiff who entered into a binding agreement to purchase securities before a defective registration statement was issued had to prove that it had in fact relied on the defective registration statement.

35 The defendant may limit a plaintiff's damages by showing that the decline in the value of the security is due to something other than the material misstatement or omission. *See* § 11(e) of the Securities Act.

36 § 11(a) of the Securities Act.

37 § 11(a)(1) of the Securities Act. Generally, the registration statement must be signed by the issuer, its principal executive officer, its principal financial officer, its controller or principal accounting officer and a

majority of its directors. For a foreign issuer, the registration statement also must be signed by the issuer's authorized representative in the United States. *See* § 6(a) of the Securities Act.

38 *See* § 11(a)(2) and (3) of the Securities Act.

39 The term underwriter is broadly defined, but does not include brokers "whose interest is limited to a commission from an underwriter or dealer not in excess of the usual and customary distributors'or sellers'commission." § 2(a)(11) of the Securities Act. An underwriter's liability is generally limited by § 11(e) to the total offering price of securities that it underwrites unless the underwriter receives a benefit that is disproportionate to the amount of securities it underwrites and is not shared by the other underwriters. Unlike their European counterparts, U.S. underwriters will not agree to joint and several liability in public offerings because, in the event of litigation, they could be found liable for the entire amount of the offering and then would have to seek contribution from those who were also at fault. *See* § 3.02[1][a].

Although § 11(e) generally has been interpreted to limit an underwriter's liability in an offering to the securities it has agreed to underwrite in that offering, *see Special Situations Fund, III v. Cocchiola*, Fed. Sec. L. Rep. (CCH) ¶94,459 (D.N.J. Aug. 3, 2007) (holding that, as a matter of law, § 11(e) of the Securities Act limits the liability of an individual underwriter to the securities underwritten by that underwriter, and rejecting the contention that § 11(e) limits "the liability of an underwriter to the shares that particular underwriter personally distributed to the public"), in *In re WorldCom, Inc. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶93,139 n.8 (S.D.N.Y. Mar. 14, 2005), the court speculated *in dictum* that, in light of the broad definition of "underwriter" under the Securities Act, the amount of securities "underwritten" by a lead underwriter in an offering for purposes of § 11(e) "may be greater than the amount formally allocated to that underwriter" and refused to interpret § 11(e) to exempt underwriters from the joint and several liability provisions of the Securities Act.

Issuers and sellers outside the United States sometimes provide a "success fee" that may only be for the benefit of the global coordinators or lead managers of the offering. In the context of a U.S. registered offering, an underwriter's limitation of liability under § 11(e) could be lost unless all the underwriters receive the fee on a *pro rata* basis or non- *pro rata* fees are distributed by the syndicate rather than by the issuer or other seller. *See* § 3.02[4][h].

In addition to the statutory liability to which underwriters may be exposed under § 11 and the other sections discussed in this chapter, they may be subject to fiduciary duty claims by issuers in connection with their role in the pricing of securities. *See* § 3.06[2][b], Note 662.

Plaintiffs in some of the recent MBS litigation have sued rating agencies and argued that they were "underwriters" of the offerings based on the view that the evaluations and ratings were necessary steps in the distribution of the MBS. Courts have rejected the argument and held that rating agencies do not fit the statutory definition of underwriters. *See In re Lehman Brothers Mortgage-Backed Securities Litigation*, 650 F.3d 167 (2d Cir. 2011). The court in *Lehman Brothers* concluded that underwriter liability under § 11 only extends to those who participate in purchasing securities with a view towards distribution, or in offering or selling securities for an issuer in connection with a distribution, but did not extend to other persons who merely provide services that facilitate the participation of others in such undertakings.

40 Liability of such experts (including accountants, engineers and appraisers) extends only for material misstatements and omissions in the report or valuation prepared or certified by them for inclusion in the registration statement (an "expertized" part of the registration statement). § 11(a)(4) of the Securities Act.

There is no question that Congress, in repealing Rule 436(g) under the Securities Act (which provided that a credit rating was not part of a registration statement within the meaning of the Securities Act) intended § 939G of the Dodd-Frank Act to bring rating agencies into the scope of § 11 as "experts." The response of the rating agencies has been to refuse to consent to the use of their ratings in registration statements.

41 *See* § 15 of the Securities Act. Control person liability under § 15 is actually secondary or derivative liability; a claim against a control person must be predicated upon an underlying violation of the securities laws by a primary violator who was under the control of the § 15 defendant.

42 *See* § 15 of the Securities Act and Rule 405 thereunder.

43 Note that this is a statutory defense under § 15 of the Securities Act, not a defense to the primary § 11 violation. *See generally Donohoe v. Consolidated Operating & Products Corp.*, 30 F.3d 907, 911 (7th Cir. 1994) (noting that § 20(a) of the Exchange Act and § 15 of the Securities Act are "parallel, though control person liability is limited [in § 15] to actions under sections 11 and 12 of that Act"). *See infra* Notes 221 and 222 for a discussion of control person liability in the context of § 20(a) of the Exchange Act.

44 *See, e.g.*, *Bresson v. Thomson McKinnon Securities, Inc.*, 641 F. Supp. 338, 342 (S.D.N.Y. 1986); *Anderson v. Clow (In re Stac Electronics Securities Litigation)*, Fed. Sec. L. Rep. (CCH) ¶97,807 (S.D. Cal. Sept. 17, 1993), *withdrawn*, 89 F.3d 1399 (9th Cir. 1996), *cert. denied*, 520 U.S. 1103 (1997).

45 *See* § 11(a) of the Securities Act.

46 *See, e.g.*, *Greenwald v. Integrated Energy, Inc.*, 102 F.R.D. 65, 71 (S.D. Tex. 1984) ("[W]hat investors knew or should have known on a particular date is a matter for proof at trial.").

47 Defendants other than the issuer may also invoke two other statutory defenses, which are rarely used: (i) that the defendant had resigned prior to the effective date and advised the SEC and the issuer that he or she would not be responsible for the registration statement or (ii) that the registration statement became effective without his or her knowledge and he or she so advised the SEC and gave "reasonable public notice." §§ 11(b)(1) and 11(b)(2) of the Securities Act.

48 [Reserved.]

49 § 11(b)(3)(A) of the Securities Act. A similar standard applies for a due diligence defense by an expert with respect to an expertized portion of a registration statement. *See* § 11(b)(3)(B) of the Securities Act.

50 § 11(c) of the Securities Act.

51 *See* § 3.06 for a discussion of the investigation conducted in order to establish the due diligence defense.

52 *See* § 11(b)(3)(C) of the Securities Act. The same showing is necessary with respect to portions of the registration statement that purport to be made on the authority of official government documents or statements of U.S. or foreign government officials. *See* § 11(b)(3)(D) of the Securities Act. In the context of international securities transactions, such information is most commonly included in the registration statements of non-U.S. issuers that are government related or government owned, including in particular, registration statements of foreign governments or political subdivisions thereof registered under Schedule B of the Securities Act. Such information is also sometimes included in foreign private issuer offerings where U.S. investors are believed to require background information about the domestic context in which the issuer functions. *See* § 3.05[1].

53 *See In re WorldCom, Inc. Securities Litigation*, 346 F. Supp. 2d 628, 673 (S.D.N.Y. 2004) (stating that a red flag consists of "[a]ny information that strips a defendant of his confidence in the accuracy of those portions of a registration statement premised on audited financial statements"). In *WorldCom*, the court refused to grant the defendant underwriters summary judgment on claims brought under §§ 11 and 12 of the Securities Act. The underwriters had argued that their reliance defense under § 11 entitled them to summary judgment on claims alleging that WorldCom's audited financial statements contained materially misleading information. In rejecting their argument, the court found that disputed facts suggested red flags existed that should have caused the underwriters to question the reliability of WorldCom's audited financial statements and conduct a further investigation. In particular, the court noted that certain cost ratios reported by WorldCom were significantly lower than equivalent ratios at its two closest competitors and that WorldCom's reported assets may have been doubtful in light of the general telecommunications downturn and asset impairments that its competitors had taken to their core networks during the period under review. *See In re WorldCom, Inc. Securities Litigation*, 346 F. Supp. 2d 628, 678–81 (S.D.N.Y. 2004).

Unaudited financial information is not considered to be expertized, and therefore the defendant must have conducted a reasonable investigation to establish the higher threshold due diligence defense. *See In re WorldCom, Inc. Securities Litigation*, 346 F. Supp. 2d 628 (S.D.N.Y. 2004). In *WorldCom*, the court confirmed that a comfort letter does not expertize unaudited interim financial statements and rejected the underwriters' contention, on a motion for summary judgment, that an underwriter's due diligence investigation of accounting issues is *per se* reasonable when it rests on an auditor's review of unaudited interim financial statements and a SAS 72 comfort letter (at least in the absence of any red flags and in the context of integrated disclosure for shelf registration statements). The court acknowledged, however, that receipt of a comfort letter would constitute "important evidence" at trial of the reasonableness of an underwriter's investigation. *In re WorldCom, Inc. Securities Litigation*, 346 F. Supp. 2d 628, 682–83 (S.D.N.Y. 2004); *see also* Rule 436(c) under the Securities Act. For a further discussion of due diligence in the context of the SEC's integrated disclosure framework and the guidance provided by Rule 176 under the Securities Act, *see infra* Note 58 and accompanying text.

54 *See Escott v. BarChris Construction Corp.*, 283 F. Supp. 643 (S.D.N.Y. 1968).

55 *Escott v. BarChris Construction Corp.*, 283 F. Supp. 643, 697 (S.D.N.Y. 1968).

56 *See Escott v. BarChris Construction Corp.*, 283 F. Supp. 643, 697 (S.D.N.Y. 1968). Other courts have also indicated that an inside director (who has or should have intimate knowledge of the issuer) would have difficulty in establishing a due diligence defense. *See, e.g.*, *In re WorldCom, Inc. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶93,137 (S.D.N.Y. Mar. 21, 2005) (noting more searching inquiry is required by inside directors, in contrast to outside directors, to establish a due diligence defense under § 11 of the Securities Act); *In re Livent, Inc. Noteholders Securities Litigation*, 355 F. Supp. 2d 722, 733 (S.D.N.Y. 2005) ("As inside directors, with intimate knowledge of corporate affairs and the transactions that were accounted for in a materially misleading manner, [defendants] must put forward evidence that the misleading information was incorporated notwithstanding their reasonable efforts to ensure the Registration Statement's accuracy."); *Laven v. Flanagan*, 695 F. Supp. 800, 811–12 (D.N.J. 1988); *Feit v. Leasco Data Processing Equipment Corp.*, 332 F. Supp. 544, 577–78 (E.D.N.Y. 1971). Clearly, no director could establish his or her defense by proof that he or she simply read the registration statement, and reliance on other professionals such as auditors and underwriters will not absolve a director of the director's obligation to conduct his or her own due diligence inquiry. *See In re WorldCom, Inc. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶93,137 (S.D.N.Y. Mar. 21, 2005) (noting that "[t]he SEC has clarified that directors are not excused from performing a meaningful due diligence investigation due to the involvement of professionals, such as underwriters and auditors, in a given securities offering"). Outside directors may be able to rely on the due diligence investigation and the related "negative assurance" letter delivered by issuer's counsel to the underwriters, although in appropriate circumstances, directors may be required to question management more closely and consult the company's auditors and underwriters. *See In re WorldCom, Inc*. *Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶93,137 (S.D.N.Y. Mar. 21, 2005); *see also SEC v. Chancellor Corp.*, SEC Litigation Release No. 19177 (Apr. 11, 2005) (announcing a settlement with a number of defendants, including an outside director who allegedly failed in his responsibility to address fraud at the Chancellor Corporation by ignoring clear warning signs of ongoing improprieties and failing to ensure the accuracy of the company's public filings).

57 *Escott v. BarChris Construction Corp.*, 283 F. Supp. 643, 685 (S.D.N.Y. 1968).

58 Rule 176 was promulgated to address due diligence in the context of a shelf registration, *see* § 3.02[6], but it can be analogized to other circumstances in which a reasonable investigation is required. The introduction of the integrated disclosure framework and shelf registration greatly accelerated the timetable on which securities offerings could be completed, increasing the pressure on underwriters to complete their diligence on issuers within a compressed timeframe. Some had asked the SEC to create a diligence safe harbor to alleviate concerns over the ability of underwriters to conduct a reasonable investigation under these conditions. In proposing Rule 176, however, the SEC declined to create a safe harbor and made clear its view that the new disclosure framework had not substantively altered the diligence obligations of underwriters. *See* SEC Release No. 33-6335 (Aug. 6, 1981); *see also In re WorldCom, Inc. Securities Litigation*, 346 F. Supp. 2d 628, 685 (S.D.N.Y. 2004) (stating that as a result of the introduction of the integrated disclosure framework and shelf registration "[t]he processes through which and the timing in which due diligence is performed have changed, but the ultimate test of reasonable conduct in the specific circumstances of an offering remains unchanged").

59 An advisory committee appointed by the SEC to study various issues arising under the Securities Act and its rules noted the limitations of Rule 176 in providing meaningful guidance regarding the respective due

diligence responsibilities of underwriters, outside directors and other "monitors," and recommended additional elaboration upon the factors courts may consider as indicia of "reasonable investigation" and/or "reasonable care." SEC, REPORT OF THE ADVISORY COMMITTEE ON THE CAPITAL FORMATION AND REGULATORY PROCESSES, Appendix B, at 95–100 (July 24, 1996). The SEC proposed in its so-called Aircraft Carrier Release, which has since been withdrawn, an expansion of Rule 176 that would have addressed the "reasonableness" standards under §§ 12(a)(2) and 11 for underwriters' due diligence investigation when conducting an expedited offering. SEC Release No. 33-7606 (Nov. 3, 1998), *as amended*, SEC Release No. 33-7606A (Nov. 13, 1998). In 1992, a report prepared by a task force of the American Bar Association recommended changes to Rule 176 on the ground that the listed factors were not sufficient to protect underwriters. *See Report of Task Force on Sellers' Due Diligence and Similar Defenses Under the Federal Securities Laws*, as submitted to the ABA, Sec. of Bus. L., Comm. on Federal Regulation of Securities (July 10, 1992), which is discussed in § 3.02[6].

60 *See also* § 11.03[5] discussing certain safe harbors for forward-looking statements principally under the Private Securities Litigation Reform Act of 1995, Pub. L. No. 104-67, 109 Stat. 737 (the "Litigation Reform Act").

68 *Tongue v. Sanofi*, 816 F.3d 199 (2d Cir. 2016).

69 *Tongue v. Sanofi*, 816 F.3d 199, 211–13 (2d Cir. 2016).

70 *Tongue v. Sanofi*, 816 F.3d 199, 212 (2d Cir. 2016).

71 *See* § 11.03[5] for discussion of the qualified safe harbor for forward-looking statements enacted as part of the Securities Litigation Reform Act.

72 *See In re Amdocs Ltd. Securities Litigation*, 390 F.3d 542 (8th Cir. 2004) (affirming dismissal of plaintiffs' complaint, holding that the "bespeaks caution" doctrine rendered Amdoc's representations about its customer demand immaterial as a matter of law because of the accompanying warnings about market erosion); *see also In re Worlds of Wonder*, 814 F. Supp. 850, 866 (N.D. Cal. 1993) (noting, in context of § 10(b) of the Exchange Act, that adequate cautionary language will negate an inference of *scienter*); *Halperin v. eBanker USA.COM, Inc.*, 295 F.3d 352, 357–59 (2d Cir. 2002) (holding statements in an offering memorandum as to the issuer "intend[ing] to endeavor" to register securities were rendered not misleading as a matter of law by the numerous cautionary statements that the securities were subject to restrictions and that registration could not be assured). By contrast, in *Hunt v. Alliance North American Government Income Trust, Inc.*, 159 F.3d 723, 724–25 (2d Cir. 1998), the Second Circuit held that the prospectus's cautionary language as to the fund manager's intention to use hedging techniques did not provide an affirmative defense to fraudulent misrepresentation claims as a matter of law because the lack of liquidity made it impossible to use the hedging techniques. *See also Olkey v. Hyperion 1999 Term Trust, Inc.*, 98 F.3d 2, 5 (2d Cir. 1996), *cert. denied*, 520 U.S. 1264 (1997); *Gasner v. Board of Supervisors*, 103 F.3d 351, 358 (4th Cir. 1996); *In re Westinghouse Securities Litigation*, 90 F.3d 696, 707 (3d Cir. 1996); *Anderson v. Clow (In re Stac Electronics Securities Litigation)*, 89 F.3d 1399, 1408 (9th Cir. 1996), *cert. denied*, 520 U.S. 1103 (1997); *Saltzberg v. TM Sterling/Austin Associates, Ltd.*, 45 F.3d 399 (11th Cir. 1995); *cf. Livid Holdings v. Salomon Smith Barney*, 403 F.3d 1050 (9th Cir. 2005) (declining to apply the bespeaks caution doctrine to alleged misrepresentations of historical fact in a notice statement to a potential investor).

80 In a recent decision interpreting the disclosure obligations imposed by Item 303 of Regulation S-K, the Second Circuit has held that "Item 303 requires the registrant to disclose only those trends, events, or uncertainties that it actually knows of when it files the relevant report with the SEC" and "[i]t is not enough that it should have known of the existing trend, event, or uncertainty." *Indiana Public Retirement System v. SAIC, Inc.*, 818 F.3d 85, 95 (2d Cir. 2016).

81 *In re WorldCom, Inc. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶92,857 (S.D.N.Y. June 28, 2004).

82 *In re WorldCom, Inc. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶92,857 (S.D.N.Y. June 28, 2004).

83 *See, e.g.*, *Police Retirement System of St. Louis v. Intuitive Surgical, Inc.*, 759 F.3d 1051, 1060 (9th Cir. 2014) ("Statements of mere corporate puffery, vague statements of optimism like ‘good,’ ‘well-regarded,’ or other feel good monikers, are not actionable because professional investors, and most amateur investors as well, know how to devalue the optimism of corporate executives."); *Indiana State District Council of Laborers & Hod Carriers Pension & Welfare Fund v. Omnicare, Inc.*, 583 F.3d 935, 944 (6th Cir. 2009) ("Courts have consistently found immaterial a certain kind of rosy affirmation commonly heard from corporate managers and numbingly familiar to the marketplace—loosely optimistic statements that are so vague, so lacking in specificity, or so clearly constituting the opinions of the speaker, that no reasonable investor could find them important.").

84 *Indiana Public Retirement System v. SAIC, Inc.*, 818 F.3d 85, 97–98 (2d Cir. 2016); *but see In re Goldman Sachs Group, Inc. Securities Litigation*, 868 F. Supp. 2d 261, 279–80 (S.D.N.Y. 2012) (declining to dismiss claims as puffery where issuer allegedly made "repeated assertions that it complies with the letter and spirit of the law, values its reputation, and is able to address ‘potential’ conflicts of interest" because "they involve ‘misrepresentations’ of existing facts").

85 *See* § 11(e) of the Securities Act. Under no circumstances can the plaintiff recover more than the price at which the security was offered to the public. *See* § 11(g) of the Securities Act.

86 *See NECA-IBEW Health & Welfare Fund v. Goldman Sachs & Co.*, 693 F.3d 145 (2d Cir. 2012). In *NECA-IBEW*, the court further held that a plaintiff could recover the loss in value of a debt security—in that case, a residential mortgage-backed security—under § 11 even where no scheduled coupon payments on the security had been missed.

87 *See* § 11(e) of the Securities Act; *see, e.g.*, *Collins v. Signetics Corp.*, 605 F.2d 110, 114 (3d Cir. 1979); *Feit v. Leasco Data Processing Equipment Corp.*, 332 F. Supp. 544, 586 (E.D.N.Y. 1971).

88 *See* § 11(f) of the Securities Act.

89 *See* § 11(e) of the Securities Act; *supra* Note 39. However, in *In re WorldCom, Inc. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶93,139 (S.D.N.Y. Mar. 14, 2005), the court rejected the objection of JP Morgan Securities Inc. (an underwriter defendant) to a settlement agreement between the lead plaintiff and the other defendants that would both bar any post-settlement contribution from settling defendants and also included a judgment reduction formula that could require a nonsettling defendant to pay more than the value of its allocated share of securities after judgment was entered after trial. The court found the judgment reduction formula was permissible, particularly in light of the fact that the Litigation Reform Act replaced joint and several liability with proportionate liability in the case of § 11 violations by outside directors, but did not do so for underwriters. *See infra* Note 94. According to the court, adoption of JP Morgan Securities Inc.’s judgment reduction proposal to limit the liability of underwriters to merely a proportionate share of underwriter liability would serve to reduce the plaintiff's rightful recovery. Further, the court held that the bar on subsequent

contribution claims, despite the existence of contractual provisions enabling contribution, provided an important incentive for defendants to settle.

90 *See* § 11.03[1][e][ii].

91 *See* § 11(f) of the Securities Act; § 11.03[1][e].

92 *See, e.g.*, *In re Continental Airlines*, 203 F.3d 203, 215–16 (3d Cir. 2000); *First Golden Bancorp. v. Weiszmann*, 942 F.2d 726, 728 (10th Cir. 1991); *Riverhead Savings Bank v. National Mortgage Equity Corp.*, 893 F.2d 1109, 1116 (9th Cir. 1990); *Baker, Watts & Co. v. Miles & Stockbridge*, 876 F.2d 1101, 1104–06 (4th Cir. 1989).

93 Item 512(h) of Regulation S-K under the Securities Act; *see* § 3.02[4][c].

94 *See, e.g.*, *Lucas v. Hackett Associates, Inc.*, 18 F. Supp. 2d 531, 535–36 (E.D. Pa. 1998); *Eichenholtz v. Brennan*, 52 F.3d 478, 483 (3d Cir. 1995); *In re Professional Financial Management, Ltd.*, 683 F. Supp. 1283, 1285 (D. Minn. 1988 *); Kilmartin v. H.C. Wainwright & Co.*, 637 F. Supp. 938, 940 (D. Mass. 1986); *Laventhol, Krekstein, Horwath & Horwath v. Horwitch*, 637 F.2d 672, 676 (9th Cir. 1980), *cert. denied*, 452 U.S. 963 (1981); *Odette v. Shearson, Hammill & Co.*, 394 F. Supp. 946 (S.D.N.Y. 1975); *see also In re Healthsouth Corp. Securities Litigation*, 572 F.3d 854, 860 (11th Cir. 2009) (Litigation Reform Act case recognizing holdings of *Eichenholtz* and related cases).

95 Such indemnification is commonplace in underwriting agreements involving registered offerings. The contractual indemnifications generally also run to officers, directors and controlling persons of the underwriters because of the potential liability of these parties under the Securities Act.

96 The practice with respect to such indemnification varies. Where securityholders are affiliates of the issuer, and thus subject to the registration requirements of the Securities Act, they frequently negotiate a contractual right to cause the issuer to register their securities for sale (so-called "registration rights"). Such registration rights agreements frequently require the related underwriting agreement to include the issuer's indemnification not only of the underwriters, but also of the selling securityholders, against liabilities arising out of material misstatements or omissions in the registration statement.

97 *See Globus v. Law Research Services, Inc.*, 418 F.2d 1276, 1288 (2d Cir. 1969), *cert. denied*, 397 U.S. 913 (1970) (underwriter not entitled to indemnification where it had actual knowledge of misstatement in registration statement and showed "wanton indifference" to its obligations); *see also Nelson v. Quimby Island Reclamation District Facilities Corp.*, 491 F. Supp. 1364, 1381 (N.D. Cal. 1980) (indemnification against actual wrongdoing, as contrasted with negligent conduct, is considered void). In some foreign jurisdictions, such as England and Germany, indemnification agreements are enforceable. Thus, in drafting cross-border agreements, some parties choose to have their contracts governed by the laws of these countries. U.S. courts, however, still may be reluctant to enforce indemnification provisions in the context of U.S. public offerings. The agreement, therefore, should contain a forum selection clause providing for enforcement of the agreement in another jurisdiction.

98 *Compare Eichenholtz v. Brennan*, 52 F.3d 478, 484 (3d Cir. 1995), *In re Olympia Brewing Co. Securities Litigation*, 674 F. Supp. 597, 610–14 (N.D. Ill. 1987), *Stratton Group, Ltd. v. Sprayregen*, 466 F. Supp. 1180, 1185 n.4 (S.D.N.Y. 1979), *Odette v. Shearson, Hammill & Co., Inc.*, 394 F. Supp. 946, 956–57 (S.D.N.Y. 1975), and *Columbia Savings & Loan Association v. American International Group, Inc.*, Fed. Sec. L. Rep. (CCH) ¶98,179 (S.D.N.Y. Mar. 18, 1994) (no indemnification) *with Adalman v. Baker, Watts & Co.*, 599 F. Supp. 752, 754 (D. Md. 1984), *McLean v. Alexander*, 449 F. Supp. 1251, 1266 n.49 (D. Del. 1978), *rev'd on other grounds*, 599 F.2d 1190 (3d Cir. 1979), and *In re Motel 6 Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶90,927 (S.D.N.Y. Mar. 28, 2000) (indemnification might be permitted under certain circumstances).

99 This section is the only provision in the Securities Act that expressly provides for contribution. Contribution rights are expressly provided under §§ 9(e) (manipulation of security prices) and 18(b) (liability for misleading statements in filings) of the Exchange Act and have been judicially implied in connection with liability under other provisions of the securities laws, notably Rule 10b-5 under the Exchange Act. *See Musick, Peeler & Garrett v. Employers Insurance of Wausau*, 508 U.S. 286, 294–98 (1993).

100 § 11(f) of the Securities Act. The Litigation Reform Act, Pub. L. No. 104-67, § 201(a), 109 Stat. 737 (1995),

added § 21D(g)(2) of the Securities Act.

101 *See* Item 511 of Regulation S-K under the Securities Act. The SEC has taken the position that insurance policies' indemnification of officers and directors that includes coverage for disgorgement and other fines is against public policy, and since April 2003, the SEC has included language in its settlement agreements with individuals who were alleged to have committed fraud to prevent those individuals from using insurance or indemnification policies to pay civil fines. Deborah Solomon, *SEC Considers Stronger Sanctions—Companies Urge Panel Not to Let Holder Nominees Be in Official Proxy Data*, WALL ST. J., June 16, 2003. In 2004, the SEC levied a $25 million fine against Lucent Technologies for failure to cooperate with a fraud investigation, the then-largest penalty ever imposed against a corporation for failure to cooperate. Ken Belson, *Lucent Fined $25 Million by SEC in Fraud Case*, N.Y. TIMES, May 18, 2004. The noncooperation penalty was levied in part because after reaching a settlement agreement in connection with the fraud investigation, Lucent expanded the scope of employees that could be indemnified against the SEC enforcement action. The SEC stated that such conduct is contrary to the public interest. *SEC v. Lucent Technologies Inc.*, SEC Litigation Release No. 18715 (May 17, 2004). Although not an SEC enforcement proceeding, members of the WorldCom board of directors who agreed to settle class-action claims arising out of the WorldCom accounting scandal were required, as a condition of the settlement, to pay a significant portion of the settlement amount personally. They were prevented from relying exclusively on their directors' liability insurance. *See In re WorldCom, Inc. Securities Litigation*, Master File No. 02 Civ. 3288 (S.D.N.Y. Mar. 21, 2005) (order granting preliminary approval of settlement with 12 WorldCom directors). Directors settling class-action claims arising out of the Enron litigation also agreed to pay a portion of their agreed settlement amount personally. *See In re Enron Corp. Securities Litigation*, Civil Action No. H-01-3624 (Feb. 7, 2005) (order granting preliminary approval of settlement with outside directors of Enron). These developments indicate that a greater effort is being made to hold directors personally responsible for financial irregularities at the companies they oversee.

102 § 13 of the Securities Act.

103 *See In re Adelphia Communications Corp. Securities & Derivative Litigation*, No. 03 MD 1529 (LMM), 2005 WL 1278544, at *18 (S.D.N.Y. May 31, 2005); *Westinghouse Electric Corp. v. '21' International Holdings, Inc.*, 821 F. Supp. 212, 222 (S.D.N.Y. 1993); *but see Pension Trust Fund for Operating Engineers v. Mortgage Asset Securitization Transactions, Inc.*, 730 F.3d 263 (3d Cir. 2013) (holding that a plaintiff need not plead compliance with § 11's statute of limitations because it is an affirmative defense).

104 *See In re Adelphia Communications Corp. Securities & Derivative Litigation*, No. 03 MD 1529 (LMM), 2005 WL 1278544, at *18 (S.D.N.Y. May 31, 2005); *In re Integrated Resources Real Estate Ltd. Partnerships Securities Litigation*, 815 F. Supp. 620 (S.D.N.Y. 1993).

105 *See Chapman v. ChoiceCare Long Island Term Disability Plan*, 288 F.3d 506, 512 (2d Cir. 2002); *Wasco Products, Inc. v. Southwall Technologies, Inc.*, 435 F.3d 989, 991 (9th Cir. 2006).

106 *See Lampf, Pleva, Lifkind, Prupis & Petigrow v. Gilbertson*, 501 U.S. 350 (1991). In *Lampf*, the Court held that "[t]he 1-year period, by its terms, begins after discovery of the facts constituting the violation, making tolling unnecessary [and] [t]he 3-year limit is a period of repose inconsistent with tolling." Courts have generally followed *Lampf* in declining to apply equitable tolling doctrines to securities law claims. *See, e.g.*, *Whirlpool Financial Corp. v. GN Holdings, Inc.*, 67 F.3d 605, 610 n.3 (7th Cir. 1995) (rejecting plaintiff's argument that the statute of limitations for its claims under § 12(a)(2) should be equitably tolled because "the plain import of the Supreme Court's decision in [*Lampf*] is that 'when knowledge or notice is required to start the statute of limitations running, there is no room for equitable tolling'"); *Sterlin v. Biomune Systems*, 154 F.3d 1191 (10th Cir. 1998) (discussing *Lampf* and acknowledging its holding that equitable tolling does not apply to the limitations periods contained in the securities laws); *Gardner v. Investors Diversified Capital, Inc.*, 805 F. Supp. 874 (D. Colo. 1992) (holding that equitable tolling of statute of limitations is inapplicable to claims under § 12(a)(1)); *Arioli v. Prudential-Bache Securities, Inc.*, 792 F. Supp. 1050 (E.D. Mich. 1992) (holding that doctrine of equitable tolling does not apply to claims under §§ 12(a)(2) and 15 of the Securities Act); *Del Sontro v. Cendant Corp., Inc.*, 223 F. Supp. 2d 563, 573 (D.N.J. 2002) ("It is clearly established that equitable tolling is inapplicable to the one-and-three year limitation

periods of securities fraud actions."). Some post- *Lampf* courts, however, have continued to suggest that equitable tolling may be available with respect to the statute of limitations periods applicable to claims under the Securities Act. *See, e.g.*, *Dodds v. Cigna Securities, Inc.*, 12 F.3d 346, 350, 352 (2d Cir. 1993) (stating, in an action asserting claims under both § 12(a)(2) of the Securities Act and § 10(b) of the Exchange Act, that "[i]f the defendants actively prevented [plaintiff] from discovering the basis of her claim, then the statute would be tolled for the period of concealment," but that the doctrine of "[e]quitable tolling will stay the running of the statute of limitations only so long as the plaintiff has 'exercised reasonable care and diligence in seeking to learn the facts which would disclose fraud'") (citation omitted). The case law is also clear that equitable tolling is *not* available with respect to the statute of repose period. *See Ma v. Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 597 F.3d 84, 88 n.4 (2d Cir. 2010) (holding that in contrast to statutes of limitations, which are "often subject to tolling principles," "a statute of repose *extinguishes* a plaintiff's cause of action after the passage of a fixed period of time, usually measured from one of the defendant's acts"); *Caviness v. Derand Resources Corp.*, 983 F.2d 1295, 1301 (4th Cir. 1993) (holding that to apply "tolling principles to extend the three-year period of § 13 would require [a court] to ignore the plain meaning of the language that says 'in no event' and defeat the very purpose of a statute of repose"). Courts have disagreed, however, concerning whether class action tolling applies to the statute of repose. *Compare Police & Fire Retirement System of Detroit v. IndyMac MBS, Inc.*, 721 F.3d 95, 101 (2d Cir. 2013) (holding class action tolling does not apply to the three-year statute of repose) *and Stein v. Regions Morgan Keegan Select High Income Fund, Inc.*, 821 F.3d 780 (6th Cir. 2016) *with Joseph v. Wiles*, 223 F.3d 1155, 1168 (10th Cir. 2000) (holding class action tolling is a form of legal tolling that can apply to the statute of repose).

107 *P. Stolz Family Partnership L.P. v. Daum*, 355 F.3d 92, 99 (2d Cir. 2004).

108 *P. Stolz Family Partnership L.P. v. Daum*, 355 F.3d 92, 103–04 (2d Cir. 2004); *see also* Rule 430B(f)(1), (2), (4) under the Securities Act (providing effective dates, for purposes of § 11 liability, for shelf registration statements for offerings made pursuant to a prospectus supplement).

109 Section 12(a)(2) establishes a cause of action (other than in offerings exempt from registration under §§ 3(a)(2) or 3(a)(14)) against sellers who make material misstatements or omissions "by means of a prospectus." Interpreting this language in light of the Securities Act's other references to prospectuses, the Supreme Court in *Gustafson v. Alloyd Co., Inc.*, held that § 12(a)(2) only applies to public offerings of securities by an issuer or controlling shareholder, and not to private offerings. *See Gustafson v. Alloyd Co., Inc.*, 513 U.S. 561 (1995); *see also* § 11.04[1].

110 By contrast with § 11, under which investors' rights turn on when information is deemed part of the relevant registration statement and the time of the registration statement's effectiveness, liability for § 12(a)(2) purposes is based on the information conveyed to investors at or prior to the time of sale (*i.e.*, at or prior to the time the investment decision is made). As a result, even if information is deemed part of the registration statement as of the time of sale and thus subject to § 11, the information will not be taken into account for § 12(a)(2) purposes unless it was conveyed to investors at or prior to the time of sale. *See* Rule 159 under the Securities Act. Conversely, information conveyed to investors at or prior to the time of sale that is not deemed a part of the registration statement at the time of its effectiveness will not be subject to § 11. *See* SEC Release No. 33-8591 (July 19, 2005).

As part of the Securities Offering Reforms, the SEC clarified that information contained in a prospectus supplement is deemed part of the registration statement to which it relates. Outside the shelf registration statement context, pricing information filed under Rule 430A under the Securities Act is deemed part of the relevant registration statement as of the time it was declared effective. For shelf takedowns, the date on which the information is deemed included in the relevant registration statement is the earlier of the date the supplement is first used (*i.e.*, first made available to an underwriter or any prospective purchaser) and the date and time of the first contract of sale of securities to which the supplement relates. In all other cases, the supplement is deemed included in the registration statement, pursuant to Rule 430B or Rule 430C under the Securities Act, as applicable, on the day it is first used.

For purposes of § 11 liability in a shelf takedown, the date on which a prospectus supplement is deemed part of the registration statement constitutes a new effective date for issuers and underwriters. Unless a registration statement is updated by a prospectus supplement filed to provide updating information pursuant to § 10(a)(3) of the Securities Act or by a prospectus supplement reflecting fundamental changes in the information set forth in the registration statement, a prospectus supplement will not create a new effective date for directors or signing officers of the issuer. *See Federal Housing Finance Agency v. HSBC North America Holdings Inc.*, 987 F. Supp. 2d 369, 375, at *4 (S.D.N.Y. 2013) (holding that "a prospectus supplement containing information representing a fundamental change in the information provided in the registration statement creates § 11 liability for directors based on that new information"). Similarly, the effective date for auditors and other experts will not change with the filing of a prospectus supplement, unless it contains new audited financial statements, a new report or opinion or other information requiring the filing of a consent under § 7 of the Securities Act.

111 The term "prospectus" is defined in § 2(a)(10) of the Securities Act to include virtually every written offer for the purchase of a security, and therefore any offering document used in connection with a public offering may give rise to § 12(a)(2) liability. It is unclear whether § 12(a)(2) liability may arise in connection with public offerings outside the United States exempt from Securities Act registration under Regulation S. *Cf. Sloane Overseas Fund, Ltd. v. Sapiens International Corp.*, 941 F. Supp. 1369, 1376 (S.D.N.Y. 1996); *see also* § 11.10[3] & Note 677 for a discussion of the extraterritorial scope of the Securities Act.

112 § 12(a)(2) of the Securities Act; *cf*. § 11 of the Securities Act, which creates liability for omissions without the limiting language concerning the applicable circumstances.

113 *See Gustafson v. Alloyd Co., Inc.*, 513 U.S. 561 (1995).

114 Where the alleged misstatement or omission is made prior to distribution of the final prospectus or offering document (whether orally or in preliminary offering documents), the fact that the errors were corrected in the final documents will not be sufficient to defeat liability if the defendants made no special efforts to bring the corrected information to the purchaser's attention before the sale. Courts have repeatedly stated that purchasers are not charged with constructive knowledge in a § 12(a)(2) claim, and must only show that they had no actual knowledge of the misstatements or omissions. *See MidAmerica Federal Savings & Loan Association v. Shearson/American Express, Inc.*, 886 F.2d 1249, 1256 (10th Cir. 1989) (broker-dealer liable despite distribution of corrected prospectus, where plaintiff did not actually read prospectus until after sale); *see also Casella v. Webb*, 883 F.2d 805, 809 (9th Cir. 1989) ("[C]onstructive knowledge cannot bar a purchaser's recovery under section 12[(a)](2)" where plaintiffs relied on oral representations of the seller that were contrary to statements contained in the offering memorandum, which the plaintiffs had not read and of which the plaintiffs did not have actual knowledge.).

115 *See Sanders v. John Nuveen & Co.*, 619 F.2d 1222, 1227 n.8 (7th Cir. 1980), *cert. denied*, 450 U.S. 1005 (1981). The court noted that more proof might be required if the disclosure violation was oral and made to an individual purchaser, because spoken words "lack continuing vitality and are unlikely to affect the general market price of a security."

116 This definition of "seller" derives from *Pinter v. Dahl*, 486 U.S. 622, 647 (1988), which construed that term under § 12(a)(1). *See Maher v. Durango Metals, Inc.*, 144 F.3d 1302, 1307 (10th Cir. 1998); *In re NationsMart Corp. Securities Litigation*, 130 F.3d 309, 319 (8th Cir. 1997); *In re Westinghouse Securities Litigation*, 90 F.3d 696, 715–16 (3d Cir. 1996); *Commercial Union Assurance Co. v. Milkin*, 17 F.3d 608, 616 (2d Cir. 1994). In *In re Deutsche Telekom AG Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶91, 703 (S.D.N.Y. Feb. 20, 2002), a district court found that a selling shareholder in an initial public offering was not a "seller" for purposes of § 12(a)(2) because it neither passed title to the plaintiffs nor solicited the plaintiffs' purchases. *See* § 4.12[5], Note 461.

117 *See, e.g.*, *In re Chaus Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶95,646 (Nov. 20, 1990), *dismissed on other grounds*, 801 F. Supp. 2d 1257 (S.D.N.Y. 1992) (reasoning that such facts, if true, would support a conclusion that the defendants solicited sales, and thus were "sellers").

118 § 15 of the Securities Act; *see* § 11.03[1][b].

119 *See, e.g.*, *Wilson v. Saintine Exploration & Drilling Corp.*, 872 F.2d 1124, 1127 (2d Cir. 1989) (aiding and abetting liability under § 12(a)(2) would be anomalous in light of rejection of such liability under § 12(a)(1) in

Pinter v. Dahl, 486 U.S. 622 (1988)).

120 *See Davis v. Avco Financial Services, Inc.*, 739 F.2d 1057, 1068 (6th Cir. 1984), *cert. denied*, 470 U.S. 1005, *cert. denied*, 472 U.S. 1012 (1985). The court identified five factors relevant to the issue of what care is required: (i) the nature and extent of the seller's participation in the offering, (ii) whether the seller had access to information that would permit examination of the statements made in the offering, (iii) the seller's relative skill in testing such statements, (iv) its financial interest in the transaction and (v) the relationship, if any, between the seller and the purchaser.

121 *See, e.g.*, *Sanders v. John Nuveen & Co.*, 619 F.2d 1222, 1228 (7th Cir. 1980) (defense required underwriter to investigate issuer's books and records and accountants' work papers, where such an investigation would have uncovered a fraud by both parties). This result has been criticized by many who argue that the standard of care under § 12(a)(2) was intended to be less demanding than that required by § 11. *See John Nuveen & Co., Inc. v. Sanders*, 450 U.S. 1005, 1009 (1981) (Powell, J., dissenting from denial of *certiorari*); *Report of Task Force on Sellers' Due Diligence and Similar Defenses Under the Federal Securities Laws*, as submitted to the ABA, Sec. of Bus. L., Comm. on Federal Regulation of Securities (July 10, 1992) (urging that *Sanders* be confined to its facts and the courts recognize the "significant distinction between ‘reasonable investigation’ and ‘reasonable care’ that the words of the statute imply" in §§ 11 and 12(a)(2) of the Securities Act, respectively).

122 *See* § 11.03[1][e].

123 The Securities Litigation Reform Act. Most of the provisions of the Litigation Reform Act have been incorporated into the Exchange Act as §§ 21D and 21E and into the Securities Act as §§ 27 and 27A, as well as into various liability provisions of the Exchange Act and the Securities Act.

124 *See* § 12 of the Securities Act.

125 *See* § 13 of the Securities Act; *Gustafson v. Alloyd Co., Inc.*, 513 U.S. 561 (1995).

126 However, the definition of "*bona fide* offering" is not germane to the period of repose for § 12(a)(2) claims, which is simply three years after the sale of the security in question. *See* § 13 of the Securities Act; *Gustafson v. Alloyd Co., Inc.*, 513 U.S. 561 (1995).

127 *See* § 8(b) of the Securities Act. This is largely a theoretical issue in the context of public offerings, because in most cases companies include a "delaying legend" on the cover page of the registration statement that delays the effective date until the SEC declares the registration statement effective.

128 *See* § 8(d) of the Securities Act. The SEC takes the position that it may issue a stop order even if the registrant has abandoned the proposed securities offering and has sought to withdraw the registration statement. *See In re Matter of Advanced Chemical Corp.*, 47 S.E.C. 1012 (Feb. 9, 1984).

129 A plaintiff may pursue simultaneously his or her remedies under Rule 10b-5 under the Exchange Act and §§ 11 and 12(a)(2) of the Securities Act *. See Herman & MacLean v. Huddleston*, 459 U.S. 375, 380–87 (1983).

130 *See* § 4.10[4] for a discussion of the duty to correct or update previous communications. Liability for forward-looking statements, like liability for other statements or omissions concerning an issuer, can attach not only in the context of a registered public offering under §§ 11 and 12(a)(2) of the Securities Act, but also in the context of a private placement or secondary market transaction under § 10(b) of the Exchange Act and Rule 10b-5 thereunder, § 18 of the Exchange Act and § 17(a) of the Securities Act. Forward-looking statements also are subject to liability under state antifraud law. *See* §§ 11.03[6] and 11.04[4].

131 *See* § 4.10[6]. Although Regulation FD does not apply to foreign private issuers, they sometimes comply with it both as a matter of best practice and to reduce the risk that selective disclosure would be challenged as a violation of the insider trading prohibitions under the Exchange Act.

132 *See* §§ 11.03[1][c].

133 A "forward-looking statement" is defined as:

> A statement containing a projection of revenues, income (including income loss), earnings (including earnings loss) per share, capital expenditures, dividends, capital structure or other

financial items;
A statement of the plans and objectives of management for future operations, including plans or objectives relating to the products or services of the issuer;
A statement of future economic performance, including any such statement contained in a discussion and analysis of financial condition by the management or in the results of operations included pursuant to the rules and regulations of the SEC;
Any statement of the assumptions underlying or relating to any statement described in subparagraph (A), (B) or (C);
Any report issued by an outside reviewer retained by an issuer, to the extent that the report assesses a forward-looking statement made by the issuer; or
A statement *containing* a projection or estimate of such other items as may be specified by rule or regulation of the SEC.

See § 27A(i)(1) of the Securities Act and § 21E(i)(1) of the Exchange Act. This definition of forward-looking statement is substantially the same as that set forth in Rule 175(c) under the Securities Act and Rule 3b-6(c) under the Exchange Act. Certain courts have taken an expansive view of what constitutes a forward-looking statement. *See, e.g.*, *Harris v. Ivax Corp.*, 182 F.3d 799 (11th Cir. 1999) (holding that (i) a statement grammatically in the present tense can be forward-looking if its truth or falsity is discernible only after it is made and (ii) a list of statements meant to explain an economic forecast should be treated as entirely forward-looking even if it includes both forward-looking and non-forward-looking (factual) items); *In re Columbia Laboratories, Inc. Securities Litigation*, 144 F. Supp. 2d 1362, 1368 (S.D. Fla. 2001) (Present-tense statements reflecting optimism and expectations about a future event are forward-looking statements under the Litigation Reform Act because they are "'assumptions underlying or relating to' the 'plans and objectives of management.'") (citations omitted); *In re Splash Technology Holdings, Inc. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶91,250 (N.D. Cal. Sept. 29, 2000) ("A present-tense statement can qualify as a forward-looking statement as long as the truth or falsity of the statement cannot be discerned until some point in time after the statement is made."); *see In re SeaChange International, Inc. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶92,682 (D. Mass. Feb. 6, 2004) (holding that statements were "clearly forward-looking in nature and therefore [fell] squarely within the safe harbor provisions of the [Litigation Reform Act]" despite a news release issued two days after the offering revealing an award to a competitor of a material contract and a material decline in segment sales of a key product; and despite issuer knowledge of meritorious patent infringement suit against key product revealed one month after the offering). *See also Iowa Public Employees' Retirement System v. MF Global, Ltd.*, 620 F.3d 137 (2d Cir. 2010), discussed in § 11.03[1][c], for an analysis of the distinction between forward-looking statements and statements of historical fact.

134 In practice, because specifically identifying each forward-looking statement is impractical, issuers generally include in their disclosure documents a disclaimer (i) stating that such documents contain forward-looking statements and (ii) containing a brief description of what constitutes a forward-looking statement.

135 Issuers have generally sought to meet the "accompanied by" requirement by including in their disclosure documents a risk factors section containing specific cautionary language and by including cross-references to such section in other parts of the same document. While there has been little guidance from the courts, commentators on the Litigation Reform Act generally agree that the use of a cross-reference in one document containing forward-looking statements to another document containing cautionary language is not sufficient to meet the "accompanied by" requirement.

136 Materiality in this context refers to the difference between predicted results and the actual results (*i.e.*, "differ materially"), the materiality of the falsity (*i.e.*, "materially false or misleading") and the materiality of the forward-looking statement itself. *See Rosenzweig v. Azurix Corp.*, 332 F.3d 854 (5th Cir. 2003); *Rombach v. Chang*, 355 F.3d 164 (2d Cir. 2004).

137 § 27A(c)(1) of the Securities Act and § 21E(c)(1) of the Exchange Act; *see, e.g.*, *Slayton v. American Express Co.*, 604 F.3d 758, 773–77 (2d Cir. 2010) (noting that this inquiry is "case-specific" and applying doctrine to facts of the case to affirm dismissal of complaint).

138 At least four circuit courts have held that dismissal under the first prong may be appropriate without any inquiry into the defendant's knowledge of the risks associated with the forward-looking statements—even where the defendant had actual knowledge of the statements' falsity. *See Edward J. Goodman Life Income Trust v. Jabil Circuit, Inc.*, 594 F.3d 783, 795 (11th Cir. 2010) (holding that "an allegation of actual knowledge of falsity will not deprive a defendant of protection by the statutory safe harbor if his forward-looking statements are accompanied by meaningful cautionary language"); *Employers Teamsters Local Nos. 175 and 505 Pension Fund Trust v. Clorox*, 353 F.3d 1125, 1133 (9th Cir. 2004); *Southland Securities Corp. v. INSpire Insurance Solutions Inc.*, 365 F.3d 353 (5th Cir. 2004); *Miller v. Champion Enterprises, Inc.*, 364 F.3d 660 (6th Cir. 2003); *Harris v. Ivax Corp.*, 182 F.3d 799, 803 (11th Cir. 1999) ("[I]f a statement is accompanied by 'meaningful cautionary language,' the defendants' state of mind is irrelevant."); *see also Slayton v. American Express Co.*, 604 F.3d 758, 771–72 (2d Cir. 2010).

139 *See In re Nash Finch Co. Securities Litigation*, 502 F. Supp. 2d 861 (D. Minn. 2007) ("[C]autionary language cannot be 'meaningful' when defendants know that the potential risks they have identified in fact already occurred, and the positive statements they are making are false."); *Limantour v. Cray Inc.*, 432 F. Supp. 2d 1129, 1147 (W.D. Wash. 2006) ("However, a forward looking statement may be actionable if it was made with actual knowledge that the statement was false or misleading."); *Schaffer v. Evolving Systems, Inc.*, 29 F. Supp. 2d 1213, 1224 (D. Colo. 1998) (holding that press release could not benefit from safe harbor even though it was accompanied by adequate cautionary language because "the safe harbor provision provides no refuge for [d]efendants who make statements with 'actual knowledge' of their falsity"). This position, however, appears inconsistent with the statute, because it treats the two prongs of the safe harbor as if they were conjunctive. The Committee Report accompanying the Litigation Reform Act clearly contemplates that the two prongs create "alternative analys[e]s." H.R. Conf. Rep. 104-369, at 44 (1995). On its face, the first prong of the Litigation Reform Act allows issuers and their officers, directors, employees and underwriters to obtain summary judgment in private civil suits based on false projections because the factual question of whether the projections were made with actual knowledge of their falsity is not determinative of liability. *See* H.R. Conf. Rep. No. 104-369, at 44 (1995), *reprinted in* 1995 U.S.C.C.A.N. 730 (stating that for the purposes of the first prong of the safe harbor "[c]ourts should not examine the state of mind of the person making the statement"); *see, e.g.*, *In re Splash Technology Holdings, Inc. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶91,250 (N.D. Cal. Sept. 29, 2000).

140 *See, e.g.*, *Slayton v. American Express Co.*, 604 F.3d 758, 772 (2d Cir. 2010) (recognizing Congress instructed courts not to look at intent for the first prong, but noting ambiguity as to how to determine which statements convey substantive information); *Lormand v. U.S. Unwired, Inc.*, 565 F.3d 228, 246–47 (5th Cir. 2009) (cautionary language is not meaningful if it is only "very vague and general" and did not "disclose the specific risks and their magnitude"); *Institutional Investors Group v. Avaya, Inc.*, 564 F.3d 242, 256 (3d Cir. 2009) (affirming dismissal of certain allegations protected by the safe harbor, after noting that cautionary language must be "extensive and specific" and "substantive and tailored to the specific future projections, estimates or opinions in the prospectus which the plaintiffs challenge" (citations omitted)).

141 The "bespeaks caution" doctrine is "shorthand for the well-established principle that a statement or omission must be considered in context, so that accompanying statements may render it immaterial as a matter of law." *In re Donald J. Trump Casino Securities Litigation*, 7 F.3d 357, 364 (3d Cir. 1993), *cert. denied*, 510 U.S. 1178 (1994); *see* § 11.03[1][c]. In order to qualify cautionary statements as "meaningful" under the bespeaks caution doctrine, issuers must disclose any assumptions on which their projections are based and make the statements specific, prominent, easy to find and specifically tailored to the issuer's business—general boilerplate warnings not specifically tailored to an issuer's business will not suffice. *See, e.g., Slayton v. American Express Co.*, 604 F.3d 758, 772 (2d Cir. 2010); *Institutional Investors Group v. Avaya, Inc.*, 564 F.3d 242, 256 (3d Cir. 2009); *Southland Securities Corp. v. INSpire Ins. Solutions, Inc.*, 365 F.3d 353, 372 (5th Cir. 2004). *See* § 11.03[1][c].

142 H.R. Conf. Rep. No. 104-369, at 43–46 (1995), *reprinted in* 1995 U.S.C.C.A.N. 730. Nevertheless, "[f]ailure to include the particular factor that ultimately causes the forward-looking statement not to come true will not mean that the statement is not protected by the safe harbor." H.R. Conf. Rep. No. 104-369, at 44 *; see*

Ehlert v. Singer, 245 F.3d 1313 (11th Cir. 2001); *In re XM Satellite Radio Holdings Securities Litigation*, 479 F. Supp. 2d 165 (D.C. Cir. 2007) (calling the "bespeaks caution" doctrine the "judicially-created counterpart" of the statutory safe harbor).

Although some courts have stated that the safe harbor provision codified the "bespeaks caution" doctrine and that the two doctrines are essentially coextensive, the Congressional Record belies this conclusion. *Compare In re Dura Pharmaceuticals, Inc. Securities Litigation*, 452 F. Supp. 2d 1005, 1033 (S.D. Cal. 2006) ("The Ninth Circuit has held the [Litigation Reform Act]'s safe harbor provision codified the judicially-created bespeaks caution doctrine.") (citing *Employers Teamsters Local Nos. 175 & 505 Pension Trust Fund v. Clorox Co.*, 353 F.3d 1125, 1132 (9th Cir. 2004)) *with* H.R. Conf. Rep. No. 104-369, at 43–46 (1995), *reprinted in* 1995 U.S.C.C.A.N. 730 ("The Conference Committee does not intend for the safe harbor provisions to replace the judicial 'bespeaks caution' doctrine or to foreclose further development of that doctrine by the courts."). *See also Payne v. DeLuca*, 433 F. Supp. 2d 547, 561 (W.D. Pa. 2006) ("Enactment of the [Litigation Reform Act's] safe harbor provision did not do away with the judicially created 'bespeaks caution' doctrine.").

143 *Asher v. Baxter*, 377 F.3d 727 (7th Cir. 2004).

144 *Asher v. Baxter*, 377 F.3d 727, 734 (7th Cir. 2004).

145 *Asher v. Baxter*, 377 F.3d 727, 734 (7th Cir. 2004).

146 *Asher* has been followed by courts in the Seventh Circuit as well as in other circuits. *See, e.g.*, *Central Laborers' Pension Fund v. SIRVA, Inc.*, No. 04 C 7644, 2006 WL 2787520, at *23 (N.D. Ill. Sept. 22, 2006); *State of New Jersey and its Division of Investment v. Sprint Corp.*, No. 03-207-JWL, 2004 WL 1960130, at *10 (D. Kan. Sept. 3, 2004); *Ong v. Sears, Roebuck & Co.*, 388 F. Supp. 2d 871 (N.D. Ill. 2004).

147 *Harris v. IVAX Corp.*, 182 F.3d 799 (11th Cir. 1999). On the surface, the Seventh Circuit's decision in *Asher* contains some language that echoes *Harris*, as the court in *Asher* acknowledged that the safe harbor provision does not require "prescience" or "prevision" or allow plaintiffs to plead "fraud by hindsight" based on circumstances that could not have been known at the time of the disclosure. The difference between the two opinions is not necessarily in the scope of the safe harbor, but how the court should apply the safe harbor at the pleadings stage.

148 *Harris v. IVAX Corp.*, 182 F.3d 799, 807 (11th Cir. 1999) (internal quotations omitted).

149 *See, e.g.*, *In re AMDOCS Ltd. Securities Litigation*, 390 F.3d 542 (8th Cir. 2004); *see also Asher v. Baxter*, 377 F.3d 727 (7th Cir. 2004).

150 § 27A(c)(2) of the Securities Act and § 21E(c)(2) of the Exchange Act. It should be noted that these cross-reference procedures available for oral forward-looking statements may not be sufficient for the purposes of invoking the safe harbor if the oral statements later are put in writing and such writing is not "accompanied by meaningful cautionary statements." Accordingly, where an issuer posts a transcript or audio recording of a conference call on its website, the cross-referenced document containing the meaningful cautionary statements also should be available on the website.

151 § 27A(c)(3) of the Securities Act and § 21E(c)(3) of the Exchange Act.

152 The safe harbor does not protect against civil or criminal enforcement actions brought by the SEC or the DOJ. *See* § 27A(c)(1) of the Securities Act and § 21E(c)(1) of the Exchange Act (limiting the safe harbor to "private actions").

153 The safe harbor does not protect against actions alleging fraud under state law, although in some jurisdictions similar results may be obtained under the "bespeaks caution" doctrine developed by the federal courts and adopted by some state courts. This doctrine shields defendants from liability based on projections and other "soft" or forward-looking statements if accompanied by meaningful disclaimers or disclosures of risk; the doctrine generally does not shield those who make statements with knowledge of their falsity. The Congressional Conference Committee Report for the Litigation Reform Act states that the safe harbor is not intended to replace the "bespeaks caution" doctrine or to foreclose further development of that doctrine by the courts. S. Rep. No. 104-98, at 15–18 (1995). *See* § 11.03[1][c] for a further

discussion of the "bespeaks caution" doctrine. SLUSA mitigates the risk of securities fraud actions in state court by requiring most class action securities fraud suits based on state law to be brought in federal court under federal law. *See* § 11.09[1][a].

154 *See* § 27A(a)(1) of the Securities Act and § 21E(a)(1) of the Exchange Act.

155 *See* § 27A(b) of the Securities Act and § 21E(b) of the Exchange Act. Forward-looking disclosures provided pursuant to Item 11 of Form 20-F (Quantitative and Qualitative Disclosures About Market Risk), however, are within the statutory safe harbors for all types of issuers and transactions. *See* § 3.08[7].

Where the Litigation Reform Act does not apply in the contexts referred to above, issuers can rely on Rule 175 under the Securities Act and Rule 3b-6 under the Exchange Act. Under those rules, a forward-looking statement that proves to be incorrect will not be considered a material misstatement or omission under the securities laws unless the plaintiff can show that it "was made or reaffirmed without a reasonable basis or was disclosed other than in good faith." The plaintiff bears the burden of proving that the statement does not fall within the Rule 175(a) or Rule 3b-6(a) safe harbor. *See, e.g.*, *Roots Partnership v. Land's End, Inc.*, 965 F.2d 1411 (7th Cir. 1992); *Wielgos v. Commonwealth Edison Co.*, 892 F.2d 509 (7th Cir. 1989). This safe harbor is available for forward-looking statements contained in any document filed with the SEC made (i) by or on behalf of an issuer that is subject to the reporting requirements of the Exchange Act or that is filing a registration statement under the Securities Act or §§ 12(b) or 12(g) of the Exchange Act or (ii) by an outside reviewer retained by such an issuer.

156 *See* § 4.10[4] for a discussion of circuit courts' disagreement concerning whether a duty to update previous communications exists.

157 *See* § 27A(d) of the Securities Act and § 21E(d) of the Exchange Act.

158 Several studies have examined whether the quantity or quality of written forward-looking disclosures increased after the enactment of the Litigation Reform Act. The studies reached different conclusions. In the first study, the SEC staff analyzed litigation conducted in the first year after the passage of the Litigation Reform Act. Although the staff cautioned that the lack of substantial jurisprudence interpreting the Act made it "too soon to draw definitive conclusions about the impact of the Reform Act on the effectiveness of the securities laws and on investor protection," the report concluded that the quality and quantity of disclosures had not significantly improved since the enactment of the safe harbor provision. *See* SEC, Office of the General Counsel, *Report to the President and the Congress on the First Year of Practice Under the Private Securities Litigation Reform Act of 1995*, at 26–27 (Apr. 1997). The second study, published by the New York City Bar Association, concluded that while cautionary language has become standard in corporate disclosures, the substantive quantity or quality of disclosures had not increased. *See* Committee on Securities Regulation *, A Study of Current Practices: Forward Looking Statements and Cautionary Language After the 1995 Private Securities Litigation Reform Act*, RECORD OF THE NEW YORK CITY BAR ASSOC., Vol. 53, No. 6, Nov. (Dec. 1998) at 723, 726. The third study, published in the Journal of Accounting Research, reached the opposite conclusion, finding that the quantity of disclosures had increased without any significant decrease in their accuracy. Marilyn F. Johnson et al., *The Impact of Securities Litigation Reform on the Disclosure of Forward-Looking Information By High-Technology Firms*, 39 J. ACCT. RES. 297, 318, 322 (2001) ("[T]he evidence presented above indicates that there was a significant increase in the level of voluntary disclosure during the post-Act period, and that this increase appears to be a direct response to the reduced legal exposure for forward-looking statements. [W]e find that the safe harbor had no adverse impact on the quality of forward-looking information released by management.").

Studies have also tracked the number of securities class actions filed over recent years. In January 2016, NERA Economic Consulting released its assessment of securities class action filing activity in 2015. The 234 securities class action filings in 2015 represented the highest level since 2008, and an increase of 8% from 2014. The study further noted that the number of publicly listed companies in the United States has decreased substantially over time, meaning that an average company was almost 70% more likely to be the target of a securities class action between 2010 and 2015 than in the first five years after the passage of the Litigation Reform Act. *See* NERA Economic Consulting, *Recent Trends in Securities Class Action Litigation: 2015 Full-Year Review*.

159 *See* SEC, Office of the General Counsel, *Report to the President and the Congress on the First Year of Practice Under the Private Securities Litigation Reform Act of 1995*, at 3 (Apr. 1997).

160 *See* SEC, Office of the General Counsel, *Report to the President and the Congress on the First Year of Practice Under the Private Securities Litigation Reform Act of 1995*, at 26–27 (Apr. 1997).

161 *See* Michael A. Perino, *Did the Private Securities Litigation Reform Act Work?*, 2003 U. ILL. L. REV. 913, 928 (2003). *See also* § 11.09[1][a].

162 *See* Michael A. Perino, *Did the Private Securities Litigation Reform Act Work?*, 2003 U. ILL. L. REV. 913, 928 (2003).

163 *See* SEC, Office of the General Counsel, *Report to the President and the Congress on the First Year of Practice Under the Private Securities Litigation Reform Act of 1995*, at 28 (Apr. 1997).

164 *See* § 101(2) of the Uniform Securities Act.

165 *See* § 410(a)(2) of the Uniform Securities Act. Control persons are liable under the Uniform Securities Act to the same extent as those they control, subject to the same basic defenses set forth in § 15 of the Securities Act. *See* § 410(b) of the Uniform Securities Act.

166 *See* § 18(c)(1) of the Securities Act, *as amended* by the NSMIA; *see also* § 11.02[3].

167 *See* § 11.09[1][a]. On the other hand, in *Merrill Lynch, Pierce, Fenner & Smith Inc. v. Manning*, the Supreme Court held that a defendant could not remove to federal court an action asserting state law claims based in part on an alleged breach of a duty imposed by a regulation under the Exchange Act, notwithstanding that § 27 of the Exchange Act provides that federal courts have exclusive jurisdiction "of all suits … brought to enforce any liability or duty created by [the Exchange Act] or the rules or regulations thereunder," because the plaintiff in that case could "prevail on those [state law] claims without proving that the alleged breach of an Exchange Act duty … actually occurred" and those [state law] claims therefore did not "necessarily raise a federal issue." *See Merrill Lynch, Pierce, Fenner & Smith Inc. v. Manning*, 136 S. Ct. 1562, 1568, 1575 (2016). Instead, the Supreme Court held that state law claims are removable to federal court under § 27 of the Exchange Act only if they "arise under" the Exchange Act, meaning that the "state-law action necessarily depends on a showing that the defendant breached the Exchange Act." *See Merrill Lynch, Pierce, Fenner & Smith Inc. v. Manning*, 136 S. Ct. 1562, 1567–69 (2016).

U.S. Regulation of the International Securities and Derivatives Markets, § 11.04, LIABILITIES CONNECTED WITH DISCLOSURE IN PRIVATE OFFERINGS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 11.04 (11th and 12th Editions 2014-2017)
11th and 12th Editions

p. 11-46

Like the registered public offerings discussed in the preceding section, private offerings of securities in the United States (including offerings under Rule 144A under the Securities Act) also can give rise to liability for improper disclosures under U.S. federal and state securities laws, with remedies ranging from actions by private parties for damages to injunctive actions by the SEC and criminal prosecutions by the DOJ. In general, however, the legal standards under federal law for imposing such liability are higher in the private offering context than for registered public offerings: in the case of private suits, the plaintiff must demonstrate that the defendant acted recklessly or with fraudulent intent, and must also prove that he or she relied on the defendant's wrongful conduct to his or her detriment. The distinctions between the standards applicable to public and private offerings were clarified by the Supreme Court in *Gustafson v. Alloyd Co., Inc.*, [168] which—as discussed in § 11.04[1]—held that § 12(a)(2) of the Securities Act, with its lower burden of proof required for liability, [169] does not apply outside the public offering context. The two federal provisions that do apply to disclosure violations in private offerings, § 10(b) of the Exchange Act and Rule 10b-5 thereunder and § 17 of the Securities Act, are examined below in § 11.04[2] and [3], respectively. The relevant provisions of state securities law are addressed in § 11.04[4].

[1] *Gustafson* and Securities Act § 12(a)(2)

Although a purchaser in a private placement does not have any rights under § 11 of the Securities Act (relating to misstatements or omissions in a registration statement), [170] it was believed widely that such purchasers could take advantage of the remedies afforded by § 12(a)(2) of the Securities Act, which imposes

p. 11-46

p. 11-47

liability on securities sellers for misstatements or omissions in prospectuses or oral communications made in the offer or sale of a security. (Indeed, many had thought that § 12(a)(2) also applied to secondary market transactions.) The

p. 11-47

p. 11-48

Supreme Court's 1995 decision in *Gustafson* held the opposite, that § 12(a)(2) does not apply at all to private placements or secondary market transactions. [171] The breadth of the Court's holding was unexpected, particularly as applied to private placements. As a result of the *Gustafson* decision, a plaintiff who purchases securities in a private placement or in a secondary market transaction will be forced to pursue its claims based on federal law under the more rigorous standards of Rule 10b-5 (discussed in § 11.04[2])—which applies to private and secondary market transactions as well as public offerings—as well as under any applicable state securities laws. [172]

The *Gustafson* decision went a long way toward addressing concerns of securities market participants about inadvertent liability in connection with private placements and secondary market transactions. Although consideration still will have to be given to reputational issues, state securities laws and the common law, the potential remedies under state and common law are less likely to provide the basis, especially in the context of international offerings, for the nationwide class actions and other large-scale proceedings that have marked securities law litigation under the federal securities laws. [173]

By changing the standards for liability in private placements and secondary market transactions, *Gustafson* led some participants to reexamine the nature of the documentation used in these transactions or the procedures employed in executing them. However, the core business reasons that motivate due diligence (*e.g.*, reputational concerns and investor expectations), as well as the desire to be able to protect against possible evolution of liability standards under, for example, Rule 10b-5, and to dispose quickly of litigation alleging defective disclosure, have combined to result in continued substantial due diligence in Rule 144A offerings. [174]

Despite *Gustafson's* expansive holding, some courts have nonetheless left open the possibility of § 12(a)(2) liability in Rule 144A and Regulation S offerings. [175] Notably, in the Enron civil litigation, the court denied an underwriter's

p. 11-48

p. 11-49

motion to dismiss the § 12(a)(2) claim, holding that notwithstanding exemption from registration under Regulation S or Rule 144A, there were circumstances whereby an offering could be found public for the purposes of § 12(a)(2). [176] The court, in particular, noted the absence of a statutory definition of "public offering," the wide distribution (although limited to qualified institutional buyers in the United States) and the listing of the securities on the Luxembourg Stock Exchange as factors that made it inappropriate to dismiss the underlying claim since there was a possibility that, through the admission of further evidence, the

p. 11-49

p. 11-50

plaintiffs could establish that the offering was a public offering, actionable under § 12(a)(2). [177]

[2] Exchange Act § 10(b) and Rule 10b-5

The catch-all antifraud provisions of the Exchange Act, § 10(b) and Rule 10b-5 thereunder, have become by far the most significant remedy for disclosure violations in securities transactions, both for the SEC and for private litigants. The provisions themselves do not create a private right of action; the Exchange Act speaks only of civil and administrative remedies by the SEC, and possible criminal prosecution. However, the courts have long held that buyers or sellers of securities have an implied right to recover damages based on violations of § 10(b) and Rule 10b-5. [178] The elements of a claim under these provisions are discussed below, as are the parties who may be held liable as defendants and the remedies that may be available.

[a] Elements of Claim

Section 10(b) of the Exchange Act and Rule 10b-5 thereunder are broadly written: § 10(b) proscribes the use of "any manipulative or deceptive device or contrivance" in connection with the purchase or sale of any security, and Rule 10b-5 specifies three categories of conduct that qualify as violations. These are (i) employing any "device, scheme, or artifice to defraud," (ii) making any untrue statement of material fact or failing to state a material fact "necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading" [179] and (iii) engaging in any "act, practice, or course of business" that operates as a "fraud or deceit."

p. 11-50

p. 11-51

Information is deemed material for purposes of the second prong if there is a substantial likelihood that a reasonable investor would have viewed its disclosure as significantly altering the "total mix" of available information, and would consider it important in deciding whether to purchase or sell stock. [180] Whether or not misstatements or omissions are material may involve qualitative as well as quantitative judgments. In Staff Accounting Bulletin No. 99, the SEC offered guidelines to registrants and independent auditors in evaluating the materiality of misstatements identified in the audit process or preparation of financial statements. [181] The SEC emphasized that registrants should not assume that the misstatement or omission of items that fell below a certain quantitative threshold (*e.g.*, 5%) was immaterial for disclosure purposes. [182] While a numerical threshold can provide a starting point for determining the materiality of an item, such an assessment also must include "the factual context in which the user of financial statements would view the financial statement item." [183] Thus, some of the qualitative factors that must be considered are:

- whether the misstatement arises from an item capable of precise measurement or whether it arises from an estimate, and, if so, the degree of imprecision inherent in the estimate;
- whether the misstatement masks a change in earnings or other trends;
- whether the misstatement hides a failure to meet the consensus expectations of the analysts for the enterprise;
- whether the misstatement changes a loss into income or *vice versa*;

p. 11-51
p. 11-52

- whether the misstatement concerns a segment or other portion of the registrant's business that has been identified as playing a significant role in the registrant's operations or profitability;
- whether the misstatement affects the registrant's compliance with regulatory requirements;
- whether the misstatement affects the registrant's compliance with loan covenants or other contractual requirements;
- whether the misstatement has the effect of increasing management's compensation—for example, by satisfying requirements for the award of bonuses or other forms of incentive compensation;
- whether the misstatement concerns a segment or other portion of the registrant's operations or profitability; and
- whether the misstatement involves concealment of an unlawful transaction. [184]

The SEC also cautioned that where financial statements contained multiple misstatements, registrants should consider first each misstatement separately and second the aggregate effect of all misstatements. The effect of the misstatement of an individual amount that causes the financial statements as a whole to be materially misstated cannot be eliminated by the inclusion of other misstatements whose effect diminishes the impact of the original misstatement. Conversely, financial statements may be rendered materially misleading even though no individual misstatement is material. [185]

p. 11-52
p. 11-53

Courts have also found that the alleged misstatement or omission of items falling below a certain quantitative threshold can be qualitatively material if those items concern a particular product, division, or segment of an issuer's business that has independent significance for investors, such as a product or segment that is the company's original niche, its iconic or eponymous business, or that is critical to its reputation, revenue or growth. [186]

More recently, the Supreme Court rejected the contention that the materiality of adverse event reports in the pharmaceutical context can be reduced to the binary question of whether an issuer knew of a statistically significant number of such event reports. In *Matrixx Initiatives v. Siracusano*, [187] the plaintiffs challenged as materially misleading a drug manufacturer's statements touting the safety of its anti-cold medication, because the manufacturer knew of a large number of reports concerning adverse health effects of such medication. The drug manufacturer argued that plaintiffs did not adequately plead the materiality of the alleged misstatements because the complaint did not allege that the manufacturer knew of a statistically significant number of such adverse health reports. The Supreme Court, relying on *Basic*, rejected this contention and affirmed the Ninth

Circuit's refusal to dismiss the complaint, noting that a bright-line rule that would turn on the existence of a statistically significant number of adverse effect reports would "artificially exclude information that would otherwise be considered significant to the trading decision of a reasonable investor." [188] The Court instead reaffirmed that assessing the materiality of an adverse event report is a "fact-specific inquiry that requires consideration of the source, content, and context of the reports." [189]

The disclosure standard under Rule 10b-5 is identical to that under § 12(a)(2) of the Securities Act: liability is predicated upon a misstatement or upon omission of a material fact that makes an included statement misleading. [190] The remaining elements of the claim differ, however, in significant ways. Unlike under § 12(a)(2), where the defendant must establish that it acted with reasonable care, [191] a plaintiff bringing a claim under Rule 10b-5 must plead conduct by

p. 11-53

p. 11-54

the defendant giving rise to "a *strong inference* of *scienter*." [192] For Rule 10b-5 purposes, "*scienter*" is defined as an intent to defraud, deceive or manipulate, [193] with courts generally agreeing that recklessness constitutes "*scienter*" as well. [194]

p. 11-54

p. 11-55

Mere negligence is not sufficient to state a cause of action under Rule 10b-5. [195] Recklessness has been defined as "a highly unreasonable omission, involving not merely simple, or even inexcusable negligence, but an extreme departure from the standards of ordinary care, and which presents a danger of misleading buyers or sellers that is either known to the defendant or is so obvious that the actor must have been aware of it." [196] Under this definition, which has been adopted by the majority of circuits and applied to claims of material misstatements as well as omissions, [197] the danger of "misleading buyers must be actually known or so obvious that any reasonable man would be legally bound …[and that the conduct in question must be] more egregious than even ‘white heart/empty head’ good faith." [198]

p. 11-55

p. 11-56

In *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, the Supreme Court addressed the level of specificity that a plaintiff must plead in order to satisfy the "strong inference of *scienter*" standard on a motion to dismiss. [199] The Court held that a complaint must meet a two-pronged test: its allegations of *scienter* must be both "cogent" and "at least as compelling as any opposing inference of nonfraudulent intent." In applying this test, the reviewing court must consider not only the inferences urged by the plaintiff, but also competing inferences rationally drawn from the facts of the complaint and any other sources that a court may consider on a motion to dismiss. By requiring courts to consider competing inferences of *scienter* (*i.e.*, "innocent" or "nonculpable" inferences), the effect of the Court's ruling will be to trigger more rigorous scrutiny of plaintiffs' pleadings and, in some cases, earlier dismissal.

The decision in *Tellabs* was also significant for its discussion of the analytical approach that a reviewing court should take when determining whether the "strong inference of *scienter*" is adequately pled. The Court stated that the allegations of the complaint should be assessed "holistically," rather than in isolation. In other words, the Court rejected approaches that afforded determinative significance to specific allegations of the complaint (*e.g.*, motive and opportunity) and instructed lower courts to review complaints in their entirety to determine "whether all the facts alleged, taken collectively, give rise to a strong inference of *scienter*," not whether any individual allegation, scrutinized in isolation, meets that standard.

The plaintiff in a private action under Rule 10b-5 (as contrasted with an SEC enforcement action) also must show that he or she relied on the defendant's wrongful conduct and that the conduct was the proximate cause of the investment loss. [200] These elements of a Rule 10b-5 claim are sometimes referred to as transaction causation and loss causation.

Transaction causation is akin to reliance, and requires only an allegation that "but for the defendant's wrongdoing, the plaintiff would not have incurred the harm of which he complains." [201] There are two important exceptions, however, to the need for a plaintiff to prove reliance.

The first exception applies only in cases alleging material omissions. In such a case, courts have held that proof of the materiality of the omission gives

p. 11-56

p. 11-57

rise to a presumption of the plaintiff's reliance. [202] This exception to proving reliance originates from the U.S. Supreme Court's decision in *Affiliated Ute v. United States*. [203] That case involved a failure to disclose material information in a context in which there were face-to-face transactions between the defendant-bankers and the plaintiff-investors. Based on these transactions, and the relationship between the bankers and the investors, the Court found that the bankers had a duty to disclose material information to the investors. The Court held that, in light of this duty, "positive proof of reliance is not a prerequisite to recovery. This obligation to disclose and the withholding of a material fact establish the requisite element of causation in fact." [204]

p. 11-57

p. 11-58

The second exception—the so-called "fraud-on-the-market" theory—applies to transactions in securities that trade in the open market. In circumstances where there is an organized and efficient market for the securities—*i.e.*, the securities trade on a major stock exchange, are heavily traded, are followed by a number of analysts, and generally move in response to the release of material information about the issuer—the court may presume that the market price reflects the information available about the issuer, and a material misstatement or omission will be deemed to have affected the market price of the stock. [205] This presumption allows those who traded on the basis of the artificially inflated or depressed market price to recover the difference between the price paid or received and the price at which the stock would have been trading in the absence of the defendant's material misstatement or omission. [206] If the defendant can establish that the plaintiff in fact did not rely on the misstatement or omission or that the defendant's misstatement or omission did not affect the market price of the security, then the presumption of reliance is rebutted. [207] In an important decision in *In re Initial Public Offering Securities Litigation*, [208] the Second Circuit

p. 11-58

p. 11-59

concluded that the "fraud-on-the-market" theory is inapplicable to initial public offerings because the market for IPO shares is not efficient.

In *Halliburton Co. v. Erica P. John Fund, Inc.*, the Supreme Court considered whether to overrule or substantially modify the "fraud-on-the-market" theory, in light of recent scholarship that called into question the economic underpinnings of the theory. [209] The Court ultimately reaffirmed the theory under the principle of *stare decisis*, but noted that the presumption of reliance could be rebutted by a showing that the alleged misrepresentation had no "price impact," and held that "defendants must be afforded an opportunity before class certification to defeat the presumption [of reliance] through evidence that an alleged misrepresentation did not actually affect the market price of the stock." [210] On remand, the district court in *Halliburton* concluded that the defendants successfully defeated the presumption of reliance with respect to certain alleged misstatements by submitting an event study that showed there was no statistically significant price reaction on particular days when the truth about those alleged misstatements was revealed to the market. [211]

The Eighth Circuit has further held that a defendant can rebut the fraud-on-the-market presumption by demonstrating that the allegedly misleading statements did not affect the price of the issuer's securities at the time of the alleged misstatements. [212] Other courts, however, have rejected attempts to rebut the presumption of reliance unless defendants "demonstrate a complete lack of price impact." [213]

Loss causation, unlike transaction causation, is concerned primarily with causation instead of reliance. It is a fact-based inquiry akin to common law proximate cause. In order for a private plaintiff under Rule 10b-5 to show loss causation, he must demonstrate that the misstatement or omission concealed something from the market that, when disclosed, negatively affected the value of the security. [214]

p. 11-59

p. 11-60

In 2005, a unanimous Supreme Court raised the bar in Rule 10b-5 suits, holding that given the common law roots of this implied private right of action and the pleading requirements under the Litigation Reform Act, private plaintiffs pursuing Exchange Act fraud claims must plead and prove more than just price inflation at the time of purchase in order to satisfy the "loss causation" element. The Supreme Court expressly rejected the Ninth Circuit's "inflated share price approach" to proving causation and loss, pursuant to which the mere allegation in a complaint that the price of a security "on the date of purchase was inflated because of the misrepresentation" was sufficient to plead and, when later established, also sufficient to prove loss causation because the injury was understood to occur at the time of the transaction. [215] The Supreme Court found this approach to be at odds with the logic and the policies behind the securities laws, because under the "inflated share price approach," private securities actions would operate largely as a "partial downside insurance policy," [216] since an initially inflated purchase price would not invariably lead to an economic loss. The Supreme Court held that to prevail in a 10b-5 suit, a private plaintiff must plead and prove that the defendant's fraud caused "an economic loss." [217]

Thus, given the foregoing discussion of the elements required for the successful prosecution of a 10b-5 claim, issuers organizing private placements in the United States, or investment bankers participating in such placements, should consider a number of factors in determining what level of disclosure is appropriate to avoid liability. First, because the *scienter* standard includes reckless as well as intentional disclosure violations, an underwriter is unlikely to be able to

p. 11-60

p. 11-61

avoid liability by doing no investigation and therefore not "knowing" of the misstatement or omission. Investment bankers associated with a private placement may be found to have impliedly represented that they have performed a customary "business diligence" investigation. [218] This investigation would probably be required to include pursuing internal inconsistencies or "red flags" that become apparent, but in all likelihood does not require the full "legal" or "documentary" diligence necessary for public offerings where proof of *scienter* is not required for disclosure liability. [219]

Second, issuers and sellers should examine the circumstances of the particular private placement to determine what level of disclosure is necessary. In some cases, such as a private placement associated with an initial offering in the capital markets by a non-U.S. issuer, the scope of disclosure appropriately may be quite close to that for an offering registered with the SEC. In other cases, involving for example an offering of debt securities under Rule 144A by a seasoned, "world-class" non-U.S. company that has been a frequent issuer in the international markets, disclosure that substantially follows the issuer's prior practice in the international markets might be appropriate. In particular, less detailed disclosure may be required for offerings of investment-grade debt than for equity. For debt offerings, investors generally are willing to place as much reliance on rating agencies as on the underwriters.

[b] Who May Be Liable

[i] *Standing and Contribution*

Although the plaintiff in a Rule 10b-5 action must demonstrate that it was an actual purchaser or seller of the security to have standing to sue, it may sue defendants other than the purchaser or seller with whom it dealt. [220] There is no requirement of privity in Rule 10b-5 actions. Rather, the Rule extends liability to

p. 11-61

p. 11-62

"any person, directly or indirectly" who commits fraud or intentionally or recklessly provides misleading disclosure "in connection with the purchase or sale of any security."

In addition, § 20(a) of the Exchange Act imposes control person liability for violations of its provisions. The control person is liable to the same extent as those who directly committed the offense, [221] unless it can show that it "acted in good faith and did not induce the act or acts constituting the violation or cause of action." [222]

Section 10(b) and § 20(a) claims must be pled in the alternative because a party cannot be held liable under both sections for the same conduct. [223]

Further, Congress amended the Exchange Act to provide that in cases in which more than one person violated the Exchange Act and contributed to the plaintiff's damages, each person is liable only for a portion of the total damages based on the percentage of responsibility that the jury attributes to that person. This provision, which carves out an exception for cases of "knowing" securities fraud, is discussed in § 11.03[1][e][ii].

[ii] *Secondary Actor Liability*

The SEC may bring enforcement actions against parties (often called "secondary actors") who "aid and abet" violations of Rule 10b-5 or other provisions of the Exchange Act, meaning that they provide substantial assistance to others in accomplishing the securities violation despite knowledge that the others' conduct violates the law. [224] The SEC staff has said that using an aiding and abetting

p. 11-63

p. 11-64

theory to pursue "enablers" of fraud—secondary actors such as lawyers, accountants, bankers and non-management directors—is an important part of the Commission's enforcement program, and it has brought enforcement actions accordingly. [225]

By contrast, the Supreme Court has held that private investors may not bring suit against aiders and abettors under Rule 10b-5. [226] The Court's elimination of aiding and abetting liability in private actions also calls into question private investors' previously accepted ability to sue employers under the doctrine of "*respondeat superior*," [227] which permits the imposition of strict liability on employers for the fraudulent acts of their employees if the employees were acting within the scope of their employment. [228] This issue may arise not only in the

p. 11-64

p. 11-65

context of actions against employers, but also actions against parent corporations on the basis of the actions of their subsidiaries. [229]

In a pair of more recent decisions, the Supreme Court has further curtailed the ability of private plaintiffs to pursue claims against secondary actors as primary violators rather than as aiders and abettors. In *Stoneridge Investment v. Scientific-Atlanta, Inc.*, the Supreme Court considered whether secondary actors can be liable under a "scheme" liability theory. [230] Following *Central Bank*, private litigants seeking to reach secondary actors attempted to pursue claims using the previously untapped "scheme to defraud" prongs of Rule 10b-5—namely Rule 10b-5(a) and (c). [231] Although initial district court decisions suggested that

p. 11-65

p. 11-66

this "scheme" theory may support broad Rule 10b-5 liability against secondary actors such as lawyers, accountants and financial institutions, subsequent decisions narrowed the application of Rule 10b-5(a) and (c) to circumstances in which the defendant actually made use of an allegedly deceptive device or contrivance. [232] In *Stoneridge*, while the Supreme Court stopped short of completely eliminating scheme liability in the case of secondary actors, it established a test that may be difficult for plaintiffs to meet as a practical matter. The Court held that plaintiffs bringing Rule 10b-5(a) and (c) claims must demonstrate that they specifically relied on the defendants' acts or statements when making their investment decisions. It went on to reject liability against secondary actors (here, counterparties to sham transactions) where the secondary actors did not make it "necessary or inevitable" that the primary actor would defraud investors by issuing false financial statements. [233] As the Court explained, it was the primary actor, not the secondary actors, "that misled its auditor and filed fraudulent statements; nothing [the secondary actors] did made it necessary or inevitable for [the primary actor] to record the transactions as it did."

In *Stoneridge*, the shareholder-plaintiff had brought claims against two equipment vendors who allegedly participated with Charter Communications in a fraudulent "wash sale" scheme. The complaint alleged that the vendor-defendants had sold equipment (cable television set-top boxes) to Charter with the understanding that Charter would pay an extra $20 per unit and the vendors would return the extra funds to Charter through advertising fees. Even though the complaint alleged that the vendor-defendants were aware that they were engaged in a scheme with the purpose of inflating Charter's apparent revenues, the Eighth Circuit held that no violation of any subsection of Rule 10b-5 could be pled against defendants who "did not issue any misstatement relied upon by the investing public" and were not "under a duty to Charter investors and analysts to disclose information useful in evaluating Charter's true financial condition." The Supreme Court affirmed this decision. [234] Following *Stoneridge*, a number of circuit courts adopted or reaffirmed their prior holdings that a primary violation only exists if the actor makes a false or misleading statement and it was publicly attributable to him at the time of dissemination. [235]

Expanding on its decision in *Stoneridge*, the Supreme Court has further narrowed the reach of the § 10(b) private cause of action in *Janus Capital Group, Inc. v. First Derivative Trader*. [236] In *Janus*, the Court held that the investment adviser to a mutual fund could not be liable in a private action under § 10(b) for allegedly false statements contained in prospectuses issued by the mutual fund, even though the investment adviser wrote the allegedly misleading prospectuses. In *Janus*, the Court described the issue as what it means to "make" a statement under Rule 10b-5(b), and held that the "maker" of a statement is "the person or entity with ultimate authority over the statement, including its content and whether and how to communicate it." [237] Applying this test, the Court held that the mutual fund, not the investment adviser, was the "maker" of the challenged statements, because the fund was the entity with "ultimate authority" over the prospectuses, bore the statutory obligation to (and did) file the prospectuses with the SEC and the prospectuses were attributed to the fund and not the adviser.

p. 11-67

p. 11-68

Since *Janus*, lower courts have disagreed on whether *Janus* forecloses liability against investment banks acting as placement agents or underwriters for statements attributed to the issuer in offering documents. [238] Courts have also disagreed concerning whether the Supreme Court's reasoning in *Janus* only applies to legally independent third parties, or also extends to corporate officers. [239]

[c] Remedies

A private party prevailing in an action under Rule 10b-5 is entitled to recover its out-of-pocket loss, [240] generally the difference between the "true" value of the securities (the price at which they would have traded absent the fraud) and the price paid or received by the plaintiff. [241] Alternatively, some courts permit plaintiffs to recover subsequent price declines that were a foreseeable materialization of the risk concealed by the fraudulent statement, even if

p. 11-68

p. 11-69

those losses would exceed the price inflation that existed on the original transaction date, which would have reflected only the *risk* of an adverse development rather than its actual occurrence. [242] The determination of damages under these principles can be quite complicated, often requiring the use of economic models and expert testimony to distinguish between losses caused by the fraud and those attributable to other factors, including factors generally affecting the economy and the company's industry or those specifically affecting the company but not related to the fraud. [243] In response to the difficulty of making this distinction, and the potential for thus greatly overestimating plaintiff damages, Congress established an upper limit, or cap, on damages for claims arising under the Exchange Act "in which the plaintiff seeks to establish damages by reference to the market price." [244] The recovery limit is calculated as the difference between the price paid or received by the plaintiff for the securities and the mean trading price of the same securities during the three months following corrective disclosure to the market. [245] Moreover, pursuant to a 1995 amendment to the Exchange Act, a system of "proportionate liability" that apportions liability based on "the percentage of responsibility" of each violator applies to virtually all violations of the Exchange Act, essentially eliminating joint and several liability for such violations except where statements or omissions were made with actual knowledge of falsity, rather than mere recklessness. [246]

The SEC may sue for injunctive relief under § 10(b) and Rule 10b-5, or to prohibit (permanently or temporarily) any person who violated these provisions from acting as an officer or director of any public company. [247] The SEC may also seek civil penalties in amounts ranging from $8,156 to $178,156 for natural persons or $81,559 to $890,780 for corporations, depending on the egregiousness of the defendant's conduct, or disgorgement of the defendant's gain from its actions, whichever is greater. [248] Finally, the DOJ may seek criminal sanctions (including substantial fines or imprisonment in the case of natural persons) for willful violations of the antifraud or other provisions of the Exchange Act. [249]

[d] Statutes of Limitations and Repose

p. 11-70
p. 11-71

There is no statute of limitations applicable to actions brought by the SEC under § 10(b) of the Exchange Act and Rule 10b-5 thereunder for injunctive relief or disgorgement. [250] As discussed in § 11.07[1][a], the Sarbanes-Oxley Act created new statutes of limitations and repose for private claims under § 10(b) and Rule 10b-5—the earlier of two years from the date of "discovery of the facts constituting the violation" or five years from the date of the violation. [251]

In *Merck & Co., Inc. v. Reynolds*, the Supreme Court interpreted the text of this statute of limitations and rejected the notion that § 1658's limitations period begins to run at the point that plaintiffs should begin investigating their claim, as opposed to the date when plaintiffs should actually discover their claim. [252] *Merck* involved a Rule 10b-5 allegation that pharmaceutical company Merck knowingly misrepresented the risk of heart attack associated with its drug Vioxx. Relying on Second Circuit precedent, the district court dismissed the complaint on statute of limitations grounds, holding that the plaintiffs should have been alerted by three events constituting "inquiry notice" to the possibility of the misrepresentations more than two years prior to the filing of the complaint, but failed to undertake a reasonably diligent investigation at that time. The Third Circuit reversed, holding that although the three events constituted "storm warnings," they did not suggest that Merck had acted with *scienter*, and therefore they did not put plaintiffs on "inquiry notice," triggering a duty to investigate further. Rejecting the applicability of "inquiry notice," the Supreme Court noted that while "terms such as 'inquiry notice' and 'storm warnings' may be useful to the extent that they identify a time when the facts would have prompted a reasonably diligent plaintiff to begin investigating.…the limitations period does not begin to run until the plaintiff thereafter discovers or a reasonably diligent plaintiff would have discovered 'the facts constituting the violation,' including *scienter*—irrespective of whether the actual plaintiff undertook a reasonably diligent investigation." [253]

p. 11-71
p. 11-72

The Court further held that *scienter* is among the "facts constituting the violation" that plaintiffs must actually or constructively discover before the statute of limitations begins to run on their Rule 10b-5 claims. In so holding, the Court pointed out the special heightened pleadings requirements applicable to the *scienter* element in Rule 10b-5 cases under the Litigation Reform Act. Specifically, plaintiffs must "state with particularity facts giving rise to a strong inference that the defendant acted with the required state of mind," and the complaint will give rise to such a "strong inference" only where it demonstrates that it is "at least as likely" as not that the defendant acted with the relevant knowledge or intent. [254] Accordingly, the Court held that "[i]t would therefore frustrate the very purpose of the discovery rule in this provision—which, after all, specifically applies only in cases 'involv[ing] a claim of fraud, deceit, manipulation, or contrivance,'—if the limitations period began to run regardless of whether a plaintiff had discovered any facts suggesting scienter." [255] The Court rejected Merck's argument that this holding would give life to stale claims or subject defendants to liability for acts taken long ago, pointing to the five-year repose period as adequately addressing these concerns. The Court specifically declined to address whether or what other elements of a Rule 10b-5 claim, such as reliance, loss and loss causation, qualify as "facts constituting the violation" for purposes of determining when the limitations period begins to run.

Building on *Merck*, the Second Circuit has held that a fact is not deemed "discovered" for purposes of commencing the statute of limitations until a reasonably diligent plaintiff would have sufficient information about that fact to adequately plead it in a complaint. [256] Therefore, the statute of limitations on a Rule 10b-5 claim does not begin to run until a reasonably diligent plaintiff would have uncovered enough information about the defendant's knowledge or intent to establish a strong inference of *scienter*.

[3] Securities Act § 17(a)

The Securities Act contains a broad antifraud provision, § 17(a), which closely mirrors the language of Rule 10b-5 under the Exchange Act. [257] Although

p. 11-72
p. 11-73

the Securities Act is primarily concerned with the regulation of new public offerings, the Supreme Court has held that § 17(a) is applicable to the seller in private placements and secondary market trading as well. [258]

Though the language of § 17(a) is very similar to that of Rule 10b-5, [259] most actions under its provisions do not require proof of the defendant's *scienter*, a significant burden in Rule 10b-5 actions. Instead, negligence in disclosure generally will suffice as a basis for imposing liability under § 17(a). [260] To prevent § 17(a) from being used as an end-run around Rule 10b-5's requirements, however, almost all courts have held that § 17(a) does not provide a private right of action. [261] Therefore, only the SEC may enforce § 17(a) provisions [262] and only the DOJ may institute criminal proceedings for willful, as opposed to negligent, violations.

[4] State Securities Laws

State securities laws—the so-called "blue sky" laws—are another possible source of liability with respect to offering documents used in private placements. All U.S. states (other than New York) have statutes that allow investors to sue to rescind transactions or recover damages when securities are sold by means of

p. 11-73
p. 11-74

materially misleading offering documents. [263] In approximately 35 states, including a number with a significant institutional investor base, the standard of actionable conduct is comparable to the reasonable care standard under § 12(a)(2) of the Securities Act. However, state securities laws are unlikely to provide a basis for the nationwide class actions or other large-scale proceedings that have marked securities law litigation under the federal securities laws. [264]

Footnotes

168 *See Gustafson v. Alloyd Co., Inc.*, 513 U.S. 561 (1995).

169 *See* § 11.03[2] for discussion § 12(a)(2) of the Securities Act.

170 Courts have affirmed that there is no § 11 liability in the case of a Rule 144A offering. *See In re Levi Strauss & Co. Securities Litigation*, 527 F. Supp. 2d 965, 975 (N.D. Cal. 2007); *In re Enron Corp. Securities, Derivative & ERISA Litigation*, 258 F. Supp. 2d 576, 619 (S.D. Tex. 2003) (holding that there is no liability under § 11 for a Rule 144A offering because (i) a registration statement is an essential element of a § 11 claim and (ii) a Rule 144A offering is expressly exempt from the requirement that a registration statement be filed in connection with an offering); *In re Livent, Inc. Noteholders Securities Litigation*, 151 F. Supp. 2d 371, 430 (S.D.N.Y. 2001) (holding that in the case of a Rule 144A offering, the offering memorandum, although similar on its face to a prospectus, is not a registration statement within the meaning of the Securities Act and therefore no § 11 liability attaches). Courts have also held that the banks acting as initial purchasers in Rule 144A offerings have no § 11 liability for registered A/B exchanges effected subsequent to the Rule 144A offerings because they are not "directly involved in the preparation of the registration statement or in the subsequent exchange for registered securities of unregistered securities

that the initial purchasers no longer held." *In re Livent, Inc. Noteholders Securities Litigation*, 151 F. Supp. 2d 371, 432 (S.D.N.Y. 2001); *see also American High-Income Trust v. AlliedSignal*, 329 F. Supp. 2d 534, 541–42 (S.D.N.Y. 2004) ("To import underwriter liability for entities that serve as initial purchasers prior to an [A/B exchange] would render Rule 144A ineffective for a very substantial number of securities transactions, and defeat the capital market financing objectives the Rule 144A exemption was designed to achieve." (internal quotations and citations omitted)); *In re Safety-Kleen Corp. Bondholders Litigation*, No. C/A 3:00-1145-17, 2002 WL 32349819 (D.S.C. Mar. 27, 2002) (rejecting plaintiff's contention that both the Rule 144A offering and the subsequent A/B exchange should be seen as one "integrated transaction" subject to § 11 liability, holding that as outlined in the SEC's *amicus curiae* brief to the court, this proposed integration would undercut the policy behind the provision of a 144A exemption). The *Safety-Kleen* court also found no basis for damages in an A/B exchange, because the securities being exchanged are identical. *See In re Safety-Kleen Corp. Bondholders Litigation*, No. C/A 3:00-1145-17, 2002 WL 32349819 (D.S.C. Mar. 27, 2002).

The district court in *In re HealthSouth Securities Litigation* asked the SEC to submit an *amicus curiae* brief addressing whether an underwriter that participates in a Rule 144A offering and a subsequent A/B exchange should continue to enjoy an exemption from the registration process if the transaction is structured as a Rule 144A offering and A/B exchange for the purpose of obtaining the registration exemption and avoiding potential § 11 liability for a Rule 144A offering statement that they knew to be fraudulent or otherwise misleading. *See* Brief of *Amicus Curiae* of the SEC, *In re HealthSouth Securities Litigation*, No. 03-CV-1500 (N.D. Ala. Nov. 28, 2006). The SEC reiterated the position it took in *Safety-Kleen*, rejecting the plaintiffs' "integration" argument. The SEC went on to argue that the applicability of the registration exemption should turn on the substance of the transaction (*i.e.*, whether it meets the qualifications for Rule 144A or "is a sham designed to create the illusion that it should be exempt"). *See* Brief of *Amicus Curiae* of the SEC at 8, *In re HealthSouth Securities Litigation*, No. 03-CV-1500 (N.D. Ala. Nov. 28, 2006). The purported reason that the defendants sought the exemption would not be controlling because there is "nothing inherently nefarious about seeking to avoid Commission review or the possibility of Section 11 or 12(a)(2) liability." *See* Brief of *Amicus Curiae* of the SEC at 9, *In re HealthSouth Securities Litigation*, No. 03-CV-1500 (N.D. Ala. Nov. 28, 2006). The SEC argued that examining such intent would defeat the expectations of capital market participants, lead to uncertain standards and apply an erroneously broad interpretation to Preliminary Note 3 to Rule 144A, which provides that the Rule 144A exemption "is not available with respect to any transaction or series of transactions that, although in technical compliance with this section, is part of a plan or scheme to evade the registration provisions of the Act." Preliminary Note 3 to Rule 144A under the Securities Act. Thus, the SEC argued that Preliminary Note 3 requires courts to look beyond the structure of the transaction to its substance (to see, *i.e.*, whether the QIBs are "mere conduits for unregistered sales to the public") but "there is no precedent for making the exemption question turn solely on offeror motives that are independent of the substance of the transaction."

See also Randall W. Bodner & Peter L. Welsh, *Institutional Buyer Beware: Recent Decisions Reinforce Narrow Range of Remedies Available to QIBs in Rule 144A Offerings*, 36 SEC. REG. & L. REP. (BNA) 38, 1728 (Sept. 27, 2004); § 11.03[1] for discussion of § 11 of the Securities Act.

171 *See Gustafson v. Alloyd Co., Inc.*, 513 U.S. 561, 562 (1995). Specifically, the Court held that the term "prospectus" as used in § 12(a)(2) means a prospectus used in a public offering by an issuer or a controlling person, not offering documents used in private offerings or secondary market transactions.

172 *See* § 11.04[4].

173 *See* § 11.09[1][a] for a discussion of class action lawsuits.

174 *See* § 7.02[3].

175 In the context of Rule 144A offerings, some courts have rejected a bright-line rule that a Rule 144A offering memorandum is never a "prospectus" soliciting the public purchase of securities. *See AAL High Yield Bond Fund v. Ruttenberg*, No. Civ. A. 00-C-1404-S, 2001 WL 34372980 (N.D. Ala. Sept. 30, 2001) (holding that an inquiry into the marketing strategies involved, the scope of the offering and the "sophistication of the

offerees" is warranted because the line between public offerings and private placements is unclear); *see also Steed Finance LDC v. Nomura Securities International, Inc.*, Fed. Sec. L. Rep. (CCH) ¶91,552 (S.D.N.Y. Sept. 20, 2001) (denying defendant's motion to dismiss the complaint and holding that it is not suitable at the pre-discovery stage to determine whether a private placement with a simultaneous public offering could be considered an integrated offering because factors such as the sophistication of the offerees and the actual information provided to them are crucial in making that determination).

However, several more recent decisions have questioned whether § 12(a)(2) liability can arise out of a Rule 144A offering. *See In re Merrill Lynch Auction Rate Securities Litigation*, Nos. 09 MD 2030 (LAP), 10 Civ. 0124 (LAP), 2012 WL 1994707, at *7 (S.D.N.Y. June 4, 2012) ("Because Rule 144A provides a safe harbor from the registration requirements of the 1933 Act for private resales of restricted securities to QIBs, Plaintiff's Section 12 claim must be dismissed with prejudice as a matter of law."); *In re Refco, Inc. Securities Litigation*, 503 F. Supp. 2d 611, 626 (S.D.N.Y. 2007) (holding that "offerings under Rule 144A are by definition nonpublic, and offering memoranda distributed in connection with such offerings cannot give rise to Section 12(a)(2) liability" (citing *American High-Income Trust v. AlliedSignal*, 329 F. Supp. 2d 534, 543 (S.D.N.Y. 2004)); *AIG Global Securities Lending Corp. v. Banc of America Securities LLC*, 254 F. Supp. 2d 373, 389 (S.D.N.Y. 2003) ("There is no dispute that both the 1998-1 and 1998-2 securities were sold through private offerings, made pursuant to Rule 144A. Consequently, the defendants cannot be held liable under § 12(a)(2) of the Securities Act, and the plaintiffs' claim under § 12(a)(2) is dismissed.").

In the context of Regulation S offerings, *see Sloane Overseas Fund, Ltd. v. Sapiens International Corp.*, 941 F. Supp. 1369 (S.D.N.Y. 1996) (denying defendant's motion to dismiss the complaint and holding that despite the applicability of Regulation S, the "wide distribution of the Offering Circular" made an offering public and hence subject to § 12(a)(2) liability). The *Sapiens* decision, however, may be distinguishable because it was unclear whether the offering in fact was eligible for the Regulation S exemption.

Without initially ruling on the ultimate issue of whether § 12(a)(2) liability can lie in a Rule 144A or Regulation S offering, the court in *In re Enron Corporation Securities, Derivative & ERISA Litigation* noted that plaintiffs seeking to pursue such claims on behalf of a class must, at a minimum, meet certain threshold standing requirements. *In re Enron Corp. Securities, Derivative & ERISA Litigation*, 529 F. Supp. 2d 644, 718–20 (S.D. Tex. 2006). In *Enron*, the court dismissed the plaintiff's § 12(a)(2) claims based on Rule 144A and Regulation S offerings because the lead plaintiff had not produced a party with standing to sue the defendants. The court noted that § 12(a)(2) requires privity between the seller and the investor, which means that a class representative can only represent other investors who bought the same securities from the same seller. In a subsequent decision, however, the court in *In re Enron Corporation Securities, Derivative & ERISA Litigation* held that "[b]ecause no prospectus is required" for offerings pursuant to Rule 144A and Regulation S, "such offerings cannot give rise to Section 12(a)(2) liability." *In re Enron Corp. Securities, Derivative & ERISA Litigation*, 761 F. Supp. 2d 504, 532 (S.D. Tex. 2011).

176 *See In re Enron Corp. Securities, Derivative & ERISA Litigation*, 310 F. Supp. 2d 819 (S.D. Tex. 2004).

177 *See In re Enron Corp. Securities, Derivative & ERISA Litigation*, 310 F. Supp. 2d 819, 864 (S.D. Tex. 2004).

178 *See Herman & MacLean v. Huddleston*, 459 U.S. 375, 380 (1983) ("The existence of [an] implied remedy [under § 10(b) and Rule 10b-5] is simply beyond peradventure.").

179 Because the Rule 10b-5 standard is defined in terms of active misstatements or omissions, it is generally inapplicable to situations in which no affirmative disclosure statements are made at all (other than in the context of a duty to update challenge, as discussed in § 11.03[5]). In such situations, the investors'remedies are limited more, for example, to pursuing claims against broker-dealers under the "shingle theory." *See* § 11.05[3][b] (discussing liability based on implied representations underlying broker-dealer recommendations). In the context of undocumented offerings, investors generally are required to sign letters explicitly disavowing reliance on any such recommendations. *See* § 10.04. Note, though, that once a statement is made, the speaker may be liable for omitting material information that would have been necessary to make the statement not misleading.

180 *See Basic, Inc. v. Levinson*, 485 U.S. 224, 231 (1988); *see also Cooperman v. Individual Inc.*, 171 F.3d 43, 49 (1st Cir. 1999). It is unclear whether the market's failure to react to a disclosure of a misrepresentation is determinative of whether that misrepresentation is material. The Ninth Circuit has held that materiality cannot be determined as a matter of law solely based upon the market's failure to react, and it requires a fact specific inquiry, *see No. 84 Employer-Teamster Joint Council Pension Trust Fund v. America West Holding Corp.*, 320 F.3d 920 (9th Cir. 2003), whereas the Third Circuit has held that the failure of a disclosed misrepresentation to affect the stock price permits a court to determine that the misrepresentation is immaterial as a matter of law, *see Merck & Co., Inc. Securities Litigation*, 432 F.3d 261 (3d Cir. 2005); *Oran v. Stafford*, 226 F.3d 275 (3d Cir. 2000).

181 SEC, Staff Accounting Bulletin No. 99 (Aug. 12, 1999), Fed. Sec. L. Rep. (CCH) ¶75,563. Although the SEC has been willing to opine on the materiality of misrepresentations, for the purposes of liability under the Exchange Act courts will determine materiality by asking whether a piece of information was important to a reasonable investor, not to the SEC. *United States v. Berger*, 473 F.3d 1080 (9th Cir. 2007) (applying "reasonable investor" materiality standard to § 32(a) action); *United States v. Tarallo*, 380 F.3d 1174, 1182 (9th Cir. 2004) (same under § 10(b)).

182 For a discussion of the history of quantitative versus qualitative approaches to making materiality decisions, *see* John M. Fedders, *Qualitative Materiality: The Birth, Struggles, and Demise of an Unworkable Standard*, 48 CATH. U. L. REV. 41 (1998).

183 *See* SEC, Staff Accounting Bulletin No. 99 (Aug. 12, 1999), Fed. Sec. L. Rep. (CCH) ¶75,563, at 64,219-4.

184 *See* SEC, Staff Accounting Bulletin No. 99 (Aug. 12, 1999), Fed. Sec. L. Rep. (CCH) ¶75,563, at 64,219-4.

185 Even if a misstatement is immaterial, the inaccurate recording of such an item may, under certain circumstances, constitute a violation of the securities laws. *See* SEC, Staff Accounting Bulletin No. 99 (Aug. 12, 1999), Fed. Sec. L. Rep. (CCH) ¶75,563, at 64,219-4; *see also* Letter from Donald T. Nicolaisen, Chief Accountant, SEC, to AICPA (Feb. 7, 2005) (providing SEC guidance on lease accounting and disclosures). In the letter the SEC staff states that, with respect to lease accounting, if a registrant has not been in compliance with the standards of the Financial Accounting Standards Board, it must "assess the impact of the resulting errors" and restate its financial statements if the error was material or disclose that the "errors were immaterial to prior periods." Moreover, in a speech on May 3, 2005 before the American Academy of Actuaries, the SEC Chief Accountant stated that the SEC will require companies to restate their financial statements for all structured transactions that are aimed at improving the appearance of earnings and that do not have an otherwise legitimate business purpose, regardless of whether the improper accounting is material or not. *See* Rachel McTague, *SEC's Nicolaisen Says Restatement Required for Transactions Without Business Purpose*, BANKING REPORT (BNA) (May 9, 2005).

186 *Hutchinson v. Deutsche Bank Securities Inc.*, 647 F.3d 479 (2d Cir. 2011).

187 *Matrixx Initiatives v. Siracusano*, 131 S. Ct. 1309 (2011).

188 *Matrixx Initiatives v. Siracusano*, 131 S. Ct. 1309, 1319 (2011) (quoting *Basic v. Levinson*, 485 U.S. 224, 236 (1988)).

189 *Matrixx Initiatives v. Siracusano*, 131 S. Ct. 1309, 1321 (2011) (quoting *Basic v. Levinson*, 485 U.S. 224, 236 (1988)).

190 As a result of the amendments to the Exchange Act enacted by the Litigation Reform Act, plaintiffs now must specify at the outset of litigation precisely which statements are alleged to be misleading and the reasons why they are misleading. *See* § 21D(b)(1)(B) of the Exchange Act.

191 *See* § 11.03[2][b].

192 The Litigation Reform Act requires that plaintiffs plead specific facts "giving rise to a strong inference that the defendant acted with the required state of mind"; conclusory assertions of intent will no longer suffice to survive a motion to dismiss. § 21(D)(b)(2) of the Exchange Act.

193 *See Ernst & Ernst v. Hochfelder*, 425 U.S. 185, 193 (1976).

194 *See, e.g.*, *In re Silicon Graphics Inc. Securities Litigation*, 183 F.3d 970, 977 (9th Cir. 1999) (interpreting the

Litigation Reform Act to require "that the evidence must create a strong inference of, at a minimum, ‘ *deliberate recklessness*'" (emphasis added)); *Citibank, N.A. v. K-H Corp.*, 968 F.2d 1489 (2d Cir. 1992); *Akin v. Q-L Investments, Inc.*, 959 F.2d 521 (5th Cir. 1992); *see also In re Lernout & Hauspie Securities Litigation*, 208 F. Supp. 2d 74 (D. Mass. 2002) (holding that "alleged GAAP violations combined with the magnitude of overstatement of revenue are sufficient to create a strong inference of *scienter* via recklessness").

Although courts generally agree that an allegation of recklessness will suffice under the Litigation Reform Act, the precise definition of the plaintiff's burden remains the subject of a split among the Circuits. The Second Circuit has held that the Litigation Reform Act did not change pre-Act pleading requirements followed in that Circuit. Under those requirements, a plaintiff could satisfy his or her burden by showing that a defendant had either a "motive and opportunity" to commit fraud or "strong circumstantial evidence of conscious misbehavior or recklessness." *See, e.g.*, *Novak v. Kasaks*, 216 F.3d 300 (2d Cir.), *cert. denied*, 531 U.S. 1012 (2000) (discussing plaintiff's burden of pleading *scienter* under the Litigation Reform Act and holding that the Act did not change the pre-existing Second Circuit standard). Although the Third Circuit had agreed with the Second in *In re Advanta Corp. Securities Litigation*, 180 F.3d 525, 534 (3d Cir. 1999), the Third Circuit reversed course in light of the Supreme Court's opinion in *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308 (2007), and held that allegations of motive and opportunity "may no longer serve as an independent route to scienter." *Institutional Investors Group v. Avaya*, 564 F.3d 242, 277 (3d Cir. 2009). This reasoning was based on the Seventh Circuit's approach to the question in *Makor Issues & Rights, Ltd. v. Tellabs*, 437 F.3d 588, 601 (7th Cir. 2006), which the Supreme Court did not address. The Second Circuit has reaffirmed the *Novak* approach even after *Tellabs. See, e.g.*, *ECA & Local 134 IBEW Joint Pension Trust of Chicago v. JP Morgan Chase Co.*, 553 F.3d 187, 198–99 (2d Cir. 2009).

The Ninth and Eleventh Circuits, by contrast, have held that the Litigation Reform Act did not merely codify the Second Circuit's standard, and those courts have held that mere "motive and opportunity" will not satisfy the plaintiff's burden. *In re Silicon Graphics, Inc. Securities Litigation*, 183 F.3d 970 (9th Cir. 1999) (representing the strictest interpretation among the circuits of the Litigation Reform Act's *scienter* pleading standard and concluding that the Act raised the *scienter* pleading standard to now require deliberate recklessness); *Bryant v. Avado Brands, Inc.*, 187 F.3d 1271, 1285–86 (11th Cir. 1999); *see also Lipton v. Pathogenesis Corp.*, 284 F.3d 1027, 1034 n.13 (9th Cir. 2002) (citing cases discussing the standard). *But see No. 84 Employer-Teamster Joint Council Pension Trust Fund v. American West Holding Corp.*, 320 F.3d 920 (9th Cir. 2003) (reinstating a securities fraud case after finding that the plaintiff adequately pled materiality and reliance despite the dissenting judge's comments that the holding improperly lowers plaintiffs' burdens under the Litigation Reform Act). Other courts have followed a case-by-case analysis that may consider a showing of motive and opportunity persuasive, depending on the circumstances of the case. *See, e.g.*, *Ottmann v. Hangar Orthopedic Group, Inc.*, 353 F.3d 338, 343 (4th Cir. 2003); *Florida State Board of Administration v. Green Tree Financial Corp.,* 270 F.3d 645, 659–60 (8th Cir. 2001); *Helwig v. Vencor, Inc.*, 251 F.3d 540, 550–52 (6th Cir. 2001) (*en banc*); *Greebel v. FTP Software, Inc.*, 194 F.3d 185, 195–96 (1st Cir. 1999).

Plaintiffs in some cases have attempted to plead *scienter* by demonstrating that the defendants made erroneous certifications in connection with the preparation of the company's periodic reports containing financial statements. However, the circuit courts that have considered whether such certifications (required by §§ 302 and 906 of the Sarbanes-Oxley Act) are, by themselves, sufficient to plead *scienter* have uniformly concluded that they are only "probative of *scienter* if the person signing the certification was severely reckless in certifying the accuracy of the financial statements." *Garfield v. NDC Health Corp.*, 466 F.3d 1255 (11th Cir. 2006); *see also Zucco Partners, LLC v. Digimarc Corp.*, 552 F.3d 981 (9th Cir. 2009); *In re Ceridian Corporation Securities Litigation*, 542 F.3d 240 (8th Cir. 2008); *Central Laborers' Pension Fund v. Integrated Electrical Services Inc.*, 497 F.3d 546 (5th Cir. 2007).

195 *See Aaron v. SEC*, 446 U.S. 680, 690, 695 (1980); *Ernst & Ernst v. Hochfelder*, 425 U.S. 185, 214 (1976).

196 *Sundstrand Corp. v. Sun Chemical Corp.*, 553 F.2d 1033, 1045 (7th Cir. 1977), *cert. denied*, 434 U.S. 875 (1977) (quoting *Franke v. Midwestern Oklahoma Development Authority*, 428 F. Supp. 719 (W.D. Okla.

1976)).

197 *See, e.g.*, *In re Daou Systems, Inc.*, 411 F.3d 1006 (9th Cir. 2005) (severe recklessness in which the danger of misleading buyers or sellers is known or should have been known satisfies *scienter)*; *City of Monroe Employees Retirement System v. Bridgestone Corp.*, 399 F.3d 651 (6th Cir. 2005) (strong inference of recklessness by a manufacturer was sufficient to plead *scienter*); *Ferris, Baker Watts, Inc. v. Ernst & Young, LLP*, 395 F.3d 851 (8th Cir. 2005) (*scienter* is satisfied by an extreme departure from standards of ordinary care); *SEC v. U.S. Environmental Inc.,* 114 F. App'x 426 (2d Cir. 2004) (finding that the defendant violated § 10(b) because he knew or should have known of a windfall scheme); *In re Alpharma Inc. Securities Litigation*, 372 F.3d 137 (3d Cir. 2004) (plaintiffs did not sufficiently allege that executives acted recklessly in violation of Rule 10b-5); *Southland Securities Corp. v. INSpire Insurance Solutions, Inc.*, 365 F.3d 353 (5th Cir. 2004) (*scienter* was not established because the plaintiffs could not establish that the company representatives knew or should have known of fraud); *Ottman v. Hanger Orthopedic Group, Inc.*, 353 F.3d 338 (4th Cir. 2003) (recklessness suffices in pleading *scienter* in a § 10(b) claim).

198 *Sundstrand Corp. v. Sun Chemical Corp.*, 553 F.2d 1033, 1045 (7th Cir. 1977), *cert. denied*, 434 U.S. 875 (1977).

199 *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308 (2007).

200 Reliance, however, is not a required element of SEC enforcement actions for violations of Rule 10b-5 under the Exchange Act. *See United States v. Vilar,* 729 F.3d 62, 88–89 (2d Cir. 2013) ("the long-established law of our Circuit, and nearly every other circuit, is that, when the government (as opposed to a private plaintiff) brings a civil or criminal action under Section 10(b) and Rule 10b-5, it need only prove, in addition to scienter, materiality … and not actual reliance").

201 *Bastian v. Petren Resources Corp.*, 892 F.2d 680, 685 (7th Cir.), *cert. denied*, 496 U.S. 906 (1990); *Lattanzio v. Deloitte & Touche LLP*, 476 F.3d 147, 157 n.1 (2d Cir. 2007).

202 The contrary also is true: When abundant disclaimers and other cautionary language render alleged misstatements or omissions immaterial under the "bespeaks caution" doctrine, *see* § 11.03[1][c], the courts generally consider that reliance on the misstatements or omissions would be unreasonable.

The courts have generally held that it would be inconsistent with § 29(a) of the Exchange Act, which precludes anticipatory waivers of Exchange Act protections such as § 10(b), to find a nonreliance provision to bar, as a matter of law, the assertion of a 10b-5 claim. Instead, a nonreliance provision should be taken into account as one evidentiary factor in determining whether the plaintiff reasonably relied on the accuracy of information provided to it. Whether reliance by the plaintiff was "reasonable" depends on a number of factors, including (i) whether the plaintiff had the opportunity to detect the fraud, (ii) the sophistication of the plaintiff, and (iii) the plaintiff's access to the relevant information. *Staub v. Vaisman and Co., Inc.*, 540 F.2d 591, 598 (3d Cir. 1976). Courts have reached different results in applying this analysis. *Compare AES v. Dow Chemical Co.*, 325 F.3d 175 (3d Cir. 2003) (finding § 29(a) of the Exchange Act precludes contractual waiver of duties imposed by Rule 10b-5; parties had agreed seller had no responsibility for materials furnished in connection with the sale of a business, only with respect to representations and warranties in the purchase and sale agreement and attached exhibits), *and Rogen v. Ilikon Corp.*, 361 F.2d 260 (1st Cir. 1966) (stating a party cannot contract to avoid Rule 10b-5 responsibilities because it would defeat the purpose of the Exchange Act and undermine Rule 10b-5 and § 29(a)), *with Harsco v. Segui*, 91 F.3d 337 (2d Cir. 1996) (disclaimer of Rule 10b-5 obligations related to oral representations was effective where the parties explicitly stated in the contract to only be bound by the contract terms because the waiver did not eviscerate the contracting parties' Rule 10b-5 duties). *Cf. Vacold LLC v. Cerami*, 545 F.3d 114, 122 (2d Cir. 2008) (refusing to give effect to contractual language purportedly waiving Rule 10b-5 liability altogether).

203 *Affiliated Ute v. United States*, 406 U.S. 128 (1972).

204 *Affiliated Ute v. United States*, 406 U.S. 128, 153–54 (1972); *see also Regents of the University of California v. Credit Suisse First Boston (USA), Inc.*, 482 F.3d 372, 384 (5th Cir. 2007) ("For us to invoke the Affiliated Ute presumption of reliance on an omission, a plaintiff must (1) allege a case primarily based

on omissions or non-disclosure and (2) demonstrate that the defendant owed him a duty of disclosure."). In *Regents*, the plaintiffs, who were Enron investors, brought Rule 10b-5(a) and (c) claims against certain banks, alleging that the banks had entered into transactions with Enron that allowed Enron to misstate its financial condition. Despite the fact that the plaintiffs made no allegation that the banks owed them a fiduciary duty, the district court held that the *Affiliated Ute* presumption should apply because the bank had a "duty not to engage in a fraudulent 'scheme.'" *In re Enron Corp. Securities, Derivative & ERISA Litigation*, 529 F. Supp. 2d 644, 683 (S.D. Tex. 2006). The Fifth Circuit reversed, holding that the Affiliated Ute presumption does not apply because "where the plaintiffs had no expectation that the banks would provide them with information, there is no reason to expect that the plaintiffs were relying on their candor." *Regents of the University of California v. Credit Suisse First Boston (USA), Inc.*, 482 F.3d 372 (5th Cir. 2007).

205 Whether the market for the security was actually "efficient" is a threshold question for a court considering whether to apply this presumption. If the market is not efficient, then the market price cannot be presumed to reflect all material information—including material misinformation—about an issuer and its securities. *See Freeman v. Laventhol & Horwath*, 915 F.2d 193, 198 (6th Cir. 1990). The First Circuit has defined an efficient market as "one in which the market price of the stock *fully reflects all* publicly available information." *In re PolyMedica Corp. Securities Litigation*, 432 F.3d 1 (1st Cir. 2005). In its decision, the First Circuit acknowledged that this can be a difficult determination for a court to make, but further counseled that an efficient market responds "so quickly to new information that ordinary investors cannot make trading profits on the basis of such information." Further, in *Gariety v. Grant Thornton, LLP*, 368 F.3d 356 (4th Cir. 2004), the Fourth Circuit held that a district court cannot certify a class under the "fraud-on-the-market" theory until the court conducts a "rigorous analysis" and finds that the doctrine actually applies. *See also In re American International Group Inc. Securities Litigation*, 265 F.R.D. 157, 181 (S.D.N.Y. 2010) (holding that *In re Initial Public Offering Securities Litigation*, 471 F.3d 24, 42 (2d Cir. 2006), "requires a district court to make a 'definitive assessment'…[regarding the applicability of] the fraud-on-the-market presumption"), *rev'd on other grounds*, 689 F.3d 229 (2d Cir. 2012).

206 The U.S. Supreme Court adopted this "fraud-on-the-market" theory in *Basic, Inc. v. Levinson*, 485 U.S. 224, 243–44 (1988) (selling shareholders satisfied reliance requirement by claim that they sold their shares into a market artificially depressed by Basic's false statements that no merger negotiations were underway).

207 *See, e.g.*, *In re Apple Computer Securities Litigation*, 886 F.2d 1109, 1115–16 (9th Cir. 1989), *cert. denied*, 496 U.S. 943 (1990) (no liability under Rule 10b-5 for the defendant's omission because the nondisclosed information had been made available to the market through widespread press reports, so the market price was not affected by the defendant's omission), *overruled on other grounds by Rubke v. Capitol Bancorp*, 551 F.3d 1156 (9th Cir. 2009).

208 *In re Initial Public Offering Securities Litigation*, 471 F.3d 24 (2d Cir. 2006).

209 *See Halliburton Co. v. Erica P. John Fund, Inc.*, 134 S. Ct. 2398 (2014).

210 *See Halliburton Co. v. Erica P. John Fund, Inc.*, 134 S. Ct. 2398, 2417 (2014).

211 *See Erica P. John Fund, Inc. v. Halliburton Co.*, 309 F.R.D. 251 (N.D. Tex. 2015).

212 *See IBEW Local 98 Pension Fund v. Best Buy Co.*, 818 F.3d 775 (8th Cir. 2016).

213 *In re Goldman Sachs Group, Inc. Securities Litigation*, 2015 WL 5613150, at *6 (S.D.N.Y. Sept. 24, 2015); *see also Strougo v. Barclays PLC*, 312 F.R.D. 307, 323–27 (S.D.N.Y. 2016) (holding the defendant did not "me[e]t their burden of proving *lack of* price impact" despite identifying evidence that the securities' prices did not "show a statistically significant increase … on any of the alleged misstatement dates" and that "other factors contributed to the price decline").

214 In the research analyst context, in order to adequately plead loss causation the plaintiff must demonstrate that corrective disclosure regarding the falsity of stock recommendations was the cause of the decline in stock value that the plaintiff claims as his loss. *See Lentell v. Merrill Lynch & Co. Inc.*, 396 F.3d 161 (2d Cir. 2005), *cert. denied*, 546 U.S. 935 (2005) (holding that nonclient investors had failed to establish loss causation in suit against investment bank analysts over allegedly misleading research reports because they did not demonstrate that the loss was both foreseeable and that it was caused by the "materialization of the

concealed risk"); *Swack v. Credit Suisse First Boston*, 230 F.R.D. 250 (D. Mass. 2005) (granting motion for class certification for claims alleging violations of §§ 10(b) and 20(a) of the Exchange Act based on allegedly false and misleading research reports that, in the court's analysis, were tied to the artificial inflation of the price of the company's stock); *DeMarco v. Lehman Bros., Inc.*, 222 F.R.D. 243 (S.D.N.Y. 2004) (denying defendant's motion to dismiss and holding that the plaintiff had sufficiently pled loss causation by alleging that the disclosure of negative information led to stock decline); *In re Merrill Lynch Tyco Research Securities Litigation*, No. 03 CV 4080 (MP), 2004 WL 305809 (S.D.N.Y. Feb. 18, 2004) (granting defendant investment banks' motion to dismiss and holding that the plaintiff-investor failed to adequately plead loss causation because no evidence was proffered to show that statements in an analyst report were the foreseeable cause of a decline in the stock price); *In re Salomon Analyst AT&T Litigation*, 350 F. Supp. 2d 455 (S.D.N.Y. 2004) (holding that plaintiff adequately pled loss causation because he demonstrated not only artificial price inflation but also a "causal chain linking their losses to the alleged fraud"), *vacated on other grounds, In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474 (2d Cir. 2008).

215 *See Broudo v. Dura Pharmaceuticals, Inc.*, 339 F.3d 933, 938 (9th Cir. 2003), *rev'd*, 544 U.S. 336 (2005) ("[L]oss causation does not require pleading a stock price drop following a corrective disclosure or otherwise. It merely requires pleading that the price at the time of purchase was overstated and sufficient identification of the cause.").

216 *See Dura Pharmaceuticals, Inc., v. Broudo*, 544 U.S. 336 (2005).

217 *See Dura Pharmaceuticals, Inc., v. Broudo*, 544 U.S. 336 (2005).

218 *See* § 11.05[3][b] for a discussion of the so-called "shingle theory" under which this implied duty to investigate arises.

219 Business diligence generally involves meetings with the issuer's senior management to learn about the business, meeting with the issuer's independent accountants to discuss the issuer's accounts and its internal control systems and review and discussion of the offering document while it is being drafted. In contrast, legal or documentary diligence consists of an all-encompassing review of the corporate and other documents relating to the issuer and its business. Whereas business diligence is designed in large part to facilitate an understanding of the issuer and to determine what disclosure is necessary or appropriate for both marketing and legal reasons, a substantial portion of legal or documentary diligence is undertaken principally for verification purposes, *i.e.*, to establish that there is nothing in the issuer's files to suggest inaccuracies in the offering document or to indicate a need for additional disclosure.

220 *See Blue Chip Stamps v. Manor Drug Stores*, 421 U.S. 723, 754–55 (1975). The standing requirement bars three principal groups of potential plaintiffs from suit: (i) potential purchasers, except for those holding a contractual right to purchase the security, (ii) securities holders who allegedly decided not to sell because of some fraud, and (iii) shareholders, creditors and others related to an issuer who suffered loss in the value of their investment due to the alleged fraud. *See Blue Chip Stamps v. Manor Drug Stores*, 421 U.S. 723, 737–38 (1975).

Additionally, in *Ontario Public Service Employees Union Pension Trust Fund v. Nortel Networks Corp.*, 369 F.3d 27 (2d Cir. 2004), the Second Circuit effectively added a fourth class to the group of potential plaintiffs that lack the requisite standing under Rule 10b-5. The court held that the shareholders of one company, JDS, did not have standing to sue another company, Nortel, under Rule 10b-5 for material misstatements that affected JDS. Pursuant to *Blue Chip Stamps*, shareholders were barred from pursuing a securities fraud claim against a company of which they were not (or had not been) equity holders. However, Nortel and JDS had a strong business relationship and announced in press releases during early 2001 that they would be engaging in a $2.5 billion asset-for-stock sale (JDS's laser business for Nortel stock). Plaintiffs, who were holders of JDS stock, alleged that Nortel knowingly made materially misleading statements in the press releases that led to a significant loss in revenue for JDS. Nonetheless, the court held that the implied private right of action under Rule 10b-5 is not an unfettered right, but has limitations that are aimed at protecting companies from abusive litigation. The plaintiffs argued that the phrase "in connection with the purchase or sale of *any* security" includes securities of companies affected by the offending company's misrepresentation. The court rejected this expansive construction of Rule 10b-5, reasoning instead that "any security" refers to all types of securities that are owned by (in this case) equity holders and not "*any affected company's* securities."

221 Courts take different approaches to the question whether § 20(a) of the Exchange Act requires a person to exercise, or simply possess, the power to control. *Compare Harrison v. Dean Witter Reynolds, Inc.*, 79 F.3d 609, 614 (7th Cir. 1996) (using a two-part test according to which the plaintiff "must establish, first, that the defendant … actually participated in (*i.e.*, exercised control over) the operations of the corporation in general; then he or she must prove that the defendant possessed the power to control the specific transaction or activity upon which the primary violation is predicated, but he or she need not prove that this later power was exercised") *with Howard v. Everex Systems, Inc.*, 228 F.3d 1057, 1065 (9th Cir. 2000) ("[I]n order to prove [as opposed to simply make out] a *prima facie* case under § 20(a), a plaintiff must prove … that the defendant exercised actual power or control over the primary violator.…"). The Second Circuit's standard, which simply requires the plaintiff to show "control of the primary violator by the plaintiff," *Boguslavsky v. Kaplan*, 159 F.3d 715, 720 (2d Cir. 1990), has been interpreted by one district court not to require proof that control was exercised. *See Dietrich v. Bauer*, 126 F. Supp. 2d 759 (S.D.N.Y. 2001).

In addition, all of the circuit courts to consider directly the issue have held that the group pleading doctrine has not survived the enactment of the Litigation Reform Act. Under the court-created doctrine, group published information, such as annual reports and press releases, are attributable to the officers and directors with day-to-day control in the company, regardless of their participation in the actual documents. *Winer Family Trust v. Queen*, 503 F.3d 319 (3d Cir. 2007); *Financial Acquisition Partners, L.P. v. Blackwell*, 440 F.3d 278, 287 (5th Cir. 2006); *Makor Issues & Rights, Ltd. v. Tellabs, Inc.*, 437 F.3d 588, 602–03 (7th Cir. 2006), *vacated on other grounds*, *Tellabs, Inc. v. Makor Issues & Rights Ltd.*, 551 U.S. 308 (2007). These courts have held that the presumption created by the group pleading doctrine is inconsistent with the heightened pleading standards of the Litigation Reform Act. Despite these rulings, the group pleading doctrine continues to survive in some districts. *See Loreley Financing (Jersey) No. 3 Ltd. v. Wells Fargo Securities, LLC*, 797 F.3d 160, 172 n.7 (2d Cir. 2015) (recognizing that "numerous district courts in our Circuit" have concluded that the doctrine remains viable after the Reform Act, but declining to resolve the issue).

222 § 20(a) of the Exchange Act. Courts are split over whether the plaintiff has the burden of proving culpable participation or whether the defendant has the burden of proving good faith. *Compare Howard v. Everex Systems, Inc.*, 228 F.3d 1057, 1065 (9th Cir. 2000) (the plaintiff does not have the burden of proof; the defendant may assert a good faith defense) *with SEC v. First Jersey Securities, Inc.*, 101 F.3d 1450, 1472 (2d Cir. 1996) (the plaintiff must "show that the controlling person was in some meaningful sense a culpable participant in the fraud perpetrated by the controlled person," and the burden only shifts to the defendant once the plaintiff has made out a *prima facie* case (internal quotation marks and citation omitted)).

223 *See In re Adelphia Communications Corp. Securities & Derivative Litigation*, 398 F. Supp. 2d 244, 261–62 (S.D.N.Y. 2005) (citing *In re Scholastic Corp. Securities Litigation*, 252 F.3d 63, 72 (2d Cir. 2001)).

224 The SEC's authority to pursue aiders and abettors was codified explicitly in § 104 of the Litigation Reform Act, which amended § 20 of the Exchange Act to provide that the SEC could bring an action against "any person that knowingly provides substantial assistance" to a primary violator of the securities laws. In response to several decisions holding that secondary actors could only be liable for aiding and abetting securities fraud to the extent that they had actual knowledge of the fraud, the Dodd-Frank Act further amended § 20 of the Exchange Act to cover persons who either "knowingly or recklessly" provide substantial assistance to primary violators of the securities laws. *See* § 929O of the Dodd-Frank Act.

225 *See* Stephen M. Cutler, then-Director of SEC Enforcement, The Themes of Sarbanes-Oxley as Reflected in the SEC's Enforcement Program (Sept. 20, 2004); *SEC v. Steckler*, SEC Litigation Release No. 19385 (Sept. 21, 2005). In one demonstration of the Division of Enforcement's increased use of aiding and abetting charges against "enablers," the SEC has filed aiding and abetting actions against 30 individuals who allegedly assisted U.S. Foodservice, Inc. (a subsidiary of Royal Ahold) in a scheme to overstate

revenues by as much as $700 million. The complaints against these individuals, who were vendors who supplied U.S. Foodservice, allege that they assisted the fraudulent scheme by submitting false confirmation letters to the company's auditors. *See SEC Charges Seven Individuals with Aiding and Abetting Financial Fraud at Royal Ahold's U.S. Foodservice Subsidiary for Signing and Returning False Audit Confirmations*, SEC Litigation Release No. 19454 (Nov. 2, 2005); *Nine Individuals Charged by the Securities and Exchange Commission with Aiding and Abetting Financial Fraud at Royal Ahold's U.S. Foodservice Subsidiary for Signing and Returning False Audit Confirmations*, SEC Litigation Release No. 19034 (Jan. 13, 2005). As part of a $22 million settlement agreement, the SEC found that KPMG LLP caused and willfully aided and abetted Xerox Corp.'s fraud, reporting and recordkeeping violations. *SEC v. KPMG LLP*, SEC Litigation Release No. 19191 (Apr. 19, 2005). Time Warner Inc. agreed to a $300 million penalty to settle charges by the SEC of fraud and aiding and abetting fraud by others in connection with its use of fraudulent "round-trip" transactions that boosted its online advertising revenue. *SEC v. Time Warner Inc.*, SEC Litigation Release No. 19147 (Mar. 21, 2005). J.P. Morgan Chase & Co. settled charges by the SEC for $135 million that it aided and abetted Enron's manipulation of its reported financial results through a series of complex structured financing transactions called "prepays." *SEC v. J.P. Morgan Chase & Co.*, SEC Litigation Release No. 18252 (July 28, 2003). Citigroup Inc. also paid $120 million to settle similar charges brought by the SEC that it aided and abetted violations by Enron and Dynegy Inc. *In re Citigroup*, SEC Admin. Proc. 3-11192 (July 28, 2003).

226 *See Central Bank v. First Interstate Bank*, 511 U.S. 164, 178, 190–92 (1994).

227 *See, e.g.*, *Hollinger v. Titan Capital Corp.*, 914 F.2d 1564, 1576–77 (9th Cir. 1990), *cert. denied*, 499 U.S. 976 (1991) (pre- *Central Bank v. First Interstate Bank* case holding that the control person provision of the Exchange Act was "intended to supplement, not to supplant, the common law theory of ' *respondeat superior*' as a basis for vicarious liability in securities cases").

228 *Compare In re Parmalat Securities Litigation*, 594 F. Supp. 2d 444, 450 (S.D.N.Y. 2009); *Seolas v. Bilzerian*, 951 F. Supp. 978 (D. Utah 1997), and *Pollack v. Laidlaw Holdings*, *Inc.*, Fed. Sec. L. Rep. (CCH) ¶98,741 (S.D.N.Y. May 3, 1995) (holding that *respondeat superior* theory survives *Central Bank v. First Interstate Bank*), *with In re Prudential Insurance Co.*, 975 F. Supp. 584 (D.N.J. 1996), *ESI Montgomery County, Inc. v. Montenay International Corp.*, Fed. Sec. L. Rep. (CCH) ¶99,345 (S.D.N.Y. Jan. 23, 1996), and *Pitten v. Jacobs*, 903 F. Supp. 937, 950 (D.S.C. 1995) (holding that *Central Bank v. First Interstate Bank's* elimination of private aiding and abetting suits also eliminated private actions for *respondeat superior*).

Courts have also reached differing conclusions on the related question of whether the fraudulent intent of an employee acting for his own benefit can be attributed to his employer. Some courts have applied the common law adverse interest exception to prevent imputation of *scienter* under those circumstances. *See, e.g.*, *Kaplan v. Utilicorp United, Inc.*, 9 F.3d 405, 407 (5th Cir. 1993) ("the knowledge and actions of employees acting adversely to the corporate employer cannot be imputed to the corporation"). The Ninth Circuit, however, has cast doubt on whether the adverse interest exception is viable in securities litigation, by concluding that an employer cannot benefit from the exception when facing claims filed by an innocent third-party investor. *In re ChinaCast Education Corporation Securities Litigation*, 809 F.3d 471 (9th Cir. 2015).

229 *See In re Alstom SA Securities Litigation*, 454 F. Supp. 2d 187, 213–16 (S.D.N.Y. 2006). In *Alstom*, plaintiffs brought securities law claims against Alstom S.A. and several of its subsidiaries based on an alleged accounting fraud and related misleading public statements. The plaintiffs argued that the corporate parent should be liable for the acts of its subsidiaries under a *respondeat superior* or agency theory, but the court decided that it did not need to reach these arguments. Instead, the court found that the plaintiffs had pled facts to support a veil-piercing theory of liability based on the allegations of dominion and control exercised by the parent over its subsidiaries. *See also In re Parmalat Securities Litigation*, 375 F. Supp. 2d 278 (S.D.N.Y. 2005) (allowing plaintiffs to proceed under agency theory of liability).

230 *Stoneridge Investment v. Scientific-Atlanta, Inc.*, 552 U.S. 148 (2008).

231 The provisions of Rule 10b-5(a) and (c) state, in relevant part, that it is unlawful for "any person, directly or indirectly …(a) to *employ any device, scheme, or artifice to defraud*… or (c) to *engage in any act, practice or course of business which would operate as a fraud or deceit* upon any person, in connection with the purchase or sale of any security." Rule 10b-5 under the Exchange Act (emphasis added); *see, e.g.*, *In re Enron Securities, Derivatives & ERISA Litigation*, 439 F. Supp. 2d 692 (S.D. Tex. 2006) (dismissing claims brought under Rule 10b-5(a) and (c)); *In re Parmalat Securities Litigation*, 376 F. Supp. 2d 472 (S.D.N.Y. 2005) (rejecting defendants' argument that Rule 10b-5(a) and (c) can only apply to "manipulative" acts and holding that these subsections only require the plaintiff to plead that a defendant's specific deceptive act was part of a scheme that had an effect on the plaintiff-investors); *In re AOL Time Warner, Inc. Securities & ERISA Litigation*, 381 F. Supp. 2d 192 (S.D.N.Y. 2004) (allowing plaintiff to proceed under Rule 10b-5(a) and (c)); *Cooper v. Pickett*, 137 F.3d 616 (9th Cir. 1997) (reversing district court's dismissal of complaint, holding that *Central Bank* does not preclude secondary actor liability for participation in a fraudulent scheme); *Adam v. Silicon Valley Bancshares*, 884 F. Supp. 1398 (N.D. Cal. 1995) (refusing to dismiss suit pursuant to Rule 10b-5(c) against accountants for their involvement in misrepresentations made by issuer).

232 The early trend, in which courts were reluctant to grant summary judgment in favor of defendants facing "scheme" allegations, is typified by *In re Enron Corp. Securities, Derivative & ERISA Litigation*, 235 F. Supp. 2d 549, 581–688 (S.D. Tex. 2002) ("*Enron I*"). The court refused to dismiss claims against lawyers, accountants and financial institutions and adopted the position taken by the SEC in its *Amicus Curiae* brief that secondary actors can be held liable as primary violators if they create a misrepresentation, for example, by writing documents or portions of documents containing misrepresentations that will be given to investors. The court held that *Central Bank's* preclusion of aider and abettor liability did not shield all secondary actors from liability, particularly given the broader provisions of Rule 10b-5(a) and (c). *See also Pioneer Insurance Co. v. Chase Securities*, 2002 U.S. Dist. LEXIS 7562 (N.D. Okla. Mar. 28, 2002) (adopting report and recommendation of the magistrate judge that a law firm could be a primary violator if its negative assurance letters, which were addressed to investors, contained misrepresentations); *In re Lernout & Hauspie Securities Litigation*, 208 F. Supp. 2d 74 (D. Mass. 2002) (holding that Belgian auditor's drafting, signing and publication of clean audit report included in corporate filings with the SEC was sufficient to trigger primary liability when those filings were "rife with false and misleading information"); *see also In re Parmalat Securities Litigation*, 376 F. Supp. 2d 472 (S.D.N.Y. 2005) (denying a motion to dismiss 10b-5(a) and (c) claims).

More recent decisions have suggested that these earlier decisions improperly exposed secondary actors to liability for conduct that amounted to no more than aiding and abetting. In fact, in one of these more recent decisions, the same district court that denied a defendant's motion for summary judgment in *Enron I* noted that the case law and legal standards had evolved in the intervening years. *See In re Enron Securities, Derivative & ERISA Litigation*, 439 F. Supp. 2d 692 (S.D. Tex. 2006). Here, the court granted defendant's motion and dismissed Rule 10b-5(a) and (c) claims against a secondary actor (here, a bank that had been a counterparty to various transactions that Enron had used to misstate its financial condition). In fact, the court explicitly repudiated its ruling in *Enron I* insofar as that ruling would permit securities fraud claims to be brought against those who only aid and abet the fraud. The court distinguished between secondary actors who are counterparties to economically substantive transactions with primary violators (even if the transactions may become "deceptive" because of the way the primary violator characterizes or discloses them) and parties who engage in inherently deceptive conduct.

233 *Stoneridge Investment v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 161 (2008).

234 *Stoneridge Investment v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 161 (2008).

235 *See In re DVI, Inc. Securities Litigation*, 639 F.3d 623, 648–49 (3d Cir. 2011) (holding, in a "decision … guided by *Stoneridge*," "that a plaintiff cannot invoke the fraud-on-the-market presumption of reliance in a private action under Rule 10b-5(a) and (c) unless the deceptive conduct has been publicly disclosed and attributed to the actor"); *Affco Investments 2001, L.L.C. v. Proskauer Rose, L.L.P.*, 625 F.3d 185, 193–195 (5th Cir. 2010) (concluding, after analyzing *Stoneridge*, that "explicit attribution is required to show reliance under section 10(b)"); *Pacific Investment Management Co. LLC v. Mayer Brown LLP*, 603 F.3d 144, 152–

58 (2d Cir. 2010) (reaffirming prior "attribution" standard as "consistent with *Stoneridge*").

236 *Janus Capital Group, Inc. v. First Derivative Trader*, 131 S. Ct. 2296 (2011).

237 *Janus Capital Group, Inc. v. First Derivative Trader*, 131 S. Ct. 2296, 2302 (2011).

238 *Compare In re Fannie Mae 2008 Securities Litigation*, 891 F. Supp. 2d 458, 484 (S.D.N.Y. 2012), *aff'd*, 525 F. App'x 16 (2d Cir. 2013) (holding underwriter did not "make" alleged misstatements in the offering materials under Janus because "[a]ny role [the underwriter] served in the drafting process, or in preparing and publishing the offering materials, is insufficient to impose primary liability under Janus" and "it is absolutely clear that [the issuer], not [the underwriter], had ultimate authority over statements made in its SEC filings incorporated by reference in the offering materials") with *In re Puda Coal Securities Inc., Litigation*, 30 F. Supp. 3d 261, 267 (S.D.N.Y. 2014) (holding underwriters could be liable under Janus based on allegations they "actively participated in creating" the prospectus and "draft[ed] it jointly with [the issuer's] management," had a formal agreement with the issuer requiring the prospectus to be "in a form approved by" the underwriter, and "communicated their involvement with the prospectus to the investing public" by prominently displaying their names on the prospectus, soliciting investors for the offering and distributing the prospectus).

239 *Compare Glickenhaus & Co. v. Household International Inc.*, 787 F.3d 408, 425 (7th Cir. 2015) ("[n]othing in Janus limits its holding to legally independent third parties" and "[t]he Court's interpretation [in Janus] applies generally, not just to corporate outsiders") with *City of Pontiac General Employees' Retirement System v. Lockheed Martin Corp*., 875 F. Supp. 2d 359, 374 (S.D.N.Y. 2012) (stating *Janus* "addressed only whether third parties can be held liable for statements made by their clients … and has no bearing on how corporate officers who work together in the same entity can be held jointly responsible on a theory of primary liability").

240 The plaintiff also may seek to rescind the contract or defend against an action by the other party for the contract's enforcement. *See* § 29(b) of the Exchange Act (contracts made in violation of the Exchange Act are voidable under certain conditions); *Aimis Art Corp. v. Northern Trust Securities, Inc.*, 641 F. Supp. 2d 314, 319 (S.D.N.Y. 2009) (noting that "appropriate grounds for damages in § 10(b) actions are not limitless, and courts have required plaintiffs to choose between rescinding a transaction and being paid restitution on the one hand and holding the defrauder to the bargain and recovering out-of-pocket losses resulting from the fraudulent transaction on the other hand" (citation omitted)); *Regional Properties, Inc. v. Financial & Real Estate Consulting Co.*, 678 F.2d 552, 558 (5th Cir. 1982).

241 In *Acticon AG v. China North East Petroleum Holdings Ltd.*, 692 F.3d 34 (2d Cir. 2012), the Second Circuit held that a plaintiff's out-of-pocket losses under Rule 10b-5 are not eliminated where the share price rebounds to the plaintiff's purchase price after the final alleged corrective disclosure. The court indicated, however, that any price recovery that represented the market's reactions to the disclosure of the alleged fraud, rather than an unrelated gain, could offset the plaintiff's recoverable loss.

242 *See, e.g.*, *Ohio Public Employees Retirement System v. Federal Home Loan Mortgage Corp.*, 830 F.3d 376 (6th Cir. 2016) (collecting cases). In the securities litigation against BP arising out of the 2010 Deepwater Horizon oil spill, however, the Fifth Circuit held that such materialization of the risk damages could only be awarded to a plaintiff who would not have purchased the relevant security had it known the true nature of the allegedly concealed risk. *See Ludlow v. BP, P.L.C.*, 800 F.3d 674, 690 (5th Cir. 2015). The plaintiffs in that case alleged that BP misstated the efficacy of its safety procedures, which created an impression that the risk of a spill was lower than it actually was, and that this concealed risk materialized when the later spill occurred. The plaintiffs sought damages based on the price declines caused by the spill itself, notwithstanding that the inflation on the dates that they purchased securities only reflected the increased risk of a spill and not the full materialization of that risk. Without addressing the viability of the materialization of the risk measure of damages in general, the Fifth Circuit reasoned that full materialization of the risk damages "would prove a windfall" for an investor who "might have purchased the stock even assuming the true risk," since such an investor would have suffered the same eventual loss had they purchased at a lower price. Instead, the Fifth Circuit held that the appropriate damages measure for such

an investor is "based on the inflated price she paid." The Fifth Circuit thus limited full materialization of the risk damages to investors who would not have purchased the security at all had they known the true risk, in order to compensate them for the materialization of a risk that they otherwise would not have taken.

243 For example, one court has stated that damages based on the gross economic loss in the value of the plaintiff's stock portfolio over the period in which the fraud was perpetrated should be reduced by the average percentage decline in the Standard & Poor's Index or some other well-recognized index, since the defendant should have "no general responsibility for the general decline in economic conditions." *Rolf v. Blyth, Eastman Dillon & Co.*, 570 F.2d 38, 49 n.22 (2d Cir.), *cert. denied*, 439 U.S. 1039 (1978). Another court has approved the jury's valuation of the stock absent the fraud (the issuer's overvaluation of inventory and sales) based on expert testimony, although the "actual response of the market" following the disclosure must be taken into account. *Sirota v. Solitron Devices, Inc.*, 673 F.2d 566, 577–78 (2d Cir.), *cert. denied*, 459 U.S. 838 (1982). The Seventh Circuit, however, has held that a plaintiff can recover all of the company-specific securities price declines over an extended period of time under a so-called "leakage theory" if its expert "testifies that no firm-specific, nonfraud related information contributed to the decline in stock price during the relevant time period and explains in nonconclusory terms the basis for this opinion." *Glickenhaus & Co. v. Household International, Inc.*, 787 F.3d 408, 422 (7th Cir. 2015).

244 § 21D(e)(1) of the Exchange Act. This provision only limits damages; it does not provide an alternate formulation for calculating damages.

245 *See* § 21D(e) of the Exchange Act. *See generally* Lewis D. Lowenfals & Alan R. Bromberg, *Compensatory Damages in Rule 10b-5 Actions: Pragmatic Justice or Chaos?*, 30 SETON HALL L. REV. 1083, 1113 (2000) ("This allowance for a 'bounce back' in price should yield a more accurate and fairer estimate of the stock's true value and therefore a more accurate measure of the deviation from this true value and the resulting damages caused by the fraud.").

246 *See* § 21D(f)(2) of the Exchange Act. Defendants who settle an action under the Exchange Act are insulated from contribution claims by nonsettling defendants, and nonsettling defendants receive a credit against any adverse judgment at trial for the greater of the amount of any settlements or the percentage of responsibility of the settling defendants. The system of proportionate liability should reduce the exposure of defendants, such as accounting firms, that frequently play relatively insignificant roles in the issuer's misdeeds, but historically risked verdicts in the full amount of the plaintiff's recoverable damages, subject only to the right to seek contribution.

247 *See* § 21(d)(1) and (2) of the Exchange Act.

248 *See* § 21(d)(3) of the Exchange Act; SEC Release No. 33-10104 (June 27, 2016). The SEC, however, has imposed substantial civil penalties on companies and individuals for fraud violations. *See, e.g.*, *SEC v. WorldCom Inc.*, SEC Litigation Release No. 18219 (July 7, 2003) (fining WorldCom Inc. $2.25 billion); Press Release, SEC, SEC and U.S. Attorney Settle Massive Financial Fraud Case Against Adelphia and Rigas Family for $715 Million (Apr. 25, 2005); *SEC v. Time Warner Inc.*, SEC Litigation Release No. 19147 (Mar. 21, 2005) (fining Time Warner Inc. $300 million).

249 *See* § 32(a) of the Exchange Act.

250 *See SEC v. Rind*, 991 F.2d 1486, 1491–92 (9th Cir.), *cert. denied*, 510 U.S. 963 (1993) (reasoning that SEC actions serve the public purpose of deterring wrongdoing, rather than the private purpose of compensating individuals for their losses). However, the SEC is still subject to a five-year statute of limitations for the enforcement of "any civil fine, penalty or forfeiture, pecuniary or otherwise." *See* 28 U.S.C. § 2462; *see also* § 11.09[2][d].

251 28 U.S.C. § 1658(b). Prior to the adoption of the Sarbanes-Oxley Act, private actions were required to be commenced within one year of the discovery of the violation but no later than three years after its occurrence. *See Lampf, Pleva, Lifkind, Prupis & Petigrow v. Gilbertson*, 501 U.S. 350 (1991).

252 *Merck & Co., Inc. v. Reynolds*, 130 S. Ct. 1784 (2010).

253 *Merck & Co., Inc. v. Reynolds*, 130 S. Ct. 1784, 1798 (2010). Courts have reached different conclusions concerning whether *Merck's* rejection of an "inquiry notice" approach applies equally to the separate statute

of limitations applicable to claims under §§ 11 and 12(a)(2) of the Securities Act. *Compare Pension Trust Fund for Operating Engineers v. Mortgage Asset Securitization Transactions, Inc.*, 730 F.3d 263 (3d Cir. 2013) (applying *Merck* to claims under the Securities Act) *with Lighthouse Financial Group v. Royal Bank of Scotland Group*, PLC, 902 F. Supp. 2d 329 (S.D.N.Y. 2012) (declining to apply *Merck* to claims under the Securities Act).

254 § 21D(b)(2) of the Exchange Act.

255 *Merck & Co., Inc. v. Reynolds*, 130 S. Ct. 1784, 1796 (2010) (citation omitted).

256 *See City of Pontiac General Employees' Retirement System v. MBIA, Inc.*, 637 F.3d 169 (2d Cir. 2011).

257 Section 17(a) of the Exchange Act provides that it is "unlawful for any person in the offer or sale of any securities" to: (i) "employ any device, scheme, or artifice to defraud," (ii) "obtain money or property by means of any untrue statement of a material fact or any omission to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading," or (iii) "engage in any transaction, practice, or course of business which operates or would operate as a fraud or deceit upon the purchaser."

258 *See United States v. Naftalin*, 441 U.S. 768, 778 (1979).

259 The section differs from Rule 10b-5 in two potentially significant respects. First, it applies only to the "offer or sale" of a security, rather than the purchase or sale. Second, its reference to "offers" as well as "sales" might be read to reach "offerees" in addition to actual purchasers, as required by Rule 10b-5.

260 The sole exception is an action under § 17(a)(1), prohibiting the use of any device, scheme or artifice to defraud, which does require proof of *scienter. See Aaron v. SEC*, 446 U.S. 680, 695–96 (1980).

261 *See, e.g.*, *Maldonado v. Dominguez*, 137 F.3d 1, 7 (1st Cir. 1998); *Finkel v. Stratton Corp.*, 962 F.2d 169, 175 (2d Cir. 1992); *Sears v. Likens*, 912 F.2d 889, 893 (7th Cir. 1990); *Newcome v. Esrey*, 862 F.2d 1099, 1107 (4th Cir. 1988); *In re Washington Public Power Supply Systems Securities Litigation*, 823 F.2d 1349, 1358 (9th Cir. 1987); *Brannan v. Eisenstein*, 804 F.2d 1041, 1043 n.1 (8th Cir. 1986); *Landry v. All American Assurance Co.*, 688 F.2d 381, 391 (5th Cir. 1982). The only exception is the Sixth Circuit, which has found § 17(a) to imply a private right of action for purchasers. *See Craighead v. E.F. Hutton & Co.*, 899 F.2d 485, 492 (6th Cir. 1990). The Supreme Court has never addressed the issue. *See Aaron v. SEC*, 446 U.S. 680, 689 (1980).

262 Among other things, the SEC has the authority to seek to enjoin any person who violated the antifraud provisions of § 17(a)(1) of the Securities Act from acting as an officer or director of a public company. *See* § 20(e) of the Securities Act.

263 *See* §§ 11.02[3] and 11.03[6]; *see also* § 101(2) of the Uniform Securities Act (proscribing fraudulent acts and incomplete or misleading disclosure in connection with the offer, sale or purchase of "any security, directly or indirectly"). Although some courts had interpreted New York's "blue sky" law, which does not provide a private right of action, as preempting all private common law claims alleging non-intentional misstatements or omissions in the sale of securities, *see, e.g.*, *Castellano v. Young & Rubicam*, 257 F.3d 171 (2d Cir. 2001), the New York Court of Appeals has since held that such claims are not preempted. *See Assured Guaranty (UK) Limited v. J.P. Morgan Investment Management Inc.*, 18 N.Y.3d 341 (2011).

264 Pursuant to SLUSA, most securities fraud class actions can no longer be based on state law. *See* § 11.09[1][a].

U.S. Regulation of the International Securities and Derivatives Markets, § 11.05, LIABILITIES CONNECTED WITH SECONDARY MARKET TRANSACTIONS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 11.05 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

The U.S. securities laws closely regulate a number of different aspects of the secondary market for securities and provide a range of civil, administrative and criminal penalties for market participants who violate federal law. In addition to proscribing false or misleading disclosure in connection with secondary market transactions, as discussed below in § 11.05[1], the securities laws also prohibit trading in securities, in breach of certain fiduciary or similar duties, while knowingly in possession of material nonpublic information ("insider trading"), as well as other types of market conduct aimed at or with the effect of manipulating the price of securities on or off of a national securities exchange. These issues are examined in § 11.05[2] and [3], respectively. Finally, § 11.05[3] also addresses special standards of conduct that have been carved out by the SEC and the courts for broker-dealers and investment advisers as a means of enhancing customer protection under the securities laws.

[1] Disclosure Violations

Liabilities can arise in connection with disclosure in secondary market transactions in a number of situations. First, broker-dealers and other trading participants may be liable for material misstatements or omissions in connection with everyday resales of securities, such as oral misrepresentations about the quality of a security or events likely to affect its value. Second, broker-dealers may be liable for misstatements about securities made prior to a trade, for

p. 11-75

example in research reports circulated to customers. Finally, issuers may be liable for material misstatements or omissions in company filings or press releases.

The statutory provisions from which these liabilities may arise, § 17(a) of the Securities Act and §§ 10(b) and 18 of the Exchange Act, are discussed below.

[a] Securities Act § 17(a)

First, § 17(a) of the Securities Act applies to secondary market offers and sales as well as primary offerings (public or private). As discussed in § 11.04[3], § 17(a) bars conduct by the seller intended to defraud, or with the effect of defrauding, others in the offer or sale of any securities, including but not limited to the making of false statements and material omissions. Disclosure violations under § 17(a) may generally be proved without demonstrating the defendant's *scienter*, but almost all courts have held that enforcement actions are reserved to the SEC and that there is no private right of action under § 17(a) of the Securities Act. [265]

[b] Exchange Act § 10(b) and Rule 10b-5

Liability for deficient disclosure in secondary transactions may also attach by virtue of § 10(b) of the Exchange Act and Rule 10b-5 thereunder, and the vast majority of litigation involving disclosure issues in the secondary markets has been brought under this Rule. [266] This catch-all antifraud provision has been widely used by private parties and the SEC alike as a remedy for misstatements and material omissions, both written and oral, in connection with purchases and sales of securities. [267] As discussed in § 11.04[2][b], there is no privity

p. 11-75
p. 11-76

requirement in Rule 10b-5 actions. Thus, a plaintiff is not limited to suing the purchaser or seller with whom he or she dealt. The plaintiff must demonstrate, among other things, that the defendant acted intentionally or recklessly and the plaintiff relied to its detriment on the defendant's actions, although the latter showing has been eased significantly by certain presumptions (such as the "fraud-on-the-market-theory," discussed above) adopted by the courts. A more detailed discussion of Rule 10b-5, including the elements of a claim, the parties who may be liable and the remedies available, is included in § 11.04[2].

[c] Exchange Act § 18

In addition to the implied right of action under Rule 10b-5 for defective disclosure in almost any form, the Exchange Act includes a narrower, but express, right of action for false or misleading statements or omissions [268] in certain applications, reports or documents filed pursuant to the Exchange Act or its associated rules, whether filed with the SEC or with a national securities exchange. [269] As explained in § 4.02, the Exchange Act compels initial

p. 11-76
p. 11-77

registration and periodic reporting obligations for many companies, domestic and foreign, [270] including such common filings as annual reports on Form 10-K for U.S. issuers and annual reports on Form 20-F for non-U.S. issuers. The Exchange Act also imposes reporting obligations when a party's voting equity ownership of a public company exceeds 5%. [271]

Under § 18 of the Exchange Act, any person who buys or sells securities in reliance on misstatements or omissions in filed documents may bring a claim against any person responsible for those statements; there is no requirement of privity between plaintiff and defendant. Recovery under § 18 is difficult, however, because although the plaintiff need not prove the defendant's *scienter* to establish a claim (as it must under Rule 10b-5), it must demonstrate that it actually relied on the misstatement or omission. The "fraud-on-the-market" presumption of reliance in Rule 10b-5 litigation, discussed in § 11.04[2][a], has not been extended to claims under § 18. [272] The plaintiff must also show that the price at which it purchased or sold was affected by the defendant's misstatement or omission, and that its loss was caused by such misstatement or omission. Finally, the plaintiff must establish that it did not know of the misstatement or omission at the time it purchased or sold the securities. [273]

The claim is made even more difficult by the availability to the defendant of an affirmative defense against liability, if it can show it acted in good faith and without knowledge of the material misstatement or omission. [274] To rebut this

p. 11-77
p. 11-78

defense, the plaintiff in effect may be required to make at least some showing that the defendant acted with *scienter*.

Because of the difficulties in establishing a § 18 claim, the provision is rarely used. [275] Rather, plaintiffs generally opt to pursue their remedy under Rule 10b-5, which remains available to them for disclosure deficiencies in filed documents despite the existence of an express cause of action under § 18. [276] The growth of litigation under Rule 10b-5 and the paucity of cases under § 18 illustrate how U.S. courts have implied statutory rights if express rights prove ineffective, especially in the context of claims for fraud.

[2] Insider Trading

The Exchange Act provides tough sanctions for those guilty of "insider trading," the purchase or sale of securities by certain persons while knowingly in possession of material nonpublic information relating to those securities. Like many other provisions of the U.S. securities laws, the prohibition against insider trading extends to non-U.S. persons trading in U.S. markets, even in the securities of non-U.S. issuers. [277] The SEC and the courts also have made clear that liability extends beyond those who directly trade while possessing material nonpublic information to those who disclose such information to others ("tippers") and in some instances to the recipients of their disclosure ("tippees"). These three categories of potential offenders are discussed in § 11.05[2][a]. Two enforcement provisions, which authorize civil actions by contemporaneous traders and stiff penalties in actions by the SEC, are examined in § 11.05[2][b] and [c], respectively.

[a] Exchange Act § 10(b) and Rule 10b-5

p. 11-78
p. 11-79

[i] *Liability of Traders*

A party who trades on material nonpublic information may be liable under certain circumstances under § 10(b) of the Exchange Act and Rule 10b-5 thereunder, which proscribe fraudulent and manipulative conduct in general. [278] In 2000, Congress amended § 10(b) to clarify that insider-trading rules cover trading not just in garden-variety securities, but also in "securities-based swap agreements.…" [279]

An unsettled issue in insider trading law has been what, if any, causal connection must be shown between the trader's possession of inside information and

p. 11-79
p. 11-80

his or her trading. The SEC has argued that trading while in "knowing possession" of the information creates liability. The contrary view is that for liability to attach a trader must be shown to have "used" the information for trading.

The Supreme Court has variously described an insider's violations as trading "on" or "on the basis of" material nonpublic information, but has not addressed the use/possession distinction. In recent years, three courts of appeals have addressed the issue, each reaching different results. In *United States v. Teicher*, [280] the Second Circuit suggested that "knowing possession" is sufficient to trigger insider trading liability. In *SEC v. Adler*, [281] the Eleventh Circuit held that in civil enforcement proceedings, the government may rely on a "strong inference" that one who traded while in possession of material nonpublic information actually used such information, and the trader can then attempt to rebut that inference by adducing evidence that the information was not used. Finally, in *United States v. Smith*, [282] the Ninth Circuit held that, in a criminal case, the government must prove that the suspected insider trader actually used material nonpublic information in deciding whether to buy or sell.

In 2000, the SEC adopted Rule 10b5-1, which is designed to address this unsettled issue. [283] Adopting an approach similar to the *Adler* decision, the Rule states the general principle that insider trading liability arises when a person trades while "aware" of material nonpublic information, but also provides two affirmative defenses to liability in circumstances where it is clear that a trade was not made "on the basis of" the material nonpublic information. The first affirmative defense applies if:

- a person had, before becoming aware of material nonpublic information, (i) entered into a binding contract to purchase or sell, (ii) provided instructions to another person to purchase or sell for the instructing person or (iii) adopted a written plan for trading;
- the contract, instruction or plan (i) specified the amount of, price of, and date on which the securities were to be purchased or sold, (ii) provided a written formula or computer program for determining the amount of, price of and date on which the securities were to be purchased or sold or (iii) did not permit the person to exercise any subsequent influence over how, when or whether to effect purchases or sales, and no person exercising such influence was aware of the material nonpublic information when doing so; and

p. 11-80
p. 11-81

- the purchase or sale occurred pursuant to the contract, instruction or plan. [284]

This defense would only be available if the contract, instruction or plan was entered into in good faith and not as part of a plan or scheme to evade Rule 10b5-1.

In the wake of scandals involving the back-dating of corporate executives' stock options, Linda Chatman Thomsen, then Director of the SEC's Division of Enforcement, indicated that the SEC would begin looking more closely at trading conducted under plans pursuant to Rule 10b5-1. [285] These comments were prompted by two studies that Thomsen said suggested that "the Rule is being abused" by executives whose Rule 10b5-1 trades are outperforming "control" trades by executives who are not trading under 10b5-1 plans. [286] Calls for the SEC to review 10b5-1 plans have persisted over time in light of the perceived abuse of such plans. [287]

Rule 10b5-1 also provides a separate affirmative defense for entities. This defense, similar to an insider trading defense already available to entities such as broker-dealers in other contexts but not limited to such entities, would be available to an entity that can show that the individual making a decision to trade on behalf of the entity was not aware of the material nonpublic information and that the entity had implemented reasonable policies and procedures, such as information barriers and restricted lists, to prevent insider trading.

In construing whether any particular insider trading conduct is fraudulent under Rule 10b-5, the courts have adopted two theories, [288] each predicated on a

p. 11-81

p. 11-82

breach of a duty owed by the defendant by reason of a fiduciary or similar relationship of trust and confidence. Unlike the rules dealing with insider trading in some non-U.S. jurisdictions, including the European Union, a duty to abstain from trading does not arise under Rule 10b-5 from mere possession of material nonpublic information. [289]

The first general theory of liability is that certain insiders of a corporation—directors, officers and key employees—owe a fiduciary duty to the corporation's current and prospective shareholders. [290] That duty is breached when they buy or sell the corporation's securities while knowingly in possession of material nonpublic information. [291] Insiders therefore have a duty to disclose the information or to abstain from trading. [292] Although directors and officers of the corporation whose securities are traded are always insiders, temporary insider status has been accorded to persons such as underwriters, lawyers, accountants and financial advisers who gain access to material nonpublic information in the conduct of the corporation's business, if there is an expectation that the information disclosed to them will be kept confidential. [293]

p. 11-82

p. 11-83

Such temporary insiders must also refrain from trading in the absence of disclosure. [294]

The second theory of insider trading liability is one of misappropriation. This theory, which was upheld by the Supreme Court in *United States v. O'Hagan*, [295] "protects the integrity of the securities markets against abuses by 'outsiders' to a corporation who have access to confidential information that will affect the corporation's security price when revealed, but who owe no fiduciary or other duty to that corporation's shareholders." [296] Under the misappropriation theory, a person violates Rule 10b-5 when he or she misappropriates material nonpublic information in breach of a fiduciary or similar relationship of trust and confidence with the person (who may not be the issuer or anyone connected with the issuer) who entrusted him or her with the information, and uses that information, without disclosing such use to the source, for his or her personal benefit in a securities transaction. The "predicate act of fraud may be perpetrated on the source of the nonpublic information, even though the source may be unaffiliated with the buyer or seller of securities." [297] Under the misappropriation theory, the courts have found violations of Rule 10b-5 based upon a financial columnist's breach of duty to his newspaper, [298] a copyholder's breach of duty to his employer printing company, [299] an investment banker's breach of duty to his firm, [300] an attorney's breach of duty to his law firm, [301] a wife's breach of "trust and confidence" to her husband [302] and even a psychiatrist's breach of duty to his patient. [303]

A settled insider trading action brought by the SEC against Barclays Bank PLC demonstrates some of the issues that financial institutions must consider in light of their multiple relationships with their clients and customers. [304] In *Barclays*, the bank obtained material nonpublic information about various distressed

p. 11-83
p. 11-84

corporations by virtue of its participation in the corporations' creditors' committees. As a commercial lender to the corporations, the bank learned information about the debtors subject to either express or implied promises of confidentiality. As is common, Barclays also traded in the securities of some of these corporations. The SEC's settlement with Barclays suggests that the bank failed to create and enforce adequate information barriers between the individuals who served on the creditors' committees and the individuals who engaged in the securities trading. [305]

Overall, however, the question of what circumstances give rise to the duty of trust or confidence in nonbusiness relationships has remained unsettled. In an effort to clarify this matter, the SEC promulgated Rule 10b5-2 under the Exchange Act, [306] which contains a "nonexclusive list of three situations in which a person has a duty of trust or confidence for purposes of the ‘misappropriation’ theory." [307] The first situation exists when a person has agreed to keep information confidential. The second circumstance is one in which the overall relationship between two persons, taking into consideration their "history, pattern, or practice of sharing confidences," [308] gives rise to an expectation of confidentiality. Third, a person also owes a duty of trust and confidence when that person receives material nonpublic information from a spouse, parent, child or sibling, unless it is shown affirmatively, based on the facts and circumstances of that family relationship, that there was no reasonable expectation of confidentiality. [309]

The SEC's ability to use Rule 10b5-2 to redefine the scope of the duty owed by outsiders to the person or entity that entrusted them with material nonpublic information, however, was called into question in *SEC v. Cuban*. [310] In

p. 11-84
p. 11-85

Cuban, the SEC brought insider trading charges against billionaire Mark Cuban. The SEC alleged that Cuban violated § 10(b) of the Exchange Act when he sold stock in a company (Mamma.com) in which he owned a 6.3% share, after the company informed him that it intended to conduct an equity offering that would dilute Cuban's holdings. Cuban and Mamma.com had entered into an agreement that Cuban would keep information of the upcoming offering confidential, but the agreement did not specify that he would not trade on the information. During a conversation with Mamma.com's CEO, Cuban received more information about the potential sale and allegedly expressed his belief that he could no longer sell the shares after receiving such information. Cuban then sold his shares and avoided losses of about $750,000 when Mamma.com announced the equity offering and the stock price declined.

The SEC argued that an agreement between two parties can give rise to a duty that can be the basis for a misappropriation theory of liability. The district court agreed that, as a theoretical matter, under *Chiarella* and *O’Hagan* an agreement could indeed constitute the basis of a finding of a duty not to trade. In other words, a fiduciary duty is *not* required to establish the misappropriation theory. [311] However, the district court disagreed that the agreement at issue, or the conversation with the CEO, was sufficient to create such a duty because Cuban only promised to keep the information confidential, not to refrain from trading on it, and because his own belief that he could not sell could not give rise to such a promise. [312] Moreover, to the extent the SEC argued that Rule 10b5-2 imposed on Cuban the fiduciary duty to refrain from trading on material nonpublic information based solely on a confidentiality agreement, [313] the district court held the Rule exceeded the SEC's authority because § 10(b) does not allow it to impose liability on the basis of a confidentiality agreement lacking a non-use component. [314]

The SEC then appealed this ruling to the Fifth Circuit, which vacated the opinion of the district court after disagreeing with the district court's reading of the complaint. The Fifth Circuit interpreted Cuban's conversation with the CEO as creating a plausible inference of an agreement not to trade on the information, and thus declined to reach the question of the legality of Rule 10b5-2. [315] Following remand to the district court, the case proceeded to a jury trial, after which Cuban was found not liable for insider trading. [316]

p. 11-85
p. 11-86

Another case exemplifies the willingness of the SEC and the courts to look at theories of liability for insider trading that fall outside the traditional scope of the "insider" and "misappropriation" theories. In *SEC v. Dorozhko*, [317] the SEC brought insider-trading charges against a computer hacker who had obtained electronic access to a company's earnings report the day before it was released and traded on that information. Because the defendant was neither an insider nor owed a fiduciary duty to the source of the information or the company whose stock he traded, the Second Circuit found that the case did not fit either the breach of fiduciary duty or misappropriation theories. Thus, the court turned to the "deceptive device" language of § 10(b) of the Exchange Act and concluded that the defendant could be held liable under a so-called "straight-forward theory of fraud" if the district court on remand determined that the computer hacking at issue was "deceptive in that the defendant misrepresented who he was to gain access. Without such a misrepresentation, however, there would be no liability under § 10(b)." [318] Importantly, the court once again reiterated that "a fiduciary duty [is not a] requirement as an element of every violation of § 10(b)." [319]

[ii] *Liability of Tippers and Tippees*

An insider who abstains from trading on the basis of material nonpublic information but "tips" other investors by passing material nonpublic information to them can also be liable under Rule 10b-5 if the insider's disclosure is considered to be fraudulent. The courts have held that tips made in return for a personal benefit [320] are a breach of an insider's duty to his corporation and therefore fraudulent. [321] The benefit may be direct, such as pecuniary gain, or indirect, such

p. 11-86
p. 11-87

as a "reputational benefit that will translate into future earnings" [322] or the satisfaction of having bestowed a "gift of confidential information to a trading relative or friend." [323] The "tipper" under these circumstances is liable for the profit made or losses avoided by the "tippee" (the recipient of material nonpublic information) even though the tipper may not have traded at all. [324] The misappropriation theory has also been used against tippers, based on a showing that the tipper owed a duty of confidentiality to the source from whom he or she learned the nonpublic information. [325]

A tippee is liable for insider trading only when (i) the tipper has breached his fiduciary duty to corporate shareholders or to the source of his or her information by disclosing the information to the tippee [326] and (ii) the tippee knows or should know that there has been such a breach. [327] As discussed above, the tipper

p. 11-87
p. 11-88

has breached his or her fiduciary duty if he or she will benefit, directly or indirectly, from the disclosure of the information. In order to recover against a tippee, the plaintiff must show that the tippee knew the tipper benefited from the disclosure and so breached the tipper's duty to the corporation or the source of the information. The Supreme Court has rejected the notion that the mere receipt of material nonpublic information by a tippee creates a duty to disclose or abstain similar to that placed on the source of the information. [328]

Recently, the Supreme Court resolved a circuit split concerning the nature of the personal benefit that a tipper must receive to establish liability under the misappropriation theory by reaffirming its ruling in *Dirks* that "a tippee breaches a fiduciary duty by making a gift of confidential information to a 'trading relative.'" [328.1]

Previously, in *United States v. Newman*, the Second Circuit overturned the insider trading convictions of two remote tippees (meaning individuals who received nonpublic information from another tippee, rather than from the original tipper) where the personal benefits identified by the government included that the tippers and initial tippees "had known each other for years," attended business school together and worked together, "sought career advice and assistance" from each other, and/or "were family friends that had met through church and occasionally socialized together." [329] The Second Circuit concluded that "the mere fact of a friendship, particularly of a casual or social nature" is insufficient to establish the requisite personal benefit, which instead requires "proof of a meaningful close personal relationship that generates an exchange that is objective, consequential, and represents at least a potential gain of a pecuniary or similarly value nature." [329.1]

In another case involving a remote tippee, however, the Ninth Circuit "decline[d] to follow" *Newman* to the extent it could be read as holding "that evidence of a friendship or familial relationship between tipper and tippee, standing alone, is insufficient to demonstrate that the tipper received a benefit." [330] Instead, relying on the Supreme Court's statement in *Dirks* that "the elements of fiduciary duty and exploitation of nonpublic information also exist when an insider makes a gift of confidential information to a trading relative or friend," the Ninth Circuit affirmed the conviction of a remote tippee where the tipper and initial tippee were relatives.

p. 11-88

p. 11-89

The Supreme Court unanimously agreed with the Ninth Circuit's interpretation, concluding that an insider receives a personal benefit by gifting confidential information to a trading relative or friend even if there is no exchange of something of pecuniary or similar value. [331.1] In reaching this conclusion, the Court held that to the extent *Newman* interpreted the personal benefit requirement to include that the tipper receive something of a pecuniary or similarly valuable nature in exchange for the tip, such an interpretation was "inconsistent with *Dirks*." [331.2] While the Court's decision in *Salman* resolved the "narrow issue" of whether a gift of confidential information to a trading relative constitutes a personal benefit, [331.3] the Court reiterated *Dirks'* warning "that [d]etermining whether an insider personally benefits from a particular disclosure, a question of fact, will not always be easy for courts. [331.4]

[b] Exchange Act § 20A

The Insider Trading and Securities Fraud Enforcement Act of 1988 (the "Insider Trading Act") [332] created § 20A of the Exchange Act, which expressly permits a right of action by those trading at the same time as the defendant, even though the defendant owes them no strict legal duty. Congress left it to the courts to decide when trading is contemporaneous within the meaning of § 20A. [333]

p. 11-89

p. 11-90

The limitations period for actions under § 20A is five years, running from "the date of the last transaction that is the subject of the violation." [334] Total damages are limited to the profit gained (or loss avoided) by the defendant in the transactions that are the subject of the violation and any recovery will be further reduced by any amount required to be "disgorged" or forfeited to the SEC pursuant to an SEC injunctive action. [335] Control persons may be liable for the actions of those they control, but not solely on the basis of an employment relationship. [336]

[c] Exchange Act § 21A

This provision, also part of the Insider Trading Act and its predecessor statute, the Insider Trading Sanctions Act ("ITSA"), [337] gives the SEC increased power to impose civil penalties with respect to insider trading. Prior to the enactment of § 21A of the Exchange Act, insider traders could receive only the penalties broadly applicable to other violations of the Exchange Act, namely the greater of their pecuniary gain and a flat penalty between $5,000 and $100,000, depending on the egregiousness of their conduct. [338] Under § 21A, the SEC may now seek civil penalties of up to three times the profit gained (or loss avoided) as a result of the violations. [339] Profits or losses are measured by reference to the price at which the securities were trading at the point the material nonpublic information had been digested by the market, without regard to how the price behaved subsequently. [340]

In addition, the SEC may seek civil penalties from control persons [341] up to the greater of $1,978,690 and three times the profits of the person under their

p. 11-90

p. 11-91

control, if the controlling person knew of, or recklessly disregarded indications of, the controlled person's violations. [342]

The limitations period for penalty actions under § 21A is five years, running from the date of purchase or sale. [343]

[3] Manipulation

In addition to proscribing misleading disclosure and insider trading, the Exchange Act contains a number of provisions designed to bar manipulative market conduct on or off an exchange. These provisions, and the types of conduct that may constitute violations, are discussed below.

[a] Exchange Act § 9

Under § 9(a) of the Exchange Act, persons are prohibited from manipulating the price of a security listed on a national securities exchange in certain specified ways. These include, among other things, (i) effecting transactions in securities with no change in beneficial ownership, or engaging in "matched" purchases and sales of securities, to create a misleading appearance of active trading (so-called "wash trades"), (ii) effecting a series of transactions in a security to inflate or depress the price of the security in order to induce others to purchase or sell and (iii) effecting a series of transactions for the purpose of "pegging," "fixing" or "stabilizing" the price of securities. [344] The common thread among these prohibited practices is that each is "intended to mislead investors by artificially affecting market activity." [345]

Section 9(e) of the Exchange Act creates an express private right of action for violation of the provisions of § 9(a). Anyone who purchased or sold a security at a price affected by the defendant's manipulations may recover damages. However, the plaintiff is required to prove not only that the manipulative activity occurred, but also that (i) the activity was willfully conducted, [346] (ii) the plaintiff

p. 11-91

p. 11-92

relied on such activity [347] and (iii) the price at which the plaintiff purchased or sold the security was affected by the manipulative activity. The statute of limitations for § 9(e) claims is one year from discovery of the facts constituting the cause of action, but in no event more than three years from the violation. [348]

Because of the plaintiff's difficult burden of proof under § 9(e), as well as the court's authority to assess reasonable costs against either party litigant, [349] very few private claims have been brought under § 9(e). The SEC has sought injunctive relief, and criminal proceedings have been instituted, however, for manipulative activities proscribed by § 9(a). The types of activities that the SEC and the DOJ have targeted under § 9(a)—many of which also violate § 10(b) of the Exchange Act and Rule 10b-5 thereunder—include "wash trades," in which a single party controls both sides of the same transaction; [350] "marking the close," which occurs when a party executes the last trade of the day at a price higher than the previous trade, for example to support the stock price in a declining market; [351] reporting of nonexistent trades by stock exchange specialists to create a false appearance of trading activity; [352] and the purchase of a significant block of shares at a premium in order to manipulate the price of a stock. [353]

[b] Exchange Act Rule 10b-5

Part of Rule 10b-5 under the Exchange Act, its catch-all antifraud provision, proscribes the use of "any manipulative or deceptive device" in contravention of SEC rules and regulations in connection with the purchase or sale of any security, whether or not registered on a national exchange. The SEC and private litigants have made broader use of Rule 10b-5 than § 9 of the Exchange Act in

p. 11-92

p. 11-93

cases of manipulative conduct because of the slightly lower burden of proof under Rule 10b-5. The rule has been used, for example, in situations [354] involving matched trades and "wash sales," [355] "marking the close," [356] circular trading or other devices to artificially inflate stock prices by creating an appearance of an active market, [357] the entry of artificial bid and ask quotes on Nasdaq to manipulate market prices, [358] the use of large leveraged long positions to drive up prices and squeeze holders of short positions [359] and the paying of kickbacks to brokers for recommending the stock of a company controlled by defendants. [360] The rule has also been used by the SEC and the courts to impose liability on broker-dealers under the so-called "shingle theory," which states that a broker-dealer, by "hanging out a shingle"— *i.e.*, presenting itself as a market professional to potential customers—implicitly represents that it will deal fairly and professionally with its customers. [361] The Second Circuit, however, extended the reasoning of the Supreme Court's decision in *Janus Capital Group, Inc. v. First Derivatives Traders* to the manipulation context, and held that a defendant can only be held liable for market manipulation under Rule 10b-5 if he or she communicated misleading information to potential buyers. [362]

p. 11-93

p. 11-94

The specific elements of a claim under Rule 10b-5, as well as the remedies available, are discussed in detail in § 11.04[2].

[c] Regulation M

Adopted in 1996 and replacing old Rules 10b-6, 10b-6A, 10b-7, 10b-8 and 10b-21 (known as the "Prior Trading Rules") under the Exchange Act, Regulation M is intended to preclude manipulative conduct by persons with an interest in the outcome of an offering, while easing some of the inefficiencies and unnecessary costs imposed by the far broader Prior Trading Rules (*e.g.*, by eliminating trading restrictions for underwriters of actively traded securities).

As discussed more extensively in § 2.04[10], Rules 101 and 102 of Regulation M restrict, subject to certain exceptions and for certain "restricted periods" pegged to the time of pricing, bids for and purchases of securities in distribution by underwriters, issuers, selling securityholders and their respective broker-dealer affiliates participating in the distribution. [363] Rule 101, which governs underwriters and their affiliates, excludes from its coverage more actively traded securities and other specified securities and transactions, and excuses *de minimis* transactions, provided that a distribution participant had in place written policies and procedures reasonably designed to achieve compliance with the regulation. The rule also recognizes "information barriers" between the underwriter and its affiliates, thereby narrowing the scope of persons subject to its strictures. Rule 102, which covers issuers, selling securityholders and their affiliates, allows these parties to engage in market activities prior to the applicable restricted period and permits (during the restricted period) certain specified transactions, for example, bids and purchases of odd-lots.

Rule 103 of Regulation M governs passive market-making by Nasdaq market-makers participating in a distribution and is designed to maintain liquidity in situations where a market-maker otherwise might be required to withdraw from the market pursuant to Rule 101. Rule 104 of Regulation M prohibits actions to stabilize the price of a security to facilitate an offering, subject to certain specified exceptions. Finally, subject to certain exceptions, Rule 105 of Regulation M prohibits persons who sold equity securities short during a five-day period prior to the pricing of a registered firm commitment offering for securities of the same class from purchasing securities in the offering, regardless of whether the offered securities are intended to be used to cover the prior short sale. [364]

p. 11-94

p. 11-95

The SEC monitors compliance and brings proceedings to enforce Regulation M and its associated rules, [365] but like the predecessor Prior Trading Rules it is generally considered that there is no implied private right of action for violations. [366]

Footnotes

265 *See* § 11.04[3].

266 Many of the actions initiated by the SEC and private litigants in response to corporate scandals are predicated on § 10(b) and Rule 10b-5 thereunder. For example, the SEC enforcement action that produced a $500 million settlement payment (reduced from the pre-bankruptcy settlement amount of $1.51 billion) for wrongdoing involving WorldCom's overstatement of its income by $9 billion was brought under § 10(b) and Rule 10b-5. *See SEC v. WorldCom Inc.*, SEC Litigation Release No. 18147 (May 19, 2003); *see also* Press Release, SEC, The Honorable Jed Rakoff Approves Settlement of SEC's Claim for a Civil Penalty Against WorldCom (July 7, 2003). The main Enron-related class action lawsuit also alleged violations of § 10(b) and Rule 10b-5 *. See In re Enron Corp. Securities, Derivative & ERISA Litigation*, 235 F. Supp. 2d 549, 581–688 (S.D. Tex. 2002).

267 Notably, the SEC has brought Rule 10b-5 actions against foreign issuers for making false statements to the U.S. market. *See In re E.ON AG*, SEC Release No. 34-43372 (Sept. 28, 2000), in which the SEC imposed a cease and desist order on E.ON AG (formerly Veba, a German company and a foreign private issuer) for violating "Section 10(b) of the Exchange Act and Rule 10b-5 thereunder by deliberately issuing a series of materially false and misleading statements over a month-long period in which it denied the existence of any merger discussions or negotiations." *In re E.ON AG*, SEC Release No. 34-43372 (Sept. 28, 2000). The order states that "[w]here jurisdictional requirements are met … there is no safe harbor for foreign issuers from violations of the antifraud provisions of the U.S. federal securities laws. The [SEC] will not apply a different standard with respect to foreign issuers commenting on merger discussions or negotiations. When a foreign issuer voluntarily avails itself of the opportunities in the U.S. capital markets, it must adhere to the U.S. federal securities laws." *In re E.ON AG*, SEC Release No. 34-43372 (Sept. 28, 2000); *see also* § 4.10[3]. In addition, foreign issuers have not been entirely immune to the recent wave of corporate scandals. Among other companies, Ahold NV and Vivendi Universal S.A. have faced investigations by the SEC and the DOJ for accounting and related disclosure issues. *See* Deborah Ball, *Ahold Will Shave $880 Million Off Profit Due To Irregularities*, WALL ST. J., May 9, 2003; Martin Peers, *SEC Upgrades Vivendi Probe, Raising Stakes for French Firm*, WALL ST. J., Nov. 20, 2002; John Carreyrou, *U.S. Attorney Opens Vivendi Probe*, WALL ST. J., Nov. 5, 2002. Ahold and Vivendi have settled with the SEC, although the SEC has continued to investigate and charge individuals who participated in the fraudulent schemes. *See SEC v. Royal Ahold*, SEC Litigation Release No. 18929 (Oct. 13, 2004) (stating that Ahold would not be fined by the SEC, in part because of the company's cooperation and in part because of the parallel investigation in the Netherlands, where Ahold eventually paid a $10 million fine); *SEC v. Vivendi Universal, S.A.*, SEC Litigation Release No. 18523 (Dec. 24, 2003) (stating that Vivendi consented to pay a $50 million civil monetary penalty). Section 11.10[1]–[3] discusses jurisdiction over foreign defendants and the extraterritorial scope of the federal securities laws.

268 Although § 18 of the Exchange Act does not refer specifically to omissions, they have been deemed included in its proscription of materially misleading statements. *See, e.g.*, *In re Caesars Palace Securities Litigation*, 360 F. Supp. 366 (S.D.N.Y. 1973).

269 *See Fischman v. Raytheon Manufacturing*, *Co.*, 188 F.2d 783, 788 (2d Cir. 1951). Section 18 does not apply to documents filed pursuant to the Securities Act, rather than the Exchange Act, including Forms F-3 and associated prospectuses. *See In re Alstom SA*, 406 F. Supp. 2d 433, 481 (S.D.N.Y. 2005). Certain Exchange Act filings, including certain types of Forms 8-K, are likewise exempted from Section 18 liability by SEC regulations. *In re Alstom SA*, 406 F. Supp. 2d 433, 481 (S.D.N.Y. 2005).

270 Of specific importance to foreign issuers are Form 20-F registration statements filed, for example, in connection with a stock exchange listing (without making a concurrent primary offering). Section 18 of the Exchange Act would apply not only to an initial Form 20-F filing but also to post-listing (or post-public offering) filings (*i.e.*, the Form 20-F annual report filings of a foreign issuer, *see* § 4.03[2][a]). Under SEC regulations, however, Exchange Act filings on Forms 6-K are generally exempt from § 18 liability. *See In re Alstom SA*, 406 F. Supp. 2d 433, 481 (S.D.N.Y. 2005).

271 *See* § 6.02[2].

272 *See Ross v. A.H. Robins Co.*, 607 F.2d 545, 552–53 (2d Cir. 1979), *cert. denied*, 446 U.S. 946 (1980); *Cohen v. Stevanovich*, No. 09 Civ. 4003, 2010 U.S. Dist. LEXIS 66010, at *41 (S.D.N.Y. July 1, 2010); *In re M.D.C. Holdings Securities Litigation*, 754 F. Supp. 785, 798 (S.D. Cal. 1990).

273 *See* § 18(a) of the Exchange Act. The statute of limitations is one year after discovery of the facts constituting the cause of action, but no more than three years from the violation. § 18(c) of the Exchange Act. Damages are also measured in the same way as under Rule 10b-5. *See Harris v. American Investment Co.*, 523 F.2d 220 (8th Cir. 1975), *cert. denied*, 423 U.S. 1054 (1976); § 11.04[2][c]. Section 18(b) of the Exchange Act expressly recognizes the right of defendants held liable under the provision to seek contribution from others who could likewise have been held liable had they been sued.

274 § 18(a) of the Exchange Act.

275 *See F.N. Wolf & Co. v. Estate of Neal*, Fed. Sec. L. Rep. (CCH) ¶95,805 (S.D.N.Y. Feb. 25, 1991) (citing *Ross v. A.H. Robins Co.*, 607 F.2d 545, 552 (2d Cir. 1975)).

276 *See Ross v. A.H. Robins Co.*, 607 F.2d 545, 556–57 (2d Cir. 1975).

277 Extraterritorial application of the law has been deemed necessary to "protect domestic investors who have purchased foreign securities on American exchanges and to protect the domestic securities market from the effects of improper foreign transactions in American securities." *Schoenbaum v. Firstbrook*, 405 F.2d 200, 206 (2d Cir. 1968), *cert. denied*, 395 U.S. 906 (1969), *abrogated on other grounds by Morrison v. National Australia Bank*, 130 S. Ct. 2869 (2010). The SEC has increasingly pursued overseas parties for insider trading violations. *See, e.g.*, *SEC v. Hui*, SEC Litigation Release No. 16220 (July 26, 1999) (complaint); *SEC v. Heden*, 51 F. Supp. 2d 296 (S.D.N.Y. 1999); *SEC v. Euro Security Fund*, Fed. Sec. L. Rep. (CCH) ¶90,433 (S.D.N.Y. Feb. 16, 1999); *SEC v. Cavanagh*, 1 F. Supp. 2d 337 (S.D.N.Y. 1998), *aff'd*, 155 F.3d 129 (2d Cir. 1998); *SEC v. Morris*, SEC Litigation Release No. 14381 (Jan. 17, 1995); *SEC v. Tinajero*, SEC Litigation Release No. 12974 (Sept. 11, 1991) (final judgment); *SEC v. Foundation Hai*, SEC Litigation Release No. 12535 (July 6, 1990) (final judgment). In *Morrison v. National Australia Bank Limited*, however, the Supreme Court limited the extraterroritorial reach of the federal securities laws, *see* § 11.10[3], and lower courts have begun to apply this new approach in the insider trading context. *See, e.g.*, *United States v. Martoma*, No. S1 12 Cr. 973 (PGG), 2013 WL 6632676 (S.D.N.Y. Dec. 17, 2013).

278 *See, e.g.*, *SEC v. Waksal*, SEC Litigation Release No. 19039 (Jan. 19, 2005). Under the terms of the settlement, Sam and Jack Waksal were held jointly and severally liable for disgorgement of over $2 million in illegal loss avoidance and Sam Waksal was liable for a civil penalty of over $3 million and barred from serving as an officer or director of any public company. *See also SEC v. Computer Associates International, Inc.*, SEC Litigation Release No. 18891 (Sept. 22, 2004).

279 *See* Commodity Futures Modernization Act, Appendix E, Pub. L. No. 106-554, § 303(d)(1), 114 Stat 2763, 2763A-454 (2000); 15 U.S.C § 78j(b). Under § 206B of the Gramm-Leach-Bliley Act ("GLBA"), in turn, a "security-based swap agreement" is a swap agreement "of which a material term is based on the price, yield, value, or volatility of any security or any group or index of securities, or any interest therein." GLBA, Pub. L. No. 106-102, § 206B, 113 Stat. 1338 (1999). The SEC more recently brought a case against a securities analyst who tipped off a client that a company was going to issue debt, which was expected to increase the price of certain credit-default swaps whose reference entity was the company at issue. *See SEC v. Rorech*, 720 F. Supp. 2d 367 (S.D.N.Y. 2010). The defendants argued that the new provisions did not apply to trades in those credit-default swaps, arguing that the price of the CDS was not "based on" the price, yield, value or volatility of the underlying securities, but rather on a basis point negotiation between the buyer and seller of the CDS, and affected by many factors, including the strength of the economy and the market's assessment of the referenced company's credit risk. The district court rejected this argument and held that two material terms of the CDS were "based on" the price, yield, value or volatility of the underlying securities. First, the court noted the price of the CDS was "based on" such factors because it was "clear … that a fundamental part of [the] decision [to purchase the CDS] was the spread or yield (or, inversely, the price) of the deliverable [securities]." *SEC v. Rorech*, 720 F. Supp. 2d 367, 407 (S.D.N.Y. 2010). Generally, the court held, because the price, yield, and value of the underlying securities were

"critical" to the price of the CDSs, trading in such instruments squarely fit within the statutory definition. *SEC v. Rorech*, 720 F. Supp. 2d 367, 407 (S.D.N.Y. 2010). The district court also noted that § 9.9 of the ISDA agreement governing the swaps required the CDS-buyer to deliver the covered securities to the counterparty if a credit event occurred, but also allowed the counterparty to subtract the price of such securities if the CDS-buyer failed to deliver them. *SEC v. Rorech*, 720 F. Supp. 2d 367, 408 (S.D.N.Y. 2010). Thus, the court held, "a material provision" of the CDS was "based on" the price of the underlying security for purposes of § 206B. Note that the charges against Rorech were ultimately dismissed on the grounds that the SEC could not establish the misappropriation theory, which is discussed below.

280 *See United States v. Teicher*, 987 F.2d 112 (2d Cir.), *cert. denied*, 510 U.S. 976 (1993).

281 *See SEC v. Adler*, 137 F.3d 1325, 1337–39 (11th Cir. 1998).

282 *See United States v. Smith*, 155 F.3d 1051, 1066–69 (9th Cir. 1998).

283 SEC Release No. 33-7881 (Aug. 10, 2000).

284 Trading plans permitted by Rule 10b5-1 have proven useful to insiders by allowing them to establish trading programs that do not depend on the availability of window periods. *See* § 5.05[7].

285 *See* Linda Chatman Thomsen, Director, SEC Division of Enforcement, Remarks at the 2007 Corporate Counsel Institute (Mar. 8, 2007).

286 Michael Siconolfi and Jean Eaglesham, *SEC is Pressed to Revamp Executive Trading Plans*, WALL ST. J., May 9, 2013; Alan Jagolinzer, *Do Insiders Trade Strategically Within the SEC Rule 10b5-1 Safe Harbor?* (Stanford Graduate School of Business, Working Paper, Dec. 6, 2006); Jane Sasseen, *A Closer Look at Trades By The Top Brass: Some Execs May Be Abusing An SEC "Safe Harbor" Rule on Insider Stock Sales*, BUS. WEEK, Nov. 13, 2006, at 40; Jane Sasseen et al., *Insiders With A Curious Edge: How Corporate Executives Seem To Be Violating The Spirit, If Not The Letter, Of A Rule Intended To Prevent Insider Trading*, BUS. WEEK, Dec. 18, 2006. Professor Jagolinzer's study found that 10b5-1 plans were regularly initiated in anticipation of negative disclosures and terminated in anticipation of positive disclosures. Trades by 10b5-1 plan participants outperformed those of non-participating colleagues by an average of six percent.

287 *See, e.g.*, Letter from Jeff Mahoney, General Counsel, Council of Institutional Investors, to Elisse B. Walter, Chairman, SEC (Dec. 28, 2012) (requesting that the SEC consider pursuing interpretive guidance or amending Rule 10b5-1 to require Rule 10b5-1 plans to adopt several protocols and guidelines to limit reported abuses).

288 There is no statute that defines "insider trading" or explicitly prohibits it. Insider trading is a common law offense derived from judicial interpretations of several overlapping statutory and regulatory prohibitions, mainly Rule 10b-5. In the United Kingdom and elsewhere in the European Union, the offense has been defined and insider trading banned specifically by statute. *See* EU Regulation 596/2014 on market abuse (market abuse regulation) (Apr. 16, 2014). Although the SEC historically resisted such efforts in the United States, it adopted Rules 10b5-1 and 10b5-2 to clarify and strengthen the law of insider trading, and Regulation FD (Fair Disclosure), which deals with the issue of selective disclosure. *See* SEC Release No. 33-7881 (Aug. 15, 2000). Regulation FD, including recent enforcement activity, is discussed in § 4.10[6].

289 *See Chiarella v. United States*, 445 U.S. 222, 228–29 (1980) (failure to disclose material nonpublic information cannot be fraudulent absent a duty to disclose). *See also* Edward Greene & Olivia Schmid, *Duty Free Insider Trading?*, 2 COLUM. BUS. L. REV. 369 (2013).

290 In an issue of first impression, the Second Circuit recently held that "the fiduciary-like duty against insider trading under section 10(b) is imposed and defined by federal common law" rather than state or foreign law. *See Steginsky v. Xcelera Inc.*, 741 F.3d 365 (2d Cir. 2014). The Second Circuit concluded that the relevant duty springs from federal law because "looking to idiosyncratic differences in state law"—in that case, the law of the Cayman Islands, which allegedly did not impose a duty on insiders to disclose material information before trading— "would thwart the goal of promoting national uniformity in securities markets."

291 Material information is information "which [is] reasonably certain to have a substantial effect on the market

price of the security if disclosed." *SEC v. Texas Gulf Sulphur Co.*, 401 F.2d 833, 848 (2d Cir. 1968), *cert. denied*, 394 U.S. 976 (1969), and *cert. denied*, 404 U.S. 1005 (1971) (citations omitted). Information is considered nonpublic until the relevant markets have had an opportunity to fully digest the information. In a heavily traded issue, this will usually require that the price of the company's shares have stabilized after the initial disclosure of the information.

292 Since insiders owe a duty of loyalty to the corporation, which requires that disclosure of such information be made at the appropriate time and in the best interest of the corporation, it is often said that insiders only have a duty to abstain from trading. *See SEC v. Texas Gulf Sulphur*, 401 F.2d 833, 848 (2d Cir. 1968), *cert. denied*, 394 U.S. 976 (1969), and *cert. denied*, 404 U.S. 1005 (1971) (citations omitted).

293 *See Dirks v. SEC*, 463 U.S. 646, 655 n.14 (1983); *see also SEC v. Falbo*, 14 F. Supp. 2d 508 (S.D.N.Y. 1998) (independent contractor); *SEC v. Softpoint, Inc.*, 958 F. Supp. 846 (S.D.N.Y. 1997), *aff'd without opinion*, 159 F.3d 1348 (2d Cir. 1998) (consultant); *SEC v. Franco*, SEC Litigation Release No. 11206 (D.D.C. Aug. 26, 1986) (public relations advisor).

294 "Information barriers" restricting the dissemination and misuse of material nonpublic information allow a financial institution's trading and investment management departments to trade in securities although the underwriter's corporate finance department has material nonpublic information concerning the issuer of such securities. *See* § 14.07[1][b] for a discussion of the "information barriers" required of broker-dealers; *see also* Rule 10b5-1 under the Exchange Act.

295 *United States v. O'Hagan*, 521 U.S. 642 (1997).

296 *United States v. O'Hagan*, 521 U.S. 642, 653 (1997) (internal quotations omitted).

297 *See United States v. Chestman*, 947 F.2d 551, 566 (2d Cir. 1991), *cert. denied*, 503 U.S. 1004 (1992).

298 *See United States v. Carpenter*, 791 F.2d 1024, 1026 (2d Cir. 1986), *aff'd*, 484 U.S. 19 (1987).

299 *See SEC v. Materia*, 745 F.2d 197 (2d Cir. 1984), *cert. denied*, 471 U.S. 1053 (1985).

300 *See United States v. Newman*, 664 F.2d 12 (2d Cir. 1981).

301 *See United States v. O'Hagan*, 521 U.S. 642 (1997).

302 *See SEC v. Lenfest*, 949 F. Supp. 341 (E.D. Pa. 1996).

303 *See United States v. Willis*, 737 F. Supp. 269 (S.D.N.Y. 1990).

304 *SEC v. Barclays Bank PLC*, SEC Litigation Release No. 20132 (May 30, 2007).

305 The *Barclays* case also demonstrated the SEC's apparent willingness to pursue cases even where a bank has entered into non-reliance letters, or so-called "big boy letters," with its trading counterparties. These letters involve an acknowledgment by the counterparty that it is aware that the insider may have material nonpublic information and it still wants to proceed with the transaction. Although these letters may provide some defenses in private civil litigation, *see AES Corp. v. Dow Chemical Co.*, 325 F.3d 174 (3d Cir. 2003); *McCormick v. Fund American Companies, Inc*., 26 F.3d 869 (9th Cir. 1994); *Jensen v. Kimble*, 1 F.3d 1073 (10th Cir. 1993), *Barclays* suggests that the SEC has not adopted the position that a non-reliance letter absolves a trading party of insider trading exposure to government regulators. *See also supra* Note 202.

306 *See* SEC Release No. 33-7881 (Aug. 15, 2000).

307 SEC Release No. 33-7881 (Aug. 15, 2000), 65 Fed. Reg. 51,716, 51,730 (Aug. 24, 2000).

308 SEC Release No. 33-7881 (Aug. 15, 2000), 65 Fed. Reg. 51,716, 51,738 (Aug. 24, 2000).

309 According to the SEC, the only federal appellate court decision on this point— *United States v. Chestman*, 947 F.2d 551 (2d Cir. 1991), *cert. denied*, 503 U.S. 1004 (1992)—took an unduly narrow view of when a duty of confidence arises in the context of family and other personal relationships. *Chestman* held that in the absence of an express agreement of confidentiality or a pre-existing pattern of sharing business confidences, there is not a sufficient basis in such a relationship to establish the duty to support a criminal conviction under the misappropriation theory. SEC Rule 10b5-2 broadens and in effect reverses the result of *Chestman*.

310 *SEC v. Cuban*, 634 F. Supp. 2d 713 (N.D. Tex. 2009), *vacated*, 620 F.3d 551 (5th Cir. 2010).

311 *SEC v. Cuban*, 634 F. Supp. 2d 713, 724–27 (N.D. Tex. 2009).

312 *SEC v. Cuban*, 634 F. Supp. 2d 713, 727–28 (N.D. Tex. 2009).

313 *See* Rule 10b5-2(b)(1) (creating duty of confidence for purposes of misappropriation theory "[w]henever a person agrees to maintain information in confidence" without requiring that the person also agree to not trade on the information).

314 *SEC v. Cuban*, 634 F. Supp. 2d 713, 728–31 (N.D. Tex. 2009).

315 *SEC v. Cuban*, 620 F.3d 551 (5th Cir. 2010).

316 *SEC v. Cuban*, SEC Litigation Release No. 22855 (Oct. 23, 2013).

317 *SEC v. Dorozhko*, 574 F.3d 42 (2d Cir. 2009).

318 *SEC v. Dorozhko*, 574 F.3d 42, 48–51 (2d Cir. 2009).

319 *SEC v. Dorozhko*, 574 F.3d 42, 48 (2d Cir. 2009).

320 *See Dirks v. SEC*, 463 U.S. 646, 663–64 (1983). No liability attaches if the disclosure is made for corporate rather than personal benefit.

321 Until the fall of 2000, the issue of selective disclosure had been exclusively considered under the analysis applicable to securities fraud, particularly insider trading under Rule 10b-5 under the Exchange Act. This approach had focused on whether a corporate insider, by selectively disclosing material nonpublic information to analysts and institutional investors, may be exposed to "tipper" liability for insider trading. The Supreme Court, in *Dirks v. SEC*, 463 U.S. 646 (1983), held that the insider must receive some direct or indirect "personal benefit" from the disclosure in order for liability to attach to the tipper or tippee. The *Dirks* decision was widely construed as providing considerable latitude to insiders who made selective disclosure to analysts, and to the analysts (and their clients) who received selectively disclosed information and acted on it.

The SEC's recognition of the difficulties it faced in proving "personal benefit" under Rule 10b-5 led to its decision to adopt Regulation FD (Fair Disclosure), which became effective in October 2000, and abandon exclusive reliance on Rule 10b-5 to regulate selective disclosure to analysts. *See* SEC Release No. 33-7881 (Aug. 15, 2000). Regulation FD generally requires an issuer that has selectively disclosed material nonpublic information to promptly disclose that information publicly. The requirements of Regulation FD, which do not apply to foreign private issuers, and enforcement activity thereunder, are addressed in more detail in § 4.10[6].

322 *SEC v. Stevens*, No. 91 Civ. 1869 (S.D.N.Y. Mar. 19, 1991) (insider trading proceeding settled by the SEC, involving the CEO's disclosure of information to analysts to enhance his reputation); *see* § 4.10[7] (discussing *Dirks* and *Stevens* in the context of selective disclosure to analysts).

323 *Bateman Eichler, Hill Richards, Inc. v. Berner*, 472 U.S. 299, 311 n.21 (1985) (citing *Dirks v. SEC*, 463 U.S. 646, 663–64 (1983)).

324 The SEC has taken the position that a tipper is liable even if the tippee never actually trades, assuming it was reasonably foreseeable at the time the information was provided that the tippee would trade. It is unclear whether the courts will impose liability under these circumstances, except in the tender offer context, where the "reasonably foreseeable" test is codified in Rule 14e-3 under the Exchange Act. *See* § 11.06[4].

325 A tipper is liable under the misappropriation theory for disclosing nonpublic information even if he or she did not specifically know that the tippee would trade on it, so long as the tipper knew he or she was breaching his or her own duty to maintain the confidentiality of the information. *See United States v. Libera*, 989 F.2d 596 (2d Cir.), *cert. denied*, 510 U.S. 976 (1993).

326 *See United States v. Chestman*, 947 F.2d 551, 567–71 (2d Cir. 1991), *cert. denied*, 503 U.S. 1004 (1992) (reversing the conviction of a tippee-defendant where there was an insufficient showing that the tipper owed a duty of confidence to his source, a family member). In *Chestman*, the court held that fiduciary relationships are "marked by the fact that the party in whom confidence is reposed has entered into a relationship in which he or she acts to serve the interests of the party entrusting him or her with such

information." Courts have noted that a fiduciary duty cannot be unilaterally imposed by entrusting an individual with confidential information, but an explicit acceptance of a duty of confidentiality must be present in order for misappropriation liability to attach. *See United States v. Cassese*, 273 F. Supp. 2d 481 (S.D.N.Y. 2003) (finding that despite the existence of an unexecuted confidentiality agreement, the relationship between the parties was not a fiduciary one because it was not marked by "*de facto* control" and "dominance" or entailing "discretionary authority and dependency" but was rather an arm's-length relationship that was insufficient to trigger misappropriation liability); *see also United States v. Kim*, 184 F. Supp. 2d 1006 (N.D. Cal. 2002) (granting a motion to dismiss and holding that even though confidential information was regularly exchanged between the defendant and a fellow member of a social club and despite the fact that there was a signed confidentiality agreement, no fiduciary relationship was formed).

327 *See Dirks v. SEC*, 463 U.S. 646, 660 (1983).

328 *See Dirks v. SEC*, 463 U.S. 646, 664 (1983). As discussed above, the Supreme Court's position is contrary to that taken in other jurisdictions, such as the United Kingdom, where a duty to abstain arises from mere possession of material nonpublic information.

328.1 *Salman v. United States*, 137 S. Ct. 420, 427–28 (2016) (citing *Dirks*, 463 U.S. at 664 (1983)).

329 *See United States v. Newman*, 773 F.3d 438 (2d Cir. 2014).

329.1 *See United States v. Newman*, 773 F.3d 438, 452 (2d Cir. 2014).

330 *See United States v. Salman*, 792 F.3d 1087 (9th Cir. 2015).

[331] [Reserved.]

331.1 *Salman v. United States*, 137 S. Ct. 420, 424 (2016).

331.2 *Salman v. United States*, 137 S. Ct. 420, 427–28.

331.3 *Salman v. United States*, 137 S. Ct. 420, 427.

331.4 *Salman v. United States*, 137 S. Ct. 420, 429 (2016) (quoting *Dirks v. SEC*, 463 U.S. 646, 664 (1983)).

332 *See* Insider Trading and Securities Fraud Enforcement Act of 1988, Pub. L. No. 100-704, 102 Stat. 4677 (1988).

333 The courts have not offered any definitive rules on this subject since the passage of the Insider Trading Act. *See In re Microstrategy, Inc. Securities Litigation*, 115 F. Supp. 2d 620, 662–63 (E.D. Va. 2000). The *Microstrategy* court summarized the state of the law regarding this question, noting that the decisions from various circuits are not uniform. "[C]ourts … have applied varying definitions of contemporaneity, ranging from requiring that the investor trade on the same date as did the insider, to allowing as much as a month to pass between the trades, with at least one court even holding that ‘the term "contemporaneously" may embrace the entire period while relevant nonpublic information remained undisclosed.’" *In re Microstrategy, Inc. Securities Litigation*, 115 F. Supp. 2d 620, 662–63 (E.D. Va. 2000) (footnote call numbers omitted) (quoting *In re American Business Computers Corp. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶98,839 at 93,055 (S.D.N.Y. Feb. 24, 1994)). However, the trend among some courts has been to "adopt a restrictive reading of the term ‘contemporaneous' at least with respect to shares heavily traded on a national exchange." *In re Microstrategy, Inc. Securities Litigation*, 115 F. Supp. 2d 620, 662–63 (E.D. Va. 2000) (quoting *In re AST Research Securities Litigation*, 887 F. Supp. 231, 233 (C.D. Cal. 1995)). Nor is the prior case law—to which Congress referred in the legislative history—entirely clear. *See, e.g.*, *Wilson v. Comtech Telephone Corp.*, 648 F.2d 88, 94 (2d Cir. 1981) (defendant not liable to the plaintiff who traded a month after the defendant's trading); *Shapiro v. Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 495 F.2d 228, 241 (2d Cir. 1974) (defendant liable to those who traded "during the same period" in which the defendant traded); *O'Connor & Associates v. Dean Witter Reynolds, Inc.*, 559 F. Supp. 800, 803 n.4 (S.D.N.Y. 1983) (defendant liable to the plaintiffs who traded during the week after the defendant's trades, but not to those who traded before him or his tippees).

334 § 20A(b)(4) of the Exchange Act. In *Johnson v. Aljian*, the Ninth Circuit held that a case may proceed under § 20A within the five-year limitations period even if the underlying Rule 10b-5 violation is time-barred—and even if the time-barred Rule 10b-5 violation was the *sole* underlying violation. *Johnson v. Aljian*, 490 F.3d

778 (9th Cir. 2007).

335 *See* § 20A(b)(1) and (2) of the Exchange Act.

336 *See* § 20A(b)(3) of the Exchange Act.

337 *See* Insider Trading Sanctions Act, Pub. L. No. 98-376, 99 Stat. 1264 (1984).

338 *See* § 21(d)(3)(B) of the Exchange Act. This penalty range applied to natural persons; the range for corporate defendants was $50,000 to $500,000. § 21(d)(3)(B) of the Exchange Act; *see also* SEC Release No. 33-7361 (Nov. 1, 1996).

339 *See* § 21A(a)(2) of the Exchange Act.

340 *See* § 21A(f) of the Exchange Act.

341 The definition of control persons under § 21A, like that under § 20A, is narrower than that applicable (under § 20(a)) in determining control person liability with respect to other provisions of the Exchange Act. Among other things, an employer would not be liable under § 21A "solely by reason of employing" the insider trader. *See* § 21A(b)(2) of the Exchange Act.

342 *See* § 21A(a)(3) of the Exchange Act; SEC Release No. No. 33-10104 (June 27, 2016). If the control person is a broker-dealer or an investment adviser and knowingly or recklessly failed to establish, maintain or enforce the "information barriers" required by § 15(f) of the Exchange Act or § 204A of the Advisers Act, *see* §§ 14.07[1][b] and 16.13, he or she is likewise liable for up to $1,525,000 or treble profits. § 21(b)(1)(B) of the Exchange Act. If the controlled person's violation was tipping material nonpublic information and not trading on it, the profits used for the damages calculation are those of the tippee. § 21A(a)(3) of the Exchange Act.

343 *See* § 21A(d)(5) of the Exchange Act.

344 § 9(a) of the Exchange Act.

345 *Santa Fe Industries, Inc. v. Green*, 430 U.S. 462, 476 (1977).

346 *See, e.g.*, *Baum v. Phillips, Appel & Walden, Inc.*, 648 F. Supp. 1518, 1530 (S.D.N.Y. 1986), *aff'd*, 867 F.2d 776 (2d Cir.), *cert. denied*, 493 U.S. 835 (1989) (§ 9 actions require proof of *scienter*).

347 *See Baum v. Phillips, Appel & Walden, Inc.*, 648 F. Supp. 1518, 1529–30 (S.D.N.Y. 1986), *aff'd*, 867 F.2d 776 (2d Cir. 1989), *cert. denied*, 493 U.S. 835 (1989) (reading the reliance requirement into a § 9 claim by reference to legislative history, despite the statute's silence on the issue).

348 Defendants are provided an express right of contribution against fellow wrongdoers for civil liability imposed under § 9(e) of the Exchange Act.

349 *See* § 9(e) of the Exchange Act.

350 *See, e.g.*, *United States v. Gilbert*, Fed. Sec. L. Rep. (CCH) ¶98,244 (S.D.N.Y. July 23, 1981), *aff'd*, 668 F.2d 94 (2d Cir. 1981), *cert. denied*, 456 U.S. 946 (1982) (conviction and sentencing of defendant who used multiple accounts with broker-dealers to manipulate the price of stock through "wash" trades and matched orders).

351 *See, e.g.*, *SEC v. Broumas*, SEC Litigation Release No. 12999 (Sept. 27, 1991). *See generally SEC v. Masri*, 523 F. Supp. 2d 361 (S.D.N.Y. 2007) (describing allegations of "marking the close" trades as a mechanism of market manipulation in a case brought pursuant to § 10(b) of the Exchange Act).

352 *See* SEC Release No. 34-13453 (Apr. 19, 1977).

353 *See SEC v. Drexel Burnham Lambert Inc.*, SEC Litigation Release No. 11859 (Sept. 7, 1988) (alleging that Ivan Boesky made large purchases of Wickes common stock at Michael Milken's direction to cause the stock to close within a certain price range so that Wickes, a client of Milken's, could call its outstanding convertible preferred stock for conversion).

354 Many of these same situations could have given rise as well to liability under § 9(a) of the Exchange Act. *See* § 11.05[3][a].

355 *See SEC v. Malenfant*, SEC Litigation Release No. 13339 (Aug. 17, 1992); *SEC v. Sonic Electric Energy*

Corp., SEC Litigation Release No. 13076 (Nov. 4, 1991).

356 *See In re Myron S. Levin*, SEC Release No. 34-31124 (Sept. 1, 1992).

357 *See SEC v. D'Onofrio*, SEC Litigation Release No. 13627 (May 6, 1993); *SEC v. Militano*, SEC Litigation Release No. 12870 (June 4, 1991); *see also SEC v. Militano*, 773 F. Supp. 589 (S.D.N.Y. 1991), *summary judgment granted*, Fed. Sec. L. Rep. (CCH) ¶98,330 (S.D.N.Y. June 23, 1994).

358 *See SEC v. Lorin*, SEC Litigation Release No. 12707 (Nov. 20, 1990); *see also SEC v. Lorin*, 877 F. Supp. 192 (S.D.N.Y 1995), *aff'd in part, vacated in part*, 76 F.3d 458 (2d Cir. 1996); *SEC v. Lorin*, SEC Litigation Release No. 12893 (June 24, 1991); *SEC v. Lorin*, SEC Litigation Release No. 13050 (Oct. 17, 1991).

359 *See SEC v. Steinhardt Management Co.*, SEC Litigation Release No. 14358 (Dec. 16, 1994).

360 *See SEC v. Shull*, SEC Litigation Release No. 14441 (Mar. 15, 1995).

361 Under this theory, broker-dealers have been deemed to represent, among other things, that they: (i) have an "adequate and reasonable basis" for recommending securities to their customers, which necessitates a "reasonable investigation" of the security, (ii) will not recommend securities that they know or should know are not suitable for their customers, (iii) will not sell or purchase securities at prices unrelated to the market price, or with an excessively high mark-up, and (iv) will not churn a customer's account (*i.e.*, trade the customer's securities excessively in order to increase commissions). *See Hanly v. SEC*, 415 F.2d 589, 596–97 (2d Cir. 1969). Broker-dealers have been held liable under the "shingle theory" where they knew their recommendation was false, or disregarded obvious inconsistencies or other negative information of which they were on notice. *See, e.g.*, *McDonald v. Alan Bush Brokerage Co.*, 863 F.2d 809 (11th Cir. 1989); *Cook v. Avien, Inc.*, 573 F.2d 685 (1st Cir. 1978); *In re Allen R. Asker*, SEC Admin. Proc. File No. 3-7401 (Mar. 14, 1992); *In re Lester Kuznetz*, SEC Release No. 34-23525 (Aug. 12, 1986). *See generally* § 14.07[1][a].

362 *Fezzani v. Bear, Stearns & Co.*, 716 F.3d 18 (2d Cir. 2013) (citing *Janus Capital Group, Inc. v. First Derivatives Traders*, 131 S. Ct. 2296 (2011)).

363 As under old Rule 10b-6, a "distribution" is defined for purposes of Regulation M as any offering of securities that is "distinguished from ordinary trading transactions by the magnitude of the offering and the presence of special selling efforts and selling methods." *See* Rule 100 of Regulation M under the Exchange Act.

364 *See* SEC Release No. 34-56206 (Aug. 6, 2007).

365 *See* § 3.02[8] for a discussion of violations of Regulation M in the context of public offerings.

366 *See*, *e.g.*, Piper v. Chris-Craft Industries, Inc., 430 U.S. 1, 44–46 (1977) (denying Rule 10b-6 standing to a tender offeror seeking to sue a target company for market manipulations that caused it to lose the opportunity to gain control, and suggesting that there might not be any implied right of action under Rule 10b-6 under the Exchange Act).

U.S. Regulation of the International Securities and Derivatives Markets, § 11.06, LIABILITIES CONNECTED WITH TENDER AND EXCHANGE OFFERS

U.S. Regulation of the International Securities and Derivatives Markets

The Exchange Act provides a series of remedies for fraudulent, deceptive or manipulative practices in connection with tender or exchange offers. [367] First, as addressed briefly in § 11.06[1], the broad antifraud provisions of Rule 10b-5 apply to purchases and sales of securities in connection with these offers. In addition, the Williams Act amendments to the Exchange Act, and principally §§ 13(d) and 14(d) and (e) of the Exchange Act, specifically target perceived abuses of the tender offer process by mandating certain types of disclosure and creating causes of action for improper disclosure and other forms of deceit. These provisions are addressed in § 11.06[2]. Finally, as examined in § 11.06[4], Rule 14e-3 under the Exchange Act prohibits insider trading in the context of tender offers, supplementing the general prohibitions on insider trading under Rule 10b-5 discussed in § 11.05[2].

[1] Exchange Act § 10(b) and Rule 10b-5

Section 10(b) of the Exchange Act and Rule 10b-5 thereunder prohibit a wide range of fraudulent, deceptive and manipulative practices in connection with the purchase or sale of securities, including purchases pursuant to tender or exchange offers. As discussed in § 11.04[2][a], a plaintiff bringing a private action under Rule 10b-5 must generally demonstrate that the defendant acted recklessly or with fraudulent intent, [368] that the plaintiff relied on the defendant's conduct in making a purchase or sale of securities, and that the conduct caused injury to the plaintiff in some measurable way. The SEC may also seek injunctive relief or civil penalties for violations of Rule 10b-5 or, in the case of willful conduct, ask the DOJ to bring criminal charges against the alleged violator.

[2] Exchange Act §§ 13(d) and 14(d) and (e)

p. 11-96

The Williams Act, a set of amendments to the Exchange Act enacted in 1968, was intended to increase regulation of, and thereby reduce the incidence of abuses in, the tender offer process. The legislation was aimed at reducing the "undue pressure on shareholders to act hastily and to accept an offer, before management or any other group has an opportunity to present opposing argument or competing offers." [369]

The principal enforcement provisions added by the Williams Act are §§ 13(d) and 14(d) and (e) of the Exchange Act. As discussed in § 6.02[2], § 13(d) generally requires any person (or group acting in concert) who acquires more than 5% of the outstanding voting stock of a publicly held corporation to file a disclosure statement revealing, among other things, the identity of the acquiror, the source and amount of the funds used in making its purchases, the number and percentage of shares it holds, the purpose of the acquisition, including whether it intends to acquire control of the issuer's business and, if so, any plans to liquidate the issuer or effect any similar extraordinary transaction, and the nature of any arrangements the acquiror has with respect to the issuer's securities. [370] Section 14(d) requires similar disclosure by any offeror prior to commencing a tender

p. 11-96

p. 11-97

offer. Section 14(e) sets forth a general prohibition against fraudulent, deceptive or manipulative devices, including materially misleading statements or omissions, in the tender offer context.

The courts have generally permitted private actions for injunctive relief (including corrective disclosure) for violations of the reporting requirements of §§ 13(d) and 14(d), but have not extended the private right of action to suits for monetary damages. [371] To obtain an injunction, such as one prohibiting further acquisition of shares by the defendant or voting of shares, the plaintiff must demonstrate that the reporting violation was material [372] and that it was linked to

p. 11-97
p. 11-98

plaintiff's injury. [373] If the plaintiff seeks a preliminary injunction, as is often the case in fast-moving tender offers, it must also demonstrate that it would be irreparably harmed without the injunction. In many cases, the court may issue only interim relief pending corrective disclosure by the defendant.

The courts generally have implied a private right of action for violations of § 14(e) by would-be acquirors. [374] Such actions may permit money damages in certain circumstances, as well as injunctive relief. [375] The damage remedy is available to the target company and its shareholders, whether tendering or non tendering, [376] but may not be brought by unsuccessful tender offerors against the successful bidder. [377] The plaintiff in a § 14(e) action must prove that the defendant made material misstatements or omissions, that the defendant acted either intentionally or with reckless disregard for the truth, and that the plaintiff actually relied on the misstatement or omission. [378]

[3] Exchange Act Rule 14d-10

p. 11-98
p. 11-99

Although Rule 14d-10 under the Exchange Act, the so-called "best price rule," [379] had been an important basis for tender offer litigation, recent amendments to the rule are likely to substantially reduce the number of lawsuits brought under the implied private right of action created by this provision. [380]

When the SEC adopted Rule 14d-10 in 1986, the stated purpose of the rule was to advance the principle of nondiscrimination in tender offers. Since then, the best price rule had been used increasingly in shareholder litigation in which plaintiffs claimed that amounts paid (by the bidder or by the target) to target executives as retention bonuses or pursuant to golden parachutes, consulting agreements, noncompetition agreements, new equity grants or similar arrangements actually constituted additional payments for the executive's shares. In 2006, the SEC adopted amendments to establish that these arrangements are outside the scope of the best price rule and "clarify that the provisions of the rule apply only with respect to the consideration offered and paid for securities tendered in a tender offer." [381] The SEC noted that such clarification was necessary because conflicting judicial decisions and potentially onerous litigation exposure had substantially chilled tender offer activity. [382]

Prior to the 2006 amendments, Rule 14d-10 provided that "[n]o bidder shall make a tender offer" unless, among other requirements, "[t]he consideration paid to any security holder *pursuant to* the tender offer is the highest consideration paid to any other security holder during such tender offer" (emphasis added). The amended rule focuses on the price paid "for securities tendered in the tender offer," not the price paid "pursuant to the tender offer." Thus, the amended provision reads: "[t]he consideration paid to any security holder *for securities tendered in* the tender offer is the highest consideration paid to any other security holder for securities tendered in the tender offer" (emphasis added). Also, the amended rule includes an explicit exemption for employment compensation as long as the compensation is for past services and the amount paid is not determined by the number of shares tendered. The amended rule also includes a safe harbor provision for arrangements approved by a properly constituted committee of the involved companies' boards of directors.

[4] Exchange Act Rule 14e-3

Rule 14e-3 under the Exchange Act, promulgated by the SEC under § 14(e) of the Exchange Act, specifically targets insider trading in the tender offer context. It provides that once a bidder has taken a "substantial step or steps to commence, or has commenced, a tender offer," it is unlawful for anyone (other than the bidder or its agents) to trade in the securities sought in the tender offer on the basis of material nonpublic information that such person knows or should know has been obtained directly or indirectly from the bidder or the target. Rule 14e-3 also makes it unlawful for persons connected with the tender offeror or target, such as their officers, directors, employees or advisers—or those who have reason to know the information was misappropriated from such persons—to tip the material nonpublic information to others. The soon-to-be tender offeror does not have a general duty to disclose its intention to make a tender offer and may therefore purchase securities knowing that it plans to make a tender offer before announcing the offer; however, any such purchase may, if sufficiently large, be subject to the reporting requirements of § 13(d) of the Exchange Act and other federal laws. [383]

Like Rule 10b-5, Rule 14e-3 has been interpreted as creating a private right of action. [384] However, within its limited context of tender offers, [385] Rule 14e-3 prohibits a broader range of conduct than does Rule 10b-5. Unlike Rule 10b-5, Rule 14e-3 does not require proof of fraud or breach of fiduciary duty by the defendant. [386] Rule 14e-3 was promulgated in part to respond to the Supreme

Court's decision in *Chiarella v. United States*, [387] which limited insider trading liability to those breaching a fiduciary duty. In *Chiarella*, the court rejected the "parity of information" approach, which deemed trading to be fraudulent whenever the trader possessed material information not generally available to the public. The court instead held that there must be a breach of a fiduciary duty or other relationship of trust and confidence before the law imposes a duty to disclose information or abstain from trading. In *Chiarella*, an employee of a financial printer discovered nonpublic information while printing corporate takeover bids and then used that information to trade at a profit. The court held that the employee did not have a fiduciary duty to disclose his knowledge to the target shareholders. This decision thus created a gap in the coverage afforded by Rule 10b-5, necessitating the enactment of Rule 14e-3.

Rule 14e-3 also prohibits the communication of inside information to others— "tipping"—where it is "reasonably foreseeable" that the tip might result in trading by the tippee, whether or not trading actually occurs. It is unclear whether Rule 10b-5 would be interpreted to extend this broadly. [388]

Rule 14e-3 does contain a defense, or "safe harbor," for financial institutions that conduct both trading and corporate finance activities. These companies may avoid liability by showing both that (i) the person who made the investment decision on behalf of the company was not actually in possession of the material information and (ii) the company had implemented procedures, such as "information barriers," to prevent those persons making investment decisions from obtaining inside information. [389]

Footnotes

367 *See* § 9.05 for a more general discussion of regulation of tender and exchange offers.

368 The "safe harbor" created by the Litigation Reform Act for certain projections and other forward-looking statements made by issuers or underwriters does not apply to statements made in the context of a tender offer or a going-private transaction. *See* § 11.03[5].

369 Senate Committee on Banking and Currency, Hearings Before the Subcommittee on Securities on S. 510, 90th Cong., 1st Sess. 21 (1967).

370 An investor that crosses the 5% threshold is normally required to report on Schedule 13D such holdings within ten days of the purchase that put it over the threshold. *See* Rule 13d-1 under the Exchange Act. However, certain "qualified institutional investors" ("QIIs") may file short-form Schedule 13G within ten days if the securities are not acquired "with any purpose, or with the effect of, changing or influencing the control of the issuer, or in connection with … any transaction having that purpose or effect," so long as certain other requirements are met. Rule 13d-1(c) under the Exchange Act. Moreover, if the QII acquired no more than 10% of the shares of the company "for investment purposes in the ordinary course of business," and not with the intent of influencing control of the issuer, it may delay filing of short-form Schedule 13G

until 45 days after the end of the calendar year in which it made its purchase (and then only if it continued to own more than 5% at the end of the calendar year). Rule 13d-1(b) under the Exchange Act.

The SEC took a strong stance under § 13(d) of the Exchange Act and Rule 13d-1 thereunder against a merger arbitrage hedge fund that had acquired more than 5% of the voting stock of a company. *See In the Matter of Perry Corp.*, Admin. Proc. File No. 3-13561 (July 21, 2009) ("*Perry*"). In *Perry*, the hedge fund was engaged in a strategy known as "merger arbitrage," which consisted of holding long the stock of a suspected target company and holding short the stock of the acquiror. However, when it became apparent that the acquiror's shareholders would vote down the merger, Perry began to purchase stock in the acquiror (without liquidating its short position) in order to use the shares to influence the merger vote, and at the same time entered into a total return swap that effectively eliminated the economic risk of ownership of the shares. When Perry exceeded the 5% threshold of the acquiror's shares, it took the position that it did so in the ordinary course of business and not for the purpose of effecting a change of ownership in the acquiror. Further, because its holdings did not cross the 10% threshold, Perry did not file short-form 13G, intending to wait until 45 days after the end of the calendar year to do so. On these facts, the SEC imposed a fine of $150,000 and entered a cease and desist order. The SEC ruled that whenever a merger arbitrage fund holds stock to affect the outcome of a merger vote, it does not purchase the stock in the ordinary course of business and thus cannot avail itself of the short-form Schedule 13G option. Instead, it must file Schedule 13D within ten days of its purchases exceeding 5% of the acquiring company.

In *Perry*, the SEC adopted a broad reading of § 13(d). It stated that both §§ 13(d) and 13(g) of the Exchange Act are "broad disclosure statutes" that go beyond "mere ‘technical’ reporting provisions." *In the Matter of Perry Corp.*, Admin. Proc. File No. 3-13561 (July 21, 2009). Rather, the SEC stated, the provisions are the "pivot" of a regulatory scheme that "may represent the only way that corporations, their shareholders and others can adequately evaluate … the possible effects of a change in substantial shareholdings." *In the Matter of Perry Corp.*, Admin. Proc. File No. 3-13561 (July 21, 2009) (citing *SEC v. Drexel Burnham Lambert, Inc.*, 837 F. Supp. 587, 607 (S.D.N.Y. 1993)). The SEC further explained that § 13(d) served the broad purposes of: "(i) providing adequate disclosure and other protections to stockholders in connection with takeover attempts, such as tender offers, and corporate repurchases, and (ii) providing adequate disclosure to stockholders in connection with any substantial acquisition of securities within a relatively short period of time." *In the Matter of Perry Corp.*, Admin. Proc. File No. 3-13561 (July 21, 2009) (citing Exchange Act Release No. 13291, 42 Fed. Reg. 12,342, 12,343 n.2 (Mar. 3, 1977)); *see also* Chapter 6.

371 *See generally Rondeau v. Mosinee Paper Corp.*, 422 U.S. 49, 57 (1975) (discussing availability of injunctive relief under § 13(d) of the Exchange Act); *see, e.g.*, *Motient Corp. v. Dondero*, 529 F.3d 532, 536 (5th Cir. 2008) ("We agree with the district court that there is no private cause of action for money damages under Section 13(d)."); *Florida Commercial Banks v. Culverhouse*, 772 F.2d 1513, 1519 (11th Cir. 1985) (holding that there is a private right of action to seek corrective disclosure); *Gearhart Industries, Inc. v. Unitex, Ltd.*, 624 F.2d 1216, 1224 (4th Cir. 1980), *cert. denied*, 449 U.S. 1101 (1981); *GAF Corp. v. Milstein*, 453 F.2d 709, 720–21 (2d Cir. 1971), *cert. denied*, 406 U.S. 910 (1972) (private actions under § 13(d)); *E.ON AG v. Acciona, S.A.*, 468 F. Supp. 2d 559, 573 (S.D.N.Y. 2007) (private actions under § 14(d)); *Milstein v. Huck*, 600 F. Supp. 254, 263 (E.D.N.Y. 1984); *Wellman v. Dickinson*, 475 F. Supp. 783 (S.D.N.Y. 1979), *aff'd*, 682 F.2d 355 (2d Cir. 1982), *cert. denied*, 460 U.S. 1069 (1983) (private actions under § 14(d)). *But see Liberty National Insurance Holding Co. v. Charter Co.*, 734 F.2d 545, 570–71 (11th Cir. 1984) (holding that there is no private right of action available under either statute where an issuer seeks injunctive relief requiring the shareholder to divest shares and to refrain from voting its shares, pending divestiture).

372 *See Transcon Lines v. A.G. Becker, Inc.*, 470 F. Supp. 356, 376 (S.D.N.Y. 1979); *see also Treadway Companies v. Care Corp.*, 490 F. Supp. 660, 663–65 (S.D.N.Y.), *aff'd in relev. part, rev'd in part*, 638 F.2d 357, 380 (2d Cir. 1980).

373 *See Stirling v. Chemical Bank*, 382 F. Supp. 1146, 1151–52 (S.D.N.Y. 1974), *aff'd*, 516 F.2d 1396 (2d Cir.

1975); *Washburn v. Madison Square Garden Corp.*, 340 F. Supp. 504, 508 (S.D.N.Y. 1972).

374 The effect of the Sarbanes-Oxley Act on the statute of limitations for private rights of action, including those under § 14(e), is discussed in § 11.07[1][a].

375 *See, e.g.*, *Plaine v. McCabe*, 797 F.2d 713, 717 n.7 (9th Cir. 1986); *Gearhart Industries, Inc. v. Smith International, Inc.*, 741 F.2d 707, 716 (5th Cir. 1984); *Mobil Corp. v. Marathon Oil Co.*, 669 F.2d 366, 370–71 (6th Cir. 1981). *But see Liberty National Insurance Holding Co. v. Charter Co.,* 734 F.2d 545, 570–71 (11th Cir. 1984) (no private right of action for issuers seeking drastic injunctive relief).

376 *See, e.g.*, *Smallwood v. Pearl Brewing Co.*, 489 F.2d 579, 596 (5th Cir. 1974); *Electronic Specialty Co. v. International Controls Corp.*, 409 F.2d 937, 946 (2d Cir. 1969). Shareholders who decided not to tender due to fraudulent misrepresentations have standing because, unlike § 10(b) of the Exchange Act, § 14(e) contains no language limiting claims to situations involving the actual purchase or sale of securities. *See Piper v. Chris-Craft Industries, Inc.*, 430 U.S. 1, 38–39 (1977).

377 *Piper v. Chris-Craft Industries, Inc.*, 430 U.S. 1, 35 (1977). In some cases, unsuccessful offerors have been permitted to bring injunctive actions under § 14(e), on the theory that such actions result in "clear benefit" to the shareholders of the target. *See, e.g.*, *Mobil Corp. v. Marathon Oil Co.*, 669 F.2d 366, 371–72 (6th Cir. 1981); *Humana, Inc. v. American Medicorp, Inc.*, 445 F. Supp. 613, 616 (S.D.N.Y. 1977). *But see Astronics Corp. v. Protective Closures Co.*, 561 F. Supp. 329, 332–33 (W.D.N.Y. 1983) (casting doubt about the validity of these cases in light of subsequent legal developments).

378 *See Panter v. Marshall Field & Co.*, 646 F.2d 271, 283–84 (7th Cir.), *cert. denied*, 454 U.S. 1092 (1981); *Chris-Craft Industries v. Piper Aircraft Corp.*, 480 F.2d 341, 373 (2d Cir.), *cert. denied*, 414 U.S. 910, and *cert. denied*, 414 U.S. 924 (1973).

379 In addition to the "best price rule," Rule 14d-10 also includes the companion "all holders rule," which provides that any tender offer must be "open to all security holders of the class of securities subject to the tender offer." This provision has not been the subject of private litigation to the same extent as the best price rule.

380 For an example of such a lawsuit, and the court's analysis of the private right of action created under Rule 14d-10, *see Epstein v. MCA, Inc.*, 50 F.3d 644, 652 (9th Cir. 1995), *vacated on other grounds*, 516 U.S. 367 (1996), and *Katt v. Titan Acquisitions, Ltd.*, 133 F. Supp. 2d 632, 640 (M.D. Tenn. 2000) (gathering authority).

381 SEC Release No. 34-54684 (Nov. 1, 2006).

382 Courts had adopted competing interpretations of the best price rule. Some courts followed the "bright line test," holding that a transaction that is entered into with an executive prior to the actual commencement of the tender offer can never be subject to the best price rule. *See, e.g.*, *Gerber v. Computer Associates International, Inc.*, 303 F.3d 126 (2d Cir. 2002); *Lerro v. Quaker Oats Co.*, 84 F.3d 239 (7th Cir. 1996); *Katt v. Titan Acquisitions, Ltd.*, 244 F. Supp. 2d 841 (M.D. Tenn. 2003); *In re Digital Island Securities Litigation*, 223 F. Supp. 2d 546 (D. Del. 2002); *Walker v. Shield Acquisition Corp.*, 145 F. Supp. 2d 1360 (N.D. Ga. 2001). Other courts followed the "integral part test," holding that any transaction integral or closely related to the tender offer can be subject to the best price rule. This test is ambiguous and its application is more difficult to predict. *See, e.g.*, *Epstein v. MCA. Inc.*, 50 F.3d 644 (9th Cir. 1995); *Millionerrors Investment Club v. General Electric Co. PLC*, Fed. Sec. L. Rep (CCH) ¶90,944 (W.D. Pa. Mar. 21, 2000).

383 Filings may be required, for example, under the Hart-Scott-Rodino Antitrust Improvements Act. *See* § 9.06.

384 The Sarbanes-Oxley Act creates a new statute of limitations for private rights of action under Rule 14e-3, which is discussed in § 11.07[1][a].

385 Rule 14e-3 is not applicable to insider trading connected with mergers or consolidations, which must be addressed, along with other types of insider trading, under Rule 10b-5. *See* § 11.05[2].

386 *Cf.* § 11.05[2]. The absence of a "breach of duty" element in Rule 14e-3 sparked challenges to its validity, with litigants contending that the SEC exceeded its rulemaking authority. The Supreme Court has since held, however, that Rule 14e-3 was validly promulgated, and that SEC prohibitions may sweep in

nonfraudulent acts and practices so long as the rule is "reasonably designed" to prevent fraudulent activity. *See United States v. O'Hagan*, 521 U.S. 642 (1997); *see also United States v. Chestman*, 947 F.2d 551, 557 (2d Cir. 1991), *cert. denied*, 503 U.S. 1004 (1992).

387 *See Chiarella v. United States*, 445 U.S. 222 (1980).

388 *See* § 11.05[2][a][ii].

389 Rule 14e-3 under the Exchange Act. *See* § 14.07[1][b] for a discussion of "information barriers."

U.S. Regulation of the International Securities and Derivatives Markets, § 11.07, ENFORCEMENT RELATED PROVISIONS OF THE SARBANES-OXLEY AND DODD-FRANK ACTS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 11.07 (11th and 12th Editions 2014-2017)

Click to open document in a browser

The Sarbanes-Oxley Act contains a number of provisions relevant to civil, administrative and criminal enforcement. Several of these provisions expand on the existing powers of the SEC under the Exchange Act and the Securities Act, while other provisions seek to stiffen penalties and eliminate perceived deficiencies in the previously existing enforcement scheme for corporate and securities fraud in light of the corporate scandals that preceded the passage of the Act.

[1] Civil Enforcement

p. 11-102

[a] Statute of Limitations for Securities Fraud

The Sarbanes-Oxley Act created a new statute of limitations for any private right of action involving a claim for fraud "in contravention of a regulatory requirement" under the securities laws of the earlier of two years from the date of discovery or five years from the date of the violation. [390] Although the Sarbanes-Oxley Act is not explicit about the claims that it intends to cover, the likely interpretation of this provision is that it will provide the applicable limitations period for securities claims only where the securities laws themselves do not expressly set out the limitations period. To determine whether the new statute of limitations applies, courts have noted that, by its terms, the provision only applies to "a private right of action that involves a claim of fraud, deceit, manipulation, or contrivance in contravention of a regulatory requirement concerning the securities laws." [391] Based on this limitation, courts have generally only applied the longer limitations period to claims that require a showing of fraudulent intent as an element of the cause of action. [392] Courts have noted that Congress used language that mirrors § 10(b) of the Exchange Act in § 804, when it could just as easily have made clear that the new limitations period applied to all actions under the securities laws. Thus, the new statute of limitations will likely not apply to causes of action pursuant to §§ 9 and 18 of the Exchange Act or §§ 11 and 12 of the Securities Act, [393] but likely applies to causes of action

p. 11-102

p. 11-103

pursuant to § 10(b) of the Exchange Act. [394] The statute of limitations for claims under § 10(b) previously had been the earlier of one year from the date of discovery or three years from the date of violation. [395] Courts, however, have determined that the new statute of limitations does not apply to § 14 of the Exchange Act even though § 14 does not expressly set out the limitations period. [396]

[b] Debts Nondischargeable if Incurred in Violation of Securities Fraud Laws

The Sarbanes-Oxley Act also created an additional exception to the discharge of any individual bankruptcy debtor in a bankruptcy proceeding from any debt relating to any judgment, settlement or order resulting from the violation of the federal or state securities laws or regulations or common law fraud in connection with the purchase or sale of a security. [397]

[c] Whistleblower Protections and Incentives

p. 11-103

p. 11-104

[i] *Civil Action to Protect Against Retaliation*

The Sarbanes-Oxley Act created a civil action to protect informants or whistleblowers from possible retaliation for providing assistance or information to federal regulatory or law enforcement agencies, any member or committee of Congress, or any other proceeding concerning alleged violations of any SEC rule, mail fraud, wire fraud, bank fraud, securities fraud or any federal law relating to fraud against shareholders. [398] Initially, the employee is required to show that the whistleblowing conduct was a "contributing factor" in the unfavorable personnel action and must file a claim with the Department of Labor within 90 days of violation. That period was extended to 180 days by the Dodd-Frank Act, and now allows an employee to bring a claim within 180 days of the date in which he or she became aware of the violation. [399]

The Department of Labor administers the employee's complaint, but the employee can bring a claim before a district court if a final decision is not issued by the Department of Labor within 180 days of filing the claim. The Sarbanes-Oxley Act authorizes the following remedies: reinstatement, back pay, interest, attorneys' fees, "any special damages sustained as a result of the discrimination" and "all relief necessary to make the employee whole." [400] It is unclear whether punitive damages are available. The Dodd-Frank Act clarified that a jury trial is available under such claims. [401] These rights may not be waived by any agreement or condition of employment, including by a predispute arbitration agreement. [402]

The Sarbanes-Oxley Act had limited these remedies mainly to employees who work for a publicly traded company or brokerage firm, including the

p. 11-104

p. 11-105

employees of their private contractors and subcontractors. [403] The Dodd-Frank Act further expanded coverage to employees of any "nationally recognized statistical rating organization." [404] In addition, the Dodd-Frank Act created a private right of action for *any* employee (not just those of publicly traded companies) that is the subject of discharge, demotion, suspension, harassment, threats or any manner of discrimination in the terms and conditions of employment, for providing information to the SEC or making the disclosures required or protected under the Sarbanes-Oxley Act, the Exchange Act, or any other law or rule subject to the jurisdiction of the SEC. [405] However, in *Liu Meng-Lin v. Siemens AG*, the Second Circuit held that this provision of the Dodd-Frank Act does not apply extraterritorially, and declined to apply the provision where "the whistleblower, his employer, and the other entities involved in the alleged wrongdoing are all foreigners based abroad, and the whistleblowing, the alleged corrupt activity, and the retaliation all occurred abroad." [406]

[ii] *Whistleblower Incentives*

In addition to expanding the protections for whistleblowers as detailed above, the Dodd-Frank Act provided additional incentives in the form of monetary compensation. Section 922(a) of the Act added a new § 21F to the Exchange Act, which establishes the Securities and Exchange Commission Investor Protection Fund (the "SEC Fund"). [407] The SEC must deposit into the SEC Fund all moneys collected in proceedings enforcing the securities laws, to the extent not added to a disgorgement fund under § 308 of the Sarbanes-Oxley Act, [408] and to the extent the balance of the SEC Fund does not exceed $300 million. In addition, the SEC must deposit into the SEC Fund all funds from the

p. 11-105

p. 11-106

§ 308 disgorgement funds that are not distributed to victims of securities law violations, unless the SEC Fund's balance exceeds $200 million. [409]

The new § 21F provides that, upon the completion of a successful administrative or judicial action that results in monetary sanctions exceeding $1,000,000, the SEC shall award to any whistleblower who voluntarily provided information not already known to the SEC an amount equal to no less than ten percent and no more than 30% of the total collected as monetary sanction in such enforcement action. [410] The determination of the proper award is left to the discretion of the SEC after consideration of certain guidelines listed in § 21F(c). Whistleblowers are given the opportunity to appeal the SEC's determination of whether or to whom to award any amount under this provision to the appropriate United States Court of Appeals. [411] As of August 2016, the SEC had awarded more than $107 million to 33 whistleblowers under its whistleblower program. [412]

[2] Regulatory Enforcement

[a] Disgorgement of Incentive Compensation Following Restatements

Section 304 of the Sarbanes-Oxley Act requires the chief executive officer and chief financial officer of an issuer to reimburse it for all bonuses and other incentive-based or equity-based compensation received, as well as all profits realized from sales of issuer securities, in the 12-month period following the first public issuance or filing of reported financial statements that are later restated due to material noncompliance with any financial reporting requirement as a result of misconduct. [413] The Ninth Circuit has held that this provision "allows the SEC to seek disgorgement from CEOs and CFOs even if the triggering restatement did not result from misconduct on the part of those officers." [414]

p. 11-106

p. 11-107

The Dodd-Frank Act requires the SEC to direct national securities exchanges and associations to modify their listing standards to require new disgorgement policies from listed companies. Specifically, it requires that issuers with listed securities establish a clawback policy in the event of an accounting restatement that would recover incentive-based compensation received during the three-year period *preceding* the date of the restatement due to material noncompliance by the company with any financial reporting requirement under the federal securities laws. [415] The provision is required to apply to any current or former executive officer of the issuer (not just the CEO and CFO) "in excess of what would have been paid to the executive officer under the accounting restatement." [416] A showing of misconduct on the part of either the issuer or the officer is not required. [417]

[b] Restrictions on Persons Serving as Directors and Officers

Section 1105 of the Sarbanes-Oxley Act amended § 21C of the Exchange Act and § 8A of the Securities Act to authorize the SEC, in connection with a cease-and-desist proceeding, to issue an order barring any person who has violated § 10(b) of the Exchange Act or § 17(a)(1) of the Securities Act, as applicable, from acting as a director or officer of any issuer "if the conduct of that person demonstrates unfitness to serve as an officer or director." [418] Prior to these

p. 11-107

p. 11-108

amendments to the Exchange Act and Securities Act, the SEC could only seek a bar in court. [419]

Section 305(a) of the Sarbanes-Oxley Act also amended § 21(d)(2) of the Exchange Act and § 20(e) of the Securities Act to provide that a U.S. federal court may, pursuant to a proceeding initiated by the SEC, bar any person who violates § 10(b) of the Exchange Act or § 17(a)(1) of the Securities Act from acting as an officer or director of any issuer, if such person's conduct demonstrates "unfitness" to serve as an officer or director of an issuer. Prior to these amendments, a court could only bar a person whose conduct demonstrated "substantial unfitness" to serve in such capacity.

Notably, the above amendments to the Securities Act and Exchange Act give the SEC and U.S. federal courts the power to determine the eligibility of foreign persons to serve on the boards of directors or as executive officers of foreign issuers that are SEC reporting companies.

[c] Equitable Relief

Section 305(b) of the Sarbanes-Oxley Act created a new § 21(d)(5) of the Exchange Act that states that the SEC may seek, and any federal court may grant, "any equitable relief that may be appropriate or necessary for the benefit of investors." Although both what specific power the Sarbanes-Oxley Act intended to bestow upon the SEC and the scope of those powers are unclear, the SEC has already invoked this provision in an enforcement proceeding to seek disgorgement of all compensation received after allegedly fraudulent conduct had occurred, not just the bonuses or other incentive-based or equity-based compensation that are subject to recapture under § 304. [420]

[d] Disgorgement Funds

Section 308 of the Sarbanes-Oxley Act provides that the SEC may, in any judicial or administrative matter in which the SEC obtains an order or settlement for disgorgement, cause any civil penalties to be paid to the disgorgement fund

p. 11-108

p. 11-109

established for the benefit of the violation's victims. [421] The SEC may accept additional contributions to the fund. The Dodd-Frank Act, however, eliminated the requirement that the SEC obtain an order or settlement for disgorgement, and allows it to pay any civil penalties to a disgorgement or other fund established for the benefit of the violation's victims. [422]

[e] SEC Authority to Seek Order Freezing Certain Assets of an Issuer During an Investigation Involving Possible Federal Securities Law Violations

Section 1103 of the Sarbanes-Oxley Act authorizes the SEC to petition a U.S. federal court for a temporary order requiring an issuer of "publicly traded securities" to escrow any "extraordinary payments (whether compensation or otherwise)" that appear likely to the SEC to be made to any director, officer, partner, controlling person, agent or employee of the issuer during an investigation of such issuer or individual involving possible violations of the U.S. federal securities laws. A court may issue such an order after notice and an opportunity for a hearing, unless the court determines this requirement to be impracticable or contrary to the public interest. Section 1103 further provides that a court order would take effect immediately and remain in effect for 45 days, unless set aside or modified by a court. The initial order may also be extended by up to 45 additional days for "good cause shown." If, prior to the expiration of the order, the issuer or individual is charged with a federal securities law violation, § 1103 provides that the order will remain in effect until the conclusion of any related legal proceedings, subject to court approval and the right of the issuer or individual to petition the court. If no charges are brought prior to the order's expiration, the disputed payments (plus accrued interest) must be returned to the issuer or individual.

p. 11-109

p. 11-110

Section 1103 raises interpretive issues with respect to scope, including the definition of "publicly traded securities," "extraordinary payments" and "good cause shown" and the duration of an order following the filing of charges relating to an alleged federal securities law violation. [423] Although the SEC sought and the Ninth Circuit Court of Appeals upheld a § 1103 order in *SEC v. Gemstar-TV Guide International, Inc.*, and the then-SEC Chairman signaled that the *Gemstar* decision would prompt increased § 1103 petitions, the SEC has made minimal use of this provision. [424]

[3] Enhanced Criminal Provisions Under the Sarbanes-Oxley Act

[a] Certification of Periodic Reports Containing Financial Statements

Section 906 of the Sarbanes-Oxley Act requires that each "periodic report containing financial statements filed by an issuer with the [SEC]" must be accompanied by a certification by the issuer's chief executive officer and chief financial officer (or equivalent thereof) that the report "fully complies with the requirements of § 13(a) or § 15(d) of the [Exchange Act] and that information contained in the periodic report fairly presents, in all material respects, the financial condition and results of operations of the issuer." [425] Section 906, which is

p. 11-110

p. 11-111

enforceable by the DOJ and not the SEC, imposes criminal liability for inaccurate certifications knowingly or willfully furnished. [426]

[b] Destruction, Alteration or Falsification of Records

The Sarbanes-Oxley Act added § 1519 to Title 18 of the U.S. Code, making it a crime to knowingly destroy, alter or falsify any record, document, or tangible object with the intent to impede, obstruct or influence a federal investigation or bankruptcy or in relation to or contemplation of any such matter, and amended existing § 1512 of Title 18 of the U.S. Code to apply to document destruction or alteration in any federal court or similar proceeding. [427] In each case, the maximum sentence is 20 years imprisonment. In a case concerning the prosecution of a commercial fisherman under this provision for tossing illegally harvested fish into the sea, the Supreme Court recently clarified that § 1519 "cover[s] only objects one can use to record or preserve information, not all objects in the physical world." [428]

[c] Destruction of Corporate Audit Records

The Sarbanes-Oxley Act added § 1520 to Title 18 of the U.S. Code, requiring (i) any accountant conducting an audit of an issuer to maintain work papers for a defined period and (ii) the SEC to promulgate rules regarding the retention

p. 11-111

p. 11-112

of work papers and other documents. [429] In response, the SEC amended Regulation S -X to require accountants to retain work papers for seven years following their conclusion of an audit or review of an issuer's financial statements. [430] The maximum sentence for violation of the Sarbanes-Oxley Act's requirement or the SEC's rules thereunder is ten years' imprisonment.

[d] Securities Fraud

The Sarbanes-Oxley Act added § 1348 to Title 18 of the U.S. Code, making it a crime to defraud any person in connection with any security of an issuer. [431] This section does not contain the purchase or sale requirement contained in § 10(b) of the Exchange Act. [432] The maximum sentence is 25 years' imprisonment.

[e] Retaliation Against Informants

The Sarbanes-Oxley Act added § 1513 to Title 18 of the U.S. Code, making it a crime to retaliate against any person for providing information to a law enforcement officer. [433] The maximum sentence is ten years' imprisonment.

[f] Increased Maximum Penalties

The Sarbanes-Oxley Act increased the maximum sentence for mail and wire fraud from five to 20 years' imprisonment. [434] It also increased the maximum criminal penalties under the Exchange Act from $1 million to $5 million for individuals and from $2.5 million to $25 million for entities, and the maximum prison sentence from ten years to 20 years. [435] The Sarbanes-Oxley Act increased the penalties for a willful violation of ERISA's reporting and disclosure provisions to a fine of not more than $100,000 and imprisonment for not more than ten years. [436]

[g] Review by U.S. Sentencing Commission

p. 11-112
p. 11-113

The Sarbanes-Oxley Act instructed the U.S. Sentencing Commission, which, as discussed further in § 11.09[3][d], sets the sentencing guidelines used by U.S. federal courts, to review the guidelines for obstruction of justice, criminal fraud and securities and accounting fraud related offenses, and to ensure that the sentencing guidelines reflect the nature of the offenses and penalties set forth in the Act. [437] In 2003, the Commission promulgated permanent amendments to reflect the provisions of the Sarbanes-Oxley Act. [439] These amendments, which became effective November 1, 2003, made permanent the temporary amendments and added several provisions. Together, the amendments increased the penalties and the scope of the current sentencing guidelines for corporate and serious white-collar frauds. Specifically, the amendments:

- significantly increased certain penalty enhancements for offenses affecting more than 50 victims;
- expanded the scope of certain penalty enhancements to cover offenses that substantially endanger (i) the solvency or financial security of an organization that at the time was publicly traded or had 1,000 or more employees, or (ii) the solvency or financial security of 100 or more victims (prior to the amendments, the enhancements applied only if the offense substantially jeopardized the safety and soundness of a financial institution);
- created a new penalty enhancement to cover violations of securities laws by officers or directors of publicly traded companies, registered broker-dealers and investment advisers;
- significantly increased penalties for offenses such as wire fraud and mail fraud;
- significantly increased penalties for offenses in which the loss exceeds $200 million (reduction in value of equity securities or other corporate assets is now a factor in measuring losses); and
- significantly increased penalties for obstruction of justice offenses and create new penalty enhancements to cover alteration or fabrication of substantial

p. 11-113
p. 11-114

numbers of documents or objects, destruction of particularly probative documents or objects, or offenses that were extensive in scope, planning or preparation.

Footnotes

390 *See* § 804 of the Sarbanes-Oxley Act.

391 *See* § 804 of the Sarbanes-Oxley Act.

392 *See In re Alstom S.A.*, 406 F. Supp. 2d 402, 412 (S.D.N.Y. 2005) (noting that "Section 804 ‘by its plain text’ does not apply to claims under the securities laws that do not require any showing of fraudulent intent as an element of the cause of action" and holding that the new limitations period does not apply to § 11, § 12 or § 15 claims under the Securities Act or § 18 claims under the Exchange Act, but does apply to § 10(b) claims under the Exchange Act). In *Alstom*, the plaintiff contended that even though a § 11/§ 12 plaintiff need not plead fraud in all cases, the longer limitations should apply when a § 11/§ 12 plaintiff *does* plead fraud. The court rejected this argument in favor of a bright line rule that selects the statutory period based on the elements of the *prima facie* claim instead of the individual circumstances of the plaintiff's factual pleadings. *See also In re Pfizer Inc. Securities Litigation*, 584 F. Supp. 2d 621, 641–43 (S.D.N.Y. 2008) (holding that the extended Sarbanes-Oxley statute of limitations did not apply to § 18 claims because fraudulent intent is not an element of a *prima facie* case under that section).

393 Most courts to consider the issue have determined that the new statute of limitations does not apply to §§

11 and 12 of the Securities Act. *See In re Metropolitan Securities Litigation*, 532 F. Supp. 2d 1260, 1284 (E.D. Wash. 2007); *Cohen v. Northwestern Growth Corp.*, 385 F. Supp. 2d 935 (D.S.D. 2005); *In re Alamosa Holdings, Inc. Securities Litigation*, 382 F. Supp. 2d 832, 863–64 (N.D. Tex. 2005); *Ballard v. Tyco International*, Fed. Sec. L. Rep. 404 § 922(b) of the Dodd-Frank Act.

405 *See* § 922(a) of the Dodd-Frank Act. Lower courts have disagreed concerning whether the anti-retaliation protections of the Dodd-Frank Act only protect employees who provide information to the SEC or also extend to employees who only report violations internally. *Compare Asadi v. G.E. Energy (USA), LLC*, 720

F.3d 620 (5th Cir. 2013) ("Based on our examination of the plain language and structure of the whistleblower-protection provision, we conclude that the whistleblower-protection provision unambiguously requires individuals to provide information relating to a violation of the securities laws *to the SEC* to qualify for protection from retaliation.") *with Berman v. Neo@Ogilvy LLC*, 801 F.3d 145, 155 (2d Cir. 2015) (finding the language of the Dodd-Frank Act to be ambiguous and therefore deferring to the SEC's interpretation of the statute as creating a remedy for whistleblowers who report internally).

406 *Liu Meng-Lin v. Siemens AG*, 763 F.3d 175, 179-83 (2d Cir. 2014).

407 *See* § 922(a) of the Dodd-Frank Act.

408 *See* § 11.07[2][d].

409 *See* § 11.07[2][d].

410 *See* § 5.04[6] for a discussion of the whistleblower program implemented under § 21F of the Exchange Act.

411 *See* § 11.07[2][d].

412 *See* Press Release, SEC, SEC Whistleblower Program Surpasses $100 Million in Awards (Aug. 30, 2016).

413 This provision is discussed in greater detail in § 5.05[2].

414 *SEC v. Jensen*, 835 F.3d 1100, 1116 (9th Cir. 2016). Plaintiffs in various circuits have attempted to bring private actions against corporate officers under § 304 of the Sarbanes-Oxley Act. However, no court to date has recognized a private right of action under § 304. *See In re Goodyear Tire & Rubber Co.*, Fed. Sec. L. Rep. (CCH) ¶94,142 (N.D. Ohio Jan. 5, 2007); *In re Digimarc Corp.*, Civil No. 05-1324-HA (LEAD), 2006 WL 2345497, at *2 (D. Or. Aug. 11, 2006) ("That there is no private cause of action explicitly stated in [Sarbanes-Oxley Act § 304] is beyond dispute."), *aff'd in relevant part, In re Digimarc Corp. Derivative Litigation*, 549 F.3d 1223, 1233 (9th Cir. 2008) ("[W]e conclude that section 304 does not create a private right of action"); *In re BISYS Group Inc.*, 396 F. Supp. 2d 463 (S.D.N.Y. 2005) ("[T]he omission in Section 304 [of language explicitly authorizing private actions] appears to have been quite deliberate."); *In re Qwest Communications International, Inc. Securities Litigation*, 387 F. Supp. 2d 1130 (D. Colo. 2005) (holding that a stockholder lacked standing under § 304 and thus not reaching the issue of whether such a claim could be brought by a proper plaintiff).

415 *See* § 954 of the Dodd-Frank Act.

416 *See* § 954 of the Dodd-Frank Act. Although § 954 does not define "executive officer," the SEC has proposed a rule that includes a definition modeled on the definition of "officer" under § 16 of the Exchange Act, which covers "the issuer's president, principal financial officer, principal accounting officer (or if there is no such accounting officer, the controller), any vice-president of the issuer in charge of a principal business unit, division or function (such as sales, administration or finance), any other officer who performs a policy-making function, or any other person who performs similar policy-making functions for the issuer." SEC Release No. 34-75342 (July 1, 2015). The SEC's proposed rule further defines the recoverable amount as "the amount of incentive-based compensation received by the executive officer or former executive officer that exceeds the amount of incentive-based compensation that otherwise would have been received had it been determined based on the accounting restatement," calculated on a pre-tax basis. SEC Release No. 34-75342 (July 1, 2015).

417 *See* § 954 of the Dodd-Frank Act.

418 *See, e.g.*, *SEC v. Symbol Technologies*, SEC Litigation Release No. 19086 (Feb. 17, 2005) (relating to consent of former Chief Accounting Officer and Senior Vice President of Worldwide Operations to permanent injunctive relief and officer-and-director bar); *see also* § 5.04[4] (discussing further orders barring persons from serving as directors and officers).

419 The Charity Aid, Recovery and Empowerment Act of 2003 (the "CARE Act"), which was passed by the Senate but never reached a vote in the House of Representatives, would have further expanded the SEC's power to act without court authority, including the ability to impose fines in administrative proceedings. S. 476, 108th Cong. (2003). The relevant provision of the CARE Act was previously introduced in the Senate as the SEC Civil Enforcement Act and incorporated in whole in the CARE Act. S. 183, 108th Cong. (2003).

420 *See SEC v. Kozlowski*, SEC Litigation Release No. 17722 (Sept. 12, 2002); § 5.04[3].

421 This provision was applied by the SEC in its $300 million settlement against Time Warner and its $500 million settlement against WorldCom. *See SEC v. Time Warner Inc.*, SEC Litigation Release No. 19147 (Mar. 21, 2005); *SEC v. WorldCom Inc.*, SEC Litigation Release No. 18147 (May 19, 2003). The former Chairman of the SEC also indicated he intended that the federal regulators' portion of the penalties in connection with the global settlement regarding analyst conflicts of interest be contributed under this provision to the distribution funds created by the settlement. *See* Global Research Analyst Settlement: Hearing Before the Senate Committee on Banking, Housing and Urban Affairs, 108th Cong. (May 7, 2003) (statement of William H. Donaldson, former Chairman, SEC). On June 5, 2003, the SEC announced the $22 million payment it will receive from its settlement with six senior executives of Xerox Corporation alleged to have participated in securities fraud will be paid into a court account pursuant to this provision. *See SEC v. Allaire*, SEC Litigation Release No. 18174 (June 5, 2003).

422 *See* § 929B of the Dodd-Frank Act.

423 Pursuant to § 1103 of the Sarbanes-Oxley Act, a California district court ordered Gemstar-TV Guide International, Inc. ("Gemstar") to freeze for 45 days the $37.64 million it agreed to pay its former Chief Executive Officer and Chief Financial Officer, whose accounting and disclosure practices during their tenure at Gemstar were being investigated by the SEC. *See SEC v. Yuen*, SEC Litigation Release No. 18135 (May 13, 2003). The Ninth Circuit, en banc, upheld the decision and declared that when determining the scope of an extraordinary payment, courts should be free to determine the proper context in which to evaluate such evidence as the size, purpose and circumstances of payments. The court held that Sarbanes-Oxley "does not compel any specific method of making the determination but allows for the consideration of a variety of factors." *SEC v. Gemstar-TV Guide International, Inc.*, 401 F.3d 1031 (9th Cir. 2005) (*en banc*), *cert. denied sub nom.*, *Yuen v. SEC*, 546 U.S. 933 (2005); *see also SEC v. Gemstar-TV Guide International, Inc.*, SEC Litigation Release No. 18760 (June 23, 2004).

HealthSouth Corp. also consented to an escrow of certain extraordinary payments to its executive officers and directors. *See SEC v. HealthSouth Corp.*, SEC Litigation Release No. 18044 (Mar. 20, 2003); *SEC v. HealthSouth Corp.*, 261 F. Supp. 2d 1298 (N.D. Ala. 2003).

424 *See SEC v. Gemstar-TV Guide International, Inc.*, 401 F.3d 1031 (9th Cir. 2005) (*en banc*), *cert. denied sub nom.*, *Yuen v. SEC*, 546 U.S. 933 (2005); *Testimony Before The House Committee On Financial Services Concerning The Impact Of The Sarbanes-Oxley Act*, by Former Chairman William H. Donaldson (Apr. 21, 2005).

425 The periodic reports for which this certification is required, the location of the certification and the other certification requirements of the Sarbanes-Oxley Act are discussed in further detail in § 5.03[7]. *See also supra* Note 194 (discussing whether certifications may be used to demonstrate *scienter* in civil litigation actions brought under § 10(b) of the Exchange Act and Rule 10b-5 thereunder).

426 The penalties include up to 20 years' imprisonment for anyone who "willfully" certifies such statements, or up to ten years' imprisonment for anyone who otherwise certifies such statements knowing that the report does not comport with all the relevant requirements. One peculiar aspect of the statute is that the penalties apply to non-compliance with the terms of the certification, but the statute does not explicitly provide that a failure to certify triggers liability.

427 *See* §§ 802 and 1102 of the Sarbanes-Oxley Act. Prior to the Sarbanes-Oxley Act, the general obstruction statute, 18 U.S.C. § 1503, prohibited a person from corruptly endeavoring to influence, obstruct or impede the due administration of justice, and the general tampering statute, 18 U.S.C. § 1512, prohibited one person from corruptly persuading another to destroy a document to prevent its use in an official proceeding. In 2002, Arthur Andersen was convicted under the then-existing 18 U.S.C. § 1512. The Supreme Court reversed the conviction in 2005 due to flawed jury instructions and remanded the case for further proceedings. *See Arthur Andersen LLP v. United States*, 544 U.S. 696 (2005). The Sarbanes-Oxley Act amendments likely reflect Congressional concerns that the existing statutes were inadequate: § 1503 captured individuals acting alone, but required a pending proceeding, and § 1512 did not require a pending

proceeding, but failed to capture individuals acting alone. Both the amended § 1512 and the new § 1519 capture individuals acting alone and neither requires a pending proceeding. Amended § 1512 also applies beyond document destruction to include any conduct that corruptly "otherwise obstructs, influences, or impedes any official proceeding, or attempts to do so." § 1102 of the Sarbanes-Oxley Act.

428 *See Yates v. United States*, 135 S. Ct. 1074 (2015).

429 *See* § 802 of the Sarbanes-Oxley Act.

430 *See* Rule 2-06 of Regulation S -X.

431 *See* § 807 of the Sarbanes-Oxley Act.

432 *See* § 11.04[2].

433 *See* § 1107 of the Sarbanes-Oxley Act.

434 *See* § 903 of the Sarbanes-Oxley Act.

435 *See* § 1106 of the Sarbanes-Oxley Act.

436 *See* § 904 of the Sarbanes-Oxley Act.

U.S. Regulation of the International Securities and Derivatives Markets, § 11.08, ENFORCEMENT OF THE FOREIGN CORRUPT PRACTICES ACT

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 11.08 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

As discussed in § 4.08, the Foreign Corrupt Practices Act of 1977, [440] as amended by the Foreign Corrupt Practices Act Amendments of 1988 [441] and the International Anti-Bribery and Fair Competition Act of 1998 [442] (collectively, the "FCPA"), [443] comprises two sets of provisions that impose certain prohibitions and requirements on companies, referred to in the FCPA as "issuers," that have registered securities under the Exchange Act or are required to file reports under § 15(d) of the Exchange Act. One set prohibits the bribery [444] of foreign officials. [445] The other requires issuers to (i) maintain books, records and accounts

p. 11-115

which, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the issuer and (ii) devise and maintain an adequate system of internal accounting controls. [446] Enforcement of the two types of prohibitions is frequently in tandem because, as U.S. authorities explain, bribes are "often concealed under the guise of legitimate payments, such as commissions or consulting fees," and the "payment of bribes often occurs in companies that have weak internal control environments." [447] As discussed at § 11.08[5], the SEC and the DOJ have aggressively expanded FCPA enforcement over the last decade.

[1] Penalties for Violations of the FCPA

Both the antibribery and record keeping portions of the FCPA provide for criminal and civil penalties for violations of the Act. Settlement agreements

p. 11-115

p. 11-116

resolving FCPA enforcement actions now often require defendants to appoint independent compliance monitors with broad authority to review corporate compliance with anticorruption laws.

[a] Antibribery Provisions

The FCPA's antibribery provisions provide for severe criminal penalties. Convicted individuals face imprisonment of up to five years and a fine of up to $250,000. [448] Convicted issuers are subject to fines of $2,000,000. [449] A court can also impose a fine equal to double the amount of gross gain or loss from the violation. [450]

In addition, the SEC may bring civil actions against issuers and individuals, which can result in a $19,787 fine for each violation. [451] When such criminal or civil fines are imposed on an officer, director, employee or agent of an issuer, the issuer may not pay the fine on behalf of the individual. [452]

[b] Accounting Provisions

An issuer that willfully violates the FCPA's accounting provisions is subject to a fine of up to $25 million. [453] An individual who willfully violates the accounting provisions can be fined up to $5 million and imprisoned up to 20 years. [454] The SEC can also impose disgorgement of profits and fines in civil actions under the FCPA accounting provisions, without regard to intent or negligence. [455]

[2] Injunctions

p. 11-116
p. 11-117

The Exchange Act authorizes the SEC to issue a cease-and-desist order or to bring an action to obtain an injunction against any person, including an issuer, who has engaged or is about to engage in acts or practices that violate any part of the Exchange Act, including the FCPA. [456]

[3] Enforcement by the DOJ and the SEC

The SEC is responsible for civil enforcement of the FCPA with respect to issuers. The DOJ brings all criminal enforcement actions against issuers, as well as civil enforcement actions against non-issuers. Enforcement actions under the FCPA are not limited to domestic issuers. Foreign issuers are also subject to the reach of the FCPA, as seen in the recent SEC and DOJ actions brought against foreign issuer VimpelCom Limited, an Amsterdam-based company, for allegedly conspiring to pay more than $114 million in bribes to a government official in Uzbekistan to allow VimpelCom to operate in the Uzbek telecommunications market. [457] Similarly, the DOJ and SEC may bring enforcement actions against foreign subsidiaries of U.S. issuers in reliance on the jurisdictional provision of 15 U.S.C. § 78dd-3, which allows FCPA charges to be brought against any

p. 11-117
p. 11-118

person that engages in any act in furtherance of a bribery scheme "while in the territory of the United States." [458]

The courts have held that there is no private cause of action for a violation of the FCPA. [459] However, a violation of the FCPA's antibribery provisions may be one basis for civil or criminal actions brought under RICO. [460] Also, some plaintiffs have attempted to frame § 10(b) claims around FCPA charges and investigations, alleging that the defendants failed to disclose the extent or nature of their potential FCPA violations. There has been a steady stream of securities and derivative shareholder lawsuits based on alleged FCPA violations in recent years. [461] Although many courts have rejected these claims, some have survived a defendant's motion to dismiss. In one recent case, a federal court in Texas refused to dismiss a class action alleging violations of the securities laws based on the company's failure to disclose the allegedly corrupt nature of its oil business in Angola, activity for which it was later investigated by the SEC and DOJ for potential FCPA violations. The court held that the plaintiffs adequately alleged that the company misrepresented its knowledge of the connection between its business partner and senior government officials in Angola. [462]

[4] Department of Justice Opinion Procedure

p. 11-118
p. 11-119

Issuers and other parties subject to the FCPA may request opinions from the DOJ as to whether their prospective conduct would violate the antibribery provisions of the FCPA. [463] If such an opinion approves specified conduct, a rebuttable presumption exists in any action brought under the FCPA that the approved conduct does not violate the FCPA. [464] Documents and other materials submitted in connection with such requests are exempt from public disclosure. [465] This practice is infrequently used because (i) it may require a time-consuming submission, (ii) the transaction at issue, as well as any prior or future transactions between the parties, may come under greater government scrutiny, (iii) the DOJ's public release may identify the requesting party and the transaction or the media may identify the parties given the details in the opinion release, and (iv) the requesting party can often obtain similar comfort from outside counsel while maintaining the confidentiality of the parties and the transaction. [466] The DOJ has issued 12 opinions since 2008 and none since 2014. [467]

[5] Increased SEC and DOJ Enforcement of the FCPA

The last decade has seen a dramatic increase in enforcement actions under the FCPA, as well as an increase in fines and penalties levied for violations of the Act. In a keynote address in 2015, the Director of Enforcement at the SEC

p. 11-119

p. 11-120

noted that 2015 had been "especially active" for the SEC, with 14 actions filed against entities and individuals for FCPA violations, resulting in $215 million of financial remedies. [468] In 2007, Baker Hughes paid $44 million to settle FCPA charges, which was, at the time, by far the largest FCPA sanction ever recorded. But subsequent FCPA penalties have soared into the hundreds of millions of dollars. [469] In the largest FCPA penalty ever imposed, in 2008 Siemens AG, a German company, and several of its subsidiaries were charged with fraudulent bookkeeping to mask bribes paid to government officials to secure lucrative contracts, throughout the course of many years and in dozens of different countries. The companies agreed to pay criminal fines totaling more than $450 million, and more than $350 million in disgorgement to the SEC. The case marked the first time the DOJ brought criminal charges for violation of the FCPA's internal controls provision. [470]

The prosecutions arising out of the Nigerian gas line case are illustrative of both the potential magnitude of FCPA cases and expanded FCPA jurisdiction. Starting in 1990, Technip S.A., a French company, Halliburton subsidiary Kellogg Brown & Root LLC ("KBR"), Snamprogetti Netherlands, a Dutch entity, and Japan Gas Corporation ("JGC") formed a joint venture to bid on contracts to construct natural gas lines on Bonny Island in Nigeria. They then hired a U.K. solicitor and a Gibraltar entity as "consultants" to pay bribes to Nigerian government officials. Over $180 million in bribes were paid, and the joint venture was awarded contracts worth over $6 billion. In February of 2009 in a settlement that eclipsed most of the previous fines imposed under the FCPA, KBR pled guilty to a five-count criminal information charging it with violations of the FCPA for payment of these bribes. The plea agreement required KBR to pay a

p. 11-120

p. 11-121

$402 million fine. [471] KBR also settled civil FCPA charges with the SEC, agreeing to pay $177 million in disgorgement and to the imposition of a three-year independent monitor for FCPA compliance. [472]

In June of 2010, the SEC and DOJ charged Technip and another of its joint venture partners with violations of the FCPA antibribery, books and records and internal controls provisions. Technip agreed to pay $98 million to the SEC in disgorgement of profits, and a $240 million penalty to the DOJ under a two-year deferred prosecution agreement that required Technip to retain an independent compliance monitor for two years. [473]

And in July of 2010, the SEC and DOJ charged another of the joint venture partners, Snamprogetti and its Italian parent company (Eni S.p.A.) with violations of the FCPA in connection with the Nigerian officials bribe scheme. [474] The case is notable, in part, because the SEC charged Snamprogetti "as an agent of an issuer" for allegedly falsifying the issuer's (Eni's) books. This theory effectively permits the SEC to charge not just issuers, but also their subsidiaries in connection with the FCPA's books and records provisions. As part of its settlement with the SEC, Snamprogetti agreed to $125 million in disgorgement. [475] It also entered into a two-year deferred prosecution agreement with the DOJ that required it to pay a $240 million criminal penalty. [476]

The KBR-related cases also illustrate the DOJ's aggressive approach in expanding the reach of the FCPA's jurisdiction. In each of these prosecutions, the correspondent bank connection was one basis for jurisdiction. Specifically, the bribe funds were transferred from banks accounts in Amsterdam to the agents' account in Japan, Morocco or Switzerland. The DOJ did not allege that any relevant bank account was located in the United States, but rather simply that because the transactions were made in U.S. dollars they were transferred "via a correspondent bank account in New York, New York." [477] Effectively, this "correspondent bank account" theory of liability allows the U.S. government to reach most U.S. dollar transactions. This theory has not yet been challenged by a defendant in court.

p. 11-121

p. 11-122

As the *Siemens*, *Technip* and *Snamprogetti* cases suggest, FCPA enforcement is not limited to U.S. companies. In fact, as of February 2016, eight of the top ten FCPA enforcement settlements were against foreign companies. [478] Moreover, the DOJ and SEC have been actively seeking cooperation of foreign government entities in enforcement of the FCPA. The Director of the SEC Enforcement Division has publicly attributed the

SEC's success in recent FCPA cases in part to its effective coordination with international regulators, noting the "tremendous increase in cooperation from other governments and better access to evidence in foreign countries." [479] The Assistant Attorney General of the DOJ Criminal Division has made similar remarks, stating that the DOJ "increasingly find[s itself] shoulder-to-shoulder with law enforcement and regulatory authorities in other countries," and affirming that "this international approach has dramatically advanced [its] efforts to uncover, punish and deter foreign corruption." [480]

While the DOJ routinely brings FCPA cases against non-issuers, in November 2010, the SEC for the first time brought FCPA charges against an entity that is neither a U.S. issuer nor affiliated with one, on the theory that it was "an agent of its issuer customers" in violating the FCPA. [481]

In addition, individual defendants have not been immune from this increased FCPA enforcement, with some of the actions leading to substantial fines and prison terms. The DOJ has increasingly touted the importance of individual accountability, describing it as a matter of "basic fairness" to a company's employees and shareholders, and noting that "nothing discourages corporate criminal activity like the prospect of people going to prison." [482] In the fall of 2015, the DOJ initiated an official policy to facilitate its ability to identify and pursue individuals involved in corporate misconduct, including by predicating *any* cooperation credit granted to a company on the company's provision of "all relevant facts about individuals involved in corporate misconduct." [483]

The DOJ has sought harsh sentences for those individuals charged. For example, in 2010, an individual was sentenced to 87 months in prison after

p. 11-122
p. 11-123

pleading guilty to violating the FCPA by paying bribes to Panamanian government officials to secure maritime contracts and making a false statement to the FBI regarding how the bribe money was paid. This remains the longest prison sentence ever imposed on an individual for violating the FCPA, reflecting the DOJ's effort to deter foreign bribery through individual culpability. In announcing the sentence, prosecutors stated that the "sentence makes clear that this is a serious crime that the U.S. government is intent on enforcing." [484]

In 2012 and 2013, the DOJ brought FCPA charges against individuals associated with a broker-dealer in connection with a scheme to bribe a senior official of Venezuela's state economic development bank in exchange for bond trading work. The individuals pled guilty to conspiracy to violate the FCPA and admitted to paying over $5 million in bribes to the Venezuelan official and generating more than $60 million in commissions from the resulting trading business. The individuals were sentenced to prison terms from two to four years, and forfeitures ranging from $2.7 million to $11.9 million. [485] Notably, the Venezuelan official was also arrested in 2013 upon entering the United States and charged with money laundering and violations of the Travel Act (since the FCPA does not criminalize the recipient of bribe payments), to which she pled guilty and was sentenced to time served. [486]

In 2009, the SEC charged a parent corporation with violating the FCPA's antibribery, books and records, and internal control provisions in connection with bribes paid by its Brazilian subsidiary to Brazilian customs brokers. [487] Notably, the SEC also charged two of the company's executives as "control persons" within the meaning of § 20 of the Exchange Act, the first time the control person provision of the Exchange Act had been used against individuals in the FCPA

p. 11-123
p. 11-124

context. The SEC did not allege that the executives participated in or knew of the violations, but instead based its control person liability charges on a "failure to supervise" theory. Each executive was required to pay a fine of $25,000.

Moreover, while the DOJ has long used deferred prosecution agreements as an enforcement tool under the FCPA, in May of 2011, the SEC announced its first-ever deferred prosecution pact under the FCPA, involving global steel pipe manufacturer Tenaris. [488] Under the agreement, the company would pay over $5 million in disgorgement and prejudgment interest, in an approach the SEC hopes will encourage cooperation by individuals and companies in the future. [489]

In 2012, the DOJ and SEC collaboratively published ("the FCPA GUIDE"), a comprehensive manual that provides guidance on a broad range of topics regarding the enforcement of and compliance with the FCPA. In addition to setting forth detailed information on the FCPA statutory requirements, THE FCPA GUIDE provides useful insight into the enforcement approaches and priorities of the DOJ and SEC.

On April 5, 2016, the DOJ announced a three-step "enhanced FCPA enforcement strategy," which stated that the DOJ was "committed to enhancing its efforts to detect and prosecute both individuals and companies" for violations of the FCPA. [490] In what it described as the "first and most important step in combatting FCPA violations," the DOJ announced it was increasing the number of

p. 11-124

p. 11-125

staff for its FCPA unit by 50%, adding 10 new prosecutors and creating three new squads of FBI special agents dedicated to FCPA investigation and enforcement. For the second step of the new program, the DOJ announced that it was strengthening its coordination with foreign law enforcement officials in corruption cases, including by sharing leads and striving to share more effectively documents and witnesses. The third step of the strategy was the launch of a pilot program aimed at inducing more companies to self-report FCPA problems. To satisfy the pilot program's criteria, a company must:

- Make a voluntary self-disclosure, including by disclosing the matter before "an imminent threat" that the government will learn of the matter, making the disclosure "reasonably prompt[ly]" after the company discovers the matter, and disclosing all relevant facts known to the company, including concerning individual malfeasance.
- Provide "full cooperation," including by making timely disclosure of all facts relevant to the alleged wrongdoing, updating that disclosure in a timely manner, proactively offering information, preserving and providing relevant documents, translating relevant documents, making individuals available for interviews, detailing the sources of information, and "de-conflict[ing]" internal investigations.
- Make "timely and appropriate remediation," including by implementing a compliance program that is periodically reviewed and modified if necessary, establishing a culture of compliance, providing sufficient resources for the compliance function, which must be independent, retaining qualified and experienced compliance personnel, conducting risk assessments and tailoring the compliance program to meet those risks, auditing the compliance program, and implementing an appropriate reporting structure for compliance personnel.

If the company meets these requirements and disgorges any profits earned from the bribery scheme, the DOJ "may" (1) grant a 50% reduction from the bottom end of the sentencing guidelines fine range, (2) "generally" not require a monitor if the company has implemented an effective compliance program, and (3) "consider" a declination of prosecution based on a consideration of "countervailing interests," including whether the company has a history of misconduct or the incident involved large sums of money or senior management. On the other hand, companies that fully cooperate and conduct timely and appropriate remediation but fail voluntarily to disclose misconduct will receive "markedly less" credit than those that self-report, including at best a reduction of no more than 25% off the bottom of the Sentencing Guidelines fine range.

Footnotes

440 *See* Foreign Corrupt Practices Act of 1977, Pub. L. No. 95-213, 91 Stat. 1494 (1977).

441 *See* Foreign Corrupt Practices Act Amendments of 1988, Pub. L. No. 100-418, Title V, Subtitle A, Part I, 102 Stat. 1107, 1415 (1988).

442 *See* International Anti-Bribery and Fair Competition Act of 1998, Pub. L. No. 105-366, 112 Stat. 3302 (1998) (the "1998 Amendments").

443 The FCPA is incorporated into the Exchange Act as §§ 13(b), 30A and 32(c) (penalties).

444 *See United States v. Kay*, 359 F.3d 738, 743 (5th Cir. 2004) (holding that invocation of the antibribery portion of the FCPA requires payments "that are intended to (1) influence a foreign official to act or make a decision in his official capacity, or (2) induce such an official to perform or refrain from performing some act in violation of his duty, or (3) secure some wrongful advantage to the payor" and that "[t]he FCPA … criminalizes these kinds of payments only if the result they are intended to produce—their *quid pro quo*—will assist (or is intended to assist) the payor in efforts to get or keep some *business*") (second emphasis added); *see also United States v. Kozeny*, 493 F. Supp. 2d 693, 705 (S.D.N.Y. 2007) (agreeing with *Kay* that "the FCPA's business nexus element was intended to be construed broadly").

Under the antibribery provisions, bribe payments must be made "corruptly," 15 U.S.C. § 78dd-1(a), § 78dd-2(a), § 78dd-3(a), which, according to the DOJ and the SEC, means made with an "an intent or desire to wrongfully influence the recipient," The Criminal Division of the DOJ and the Enforcement Division of the SEC, "A Resource Guide to the U.S. Foreign Corrupt Practices Act" 14 (Nov. 14, 2012) ("*FCPA Guide*").

445 The FCPA's antibribery provisions apply to issuers if the bribe occurs in connection with U.S. interstate commerce. 15 U.S.C. § 78dd-1(a). These provisions also apply to "domestic concerns," which are U.S. citizens, nationals and residents, and all companies that have their principal place of business in the United States or are organized under U.S. law. 15 U.S.C. § 78dd-2(h)(1). The antibribery provisions apply to domestic concerns regardless of whether the activity related to the bribe involves U.S. interstate commerce or has any other connection to the United States. 15 U.S.C. § 78dd-2(i). Finally, for persons or entities who are not issuers or domestic concerns, the antibribery provisions apply if they, or any person acting on their behalf, perform any part of the acts of bribery in connection with U.S. interstate commerce while in the territory of the United States. 15 U.S.C. § 78dd-3(a).

The FCPA defines the term "foreign official" as an "officer or employee of a foreign government or any department, agency, or instrumentality thereof," but does not define "instrumentality," "department" or "agency." *See* 15 U.S.C. § 78dd-2(h)(2). A decision by the Tenth Circuit found that the term "foreign officials" includes employees of state-owned companies. *See United States v. Esquenazi*, 752 F.3d 912 (11th Cir. 2014) (holding state-owned telecommunications company as an "instrumentality" of government and defining "instrumentality" as "an entity controlled by the government of a foreign country that performs a function the controlling government treats as its own"). Some DOJ prosecutions under the FCPA, such as the KBR-related actions described below, *see infra* Notes 478, 484, raise the specter that the DOJ views even certain minority ownership by a foreign government of a private entity to suffice to make that entity an "instrumentality" of a foreign government, and thus subject payments to employees of such entity to FCPA enforcement. *See also United States v. Alcatel-Lucent*, No. 10-cr-20907 (S.D. Fla. Dec. 27, 2010). Moreover, in September 2010, the DOJ issued an opinion procedure release that expanded the scope of who the DOJ would consider to qualify as a "foreign official" for FCPA purposes to include, in certain instances, otherwise private individuals or organizations who act on behalf of a foreign government, such as a "consultant" and its employees. *See* DOJ, Opinion Procedure Release No. 10-03 (Sept. 1, 2010).

446 § 13(b)(2) of the Exchange Act. The SEC has opined that the "reasonableness" standards contained in § 13(b)(2)–(7) of the Exchange Act should be "based not on a ‘materiality’ analysis but on the level of detail and degree of assurance that would satisfy prudent officials in the conduct of their own affairs." SEC, Staff Accounting Bulletin No. 99 (Aug. 12, 1999), Fed. Sec. L. Rep. (CCH) ¶75,563. In determining whether a misstatement has resulted in a violation of § 13(b)(2), registrants should consider (i) the significance of the misstatement, (ii) how the misstatement arose, (iii) the cost of correcting the misstatement, and (iv) the clarity of authoritative accounting guidance with respect to the misstatement. These factors should be considered along with the ten other factors that should be assessed when making a determination of materiality. *See* § 11.04[2].

Under § 404 of the Sarbanes-Oxley Act, management is required to report on the adequacy of internal controls and auditors of those companies are required to provide an attestation on internal controls. *See* § 5.03[7][a][ii].

447 FCPA Guide at 39-40. *See, e.g.*, *In re Key Energy Services, Inc.*, SEC Release No. 78558 (Aug. 11, 2016) (employees made payments to a Pemex employee to induce him to provide advice, assistance and inside information, all in violation of the books and records and internal controls provisions).

448 *See* § 32(c)(2)(A) of the Exchange Act.

449 *See* § 32(c)(1)(A) of the Exchange Act.

450 *See* 18 U.S.C. § 3571.

451 *See* §§ 32(c)(1)(B) and 32(c)(2)(C) of the Exchange Act; SEC Release No. 33-10104 (June 27, 2016).

452 *See* § 32(c)(3) of the Exchange Act.

453 *See* § 32(a) of the Exchange Act. As with violations of the antibribery provisions, if a defendant derives a gain or causes a loss to another person by violating the accounting provisions, the defendant may be fined up to twice the amount of the gross gain or loss. *See* 18 U.S.C. § 3571(d).

454 *See* § 32(a) of the Exchange Act, which is discussed in § 11.07[3][f]. A defendant cannot, however, be imprisoned if he or she had no knowledge of the rule or regulation he or she is convicted of violating. § 32(a) of the Exchange Act.

455 These penalties may not exceed the higher of (i) the amount the defendant gained from the violation or (ii) an amount based upon the egregiousness of the violation, ranging from $8,156 to $178,156 for a natural person and from $81,559 to $890,780 for an issuer. *See* § 21(d)(3) of the Exchange Act; SEC Release No. 33-10104 (June 27, 2016).

456 *See* §§ 21C and 21(d)(1) of the Exchange Act.

457 The Dutch defendant, VimpelCom, was at the time of the regulatory action the sixth-largest telecommunications company in the world, and an issuer of publicly traded securities in the United States. To enter into and operate in the Uzbek telecommunications market, VimpelCom and its Uzbek subsidiary, Unitel, allegedly paid bribes to an Uzbek government official who had influence over the governmental body that regulated the telecom industry in Uzbekistan. Over a six-year period, VimpelCom and Unitel executives and employees allegedly funnelled bribe payments through a shell company beneficially owned by the Uzbek official. The DOJ charged VimpelCom with conspiracy to violate the antibribery and books and records provisions of the FCPA, and a separate count of violating the internal controls provisions of the FCPA. VimpelCom entered into a deferred prosecution agreement with the DOJ pursuant to which it agreed to pay a criminal penalty of $230 million, implement rigorous internal controls and retain an independent compliance monitor for three years. In related proceedings, VimpelCom settled with the SEC and the Public Prosecution Service of the Netherlands, agreeing to pay a total of $375 million in disgorgement of profits and prejudgment interest to be apportioned between the SEC and the Dutch prosecutors, with additional criminal penalties paid to the Dutch prosecutors. In total, VimpelCom paid over $795 million in criminal and regulatory penalties to the U.S. and Dutch authorities, making it one of the largest foreign bribery matters to date. The DOJ subsequently filed two civil complaints seeking a total of $850 million in forfeiture comprising the illegal bribes paid and property involved in the laundering of those bribe payments. *See* Press Release, DOJ, VimpelCom Limited and Unitel LLC Enter into Global Foreign Bribery Resolution of More Than $795 Million; United States Seeks $850 Million Forfeiture in Corrupt Proceeds of Bribery Scheme (Feb. 18, 2016).

p. 11-126

The previous sections have examined the principal sources of liability under the U.S. federal and state securities laws. This section highlights a number of common enforcement scenarios. In § 11.09[1], we address two common vehicles for civil enforcement: actions brought on behalf of a wide class of plaintiffs ("class actions") and private actions under the RICO statute. Issues concerning administrative enforcement are addressed in § 11.09[2], including general SEC powers to investigate and prosecute offenses and to seek a variety of forms of relief, such as injunctions and civil monetary penalties, as well as a recent series of actions against market professionals that were initially spearheaded by the states' attorneys general rather than the SEC. Finally, § 11.09[3] examines several different mechanisms available for criminal enforcement of the securities laws and briefly examines the provisions of federal law that relate to penalties for crimes committed by or on behalf of organizations.

[1] Civil Enforcement

[a] Class Actions

Class actions are civil suits brought by an individual plaintiff or a group of plaintiffs who seek to represent the interests of a much broader group of similarly situated parties (the "class"). The would-be class representative must demonstrate that questions of law or fact are common to the class (commonality), that those common claims of the class predominate over individual questions (predominance), that the claims asserted by the named plaintiffs are typical of the class (typicality), that the members of the class are so numerous that it would be impracticable to join each plaintiff in the suit (numerosity), that the class representative will adequately represent the interests of the class (adequacy), and that a class action is superior to other means of pursuing the claims (superiority). [491]

Class actions are prevalent in the United States, including in securities litigation (involving both domestic issuers and foreign issuers listed on U.S. exchanges), [492] and are often brought in situations where an individual plaintiff's claimed damages do not justify the substantial costs of litigating the claim, but where the total damages alleged to have been sustained by the class are

p. 11-126

p. 11-127

extremely large, thereby making the suit worthwhile. [493] A typical example would be a class action on behalf of shareholders who purchased stock on the basis of allegedly misleading information published by the issuer in its annual report. Since in these cases there is no need to establish that each plaintiff relied on a particular statement (or, in a fraud-on-the-market case, that each plaintiff was even aware of the statement), [494] the elements of the claim are typically common to all members of the plaintiff class and appropriate for resolution in a class action suit. Because an adverse judgment before a single court binds the defendant with respect to all members of the class [495]—as opposed to a series of individual actions where the decisions of one court usually do not bind the others—class actions can pose a risk of substantial damages for defendants.

Most class litigation is brought pursuant to Fed. R. Civ. P. 23(b)(3), which requires a plaintiff to demonstrate that the criteria set forth above have been met, including numerosity, typicality, commonality, predominance, and adequacy. [496] A decision from the Second Circuit Court of Appeals in 2006 clarified the scope of inquiry and held that a court considering a motion for class certification must resolve any factual disputes relevant to each Rule 23 requirement, including an analysis of the evidence presented by all of the parties—an analysis that may necessarily reach the merits of the litigation. [497] This decision significantly

p. 11-127

p. 11-128

increased the plaintiff's burden at the class certification stage of the litigation by rejecting earlier decisions that had suggested that the plaintiff was only required to make "some showing" that it could satisfy the requirements of Rule 23. [498]

A key issue in class certification motions filed in actions asserting claims under Rule 10b-5 is predominance and, in particular, whether plaintiffs are entitled to the presumption of reliance of *Basic v. Levinson*. [499] In the absence of such a presumption, individualized questions of reliance will predominate over common questions, making class certification inappropriate. In a recent line of decisions, the Supreme Court has held that plaintiffs do not bear the burden of directly proving loss causation, materiality, or price impact at the class certification stage in order to trigger the *Basic* presumption. [500] In *Erica P. John Fund, Inc. v. Halliburton Co.*, [501] the Supreme Court held that a securities class action plaintiff need not prove loss causation at the class certification stage because "[t]he fact that a subsequent loss may have been caused by factors other than the revelation of a mispresentation has nothing to do with whether an investor relied on the misrepresentation in the first place, either directly or presumptively through the fraud-on-the-market theory." Nonetheless, the Court left open the question whether a loss causation inquiry may be appropriate at the class certification stage to defeat another element of the Rule 23 showing, such as to demonstrate that the lead plaintiff's claims are not typical of those of the entire class, [502] or to rebut the *Basic* presumption of reliance by establishing that the alleged misrepresentation or omission had no impact on the price of the stock. [503]

p. 11-128

p. 11-129

In *Amgen Inc. v. Connecticut Retirement Plans & Trust Funds*, the Supreme Court likewise held that securities class action plaintiffs need not prove materiality in order to obtain class certification. [504] Although the Supreme Court acknowledged that materiality is an essential predicate of the "fraud-on-the-market" theory underlying the *Basic* presumption of reliance, it concluded that the question of materiality is common to the class and that proof of materiality was therefore not needed to ensure that questions of law or fact common to the class would predominate over individual questions, as required by Rule 23(b)(3). And, in *Halliburton Co. v. Erica P. John Fund, Inc.*, the Supreme Court held that plaintiffs need not prove price impact directly at the class certification stage in order to invoke the fraud-on-the-market presumption because such a rule "would radically alter the required showing for the reliance element of the Rule 10b-5 cause of action." [505] However, as noted above, the Court nonetheless held that a defendant may introduce price impact evidence at the class certification stage either to counter a plaintiff's showing of market efficiency or to directly rebut the presumption. [506]

In several recent decisions arising outside the securities context, the Supreme Court has otherwise increased the burden on putative class plaintiffs to obtain class certification. In *Wal-Mart Stores, Inc. v. Dukes*, which involved a putative class action concerning employment discrimination, the Supreme Court held that a party seeking class certification must affirmatively demonstrate compliance with Rule 23 and that the trial court must conduct a rigorous analysis to determine if Rule 23(a)'s prerequisites have been satisfied. [507] The *Wal-Mart* Court observed that this inquiry could entail some overlap with the merits of the plaintiff's underlying claim, but stated "[t]hat cannot be helped." The Court further noted that the commonality requirement of Rule 23(a)(2) requires the claims of the class to depend upon a "common contention," which must be of such a nature as to be "capable of classwide resolution."

The Supreme Court expanded on its *Wal-Mart* decision in *Comcast Corp. v. Behrend*, which involved a putative class action alleging violations of the federal antitrust laws. [508] In *Comcast*, the putative class plaintiff originally alleged four theories of antitrust liability, but the district court subsequently rejected all

p. 11-129

p. 11-130

but one of those theories. Nonetheless, the plaintiffs' damages model assumed that all four of the original theories were valid and did not attribute damages to any one particular theory. Under this circumstance, the Supreme Court held that the plaintiffs had failed to satisfy the predominance requirement of Rule 23(b)(3) because they did not establish "that damages are capable of measurement on a classwide basis."

Applying this precedent, the Fifth Circuit recently affirmed the denial of class certification in the securities litigation arising out of the explosion of BP's Deepwater Horizon drilling rig in the Gulf of Mexico. [509] The plaintiffs in that case (as is typical in securities class actions) alleged that the defendants made a number of misstatements and omissions. The plaintiffs also indicated that they would calculate class members' damages by use of an event study (as is also common in securities class actions). However, the plaintiffs did not offer a specific event study in connection with their class certification motion that was capable of isolating losses attributable to each of the individual misstatements and omissions alleged in the complaint. The Fifth Circuit therefore held that the plaintiffs had failed to satisfy their burden of "providing an adequate measure of class-wide damages under *Comcast*" because their damages model could not "be applied uniformly across the class."

With the passage of the Litigation Reform Act in 1995, Congress sought to reduce certain perceived abuses of the class action mechanism in securities lawsuits, particularly the common practice in which the class representative was merely a nominal party, or "professional plaintiff," selected and controlled by plaintiffs' counsel who filed the suit with little real financial stake in its outcome. [510] Specifically, the Litigation Reform Act mandates, for all class actions brought under the Securities Act or the Exchange Act, the appointment by the court of the "lead plaintiff," who will not necessarily be the original named plaintiff in the lawsuit and who, among other things, selects the plaintiffs' counsel. [511] The lead plaintiff will be the person deemed by the court

p. 11-130

p. 11-131

most capable of adequately representing the interests of the class, and generally may not have served in this role in more than five class actions in any three-year period. A group may act as lead plaintiff, and claims may be aggregated in most circumstances in order for a group to be appointed lead plaintiff. [512] The statute includes a rebuttable presumption that the class member with the largest financial interest in the litigation should be designated as the lead plaintiff. [513] Congress intended to facilitate appointment of institutional investors as lead plaintiffs. [514] Although there was little change initially, [515]

p. 11-131

p. 11-132

institutional investors increasingly are having a greater impact in securities class actions as the lead plaintiff. [516]

Shortly after the enactment of the Litigation Reform Act, many plaintiff's attorneys sought to avoid the Act's tougher pleading requirements and mandatory stays of discovery pending a defendant's motion to dismiss by filing securities class actions in state rather than federal court. Concerned that the state courts were now being used to frustrate the objectives of the Litigation Reform Act, in 1998, Congress passed SLUSA, which requires most class action securities fraud cases to be brought exclusively in federal court under federal law. [517] SLUSA prohibits a private party from bringing a covered class action in state or federal court based upon the statutory or common law of any state if the party alleges (i) an untrue statement or omission of material fact in connection with the purchase or sale of a covered security or (ii) that the defendant used a manipulative or deceptive device in connection with the purchase or sale of a covered security. [518] Any such action that is brought in state court can be removed

p. 11-132

p. 11-133

to federal court and dismissed, and a federal court is required to dismiss any such action filed with it. Once a court decides that SLUSA does not authorize removal of an action to federal court, the case must be remanded; because this decision is jurisdictional, the remand may not be reviewed by the federal appellate courts. [519]

In *Merrill, Lynch, Pierce, Fenner & Smith Inc. v. Dabit*, [520] the Supreme Court held that SLUSA authorized the removal and dismissal not only of claims for which federal law provides a remedy (*i.e.*, viable Rule 10b-5 claims), but also claims brought on behalf of holders of securities, which are not actionable under Rule 10b-5. [521] The Court held that this broad reading of the "in connection with the purchase or sale" requirement of SLUSA was consistent with the policies articulated in *Blue Chip Stamps*, by preventing plaintiffs from circumventing the federal prohibition on "holder" claims by filing their claims in state court. [522] In a recent decision arising out of the Allen Stanford Ponzi scheme, however, the Supreme Court held that the "covered security" requirement is not satisfied by the purchase or sale of uncovered securities that were falsely claimed to be backed by covered securities. [523] Instead, citing SLUSA's focus upon transactions in covered securities, the Supreme Court concluded that SLUSA preemption requires a fraudulent misrepresentation or omission that "is material to a decision by one or more individuals (other than the fraudster) to buy or to sell a 'covered security.'" In a case arising out of the Bernie Madoff Ponzi scheme, which alleged that certain feeder funds violated state law by making misrepresentations about their investments with Bernie Madoff and breached various

p. 11-133

p. 11-134

duties owed to investors by failing to detect the Ponzi scheme, the Second Circuit has further held that SLUSA preclusion only applies when the state law claim is predicated on conduct by the defendant (rather than a third party), and that in circumstances where some but not all of the claims in an action are precluded by SLUSA courts may only dismiss the specific claims that are precluded by SLUSA and not the entire action. [524]

In a similar strategy to evade the heightened rigors of the Litigation Reform Act, plaintiffs have filed Securities Act class actions in state courts, arguing that claims based entirely on the Securities Act, without any state law claims, are not removable. Although courts have split on the question of whether a claim must be precluded by § 26(b) of SLUSA in order to be removable under § 26(c) of SLUSA, [525] several district courts have ruled that SLUSA eliminated state court jurisdiction over "covered class actions" brought under the Securities Act. [526] Under these rulings, the disagreement among the courts as to the scope of the *removal* provision of the Securities Act is irrelevant because defendants

p. 11-134

p. 11-135

do not need to invoke the removal provision of the Securities Act to effect the removal of actions over which state courts lack jurisdiction. However, several courts have recently disagreed that state courts lack jurisdiction over class actions asserting Securities Act claims, including many district courts within the Ninth Circuit. [527]

As discussed below in § 11.10[4][a], SLUSA also prevents parties from obtaining discovery in parallel state court proceedings while discovery in the federal action is stayed. Section 101 of the Act empowers a federal court to stay discovery in private state court actions when it is "necessary in aid of [the court's] jurisdiction, or to protect or effectuate its judgments."

Furthermore, in 2005, Congress enacted the Class Action Fairness Act ("CAFA"), [528] which significantly alters federal court jurisdiction in class action cases and provides a powerful new tool to defendants. Federal courts under CAFA have original jurisdiction over class actions that seek more than $5 million in damages where any one defendant is a citizen of a state different from any one plaintiff. Thus, under CAFA, defendants may remove large interstate class actions from state to federal court that they could not have removed pursuant to the stricter requirements of federal diversity jurisdiction. [529] Additionally, even if class certification is later denied, CAFA allows the federal court to maintain jurisdiction over the suit.

There are some limitations, however, to this jurisdictional grant: CAFA does not apply to class actions where the primary defendants are states or state officials or where the number of proposed class members is less than 100. In

p. 11-135

p. 11-136

addition, federal courts are required to remand class actions to state courts in certain cases when more than two-thirds of the class members are citizens of the forum state. Courts have also reached differing conclusions on whether CAFA permits the removal of Securities Act class actions, notwithstanding that § 22(a) of the

Securities Act otherwise prohibits the removal of actions filed in state court asserting Securities Act claims. [530]

Finally, the mortgage-backed securities ("MBS") litigation has generated a number of decisions regarding the scope of claims that can be asserted by putative class plaintiffs as a matter of constitutional and statutory standing. In these cases, many courts have held that class action plaintiffs can only bring claims related to the offerings or securities in which they personally invested. [531] In *NECA-IBEW Health & Welfare Fund v. Goldman Sachs & Co.*, [532] however, the Second Circuit held that a putative class plaintiff who invested in one offering may possess "class standing" to bring claims related to other offerings if both claims raise the same set of concerns. In *NECA-IBEW*, the court thus concluded that a putative class plaintiff who invested in securities from one MBS offering could represent a class containing investors in other securities from that offering, as well as investors in other MBS offerings, so long as all of the securities were backed by mortgages from the same originators. The Second Circuit further observed that purchasers of corporate debt securities from one offering likewise may have "class standing" to assert claims on behalf of investors in other debt securities from the same corporation if the offering documents all contained identical misrepresentations.

[b] RICO

Prior to 1995, one of the most common vehicles for civil enforcement of the securities laws stemmed from RICO. The Litigation Reform Act eliminated RICO liability for "conduct that would have been actionable as fraud in the purchase or sale of securities," unless the defendant actually has been criminally convicted in connection with the fraud. [533] This provision explicitly eliminated

p. 11-136

p. 11-137

securities fraud (absent a conviction) as a predicate act for RICO liability. According to the Conference Committee report, it was also intended to preclude use of the RICO statute to impose liability under any other theories (such as wire or mail fraud) if the conduct relied upon would constitute securities fraud. The effect of the Litigation Reform Act provision is to remove the significant threat of RICO treble damages suits for what essentially are federal securities fraud claims.

[2] Regulatory Enforcement

In addition to the private enforcement mechanisms addressed above and elsewhere in this chapter, the SEC has wide powers to pursue and punish violations of the securities laws. The various weapons in its enforcement arsenal, which was enhanced by the Sarbanes-Oxley Act and the Dodd-Frank Act, are discussed below. The SEC has employed these weapons to attempt to achieve "real time" enforcement by initiating proceedings immediately upon discovery of violations. [534]

p. 11-137

p. 11-138

In recent years, the SEC has also developed a number of computerized tools intended to detect early warning signs of suspicious activities. [535]

[a] Investigation and Prosecution

The SEC has broad powers to investigate past, existing or imminent violations of the securities laws. [536] This investigatory power includes the right to administer oaths, compel sworn testimony and require the production of documents by subpoena. [537]

p. 11-138

p. 11-139

SEC administrative proceedings and civil actions commenced by the SEC are generally preceded by an investigation conducted by staff attorneys and other professionals in the SEC's Division of Enforcement. The SEC staff often requests that persons with information pertinent to a matter under investigation provide documents and testimony on a wholly voluntary basis. If such cooperation is not forthcoming, the staff requests the SEC to authorize a formal investigation. In a formal investigation, the staff is authorized to issue and enforce subpoenas.

Upon conclusion of the investigation, the Division of Enforcement recommends whether further action should be taken. If the Division plans to recommend that the SEC authorize commencement of proceedings, the Division will issue a notification, or Wells Notice, to individuals and companies to provide them an opportunity to explain their alleged wrongdoing and assure the SEC of attempts to rectify the violations. The SEC then decides whether to authorize the commencement of administrative or judicial proceedings. [538] SEC staff attorneys conduct administrative proceedings before a quasi-judicial administrative law judge employed by the SEC. [539] The administrative law judge conducts a hearing and then issues a decision. [540] The decision of the administrative law judge can be appealed to the SEC, and any final order of the SEC can be appealed to a federal appellate court. [541]

In recent years, the SEC has faced criticism for its increased reliance on internal administrative law judges, who have been perceived as providing a more favorable forum for the SEC than the federal courts. [542] Several defendants have

p. 11-139

p. 11-140

challenged the constitutionality of the SEC's in-house judges in the proceedings pending against them, arguing that the judges were appointed in violation of the Appointments Clause or that the use of administrative proceedings violates their due process rights, and certain district courts have expressed the view that certain aspects of the in-house courts are "likely unconstitutional." [543] However, several circuit courts have dismissed similar challenges on jurisdictional grounds, ruling that defendants must complete the administrative process within the SEC before appealing to federal court, [544] and others have issued conflicting opinions on whether the SEC's administrative law judges' appointments are constitutional. [545] In response to this criticism, the SEC has provided additional guidance on when it considers bringing cases before its in-house courts, has increased the protections provided to defendants in its in-house proceedings, and has reduced its usage of in-house courts. [546]

Alternatively, the SEC can agree to settlements with the targets of its investigation before filing administrative or judicial proceedings. The SEC reached

p. 11-140

p. 11-141

such settlements with many financial institutions concerning alleged securities law violations arising out of the 2008 financial crisis. [547] These settlement agreements generally require judicial approval, and have been the subject of increased judicial scrutiny. Most notably, in 2011, Judge Jed S. Rakoff of the Southern District of New York rejected a settlement agreement between the SEC and Citigroup, in which Citigroup agreed to disgorge $160 million in profits, plus $30 million in interest, and pay a civil penalty of $95 million. [548] For several reasons, Judge Rakoff concluded that the proposed settlement was "neither fair, nor reasonable, nor adequate, nor in the public interest." Most fundamentally, Judge Rakoff criticized the SEC's "long-standing policy—hallowed by history, but not by reason—of allowing defendants to enter into Consent Judgments without admitting or denying the underlying allegations." Judge Rakoff stated that such settlements fail to "provide the Court with a sufficient evidentiary basis to know whether the requested relief is justified." Judge Rakoff further pointed to the "overriding public interest in knowing the truth," and rebuked the SEC for failing to fulfill its "duty, inherent in its statutory mission, to see that the truth emerges." Judge Rakoff also characterized the settlement at issue as imposing "only very modest penalties," which could be viewed "as a cost of doing business imposed by having to maintain a working relationship with a regulatory agency, rather than as any indication of where the real truth lies."

Although the Second Circuit Court of Appeals subsequently held that Judge Rakoff committed an abuse of discretion in rejecting the settlement, after concluding that "there is no basis in the law for the district court to require an admission of liability as a condition for approving a settlement between the parties" and that the SEC is not required to "establish the 'truth' of the allegations against a settling party as a condition for approving" a settlement, [549] the SEC

p. 11-141
p. 11-142

nonetheless announced a new policy in 2013, under which it will require admissions of wrongdoing in certain cases. [550] Pursuant to this policy, the SEC requires companies to admit wrongdoing in certain settlements. [551]

[b] Injunctive Relief

The SEC has authority to enforce the securities laws by bringing suit in federal district court for injunctive relief. [552] The injunction—a court order compelling or prohibiting specified conduct of the defendant—is among the SEC's strongest weapons for enforcing compliance with the securities laws. [553] Generally, for injunctive relief to be ordered, the SEC must show there is a reasonable

p. 11-142
p. 11-143

likelihood of a future violation. [554] The court will look at such factors as the nature of the violation (*e.g.*, whether a minor technical violation or a flagrant one) and defendant's past conduct to determine whether such a likelihood exists. [555]

The SEC also has the authority to request a federal court to enjoin any person who violated the antifraud provisions of § 17(a)(1) of the Securities Act or § 10(b) of the Exchange Act from acting as an officer or director of a public company. [556] The Sarbanes-Oxley Act, as discussed in § 11.07[2][b], makes it easier for the SEC to obtain such a court injunction.

[c] “Cease-and-Desist” Proceedings and Stop Orders

The SEC also has the authority to institute administrative proceedings to order a person to "cease and desist" committing or causing a present or future violation of the major U.S. securities laws. [557] The SEC may also, in connection with this cease-and-desist proceeding, issue an order barring any person who has violated § 10(b) of the Exchange Act or § 17(a)(1) of the Securities Act from acting as a director or officer of a public company.

Unlike the SEC's power to seek injunctive relief, these orders can be issued by the SEC in an administrative proceeding without seeking court action and do not require a showing of likelihood of future violation.

If the SEC determines that the alleged violation is likely to result in significant harm to investors or the public interest, it can enter a temporary order pending completion of the proceedings. [558] A temporary cease-and-desist order can only be entered against a "broker, dealer, investment adviser, investment company, municipal securities dealer, government securities broker, government securities dealer, or transfer agent" or any of their associated persons. The order,

p. 11-143
p. 11-144

effective upon service, can be entered without giving the affected party notice and opportunity to be heard if the SEC determines that "notice and hearing prior to entry would be impracticable or contrary to the public interest." [559] Such orders are subject to judicial review within ten days. [560]

The SEC may also issue, after notice and hearing, an order, known as a "stop order," denying effectiveness to a registration statement if it appears inaccurate or incomplete in any material respect, or suspending the effectiveness of a registration statement if it contains a material misstatement or omission. [561]

[d] Civil Monetary Penalties and Disgorgement

The SEC has authority to bring an action in federal court to impose civil penalties for violations of any of the federal securities laws or any cease-and-desist order. [562] The SEC's penalty authority was limited prior to 1984, mainly consisting of a $100 per day assessment against issuers for reporting requirement violations. However, through the 1984 Insider Trading Sanctions Act, the 1988 Insider Trading and Securities Fraud Act, the Sarbanes-Oxley Act, and the Dodd-Frank Act, this power has gradually expanded. [563] The largest civil penalties are imposed for violations that involve "fraud, deceit, manipulation, or deliberate or reckless disregard of a regulatory requirement" and where the violation "directly or indirectly resulted in substantial losses or created significant risk of substantial losses to other persons"; penalties for such violations are the greater of (i) $178,156 for individuals or $890,780 for corporations and (ii) the gross amount of the pecuniary gain to the defendant resulting from such violation. [564]

The SEC considers three core issues in the assessment of a monetary penalty: first, the type of violation, and notably the presence of a fraud element;

p. 11-144

p. 11-145

second, the degree of harm or loss to investors (for a regulated entity, there is a greater degree of harm because of the danger of a public loss of confidence in the markets); and third, the extent of a violator's cooperation. [565] Additional

p. 11-145

p. 11-146

considerations, such as recidivism, the relative sophistication or seniority of the party, evidence of personal enrichment, the violation's duration and the size of the entity or the net worth of the individual, are all important in computing the final monetary penalty. [566]

When considering the appropriateness of monetary sanctions against corporate defendants, the SEC staff has identified two primary considerations: (i) "[t]he presence or absence of a direct benefit to the corporation as a result of the violation" and (ii) the degree to which the penalty will recompense or further harm the injured shareholders; as well as several secondary considerations, including:

- the need to deter the particular type of offense;
- the extent of the injury to innocent parties;
- whether complicity in the violation is widespread throughout the corporation;
- the level of intent on the part of the perpetrators;
- the degree of difficulty in detecting the particular type of offense;
- presence or lack of remedial steps by the corporation; and
- extent of cooperation with the SEC and other law enforcement. [567]

Certain provisions authorizing the SEC to assess civil penalties contain explicit statutes of limitations, which fix the time in which the SEC must file actions seeking such penalties. For example, actions assessing civil penalties for insider trading must be brought within "5 years after the date of the purchase or sale." [568] Civil penalty provisions that do not contain specific statutes of limitations are subject to the default five-year statute of limitations contained in 28 U.S.C. § 2462, which begins to run on the date that the claim "first accrued." In *Gabelli v. SEC*, a unanimous Supreme Court rejected the SEC's argument that this default statute of limitations should not begin to run on claims that sound in fraud until the agency discovered or should have discovered the alleged wrongdoing, holding that the default statute of limitations for civil penalties begins to run on the date of the alleged wrongdoing and is not subject to the discovery rule. [569]

p. 11-147

p. 11-148

The SEC also may seek the "disgorgement," or forfeiture, of profits arising from the defendant's violations. [570] Disgorgement is an equitable remedy within the discretion of the court, but is generally a powerful tool. [571] Courts have held, for example, that defendants in disgorgement actions may not plead defenses based on laches or the statute of limitations, because the SEC acts in the public interest. [572] Moreover, the government may seek disgorgement in addition to criminal sanctions for the same wrongful conduct: disgorgement orders do not constitute "punishment" for purposes of the Double Jeopardy Clause of the U.S. Constitution, provided that the amount ordered to be disgorged bears a rational relationship to the actual damages and costs caused by the defendant. [573] Under the Sarbanes-Oxley Act, the SEC has the authority to add any civil penalties obtained in connection with such disgorgement to the disgorgement fund. [574]

The SEC also has limited authority to impose civil penalties in certain administrative proceedings against persons who have willfully violated provisions of the securities laws if the penalty is "in the public interest." [575] Prior to the enactment of the Dodd-Frank Act, the SEC could only impose penalties in administrative proceedings against certain regulated entities, including broker-dealers and investment advisers. Section 929P of the Dodd-Frank Act, however, expanded the SEC's ability to impose civil penalties in administrative proceedings to encompass any person or company.

In the aftermath of the 2008 financial crisis, the DOJ has also pursued civil penalties against various banks, their executives, and the credit rating agencies

p. 11-148

p. 11-149

under the Financial Institutions Reform, Recovery and Enforcement Act ("FIRREA"), which imposes civil penalties for violations of various criminal statutes, including the federal mail and wire fraud statutes, that "affect[] a federally insured financial institution." [576] Although the statute, which was enacted following the savings and loan crisis of the 1980s, was arguably intended to protect financial institutions from fraud committed by others that affected them, a number of district courts have permitted the government to pursue FIRREA claims against financial institutions themselves based on so-called "self-affecting" misconduct. [577] One of those cases subsequently proceeded to trial, which resulted in a verdict in favor of the government and the imposition of a $1.27 billion civil penalty, although the verdict was subsequently reversed on appeal based on the government's failure to prove fraudulent intent. [578] Prior to that reversal, however, a number of financial institutions agreed to multi-billion dollar settlements of similar FIRREA claims with the DOJ for alleged wrongdoing in connection with mortgages and mortgage-related securities in the years before the financial crisis. [579]

[e] Publication of Findings

The SEC has power under § 15(c)(4) of the Exchange Act to publish a report of the findings of administrative proceedings in connection with noncompliance with the registration, reporting or proxy requirements of the Exchange Act by issuers that are reporting companies under the Exchange Act. [580] It can also issue orders under § 15(c)(4) to bring conduct of the particular issuer into

p. 11-149

p. 11-150

compliance with the securities laws. [581] In addition, the SEC has the power under § 21(a)(1) of the Exchange Act to publish reports concerning securities law violations it has investigated. The SEC primarily uses these so-called § 21(a) reports to publicize its view on matters for which enforcement proceedings have not been pursued or with respect to "novel or unique matters." [582]

[f] Enforcement Activities Against Market Professionals

By the fall of 2002, the SEC, the NASD (now known as FINRA), the NYSE and state attorneys general began cooperatively investigating the practices of financial institutions. These investigations resulted in several settlements related to analyst conflicts of interest issues and allocation practices in initial public offerings, such as "spinning," in which shares of an initial public offering that are expected to trade in the aftermarket at a premium are allocated to company executive officers and directors in order to induce those individuals to steer investment banking business to the underwriter.

Notably, in January 2002, Credit Suisse First Boston settled for $100 million with the NASD and the SEC to resolve a federal investigation of IPO allocation practices. [583] After more than six months of investigation by the Attorney General of the State of New York (the "NYAG"), a similar settlement agreement for a $100 million payment was reached between Merrill Lynch, Pierce, Fenner & Smith Incorporated and the NYAG in May 2001, regarding allegations that

p. 11-150

p. 11-151

Merrill Lynch analysts issued misleading research related to the technology and Internet sectors, and that their research was influenced by investment banking relationships. [584]

Around the same time, the SEC, the NASD, the North American Securities Administrators Association ("NASAA"), the NYSE and attorneys general from a number of states, including New York, undertook a broader investigation of 12 prominent Wall Street banking firms with regard to research and IPO allocation practices, such as "spinning" in initial public offerings. During the course of these investigations, [585] damaging evidence was made public suggesting that the public recommendations of Wall Street analysts often did not reflect their firms' internal assessments of a company and that the independence of analysts was compromised by their firms' investment banking relationships with the same companies they were analyzing. In October 2002, the SEC, the NASD, the NASAA, the NYSE, the NYAG and various state securities regulators officially agreed to coordinate investigation and enforcement efforts, [586] and a global settlement between each of these regulators and ten of the financial institutions under investigation was announced on April 28, 2003 and was entered by the court on

p. 11-151

p. 11-152

October 31, 2003. [587] A later settlement with the remaining two firms was announced on August 26, 2004. [588]

Under the terms of the settlements, the 12 firms were required to pay disgorgement and civil penalties totaling approximately $1.5 billion, which included Merrill Lynch's prior payment of $100 million in connection with its initial settlement with the NYAG. [589] Some of the money was used to create funds for investors, to pay for independent research and for investor education. [590] The settling firms also agreed to structural reforms to separate research and investment banking and to improve disclosure as to possible conflicts of interest. The 12 firms also entered into a voluntary agreement to restrict spinning in initial public offerings. A variety of different statutory provisions were invoked against the settling firms:

- Firms issuing fraudulent research reports were charged with violating § 15(c) of the Exchange Act.
- Firms issuing research reports that were not based upon principles of fair dealing and good faith and did not provide a sound basis for evaluating facts, contained exaggerated or unwarranted claims about the covered companies, and/or contained opinions for which there were not reasonable bases were charged with violating NYSE Rules 401, 472 and 476(a)(6) and then—NASD Rules 2110 and 2210 and states' ethics statutes.
- Firms receiving payments for research without disclosing such payments were charged with violating § 17(b) of the Securities Act as well as NYSE Rules 476(a)(6), 401 and 472, then—NASD Rules 2210 and 2110 and state statutes.
- Firms engaging in spinning of initial public offerings were charged with violating NYSE and NASD rules requiring adherence to high business standards and the recordkeeping provisions of § 17(a) of the Exchange Act, NYSE Rule 440 and NASD Rule 3110.
- All firms were alleged to have failed to maintain appropriate supervision over their research and investment banking operations in violation of NASD Rule 3010 and NYSE Rule 342.

p. 11-152

p. 11-153

Two individual analysts were fined and agreed to an injunction against future securities laws violations and a bar on associating with a broker, dealer or investment adviser. [591] The settlements did not foreclose further actions against the 12 firms (or other firms or individuals) by regulatory or individual investors, and civil plaintiffs filed hundreds of class action complaints related to IPO allocation practices, which were settled in 2009 for $586 million. [592]

The SEC also has pursued actions against certain securities exchanges. In 2013, the SEC charged NASDAQ with securities law violations relating to the initial public offering of Facebook, during which a computer error caused more than 30,000 orders to remain stuck in the exchange's system for several hours without being executed or cancelled. [593] In its order against NASDAQ, the SEC charged that, despite widespread anticipation that the Facebook IPO would be among the largest in history, NASDAQ failed to correct the computer error and thereby violated its rule governing the price/time priority for executing trade orders. The SEC order further asserted that NASDAQ violated its rules by utilizing an unauthorized error account. NASDAQ agreed to settle the charges by paying a $10 million penalty.

[3] Criminal Enforcement

p. 11-153

p. 11-154

Violations of the U.S. securities laws can also give rise to criminal prosecution by the DOJ [594] and, upon conviction, to sentences ranging from substantial fines to imprisonment. As in civil enforcement, there are multiple statutory provisions under which criminal charges may be brought. This section discusses several provisions within the securities laws themselves, as well as several general criminal statutes that are frequently applied in securities cases. It also discusses the federal guidelines applicable for sentencing corporations and other entities.

[a] Securities Law Provisions

The principal U.S. securities laws each authorize the commencement of criminal proceedings against persons who willfully violate certain provisions of these statutes. [595] The Securities Act, the Investment Company Act and the Advisers Act each provide for fines of up to $10,000, [596] and the Exchange Act provides for fines of up to $5 million for natural persons or $25 million for others. [597] Alternatively, fines may be fixed at twice the profit gained by the defendant or the loss inflicted on the victim, if this amount is greater than the statute would otherwise provide. [598] The DOJ may also seek imprisonment of up to five years for violations of the Securities Act, the Investment Company Act

p. 11-154

p. 11-155

and the Advisers Act [599] or up to 20 years for violations of the Exchange Act. [600] Certain defenses to imprisonment are available for nonwillful, technical violations of rules and regulations under the Act if the defendant can prove that he or she had no actual knowledge of the rule or regulation at issue. [601]

Following significant economic downturns coupled with revelations of misconduct, prosecutors have reacted by vigorously prosecuting violations of the securities laws. In the late 1980s, prosecutors brought highly publicized and successful prosecutions of insider trading, market manipulation and other securities violations. [602] In the wake of Enron and the Sarbanes-Oxley Act, prosecutors aggressively investigated and prosecuted alleged misconduct related to accounting and disclosure issues, related-party transactions and insider trading. [603]

p. 11-155

p. 11-156

Another wave of securities-related prosecutions targeted the back-dating of stock options. In the second half of 2006, over 100 companies acknowledged either internal or governmental investigations into potential backdating, a practice by which the exercise price of executives' stock options is set prior to the board meetings at which the options were awarded and at a lower price than the stock was trading on the day of the grant. [604] More recently, prosecutors have pursued a number of criminal prosecutions arising from the 2008 financial crisis, including actions concerning mortgage-related assets, Ponzi schemes, and insider trading. [605]

p. 11-156

p. 11-157

These actions represent a further intensification of the prosecutions from the 1980s in terms of both the number of actions brought and the aggressiveness of prosecutors. [606]

It is not uncommon for separate civil and criminal proceedings brought by the government against the same defendant to proceed simultaneously. Although the SEC and the DOJ are separate and distinct governmental entities, they often cooperate to exert greater pressure on a defendant. In *United States v. Kordel*, the Supreme Court held that federal prosecutors may use evidence obtained in a civil action in prosecuting a related criminal proceeding, provided the civil action was not brought in "bad faith." [607] Moreover, in recent years, the DOJ and the SEC have also cooperated with other regulators at the state, federal, and international levels to investigate several recent securities-related scandals and negotiate large global settlements. [608] Further, the DOJ has itself pursued a number of civil actions alleging securities fraud in the years leading up to the 2008 financial crisis, including several actions relating to the marketing and sale of mortgage-backed securities. [609]

p. 11-157

p. 11-158

And, more recently, several banks agreed to plead guilty to criminal charges concerning alleged rate manipulation. [610]

Some observers, however, sharply criticized the government for failing to prosecute more high-level executives for alleged wrongdoing in connection with the financial crisis. [611] In response to this criticism, on September 9, 2015, the Department of Justice issued new guidelines aimed at prioritizing its focus on individual responsibility in cases of both civil and criminal corporate wrongdoing. [612] The guidelines, which are set out in a memorandum from Deputy Attorney General Sally Quillian Yates, describe steps that the DOJ was taking to "strengthen" its "pursuit of individual corporate wrongdoing," including providing that:

- In order to qualify for any cooperation credit, corporations must provide to the DOJ all relevant facts relating to the individuals responsible for misconduct.
- Criminal and civil corporate investigations should focus on individuals from the inception of the investigation.
- Criminal and civil attorneys handling corporate investigations should be in routine communication with one another.
- Absent extraordinary circumstances or approved departmental policy, the DOJ will not release culpable individuals from civil or criminal liability when resolving a matter with a corporation.

p. 11-158

p. 11-159

- DOJ attorneys should not resolve matters with a corporation without a clear plan to resolve related individual cases, and should memorialize any declinations as to individuals in such cases.
- Civil attorneys should consistently focus on individuals as well as the company and evaluate whether to bring suit against an individual based on considerations beyond that individual's ability to pay.

A growing number of companies have entered into deferred prosecution agreements with the DOJ. In exchange for a deferral of prosecution, these companies often agree to the payment of large penalties, institute extensive internal corporate reforms and cooperate fully with federal ongoing or subsequent investigations. [613] Since the 1995 agreement with Prudential Securities Inc. over the fraudulent marketing of limited partnerships, [614] the DOJ has entered into deferred prosecution agreements with a significant number of companies—including Lloyds Banking Group, Credit Suisse, ABN AMRO, Bristol-Myers, Monsanto, Time Warner, InVision, American International Group Inc., Computer Associates, Canadian Imperial Bank of Commerce, Merrill Lynch, PNC Financial Services Corporation, Banco Popular De Puerto Rico, Barclays, UBS, HSBC, The Royal Bank of Scotland, JPMorgan, and Deustche Bank. [615] The DOJ

p. 11-159

p. 11-160

reiterated its commitment to deferred prosecutions in December 2006, when Deputy Attorney General Paul J. McNulty issued a memorandum setting forth the factors that the Department would consider when determining whether to indict a corporation or offer a deferred prosecution agreement. [616] These factors largely echoed the factors set forth three years earlier in the Thompson Memo. [617] Moreover, a memorandum issued by Deputy Attorney General Mark R. Filip in 2008 explained that deferred prosecutions would be particularly useful tools in situations where a corporate conviction would result in significant collateral consequences on innocent third parties. [618]

[b] Mail and Wire Fraud

p. 11-160

p. 11-161

The same conduct that violates provisions of the securities laws may also be recharacterized by prosecutors as violations of various other criminal statutes. Two general antifraud statutes, commonly known as the mail and wire fraud statutes, are used with particular frequency. [619] The former provides for criminal penalties for use of the U.S. postal system, [620] and the latter for use of interstate or foreign wire, radio or television communications, [621] in furtherance of a scheme to defraud. The allegedly fraudulent information need not have been placed in the mail or transmitted over the wires (such as facsimile or telephone) to be actionable under the mail and wire fraud statutes; use of the mails or interstate wires is simply the jurisdictional means necessary to invoke the federal laws. [622] Therefore, almost any conduct that could be characterized as fraud under the common law will violate the mail and wire fraud statutes, although unlike the common law action alleging fraudulent conduct, it is not necessary that the fraud be successful [623] or that the intended victims of the scheme have relied to their detriment on the alleged fraud. [624]

The mail and wire fraud statutes are intended to protect individual property rights, [625] including intangible property rights such as the "intangible right of honest services." [626] In *Carpenter v. United States*, the Supreme Court affirmed the conviction of R. Foster Winans, a columnist at *The Wall Street Journal*, who had schemed with brokers to trade in the securities of companies that were to be the subject of upcoming "Heard on the Street" columns. The Court held that *The Wall Street Journal* had an intangible "property right in keeping confidential and making exclusive use, prior to publication, of the schedule and contents of the ‘Heard’ columns" and that this property had been fraudulently misappropriated since Winans owed a fiduciary duty not to exploit confidential information obtained during his employment. [627]

The U.S. Supreme Court upheld the constitutionality of the "honest services law" while narrowing its scope to cases that involve bribery or kickback schemes. In *Skilling v. United States* [628] the Court held that a broader interpretation of the law, to include undisclosed self-dealing by a public official or private employee, would be unconstitutionally vague because the statute had been infrequently applied to such conflict-of-interest cases and because the term "honest services" was itself ambiguous. The Court also invoked the rule of lenity to construe the statute in favor of Skilling, the former CEO of Enron, given the perceived ambiguity in the law. The government had charged Skilling with conspiring to defraud its shareholders by lying about the company's financial health, and profiting by receiving salary and bonuses and selling Enron stock at an inflated price. Because the government did not "allege that Skilling solicited or accepted side payments from a third party in exchange for making these misrepresentations," the Court held that the "honest services law" could not serve as a basis for prosecuting Skilling. [629]

A defendant may be charged simultaneously with violating the mail or wire fraud statutes and with violating an antifraud provision under the U.S. securities laws; there is no requirement that prosecutors select one or the other criminal statute on which to base their case. [630] In order to be convicted under the mail or wire fraud statutes, the defendant must have acted intentionally or with reckless indifference to the truth. [631] Good faith is a defense to a charge of scheming to defraud if the defendant reasonably and actually believed in the sound basis of the representations made or the scheme proposed. [632] A mail or wire fraud conviction can result in fines of up to $250,000 for an individual, $500,000 for an

p. 11-162

p. 11-163

organization, or twice the profit gained or loss avoided by the violation, [633] as well as up to 20 years' imprisonment. [634]

The Sarbanes-Oxley Act created a new securities fraud crime, the elements of which are similar to the existing mail and wire fraud crimes and which may be brought as an additional charge in fraud cases relating to securities. [635]

[c] Other Criminal Statutes

There are numerous other federal criminal statutes that may be applied to illegal activities in the securities marketplace. As discussed in § 11.09[1][b], the broad RICO statute allows for criminal and, in limited circumstances, civil enforcement of "fraud in the sale of the securities," so long as a "pattern" of such fraudulent acts can be shown. [636] It is also a crime in the United States to: (i) make false statements "in any matter within the jurisdiction of any department or agency of the United States," including the SEC, [637] (ii) engage in financial transactions with the proceeds of unlawful activities, with the intention of promoting those activities or concealing the nature or source of the proceeds ("money laundering"), [638] or (iii) structure financial transactions to avoid triggering certain cash reporting requirements of financial institutions. [639]

[d] Entity Sentencing Guidelines

As discussed previously, U.S. law sets forth a range of possible fines that can be imposed on corporations or others convicted of violating criminal statutes. While some of these laws provide for stiff penalties on their face, [640] others that originally contained lighter penalties have been superseded by a general penalty provision, enacted in 1984, which increased the possible fine for corporate

p. 11-163

p. 11-164

defendants to the greater of $500,000 or twice the benefit gained by the defendant or the loss inflicted on the victim. [641] Even where the pecuniary benefit or loss is minimal, however, fines can nonetheless far exceed the $500,000 alternative amount because a single episode of criminal misconduct often entails the commission of multiple criminal acts, each of which can support the imposition of a separate penalty. [642]

In 1991, the U.S. Sentencing Commission, created by Congress in 1984 to devise guidelines to limit the discretion of judges in determining sentences, issued sentencing guidelines for criminal activities of corporations and other entities. [643] While these guidelines do not by themselves modify the maximum fines that the federal courts are authorized by statute to impose, they do furnish ranges within an existing fine authorization from which the court is recommended to select the appropriate sentence. [644] Importantly, they also provide significant incentives for corporations doing business in the United States, including non-U.S. corporations or U.S. subsidiaries of non-U.S. corporations, to adopt compliance and ethics programs to prevent and detect violations of federal criminal law by employees, by significantly reducing the applicable fines for corporations that have implemented such programs.

The operation of the sentencing guidelines is complex, involving the determination of a "base fine" amount based on various specified "offense levels," and the subsequent application of multipliers based on the particular characteristics of the organization, determined by its so-called "culpability score." This score may be increased (resulting in larger fines) for corporations with large numbers of employees, corporations where senior managers "participated in, condoned, or [were] willfully ignorant of the offense," corporations with prior histories of related criminal or civil violations, or corporations that attempted to obstruct justice while the misconduct at issue was being investigated. The culpability score may be decreased (resulting in lower fines) if the organization had in place "an effective compliance and ethics program," or if the organization is highly cooperative with prosecuting authorities, for example by voluntarily

p. 11-164

p. 11-165

bringing the matter to the government's attention or promptly accepting responsibility for the criminal conduct. [645]

The sentencing guidelines for corporations set out various general criteria that a compliance and ethics program must satisfy to qualify as an "effective" one for purposes of reducing the organization's culpability score. These criteria include:

- the development, implementation and enforcement of standards and procedures "generally effective in preventing and detecting criminal conduct" and effective communication of these standards to all employees;
- knowledge by an organization's governing authority about the content and operation of the compliance and ethics program and the exercise of reasonable oversight with respect to the implementation and effectiveness of such a program;
- the promotion of an organizational culture that encourages ethical conduct and a commitment to compliance with the law;
- the designation of specific high-level personnel to oversee compliance and the delegation of day-to-day operational responsibility for the compliance and ethics program to specific individuals;
- the development of specific procedures to monitor compliance and report violations;
- the periodic evaluation of the effectiveness of the compliance and ethics program;
- the establishment and publication of a system whereby the organization's employees and agents may report or seek guidance regarding potential or actual criminal conduct without fear of retaliation; and
- the promotion and consistent enforcement of the organization's compliance and ethics program through appropriate incentives to perform in accordance with the program and appropriate disciplinary measures for engaging in criminal conduct and/or for failing to take reasonable steps to prevent or detect criminal conduct. [646]

Footnotes

491 *See* FED. R. CIV. P. 23(a) and (b).

492 *See* PricewaterhouseCoopers LLP, 2015 Securities Litigation Study (Apr. 2016) (noting that 43 foreign-filers listed on U.S. exchanges were sued in U.S. private securities class actions in 2015, out of the total of 195 private securities class actions during the year). The report highlighted that the majority of actions against foreign filers were related to China and Canada-based entities, and that a disproportionate percentage of those cases involved accounting-related allegations.

493 Many corporate scandals have produced civil class actions. *See, e.g.*, *In re WorldCom, Inc. Securities Litigation*, 219 F.R.D. 267 (S.D.N.Y. 2003) (certifying putative class of "tens of thousands of investors" who asserted, among other claims, claims under §§ 11 and 12 of the Securities Act and § 10(b) of the Exchange Act arising out of the WorldCom accounting scandal); *In re Initial Public Offering Securities Litigation*, 241 F. Supp. 2d 281 (S.D.N.Y. 2003) (consolidated action involving 1,000 class action lawsuits against more than 300 issuers, more than 50 underwriters and various individuals alleging violations of § 10(b) of the Exchange Act and § 11 of the Securities Act in connection with undisclosed compensation in exchange for allocations in initial public offerings, "tie-ins" or laddering agreements (in which banks allocate IPO shares to investors based upon their commitment to purchase additional shares at fixed prices once public trading begins to inflate newly issued shares' values) with banks in order to receive allocations, and research analysts conflicts of interest); *In re Credit Suisse First Boston Corp. Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶90,306 (S.D.N.Y. Oct. 19, 1998) (class action alleging violations of § 10(b) of the Exchange Act in connection with false research reports).

494 *See* §§ 11.03[2] and 11.04[2]. *But see In re Initial Public Offering Securities Litigation*, 471 F.3d 24 (2d Cir. 2006) (holding that fraud-on-the-market theory would not apply to claims based on alleged misstatements in connection with an initial public offering where there was no developed or efficient market for the stock).

495 The sole exception is for members of the class who choose to "opt out" of the class action proceedings,

preserving their right to sue separately but at the same time waiving their right to participate in the class action or share in the proceeds of its settlement or judgment. *See* FED. R. CIV. P. 23(c)(2).

496 *See* FED. R. CIV. P. 23.

497 *In re Initial Public Offering Securities Litigation*, 471 F.3d 24 (2d Cir. 2006). The court noted that the ultimate fact-finder would not be bound by the factual determinations made during the class certification proceedings.

498 *In re Initial Public Offering Securities Litigation*, 471 F.3d 24 (2d Cir. 2006) (quoting *Caridad v. Metro-North Commuter Railroad*, 191 F.3d 283 (2d Cir. 1999)).

499 *See* § 11.04[2][b].

500 *See* § 11.04[2][b].

501 *Erica P. John Fund, Inc. v. Halliburton Co.*, 132 S. Ct. 2179 (2011).

502 *See, e.g.*, *In re Flag Telecom Holdings, Ltd. Securities Litigation*, 574 F.3d 29, 39–41 (2d Cir. 2009) (holding that it was proper to deny certification of a class that included putative members who had sold the securities at issue before the truth regarding the alleged misstatements was revealed to the public because the plaintiffs "failed to demonstrate that any of the information that 'leaked' into the market prior to [the date plaintiffs sold their stock], revealed the truth with respect to the specific misrepresentations alleged" and thus their claims were not typical of those of the class members plaintiffs sought to represent).

503 In *Halliburton*, the issuer also defended the lower court's decision by arguing that the court's reliance on the evidence of lack of loss causation to uphold the denial of class certification was really a proxy for a determination that the alleged misrepresentations had no impact on the price of the securities at issue. *See Erica P. John Fund, Inc. v. Halliburton Co.*, 132 S. Ct. 2179, 2186–87 (2011). The Supreme Court refused to credit this interpretation of the lower court's decision, finding that the Fifth Circuit unequivocally rested on the lack of loss causation to uphold the denial of class certification. Nevertheless, as the Court explained in *Halliburton*, under *Dura Pharmaceuticals, Inc., v. Broudo*, 544 U.S. 336 (2005), a showing that the alleged misrepresentation did not cause a change in the price of the security defeats the *Basic* presumption of reliance. The Court also cited favorably the *In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474 (2d Cir. 2008), decision, where the Second Circuit reiterated that a defendant could defeat the *Basic* presumption by establishing lack of price impact of the alleged misrepresentation or omission. Thus, after *Halliburton*, defendants may still use the lack of loss causation at the class-certification stage as one factor that may lead a court to conclude that an alleged misrepresentation had no impact on the price of the security at issue, thus defeating the *Basic* presumption of reliance.

504 *Amgen Inc. v. Connecticut Retirement Plans & Trust Funds*, 133 S. Ct. 1184 (2013).

505 *Halliburton Co. v. Erica P. John Fund, Inc.*, 134 S. Ct. 2398 (2014).

506 *See* § 11.04[2][a].

507 *Wal-Mart Stores, Inc. v. Dukes*, 131 S. Ct. 2541 (2011).

508 *Comcast Corp. v. Behrend*, 133 S. Ct. 1426 (2013).

509 *Ludlow v. BP, P.L.C.*, 800 F.3d 674 (5th Cir. 2015).

510 *See, e.g., Iron Workers Local No. 25 Pension Fund v. Credit-Based Asset Servicing and Securitization, LLC*, 616 F. Supp. 2d 461, 463 (S.D.N.Y. 2009) (discussing the legislative history and purposes of the Litigation Reform Act as indicating clear intent to curtail "the vice of 'lawyer-driven' litigation"); *In re Nice Systems Securities Litigation*, 188 F.R.D. 206, 214–15 (D.N.J. 1999) (discussing the legislative history and purpose of the Litigation Reform Act). The Litigation Reform Act also mandates imposition of sanctions, presumed to be attorneys' fees and costs, against any parties or counsel found to have filed frivolous or abusive suits, and in the case of private class actions under the Exchange Act, specifically authorizes courts to require parties or their counsel to post bonds at the outset to cover any such fees or costs that may be imposed. *See* §§ 21D(c)(3) and 21D(a)(8) of the Exchange Act, respectively; §§ 27(c)(3) and 27(a)(8) of the Securities Act, respectively.

511 The lead plaintiff's choice of counsel, however, is subject to the court's approval. § 21D(a)(3)(B)(v) of the

Exchange Act. Equipped with this veto power, some courts now require lead counsel to be selected through a competitive bidding process . *See, e.g.*, *Sherleigh Associates LLC v. Windmere-Durable Holdings, Inc.*, 186 F.R.D. 669 (S.D. Fla. 1999); *In re Cendant Corp. Litigation*, 182 F.R.D. 144 (D.N.J. 1998). The Third Circuit Court of Appeals disagreed with the district court's use of a competitive bidding process in *Cendant*, however, but held that the use of the process was harmless error. *In re Cendant Corp. Litigation*, 264 F.3d 201 (3d Cir. 2001).

512 *See Burke v. Ruttenberg*, 102 F. Supp. 2d 1280 (N.D. Ala. 2000); *In re Cephalon Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶99,313 (E.D. Pa. Aug. 27, 1996). In *Weltz v. Lee*, 199 F.R.D. 129, 132 (S.D.N.Y. 2001), the court appointed an aggregate group of seven investors as lead plaintiff. However, the court also noted that there is an "outer limit to the number of plaintiffs allowed to proceed as lead plaintiff," citing cases in which groups of 137, 141 and 250 plaintiffs were deemed too large. Some courts have rejected aggregation altogether. *See, e.g.*, *Goldberger v. FXRE Group Ltd.*, Nos. 06-CV-3410 (KMK), 06-CV-3440 (GBD), 06-CV-3544 (KMK), 06-CV-4638 (KMK), 2007 WL 980417, at *4–5 (S.D.N.Y. Mar. 30, 2007). *See generally In re UBS Auction Rate Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶94,791 (S.D.N.Y. July 16, 2008) (permitting aggregation of seven class members and discussing split of authority on aggregation issue).

513 § 21D(a)(3)(B)(iii)(I)(bb) of the Exchange Act and § 27(a)(3)(B)(iii)(I)(bb) of the Securities Act. Although courts have been willing to apply this rebuttable presumption, they have also closely scrutinized aggregating plaintiff groups, questioning whether they are "simply an artifice cobbled together by cooperating counsel for the obvious purpose of creating a large enough grouping of investors to qualify as 'lead plaintiff,' which can then select the equally artificial grouping of counsel as 'lead counsel.'" *In re Razorfish, Inc. Securities Litigation*, 143 F. Supp. 2d 304, 308 (S.D.N.Y. 2001). *In Klugmann v. American Capital Ltd.*, Fed. Sec. L. Rep. (CCH) ¶95,318 (D. Md. Aug. 13, 2009), the court noted in *dicta* that aggregation of wholly unrelated plaintiffs solely for the purpose of totaling the largest losses was inappropriate, but accepted aggregation of three plaintiffs who each had, individually, larger losses than the other proposed lead plaintiff. In the Third Circuit, before appointing a lead plaintiff, the court must determine whether "the way in which a group seeking to become lead plaintiff was formed or the manner in which it is constituted would preclude it from fulfilling the tasks assigned to a lead plaintiff." *In re Cendant Corp. Litigation*, 264 F.3d 201, 266 (3d Cir. 2001). "If the court concludes that the group was created by counsel rather than class members, then 'the court should disqualify that movant on the grounds that it will not fairly and adequately represent the interests of the class.'" *In re Able Laboratories Securities Litigation*, 425 F. Supp. 2d 562, 567–68 (D.N.J. 2006) (quoting *In re Cendant Corp. Litigation*, 264 F.3d 201, 266 (3d Cir. 2001)).

514 *See* Max Berger, et al., *Institutional Investors as Lead Plaintiffs: Is There a New and Changing Landscape?*, 75 ST. JOHN'S L. REV. 31, 31 (2001) (citing H.R. Rep. No. 104-369, at 31 (1995), *reprinted in* 1995 U.S.C.C.A.N. 730).

515 In a 1997 report to the President and Congress, the SEC indicated that institutional investors had not become more active in securities class actions in the year following enactment of the Litigation Reform Act, and that such actions continued to be controlled by plaintiffs'law firms frequently representing smaller investors. The SEC suggested that "there are substantial disincentives for institutional investors considering intervention" in securities class actions, including the added costs of managing the litigation, the potential exposure of key personnel to discovery not only from defendants but also from other potential lead plaintiffs and the possibility of added liability in suits brought by other plaintiffs based on the lead plaintiff's class action litigation decisions. Some institutional investors have apparently concluded that they can obtain a better recovery and reduce exposure by opting out of the securities class and proceeding separately. As the SEC concluded, "[w]hether or not institutions will look beyond these disincentives remains to be seen." SEC, *Report to the President and the Congress on the First Year of Practice Under the Private Securities Litigation Reform Act of 1995*, at 2, 51–52 (Apr. 1997), *reprinted in* 3 SECURITIES REFORM ACT LITIG. RPTR. 27, 56 (May 1998).

516 *See* Karen Donovan, *Legal Reform Turns a Steward Into an Activist*, N.Y. TIMES, Apr. 16, 2005 (noting

increased role of institutional investors, including public pension funds, under the Litigation Reform Act, and highlighting the role of then-New York state comptroller Alan Hevesi as representative of the lead plaintiff in the *WorldCom* class action); Richard B. Schmitt, *Accounting for Enron: Pension Funds, Not Lawyers, Drive Holder Suits*, WALL ST. J., Jan. 24, 2002; Max Berger, *et al.*, *Institutional Investors as Lead Plaintiffs: Is There a New and Changing Landscape?*, 75 ST. JOHN'S L. REV. 31 (2001). Several studies have found that class action settlements are higher when institutional plaintiffs are lead plaintiffs. James D. Cox & Randall S. Thomas, *Does the Plaintiff Matter?: An Empirical Analysis of Lead Plaintiffs in Securities Class Actions*, 100 COLUM. L. REV.101 (2006); Laura E. Simmons & Ellen M. Ryan, *Post-Reform Act Securities Lawsuits: Settlements Reported Through December 2003* (Cornerstone Research, 2004).

517 SLUSA does not prohibit: (i) actions that are based on the statutory or common law of the state in which the issuer is incorporated and that involve (a) any communication with respect to the sale of the securities of the issuer that is made by or on behalf of the issuer to its equity holders and concerns decisions of those holders with respect to voting their securities, acting in response to a tender or exchange offer or exercising dissenters'or appraisal rights or (b) the purchase or sale of securities by the issuer exclusively from or to holders of equity securities of the issuer, (ii) actions involving a covered security brought by a state, its political subdivisions or a state pension plan, and (iii) actions seeking to enforce contractual agreements between an issuer and an indenture trustee.

518 § 101 of SLUSA, as incorporated into § 16 of the Securities Act. "Covered class action" is defined in § 16(f)(2) of the Securities Act as "any single lawsuit in which damages are sought on behalf of more than 50 persons," in which certain questions of law and fact predominate "without reference to issues of individualized reliance on an alleged misstatement or omission." This definition also applies to groups of lawsuits consolidated, joined or otherwise filed as a single action. Representative class actions are also covered by the definition. Section 16(f)(2)(B) of the Securities Act provides an exception for derivative actions. The term "covered security" is defined in § 16(f)(3) of the Securities Act by reference to § 18(b)(1) and (2) of the Securities Act, which defines "covered securities" as those "listed, or authorized for listing, on the New York Stock Exchange or the American Stock Exchange, or listed or authorized for listing on the National Market System of the Nasdaq Stock Market," or "on a national securities exchange (or tier or segment thereof) that has listing standards that the Commission determines by rule (on its own initiative or on the basis of a petition) are substantially similar to the listing standards" of those exchanges. "A security of the same issuer that is equal in seniority or one that is a senior security to a security" described above, is also a "covered security." § 18(b)(1)(C) of the Securities Act.

519 *Kircher v. Putnam Funds Trust*, 547 U.S. 633 (2006).

520 *Merrill*, *Lynch, Pierce, Fenner & Smith Inc. v. Dabit*, 547 U.S. 71 (2006).

521 *See supra* Note 219 and accompanying text (discussing the judicially imposed limitations on standing in private litigation under § 10(b) of the Exchange Act and Rule 10b-5 thereunder, which require that a claim be brought by purchasers or sellers of securities and not by holders of securities).

Cal. 2003), *and Alkow v. TXU Corp.*, Fed. Sec. L. Rep. (CCH) ¶92,495 (N.D. Tex. May 8, 2003) (all denying motions to remand), *with In re Tyco International, Ltd. Multidistrict Litigation*, 322 F. Supp. 2d 116, 118 (D.N.H. 2004), *Nauheim v. Interpublic Group of Cos.*, 2003 U.S. Dist. LEXIS 6266, at *1 (N.D. Ill. Apr. 15, 2003), *and In re Waste Management Inc. Securities Litigation*, 194 F. Supp. 2d 590 (S.D. Tex. 2002).

526 *Rovner v. Vonage Holdings Corp.*, Civil Action No. 07-178 (FLW), 2007 WL 446658, at *5 (D.N.J. Feb. 7, 2007) ("The Court agrees with those district courts which have found an interpretation of [§ 77v(a)] to require removal of only those securities class action cases raising state law claims to be irreconcilable with the congressional findings. Instead, I find that the plain language of the statute, coupled with the legislative

history and a healthy dose of common sense compel the conclusion that this class action, which alleges only federal Securities Act claims, was removable."); *see also Knox v. Agria Corp.*, 613 F. Supp. 2d 419 (S.D.N.Y. 2009) ("The narrow reading [of SLUSA] granting remand [over covered class actions that raise only Securities Act claims] creates a jurisdictional anomaly because it has the effect of prohibiting state securities fraud claims in state court, while allowing federal securities fraud class actions to be litigated there. It also does not make sense. SLUSA was intended to curtail the proliferation in state courts of securities fraud class actions (federal or state) beyond the reach of the [Litigation Reform Act]'s heightened pleading standards. Instead, the constricted approach threatens to spawn federal securities fraud class actions in state courts where they could proceed under the radar. That bizarre result would shift the center of gravity of federal securities fraud class actions under the 1933 Act from federal to state courts."); *In re Fannie Mae 2008 Securities Litigation*, Fed. Sec. L. Rep. (CCH) ¶95,531 (S.D.N.Y. Nov. 24, 2009) (agreeing with *Knox in dicta* because the court found that it had jurisdiction under a different statutory provision as well); *Rubin v. Pixelplus Co., Ltd.*, No. 06-CV-2964 (ERK), 2007 WL 778485, at *5 (E.D.N.Y. Mar. 13, 2007) ("[B]y enacting SLUSA Congress eliminated concurrent jurisdiction for covered class actions, which made federal court the sole venue for securities fraud class actions and effectively abolished state law causes of action for the types of cases at issue here.").

527 *See, e.g.*, *City of Warren Police and Fire Retirement System v. Revance Therapeutics, Inc.*, 125 F. Supp. 3d 917 (N.D. Cal. 2015) (stating that "[t]he Northern District of California has soundly rejected Defendants' position [that state courts lack jurisdiction over Securities Act class actions] in recent years" and the contrary position "appears to be emerging as the dominant view around the country and has almost uniformly been upheld by district courts since 2012"); *see also Niitsoo v. Alpha Natural Resources, Inc.*, 902 F. Supp. 2d 797 (S.D. W. Va. 2012); *Luther v. Countrywide Financial Corporation*, 125 Cal. Rptr. 3d 716 (Cal Ct. App. 2011).

528 Class Action Fairness Act, Pub. L. No. 109-2, 2119 Stat. 9 (2005) (codified at 28 U.S.C. § 1332(d)).

529 Diversity jurisdiction under 28 U.S.C. § 1332 requires that each plaintiff individually satisfy the $75,000 minimum amount in controversy requirement (meaning that a class action in which each plaintiff has an identical claim for $60,000 will not meet the requirement, even if there are 20 plaintiffs with an aggregate amount in controversy of $1,200,000). Also, diversity jurisdiction requires "complete diversity," meaning that none of the plaintiffs may be from the same state as any of the defendants (in the case of class actions, the court will look at the residence or domicile of the class representatives, not all class members). *See* 28 U.S.C. § 1332(a).

CAFA changes both of these rules. Instead of the individual $75,000 amount in controversy requirement, CAFA requires an aggregate amount of $5 million. Instead of "complete diversity," CAFA requires only that one class member be diverse from at least one defendant. CAFA only applies to class actions with greater than 100 class members. *See* 28 U.S.C. § 1332(d)(2)–(7).

530 *Compare Luther v. Countrywide Home Loans Servicing LP*, 533 F.3d 1031 (9th Cir. 2008) (holding that "CAFA's general grant of the right of removal of high-dollar class actions does not trump § 22(a)'s specific bar to removal of cases arising under the Securities Act of 1933") *with Katz v. Gerardi*, 552 F.3d 558 (7th Cir. 2009) ("disagree[ing] with *Luther* and hold[ing] that securities class actions covered by [CAFA] are removable").

531 *See, e.g.*, *Plumbers' Union Local No. 12 Pension Fund v. Nomura Asset Corp.*, 632 F.3d 762 (1st Cir. 2011); *In re Countrywide Financial Corporation Mortgage-Backed Securities Litigation*, 860 F. Supp. 2d 1062 (C.D. Cal. 2012); *Genesee County Employees' Retirement System v. Thornburg Mortgage Securities Trust 2006-3*, 825 F. Supp. 2d 1082 (D.N.M. 2011).

532 *NECA-IBEW Health & Welfare Fund v. Goldman Sachs & Co.*, 693 F.3d 145 (2d Cir. 2012), *cert. denied*, 133 S. Ct. 1624 (2013).

533 18 U.S.C. § 1964.

534 The SEC's real time enforcement initiative began at the end of 2001 alongside the Enron bankruptcy. As described by then-SEC Chairman Pitt, "[t]his policy aims to improve our protection of investors by moving

faster, or in real time, to bring enforcement actions. We seek to learn of violations quickly and, where investor interests are being disserved or abused, take immediate action to undo or halt the effects of misconduct." Remarks by SEC Chairman Harvey L. Pitt at the Directors' Education Institute, Duke University (Oct. 22, 2002). In one matter, the SEC brought a fraud action against an Internet investment scheme, operating under the name of Invest Better 2001, before it was able to identify the individual behind it. *See* Stephen M. Cutler, Recent SEC Enforcement Cases, 1344 PLI/Corp 991, 1009 (Nov. 2002). In another action against an oil and gas investment scam, the SEC brought an action and obtained an order within four days of learning of the scheme. *See* Press Release, SEC, SEC Halts $3.9 Million Oil & Gas Scheme; "Real-Time" Enforcement Initiative Cited (Dec. 3, 2001). In WorldCom, the SEC filed charges within 24 hours of WorldCom's initial restatement of its financial statements. *See* Seth Schiesel, *WorldCom Seems Close to Deal to Settle S.E.C.'s Fraud Case*, N.Y. TIMES, Nov. 5, 2002.

The SEC also has indicated that its enforcement will be influenced by the cooperation or lack of cooperation of a company it is investigating. *See* Harvey L. Pitt, Chairman, SEC, Remarks before the U.S. DOJ Corporate Fraud Conference (Sept. 26, 2002); *see also* Press Release, SEC, SEC Announces Initiative to Encourage Individuals and Companies to Cooperate and Assist in Investigations (Jan. 13, 2010); *infra* Note 565. As further discussed below, the DOJ has also indicated that cooperation is an important factor in charging and sanctioning decisions. *See infra* Note 565.

In 2010, the SEC announced a "Cooperation Initiative," which included, *inter alia*, an expansion of the enforcement tools available to its staff to include cooperation agreements, deferred prosecution agreements and non-prosecution agreements. Under cooperation agreements, the enforcement division staff will normally agree to recommend to the SEC that a cooperator receive credit for his or her assistance to investigations or enforcement actions, if the cooperator provides "substantial assistance." Under a deferred prosecution agreement, the SEC "agrees to forego an enforcement action against a cooperator if the individual or company agrees, among other things, to cooperate fully and truthfully and to comply with express prohibitions and undertakings during a period of deferred prosecution." *See supra* Note 488. Finally, under a non-prosecution agreement, which the SEC has indicated is appropriate under "limited and appropriate circumstances," the SEC "agrees not to pursue an enforcement action against a cooperator if the individual or company agrees, among other things, to cooperate fully and truthfully and comply with express undertakings." *See* Press Release, SEC, SEC Announces Initiative to Encourage Individuals and Companies to Cooperate and Assist in Investigations (Jan. 13, 2010). The SEC entered into its first-ever deferred prosecution agreement under the initiative in May 2011 in connection with an FCPA investigation. *See supra* Note 488. In December of 2010, the SEC entered into its first-ever non-prosecution agreement with Carters Inc., a clothing marketer, in connection with the financial fraud and insider trading of one of its top executives. The SEC indicated that it entered into the non-prosecution agreement given "the relatively isolated nature of the unlawful conduct, Carters' prompt and complete self-reporting of the misconduct to the SEC, its exemplary and extensive cooperation in the investigation, including undertaking a thorough and comprehensive internal investigation, and Carter's extensive and substantial remedial actions." Under the terms of the agreement, the company agreed to cooperate fully in any further investigation conducted by the SEC. The SEC filed civil enforcement proceedings against the officer. *See* Press Release, SEC, SEC Charges Former Carter's Executive With Fraud and Insider Trading (Dec. 20, 2010). The non-prosecution agreement can be found at http://www.sec.gov/litigation/cooperation/2010/carters1210.pdf.

535 *See, e.g.*, Press Release, SEC, SEC Announces Enforcement Initiatives to Combat Financial Reporting and Microcap Fraud and Enhance Risk Analysis (July 2, 2013) (discussing launch of several initiatives, including the Financial Reporting and Audit Task Force and the Center for Risk and Quantitative Analytics, in order to "increase the potential for uncovering financial statement and microcap fraud early" through the use of "analytical techniques and computing capacity with special expertise in data mining"); Jean Eaglesham, *Accounting Fraud Targeted*, WALL ST. J., May 27, 2013 (discussing several technological developments at the SEC, including fraud detection software that analyzes public filings and financial disclosures for "warning signs of earnings manipulation").

536 *See* § 20(a) of the Securities Act; §§ 21(a), 21(b) and 21(c) of the Exchange Act; §§ 42(a), 42(b) and 42(c)

of the Investment Company Act; §§ 209(a), 209(b) and 209(c) of the Advisers Act. The SEC invoked the investigative powers of § 21(a) of the Exchange Act as the basis for its June 2002 order requiring sworn statements by senior officers of 945 companies as to the accuracy of reports previously filed with the SEC. *See SEC Order Requiring the Filing of Sworn Statements Pursuant to Section 21(a)(1) of the Exchange Act*, File No. 4-460 (June 27, 2002). Shortly after the SEC announced this June 2002 order, the Chair and Vice Chair of the American Bar Association's Committee on Securities Regulation wrote a letter to the SEC stating their concerns with the use of this section, noting it was unclear whether § 21(a) sworn statements could be required outside the context of investigations of specific possible violations of securities laws and as such they were forming a task force to consider the scope of the SEC's § 21(a) authority. Letter from Stanley Keller & Dixie Lynn Johnson to Harvey Pitt, Chairman, SEC (July 15, 2002).

537 The SEC may invoke the power of the courts to compel such testimony and production of documents. *See* § 19(b) of the Securities Act; § 21(c) of the Exchange Act; § 42(c) of the Investment Company Act; § 209(c) of the Advisers Act.

538 Under § 929U of the Dodd-Frank Act, the SEC must either file such an action, or provide notice of its intent to not file such an action, within 180 days of issuing the Wells Notice, except for "certain complex actions," in which the SEC may receive one or more extensions of the 180-day period.

539 In 2003, the SEC amended its Rules of Practice to improve the timeliness of its administrative proceedings by imposing maximum time periods for administrative proceedings and appellate review. *See* SEC Release No. 33-8240 (June 11, 2003).

540 The administrative law judge is required to issue an initial decision, unless the SEC directs otherwise, in which case the administrative law judge recommends a decision and certifies the record to the SEC for a decision. *See* 5 U.S.C. § 557(b); 17 U.S.C. § 201.360.

541 *See* § 9(a) of the Securities Act; § 25(a)(1) of the Exchange Act; § 43(a) of the Investment Company Act; § 213(a) of the Advisers Act.

542 *See, e.g.*, Jean Eaglesham, *SEC Wins With In-House Judges*, WALL ST. J., May 6, 2015 (stating that the SEC enjoys "a home-court advantage … when it sends cases to its own judges rather than federal courts," which "is a practice the agency increasingly follows," and that the SEC has a "high success rate in appeals of its administrative law judges' rulings—the appeals its own commissioners hear"); Jean Eaglesham, *SEC Is Steering More Trials to Judge It Appoints*, WALL ST. J., Oct. 21, 2014 (describing "a marked shift at the [SEC] toward trying cases that are more complex before its administrative law judges," stating "[t]he agency's win rate in recent years is considerably higher in front of its administrative law judges than it is in jury trials" including because its administrative judges "found in its favor in every verdict for the [prior] 12 months," and observing that "[t]he move is creating a backlash among lawyers and defendants, who say in federal court they have more extensive rights to take witness testimony and collect evidence ahead of trial").

543 *See, e.g.*, *Duka v. SEC*, 124 F. Supp. 3d 287, 289 (S.D.N.Y. 2015) (holding that SEC administrative law judges' appointments are "likely unconstitutional in violation of the Appointments Clause" because they are "inferior officers" but were not appointed "by the President, courts of law, or department heads" as required by the Constitution); *Hill v. SEC*, 114 F. Supp. 3d 1297, 1319 (N.D. Ga. 2015) (concluding that the administrative law judge's "appointment is likely unconstitutional in violation of the Appointments Clause" because he "was not appointed by the President, a department head, or the Judiciary").

544 *See, e.g., Hill v. SEC*, 825 F.3d 1236, (11th Cir. 2016); *Tilton v. SEC*, 824 F.3d 276 (2d Cir. 2016); *Jarkesy v. SEC*, 803 F.3d 9 (D.C. Cir. 2015); *Bebo v. SEC*, 799 F.3d 765 (7th Cir. 2015).

545 *Compare Raymond J. Lucia Companies, Inc. v. SEC*, No 15-1345, 2016 WL 4191191, at *3-7 (D.C. Cir. Aug. 9, 2016) (holding that the appointment of SEC administrative law judges does not violate the Appointments Clause because such judges do not "issue final decisions of the Commission"), *with Bandimere v. SEC*, No. 15-9586, 2016 WL 7439007 at *9 (10th Cir. 2016) (holding that "SEC ALJs are inferior officers who must be appointed in conformity with the Appointments Clause").

546 *See, e.g.*, SEC Release No. 34-78319 (July 13, 2016) (adopting amendments to Rules of Practice

applicable to in-house courts that provide defendants with more time to prepare for trial and permit additional depositions); Jean Eaglesham, *SEC Trims Use of In-House Judges*, WALL ST. J., Oct. 11, 2015 (stating that the SEC "has quietly pulled back on its use of in-house judges" and during the full fiscal year ended September 30, 2015, "the SEC used its internal tribunal for 28% of its contested cases, compared with 43% for the previous 12 months"); Jean Eaglesham, *SEC Gives Ground on Judges*, WALL ST. J., Sept. 24, 2015 (describing the "new rules, approved by a vote of the five commissioners who run the SEC, [that] would give defendants in cases sent by the agency to its own judges more of the legal protections offered in federal court," including easing deadlines and allowing defendants to get sworn testimony from witnesses before trial); Aruna Viswanatha, *SEC Issues Guidance on Venues for Cases*, WALL ST. J., May 8, 2015 (describing new SEC guidance that it considers bringing cases before its in-house courts based on factors including if the "matter involves old conduct or a continuing issue," and if the "case is likely to raise unsettled or complex legal issues about the federal securities laws").

547 *See, e.g.*, Press Release, SEC, SEC Charges Merrill Lynch With Misleading Investors in CDOs (Dec. 12, 2013) (announcing that Merrill Lynch agreed to pay $131.8 million to settle the SEC's charges); Press Release, SEC, SEC Charges Royal Bank of Scotland Subsidiary with Misleading Investors in Subprime RMBS Offering (Nov. 7, 2013) (announcing $150 million settlement); Press Release, SEC, UBS to Pay $50 Million to Settle SEC Charges of Misleading CDO Investors (Aug. 6, 2013) (announcing $50 million settlement); Press Release, SEC, SEC Charges J.P. Morgan and Credit Suisse With Misleading Investors in RMBS Offerings (Nov. 16, 2012) (announcing settlements totaling more than $400 million); Press Release, SEC, SEC Charges Mizuho Securities USA with Misleading Investors by Obtaining False Credit Ratings for CDO (July 18, 2012) (announcing $127.5 million settlement); Press Release, SEC, J.P. Morgan to Pay $153.6 Million to Settle SEC Charges of Misleading Investors in CDO Tied to U.S. Housing Market (June 21, 2011) (announcing $153.6 million settlement); Press Release, SEC, SEC Charges Citigroup and Two Executives for Misleading Investors About Exposure to Subprime Mortgage Assets (July 29, 2010) (announcing $75 million penalty).

548 *See SEC v. Citigroup Global Markets, Inc.*, 827 F. Supp. 2d 328 (S.D.N.Y. 2011).

549 *See SEC v. Citigroup Global Markets, Inc.*, 752 F.3d 285 (2d Cir. 2014).

550 *See, e.g.*, James B. Stewart, *S.E.C. Has a Message for Firms Not Used to Admitting Guilt*, N.Y. TIMES, June 21, 2013 (describing new policy as providing that there might be cases that "justify requiring the defendant's admission of allegations in our complaint or other acknowledgement of the alleged misconduct as part of any settlement" in order to increase deterrence).

551 *See, e.g.*, Press Release, SEC, JPMorgan Chase Agrees to Pay $200 Million and Admits Wrongdoing to Settle SEC Charges (Sept. 19, 2013) (announcing settlement of charges against JPMorgan concerning its attempt to hide losses from investments made by the so-called "London Whale" in its chief investment office, which included an admission of "the facts underlying the SEC's charges" as well as JPMorgan "publicly acknowledging that it violated the federal securities laws").

552 *See* § 20(b) of the Securities Act; § 21(d)(1) of the Exchange Act; § 42(d) of the Investment Company Act (including, in a proceeding in connection with transactions by an unregistered investment company, seeking equitable relief from the court to "take exclusive jurisdiction and possession" of the investment company); § 209(d) of the Advisers Act. The Sarbanes-Oxley Act amended § 21(d) of the Exchange Act to further clarify the right of the SEC to seek only equitable relief. *See* § 21(d) of the Exchange Act; *see, e.g.*, *SEC v. Goldman Sachs & Co.*, SEC Litigation Release No. 19051 (Jan. 25, 2005) (describing an injunction against certain IPO share allocation methodologies); *SEC v. Morgan Stanley & Co.*, SEC Litigation Release No. 19050 (Jan. 25, 2005); *SEC v. Bristol-Myers Squibb Co.*, SEC Litigation Release No. 18822 (Aug. 6, 2004) (describing an injunction against "channel-stuffing," a $100 million civil penalty and a $50 million shareholder fund).

553 The influence of the Sarbanes-Oxley Act and its emphasis on corporate governance is evidenced in several SEC civil injunctive actions. In *SEC v. Hollinger International, Inc.*, for example, the SEC filed a civil injunctive action alleging Hollinger's SEC filings contained misstatements regarding transfers of corporate

assets. Hollinger agreed to corporate governance reforms that included maintaining a special committee to investigate the alleged misconduct and to continue efforts to recover and maintain corporate assets. *SEC v. Causey*, SEC Litigation Release No. 18551 (Jan. 21, 2004). Another example of a financial reporting case in which the SEC imposed corporate governance reforms on an issuer through settlement is the settlement between the SEC and the Italian company Parmalat Finanziaria. The SEC, which had jurisdiction over Parmalat because it offered and sold debt (albeit privately) in the United States, imposed a settlement that incorporated elements of the Sarbanes-Oxley Act despite the fact that Parmalat had not made any public offerings in the United States, was not listed in the United States and was not even a foreign private issuer filing annual reports with the SEC on Form 20-F. The settlement provisions included corporate governance changes, adoption of by-laws providing for a shareholder-elected board that was independent with pre-set term limits, and the establishment of an internal Code of Conduct and Ethics. *See SEC v. Parmalat Finanziaria S.p.A*, SEC Litigation Release No. 18803 (July 28, 2004) (summarizing the allegations that Parmalat sold over $1 billion in bonds through private placements exempt from SEC registration, while systematically defrauding investors).

554 *See SEC v. Calvo*, 378 F.3d 1211, 1216 (11th Cir. 2004); *SEC v. Parklane Hosiery Co.*, *Inc.*, 558 F.2d 1083 (2d Cir. 1977).

555 *See SEC v. Steadman*, 967 F.2d 636, 647–48 (D.C. Cir. 1992); *SEC v. Lipson*, 129 F. Supp. 2d 1148 (N.D. Ill. 2001), *aff'd*, 278 F.3d 656 (7th Cir. 2002).

556 *See* § 20(e) of the Securities Act and § 21(d)(2) of the Exchange Act; *see, e.g.*, *SEC v. Computer Associates International, Inc.*, SEC Litigation Release No. 18891 (Sept. 22, 2004).

557 § 8A of the Securities Act; § 21C of the Exchange Act; § 9(f) of the Investment Company Act; § 203(k) of the Advisers Act.

558 *See* § 8A(c)(1) of the Securities Act.

559 *See* § 8A(c)(1) of the Securities Act.

560 *See* § 8A(d)(2) of the Securities Act.

561 §§ 8(b) and (d) of the Securities Act; *see* § 11.03[3].

562 *See* § 20(d) of the Securities Act; § 21(d)(3) of the Exchange Act; § 42(e) of the Investment Company Act; § 209(e) of the Advisers Act. *See*, *e.g.*, SEC v. Aragon Capital Management, SEC Litigation Release No. 19995A (Feb. 8, 2007); *SEC v. Royal Dutch Petroleum Co.*, SEC Litigation Release No. 18844 (Aug. 24, 2004). According to the SEC's order and complaint, Shell overstated proved reserves reported in its 2002 Form 20-F by 4.47 billion barrels of oil equivalent and overstated its future cash flows by approximately $6.6 billion.

563 *See* Stephen M. Cutler, Director, SEC Division of Enforcement, Speech at the 24th Annual Ray Garrett Jr. Corporate & Securities Law Institute (Apr. 29, 2004) (noting that under the current regulatory regime, both entities and individuals can be assessed significant monetary penalties aimed at achieving both general deterrence and accountability).

564 *See* § 20(d)(2)(C) of the Securities Act; SEC Release No. 33-10104 (June 27, 2016).

565 *See* Stephen M. Cutler, Director, SEC Division of Enforcement, Speech at the 24th Annual Ray Garrett Jr. Corporate & Securities Law Institute (Apr. 29, 2004); *see also* Ken Belson, *Lucent Fined $25 Million by SEC in Fraud Case*, N.Y. TIMES, May 18, 2004. In 2004, the SEC levied a $25 million fine against Lucent Technologies for failure to cooperate with a fraud investigation, the largest penalty ever imposed against a corporation for failure to cooperate. The noncooperation penalty was levied in part because after reaching a settlement agreement in connection with the fraud investigation, Lucent expanded the scope of employees that could be indemnified against the SEC enforcement action. The SEC stated that such conduct is contrary to the public interest. *SEC v. Lucent Technologies Inc.*, SEC Litigation Release No. 18715 (May 17, 2004). In contrast to the Lucent case, the SEC demonstrated the potential benefits of cooperation by settling financial fraud charges brought against Delphi Corporation without imposing a financial penalty. *SEC v. Delphi Corp.*, SEC Litigation Release No. 19891 (Oct. 30, 2006); *see also Report of Investigation*

Pursuant to Section 21(a) of the Securities Exchange Act of 1934 and Commission Statement on the Relationship of Cooperation to Agency Enforcement Decisions, SEC Accounting and Auditing Enforcement Release No. 1470 (Oct. 23, 2001). The report explains the SEC's decision not to sue Seaboard Corp. for financial reporting problems. It details the steps that Seaboard took when an internal investigation uncovered financial irregularities and sets forth a variety of criteria that the SEC will consider when deciding whether to sue issuers in the context of financial reporting irregularities.

On January 13, 2010, the SEC's Office of Chief Counsel in the Enforcement Division issued a revised ENFORCEMENT MANUAL in which it discussed cooperation issues. *See* SEC Division of Enforcement, ENFORCEMENT MANUAL (Jan. 13, 2010) (*rev.* Feb. 8, 2011) ("ENFORCEMENT MANUAL"). The ENFORCEMENT MANUAL contains the SEC's new policy statement on cooperation by individuals in its investigations, *see* ENFORCEMENT MANUAL at 121–25, which became effective on January 19, 2010. *See* 17 C.F.R. § 202.12. Under 17 C.F.R. § 202.12, the SEC will determine "whether, how much, and in what manner to credit cooperation by individuals by evaluating four considerations." These considerations are: (i) the value and nature of the individual's assistance, (ii) the importance of the underlying matter, which includes consideration of the character of the investigation and the dangers to investors presented by such investigation, (iii) society's interest in holding the cooperating individual accountable, which includes consideration of the individual's culpability, and (iv) the appropriateness of cooperation credit given the individual's personal history or profile. 17 C.F.R. § 202.12. However, the ENFORCEMENT MANUAL clarifies that the policy statement and factors listed in 17 C.F.R. § 202.12 "are not listed in order of importance nor are … they intended to be all-inclusive or to require a specific determination in any particular case." ENFORCEMENT MANUAL at 125. Instead, the SEC vows to consider the unique facts and circumstances of every case and to accord appropriate weight to the principles set forth in 17 C.F.R. § 202.12 depending on such facts and circumstances.

The defendant company's cooperation with investigators is also an important factor in the context of federal prosecutions. Determining what a company must do to qualify for "cooperation" credit has been the subject of debate. In a 2003 Memorandum, Deputy Attorney General Larry D. Thompson outlined the principles of federal prosecution of business organizations, with the main focus of the memo being "increased emphasis on and scrutiny of the authenticity of a corporation's cooperation." Memorandum from Larry D. Thompson, Deputy Attorney General, to Heads of Department Components and United States Attorneys (Jan. 20, 2003) ("Thompson Memo") (the memorandum was, in large measure, a reaffirmation of positions first outlined in a 1999 memorandum by then-Deputy Attorney General Eric Holder). The Thompson Memo (like the Holder memo) noted that one indicator of a company's cooperation is its willingness to waive the attorney-client privilege. Companies argued that this policy forced a difficult choice between waiving the privilege and being considered uncooperative.

In late 2006, the DOJ backtracked from the Thompson Memo; Deputy Attorney General Paul H. McNulty issued new guidance to prosecutors, directing that they consider a company's "timely and voluntary disclosure of wrongdoing and its willingness to cooperate" but restricting the prosecutors' discretion in seeking waivers of the attorney-client or attorney work product protections. Such waivers should only be sought upon a "legitimate need," and waiver "is not a prerequisite to a finding that a company has cooperated." Memorandum from Paul J. McNulty, Deputy Attorney General, to Heads of Department Components and United States Attorneys (Dec. 12, 2006) ("McNulty Memo").

This position is consistent with other developments, such as the September 2006 hearings on Attorney-Client Privilege and Corporate Waivers before the Senate Judiciary Committee. The then-Chairman of the committee, Senator Arlen Specter, later introduced a bill called "The Attorney-Client Privilege Protection Act of 2007," which would go further than the McNulty Memo by prohibiting prosecutors from demanding or requesting privileged materials from companies under investigation. S. 186, 110th Cong., 1st Session (Jan. 4, 2007). In 2007, the American Bar Association submitted a letter in support of the bill to Senator Patrick J. Leahy, the chairman of the Senate Judiciary Committee. *See* Letter from Karen J. Mathis, American Bar Association, to Patrick J. Leahy, Chairman, Senate Judiciary Committee (June 4, 2007). A similar bill passed the House on November 12, 2007, *see* H.R. 3013, 110th Cong., 1st Session (Nov. 13, 2007), and was reintroduced to the Senate Judiciary Committee by Senator Specter on June 2008, but the bill did not leave the Committee. *See* S. 3217, 110th Cong., 2d Session (June 26, 2008); *see also* S. 445, 111th Cong., 1st Session (Feb. 13, 2009).

In 2008, the DOJ retreated still further, and, in a memorandum by Deputy Attorney General Filip, expressly prohibited prosecutors from requesting privilege waivers as a consideration of cooperation. Memorandum from Mark R. Filip, Deputy Attorney General, to Heads of Department Components and United States Attorneys (Aug. 28, 2008) ("Filip Memo"). The Filip Memo noted that businesses and commentators had decried a culture of waivers.

After the DOJ issued the McNulty Memo, SEC Deputy Enforcement Director Peter Bresnan said that the SEC was "not contemplating any changes" to the guidelines set forth in the Seaboard policy. *See Federal News: SEC Enforcement*, 39 Sec. REG. AND LAW REPORTER (BNA) 122 (Jan. 29, 2007). However, the ENFORCEMENT MANUAL indicates the measures of a company's cooperation set forth in the Seaboard report serve as general principles but are not intended to limit the SEC's "broad discretion to evaluate every case individually, on its own unique facts and circumstances." ENFORCEMENT MANUAL at 126.

566 *See* Stephen M. Cutler, Director, SEC Division of Enforcement, Speech at the 24th Annual Ray Garrett Jr. Corporate & Securities Law Institute (Apr. 29, 2004).

567 Press Release, SEC, Statement of the Securities and Exchange Commission Concerning Financial Penalties (Jan. 4, 2006). The consequences of a company's failure to cooperate with the SEC was illustrated in the 2006 settlement with Morgan Stanley, in which the firm paid $15 million for failing to produce e-mail in the course of an investigation lasting from 2000 through 2005. The SEC alleged that Morgan Stanley had failed to produce documents requested by the staff because the firm failed to undertake diligent searches, overwrote back-up tapes and made misstatements about the documents it had preserved, the documents it had reviewed and the documents it had produced. *See SEC v. Morgan Stanley & Co.*, SEC Litigation Release No. 19693 (May 10, 2006). The settlement in this action was wholly independent of any sanction or settlement related to the facts underlying the SEC investigation that prompted the requests for e-mail productions.

568 *See* § 21A(d)(5) of the Exchange Act.

569 *See Gabelli v. SEC*, 133 S. Ct. 1216 (2013).

570 Although disgorgement is generally intended to force a defendant to give up the amount by which *he* was enriched by his wrongdoing, the Second Circuit Court of Appeals recently held that a defendant who commits insider trading, which resulted in a benefit to a third party, can be forced to disgorge the gains that accrued to that third party. *See SEC v. Contorinis*, 743 F.3d 296 (2d Cir. 2014) (affirming disgorgement award that required an individual to disgorge the profits that his employer earned from his insider trading).

571 *See, e.g.*, *SEC v. Tome*, 833 F.2d 1086, 1096 (2d Cir. 1987), *cert. denied*, 486 U.S. 1014 (1988). Recently, the SEC has sought disgorgement under § 21(d)(3) of the Exchange Act against two accounting firms for their respective roles in the Adelphia and Xerox accounting frauds. *See SEC v. KPMG LLP*, SEC Litigation Release No. 19191 (Apr. 19, 2005); *SEC v. Deloitte & Touche LLP*, SEC Litigation Release No. 19202 (Apr. 26, 2005).

572 *See SEC v. Toomey*, 866 F. Supp. 719, 724–25 (S.D.N.Y. 1992).

573 *See Hudson v. United States*, 522 U.S. 93 (1997); *United States v. Gartner*, 93 F.3d 633, 635 (9th Cir.), *cert. denied*, 519 U.S. 1047 (1996).

574 *See* § 308 of the Sarbanes-Oxley Act; § 11.07[2][d].

575 *See* § 21B of the Exchange Act; § 9(d) of the Investment Company Act; § 203(i) of the Advisers Act. As in judicial actions, the largest civil penalties are imposed for violations that involve fraud and cause substantial losses. Penalties are the greater of (i) $163,118 for individuals or $788,401 for corporations and (ii) the gross amount of the pecuniary gain to the defendant resulting from such violation. *See* SEC Release No. 33-10104 (June 27, 2016).

576 12 U.S.C. § 1833a.

577 *See, e.g., United States v. Wells Fargo Bank, N.A.*, 972 F. Supp. 2d 593 (S.D.N.Y. 2013); *United States v. Countrywide Financial Corporation*, 961 F. Supp. 2d 598 (S.D.N.Y. 2013); *United States v. Bank of New York Mellon*, 941 F. Supp. 2d 438 (S.D.N.Y. 2013).

578 *United States ex rel. O'Donnell v. Countrywide Home Loans, Inc.*, 822 F.3d 650 (2d Cir. 2016).

579 *See, e.g.*, Press Release, DOJ, Bank of America to Pay $16.65 Billion in Historic Justice Department Settlement for Financial Fraud Leading up to and During the Financial Crisis (Aug. 21, 2014) (announcing Bank of America "agreed to pay a $5 billion penalty" under FIRREA, which was "the largest FIRREA penalty ever"); Press Release, DOJ, Justice Department, Federal and State Partners Secure Record $7 Billion Global Settlement with Citigroup for Misleading Investors About Securities Containing Toxic Mortgages (July 14, 2014) (announcing settlement of claims concerning residential mortgage-backed securities, including "a $4 billion civil penalty—the largest penalty to date under [FIRREA]"); Press Release, DOJ, Justice Department, Federal and State Partners Secure Record $13 Billion Global Settlement with JPMorgan for Misleading Investors About Securities Containing Toxic Mortgages (Nov. 19, 2013) (announcing settlement including a $2 billion civil penalty for claims under FIRREA).

580 *See* § 4.02 for a discussion of issuers subject to Exchange Act registration and reporting.

581 However, § 15(c)(4) of the Exchange Act does not allow the SEC to impose orders of general future compliance with the securities laws. *See In re George C. Kern, Jr.*, SEC Release No. 34-29356 (June 21, 1991).

582 *See, e.g.*, *Report of Investigation re: Netflix, Inc., and Reed Hastings*, SEC Release No. 34-69279 (Apr. 2, 2013) (discussing the application of Regulation FD and Section 13(a) of the Exchange Act to the Netflix CEO's use of his personal Facebook page to announce company metrics where the company had not previously informed shareholders that it would use that Facebook page to disclose information); *Report of Investigation re: The Titan Corporation*, SEC Release No. 34-51283 (Mar. 1, 2005) (discussing the potential liability under §§ 10(b) and 14(a) of the Exchange Act for a military and intelligence subcontractor arising out of the company's disclosures contained in a merger agreement; the disclosure represented that the company had not violated the FCPA, and the SEC's § 21(a) report examined the company's duty to update disclosures made in merger agreements upon learning of contradictory material facts); *see also* Ralph C. Ferrara & Philip S. Khinda, *SEC Enforcement Proceedings: Strategic Considerations for When the Agency Comes Calling*, 51 ADMIN. L. REV. 1143, 1193 n.198 (1999) (citing, *inter alia, In re W.R. Grace & Co.*, SEC Release No. 34-39157 (Sept. 30, 1997); *Report of Investigation in the Matter of The Cooper Companies, Inc. as it Relates to the Conduct of Cooper's Board of Directors*, SEC Release No. 34-35082 (Dec. 12, 1994)).

583 *See SEC v. Credit Suisse First Boston Corp.*, SEC Litigation Release No. 17327 (Jan. 22, 2002).

584 The agreement, which resulted after the NYAG commenced an action in New York state court under the Martin Act, provided a $48 million payment to New York state and a $52 million payment to the other affected states, in addition to changes of Merrill Lynch's policies and organization to address analyst conflicts of interest. Unlike many states, New York has not adopted the Uniform Securities Act and retains its original "blue sky" statute, the Martin Act or General Business Law Article 23-A, which dates from 1921. *See* N.Y. GEN. BUS. LAW § 352 (McKinney's 1996 & Supp. 2010). Among the unique features of the Martin Act is that it grants the NYAG unusually broad investigatory powers and it does not require a showing of reliance or intent. There is no private right of action under the Martin Act. *See* Nicholas Thompson, *The Sword of Spitzer*, LEGAL AFFAIRS, May/June 2004 (discussing the history of the Martin Act and Spitzer's use of it in the mutual fund and other financial scandals); Carey S. Dunne, *Role of the States Attorneys General in Policing the Securities Markets*, in 34 TH Annual INSTITUTE OF SECURITIES REGULATION at 1081 (Practicing Law Institute, 2002).

585 During this time period, the SEC, the NYSE and the NASD were actively engaged in a series of rulemakings directed at analyst conflicts of interest. The SEC approved rules adopted by the NYSE and the NASD to address analyst conflicts of interest on May 8, 2002, and the NYSE and NASD proposed additional rules to the SEC at the end of May 2002. *See* § 14.07[5][a]. In some respects, these rules appear

to conflict with the terms of the Merrill Lynch settlement. *See* SEC Release No. 34-45908 (May 10, 2002) (order approving proposed rule changes); SEC Release No. 34-47110 (Dec. 31, 2002) (proposed rule changes). In addition, § 15D of the Sarbanes-Oxley Act invites additional rulemaking by the SEC largely along the lines of the rules previously adopted by the NYSE and the NASD. *See* § 14.07[5][b]. Simultaneously with the passage of the Sarbanes-Oxley Act, the SEC proposed Regulation AC, the final version of which was promulgated in February 2003. *See* SEC Release No. 33-8119 (Aug. 2, 2002) (solicitation of public comment); SEC Release No. 33-8193 (Feb. 20, 2003) (final rule). *See generally* § 14.07[5][c].

586 *See* Press Release, SEC, SEC, NY Attorney General, NYSE, NASD, NASAA Reach Agreement on Reforming Wall Street Practices (Oct. 23, 2002).

587 *See* Press Release, SEC, SEC Fact Sheet on Global Analyst Research Settlements (Apr. 28, 2003); § 14.07[5][b].

588 *See* Press Release, SEC, Deutsche Bank Securities Inc. and Thomas Weisel Partners LLC Settle Enforcement Actions Involving Conflicts of Interest Between Research and Investment Banking (Aug. 26, 2004).

589 Press Release, SEC, SEC Fact Sheet on Global Analyst Research Settlements (Apr. 28, 2003).

590 *See generally* § 14.07[5] for a more detailed discussion of analyst conflicts of interest issues.

591 The NYAG concluded its involvement in the spinning investigation in July 2006 after reaching a $4.4 million settlement with a former executive who allegedly steered his company's investment banking business to Salomon Smith Barney in exchange for IPO allocations. This was the fifth settlement reached between an individual defendant and the NYAG; the total value of the settlements in these cases was over $10 million. *See* Press Release, NYAG, Telecom Exec Settles Final IPO Spinning Case (July 31, 2006). The NASD brought spinning-related charges against former Credit Suisse First Boston banker Frank P. Quattrone and imposed against him a lifetime ban from the securities industry. After several years of litigation, the Second Circuit Court of Appeals overturned Quattrone's conviction for obstruction of justice, the SEC revoked the lifetime ban and the NASD decided not to pursue the case against Quattrone. *See* Randall Smith & Paul Davies, *Quattrone Deal Drops All Charges, Allows His Return To Wall Street*, WALL ST. J., Aug. 23, 2006; Randall Smith, *IPO "Spinning" Is Under Fire; Securities Firms Are Charged*, WALL ST. J., Apr. 29, 2003.

The SEC in 2004 proposed amendments to Regulation M that could result in the adoption of a new Rule 106, which would expressly prohibit conditioning the award of allocations of offered securities on the receipt of consideration in addition to the stated offering price. SEC Release No. 33-8511 (Dec. 9, 2004) (solicitation of public comment). The comment period for the proposed amendments closed, and no action has been taken with respect to the proposed amendments.

592 *See In re Initial Public Offering Securities Litigation*, 671 F. Supp. 2d 467 (S.D.N.Y. 2009).

593 *See* Press Release, SEC Charges NASDAQ for Failures During Facebook IPO (May 29, 2013).

594 The SEC does not have authority to bring criminal proceedings, but may refer violations to the DOJ.

595 *See* § 24 of the Securities Act (any provision, including willful material misstatements or omissions in a registration statement); § 32 of the Exchange Act (willful or knowing material misstatements in any document required to be filed or any provision that states that a violation is unlawful); § 49 of the Investment Company Act (any provision, including willful material misstatements or omissions in a registration statement or document); § 217 of the Advisers Act (any provision); 18 U.S.C. § 1348 (any fraudulent act related to a public company's securities).

596 *See* § 24 of the Securities Act; § 49 of the Investment Company Act; § 217 of the Advisers Act. As a practical matter, prosecutors may actually seek fines of up to $500,000 per violation for corporate defendants under a separate statutory provision applicable to essentially all existing federal crimes. *See* 18 U.S.C. § 3571(c)(3).

597 *See* § 32(a) of the Exchange Act, which is discussed in § 11.07[3][f]. In contrast to criminal procedures in many other countries, which limit criminal prosecutions to individuals, corporations as well as their

employees are subject to indictment, conviction and criminal punishment in the United States. Misconduct by corporate employees is attributed to the corporation itself, regardless of the employee's managerial status or lack of it within the corporation, if the employee's conduct occurred within his "scope of employment" and if his conduct was intended to confer some benefit to the corporation, whether or not that benefit was the principal motivating factor for the employee or whether it actually accrues to the corporation.

598 *See* 18 U.S.C. § 3571(d).

599 *See* § 24 of the Securities Act; § 49 of the Investment Company Act; § 217 of the Advisers Act.

600 *See* § 32 of the Exchange Act, which is discussed in § 11.07[3][f].

601 *See* § 49 of the Investment Company Act; § 32(a) of the Exchange Act. *But see United States v. Sloan*, 399 F. Supp. 982, 985 (S.D.N.Y. 1975) ("The 'no knowledge' proviso was not intended to permit one who knowingly conspires to violate the general standard of conduct set forth in [the securities laws] to claim protection on the ground that he [or she] did not have knowledge of some specific rule or requirement promulgated thereunder.").

602 *See, e.g.*, Laurie Cohen, *Public Confession: Milken Pleads Guilty to Six Felony Counts and Issues an Apology*, WALL ST. J., Apr. 25, 1990; Laurie Cohen *, Lewis Pleads Guilty to Three Felony Counts*, WALL ST. J., Aug. 31, 1989; James Stewart, *Boesky is Slated to Plead Guilty to Felony Today*, WALL ST. J., Apr. 23, 1987; James Stewart, *The Drexel Settlement—Biting the Bullet: Drexel Agrees to Plead Guilty and Pay Out a Record $650 Million*, WALL ST. J., Dec. 12, 1988; James Stewart, *Levine Pleads Guilty, Agrees to Cooperate*, WALL ST. J., June 6, 1986.

603 Since Enron's collapse in December 2001, over 90 executives at more than 19 companies have been indicted for various kinds of financial fraud. The following are among the most prominent examples. At Enron, the prosecutorial focus has been on the use of special purpose entities to hide deteriorating results and produce misleading disclosures. Prosecutors won convictions against an Enron executive and former Merrill Lynch & Co. officials who had conspired to disguise a loan (of energy-generating barges) as a sale in order to permit Enron to book the profit on sale. Enron executives Jeffrey Skilling and Kenneth Lay were convicted on multiple criminal charges for their roles in the Enron fraud; however, Lay's conviction was revoked after he died before exercising his right to appeal. The Fifth Circuit Court of Appeals subsequently overturned some of the convictions against the Merrill Lynch executives. *See United States v. Brown*, 459 F.3d 509 (5th Cir. 2006), *cert. denied*, 550 U.S. 933 (2007). At HealthSouth, allegations make out a pattern of fraudulent accounting since the 1980s. Although the CEO, Richard Scrushy, was acquitted of accounting fraud charges, he was convicted of bribery, mail fraud and conspiracy in connection with bribes paid to obtain a seat on an influential state commission in Alabama. He also agreed to an $81 million settlement with the SEC. *SEC v. Scrushy*, SEC Litigation Release No. 20084 (Apr. 23, 2007). At WorldCom, as much as $11 billion in expenses were misclassified as capital expenditures. Former WorldCom Chairman Bernard Ebbers was sentenced to 25 years in federal prison for orchestrating that fraud, which toppled the telecommunications company he founded. *See* Ken Belson, *WorldCom Head Is Given 25 Years For Huge Fraud*, N.Y. TIMES, July 14, 2005. At Adelphia Communications, founders were convicted of taking more than $1 billion from the company and having misled investors and regulators. The founder John Rigas and his son (the Chief Financial Officer of Adelphia Communications) were sentenced to 20 and 15 years in prison, respectively. *See also United States v. Rigas*, No. S10CR.1236 (LBS), 2004 WL 2601084 (S.D.N.Y. Nov. 15, 2004); Press Release, DOJ, Adelphia Communications Agrees to Pay $715 Million to Government Victim Compensation Fund (Apr. 25, 2005) (announcing Adelphia Communications settlement with the DOJ and the SEC for the accounting fraud schemes that had defrauded investors). At Qwest Communications, the former Chief Executive Officer and eight other former Qwest officers and employees were prosecuted for engaging in a multifaceted fraudulent scheme designed to mislead the investing public about Qwest's revenue and growth. *See SEC v. Nacchio*, SEC Litigation Release No. 19136 (Mar. 15, 2005). At Tyco International, the former Chief Executive Officer and Chief Financial Officer were found guilty of looting the company of over $600 million. *See* Andrew Ross Sorkin, *Ex-Chief and Aide Guilty of Looting Millions at Tyco*, N.Y. TIMES, June 18, 2005.

604 An assistant director of the FBI said that the bureau was investigating potential options backdating practices at 55 companies as of October 2006. *See* Shaheen Pasha, *FBI Sees More Indictments From Backdating*, CNNMONEY.com, Oct. 12, 2006. The United States Attorney for the Northern District of California created a task force to investigate backdating allegations. *See* Press Release, DOJ, U.S. Attorney Kevin V. Ryan Creates Local Stock Option Backdating Task Force (July 13, 2006).

605 *See, e.g.*, Press Release, DOJ, SAC Capital Portfolio Manager Mathew Martoma Found Guilty In Manhattan Federal Court Of Insider Trading Charges (Feb. 6, 2014) (announcing conviction of former portfolio manager at SAC Capital for insider trading involving approximately $274 million in illegal profits and avoided losses); Press Release, DOJ, Former Credit Suisse Managing Director Sentenced In Manhattan Federal Court To 30 Months In Prison In Connection with Scheme To Hide Losses In Mortgage-Backed Securities Trading Book (Nov. 22, 2013) (discussing 30-month prison term, $1 million forfeiture, and $150,000 fine imposed on former Global Head of Structured Credit at Credit Suisse for hiding more than $100 million in losses in a mortgage-backed securities trading book); Press Release, DOJ, Manhattan U.S. Attorney Announces Guilty Plea Agreement With SAC Capital Management Companies (Nov. 4, 2013) (announcing agreement under which SAC Capital agreed to plead guilty to insider trading, pay a $1.8 billion penalty, cease accepting outside investor funds, and shut down operations as an investment adviser); Press Release, DOJ, Allen Stanford Convicted in Houston for Orchestrating $7 Billion Investment Fraud Scheme (Mar. 6, 2012) (announcing conviction of former chairman of Stanford International Bank for orchestrating a 20-year investment fraud scheme in which he misappropriated $7 billion from the bank to finance personal businesses); Press Release, DOJ, Hedge Fund Billionaire Raj Rajaratnam Found Guilty in Manhattan Federal Court of Insider Trading Charges (May 11, 2011) (discussing conviction of managing member of Galleon Management for insider trading following an eight-week trial); Press Release, DOJ, Bernard Madoff Sentenced to 150 Years in Prison (June 29, 2009) (announcing 150-year sentence and $170 billion forfeiture against Madoff in connection with Ponzi scheme).

606 *See, e.g.*, Jordan Maglich, *Once Reserved For Drug Crimes, Wiretapping Takes Center Stage in White Collar Prosecutions*, FORBES, May 21, 2013 (discussing increasing use of wiretaps by federal prosecutors to investigate and prosecute white-collar crime, and quoting U.S. Attorney Preet Bharara as stating that the "aggressive use of wiretaps is important" because "[i]t shows that we are targeting white-collar insider trading rings with the same powerful investigative tools that have worked so successfully against the mob and drug cartels").

607 *United States v. Kordel*, 397 U.S. 1, 6 (1970).

608 *See, e.g.*, Jessica Silver-Greenberg and Ben Protess, *JPMorgan Settlement Offers Look Into Mortgage Machine*, N.Y. TIMES, Nov. 19, 2013 (describing $13 billion settlement between JPMorgan Chase and the DOJ concerning the sale of mortgage-related securities, which included a $4 billion payment to the agency overseeing Fannie Mae and Freddie Mac, a $2 billion fine paid to federal prosecutors, $4 billion in mortgage borrower relief, and other payments to the National Credit Union Administration and state attorneys general in California, New York and Illinois); Ben Protess and Mark Scott, *Barclays Settles Regulators' Claims Over Manipulation of Key Rates*, N.Y. TIMES, June 27, 2012 (describing Barclays' agreement to pay $450 million in fines to resolve investigations relating to the alleged manipulation of LIBOR, including a $160 million penalty imposed by the DOJ, a $200 million penalty by the CFTC, and a $92.8 million fine by the Financial Services Authority in London).

609 *See, e.g.*, Landon Thomas Jr., *Jury Finds Bank of America Liable in Mortgage Case*, N.Y. TIMES, Oct. 23, 2013 (discussing verdict in civil trial filed by DOJ concerning alleged misstatements made in connection with mortgages sold by Countrywide to Fannie Mae and Freddie Mac); Press Release, DOJ, Department of Justice Sues Bank of America for Defrauding Investors in Connection with Sale of Over $850 Million of Residential Mortgage-Backed Securities (Aug. 6, 2013) (announcing filing of civil complaint against Bank of America alleging fraud in connection with sale of mortgage-backed securities in 2008); Press Release, DOJ, Department of Justice Sues Standard & Poor's for Fraud in Rating Mortgage-Backed Securities in the Years Leading Up to the Financial Crisis (Feb. 5, 2013) (announcing filing of civil lawsuit against S&P for allegedly issuing inflated ratings to mortgage-backed securities and collateralized debt obligations between

2004 and 2007 in order to defraud investors).

610 *See, e.g.*, Aruna Viswanatha, *Banks to Pay $5.6 Billion in Probes*, WALL ST. J., May 20, 2015 (describing several banks' agreements with the DOJ to pay fines and plead guilty to criminal charges concerning foreign-currency rate manipulation, after previously agreeing to pay fines regarding the same conduct with the CFTC, Federal Reserve, OCC, New York State Department of Financial Services, U.K. Financial Conduct Authority, and Swiss Financial Market Supervisory Authority).

611 *See, e.g.*, Jed. S. Rakoff, *The Financial Crisis: Why Have No High-Level Executives Been Prosecuted?*, N.Y. REV. OF BOOKS, Jan. 9, 2014 (stating that, "[i]n striking contrast with" past prosecutions during economic scandals and crises, "not a single high-level executive has been successfully prosecuted in connection with the recent financial crisis" and attributing the failure to other government priorities, the government's involvement in the circumstances that led to the financial crisis, and the shift towards prosecuting companies rather than individuals); Ben Protess & Susanne Craig, *Inside the End of the U.S. Bid to Punish Lehman Executives*, N.Y. TIMES, Sept. 8, 2013 (discussing internal pressure and criticism concerning failure to prosecute or sue executives from Lehman Brothers).

612 Memorandum from Sally Quillian Yates, Deputy Attorney General, to Heads of Department Components and United States Attorneys (Sept. 9, 2015).

613 In exchange for the payment of penalties and institution of corporate reform, the DOJ in deferred prosecution agreements normally files a criminal information and stays prosecution for a set period of time, at the end of which the charges are dismissed if the corporation is in compliance with the terms of the deferred prosecution agreement. By contrast, under a non-prosecution agreement, the corporation also agrees to pay criminal penalties and institute certain types of corporate reforms, but the DOJ does not file a criminal information and instead promises not to prosecute the company for the conduct under investigation. The 2003 memorandum by Deputy Attorney General Thompson explicitly instructed prosecutors to consider whether non-prosecution agreements would be proper under certain circumstances. *See* Memorandum from Larry D. Thompson, Deputy Attorney General, to Heads of Department Components and United States Attorneys (Jan. 20, 2003).

614 *See In re Prudential Securities Inc. Limited Partnerships Litigation*, Fed. Sec. L. Rep. (CCH) ¶98,978 (S.D.N.Y. Nov. 20, 1995) (where $110 million was awarded to plaintiff class).

615 *See also* Press Release, DOJ, Deutsche Bank's London Subsidiary Agrees to Plead Guilty in Connection with Long-Running Manipulation of LIBOR (Apr. 23, 2015) (announcing deferred prosecution agreement regarding role in manipulating LIBOR and Yen LIBOR); Press Release, DOJ, Manhattan U.S. Attorney and FBI Assistant Director-in-Charge Announce Filing of Criminal Charges Against and Deferred Prosecution Agreement with JPMorgan Chase Bank, N.A. in Connection with Bernard L. Madoff's Multi-Billion Dollar Ponzi Scheme (Jan. 7, 2014) (announcing $1.7 billion payment by JPMorgan); Press Release, DOJ, RBS Securities Japan Limited Agrees to Plead Guilty in Connection with Long-Running Manipulation of Libor Benchmark Interest Rates (Feb. 6, 2013) (where RBS Japanese subsidiary agreed to pay a $50 million fine and RBS parent company paid a $100 million penalty); Press Release, DOJ, UBS Securities Japan Co. Ltd. to Plead Guilty to Felony Wire Fraud for Long-Running Manipulation of LIBOR Benchmark Interest Rates (Dec. 19, 2012) (announcing penalties and fines of $500 million); Press Release, DOJ, HSBC Holdings Plc. and HSBC Bank USA N.A. Admit to Anti-Money Laundering and Sanctions Violations, Forfeit $1.256 Billion in Deferred Prosecution Agreement (Dec. 11, 2012) (announcing deferred prosecution agreement for willfully failing to maintain an effective anti-money laundering program, willfully failing to conduct due diligence on foreign correspondent affiliates, and violating the Bank Secrecy Act, the International Emergency Economic Powers Act and the Trading with the Enemy Act); Press Release, DOJ, Barclays Bank PLC Admits Misconduct Related to Submissions for the London Interbank Offered Rate and the Euro Interbank Offered Rate and Agrees to Pay $160 Million Penalty (June 27, 2012) (announcing fine for manipulation of LIBOR); Mark A. Stein, *Five Days; And Wall St. Was Filled With Settlements and Lamentations*, N.Y. TIMES, June 18, 2005 (where Bristol-Myers paid approximately $300 million to settle investigations by the Justice Department into its accounting practices); Press Release, DOJ, Monsanto Company Charged with Bribing Indonesian Government Official: Prosecution Deferred for Three Years

(Jan. 6, 2005) (where Monsanto was fined $1 million); Press Release, DOJ, America Online Charged with Aiding and Abetting Securities Fraud; Prosecution Deferred for Two Years (Dec. 15, 2004) (where Time Warner was fined $510 million); Press Release, DOJ, InVision Technologies, Inc. Enters Into Agreement with the United States (Dec. 6, 2004) (pursuant to which $800,000 in penalties was paid to the United States); *SEC v. GE InVision, Inc.*, SEC Litigation Release No. 19078 (Feb. 14, 2005) (requiring the company also to disgorge $589,000 in profits, plus $28,700 in prejudgment interest, and to pay a $500,000 civil penalty); Press Release, DOJ, American International Group Inc. Enters Into Agreements with the United States (Nov. 30, 2004) (where AIG was fined $80 million in penalties); Press Release, DOJ, Former Computer Associates Executive Indicted on Securities Fraud, Obstruction Charges (Sept. 22, 2004) (where $225 million was awarded to injured shareholders); Press Release, DOJ, Canadian Imperial Bank of Commerce Agrees to Cooperate with Enron Investigation, Exit Structured Finance Business, Implement Reforms, with Oversight By Monitor (Dec. 22, 2003) (where Canadian Imperial Bank was fined $80 million); Press Release, DOJ, Three Top Former Merrill Lynch Executives Charged with Conspiracy, Obstruction of Justice, Perjury in Enron Investigation (Sept. 17, 2003) (pursuant to which Merrill Lynch had to employ specific reforms and retain an independent auditor to monitor compliance); Press Release, DOJ, PNC ICLC Corp. Enters Into Deferred Prosecution Agreement with the United States (June 2, 2003) (where PNC ICLC agreed to pay $90 million to a restitution fund and $25 million in penalties to the United States); Press Release, DOJ, Banco Popular De Puerto Rico Enters Into Deferred Prosecution Agreement with the United States (Jan. 16, 2003) (where Banco Popular was fined $21.6 million).

616 Memorandum from Paul J. McNulty, Deputy Attorney General, to Heads of Department Components and United States Attorneys (Dec. 12, 2006).

617 Memorandum from Larry D. Thompson, Deputy Attorney General, to Heads of Department Components and United States Attorneys (Jan. 20, 2003).

618 *See* Memorandum from Mark R. Filip, Deputy Attorney General, to Heads of Department Components and United States Attorneys (Aug. 28, 2008).

619 *See, e.g.*, *United States v. Barford*, SEC Litigation Release No. 19240 (May 26, 2005). Former Charter Communications executives were ordered to serve prison terms and pay substantial fines after pleading guilty to conspiracy to commit wire fraud. The executives had knowingly participated in a scheme to defraud Charter's stockholders by causing Charter to materially inflate the number of subscribers that it reported to the public in press releases and filings with the SEC.

620 *See* 18 U.S.C. § 1341.

621 *See* 18 U.S.C. § 1343. The statutes are given a similar construction and are subject to the same substantive analysis. *See Carpenter v. United States*, 484 U.S. 19, 25 n.6 (1987).

622 *See, e.g.*, *Kehr Packages, Inc. v. Fidelcor, Inc.*, 926 F.2d 1406 (3d Cir.), *cert. denied*, 501 U.S. 1222 (1991).

U.S. Regulation of the International Securities and Derivatives Markets, § 11.10, SPECIAL LITIGATION ISSUES REGARDING FOREIGN DEFENDANTS AND OVERSEAS TRANSACTIONS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 11.10 (11th and 12th Editions 2014-2017)
11th and 12th Editions

p. 11-166

This section briefly surveys some of the special litigation issues that arise whenever a plaintiff seeks to apply the U.S. securities laws to foreign defendants and overseas transactions. [647] First, the court must determine whether it has the authority to exercise its adjudicative powers over the foreign defendants. That authority, known as "personal jurisdiction," is discussed in § 11.10[1]. If a court concludes that it has personal jurisdiction over the foreign defendants, it may nevertheless decline to hear the case based on the doctrine of *forum non conveniens*, which is discussed in § 11.10[2]. Second, the court must decide whether the plaintiff's claims entitle it to relief under the relevant statute, and this conclusion is discussed in § 11.10[3]. [648] Finally, § 11.10[4] discusses an aspect of U.S. litigation that often comes as an unpleasant surprise to foreign defendants: discovery, the process by which litigants may obtain a wide range of information from each other and from nonparty witnesses.

[1] Personal Jurisdiction

As noted, personal jurisdiction refers to the authority of a court to exercise its adjudicative powers over a defendant. A U.S. court may exercise personal jurisdiction over a foreign defendant only if authorized to do so by a statute or rule and only if such exercise satisfies the Due Process Clause of the U.S. Constitution.

Statutes authorizing the exercise of personal jurisdiction over foreign defendants are known as "long-arm statutes." Every state in the United States has enacted some form of long-arm statute or rule of court. Many state long-arm statutes confer personal jurisdiction to the full extent permitted by the Due Process Clause; others are more restrictive. On the federal level, the Securities Act and the Exchange Act both contain long-arm provisions that extend personal jurisdiction to the full extent permitted by the Due Process Clause. [649]

p. 11-166

p. 11-167

Generally speaking, the Due Process Clause permits a U.S. court to exercise personal jurisdiction over a foreign defendant who possesses "minimum contacts" with the forum where the court is located "such that the maintenance of the suit does not offend ‘notions of fair play and substantial justice.’" [650] The analysis under the Due Process Clause distinguishes between two types of personal jurisdiction: "general" jurisdiction and "specific" jurisdiction.

[a] General Jurisdiction

"General" jurisdiction permits a court to adjudicate any claim against the defendant, including claims based on activities entirely unrelated to the forum. For example, if a state court in New York has general jurisdiction over XYZ Corporation, then it may adjudicate a claim against XYZ based on the corporation's activities elsewhere, even activities occurring outside the United States.

The Due Process Clause permits the exercise of general jurisdiction over foreign defendants whose affiliations with the state where the court is located are so "continuous and systematic as to render [them] essentially at home in the forum State." [651] For an individual, the paradigm forum for the exercise of general jurisdiction is the individual's domicile. For a corporation, it is the place of incorporation and principal place of business. [652]

p. 11-167

p. 11-168

Although the Supreme Court has not foreclosed the possibility that a corporation's operations in a forum other than its place of incorporation or principal place of business may support the exercise of general jurisdiction, it has stressed that it would only find general jurisdiction in that circumstance in an "exceptional case" and that merely distributing goods to the forum, maintaining offices and other facilities in the forum, or having sizeable sales in the forum is insufficient. This general jurisdiction analysis further requires an appraisal of a corporation's activities in their entirety, "nationwide and worldwide," because "[a] corporation that operates in many places can scarcely be deemed at home in all of them." [653]

The Due Process Clause also permits the exercise of general jurisdiction over a foreign defendant who is personally served with process in the forum where the court is located, even if the defendant's presence in that forum is transitory. This method of obtaining general jurisdiction over a foreign defendant is often called "tag service." Perhaps the most extreme application of tag service occurred in a case where the defendant was served with a complaint while he or she was a passenger in an aircraft in flight through the airspace of the forum state. [654] Although tag service has been the subject of substantial criticism, most courts continue to recognize it as an effective way of obtaining general jurisdiction over a foreign defendant. [655]

[b] Specific Jurisdiction

"Specific" jurisdiction permits only the adjudication of claims "arising out of" or "relating to" the defendant's activities in the forum. For example, a defendant whose only contact with the forum is selling product X might be subject to the personal jurisdiction of the forum's courts with respect to claims arising out of those sales. But the defendant would not be subject to the personal jurisdiction of the forum's courts with respect to claims based on its activities outside the forum, such as the sale of product Y.

p. 11-168

p. 11-169

Specific jurisdiction may be exercised when: (i) the defendant has "purposefully availed" itself of the benefits and protections of the forum's law such that it should reasonably anticipate being subject to judicial proceedings there, and (ii) the exercise of personal jurisdiction over the defendant would be "reasonable." [656] Application of this two-pronged test is neither predictable nor precise; whether a court will exercise specific jurisdiction over a particular foreign defendant will depend upon all the facts and circumstances of the case. Nevertheless, because of the unique burdens faced by foreign defendants litigating in the United States, the Supreme Court has cautioned that "great care and reserve" should be exercised in asserting personal jurisdiction over foreigners. [657] In addition, the Supreme Court has recently cautioned against using facts that permit the exercise of specific jurisdiction over a foreign corporation to exercise general jurisdiction over such corporation. [658]

[2] *Forum Non Conveniens*

Almost every litigation involving foreign parties or overseas transactions will to some degree pose the issue of *forum non conveniens*. [659] The doctrine of *forum non conveniens* permits a U.S. court to dismiss an action if the balance of conveniences weighs heavily in favor of an alternative forum. [660]

p. 11-169

p. 11-170

There is ordinarily a strong presumption in favor of a plaintiff's choice of forum. However, that presumption applies with less force when the plaintiff is a foreigner, rather than a citizen or resident of the United States. When an alternative forum has jurisdiction to hear the case, and when trial in the chosen U.S. forum would be unduly burdensome to the defendant or its foreign aspects would add substantially to the court's own administrative and legal problems, the court may, in its discretion, dismiss the case. To guide the court's discretion, the Supreme Court has developed a list of private interest factors affecting the convenience of the litigants and a list of public interest factors affecting the convenience of the forum. The private and public interest factors must clearly point toward trial in the alternative forum before the plaintiff's choice of forum will be disturbed.

The factors pertaining to the private interests of the litigants include:

- the relative ease of access to sources of proof;
- the availability of a compulsory process for attendance of unwilling, and the cost of obtaining attendance of willing, witnesses;
- the possibility of a view of the premises, if a view would be appropriate to the action; and
- all other practical problems that affect whether trial of a case will be easy, expeditious and inexpensive.

The list of public interest factors includes:

- the administrative difficulties flowing from court congestion;
- the local interest in having localized controversies decided at home;
- the interest in having the trial of a diversity case in a forum that is at home with the law that must govern the action;
- the avoidance of unnecessary problems in conflict of laws, or in the application of foreign law; and
- the unfairness of burdening citizens in an unrelated forum with jury duty.

The doctrine of *forum non conveniens* is a flexible one. There are no hard and fast rules that require dismissal; each case turns on its facts. Nevertheless, a plaintiff may not defeat a motion to dismiss on the ground of *forum non conveniens* merely by showing that the substantive law that would be applied in the alternate forum is less favorable to the plaintiff than that of the present forum. The possibility of a change in substantive law is ordinarily not given substantial

p. 11-170

p. 11-171

weight in the *forum non conveniens* inquiry. [661] By the same token, the possibility of a change in law favorable to the defendant is not considered. If the defendant is able to overcome the presumption in favor of the plaintiff by showing that trial in the chosen forum would be unnecessarily burdensome, dismissal is appropriate—regardless of the fact that the defendant may also have been motivated by a desire to obtain a more favorable forum.

[3] Extraterritorial Reach of the Securities Laws

Claims under the Securities Act and the Exchange Act generally fall within the federal question jurisdiction of the federal courts. However, because both statutes are silent as to their extraterritorial application, whenever a plaintiff brings an Exchange Act or Securities Act claim based on an overseas transaction, the court must ascertain whether the relevant statute reaches the challenged conduct.

In *Morrison v. National Australia Bank* [662] ("*Morrison*"), the Supreme Court rejected the longstanding and widely applied "conduct" and "effects" test for determining the extraterritorial reach of the federal securities laws, and instead held that § 10(b) of the Exchange Act gives rise to liability only for securities transactions on a U.S. exchange or otherwise occurring in the United States. This new test—a "transactional" test—does not turn on whether the alleged fraud produced substantial "effects" in the United States or whether the alleged fraud was "conduct[ed]" in the United States, but rather whether the purchase and sale "transactions" took place in the United States. The rule of *Morrison* is more categorical than the earlier standards and means that companies that sell securities outside the United States will have significant protection from U.S. securities law class action litigation. [663] For purposes of actions brought by

p. 11-171
p. 11-172

the SEC, however, the Dodd-Frank Act effectively revives the prior "conduct and effects" test. [664]

The *Morrison* decision did not indicate—and lower courts will need to consider—what constitutes a purchase or sale of a non-listed security "in the United States." Transactions may be negotiated in the United States but paid from or delivered outside the United States, for example, and the Court's decision does not provide guidance for such circumstances. In *Absolute Activist Value Master Fund Limited v. Ficeto*, the Second Circuit held that a transaction in a security not listed on a U.S. exchange takes place in the United States where "irrevocable liability was incurred or title was transferred within the United States." [665] According to the *Absolute Activist* court, relevant considerations in determining whether irrevocable liability was incurred or title was transferred within the United States include "facts concerning the formation of the contracts, the placement of purchase orders, the passing of title, or the exchange of money," rather than the identity of the parties, the type of security at issue, or whether each defendant engaged in conduct within the United States. On remand, the district court determined that the transactions at issue took place within the United States because the parties delivered the signed purchased agreement in the United States, the closing took place in the United States, and the trades were settled through a clearinghouse located in the United States. [666]

p. 11-172
p. 11-173

The Second Circuit applied its *Absolute Activist* decision in *United States v. Vilar*. [667] In *Vilar*, the Second Circuit concluded that the transactions at issue qualified as "domestic" transactions because certain of the victims "entered into and renewed" their purchase agreements in the United States. In particular, the Second Circuit supported its conclusion by pointing to evidence that: (1) the parties met in the United States to discuss the securities; (2) the victims committed to the investments while in the United States; (3) the defendants sent a letter to the victims in the United States confirming the investments; (4) the victims were in the United States when they reinvested their money in the securities; and/or (5) the victims were in the United States when they received and signed commitment forms, and sent money to the defendants to open their accounts. In reaching this conclusion, however, the Second Circuit rejected the government's arguments that the relevant transactions were "domestic" merely because the securities were "marketed and sold to customers based in the United States" or the "investors were directed to wire funds to a New York bank, and the custodian of the fund was a New York securities firm." The court likewise rejected the defendants' arguments that the transactions were not "domestic" because the securities transactions at issue were "deliberately and carefully structured to occur outside the United States." According to the court, "[t]he parties' intention to engage in foreign transactions is entirely irrelevant" under *Morrison*.

More recently, the Second Circuit considered the scope of its *Absolute Activist* decision in the context of claims under the civil liability provisions of the Commodity Exchange Act in *Loginovskaya v. Batrachenko*. [668] In *Loginovskaya*, the Second Circuit affirmed the dismissal of the plaintiff's claims for failure to plead a domestic transaction. With respect to *Absolute Activist*'s title-transfer prong, the court held that the plaintiff could not rely on the allegedly domestic transfer of title to the assets underlying her investments because she did not directly hold title to those assets and instead only owned an interest in those assets through shares in an investment account, which were not transferred within the United States. With respect to the irrevocable-liability prong of *Absolute Activist*, the Second Circuit rejected as insufficient the plaintiff's allegation that she was required to wire transfer her funds to a bank account in the United States, concluding that those transfers "were actions needed to carry out the transactions, and not the transactions themselves—which were previously entered into when the contracts were executed in Russia." [669]

p. 11-173
p. 11-174

The Second Circuit further considered the application of *Morrison* to swap transactions in *Parkcentral Global Hub Ltd. v. Porsche Automobile Holdings SE*. [670] The case involved U.S. and foreign hedge funds that had entered into security-based swap agreements in the United States that referenced the share price of Volkswagen ("VW"), the German automaker. Their complaints alleged that Porsche, another German company, concealed its intention to acquire VW, and that plaintiffs relied on Porsche's statements when entering the swap agreements. Attempting to invoke § 10(b), plaintiffs alleged that they entered into the swap agreements in the United States with U.S.-based counterparties, and that the agreements contained New York choice-of-law provisions and forum selection clauses. They did not, however, allege that Porsche was a party to the swap agreements, that its deceptive conduct occurred primarily in the United States, or that the referenced VW shares were traded on a U.S. exchange. Because the swaps were not traded on any exchange, the Circuit had to decide whether entering into the swaps constituted "domestic transactions in other securities."

The Second Circuit construed *Morrison* as precluding the application of § 10(b) to the swap agreements at issue. The Circuit first rejected the argument that the *situs* of transactions was determinative of whether the claim was extraterritorial under *Morrison* because applying that principle to the swap agreements at issue "would subject to U.S. securities laws conduct that occurred in a foreign country, concerning securities in a foreign company, traded entirely on foreign exchanges, in the absence of any congressional provision addressing the incompatibility of U.S. and foreign law nearly certain to arise"—a result *Morrison* "plainly did not contemplate and … does not … permit." The Circuit next concluded that whether a swap transaction effected in the United States fell within *Morrison's* scope depended on the facts and circumstances and could not be decided based on any bright line rule. Thus, while a domestic transaction is a necessary element of a § 10(b) claim, it is not sufficient on its own to bring a particular claim within the confines of § 10(b). Rather, the Circuit held that whether conduct—some of which took place abroad—would be sufficient to invoke § 10(b) where there was a securities transaction in the United States

p. 11-174
p. 11-175

depended on whether the Plaintiffs' claims were so "predominantly foreign as to be impermissibly extraterritorial." The Circuit held that, on the facts pleaded, the Plaintiffs did not plead a transaction that was sufficiently domestic to satisfy § 10(b). [671] The procedural history of the *Parkcentral* case also demonstrates the extent to which *Morrison* may direct securities litigation away from the federal courts. After the district court's decision in *Parkcentral*, certain plaintiffs refiled their common law fraud and unjust enrichment claims in New York state court, where the Appellate Division granted the defendants' motion to dismiss on the ground of *forum non conveniens*. [672] Those plaintiffs subsequently pursued their claims in Germany.

In a decision arising out of the Volkswagen diesel emissions scandal, however, a district court distinguished *Parkcentral* and held that the plaintiffs adequately alleged that their transactions in Volkswagen's sponsored Level 1 ADRs were subject to the federal securities laws as "domestic transactions in other securities." [672.1] The court concluded that the transactions at issue were not "predominantly foreign" under *Parkcentral*, reasoning that the ADRs were "not independent from Volkswagen's foreign securities or from Volkswagen itself" since "Volkswagen sponsored the ADRs and thus was directly involved in the domestic offering of the ADRs." The court also rejected the defendants' argument that the level of the ADRs—Level 1, as opposed to Level 2 or 3—warranted a conclusion that the transactions were "predominantly foreign"

p. 11-175
p. 11-176

because, "[r]egardless of the level of the ADRs, Volkswagen took affirmative steps to make its securities available to investors here in the United States," including entering into deposit agreements governed by New York law with a bank in New York, submitting registration statements with the SEC, and complying with SEC rules that required it to provide on its website English-translated versions of market disclosure documents provided in its home country.

In another more recent case, *Cascade Fund, LLP v. Absolute Capital Management Holdings Ltd.*, a lower court dismissed under *Morrison* the § 10(b) claims of U.S. investors in funds organized under the laws of the Cayman Islands. Plaintiffs argued that because the money to invest in the funds was wired to the fund managers *via* an account in New York, the transactions had taken place within the United States. The district court disagreed, noting that because the subscription agreements that the plaintiffs entered into to invest in the funds were sent to the fund manager in the Cayman Islands and were subject to final approval (or rejection) in that jurisdiction (in other words the "transaction was not completed" until the fund manager accepted an application in the Cayman Islands), the transaction at issue occurred outside the United States. [673]

Relying on reasoning similar to that of the *Cascade Fund* court, another lower court recently dismissed the SEC's § 10(b) claims against Fabrice Tourre, a U.S.-based Goldman Sachs employee, in connection with Goldman's creation and sale to U.S. and foreign investors of a synthetic collateralized debt obligation ("CDO") whose performance was tied to the performance of certain RMBSs. [674] The SEC alleged that Tourre marketed the CDO at issue out of his New York office, to investors in the United States and abroad. Tourre moved to dismiss the SEC's § 10(b) claims under *Morrison*, arguing that the SEC did not allege sufficient facts to establish that the "sale or purchase" of the security at issue had occurred in the United States. The district court agreed, noting that the SEC's allegations with respect to marketing conduct that occurred in the United States "is precisely that … just conduct," and that the Supreme Court in *Morrison* had soundly rejected any reliance on "conduct" within the United States to confer jurisdiction over § 10(b) claims. [675] Instead, the court reasoned, the question after *Morrison* for non-listed securities was where the "sale or purchase" was made, a question that in turn depends on where and when someone "incurred an *irrevocable* liability" to either take or deliver a security. [676] Because the SEC had not alleged that an

p. 11-176

p. 11-177

irrevocable liability to sell the securities had arisen in the United States (and, indeed, Tourre had suggested that irrevocable liability arose when a trade confirmation for the security issued, which had occurred abroad with respect to both U.S. and foreign purchasers), the court dismissed the § 10(b) claims. [677]

[4] Discovery

[a] Overview of U.S. Discovery

Pretrial discovery in the United States often strikes foreign defendants as unusual and burdensome. First, unlike in most other countries, discovery in the United States is conducted by the litigants, rather than by the trial court. Plaintiffs' lawyers can be quite persistent in seeking information from foreign defendants. Second, the scope of discovery is much wider in the United States than in most other countries. U.S. litigants are entitled to obtain not only admissible evidence, but also any information that appears "relevant to any party's claim or defense and proportional to the needs of the case." [678] In addition to obtaining information from each other, parties can take discovery from nonparty witnesses.

There are various methods for conducting discovery in the United States. The most frequently used are oral depositions, subpoenas or demands for the production of documents and written interrogatories. Other methods include depositions on written questions, physical and mental examinations and requests for admissions. Parties are generally free to employ any combination of these discovery devices.

U.S. discovery is typically conducted with little judicial supervision. Parties are free to make discovery requests without prior court approval, and, in most cases, compliance with such requests is achieved through private negotiations among the parties and nonparty witnesses. If negotiations break down, the parties and witnesses can bring their discovery disputes to the court for resolution.

p. 11-177

p. 11-178

Once a court has ordered a party or nonparty to provide discovery, failure to do so is a ground for sanctions. With respect to the litigants, courts have a wide array of sanctions at their disposal, including:

- finding particular facts against the disobedient party;
- precluding use of evidence by that party;
- dismissing that party's claims or defenses;
- ordering the recalcitrant party (or that party's lawyer) to pay the other side's attorney's fees; and

- treating the party's noncompliance as a contempt of court, punishable by a fine or, in truly egregious cases, imprisonment.

A nonparty who disobeys a discovery order of the court risks a finding of contempt of court, with its attendant severe penalties.

U.S. pre-trial discovery can be a long and expensive process. In a complicated securities case, discovery can easily take a year or more, require the production of hundreds of thousands of documents and entail the taking of scores of depositions. In recognition of the magnitude of these burdens and the fact that many securities cases ultimately are dismissed as a matter of law, in 1995, Congress passed legislation mandating the suspension of discovery in any private suit under the Exchange Act or Securities Act between the time a defendant moves for dismissal and the resolution of the motion by the court, barring a showing of "undue prejudice" by the plaintiff. [679] While this amendment provides welcome protection against some of the more egregious abuses of the previous discovery rules, such as the filing by plaintiffs of voluminous discovery demands at the outset of even frivolous suits to pressure defendants into settling for "nuisance value," the discovery process in securities cases that survive a motion to dismiss is likely to be time-consuming and expensive. [680]

[b] Extraterritorial Application of U.S. Discovery

p. 11-178

p. 11-179

Under certain circumstances, parties to a U.S. lawsuit may obtain information from persons and entities located abroad simply by using the standard mechanisms of U.S. discovery.

For example, U.S. law entitles parties to obtain relevant documents within the custody or control of adverse parties. Accordingly, foreign defendants can be compelled to produce all relevant documents over which they have control, regardless of whether such documents are located abroad. Moreover, U.S. parent corporations generally must produce documents from their foreign subsidiaries, because parents generally are deemed to control their subsidiaries. The formalities of corporate organization, however, are not dispositive. On occasion, U.S. subsidiaries have been ordered to produce documents from their foreign parents because the facts established that, as a practical matter, the subsidiaries and parents shared control of the documents. Each case involving the "control" of corporate documents located abroad rests on its own particular facts. [681]

A foreign nonparty witness can also be compelled to produce documents located abroad, provided that the witness: (i) is properly served with a subpoena, (ii) is subject to the personal jurisdiction of the U.S. court, and (iii) has control of the documents. Even where these prerequisites are met, however, courts sometimes refrain from ordering production, presumably because they recognize the unfairness of forcing foreign companies to spend time and money producing documents located abroad in lawsuits in which the companies have no stake. [682]

Rules governing the oral depositions of foreign witnesses generally draw a distinction between party and nonparty witnesses. If the proposed witness is a party, then the court can compel a deposition of the witness. When the party is a corporation, the court's power to compel a deposition generally extends to the corporation's officers, directors and managing agents. The court has broad discretion to select a convenient place for the deposition; whether it will order a foreign witness to travel to the United States depends on the circumstances. As a general matter, courts require foreign plaintiffs to attend depositions in the United States; on the other hand, courts have sometimes excused foreign defendants from traveling to the United States where such travel would be

p. 11-179

p. 11-180

unreasonable under the particular circumstances of the case. A foreign nonparty witness, by contrast, generally cannot be compelled to travel to the United States; however, some courts have ordered nonparty foreign companies over whom they have personal jurisdiction to make their overseas employees available for depositions by telephone.

Under certain circumstances, U.S. depositions can be conducted abroad. Generally, the deponent must agree to the deposition, and the deposition must be permissible under local law. U.S. law expressly provides for taking depositions in foreign countries and sets forth detailed procedures for conducting such discovery. [683]

[c] Blocking Statutes

A number of foreign countries have enacted so-called "blocking statutes," which prohibit the production of evidence located within the blocking country's territory. Although the scope of foreign blocking statutes varies widely from country to country, most carry criminal penalties. Some blocking statutes, such as the Swiss bank secrecy law, have existed for many decades and were designed to serve long-standing government policies. Other statutes were specifically intended to respond to efforts by U.S. litigants to take U.S.-style discovery abroad. Some of these statutes, such as that in France, flatly prohibit compliance with foreign discovery orders. Litigants seeking evidence located in France must go through official government channels. Other blocking statutes, such as those in the United Kingdom, Australia and Canada, authorize certain government agencies to prohibit compliance with any foreign discovery order that would infringe on the country's sovereignty or security. Finally, many foreign blocking statutes only prohibit disclosures relating to particular industries. For example, the Bahamas, the Cayman Islands, Bermuda, Liechtenstein and Panama all have blocking statutes that apply to the banking industry.

Blocking statutes are not the only way that foreign countries have expressed their interest in the nondisclosure of information located within their territory. [684] Some countries that do not have blocking statutes nevertheless

p. 11-180

p. 11-181

recognize a right of confidentiality in the customer account records of financial institutions. In Belgium and the Netherlands, for example, that right is derived from the standard contract between a financial institution and its customer. In Hong Kong and Germany, by contrast, the right stems from judicial decisions holding that customers whose records are disclosed can recover civil damages from their financial institutions.

U.S. courts sometimes order foreign litigants and nonparty witnesses to produce information notwithstanding the fact that such production would violate a foreign country's blocking statute. Litigants and nonparty witnesses facing such discovery orders obviously find themselves in a difficult position: if they comply with the U.S. court order, they risk criminal prosecution for violating the blocking statute; on the other hand, if they comply with the blocking statute, they risk being sanctioned by the U.S. court. This dilemma can arise in the course of both civil and criminal proceedings. [685]

Courts generally balance several factors in deciding whether to issue discovery orders that conflict with a foreign blocking statute and whether to impose sanctions for noncompliance with such orders. These factors include:

- the vital national interests of the United States and the foreign country;
- the extent and the nature of the hardship that inconsistent enforcement actions would impose on the party from whom discovery is sought;
- the nationality of the person from whom discovery is sought; and

p. 11-181

p. 11-182

- the importance of the evidence. [686]

In addition, in deciding whether to impose sanctions, most courts place substantial emphasis on whether the person from whom discovery is sought has acted in bad faith. Acts of bad faith include secreting documents in a jurisdiction where they cannot be produced legally, colluding with a foreign government to obtain passage of a blocking statute or failing to seek a waiver of the blocking statute from the foreign country.

In order to minimize the risk of sanctions, the party from whom discovery is sought should respond in a way that makes its good faith unquestionable. Acts of good faith include promptly making as much disclosure as applicable law permits, attempting to obtain a waiver of the blocking statute and seeking alternative means by which to provide the information at issue. [687]

Finally, U.S. courts have the authority, at least in criminal cases, to issue so-called "consent directives." A consent directive is a court order directing a person to consent to the production of his or her documents by a records custodian, often a financial institution, located overseas. Consent directives are designed to take advantage of foreign blocking statutes that permit the production of records if the owner of such records consents to the production. [688]

[d] Letters Rogatory

If the person or entity possessing relevant information is not subject to the personal jurisdiction or subpoena power of the U.S. courts, then those courts cannot order discovery directly and must instead seek the assistance of foreign courts in obtaining the information. The traditional method of obtaining such assistance is by letter rogatory—a formal request by the court of one nation to the courts of another for assistance in performing a judicial act. In the discovery context, a U.S. letter rogatory typically will ask a foreign court to compel an individual or entity in the foreign jurisdiction to provide testimony or documents to the foreign court, so that the foreign court can then forward the evidence to the U.S. court. Letters rogatory may be used in both civil and criminal cases. [689]

As a practical matter, letters rogatory are inefficient and cumbersome. First, foreign courts are under no obligation to execute letters rogatory. As a result, foreign courts sometimes refuse to execute letters rogatory in cases

p. 11-182

p. 11-183

involving claims based on U.S. laws that conflict with the foreign jurisdiction's policy. Second, each nation has its own required form for letters rogatory. This often results in a lengthy series of rejections and resubmissions as the requesting party attempts to comply with the required form. Third, even when foreign courts execute U.S. letters rogatory, they often refuse to provide the full extent of the discovery sought. Foreign courts generally execute letters rogatory in accordance with their own procedures. Thus, oral testimony may be taken without an oath and without a transcript. In addition, foreign courts generally do not execute the wide-ranging document requests that are common in the United States. Fourth, the processing of letters rogatory is notoriously slow. The letters must be sent to the foreign court through diplomatic channels, which usually involves sending the letters to the U.S. State Department, which in turn will send them to the foreign affairs ministry, which then will send them to the foreign court. The information is sent back *via* the same route. Completing discovery *via* letters rogatory can easily take more than one year.

[e] The Hague Convention

In an effort to improve upon the letters rogatory mechanism in civil cases, the United States and nearly 20 other countries have become parties to the Hague Convention on the Taking of Evidence Abroad in Civil or Commercial Matters (the "Convention"). [690] Parties to the Convention are required to designate a "Central Authority." When a court in one member state seeks access to evidence located in another member state, it sends a "letter of request" to the Central Authority in the second state. Unlike letters rogatory, the receiving Central Authority is generally required by the Convention to execute foreign letters of request. In addition, the Convention provides that such letters should be executed expeditiously. The receiving Central Authority forwards the letters to the appropriate local court for execution and the evidence obtained thereunder is then returned to the requesting court. [691] The Convention applies to evidence sought from third parties as well as from the litigants themselves.

The general obligation of parties to execute letters of request is subject to several important exceptions. One such exception, pursuant to Article 23 of the Convention, permits parties to declare that they will not execute letters of request seeking pretrial discovery of documents. All the parties to the Convention except the United

States, Israel and Czech Republic have issued such declarations, most

p. 11-183

p. 11-184

likely because they feared "fishing expeditions" by U.S. lawyers into the files of local companies.

The Convention does not provide exclusive or mandatory procedures for obtaining evidence located abroad; it establishes optional procedures for obtaining such evidence. Thus, the Convention does not deprive a U.S. court of the power to employ traditional methods of U.S. discovery with respect to a litigant or nonparty over whom the court has personal jurisdiction. Whether a court will employ the Convention, rather than traditional U.S. discovery methods, depends upon a particularized analysis of the facts of the case, the sovereign interests of the countries involved and the likelihood that use of the Convention will prove effective. [692] On the other hand, when discovery is sought from a nonparty that is not subject to U.S. personal jurisdiction, traditional U.S. discovery is not available, and the Hague Convention (or letters rogatory) must be used. [693]

[f] Mutual Legal Assistance Treaties, Executive Agreements and Memoranda of Understanding

The United States has entered into various agreements with foreign countries in order to facilitate the government's own ability to gather evidence abroad. Many of these agreements are specifically designed to pierce the blocking statutes of foreign countries.

First, the United States has entered into Mutual Legal Assistance Treaties ("MLATs") with a number of foreign countries. [694] MLATs generally apply only

p. 11-184

p. 11-185

to criminal matters. Unlike the Hague Convention, each MLAT is a separately negotiated treaty, defining the countries' obligations to provide assistance, the scope of such assistance and the contents required in all requests for assistance. MLATs generally require that all requests be made by and sent to the Central or Competent Authority designated by each country. The U.S. Attorney General has been designated as the competent authority to make and receive such requests in the United States. Countries entering into MLATs generally reserve the right to deny a request if execution would prejudice their sovereignty, security or other essential public interest. In addition, most MLATs contain a dual criminality requirement: the offense under investigation must be punishable under the criminal laws of both countries. Some MLATs entitle a country to refuse a request for assistance if the offense in question is political or military in nature; other MLATs list specific offenses for which assistance will not be given.

Second, the U.S. government has also entered into "executive agreements" with certain countries in order to facilitate international criminal investigations in particular areas, such as drug trafficking and money laundering. [695] Executive agreements have also been negotiated on an *ad hoc* basis with respect to specific cases.

Finally, the SEC has entered into a variety of agreements, including multilateral and bilateral Memoranda of Understanding ("MOUs") and *ad hoc* arrangements, with a number of foreign governments to facilitate the SEC's ability to obtain information, such as account information from non-U.S. financial institutions, in securities law enforcement matters. [696] MOUs arose from the difficulty the SEC experienced in obtaining evidence through ordinary diplomatic channels or by means of international law enforcement, which posed a real obstacle to prosecuting transnational securities violations. [697] The increasing globalization of corporations, capital markets and securities transactions has necessitated the internationalization of enforcement. Without cooperative information-sharing agreements, it would be much easier for violators to escape prosecution by operating outside the enforcing jurisdiction. MOUs, which provide for mutual

p. 11-185

p. 11-186

assistance and agreement between countries for the orderly exchange of information in pending investigations, are arguably the most effective of the above-listed tools for gathering international evidence and have facilitated increased international cooperation. [698] Prior to 2002, the SEC relied primarily on bilateral MOUs with foreign regulators, setting forth detailed guidelines for the sharing, use and confidentiality of information. The SEC has entered into such MOUs with 20 other securities regulators. [699] Although these bilateral MOUs formerly represented the SEC's primary means of securing international cooperation, since 2002 the SEC and other regulatory agencies have pursued a multilateral approach. Thirty-six securities regulators have signed the International Organization of Securities Commissions' (IOSCO's) Multilateral Memorandum of Understanding, which generally provides for information sharing similar to that established by the bilateral MOUs. [700] In addition, the SEC has negotiated *ad hoc* arrangements with foreign jurisdictions or regulators to cooperate in specific enforcement matters.

Footnotes

647 For purposes of this section, the term "foreign defendants" refers to (i) individuals who are neither citizens nor residents of the United States and (ii) companies that are neither incorporated nor have their principal places of business in the United States. The term "overseas transactions" refers to securities transactions that occur principally outside the United States.

648 Until recently, this analysis, which considers whether a plaintiff presents a claim for relief under U.S. law, was considered by courts to be an inquiry into subject matter jurisdiction.

649 *See* § 22 of the Securities Act; § 27 of the Exchange Act; *Bersch v. Drexel Firestone*, *Inc.*, 519 F.2d 974, 998 (2d Cir.), *cert. denied*, 423 U.S. 1018 (1975); *Leasco Data Processing Equipment Corp. v. Maxwell*, 468 F.2d 1326, 1339–40 (2d Cir. 1972).

650 *International Shoe Co. v. Washington*, 326 U.S. 310, 316 (1945) (quoting *Milliken v. Meyer*, 311 U.S. 457, 463 (1940)). In a state court proceeding, the personal jurisdiction issue turns on whether the foreign defendant has sufficient "minimum contacts" with the individual state. In a federal court proceeding under the Securities Act or the Exchange Act, personal jurisdiction generally turns on whether the foreign defendant has sufficient "minimum contacts" with the United States, rather than with any one particular state. *See, e.g.*, *Securities Investor Protection Corp. v. Vigman*, 764 F.2d 1309, 1315–16 (9th Cir. 1985).

651 *Daimler AG v. Bauman*, 134 S. Ct. 746, 754 (2014).

652 Certain regulated entities, such as registered nonresident investment advisers and broker-dealers, must appoint the SEC as their agent in the United States for receipt of service of process. *See* Rule 15b1-5 under the Exchange Act and Rule 0-2 under the Advisers Act. The courts are divided as to whether a corporation that appoints an agent for service of process solely because it is required to do so by law thereby subjects itself to the general jurisdiction of the U.S. courts. *Compare Sternberg v. O'Neil*, 550 A.2d 1105 (Del. 1988) (upholding Delaware law requiring all foreign corporations doing business there to appoint agents to receive process in any action, thereby subjecting corporations to general jurisdiction), *with Ratliff v. Cooper Laboratories, Inc.*, 444 F.2d 745, 748 (4th Cir.), *cert. denied*, 404 U.S. 948 (1971) (Due Process Clause does not permit general jurisdiction based only on company's registration to do business and appointment of agent to receive service of process). *See generally Reynolds & Reynolds Holdings, Inc. v. Data Supplies, Inc.*, 301 F. Supp. 2d 545, 550–51 (E.D. Va. 2004) (collecting cases and holding that complying with registration statutes that require appointing an agent for service does not amount to consent to general personal jurisdiction).

653 *Daimler AG v. Bauman*, 134 S. Ct. 746, 762 n.20 (2014).

654 *See Grace v. MacArthur*, 170 F. Supp. 442 (E.D. Ark. 1959).

655 *See, e.g.*, *Burnham v. Superior Court of California*, 495 U.S. 604 (1990); *Amusement Equipment, Inc. v. Mordelt*, 779 F.2d 264 (5th Cir. 1985). The courts are divided, however, as to whether tag service on a corporate officer is sufficient to obtain general personal jurisdiction over the corporation. *Compare Aluminal Industries, Inc. v. Newtown Commercial Associates*, 89 F.R.D. 326 (S.D.N.Y. 1980) (tag service on managing partner established personal jurisdiction over out-of-state limited partnership), *with Scholz Research Development, Inc. v. Kurzke*, 720 F. Supp. 710 (N.D. Ill. 1989) (Due Process Clause does not

permit jurisdiction over company based on tag service on corporate officer).

656 *World-Wide Volkswagen Corp. v. Woodson*, 444 U.S. 286, 297 (1980).

657 *Asahi Metal Industries Co. v. Superior Court of California*, 480 U.S. 102, 115 (1987) (quoting *United States v. First National City Bank*, 379 U.S. 378, 404 (1965) (Harlan, J., dissenting)); *see also SEC v. Unifund SAL*, 910 F.2d 1028, 1033 (2d Cir. 1990); *SEC v. Euro Security Fund*, Fed. Sec. L. Rep. (CCH) ¶90,433 (S.D.N.Y Feb. 17, 1999).

658 *See Goodyear Dunlop Tires Operations v. Brown*, 131 S. Ct. 2846 (2011). In *Goodyear*, the plaintiff sued a foreign corporation for the negligent design of tires that the plaintiff alleged had caused an accident abroad, and sought to establish jurisdiction over the foreign corporation based on the fact that some of its tires had been distributed in the United States. The Supreme Court rejected the exercise of general jurisdiction over the foreign corporation based on these facts, noting that "ties serving to bolster the exercise of specific jurisdiction do not warrant a determination that, based on those ties, the forum has general jurisdiction over a defendant." *Goodyear Dunlop Tires Operations v. Brown*, 131 S. Ct. 2846, 2855 (2011).

659 For an example of the application of *forum non conveniens* to a securities fraud action, *see Otor, S.A. v. Credit Lyonnais, S.A.*, No. 04-CV-6978 (RO), 2006 WL 2613775 (S.D.N.Y. Sept. 11, 2006) or *Alfadda v. Fenn*, 159 F.3d 41 (2d Cir. 1998).

660 *See generally Piper Aircraft Co. v. Reynolds*, 454 U.S. 235 (1981); *Gulf Oil Corp. v. Gilbert*, 330 U.S. 501 (1947).

661 Only if the remedy provided by the alternative forum is so clearly inadequate or unsatisfactory that it is no remedy at all may the unfavorable change in law be given substantial weight. In that situation, the court may conclude that dismissal would not be in the interests of justice. *See, e.g.*, *In re Lernout & Hauspie Securities Litigation*, 208 F. Supp. 2d 74, 81 (D. Mass 2002) (holding that the lack of a fraud-on-the-market theory, when combined with the lack of a class action mechanism, "creates virtually insurmountable concerns regarding the adequacy of the foreign forum").

662 *Morrison v. National Australia Bank Ltd.*, 130 S. Ct. 2869 (2010).

663 After *Morrison*, the plaintiffs in *Cornwell v. Credit Suisse Group*, 729 F. Supp. 2d 620 (S.D.N.Y. 2010), attempted to revive the defunct "conduct and effects test" and limit *Morrison* to its facts, arguing that the transactional test it announced was limited to so-called "foreign-cubed" claims (*i.e.*, claims by a non-U.S. purchaser of securities of a non-U.S. entity on a non-U.S. exchange). Judge Marrero squarely rejected these arguments and held that *Morrison* also bars claims by U.S. plaintiffs who purchase securities on a non-U.S. exchange, regardless of whether the purchase was initiated in the United States or whether the plaintiff was enticed to purchase through acts committed in the United States. *See also In re Alstom SA Securities Litigation*, 741 F. Supp. 2d 469 (S.D.N.Y. 2010) (reaching same holding as *Cornwell*).

Also after *Morrison*, at least one set of plaintiffs argued that § 10(b) applies to purchases of securities on a foreign exchange if such security is also cross-listed on a U.S. exchange, relying on the Supreme Court's statement in *Morrison* that "Section 10(b) reaches the use of a manipulative or deceptive device or contrivance only in connection with the purchase or sale of a security *listed* on an American stock exchange." *Morrison v. National Australia Bank*, 130 S. Ct. 2869, 2888 (2010) (emphasis added). This argument has failed. *See, e.g.*, *City of Pontiac Policemen's & Firemen's Retirement Systems v. UBS AG*, 752 F.3d 173, 181 (2d Cir. 2014) (holding that "*Morrison* does not support the application of § 10(b) of the Exchange Act to claims by a foreign purchaser of foreign-issued shares on a foreign exchange simply because those shares are also listed on a domestic exchange").

At least one court has extended *Morrison* to bar claims based on purchases of ADRs on the U.S. over-the-counter market (as opposed to on a U.S. exchange), noting that trading in ADRs in such a context is a "predominantly foreign securities transaction." *In re Societe Generale Securities Litigation*, No. 08-CV-2495 (RMB), 2010 WL 3910286, at *4 (S.D.N.Y. Sept. 29, 2010) (citation omitted).

664 *See* § 929P(b) of the Dodd-Frank Act. For a discussion of applications of the "conduct and effects" test, *see, e.g.*, *Morrison v. National Australia Bank Ltd.*, 547 F.3d 167 (2d Cir. 2008) *aff'd on other grounds*, 130 S. Ct. 2869 (2010); *SEC v. Berger*, 322 F.3d 187 (2d Cir. 2003); *IIT v. Vencap, Ltd.*, 519 F.2d 1001 (2d Cir.

1975); *Bersch v. Drexel Firestone, Inc.*, 519 F.2d 974 (2d Cir.), *cert. denied*, 423 U.S. 1018 (1975). *See also* Edward Greene & Arpan Patel, *Consequences of Morrison v. NAB, securities litigation and beyond*, CAP. MKTS. L.J. (2016) 11 (2): 145–190.

665 *Absolute Activist Value Master Fund Limited v. Ficeto*, 677 F.3d 60 (2d Cir. 2012).

666 *Absolute Activist Value Master Fund, Limited v. Ficeto*, No. 09 Civ. 8862 (GBD), 2013 WL 1286170 (S.D.N.Y. Mar. 28, 2013).

667 *United States v. Vilar*, 729 F.3d 62 (2d Cir. 2013). In addition to interpreting the contours of "domestic" transactions under *Morrison*, the *Vilar* decision is also notable because the *Vilar* court held, in an issue of first impression, that *Morrison's* transactional approach applies to criminal actions under § 10(b) of the Exchange Act.

668 *Loginovskaya v. Batrachenko*, 764 F.3d 266 (2d Cir. 2014).

669 Building on this decision, a district court has held that the settlement of an unlisted security through The Depository Trust Company ("DTC"), by itself, does not establish a domestic transaction for the purposes of the federal securities laws. *See In re Petrobras Securities Litigation*, 150 F. Supp. 3d 337 (S.D.N.Y. 2015). The *Petrobras* court concluded that, "even assuming that DTC's bookkeeping affects a change in beneficial ownership in New York," "[t]he mechanics of DTC settlement are actions needed to carry out transactions," which were rejected as insufficient by *Loginovskaya*, but "involve neither the substantive indicia of a contractual commitment necessary to satisfy *Absolute Activist*'s first prong nor the formal weight of a transfer of title necessary for its second." In light of the parties' contention "that most securities transactions settle through the DTC or similar depository institutions," the court further observed that "the entire thrust of *Morrison* and its progeny would be rendered nugatory if all DTC-settled transactions necessarily fell under the reach of the federal securities laws."

670 *Parkcentral Global Hub Ltd. v. Porsche Automobile Holdings SE*, 763 F.3d 198 (2d Cir. 2014).

671 In *Stoyas v. Toshiba Corporation*, No. CV 15-04194 DDP (JCx), 2016 WL 3563084, at *10 (C.D. Cal. May 20, 2016), a district court likewise held that transactions in unsponsored ADRs, including "securities transactions that occurred domestically [in that] they were both sold and purchased in the United States," "do not fall under the second [domestic-transaction] prong of *Morrison*" where the defendants are not "involved in those transactions in any way." In reaching this decision, the court reasoned that "nowhere in *Morrison* did the Court state that U.S. securities laws could be applied to a foreign company that only listed its securities on foreign exchanges but whose stocks are purchased by an American depositary bank on a foreign exchange and then resold as a different kind of security (an ADR) in the United States." *Stoyas v. Toshiba Corporation*, No. CV 15-04194 DDP (JCx), 2016 WL 3563084, at *10 (C.D. Cal. May 20, 2016). The court further observed that applying the federal securities laws in such a circumstance would be "inconsistent with the spirit and law of *Morrison*" since it "would create essentially limitless reach of § 10(b) claims because even if the foreign defendant attempted to keep its securities from being sold in the United States, the independent actions of depositary banks selling on OTC markets could create liability." *Stoyas v. Toshiba Corporation*, No. CV 15-04194 DDP (JCx), 2016 WL 3563084, at *10 (C.D. Cal. May 20, 2016). The court instead held that *Morrison* requires a plaintiff to establish that the defendant performed some "affirmative act in connection with securities sales in the United States" for the federal securities laws to apply against that defendant. *Stoyas v. Toshiba Corporation*, No. CV 15-04194 DDP (JCx), 2016 WL 3563084, at *11 (C.D. Cal. May 20, 2016).

672 *See Viking Global Equities, LP v. Porsche Automobile Holdings SE*, 101 A.D.3d 640 (1st Dep't 2012).

672.1 *In re Volkswagen "Clean Diesel" Marketing, Sales Practices, & Products Liability Litigation*, 3:15-md-02672-CRB, 2017 WL 66281 (N.D. Cal. Jan. 4, 2017). For a discussion of ADR sponsorship and the different levels of ADRs, *see* § 3.04 [1][b].

673 *Cascade Fund, LLP v. Absolute Capital Management Holdings Ltd.*, Fed. Sec. L. Rep. ¶96,269 (D. Colo. Mar. 31, 2011).

674 *SEC v. Goldman Sachs & Co.*, No. 10-CV-3229 (BSJ), 2011 WL 2305988 (S.D.N.Y. June 10, 2011). Goldman settled the matter with the SEC without admitting or denying liability.

675 *SEC v. Goldman Sachs & Co.*, No. 10-CV-3229 (BSJ), 2011 WL 2305988, *8–9 (S.D.N.Y. June 10, 2011).

676 *SEC v. Goldman Sachs & Co.*, No. 10-CV-3229 (BSJ), 2011 WL 2305988 (S.D.N.Y. June 10, 2011) (citing *Plumbers' Union Local No. 12 Pension Fund v. Swiss Reinsurance Company*, 753 F. Supp. 2d 166, 177 (S.D.N.Y. 2010) (emphasis added).

677 The case is also notable because the district court held that *Morrison* also applies to claims under the Securities Act, given the Supreme Court's statement in *Morrison* that "the Exchange Act and the Securities Act share the same focus on domestic transactions." *SEC v. Goldman Sachs & Co.*, No. 10-CV-3229 (BSJ), 2011 WL 2305988, *14 (S.D.N.Y. June 10, 2011) (citing *Morrison v. National Australia Bank Ltd.*, 130 S. Ct. 2869, 2885 (2010)) (internal quotation marks omitted). However, it refused to dismiss the SEC's § 17(a) claims against Tourre because that section "applies not only to the 'sale' but also to the ' *offer*… of any securities or any security-based swap agreement,'" and because the SEC had sufficiently alleged that Goldman's offer to sell securities to the foreign investors had originated within the United States. *See SEC v. Goldman Sachs & Co.*, No. 10-CV-3229 (BSJ), 2011 WL 2305988, *15 (S.D.N.Y. June 10, 2011) (citing 15 U.S.C. § 17(a)).

678 Fed. R. Civ. P. 26(b)(1). *See generally* Fed. R. Civ. P. 26 for the presumptive limitations on discovery in federal courts.

679 § 21D(b)(3)(B) of the Exchange Act and § 27(b)(1) of the Securities Act. This provision acts to suspend even the preliminary disclosure normally required in federal courts, such as the informal exchange of names and addresses of parties likely to have discoverable information and copies or descriptions of documents relevant to disputed facts. *See Medhekar v. U.S. District Court*, 99 F.3d 325, 328 (9th Cir. 1996) (*per curiam*) (noting that the Litigation Reform Act requires plaintiffs to "stand or fall based on [their] actual knowledge" rather than permitting "fishing expeditions" after filing aimed at revealing possible sources of liability).

680 After enactment of the Litigation Reform Act, there was a migration of securities claims to state courts, where, in some instances, discovery was permitted to proceed even pending resolution of motions to dismiss. Plaintiffs increasingly began to file parallel actions in federal and state courts, in the hope that the discovery obtained in the state court proceedings would enable them to better prosecute their federal court claims. In order to stop plaintiffs from using such tactics to circumvent the Litigation Reform Act's discovery stay provisions, Congress enacted § 101 of SLUSA, which enables federal courts to stay discovery in private state court actions when it is "necessary in aid of [the court's] jurisdiction, or to protect or effectuate its judgments." Courts have been willing to exercise their authority under this provision. *See, e.g.*, *In re Cardinal Health, Inc.*, 365 F. Supp. 2d 866, 877 (S.D. Ohio 2005); *In re Crompton Corp.*, Fed. Sec. L. Rep. CCH ¶93,330 (D. Conn. July 22, 2005).

681 *See, e.g.*, *In re Marc Rich & Co., A.G.*, 707 F.2d 663 (2d Cir.), *cert. denied*, 463 U.S. 1215 (1983); *United States v. First National City Bank*, 396 F.2d 897 (2d Cir. 1968); *Westinghouse Electric Corp. v. Rio Algom, Ltd. (In re Uranium Antitrust Litigation)*, 480 F. Supp. 1138 (N.D. Ill. 1979).

682 *See, e.g.*, *Minpeco, S.A. v. ContiCommodity Service, Inc.*, 116 F.R.D. 517 (S.D.N.Y. 1987); *Laker Airways, Ltd. v. Pan American World Airways Ltd.*, 607 F. Supp. 324 (S.D.N.Y. 1985).

683 The procedures for taking a deposition in a foreign country pursuant to the Federal Rules of Civil Procedure are set forth in Fed. R. Civ. P. 28(b).

684 The European Commission objected, for example, to the Sarbanes-Oxley Act's requirements that foreign accounting firms register with the Public Company Accounting Oversight Board (the "PCAOB") and therefore produce upon request all audit papers to the PCAOB and the SEC, on the grounds that this requirement generally duplicates existing local requirements and conflicts with European confidentiality statutes. *See* Carrie Johnson, *Accounting Panel, SEC Backs Registry for Foreign Auditors*, WASHINGTON POST, Apr. 1, 2003 (stating the SEC's rejection of the European Commission's suggestions to allow foreign auditors one year to register and warning British accountants that disclaimers of liability they used on European audit opinions were unacceptable for U.S. reports); Alan Obsorn, *EU Urges U.S. to Reconsider Rules*, ACCOUNTANCY AGE, June 12, 2003 (urging the United States not to apply the PCAOB process to

foreign auditors); Letter from the European Commission to Mr. Jonathan G. Katz, Secretary, SEC (Dec. 20, 2002) (same). The PCAOB does not require such firms to disclose information if such disclosure would violate foreign law. SEC Release No. 34-47990 (June 5, 2003). Recently, however, an SEC administrative law judge entered an initial decision censuring the Chinese affiliates of several accounting firms for refusing to provide audit work papers relating to U.S. issuers, and denying those affiliates the privilege of practicing or appearing before the SEC for a period of six months, notwithstanding the companies' argument that they were prevented from providing those materials by Chinese national security laws. *See In the Matter of BDO China Dahua CPA Co. Ltd., et al.*, SEC Initial Decision Release No. 553 (Jan. 22, 2014). Those affiliates subsequently agreed to pay $500,000 each to settle the dispute and also agreed to follow procedures designed to ensure that the SEC is able to obtain audit documents from them in the future. *See* Michael Rapoport, *SEC, Big Four Accounting Firms in China Settle Dispute*, WALL ST. J., Feb. 6, 2015.

685 *See, e.g.*, *Société Nationale Industrielle Aérospatiale v. U.S. District Court*, 482 U.S. 522 (1987); *Société Internationale Pour Participations Industrielles et Commerciales, S.A. v. Rogers*, 357 U.S. 197 (1958); *First American Corp. v. Price Waterhouse LLP*, 154 F.3d 16, 22 (2d Cir. 1998); *In re Sealed Case*, 825 F.2d 494 (D.C. Cir.), *cert. denied*, 484 U.S. 963 (1987); *CFTC v. Nahas*, 738 F.2d 487 (D.C. Cir. 1984); *United States v. First National City Bank*, 396 F.2d 897 (2d Cir. 1968); *Compagnie Francaise D'Assurance Pour Le Commerce Extérieur v. Phillips Petroleum Co.*, 105 F.R.D. 16, 31 (S.D.N.Y. 1984).

686 *See, e.g.*, *First American Corp. v. Price Waterhouse LLP*, 154 F.3d 16, 22 (2d Cir. 1998); *SEC v. Euro Security Fund*, No. 98-CV-7347 (DLC), 1999 WL 182598 (S.D.N.Y. Apr. 1, 1999).

687 *See, e.g.*, *In re Sealed Case*, 825 F.2d 494 (D.C. Cir.), *cert. denied*, 484 U.S. 963 (1987).

688 *See Doe v. United States*, 487 U.S. 201 (1988); *United States v. Davis*, 767 F.2d 1025 (2d Cir. 1985).

689 *See* 28 U.S.C. § 1781 ("transmittal of letter rogatory or request").

690 The Hague Convention was opened for signature on March 18, 1970 and signed by the United States on October 7, 1972. It is reprinted in 28 U.S.C. § 1781.

691 The Convention also permits specified alternative procedures for taking evidence that go beyond the basic Central Authority mechanism. These alternative procedures generally involve the taking of evidence by consuls or court-appointed commissioners.

692 *See Société Nationale Industrielle Aérospatiale v. U.S. District Court*, 482 U.S. 522 (1987).

693 The regime under which discovery is sought can have important implications not only for the procedures by which the discovery is obtained, but the scope of discoverable material. Because different discovery protocols involve different bodies of substantive law, material that is discoverable under one regime (*i.e.*, under the Federal Rules) may not be discoverable under another regime (*i.e.*, Hague Convention or letters rogatory). This tension is particularly acute in disputes over discovery of potentially privileged materials. *See, e.g.*, *Tulip Computers International B.V. v. Dell Computer Corp.*, 254 F. Supp. 2d 469, 475 (D. Del. 2003); *Renfield Corp. v. E. Remy Martin & Co., S.A.*, 98 F.R.D. 442 (D. Del. 1982).

694 MLATs are currently in force between the United States and Anguilla (United Kingdom), Antigua & Barbuda, Argentina, Australia, Austria, Bahamas, Barbados, Belgium, Belize, Brazil, British Virgin Islands (United Kingdom), Canada, Cayman Islands (United Kingdom), Cyprus, Czech Republic, Dominica, Egypt, Estonia, France, Greece, Grenada, Hong Kong, Hungary, Israel, Italy, Jamaica, Korea (South), Latvia, Liechtenstein, Lithuania, Luxembourg, Mexico, Montserrat (United Kingdom), Morocco, the Netherlands, Panama, Philippines, Poland, Romania, the Russian Federation, St. Kitts & Nevis, St. Lucia, St. Vincent and the Grenadines, Spain, South Africa, Switzerland, Thailand, Trinidad & Tobago, Turkey, Turks & Caicos Islands (United Kingdom), the United Kingdom and Uruguay. U.S. Department of State Index of MLATS and Other Agreements Currently in Force. The United States has also entered into Mutual Legal Assistance Agreements by executive agreement with countries such as the People's Republic of China and Nigeria.

695 For example, the United States has entered into Financial Information Exchange Agreements ("FIEAs"), which facilitate the exchange of information relating to currency transfers, with Colombia, Ecuador, Mexico, Panama, Paraguay, Peru and Venezuela. The U.S. Department of Treasury's Financial Crimes

Enforcement Network ("FinCEN") has entered into separate Memoranda of Understanding with similar units in 18 other countries. *See* Bureau for International Narcotics and Law Enforcement Affairs, International Narcotics Control Strategy Report 2006: Treaties and Agreements.

696 *See, e.g.*, *In re Dominick & Dominick Inc.*, SEC Release No. 34-29243 (May 29, 1991); *SEC v. Katz*, SEC Litigation Release No. 11185 (Aug. 7, 1986); *see also* § 14.03[3][i] for a further discussion of MOUs.

697 By way of example, the absence of dual criminality in the MLAT with Switzerland led the SEC to negotiate its first MOU with Switzerland, which dealt with cooperation in insider trading cases. *See* Memorandum of Understanding with the Government of Switzerland, Release No. 2, 1982 SEC LEXIS 2631 (Aug. 31, 1982).

698 *See generally* The SEC Speaks in 2001, INTERNATIONAL AFFAIRS, at 977, 994–5 (Practising Law Institute 2001); John K. Carroll & Herbert S. Washer, *Globalization Comes to Law Enforcement*, N.Y.L.J., July 10, 2000. The SEC has entered into MOUs (or comparable agreements in treaty form) with Argentina, Australia, Brazil, Canada, Chile, China, Costa Rica, Egypt, the European Community, France, Germany, Hong Kong, Hungary, India, Indonesia, IADB/UNECLAC, Israel, Italy, Japan, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Portugal, Russia, Singapore, South Africa, Spain, Sweden, Switzerland and the United Kingdom.

U.S. Regulation of the International Securities and Derivatives Markets, § 11.11, SPECIAL LITIGATION ISSUES RELATING TO DERIVATIVES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 11.11 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

This section briefly surveys certain issues that have arisen in suits concerning transactions in derivative instruments. For purposes of this section, "derivatives" or "derivative instruments" are instruments of the type described in U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, Chapter 2. As discussed in U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, Chapter 2, whether or not a particular derivative instrument is characterized by a court as, for example, a "security" or a "commodity future" or an "option contract," will determine the law to be applied to a dispute involving the derivative instrument, [701] and, perhaps, the court (*e.g.*, federal or state) where the litigation will proceed.

p. 11-187

When a party faces losses on a derivatives transaction, the result may be a lawsuit (usually against the counterparty—often a dealer) aimed at recovering the losses. In a situation where the party transacted on margin, a drop in value in the derivative may result in a margin call, which if unmet leads to the liquidation of the instrument or account. In such a situation, the dealer may bring suit to recover any deficiencies. Regardless of the posture of the litigation, issues that recur in these litigations, and that are surveyed in this section, include: first, enforceability; second, the relevance of a counterparty's sophistication and contractual disclaimers as defenses to a fraud, breach of duty or other tort claim; third, the scope of duties imposed by law on counterparties to derivatives transactions; fourth, the valuation of derivatives; and fifth, the treatment afforded derivatives in bankruptcy proceedings.

[1] Enforceability

[a] Local Law Considerations

In a cross-border dispute the parties may disagree over the threshold question of what law applies to the contract or conduct at issue. Differences in the laws of the relevant jurisdictions may have outcome-determinative effects. The ISDA Master Agreement allows the parties to set forth their choice of law in the Schedule to the Agreement, and as a general matter, sophisticated parties usually include choice of law provisions in agreements to which they are party. Such provisions, depending on their drafting, may not definitively resolve all of the choice of law questions that arise in a lawsuit. For example, in *Finance One Public Company Limited v. Lehman Brothers Special Financing, Inc.*, [702] the Schedule to the ISDA Master Agreement signed by the parties specified New York law as governing "[t]his agreement." The Second Circuit held, however, that this choice of law clause did not reach the extracontractual setoff rights at issue in the dispute. [703] The court applied New York's choice of law analysis and held that Thai law was applicable because Thailand had the most significant contacts with the dispute, as well as a strong governmental interest in ensuring the stability of its economy following the late-90s financial crisis in Southeast Asia. [704] Under Thai

p. 11-187

p. 11-188

law, the defendant was entitled to the setoff rights it had exercised without any equitable reduction in the setoff amount. [705]

Even where the scope of the contractual choice of law clause is not disputed, a party may invoke the law of a relevant jurisdiction to argue that the derivative instrument is unenforceable under local law. In *Lehman Brothers Commercial Corp. v. Minmetals International Non-Ferrous Metals Trading Co.*, [706] Lehman entities entered into foreign exchange swaps and forwards with a Chinese conglomerate that produced over $50 million in losses. When Lehman sued the defendants on various contractual theories, the defendants asserted as an affirmative defense that the agreements at issue were not enforceable because they were entered into without the relevant license required by Chinese law. [707] Even though the governing ISDA Master Agreement chose New York law, the court found the place of performance of the contracts to have been China, and explained that a "contract that is illegal in its place of performance is unenforceable in New York if the parties entered into the contract with a view to violate the laws of that other jurisdiction." [708] The court ruled that it was an issue of fact for trial whether the parties entered into the agreement with a view to violate Chinese law, and so denied summary judgment. [709]

The enforceability of jury trial waivers, which are typically included in ISDA Master Agreements, may be affected by the choice of forum in which to litigate. The California Supreme Court held in *Grafton Partners, L.P. v. Superior Court* that jury trial waivers are unenforceable in that jurisdiction. [710] However, arbitration clauses were held to be enforceable because they had been specifically authorized by the legislature. [711] A pre-litigation contractual agreement to the appointment of a judicial referee is also specifically authorized in California. [712] Parties facing any possibility of litigation in California should consider including such clauses in their agreements, as many adverse judgments and unfavorable settlements of derivatives disputes have resulted from jury verdicts or the threat of adverse jury verdicts.

[b] Transactional Authority

A party to a litigation may argue that a derivative is unenforceable either because it was *ultra vires* or otherwise entered into by an individual or entity lacking the authority to engage in the transaction. [713] So long as the challenged party had actual, implied or apparent authority to engage in the transaction, a challenge to enforceability based on lack of authority generally should fail. [714] An important exception to this doctrine exists in the case of certain entities created by statute, such as municipalities. For these entities, apparent authority is an insufficient basis on which to enforce contractual obligations where the entity lacks actual authority. [715] A party's actual authority to engage in certain types of transactions is by and large a legal question governed by relevant law, regulation or the party's constituent instruments. For example, in derivatives litigation involving Orange County, counsel for Orange County argued that its treasurer

p. 11-189

p. 11-190

had acted *ultra vires* when he entered into reverse repurchase agreements in connection with billions of dollars in collateralized mortgage obligations ("CMOs") and CMO derivatives. This position was based on a California constitutional provision limiting a county's ability to create excess indebtedness or liability. The argument was rejected, however, based on California precedent holding that the debt limit is measured at the outset of a transaction and not in the period following the transaction. [716] Since each of the investments had been potentially profitable at the outset, they were not *ultra vires* assumptions of excessive debt. [717]

On the other hand, arguments that a party possessed apparent authority to enter into a transaction will involve an examination of the facts and circumstances of the particular case to determine whether, for example, the third party relied on some act or statement of the principal, cloaking the agent with the authority to take the action now challenged. [718]

[c] Possibility of Reclassification of a Derivatives Transaction

Occasionally issues arise between parties over the proper characterization of derivatives transactions. [719] A party to a litigation may seek to avoid an obligation by arguing that a derivatives transaction, or the combined effect of several derivatives transactions, actually constitutes an alternative transaction type (*e.g.*, a loan). [720] In *Mahonia Ltd. v. JP Morgan Chase Bank*, [721] defendant WestLB AG ("WestLB") sought to avoid a claim on a letter of credit it issued to Mahonia Ltd. ("Mahonia"), a special purpose vehicle established to participate in a series of energy derivative transactions with JP Morgan Chase Bank ("Chase") and an Enron subsidiary ("ENAC"). The economic effect of these derivative transactions was that $350 million was paid by Chase to Mahonia and

p. 11-190

p. 11-191

by Mahonia to ENAC in September 2001, and ENAC was obliged, approximately six months later, to pay approximately $356 million to Chase. [722] WestLB argued that the figure of $356 million was calculated specifically by reference to rates of interest that would accrue on a $350 million loan over the relevant period. As a result, WestLB argued, related derivatives transactions constituted a loan of $350 million with an effective annual interest rate of 3.44%. WestLB maintained that these transactions should thus have been accounted for as a loan and that the composite transaction and its nature as a loan should have been disclosed prior to WestLB's issuance of the letter of credit. [723] The court rejected WestLB's attempt to recharacterize the derivatives transactions as a loan, finding that "other individual characteristics" of the derivatives transactions, including the existence of price and performance risks, supported Enron's accounting of them as "price risk management activities." [724]

[2] The Requirement of Reasonable or Justified Reliance

Whether brought under federal or state law, a fraud claim requires the plaintiff to establish "reasonable" or "justified" reliance on the alleged misrepresentation or omission. Claims of reliance on misstatements or omissions that might be deemed reasonable for an ordinary investor may not be reasonable where the investor is sophisticated. In this context, institutional investors and individuals with high net worth or investment experience are considered "sophisticated" in light of their knowledge, experience and ability to conduct due diligence of the risks inherent in investment. [725]

p. 11-191

p. 11-192

In *Société Nationale d'Exploitation Industrielle des Tabacs et Allumettes v. Salomon Brothers International Ltd.*, the court found unpersuasive plaintiff's contention that it had relied on defendants' materially incomplete disclosure, because plaintiff was itself a sophisticated institutional investor and the governing contract contained a disclaimer of representations of value. [726] Indeed a buyer's sophistication may result in a transaction being exempted from particular regulations altogether, such as exemptions from the CEA for certain transactions with individuals whose assets exceed $10 million. The NASD Conduct Rules currently note that certain securities broker due diligence requirements do not apply to customers with assets greater than $50 million. [727]

Not only are the parties who transact in derivatives generally "sophisticated," but relevant documentation, *e.g.*, the ISDA Master Agreement and confirmations, contains representations specifically attesting to the parties' sophistication and general non-reliance on statements (written or oral) outside the documents. The parties also represent that they are not relying on communications by their counterparty as investment advice or recommendations to transact. [728] A party entering into a properly drafted agreement is therefore limited in its ability to claim fraud based on alleged misstatements outside the documents, when those statements are inconsistent with express contractual provisions, because such reliance would be unreasonable as a matter of law. [729]

p. 11-192

p. 11-193

Even without explicit disclaimers, courts typically reject claims that a party reasonably relied on statements in marketing materials, or other "sales talk," that is contradicted by the relevant prospectus or offering document. [730]

A contractual disclaimer, however, is generally enforceable only if it "tracks the substance of the alleged misrepresentation." [731] In other words, the disclaimer must cover the alleged misrepresentation or omission. In *Caiola v. Citibank, N.A.*, the court held that the disclaimers in the ISDA Agreement and the confirmations governing the specific trades at issue did not cover alleged assurances made to the plaintiff since the disclaimers stated only in general terms that neither party would rely "on any advice, statements or recommendations (whether written or oral) of the other party." [732] According to the court, the disclaimer did not preclude plaintiff from claiming that it was misled by Citibank's alleged assurance that the parties' existing relationship would remain unchanged and that Citibank would continue to act as a hedging counterparty following Citibank's merger with the Travelers Group. [733]

[3] Primary/Secondary Liability Theories

[a] Limitation on Duties

In typical derivatives transactions, executed on a principal basis by arm's-length counterparties or on an agency basis for a nondiscretionary account, there is no general fiduciary duty that exists between the parties. [734] A fiduciary duty

p. 11-193

p. 11-194

arises only where the customer has delegated discretionary trading authority to the broker, or if it is otherwise provided for in the governing agreements. [735] In nondiscretionary trading accounts, where the customer retains full responsibility for trading decisions, the parties ordinarily agree and understand that the broker has narrowly defined duties that begin and end with each transaction. [736] Any special duty owed by the broker to the client in a nondiscretionary trading account can arise only if "special circumstances" transform the broker-client relationship. Such "special circumstances" include a client with impaired faculties, a closer than arm's-length relationship between the client and broker or a client who is so lacking in sophistication that *de facto* control is deemed to rest in the broker. [737] Superior knowledge on the part of the dealer, standing alone, will generally be insufficient to create the "special circumstances" necessary for the court to impose fiduciary obligations. As the court explained in *Procter & Gamble v. Bankers Trust*, [738] the fact that Bankers Trust had "superior knowledge in the swaps transactions" did not convert the parties' "business relationship to one in which fiduciary duties are imposed."

p. 11-194

p. 11-195

In *De Kwiatkowski v. Bear, Stearns & Co.*, a wealthy investor sued his broker for, *inter alia*, negligence and breach of fiduciary duty relating to currency futures trading. [739] A jury awarded De Kwiatkowski $111.5 million in damages. In reversing the verdict, the Second Circuit ruled that no "special circumstances" existed warranting holding the broker liable as a fiduciary or in negligence even though the broker performed substantial advisory functions with respect to the size, placement and timing of complex transactions that made and lost hundreds of millions of dollars within a span of a few months. [740] The Second Circuit noted that while the circumstances of the broker-client relationship were unusual, there was nothing in the relationship to render the client investor dependent on the broker. Instead, the investor's sophistication (his wealth, expertise and huge appetite for risk) precluded him from arguing that he was dependent on his broker's advice. [741] *De Kwiatkowski* has been followed by other courts in dismissing, on a motion directed to the pleadings, a fiduciary duty claim against a broker where the client employed "sophisticated traders of its own who made the decisions regarding the nature and timing of trades." [742] A party may nevertheless plead "special circumstances," or raise an issue of fact concerning the existence of such circumstances, sufficient to survive a pleadings motion or a motion for summary judgment. [743]

[b] Aiding and Abetting Liability

Where a dealer has not had direct contact with a party seeking to bring suit on a derivatives transaction, a theory of secondary liability may be the basis for a claim. [744] Under New York law, the elements of an aiding and abetting fraud claim are: (i) existence of a fraud, (ii) defendant's knowledge of the fraud and

p. 11-195

p. 11-196

(iii) that defendant provided substantial assistance to advance the fraud's commission. [745] The elements of an aiding and abetting breach of fiduciary duty claim are: (i) breach by a fiduciary of obligations to another, [746] (ii) that defendant knowingly induced or participated in the breach and (iii) damages. [747]

[i] *Knowledge*

To satisfy the knowledge requirement, New York law requires that an aider/abettor have "actual knowledge" of the underlying fraud or breach of fiduciary duty. [748] Plaintiffs cannot meet the knowledge requirement by arguing for application of the lesser standard of recklessness. [749] However, in order to state a claim the defendant's knowledge and intent need only be "averred generally," and a plaintiff can satisfy the *scienter* pleading requirement when "circumstances indicating conscious behavior by the defendant" or a clear opportunity and a motive to aid the wrong is identified. [750] Pursuit of ordinary economic goals is not enough to support a claim of a motive for aiding and abetting. [751]

While a stricter *scienter* standard may apply to an aider or abettor rather than to a primary perpetrator since the "‘ *scienter* requirement scales upward when activity is more remote,’" the *scienter* requirement need not be more exacting where there are allegations that the primary and secondary actors worked closely together. [752] In the context of derivatives transactions—where dealers can play various roles in structuring, selling, valuing and lending with respect to any particular instrument—courts may be tempted to conclude that the dealer was not a distant actor in connection with the challenged transactions. [753] The court may therefore conclude that a plaintiff need not satisfy any heightened pleading requirement to plead *scienter* on the part of an alleged aider and abettor.

[ii] *Substantial Assistance and Participation*

p. 11-196

p. 11-197

Under New York law, the meanings of "substantial assistance" and "participation" are synonymous, [754] and exist where a defendant "‘affirmatively assists, helps conceal, or by virtue of failing to act when required to do so enables the fraud to proceed.’" [755] Inaction is "actionable participation only when the defendant owes a fiduciary duty directly to the plaintiff." [756] Substantial assistance can take many forms, but the closer the activities are to ordinary course trading, the less likely that a determination will be made that substantial assistance was provided. [757] Courts will consider in totality an alleged aider and abettor's conduct in deciding whether it "substantially assisted" the primary wrongdoers. [758]

There is no bright line rule for what is or is not substantial assistance, and so the practitioner must review available precedent for the most comparable fact patterns. "Substantial assistance" has been found in cases where a bank "insisted" that the wrongdoer continue the fraud; [759] where brokers allegedly provided false "performance marks" to a CMO fund manager for dissemination to investors; [760] and where brokers participated in the creation of a document that contained false statements, while others substantially assisted the fraud by reviewing and approving the document, devising the marketing and financial scheme for the fraud, and engaging in "atypical" financing transactions. [761] "Substantial assistance" has not been found where a clearing broker merely clears trades, even if the trades are for a primary broker who is acting in violation of the law; [762] for a failure to enforce margin requirements or for continuing to

p. 11-197

p. 11-198

execute trades despite margin violations; [763] and for executing trades in order to reduce "a loan of money under margin." [764]

[4] Valuation Issues

Litigation may also result following the termination of a trading relationship and the liquidation or settlement of open positions. The liquidating party may commence litigation to recover any shortfalls resulting from the liquidation; the liquidated party may challenge the propriety of the liquidation and claim damages.

The propriety of the liquidation will be analyzed according to the terms of the governing documentation. [765] The court will analyze whether the liquidating party adhered to any procedures required by the relevant contracts. [766] The valuation methodology set forth in the ISDA Master Agreement has evolved over successive versions of the Agreement, with the 2002 ISDA Master Agreement providing for a single measure of damages standard, "Close-out Amount." This standard replaces the "Market Quotation" and "Loss" methodologies contained in the 1992 ISDA Master Agreement, which were subject to criticism and arguably misapplied by courts. [767]

p. 11-198

p. 11-199

Given that the law of all states implies in every contract a covenant of good faith and fair dealing, the court may also enquire whether the liquidating party acted in good faith in conducting the liquidation, including in exercising any discretion granted it under the relevant contract. [768] The 2002 ISDA Master Agreement specifically provides that the party determining the "Close-out Amount" for a terminated transaction "will act in good faith and use commercially reasonable procedures in order to produce a commercially reasonable result." The Agreement allows flexibility to the party making the valuation determination, listing nonexclusive sources of "relevant information" (*e.g.*, quotations and market data) and types of "commercially reasonable procedures" that may be utilized. [769]

p. 11-199

p. 11-200

If a party is held to have breached the relevant agreement, damages must be determined. As in any other breach of contract situation, the damages are "determined by the loss sustained or the gains prevented at the time and place of breach." [770] As a practical matter, this standard means that the litigation of damages would involve a "battle of experts" concerning the value that should have been obtained in a proper liquidation of the derivative instrument in question. [771]

[5] Bankruptcy Issues

Upon the filing of a petition for relief under the Bankruptcy Code (the "Code"), the Code automatically stays proceedings against the debtor and prevents parties, without permission of the bankruptcy court, from acquiring or obtaining assets of the debtor. [772] The Code provides exceptions to the automatic stay for certain actions in connection with protected contracts. Thus, the Code does not stay:

- the exercise by a commodity broker, forward contract merchant, stockbroker, financial institution, financial participant, or securities clearing agency of any contractual right … under any security agreement or arrangement or other credit enhancement forming a part of or related to any commodity contract,

  p. 11-200

  p. 11-201

  forward contract or securities contract, or of any contractual right … to offset or net out any termination value, payment amount, or other transfer obligation arising under or in connection with 1 or more such contracts, including any master agreement for such contracts; or [773]
- the exercise by a repo participant or financial participant of any contractual right … under any security agreement or arrangement or other credit enhancement forming a part of or related to any repurchase agreement, or of any contractual right … to offset or net out any termination value, payment amount, or other transfer obligation arising under or in connection with 1 or more such agreements, including any master agreement for such agreements. [774]

In addition, the Code excludes certain categories of contracts (*e.g.*, securities contracts, forward contracts, commodities contracts, repurchase agreements, swap agreements and certain margin and settlement payments) from the reach of a trustee's avoidance powers and so allows for transfers under such contracts without concern that the transfer can be set aside as a fraudulent transfer or preference. For transfers made prior to the bankruptcy petition, and except for fraudulent transfers as defined in Code § 548(a)(1) (transfers made within two years of the petition date with actual intent by the broker to hinder or defraud), [775] a trustee may not avoid: (i) margin or settlement payments made by or to a commodity broker, forward contract merchant, stockbroker, financial institution, financial participant or securities clearing agency, [776] (ii) margin or settlement payments made by or to a repo participant or financial participant in

p. 11-201

p. 11-202

connection with a repurchase agreement, [777] (iii) transfers by or to a swap participant or financial participant, under or in connection with any swap agreement, [778] or (iv) transfers made by or to a master netting agreement participant under or in connection with any master netting agreement or any individual contract covered by the master netting agreement. [779] Additionally, the Code

p. 11-202

p. 11-203

generally protects contractual rights of liquidation in securities contracts, commodities contracts, forward contracts, repurchase agreements and swap agreements. [780]

The Code limits the reach of the bankruptcy trustee's avoidance powers as applying only against "the initial transferee" of the transfer sought to be avoided, "the entity for whose benefit such transfer was made," or "any immediate or mediate transferee of such initial transferee." [781] The Code does not define "initial transferee." The Seventh Circuit in *Bonded Financial Services Inc. v. European American Bank* held that a bank that received a check for the benefit of a customer's checking account was simply an intermediary and not an initial transferee because it had no "dominion over" the property at issue. [782] Recently, the Seventh Circuit characterized its approach to the initial transferee questions as "track[ing] the function of the bankruptcy trustee's avoiding powers: to recoup money from the real recipient of preferential transfers" and held that the trustee of a securitization vehicle did qualify as an initial transferee because a charge against the trustee would "draw from the corpus of the trust, not from [the trustee's] corporate assets." [783]

A party should be aware of a counterparty's status under the Bankruptcy Code; if a counterparty qualifies as a "stockbroker," it cannot be a debtor eligible for reorganization under Chapter 11 [784] and is instead subject to liquidation under the Securities Investor Protection Act ("SIPA") and Chapter 7 of the

p. 11-203

p. 11-204

Code. [785] A stockbroker's "customers" have an important priority over other creditors under the Code, including most derivatives creditors. [786] In *In re Refco, Inc.*, the bankruptcy court found an off-shore unregulated financial intermediary, RCM, to be a stockbroker. [787] The court found that the Code's definition of broker-dealer, which includes the language "engaged in the business of effecting transactions in securities with the general public," [788] did not exclude a broker-dealer who traded with sophisticated parties. [789] Many of the derivatives creditors who had contracted with RCM had failed to appreciate that they were doing business with a stockbroker.

A decision in 2010 also cast doubt on the enforceability of provisions in swap agreements (or documents referenced in swap agreements) that purport to modify the priority of payments made from a derivative structure following an event of default caused by a bankruptcy filing by a counterparty (or an entity related to a counterparty). In *Lehman Brothers Special Financing Inc. v. BNY Corporate Trustee Services Ltd. (In re Lehman Brothers Holdings Inc.) ("Dante")*, [790] the court found that the *ipso facto* provisions of the Code [791] invalidated contractual clauses that subordinated the counterparty's priority payment as a result of the counterparty's or its parent entity's filing for bankruptcy. However, the *Dante* court itself recognized that its decision was "unprecedented" and potentially "controversial," and subsequent decisions have questioned its reasoning. [792]

p. 11-204

p. 11-205

A more recent decision arising out of the Lehman Brothers bankruptcy held that, while the enforcement of payment priority provisions in swap agreements may violate the *ipso facto* provisions of the Code, such distributions are nonetheless protected by a safe harbor in § 560 of the Code, [793] provided that the contractual provisions are either explicitly part of a swap agreement or incorporated into a swap agreement. [794] The court explained that, under recent Second Circuit precedent, a "broad and literal interpretation" must be given to the Code's safe harbors, and § 560 protects the right to "liquidation," which includes enforcement of provisions that modify the priority of payments and distributions of proceeds following that modification. [795] In a related decision, the court held that the right to "liquidation" protected by the safe harbor in § 560 also extended to protect the methodology specified in a swap agreement for carrying out that liquidation (*i.e.*, the method for determining the amount due and payable to the parties). [796]

705 *See Finance One Public Company Limited v. Lehman Brothers Special Financing, Inc.*, 414 F.3d 325, 344–45 (2d Cir. 2005).

706 *See Lehman Brothers Commercial Corp. v. Minmetals International Non-Ferrous Metals Trading Co.*, 179 F. Supp. 2d 118 (S.D.N.Y. 2000).

707 *See Lehman Brothers Commercial Corp. v. Minmetals International Non-Ferrous Metals Trading Co.*, 179 F. Supp. 2d 118, 139 (S.D.N.Y. 2000). The defendants also argued that because the transactions were illegal under Chinese law, they were invalid under Article 8 of the International Monetary Fund's Articles of Agreement, which states: "Exchange contracts which involve the currency of any member and which are contrary to the exchange control regulations of that member maintained or imposed consistently with this Agreement shall be unenforceable in the territories of any member." *See* Articles of Agreement of the International Monetary Fund, Dec. 27, 1945, 60 Stat. 1401, 2 U.N.T.S. 39, art. VIII, sec. 2(b). The court did not reach this argument, however, because China did not become subject to Article 8 until after the transactions at issue in the litigation. *See Lehman Brothers Commercial Corp. v. Minmetals International Non-Ferrous Metals Trading Co.*, 179 F. Supp. 2d 118, 143 (S.D.N.Y. 2000).

708 *See Lehman Brothers Commercial Corp. v. Minmetals International Non-Ferrous Metals Trading Co.*, 179 F. Supp. 2d 118, 138 (S.D.N.Y. 2000).

709 *See Lehman Brothers Commercial Corp. v. Minmetals International Non-Ferrous Metals Trading Co.*, 179 F. Supp. 2d 118, 143 (S.D.N.Y. 2000). The matter ultimately settled after 39 days of trial. At the time of settlement (June 12, 2002), the case was the oldest ongoing U.S. derivatives litigation, having commenced in 1994.

710 *See Grafton Partners, L.P. v. Superior Court*, 116 P.3d 479 (Cal. 2005). Pre-litigation jury trial waivers are also unenforceable in Georgia and North Carolina. *See Bank South, N.A. v. Howard*, 444 S.E.2d 799 (Ga. 1994); N.C. GEN. STAT. § 22B-10 (2006).

711 *Grafton Partners, L.P. v. Superior Court*, 116 P.3d 479 (Cal. 2005).

712 *Grafton Partners, L.P. v. Superior Court*, 116 P.3d 479 (Cal. 2005).

713 The English case *Hazell v. Hammersmith and Fulham LBC*, [1992] 2 A.C. 1, brought significant attention to the power of the *ultra vires* defense. There, the House of Lords (the highest court in England) held that a

London borough council acted outside the scope of its borrowing authority, as authorized under the Local Government Act of 1972, when it entered into various swap transactions; the House of Lords consequently voided the contracts.

714 *See Three Valleys Municipal Water District v. E.F. Hutton & Co. Inc.*, 116 F.3d 486 (9th Cir. 1997) (finding that the municipalities had delegated their investment authority to the person signing the contracts and holding that "a delegation of authority to bind a municipality to arbitration need not be express, but rather can be implied from a grant of authority to contract"); *Community College District No. 508 v. Westcap Government Securities*, No. 94 C 1920, 1994 WL 530849 (N.D. Ill. Sept. 29, 1994) (where community college district board had given its treasurer the authority to invest on its behalf, the executed investment agreements and their arbitration provisions were valid and enforceable).

715 *See* RESTATEMENT (THIRD) OF AGENCY § 2.03 cmt. g (2006).

716 *See In re County of Orange v. Fuji Securities, Inc.*, 31 F. Supp. 2d 768, 776–79 (C.D. Cal. 1998).

717 *See In re County of Orange v. Fuji Securities, Inc.*, 31 F. Supp. 2d 768, 785 (C.D. Cal. 1998). The court in *Orange County* implied that *quantum meruit* might exist as a basis for relief on the part of the County in light of the fact that the County's acts were not *ultra vires*.

718 *See Lehman Brothers Commercial Corp. v. Minmetals International Non-Ferrous Metals Trading Co.*, 179 F. Supp. 2d 118, 148 (S.D.N.Y. 2000) (alleged agent lacked actual and inherent authority because his acts were unauthorized and illegal, but a question of fact remained as to whether apparent authority could be established).

719 *See generally* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, Chapter 2.

720 In addition to private litigation, there have been governmental actions surrounding the proper characterization of derivatives transactions. In a July 2003 civil action against J.P. Morgan Chase & Co. in the Southern District of Texas, for example, the SEC based its fraud argument on the theory that "[t]he structural complexity of [the derivatives] transactions had no business purpose aside from masking the fact that, in substance, they were loans." *SEC v. J.P. Morgan Chase & Co.*, SEC Litigation Release No. 18252 (July 28, 2003).

721 *Mahonia Ltd. v. JP Morgan Chase Bank*, [2004] EWHC 1938 (Comm).

722 *Mahonia Ltd. v. JP Morgan Chase Bank*, [2004] EWHC 1938 (Comm).

723 *Mahonia Ltd. v. JP Morgan Chase Bank*, [2004] EWHC 1938 (Comm). WestLB argued that Mahonia and Chase were party to a conspiracy with Enron to devise a scheme to enable Enron to illegally account for the "loan." Such accounting, WestLB argued, breached U.S. securities law and hence WestLB was entitled not to pay the demand on the letter of credit it issued. WestLB also argued that it was fraudulently induced to rely on the apparent financial strength of Enron and the apparent legality of the purpose behind the derivative transactions when issuing the letter of credit.

724 *See Mahonia Ltd. v. JP Morgan Chase Bank*, [2004] EWHC 1938 (Comm). Justice Cooke rejected WestLB's invitation to "collapse" into a single lending transaction what were in his view separate swap transactions between, respectively, Chase and Mahonia, Mahonia and ENAC, and ENAC and Chase. The court found the transactions to be "independent" of each other, noting the lack of "offsetting, netting or cross-default provisions between them." Justice Cooke noted that had he found the accounting to be illegal, he "would have accepted [WestLB's] contention that the [letter of credit] was directly tied to the illegal purpose since it was an important part of the scheme which was to give rise to the unlawful accounting."

725 *See Primavera Familienstifung v. Askin*, 130 F. Supp. 2d 450, 497 (S.D.N.Y. 2001). The *Primavera* court rejected the argument that institutional investors who lacked specific experience with CMOs were "unsophisticated" for purposes of a claim that they were defrauded in connection with investments in a CMO hedge fund.

726 *See Société Nationale d'Exploitation Industrielle des Tabacs et Allumettes v. Salomon Brothers International Ltd.*, 268 A.D.2d 373, 374 (App. Div. 2000); *see also Lazard Fréres & Co. v. Protective Life*

Insurance Co., 108 F.3d 1531, 1543 (2d Cir. 1997) ("As a substantial and sophisticated player in the bank debt market, [defendant] was under a further duty to protect itself from misrepresentation.").

727 *See De Kwiatkowski v. Bear, Stearns & Co.*, 306 F.3d 1293, 1309 n.14 (2d Cir. 2002) (citing 7 U.S.C. §§ 1a(12), 2; NASD Conduct Rules, Rule 2310, NASD MANUAL). The NASD rule will be withdrawn upon the effectiveness of a successor FINRA rule, which provides that the exemption will not apply unless the broker-dealer has reason to believe that "the institutional customer is capable of evaluating investment risks independently." FINRA Rules, Rule 2111, FINRA MANUAL (effective July 9, 2012).

728 Language regarding investor nonreliance, investor sophistication and the nonfiduciary and nonadvisory role of the counterparty is commonly found in either the ISDA Master Agreement or accompanying Schedules. Such language usually varies little from the language provided in Part 4(m)(i) of the model ISDA Schedule to the 2002 Master Agreement. Parties can include additional representations in separately negotiated confirmations.

729 *See St. Matthew's Baptist Church v. Wachovia Bank National Association*, No. Civ. A. 04-4540 (FLW), 2005 WL 1199045, at *5–7 (D.N.J. May 18, 2005) (dismissing claims of fraudulent and negligent misrepresentation in connection with interest rate swap unwind fee given contractual language regarding requirement to pay such fee); *Republic National Bank v. Hales*, 75 F. Supp. 2d 300, 315 (S.D.N.Y. 1999), *aff'd sub nom*. *HSBC Bank USA v. Hales*, 4 F. App'x 15 (2d Cir. 2001) ("[R]easonable reliance is precluded when an express provision in a written contract contradicts a prior alleged oral representation in a meaningful fashion."); *see also Independent Order of Foresters v. Donaldson, Lufkin & Jenrette, Inc.*, 157 F.3d 933, 940 (2d Cir. 1998) (finding no reasonable reliance in light of "warnings in the Offering Circulars and Prospectuses regarding the risks associated with the investments and the provisions in those documents disavowing any outside representations").

730 *See, e.g.*, *Brown v. E.F. Hutton Group, Inc.*, 991 F.2d 1020, 1032 (2d Cir. 1993) ("An investor may not justifiably rely on a misrepresentation if, through minimal diligence, the investor should have discovered the truth.").

731 *Caiola v. Citibank, N.A.*, 295 F.3d 312, 330 (2d Cir. 2002); *Grumman Allied Industries, Inc., v. Rohr Industries, Inc.*, 748 F.2d 729, 735 (2d Cir. 1984).

732 *Caiola v. Citibank, N.A.*, 295 F.3d 312, 330 (2d Cir. 2002). The *Caiola* court relied on the rule cited in *Manufacturers Hanover Trust Co. v. Yanakas*, 7 F.3d 310, 316 (2d Cir. 1993), that a valid disclaimer provision "must contain explicit disclaimers of the particular representations that form the basis" of the fraud claim. *See also Hunt v. Alliance North American Government Income Trust, Inc.*, 159 F.3d 723, 728–29 (2d Cir. 1998) (a general disclaimer that a fund's hedging strategy might fail was insufficient to defeat a fraud claim based on an allegation that the fund had, in fact, no opportunity to hedge at all).

733 *Caiola v. Citibank, N.A.*, 295 F.3d 312, 319 (2d Cir. 2002).

734 Even where there is no fiduciary duty, applicable securities law requires that information disclosed not contain any material misstatement or omission. Parties to a contract also are bound by a duty to deal fairly and in good faith. *See Procter & Gamble v. Bankers Trust*, 925 F. Supp. 1270, 1289–91 (S.D. Ohio 1996) (even though no fiduciary duty existed between the parties, the defendant had a "duty to disclose material information to plaintiff before the parties entered into the swap transactions and in their performance, and also a duty to deal fairly and in good faith"). In *In re BT Securities Corp.*, SEC Release No. 33-7124 (Dec. 22, 1994), the SEC found that Bankers Trust violated § 17(a) of the Securities Act and §§ 10(b) and 13(a) of the Exchange Act, and Rules 10b-5, 13a-1 and 12b-20 thereunder, because BT Securities misrepresented the value of derivatives sold to the company, Gibson Greetings. The SEC found that Gibson lacked the expertise to value derivatives accurately and relied on the numbers provided by BT Securities to decide whether to purchase more derivatives and to prepare financial statements.

735 *See Independent Order of Foresters v. Donaldson, Lufkin & Jenrette, Inc.*, 157 F.3d 933, 940–41 (2d Cir. 1998); *see also St. Matthew's Baptist Church v. Wachovia Bank National Association*, No. Civ. A. 04-4540 (FLW), 2005 WL 1199045, at *10 (D.N.J. May 18, 2005) (finding no fiduciary duty as a matter of law, relying, *inter alia*, on language in Schedule and swap documentation disclaiming the existence of a fiduciary

relationship); *Power & Telephone Supply Company, Inc. v. Suntrust Banks, Inc.*, No. 03-2217 MI/V, 2005 WL 1329538, at *5 (W.D. Tenn. May 10, 2005) (in dispute involving an interest rate swap, dismissing on summary judgment a fiduciary duty claim by a bank borrower since Tennessee law does not impose fiduciary duties on the bank-customer relationship and the borrower failed to produce "any evidence that Defendants entered into a written agreement with Plaintiff to act as a fiduciary"). While the plaintiff in *Power & Telephone Supply Company, Inc. v. Suntrust Banks, Inc.*, abandoned its breach of fiduciary duty claim on appeal, it challenged the dismissal of its negligence claim on the grounds that "it [had] asserted a claim for 'professional negligence' for which a duty to exercise reasonable care arises as a matter of law." *Power & Telephone Supply Company, Inc. v. Suntrust Banks, Inc.*, 447 F.3 923, 932 (6th Cir. 2006). The Sixth Circuit rejected this argument on the grounds that the plaintiff "ha[d] not demonstrated that defendants owed it a legal duty to advise it on the appropriateness of the swap transactions distinct from the agency and breach of fiduciary duty claims." *Power & Telephone Supply Company, Inc. v. Suntrust Banks, Inc.*, 447 F.3 923, 933 (6th Cir. 2006).

736 *See De Kwiatkowski v. Bear, Stearns & Co.*, 306 F.3d 1293, 1302 (2d Cir. 2002). These duties include, for example, diligence and competence in executing the client's trade orders.

737 *See De Kwiatkowski v. Bear, Stearns & Co.*, 306 F.3d 1293, 1306 (2d Cir. 2002).

738 *Procter & Gamble v. Bankers Trust*, 925 F. Supp. 1270, 1289 (S.D. Ohio 1996).

739 *See De Kwiatkowski v. Bear, Stearns & Co.*, 306 F.3d 1293, 1295–96 (2d Cir. 2002).

740 *See De Kwiatkowski v. Bear, Stearns & Co.*, 306 F.3d 1293, 1307–09 (2d Cir. 2002).

741 *See De Kwiatkowski v. Bear, Stearns & Co.*, 306 F.3d 1293, 1309 (2d Cir. 2002).

742 *See, e.g.*, *Salomon Brothers International Ltd. v. Eagle Cayman International, L.P.*, No. 601872/01 (N.Y. Sup. Ct. Mar. 13, 2003).

743 *See Lehman Brothers Commercial Corp. v. Minmetals International Non-Ferrous Metals Trading Co.*, 179 F. Supp. 2d 118, 150–52 (S.D.N.Y. 2000) (finding questions of fact as to the "true nature" of the parties' "very strong relationship" were sufficient to deny defendant's motion for summary judgment).

744 Plaintiffs who wish to bring claims of aiding and abetting fraud must now rely on state law theories of liability, in light of *Central Bank of Denver, N.A. v. First Interstate Bank of Denver, N.A.*, 511 U.S. 164 (1994), which found no private right of action to exist for aiding and abetting a violation of § 10(b) of the Exchange Act, and *Stoneridge Investment Partners v. Scientific-Atlanta, Inc.*, 552 U.S. 148 (2008), which significantly limited the circumstances under which a secondary actor could be found liable for a violation of § 10(b) in a private cause of action. *See also* § 11.04[2][b][ii] for discussion of the different tests for determining when a secondary actor may be found to be primarily liable.

745 *See Wight v. BankAmerica Corp.*, 219 F.3d 79, 91 (2d Cir. 2000); *Cromer Finance Ltd. v. Berger*, 137 F. Supp. 2d 452, 470 (S.D.N.Y. 2001).

746 The New York Court of Appeals has held that the fiduciary duties owed by a limited partnership's attorney to that entity do not extend to the limited partners. *Eurycleia Partners L.P. v. Seward & Kissel, LLP*, 12 N.Y.3d 553, 561–62 (2009).

747 *See In re Sharp International Corp.*, 403 F.3d 43, 49–50 (2d Cir. 2005); *Kolbeck v. LIT America, Inc.*, 939 F. Supp. 240, 245 (S.D.N.Y. 1996), *aff'd*, 152 F.3d 918 (2d Cir. 1998).

748 *See Cromer Finance Ltd. v. Berger*, 137 F. Supp. 2d 452, 494 (S.D.N.Y. 2001).

749 *See Cromer Finance Ltd. v. Berger*, 137 F. Supp. 2d 452, 495 n.28 (S.D.N.Y. 2001).

750 *See Cromer Finance Ltd. v. Berger*, 137 F. Supp. 2d 452, 494–95 (S.D.N.Y. 2001).

751 *See Cromer Finance Ltd. v. Berger*, 137 F. Supp. 2d 452, 494–95 (S.D.N.Y. 2001).

752 *Primavera Familienstifung v. Askin*, 130 F. Supp. 2d 450, 508 (S.D.N.Y. 2001) (quoting *ABF Capital Management v. Askin Capital Management, L.P.*, 957 F. Supp. 1308, 1331 n.5 (S.D.N.Y. 1997)) (reciting allegations that brokers aided and abetted the purported fraud by hedge fund manager).

753 *See Primavera Familienstifung v. Askin*, 130 F. Supp. 2d 450, 508 (S.D.N.Y. 2001).

754 *Kolbeck v. LIT America, Inc.*, 939 F. Supp. 240, 247 (S.D.N.Y. 1996) (defining "participation" as "substantial assistance").

755 *Cromer Finance Ltd. v. Berger*, 137 F. Supp. 2d 452, 470 (S.D.N.Y. 2001) (quoting *Nigerian National Petroleum Corp. v. Citibank, N.A.*, No. 98-CV-4960 (MBM), 1999 WL 558141, at *8 (S.D.N.Y. July 30, 1999)).

756 *Kolbeck v. LIT America, Inc.*, 939 F. Supp. 240, 247 (S.D.N.Y. 1996).

757 *See Primavera Familienstifung v. Askin*, 130 F. Supp. 2d 450, 511 (S.D.N.Y. 2001) ("Executing transactions, even ordinary course transactions, can constitute substantial assistance under some circumstances, such as where there is an extraordinary motivation to aid in the fraud.").

758 *Primavera Familienstifung v. Askin*, 130 F. Supp. 2d 450, 511 (S.D.N.Y. 2001) ("Where there is evidence of various types of activities by an alleged aider and abetter going to [the substantial assistance] issue, the evidence should be considered together.").

759 *Cromer Finance Ltd. v. Berger*, 137 F. Supp. 2d 452, 471 (S.D.N.Y. 2001) (citing *Monsen v. Consolidated Dressed Beef Co.*, 579 F.2d 793, 803 (3d Cir. 1978)).

760 *ABF Capital Management v. Askin Capital Management, L.P.*, 957 F. Supp. 1308, 1329–30 (S.D.N.Y. 1997).

761 *In re Gas Reclamation, Inc. Securities Litigation*, 659 F. Supp. 493, 504 (S.D.N.Y. 1987).

762 *Greenberg v. Bear, Stearns & Co.*, 220 F.3d 22, 29 (2d Cir. 2000), *cert. denied*, 531 U.S. 1075 (2001).

763 *See Dillon v. Militano*, 731 F. Supp. 634, 637, 639 (S.D.N.Y. 1990); *Stander v. Financial Clearing & Services Corp.*, 730 F. Supp. 1282, 1286–87 (S.D.N.Y. 1990).

764 *Ross v. Bolton*, 639 F. Supp. 323, 327 (S.D.N.Y. 1986).

765 *See Drexel Burnham Lambert Products Corp. v. MCorp*, Civ. A. No. 88C-NO-80 (SCDP), 1989 WL 16981 (Del. Super. Ct. Feb. 23, 1989) (upholding on summary judgment Drexel's calculation of "Agreement Value damages" where contract made such calculation "conclusive in the absence of manifest error" and counterparty proffered no evidence of any error); *see also The First National Bank of Chicago v. Ackerley Communications, Inc.*, No. 94 Civ. 7539 (KTD), 2001 WL 15693 (S.D.N.Y. Jan. 8, 2001), *aff'd*, 28 F. App'x 61 (2d Cir. 2002) (applying the plain terms of the agreement in determining whether the plaintiff had properly exercised its option to extend the swap agreement).

766 In *Granite Partners, L.P. v. Bear, Stearns & Co., Inc.*, 17 F. Supp. 2d 275, 300–02 (S.D.N.Y. 1998), the court declined to apply Article 9's "commercial reasonableness" standard to a liquidation of instruments subject to repurchase agreements, holding that such agreements qualify as "purchase and sales" and not "secured loans" subject to UCC Article 9. If the agreements governing repurchase transactions are ambiguous as to whether the transactions are loans or purchases and sales, courts will look to extrinsic evidence. *See Primavera Familienstifung v. Askin*, 130 F. Supp. 2d 450, 543 (S.D.N.Y. 2001).

767 Given the frequency with which disputes involving derivatives settle prior to litigation, there is little case law applying the Market Quotation and Loss methodologies. Two such cases— *Peregrine Fixed Income Ltd (In Liquidation) v. Robinson Department Store Plc*, [2000] Lloyd's Rep. Bank. 304 (QBD (Comm Ct)), and *Enron Australia Finance Pty Ltd v. Integral Energy Australia*, [2002] NSWSC 753—were roundly criticized for failing to reflect market practice or the parties' intent as evidenced by the relevant agreements. In *Peregrine*, the court rejected as "commercially unreasonable" the Market Quotation calculation of the nondefaulting party, and instead required the parties' settlement amount to be calculated under the ISDA Loss methodology. The court reached this conclusion despite the fact that the nondefaulting party—which the court recognized as the best party to determine commercial reasonableness—had not judged the result under the Market Quotation methodology as commercially unreasonable. Many believe that *Peregrine* should be limited to its unique facts: Peregrine had performed its side of the bargain and had it not appointed provisional liquidators and triggered a default, the other party, in financial distress itself, would likely have defaulted and hence Peregrine would have been in the position of determining whether the result produced by the Market Quotation method was reasonable. In *Enron Australia Finance*, the court

noted that although it is commonly understood in the derivatives market that the defaulting party bears the cost of the bid/offer spread, the electricity market in Australia was so illiquid that the bid/offer spread was artificially wide and, accordingly, the Market Quotation, measure of damages produced a commercially unreasonable result. The court then imposed a measure of damages not contemplated by either party. *See also Peregrine Fixed Income Limited v. JP Morgan Chase Bank*, No. 05 Civ. 4351 (RMB) (THK), 2006 U.S. Dist. LEXIS 8766, at *4–8 (S.D.N.Y. Jan. 26, 2006) (denying defendant's motion to dismiss on the grounds that the ISDA Master Agreement was ambiguous as to the date when market quotations should be obtained); *High Risk Opportunities HUB Fund (In Liquidation) v. Credit Lyonnais*, M-2375, M-2463, 2006 N.Y. App. Div. LEXIS 7788 (June 6, 2005) (unpublished opinion) (good faith clause of the ISDA Master Agreement was violated when the defendant "interfered with the Market-makers' independence in valuing the [non-deliverable forward contracts] as of the termination date").

768 *See* Restatement (Second) of Contracts § 205 (1981); *see also Granite Partners, L.P. v. Bear, Stearns & Co., Inc.*, 17 F. Supp. 2d 275, 305 (S.D.N.Y. 1998) (citing *Dalton v. Educational Testing Service*, 87 N.Y.2d 384, 389, 663 N.E.2d 289, 292, 639 N.Y.S.2d 977, 979 (1995)). A party, however, may not use the implied covenant to create additional, unbargained-for rights otherwise not present in the contract. *See JPMorgan Chase Bank, N.A. v. IDW Group, LLC*, No. 08-Civ-9116 (PGG), 2009 WL 321222, at *4 (S.D.N.Y. Feb. 9, 2009) ("An implied covenant of good faith and fair dealing, however, arises out of the known reasonable expectations of the other party which arise out of the agreement entered into. The covenant does not create duties which are not fairly inferable from the express terms of that contract." (citation omitted)); *Granite Partners, L.P. v. Bear, Stearns & Co., Inc.*, 17 F. Supp. 2d 275, 306 (S.D.N.Y. 1998).

769 The flexible approach to valuation reflected in the 2002 ISDA Master Agreement replaced the 1992 ISDA Master Agreement's "Market Quotation" definition, which required a terminating party to obtain five dealers' price quotes for closed-out transactions. The definition of Market Quotation was deemed unworkable during times of market dislocation or liquidity shocks, when market participants, struggling to maintain their own positions, are limited in their ability to value trades for others. *See* Counterparty Risk Management Policy Group, *Improving Counterparty Risk Management Practices* 42–43 (June 1999) (criticizing the definition of Market Quotation).

770 *Lucente v. IBM Corp.*, 310 F.3d 243, 262–63 (2d Cir. 2002). The court in *Lucente* specifically rejected the use in contract cases of the "highest intermediate value rule" (where damages are determined by identifying the highest intermediate value of a security between the commission of the alleged wrongful act and some reasonable time thereafter). *See also The First National Bank of Chicago v. Ackerley Communications, Inc.*, No. 94 Civ. 7539 (KTD), 2001 WL 15693 (S.D.N.Y. Jan. 8, 2001), *aff'd*, 28 F. App'x 61 (2d Cir. 2002) (dismissing plaintiff's damages claim because no evidence was proffered to establish lost profit or to demonstrate any attempt to mitigate damages).

771 *See Primavera Familienstifung v. Askin*, 130 F. Supp. 2d 450, 522–30 (S.D.N.Y. 2001) (reviewing admissibility of proposed expert testimony concerning CMO values and valuation procedures).

772 *See* 11 U.S.C. § 362. In 2005, the President signed into law the Bankruptcy Abuse Prevention and Consumer Protection Act of 2005 ("BAPCPA"), Pub. L. No. 109-8, 119 Stat. 23. Title IX of the Act clarifies the treatment of certain financial contracts upon the insolvency of a counterparty and in so doing makes amendments to the Bankruptcy Code, the Securities Investor Protection Act, the Federal Deposit Insurance Act, the Federal Deposit Insurance Corporation Improvement Act of 1991, and the Federal Credit Union Act. Most significant among these amendments is the expansion of the Code's definitions of "forward contract," "repurchase agreement," "swap agreement," "commodity contract" and "securities contract" to account for relevant market developments and the introduction of the phrase "or any other similar agreement" to allow for greater flexibility in the Act's application. Additionally, the counterparties that are eligible for financial contract protection are expanded to include "financial participants"—defined as entities engaged in a certain minimum gross dollar value of enumerated transactions. The Code also now provides for bilateral "cross-product" netting across financial contracts and clarifies the measurement of damages in the event of a debtor's rejection of a financial contract.

773 11 U.S.C. § 362(b)(6).

774 11 U.S.C. § 362(b)(7).

775 A trustee cannot avoid transfers where the transferees took "for value and in good faith." 11 U.S.C. § 548(c). "To establish a lack of 'good faith,' on the part of securities customers under § 548(c)… the trustee must show that the customer either actually knew of the broker's fraud or 'willfully blinded' himself to it." *Picard v. Avellino*, 469 B.R. 408, 412 (S.D.N.Y. 2012). "Willful blindness" is a "subjective standard"—the investor must "intentionally choose[] to blind himself to the 'red flags' that suggest a high probability of fraud." *Picard v. Katz*, 462 B.R. 447, 455 (S.D.N.Y. 2011), *abrogated on other grounds in Secs. Inv. Prot. Corp. v. Bernard L. Madoff Inv. Secs. LLC*, 513 B.R. 437 (S.D.N.Y. 2014).

776 *See* 11 U.S.C. § 546(e). In *Enron Creditors Recovery Corp. v. Alfa, S.A.B. de C.V.*, 651 F.3d 329 (2d Cir. 2011), the Second Circuit recently held that § 546(e) prevented a bankruptcy trustee from avoiding payments made to retire the debtor's unsecured commercial paper prior to maturity. The court reasoned that the definition of "settlement payments" under § 741(8) of the Bankruptcy Code is broad, and that the phrase "commonly used in the securities industry" in that definition was meant to act as a catchall and not to impose any requirement that a transaction be a common occurrence. The court also noted that there was nothing in § 741(8) or anywhere else in the Bankruptcy Code to support imposing a requirement that a payment result in the acquisition of title to a security, as opposed to merely retiring debt, to be properly considered a "settlement payment." Extending this reasoning further, the Second Circuit held that "settlement payments" made by a broker pursuant to a contract to buy or sell securities cannot be avoided under § 546(e) even if the broker did not actually trade securities or the contract did not specify information about the securities to be traded. *See In re Bernard L. Madoff Inv. Secs. LLC*, 773 F.3d 411 (2d Cir. 2014). *See also In re QSI Holdings, Inc.*, 571 F.3d 545 (6th Cir. 2009) (§ 546(e) prevented bankruptcy trustee from avoiding payments made to corporate debtor's shareholders in connection with leveraged buyout of privately held securities); *In re Olympic Natural Gas Co.*, 294 F.3d 734 (5th Cir. 2002) (§ 546(e) prevented bankruptcy trustee from avoiding settlement payments by debtor to forward contract merchant); *Nagel v. ADM Investor Services, Inc.*, 217 F.3d 436, 441 (7th Cir. 2000) (contract is forward if eventual delivery of commodity is reasonably assured). But see *In re Munford, Inc.*, 98 F.3d 604 (11th Cir. 1996) (§ 546(e) inapplicable when payments not "made by or to a commodity broker, forward contract merchant, stockbroker, financial institution, or securities clearing agency" (quoting 11 U.S.C. § 546(e)); *Grafton Partners, L.P. v. Circle Trust F.B.O.*, 321 B.R. 527, 529 (B.A.P. 9th Cir. 2005) (holding that nonpublic transactions in illegally unregistered securities are not "commonly used in the securities trade" and therefore are avoidable preferences ineligible for protection under § 546(e)); *American Tissue, Inc. v. Donaldson, Lufkin & Jenrette*, 351 F. Supp. 2d 79 (S.D.N.Y. 2004) (denying defendant's motion to dismiss a fraudulent conveyance claim in part because it doubted whether the payments qualified as "transfer payments" under § 546(e) because their disruption did not threaten a market collapse). In the context of a Ponzi scheme, a trustee can avoid settlement payments, even those made before the two year petition date, when the trustee shows that the transferee had "actual knowledge" of the Ponzi scheme, meaning "actual knowledge of, and indeed participation in, every aspect of [the] scheme." *See, e.g.*, *Secs. Inv. Prot. Corp. v. Bernard L. Madoff Inv. Secs. LLC*, 2013 WL 1609154 (S.D.N.Y. Apr. 15, 2013).

p. 12-3

The threshold question in determining the applicability of the U.S. securities laws to a particular transaction is whether "securities" are involved. It is not always clear whether an instrument at issue is a security for purposes of these laws.

[1] Statutory Definitions of “Security”

The Securities Act defines the term "security" as:

unless the context otherwise requires … any note, stock, treasury stock, security future, security-based swap, bond, debenture, evidence of indebtedness, certificate of interest or participation in any profit-sharing agreement, collateral-trust certificate, preorganization certificate or subscription, transferable share, investment contract, voting-trust certificate, certificate of deposit for a security, fractional undivided interest in oil, gas, or other mineral rights, any put, call, straddle, option, or privilege on any security, certificate of deposit, or group or index of securities (including any interest therein or based on the value thereof), or any put, call, straddle, option, or privilege entered into on a national securities exchange relating to foreign currency, or, in general, any interest or instrument commonly known as a "security," or any certificate of interest or participation in, temporary or interim certificate for, receipt for, guarantee of, or warrant or right to subscribe to or purchase, any of the foregoing. [1]

Likewise, the Exchange Act defines "security" as:

unless the context otherwise requires … any note, stock, treasury stock, security future, security-based swap, bond, debenture, certificate of interest or participation in any profit-sharing agreement or in any oil, gas, or other mineral royalty or lease, any collateral-trust certificate, preorganization certificate or subscription, transferable share, investment contract, voting-trust certificate, certificate of deposit for a security, any put, call, straddle, option, or privilege on any security, certificate of deposit, or group or index of securities (including any interest therein or based on the value thereof), or any put, call, straddle, option, or privilege entered into on a national securities exchange relating to foreign currency, or in general, any instrument commonly known as a "security"; or any certificate of

p. 12-3

p. 12-4

interest or participation in, temporary or interim certificate for, receipt for, or warrant or right to subscribe to or purchase, any of the foregoing; but shall not include currency or any note, draft, bill of exchange, or banker's acceptance which has a maturity at the time of issuance of not exceeding nine months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited. [2]

As can be seen, the definitions are essentially lists of categories of instruments. [3] Although the definitions differ slightly, the Supreme Court has consistently held that the respective definitions are essentially the same. [4] The Investment Company Act, the Advisers Act and state codes also contain definitions of security. [5] The Investment Company Act's definition of security, discussed in Chapter 15, is virtually identical to the definition in the Securities Act. Nevertheless, it has been interpreted by the SEC to include a broader group of instruments than is included in the Securities Act's definition or the Exchange Act's definition, such as, for example, certificates of deposit, commercial loans,

p. 12-4
p. 12-5

interaffiliate loans and other loans made in the ordinary course of business by a financial or commercial institution. [6]

The definitions of "security" in the Acts list instruments (*e.g.*, stock, notes and bonds) that are within the public's general understanding of what a security is. However, even these instruments are not always securities for purposes of the Acts. The definitions are each prefaced by "unless the context otherwise requires" and courts have used this preface to exclude certain instruments listed in the definitions.

In addition, each definition contains the general catchall of any "instrument commonly known as a security." This catchall has been viewed as an indication that Congress intended courts to include instruments not specifically listed.

The process of determining the scope of the definitions of security in the Acts has been evolutionary. Throughout the process, the SEC has urged a broad interpretation of the definitions on the theory that a broad interpretation will better protect investors. Congress has occasionally amended the definitions. [7] Finally, since the enactment of the definitions in 1933 and 1934, substantial case law has developed concerning whether or not particular instruments are included. [8]

[2] Analysis of Certain Instruments Under the U.S. Securities Laws

p. 12-5
p. 12-6

U.S. courts, in considering whether a particular instrument is a security, have interpreted the definitions with the understanding that "Congress intended the …[Acts] to cover those instruments ordinarily and commonly considered to be securities in the commercial world." [9] The courts have not articulated a single analytic framework for determining when an instrument would "ordinarily and commonly [be] considered to be a security." Instead, their analyses have varied depending on the type of instrument in question. [10] In the cases discussed below, the courts have analyzed certain notes, stock, certificates of deposit, investment contracts, loan participations, and options on securities in light of the definitions of security. However, these cases, as well as the related statutory and agency interpretations, illustrate the major issues that courts have considered when determining whether an instrument is a security.

[a] Notes

In *Reves v. Ernst & Young*, [11] the Supreme Court addressed the issue of when a "note" is a security. Guidance with respect to this issue was needed because, in spite of the inclusion of "note" in the definitions of "security" in the Acts, it was widely accepted that many notes were not securities. "Note" is a broad term with meanings ranging from an exchange-listed bond to a note given by a consumer purchasing a home appliance on credit. [12] The former is generally considered to be a security. The latter generally is not.

Before *Reves*, lower courts in the United States adopted a variety of approaches for determining whether a particular note was a security. Some courts, including the Eighth Circuit in its decision reviewed by the Supreme

p. 12-6
p. 12-7

Court in *Reves*, adopted a test that first asked whether a note could be viewed as an "investment contract," as a precondition to its being classified as a security. Under this test, a note is a security if it evidences an investment in a common enterprise, with a reasonable expectation of profits to be derived from the entrepreneurial or managerial efforts of others. [13] Other courts inquired into whether the note was issued in an "investment" as opposed to a "commercial" or "consumer" context. Only the former was regarded as a security entitled to the protection of the securities laws. [14] A third approach of lower U.S. courts before *Reves*, the so-called "family resemblance" test that the Supreme Court adopted in a modified form in *Reves*, begins the analysis with a presumption that any note having a term of more than nine months is a security. [15] This presumption, however, was rebuttable and certain types of notes are recognized as self-evidently not securities. Thus, an issuer could rebut the presumption that a note is a security if it could show that its note had a strong "family resemblance" to a previously recognized judicial exception to the definition of a security.

As adopted by the Supreme Court in *Reves*, the list of instruments commonly denominated as "notes" that nonetheless are not regarded as securities includes, but is not limited to:

> [(i) a] note delivered in a consumer financing, [(ii) a] note secured by a mortgage on a home, [(iii) a] short-term note secured by a lien on a small business or some of its assets, [(iv) a] note evidencing a ‘character’ loan to a bank customer, [(v)] short-term notes secured by an assignment of accounts receivable, [(vi) a note which simply formalizes an open-account debt incurred in the ordinary course of business (particularly if, as in the case of a customer of a broker, it is collateralized) [and (vii)] notes evidencing loans by commercial banks for current operations. [16]

p. 12-7
p. 12-8

Recognizing that types of notes not listed under the test may also not be "securities," the Court listed four additional factors to be considered under the "family resemblance" test:

> First, we examine the transaction to assess the motivations that would prompt a reasonable seller and buyer to enter into it. If the seller's purpose is to raise money for the general use of a business enterprise or to finance substantial investments and the buyer is interested primarily in the profit the note is expected to generate, the instrument is likely to be a "security." If the note is exchanged to facilitate the purchase and sale of a minor asset or consumer good, to correct for the seller's cash-flow difficulties, or to advance some other commercial or consumer purpose, on the other hand, the note is less sensibly described as a "security."
>
> Second, we examine the "plan of distribution" of the instrument to determine whether it is an instrument in which there is "common trading for speculation or investment."
>
> Third, we examine the reasonable expectations of the investing public: The Court will consider instruments to be "securities" on the basis of such public expectations, even where an economic analysis of the circumstances of the particular transaction might suggest that the instruments are not "securities" as used in that transaction.
>
> Finally, we examine whether some factor such as the existence of another regulatory scheme significantly reduces the risk of the instrument, thereby rendering application of the Acts [*i.e.*, Securities Act and Exchange Act] unnecessary. [17]

In applying these standards to the facts of the *Reves* case, the Court had "little difficulty" in deciding that the notes at issue were securities. [18] In *Reves*, an agricultural cooperative (the "Co-op") sold promissory notes that were widely distributed, uncollateralized and uninsured. The proceeds of the notes were used for working capital. The Co-op advertised the notes as investments. After the Co-op went bankrupt, some of the noteholders sued the Co-op's auditors under the fraud provisions of the Exchange Act. The auditors claimed that they could not be found liable because the notes were not securities. [19]

p. 12-8
p. 12-9

The Court concluded that the Co-op's notes were securities because, under the family resemblance test, (i) the notes did not closely resemble any of the seven listed types of notes that are not considered securities and (ii) a consideration of the notes in light of the four additional factors described above also indicated that the notes were securities. [20]

The Court rejected any resemblance to the listed types of notes that are not considered securities without any detailed discussion, but did discuss the application of the four factors. The Court held that the notes were likely to be securities in light of the first factor because the seller's motivation was to raise capital for its business and the buyer's motivation was to earn a profit in the form of interest. [21] It reached the same conclusion when it considered the notes in light of the second factor, finding that, even though the notes were not traded on an exchange, their distribution to a "broad segment of the public" was enough "to establish the requisite ‘common trading.’" [22] In considering the third factor, the Court found that the public would have perceived that the notes were securities because they had been advertised as "investments" and "there were no countervailing factors that would have led a reasonable person to question this characterization." [23] Finally, in considering the fourth factor, the Court found "no risk-reducing factor to suggest that [the notes were] not in fact securities." [24]

[b] Stock

In sharp contrast to the later approach the Supreme Court took in *Reves*, requiring a thorough analysis of the instrument, the Court had previously held in *Landreth Timber Co. v. Landreth* [25] that "stock" is generally a security for purposes of the Acts regardless of the economic circumstances surrounding its sale. In *Landreth Timber*, a family sold a timber mill to a small group of investors in a negotiated transaction. The sale was structured as a transfer of stock in the mill

p. 12-9
p. 12-10

rather than as the sale of the business' assets. After the business failed, the buyers sued the sellers, alleging violation of the registration provisions of the Securities Act and fraud under the Exchange Act. The sellers argued that the Acts should not apply to the sale of 100% of the stock of a closely held corporation because the economic realities of the transaction indicate that the buyers were entrepreneurs taking over a business rather than passive investors in securities. [26] The Court rejected the sellers' arguments. The Court held that the mill's common stock was the paradigm of a security and that, therefore, there is no need to look beyond the characteristics of the instrument to the underlying economic realities of the transaction. [27] The Court's holding suggests that common stock, in whatever context it is sold, is *per se* a security within the ambit of the Acts so long as it "bears stock's usual characteristics[, including] (i) the right to receive dividends contingent upon an apportionment of profits; (ii) negotiability; (iii) the ability to be pledged or hypothecated; (iv) the conferring of voting rights in proportion to the number of shares owned; and (v) the capacity to appreciate in value." [28]

Thus, anyone who sells a U.S. business through a sale of stock should be aware that the U.S. securities laws will apply to the transaction. If the business

p. 12-10
p. 12-11

subsequently fails or does not perform as well as expected, the buyer may sue the seller under Rule 10b-5 under the Exchange Act for fraud in connection with the purchase or sale of securities, claiming, for example, that the seller failed to disclose material risks of the business. [29]

[c] Bank Certificates of Deposit

As discussed above, the Supreme Court in *Reves* indicated that risk-reducing factors may indicate that a note is not a security. Such risk-reducing factors were the basis for the Court's prior decision in *Marine Bank*, where it ruled that a certificate of deposit issued by a federally regulated and insured bank is not a security. [30] In *Marine Bank* the plaintiffs purchased from the defendant bank a certificate of deposit (the "CD"), which was insured by a federal agency. The plaintiffs purchased the CD in order to pledge it to the bank to secure the bank's loan to a company. In exchange for the pledge, plaintiffs were to receive a percentage of the company's profits. Plaintiffs alleged that the bank had represented to them that the loan would be used as working capital for the company. In fact, the company was deeply indebted to the bank and to others, and the loan was principally used to pay off such indebtedness. When the company became bankrupt soon thereafter, plaintiffs sued, claiming *inter alia* that the bank had violated the fraud provisions of the Exchange Act because it had actively solicited their purchase and pledge of the CD without disclosing either the great indebtedness of the company or that the bank intended to repay itself from the proceeds of the loan. [31]

The Court held that the Exchange Act did not apply to the transaction because the CD was not a security. Although the Court noted that the CD shared several characteristics with other long-term debt obligations that are commonly viewed as securities, it concluded that the federal insurer virtually guaranteed payment on the CD and that holders of certificates of deposit issued by federally regulated banks thus are "abundantly protected under the federal banking laws." The Court held that federal insurance and regulation rendered it unnecessary to subject issuers of bank certificates of deposit to liability under the fraud provisions of the Acts. [32]

p. 12-11

p. 12-12

The Court explicitly left open the possibility that certificates of deposit may be securities in other contexts. [33] This has led to speculation as to whether unconventional certificates of deposit are subject to the Acts. For example, the denomination of the CD in *Marine Bank* exceeded the applicable federal insurance limit by $10,000, [34] yet the Court held that federal insurance and regulation rendered application of the Acts unnecessary. It is the subject of speculation whether the Court would have reached the same conclusion if the denomination of the CD had been several times the federal insurance limit (federal insurance is currently limited to $250,000 per account). [35]

The *Marine Bank* analysis has prompted other U.S. courts to rule that certificates of deposit issued by state-regulated or foreign government-regulated institutions are also not securities subject to the Acts, although these extensions of *Marine Bank* have not been considered by the Supreme Court. [36] These courts declined to limit the *Marine Bank* exclusion to federally regulated institutions, with the Ninth Circuit concluding instead that it should apply whenever "a bank is sufficiently well regulated that there is virtually no risk that insolvency will prevent it from repaying the holder of one of its certificates of deposit in full." [37] In contrast, the Fourth Circuit reasoned that the *Marine Bank* holding must turn on the "comprehensiveness" of federal deposit insurance rather than its effectiveness; otherwise a court would have to inquire in each case "whether, at the time a given CD is issued, the regulatory and insurance schema in place was sufficiently well managed or well positioned … potentially lead[ing] to a court concluding that the same bank could one year issue a CD that was not a security, but that due to a change in effectiveness of the regulatory, insurance protection, the next year an identical CD would be a security." [38] The SEC argued against the extension of *Marine Bank* to foreign government regulated institutions in the Ninth Circuit case, stating both that Congress did not intend this result (as evidenced by the requirement in the Securities Act that foreign governments and central banks must register obligations sold to the public in the United States) and that such an application of *Marine Bank* would require a case-by-case analysis of the adequacy of foreign regulation (which the SEC and the courts are not well equipped to perform). [39]

[d] Investment Contracts

Investment contracts are included in the statutory definitions as a separate category of instruments that are securities. In *SEC v. W.J. Howey Co.*, [40] the Supreme Court defined investment contract as "a contract, transaction or scheme whereby a person invests his money in a common enterprise and is led to expect profits solely from the efforts of the promoter or a third party." [41] *Howey* was one of the Supreme Court's first pronouncements on the definition of "security" under the U.S. securities laws. [42] After the decision, the *Howey* definition of investment contract (the so-called "*Howey* test") was invoked by some lower courts for decades to determine whether other instruments are securities. As discussed above, the Supreme Court has since held that in certain other contexts (*e.g., Reves*, with respect to notes, and *Landreth Timber*, with respect to stock), other tests apply. However, *Howey* can be expected to remain a potent analytical

p. 12-13
p. 12-14

tool with respect to instruments to which no other tests have been held to apply. [43]

In *Howey*, defendants sold to plaintiffs parcels of land in citrus fruit groves and service contracts under which defendants cultivated and developed the groves, including harvesting and marketing the crops. The service contracts had terms of several years and gave defendants complete possession over the land and full discretion and authority over cultivation, harvesting and marketing. The purchasers had no right to enter their land and no right to specific fruit. Rather, the fruit from all land controlled by defendants was pooled and plaintiffs received checks at harvest time representing a proportionate share of profits. Purchasers generally resided far from the groves and lacked the equipment and experience needed to cultivate, harvest and market citrus products. [44]

Defendants argued that the land sales and service contracts were separate transactions and did not involve securities subject to the Securities Act. The Supreme Court disagreed. It held that plaintiffs invested money in a "common enterprise" (the citrus groves) with the expectation of receiving profits through the efforts of defendants. The transaction was an investment contract subject to the Securities Act, analogous to any other transaction (*e.g.*, purchase of common stock) where "investors provide the capital and share in the earnings and profits [and] the promoters manage, control and operate the enterprise." [45]

This "investment contract" concept has since been used as a catchall term under which claimants have argued that transactions that would otherwise not involve securities should be subject to the Acts. For example, in *Gary Plastic Packaging Corp. v. Merrill Lynch, Pierce, Fenner & Smith, Inc.*, [46] the Second Circuit held, relying on a footnote in *Marine Bank* that explicitly left open the possibility that certificates of deposit could be securities under some circumstances, [47] that federally insured certificates of deposit were securities when they

p. 12-14
p. 12-15

were sold in a manner that satisfied the Supreme Court's test for determining what constitutes an "investment contract." [48] The defendants sold certificates of deposit to plaintiffs under a marketing program (the "Program") in which defendants screened a variety of bank or savings and loan issuers against insolvency risks and negotiated rates of return on behalf of investors. Defendants also maintained a secondary market in certificates of deposit sold under the Program so that investors who wished to liquidate their investments would not have to incur penalties imposed by issuers for early redemption. Plaintiffs claimed that the defendants' promotional materials for the Program failed to disclose defendants' commissions from the issuers and thus violated the fraud provisions of the Acts. [49]

The *Gary Plastic* court noted that under *Marine Bank* a conventional certificate of deposit purchased from an issuing bank is not a security. However, the court held that certificates of deposit sold through the Program were investment contracts because investors expected to receive profits through the extra services provided by defendants. The court further held that the certificates of deposit sold through the Program represented essentially a joint effort by the issuers of the certificates of deposit and the defendants and distinguished the facts of *Marine Bank* by reasoning that, although federal banking laws may protect investors from the abuses and misrepresentations of the issuers, the Acts were necessary to protect investors from the abuses and misrepresentations of defendants. [50]

In *SEC v. Edwards*, [51] the Supreme Court, reversing the Eleventh Circuit, held that an arrangement for the sale and leaseback of pay telephones was an investment contract and thus a security for purposes of the Acts. Pursuant to the arrangement, investors would purchase a pay telephone from ETS Payphones and lease it back to ETS in exchange for a fixed monthly fee. Investors "were not involved in the day-to-day operation of the payphones they owned. [Instead,] ETS selected the site for the phone, installed the equipment, arranged for connection and long-distance service, collected coin revenues, and maintained and repaired the phones." [52]

The Eleventh Circuit had held that "profits" for the purposes of the *Howey* test "require[d] either a participation in earnings by the investor or capital appreciation." [53] Therefore, the investors' entitlement to a fixed return meant that they

p. 12-15

p. 12-16

did not have the required expectation of profits. Moreover, because the investors had a contractually guaranteed entitlement to a fixed return, any "profits" on their part would not "be derived solely from the efforts of others." [54]

The Supreme Court rejected the Eleventh Circuit's analysis and conclusions. The Court held that "[t]here is no reason to distinguish between promises of fixed returns and promises of variable returns" for purposes of the *Howey* test. [55] The Court noted a particular concern that a different holding would permit evasion of the securities laws by promising a particular rate of return in an investment contract. [56] The Court also rejected the argument that a contractual entitlement to a return would not be derived solely from the efforts of others for purposes of the *Howey* analysis. [57]

Notably, in a footnote to the *Reves* decision, the Court had stated that although "profits" in the context of notes meant "a valuable return on investment," which included interest, "profit" was defined more restrictively in applying the *Howey* test. [58] That footnote suggested that the *Reves* test was the only appropriate framework to analyze a promise of fixed returns. In *Edwards*, however, the Court stated that the dictum in *Reves* was incorrect, and held that fixed returns could constitute profits for purposes of the *Howey* test. [59] This holding increases the probability that a fixed return investment scheme that does not constitute a security under the *Reves* test may nevertheless constitute an investment contract under *Howey*.

The Fourth Circuit, in *Robinson v. Glynn*, [60] refused to determine categorically whether membership interests in a limited liability company constitute investment contracts. [61] Instead, it focused principally on the extent to which LLC members were able to participate actively in the management of the entity, and thus were either passive investors in need of the protection of the securities laws or more active investors not in need of those protections. In *Robinson*, the fact that the investor had the power to appoint board members, was in fact a board member and officer and had to consent before the entity could incur indebtedness outside the normal course of business led the court to conclude that the interest was not an investment contract and a security, even though the investor did not have sole managerial control over the entity. [62] The court left open the

p. 12-16

p. 12-17

possibility that LLC interests could constitute securities where members were unable as a practical matter to exercise any meaningful control over the entity.

Other circuits faced with fact patterns where investors had far less control than in *Robinson* have held that their respective ownership interests were investment contracts, and therefore securities. In *SEC v. Merchant Capital*, [63] the Eleventh Circuit relied on a pre-circuit split Fifth Circuit precedent to hold that interests in Colorado registered limited liability partnerships [64] were investment contracts where the partners (i) had powers similar to those of limited partners, (ii) were "completely inexperienced" in the relevant industry and (iii) were dependent on the manager to run the business. [65]

The Second Circuit in *United States v. Leonard* [66] also held that, notwithstanding the terms of an LLC's organizational documents, a jury trial's conclusion that the LLC interests were securities was supported by sufficient evidence. "'[I]nterim managers' [had]… decided almost every significant issue" regarding the enterprise before investors purchased interests in the LLC; investors did not negotiate the terms of the LLC organizational documents; investors had "no particular experience" in the relevant industry; "[a]nd their number and geographic dispersion left investors particularly dependent on centralized management." [67]

The District of Columbia Circuit, in *SEC v. Life Partners, Inc.*, [68] ruled that viatical settlement contracts [69] "are not securities … because the profits from their purchase do not derive predominantly from the efforts of a [third] party." [70] Life Partners, Inc. ("LPI") sold fractional interests in insurance policies to retail investors, either individually or through such investors' Individual Retirement Accounts ("IRAs"). In LPI's programs, LPI performed certain pre-purchase functions, such as evaluating the insured's medical condition, reviewing his policy and negotiating a purchase price. In certain versions of the programs, LPI also engaged in post-purchase activities, including administration and distribution of death benefits. Under its original scheme, LPI was the record owner of the insurance policy, though investors remained the beneficial owners. Other iterations of the program involved listing the individual investors as record owners and providing no post-purchase services, except to the extent that an investor chose to use an agent of LPI as its agent to settle the insurance contract. [71]

In considering whether LPI's contracts were properly characterized as securities for purposes of the Securities Act, the court applied the *Howey* test. Looking first at the issue of profits, the court held that the investor in a viatical settlement has an expectation of profits because it is not purchasing the unmatured policy claims for current consumption. Rather, the investor seeks a financial return on its investment. [72] The court also held that a "common enterprise" was present because LPI's viatical settlements involved a pooling of funds to purchase an insurance policy that may result in a profit or loss to investors depending upon the life span of the insured. [73] The court concluded, however, that none of LPI's or its agents' pre- or post-purchase functions—amounting to no more than finder-promoter and simple ministerial activities—qualified as the entrepreneurial "efforts of others"; consequently, this element of the *Howey* test was not satisfied. [74] The court also held that the notes issued to IRAs by trusts investing in the viatical settlement contracts were not securities for purposes of the federal securities laws. [75]

p. 12-18

p. 12-19

Relying in part on the reasoning, though not the result, in *Life Partners*, the District of Columbia Circuit in *Liberty Property Trust v. Republic Properties Corp.* [76] held that two individuals who were board members and officers of a real estate investment trust ("REIT") that owned 88% of a limited partnership "did not exercise sufficient control of the limited partnership to disqualify their units as securities." [77] The court reasoned that the REIT had six trustees and ten executive officers at the time of its initial public offering of trust interests, and therefore the defendants' "two votes were a minority of the board." [78] Furthermore, although the defendants controlled the REIT board when it had just three members during its formation, the court noted that the defendants expected the board to expand as part of the transactions in connection with the public offering and that, under the *Howey* test, "they ‘expected’ to profit from the efforts of the independent trustees added" to the board. [79]

p. 12-19

p. 12-20

Together with the Supreme Court's ruling in *SEC v. Edwards*, [80] these cases may be indicative of an increased willingness of federal courts, in certain circumstances, to characterize contractual arrangements as "investment contracts" for purposes of the securities laws. [81]

[e] Loan Participations

As the *Gary Plastic* decision demonstrates, a transaction may be subject to the Acts even if an underlying instrument would not be a security if sold in other contexts. Transactions therefore must be examined in their entirety to determine whether they involve securities. For example, even if a note issued to a commercial bank by its customer is not a security under *Reves*, a separate analysis is required to determine whether loan derivative products (such as loan participations or syndications) [82] based on the note and sold by the originator are securities. Although the Supreme Court has not yet ruled on loan participations or syndications, lower courts have almost unanimously held that loan participations and syndications made in the normal course are not securities. Some of these courts based their decisions on the "commercial" nature of the underlying transactions, stating that the Acts were intended to apply to instruments issued in an "investment" context but not to instruments issued in a "commercial" context. [83]

Other courts have considered and rejected arguments that a participation or syndication satisfies the *Howey* "investment contract" test described above because participants are receiving profits (in the form of interest paid on the loan) from the efforts of the originating bank, which negotiated (and presumably provided monitoring and administrative services for) the loan. [84] In light of the

p. 12-20

p. 12-21

Supreme Court's decision in *Edwards*, [85] however, the applicability of the investment contract test would appear to turn *not* on whether the participants are receiving interest rather than equity appreciation as a profit return, but, as discussed above, whether the underlying arrangement is commercial or investment in nature. [86]

Future plaintiffs will undoubtedly also argue that loan derivative products should be analyzed as notes under *Reves* (in addition to investment contracts under *Howey*). For example, in *Banco Espanol de Credito v. Security Pacific National Bank*, [87] the Second Circuit analyzed certain loan participations under *Reves* and concluded that such participations were not securities. The participations were sold by Security Pacific as part of a loan note program that, according to the SEC, was marketed to borrowers by Security Pacific as being a more profitable alternative to the issuance of commercial paper. [88] Under the program, Security Pacific loaned money to Integrated Resources, Inc. and immediately resold pieces of the loan to institutional investors. The investors sued Security Pacific under the fraud provisions of the Securities Act after Integrated failed to repay the loan, claiming that Security Pacific had concealed material nonpublic information about Integrated's deteriorating financial condition from them. The Second Circuit ruled that the investors could not claim under the fraud provisions of the Securities Act because the participations were analogous to loans

p. 12-21

p. 12-22

issued by banks for commercial purposes, which, under *Reves*, are a type of note that is not a security. [89] The court also considered the participations in light of the four standards articulated by the Supreme Court in *Reves* for determining whether a note is a security and found that the motivation of the participants was for commercial (rather than investment) purposes, the participations were offered exclusively to institutional and corporate entities and not to the general public, the investors were on notice through contractual provisions that the participations were not investments in business enterprises and the existence of a regulatory scheme over the purchase and sale of loan participations of national banks makes application of the federal securities laws unnecessary. [90]

The SEC strongly disagreed with the court's analysis, arguing among other points that only the most "traditional" loan notes or participations should fall outside the definition of "security." [91] The SEC distinguished the Security Pacific loan participation program in *Banco Espanol* from a traditional program on the basis of the number and type of participants, the sales approach and the availability of information regarding the borrower. It stated that in a traditional program there would be only a small number of financial institutions as participants, financial institutions would become participants through referrals from the initiating bank's loan department and all information available to the initiating bank would be made available to participants. In the Security Pacific program, on the other hand, there were large numbers of diverse participants (including mutual funds and money managers), potential participants were contacted through "cold calls" from a sales desk and, although the initiating bank provided publicly available information to participants on request, it withheld nonpublic information from participants.

The participations sold under the Security Pacific program resemble commercial paper more than they resemble traditional loan participations in the way they were marketed and in the group of investors targeted. Commercial paper is well recognized as a security under the Securities Act. [92] Many other banks have

p. 12-22

p. 12-23

loan participation programs similar to Security Pacific's [93] and, at least in the Second Circuit, investors are now in the anomalous position that they are protected by the fraud provisions of the securities laws when they buy commercial paper but are not so protected when they buy notes that are economically virtually identical to commercial paper from commercial banks. [94]

Other courts may disagree with the Second Circuit's *Banco Espanol* analysis that loan derivative products such as loan participations are not securities under *Reves*. [95] It is questionable whether such loan derivative products have a family resemblance to any of the instruments in the family resemblance test's list of exceptions to the definition of a security. And under the four additional standards articulated by the Supreme Court in *Reves*, some of these instruments may not escape categorization as securities.

First, it may be difficult to prove that the motivations of the buyer are for a "commercial" rather than an "investment" purpose, especially if not all of the participants are financial institutions.

Second, if the documentation for the loan derivative product is standardized and the product is offered to a large number of prospective investors without restrictions on transfer (both within and outside the commercial banking

p. 12-23
p. 12-24

community), it may be difficult to prove that there is no "common trading market." [96]

Third, it will be difficult to predict whether the loan derivative products will be viewed as securities by nonbank investors because this view is a subjective one.

Fourth, these instruments are not federally insured and may not be covered by some other regulatory scheme that could obviate the need for the protection of the securities laws. [97]

Finally, the transactions may appear to a court more like repackaging of the loan, which, as discussed below, is thought to involve the sale of a security separate from the underlying loan itself.

In addition, loan participations that do not convey a beneficial interest in the underlying loan may be regarded as a swap or security-based swap under the Dodd-Frank Act. [98]

[f] Options on Securities and the Status of Swaps as "Securities"

[i] *Introduction*

[ii] *Background*

In contrast to certain other jurisdictions, the fundamental differences in approach to the regulation of securities, futures contracts, over-the-counter ("OTC") derivatives, banking products and insurance products in the United States have made the categorization of new financial instruments a prerequisite to the evaluation of the regulatory consequences of transacting in them, including which regulator has regulatory authority over a particular financial instrument.

The two principal U.S. regimes of historical significance are the regulation of securities under the U.S. securities laws and the regulation of futures contracts under the Commodity Exchange Act ("CEA"). [98.1] These regimes fundamentally

p. 12-24
p. 12-25

differ in structure, approach and regulatory objective. Whether, and the extent to which, an instrument is subject to one regime or the other (a security, subject to regulation under the U.S. securities laws, a futures contract subject to regulation under the CEA, or both) has historically determined whether, and the circumstances under which, the instrument may be offered, sold or entered into in the United States or to or with U.S. persons. Title VII of the Dodd-Frank Act, which created new regulatory categories for "swaps" (subject to regulation under the CEA), "security-based swaps" (subject to regulation under the U.S. securities laws) and "mixed swaps" (subject to regulation under both the CEA and the U.S. securities laws), has further complicated the determination of the regulatory consequences of financial instruments categorization. [98.2]

As described below, over the years these regulatory regimes have applied to various extents to (i) derivatives referencing securities or securities indices, and (ii) securities products (such as structured notes) embedding exposure to non-securities reference assets or measures.

[iii] *The 1974 Amendments to the CEA*

Prior to 1974, the differences in regulatory schemes applicable to securities, on the one hand, and futures contracts, on the other hand, had no appreciable effect on the U.S. capital markets. In 1974, Congress, through an amendment to the CEA (the "1974 Amendments"), granted the CFTC exclusive jurisdiction over financial futures and options on certain financial interests (in addition to the agricultural commodities traditionally regulated under the CEA). [98.3] The expanded scope of the CEA, together with the proliferation of derivative financial instruments, gave rise to regulatory problems relating to whether the SEC or CFTC could properly exercise regulatory authority over a particular instrument, including whether the CEA applied to derivative or hybrid

p. 12-25

p. 12-26

instruments that were not contemplated at the time of the 1974 Amendments. The determination that the CEA applies to an instrument has historically been significant because the exclusive jurisdiction provision of the CEA may preempt regulatory regimes that otherwise would be applicable, such as the U.S. securities laws. In addition, the CEA generally prohibits transactions in futures contracts (and prior to the Dodd-Frank Act, prohibited transactions in commodity options) that are not entered into on or subject to the rules of CFTC-regulated or non-U.S. trading facilities (so-called "off-exchange transactions"), absent a specified exemption. As the securities and financial derivatives markets developed into a more integrated, global market, the CFTC's exclusive jurisdiction (and the limited exemptions therefrom) and the uncertain division of regulatory authority between the SEC and CFTC created serious problems for issuers, market professionals and the U.S. capital markets generally. The breadth of the CFTC's exclusive jurisdiction under the 1974 Amendments resulted in a number of disputes between the CFTC and the SEC.

[iv] *The Shad-Johnson Accord*

Shortly after the 1974 Amendments became effective, the SEC asserted that such amendments had not deprived the SEC of jurisdiction over a futures contract that involved a "security" within the meaning of the Securities Act or the Exchange Act, even if the futures contract was traded on a contract market (*i.e.*, a futures exchange regulated by the CFTC). In 1981, the SEC and the CFTC met to resolve their differences, and in 1983 Congress codified the resulting jurisdictional accord (the "Shad-Johnson Accord"). [98.4]

As a result of the Shad-Johnson Accord, the CFTC retained jurisdiction over: (i) options on all commodities other than securities, (ii) futures contracts and options on futures contracts, including futures contracts and options on futures contracts on permitted securities indices, foreign currencies and permitted individual exempt securities (*e.g.*, U.S. government and agency securities), [98.5] and (iii) futures contracts, options on futures contracts and options (other than options traded on a national securities exchange) on foreign currencies. [98.6] The Shad-Johnson Accord required any securities index or group of securities underlying a futures contract be broad-based in order for the CFTC to have exclusive jurisdiction over that futures contract, and mandated that the SEC and

p. 12-26

p. 12-27

CFTC cooperate in determining, upon application by a contract market, whether particular stock index futures contracts met that test. [98.7] Futures on individual nonexempt securities (other than as referenced above) and narrow-based indices of such securities were prohibited. The SEC retained jurisdiction over (i) options on securities and securities indices (whether or not broad-based), [98.8] (ii) options on foreign currencies traded on a

U.S. national securities exchange and (iii) the offer and sale of securities issued by commodity pools. [98.9]

The Shad-Johnson Accord did not, however, completely settle jurisdictional disputes between the CFTC and the SEC. The increasing prevalence in the capital markets of hybrid instruments combining features of securities and derivative instruments [98.10] and OTC derivatives linked to the value of a security or a commodity reignited the debate over the jurisdiction of the CFTC. [98.11]

[v] *The Commodity Futures Modernization Act of 2000*

The Commodity Futures Modernization Act of 2000 ("CFMA") [98.12] addressed or eliminated the most significant uncertainties as to the applicability of the CEA under prior law by creating broad, clearly defined exclusions and exemptions from SEC and CFTC regulation for a wide range of OTC derivatives between qualifying counterparties and hybrid instruments indexed to the value, level or rate of a commodity, including OTC derivatives and hybrid instruments indexed to securities. Importantly, the CFMA eliminated the prohibitions created by the Shad-Johnson Accord by establishing a regulatory framework for the trading of futures contracts on individual nonexempt securities and narrow-based indices of such securities. Thus, while the CFMA did not address certain fundamental definitional issues, such as the futures contract definition, for a time the

p. 12-27

p. 12-28

CFMA's broad exclusions and exemptive provisions provided practical relief for the capital markets and OTC derivatives markets.

[vi] *The Dodd-Frank Act Wall Street Reform and Consumer Protection Act*

In response to views that the unregulated nature of the OTC derivatives market contributed to the 2007-2008 financial crisis, the Dodd-Frank Act [98.13] repealed the CFMA's exclusions for OTC derivatives from substantive regulation under the CEA and the U.S. securities laws. In their place, Title VII of the Dodd-Frank Act established a regime of substantially parallel regulation for swaps involving single nonexempt securities, loans and narrow-based security indices ("security-based swaps") [98.14]—to be administered by the SEC—and swaps involving other financial interests and commodities ("swaps")—to be administered by the CFTC. At the same time, Title VII of the Dodd Frank Act preserved (and excluded from regulation as swaps or security-based swaps) those categories of derivatives based on or referencing securities that were already subject to regulation as "securities" under the U.S. securities laws, including: securities options; [98.15] security future products; [98.16] contracts for the purchase or sale of a security on a fixed, variable or contingent basis, such as a forward contract providing for the deferred physical delivery of securities; [98.17] and notes, bonds or other evidences of indebtedness regulated as securities. [98.18]

[vii] *Options on Securities*

p. 12-28

p. 12-29

[A] Generally

Any put, call, straddle, option, or privilege on any security, certificate of deposit or group or index of securities (including any interest therein or based on the value thereof) is expressly included in the definition of "security." [98.19] Any such instrument is also generally excluded from regulation under the CEA [98.20] and is expressly excluded from the Dodd-Frank Act's definition of "swap" [98.21] (and, as a result, "security-based swap"). As a result, options on securities, unlike futures contracts, swaps or security-based swaps, are not subject to exchange-trading or clearing requirements under the CEA or the Exchange Act. Accordingly, the question of whether an instrument should be respected as an option on a security, rather than a futures contract, swap or security-based swap, is critical. This is particularly the case for derivatives based on broad-based security indices because the determination of whether such a derivative constitutes an option on securities, on the one hand, or a futures contract or swap, on the other, also determines whether it is subject to SEC or CFTC jurisdiction.

Several courts (and the agencies) have had occasion to evaluate whether certain derivatives constituted options on securities. Although some of those precedents pre-date the CFMA and the Dodd-Frank Act, their analysis remains relevant in distinguishing options on securities from futures contracts, swaps and security-based swaps.

In *Procter & Gamble*, [98.22] the U.S. District Court for the Southern District of Ohio analyzed an interest rate swap—referred to as the "5s/30s swap" —pursuant to which Bankers Trust ("BT") agreed to pay the plaintiff, Procter & Gamble ("P&G"), for five years a specified percentage on a notional amount of $200 million, in exchange for P&G's agreement to pay BT a floating rate of interest tied to the commercial paper rate plus, after the first six months, a spread that was to be based on the then-prevailing five-year constant maturity U.S. Treasury yield and the price of 30-year U.S. Treasury bonds. [98.23] When interest rates

p. 12-29

p. 12-30

in the United States and Germany rose substantially, putting P&G's position significantly "out-of-the-money," P&G unwound the swap and brought suit alleging, among other claims, securities fraud.

The threshold question for the court in considering the claim of securities fraud was whether the "5s/30s swap" was a security for purposes of the federal securities laws. As part of its analysis, the court considered whether the swap was an option on securities. [98.24] Five-year notes and 30-year Treasuries are securities; therefore, P&G argued, the "5s/30s swap" was an option on securities.

p. 12-30

p. 12-31

According to the court, however, because the optionee had no right to exercise an option or take possession of any securities, the swap could not be regarded as an option. [98.25]

This element of the court's ruling in *Procter & Gamble* departs from an earlier administrative decision by the SEC involving a swap that had some similarities to the "5s/30s swap." In *In re BT Securities Corp.* ("*Gibson*"), [98.26] Gibson Greetings, Inc. ("Gibson Greetings") entered into what was called a "Treasury-Linked Swap" with BT Securities Corporation ("BT Securities") in order to hedge against losses under another swap transaction. Under this agreement, Gibson Greetings was to pay to BT Securities a variable rate on a notional amount and was to receive that same variable rate plus a fixed spread on the same notional amount. This structure provided, in substance, for nothing more than a payment of a fixed amount, the spread, by BT Securities to Gibson Greetings. At maturity, Gibson Greetings was to pay the notional amount and was to receive the lesser of (i) 102% of the notional amount or (ii) an amount calculated

p. 12-31

p. 12-32

based on a formula whose value depended on the spread between a 30-year Treasury security and the average of the bid and offered yields of a two-year Treasury note. Although the transaction was in the form of a bilateral swap agreement, the SEC, presumably looking through the form to the economic substance of the transaction, which lacked bilateral exposure, characterized this transaction as essentially a cash-settled put option, written by Gibson Greetings, on a group or index of government securities. [98.27] Such put options are among those instruments listed in the definition of "security" and, accordingly, the Treasury-Linked Swap was found to be subject to the federal securities laws. [98.28]

The swap agreements in *Procter & Gamble* and in *Gibson* can be distinguished on their facts. As noted above, the payment obligations in the *Gibson* swap resulted not in bilateral executory payment obligations, but in an obligation of one party to make a fixed payment to the other that is not dissimilar to a delayed payment option premium. Moreover, it was the aggregate of the cash flows under the "swap" in *Gibson* that was characterized by the SEC as a put option. By contrast, the *Procter & Gamble* swap involved an option-like payment feature embedded in an otherwise bilateral executory interest rate swap. The dicta in the court's decision in *Procter & Gamble* and the SEC's administrative decision in *Gibson* cannot be reconciled, however, insofar as the court in *Procter & Gamble* opined that an option on a security, in order to be a security, must involve the actual right (not subject to automatic exercise) to purchase or sell a security. [98.29]

p. 12-32

p. 12-33

In *Caiola v. Citibank* ("*Caiola*"), [98.30] the U.S. Court of Appeals for the Second Circuit, reversing a decision of the district court [98.31] that relied in large part on the conclusion expressed in *Procter & Gamble*, held that a cash-settled option on a security is a security. Caiola had alleged that Citibank violated § 10(b) of the Exchange Act in connection with a series of synthetic securities trading arrangements (essentially forms of equity swaps and cash-settled options) by, among other actions, shifting from a "delta hedging" strategy to a strategy in which Citibank purchased and held the securities underlying Caiola's synthetic positions and thereby affecting the value of the underlying securities and of Caiola's synthetic positions. The transactions at issue were structured to permit Caiola to replicate certain economic characteristics of positions in Phillip Morris stock and listed options. Under the equity swap arrangements, Caiola was entitled to receive from Citibank the amount of appreciation in the underlying security (as well as any dividends payable with respect to that security) but was required to pay to Citibank the amount of any depreciation in the value of the underlying security, along with "interest" on the notional value of the contract.

As in *Procter & Gamble*, a threshold question in assessing the securities fraud claim was whether the transactions involved the purchase or sale of a security. Caiola raised two arguments in this regard: (i) that Citibank was acting as his agent in effecting transactions in the underlying security as part of its hedging activity and (ii) that the synthetic trading arrangements were themselves securities. [98.32]

The district court had dismissed Caiola's claims on the grounds that, among other reasons, (i) he lacked standing because he was not a purchaser or seller of securities and (ii) his synthetic transactions were not "securities" as defined in the Exchange Act (relying on the conclusion in *Procter & Gamble*).

With respect to Caiola's first claim, the Second Circuit found that Caiola's complaint sufficiently alleged that Citibank had acted as agent for Caiola's account in its hedging transactions in the underlying security.

With respect to the question of whether the synthetic transactions were themselves securities, the Second Circuit found that Caiola's cash-settled OTC options on the value of a security were securities under § 3(a)(10) of the Exchange Act. The court rejected the reasoning in *Procter & Gamble*, finding that the language of § 3(a)(10) covered an option based on the value of a single

p. 12-33

p. 12-34

security as well as a group or index of securities and cash-settled as well as physically-settled options. [98.33]

[viii] *Treatment of Collars and Deep-in-the-Money Options; Distinction Between Equity Swaps, Equity Futures and Equity Options*

Another set of issues involves determining when a transaction documented as an equity collar [98.34] or deep-in-the-money option [98.35] may be subject to recharacterization as a swap or security-based swap (or a futures contract) or, conversely, when the transfer of less than all of the price risk under a cash-settled

p. 12-34

p. 12-35

swap or security-based swap may subject the swap or security-based swap to potential recharacterization as one or more securities options.

There is no dispositive precedent as to the point at which the two exercise levels of a collar are sufficiently close that the collar would not be viewed as a pair of options but would instead be viewed as a swap or security-based swap (or a futures contract). Conversely, there is no dispositive precedent as to the circumstances, if any, in which the two exercise levels of a collar are sufficiently far apart that the collar may be viewed as a pair of options, rather than as a swap or security-based swap (or a futures contract). [98.36]

Similarly, there is no dispositive precedent as to the point at which an "option" is sufficiently deep-in-the-money to raise the possibility that it would not be respected as a securities option and instead be viewed as a swap or security-based swap (or a futures contract). Conversely, there is no dispositive precedent as to the point, if any, at which a swap or security-based swap has a sufficiently option-like payout profile to raise the possibility that it may be viewed as a securities option that is excluded from regulation as a swap or security-based swap.

Applicable securities and commodities law precedents have consistently purported to categorize instruments based on the underlying economic substance of the particular transactions in question and, while not necessarily disregarding the form of a transaction entirely, have rejected the proposition that form should be dispositive. [98.37]

Precedents addressing whether a deep-in-the-money option should be respected as an option have consistently looked to whether the exercise price of the option was so low as to make exercise of the option a virtual certainty as a matter of rational economic behavior. [98.38] (An analogous approach, in the context

p. 12-35

p. 12-36

of a collar, would be to look to whether the exercise prices are so close together as to make exercise of one of the component options a virtual certainty as a matter of rational economic behavior.)

Despite this consistent body of analogous precedent, [98.39] the CFTC staff, in the context of distinguishing between futures contracts and options, appears to have ignored this approach and to have adopted an approach implying a significantly narrower view of a *bona fide* option and a concomitantly broader view of the CFTC's potential jurisdictional authority under the CEA. [98.40]

Specifically, in a 1994 interpretive letter, [98.41] CFTC staff was requested to grant no-action relief for options in which the exercise price would, at issuance, be set in-the-money by an amount to be determined using a formula based primarily on a measure of the "annualized standard deviation of the natural logarithm of the daily returns on an investment in the stock" over the preceding year. [98.42] According to the request, this formula would have resulted in a "reasonable possibility" that the options would expire unexercised (*i.e.*, with the stock price out-of-the-money). [98.43]

p. 12-36

p. 12-37

CFTC staff declined to grant relief on the basis requested and instead limited the amount that the options would be permitted to be in-the-money at the time of listing by requiring, in the case of a call option, that the exercise price of the option be set at a level no lower than the level resulting from rounding the then prevailing stock price downward to the nearest $2.50 increment, in the case of stocks priced below $25, or to the nearest $5.00 increment, in the case of stocks priced above $25. According to CFTC staff, the resulting options would have "predominantly option-like attributes rather than futures-like attributes because they should reflect a return based on one-way indexing as opposed to two-way indexing." [98.44]

Although the CFTC staff's no-action guidelines are both clear and simple to apply, the staff response did not provide a rationale or basis for its conclusion that a "predominance" test is the appropriate standard for determining whether an in-the-money option should be respected as an option. Nor did CFTC staff explain why the fundamental attribute of an option is "one-way" indexation. Finally, it is not clear from the CFTC staff’s analysis how the limitations imposed in the interpretive letter by virtue of the rounding guidelines result in indexation that is "predominantly" option-like—particularly in light of the fact that the guidelines do not appear to take account of considerations such as the term of the option, the amount of the premium for the option (in relation to the price of the underlying stock), the probability at issuance that the option will expire unexercised, or the price behavior (*e.g.*, volatility) of the underlying stock. For these and related considerations, the "likelihood of exercise" analysis employed in the other precedents cited above appears more persuasive than the approach adopted by CFTC staff.

[ix] *Status of Swaps as “Securities”*

Prior to the enactment of the CFMA, the status of swap agreements and similar derivatives linked to securities under the U.S. securities laws was subject

p. 12-37
p. 12-38

to some uncertainty. Swaps and such other derivatives developed long after the enactment of the definitions of "security" and do not readily fit into any of the categories of instruments enumerated in the definitions.

The first attempt to resolve these issues statutorily came in the CFMA, which addressed certain jurisdictional questions by amending the Acts and the GLB Act to exclude certain qualifying "swap agreements" from the definition of security for purposes of those statutes. Those amendments also provided that qualifying swap agreements relating to securities, while not securities themselves, remained subject to the fraud, manipulation and insider trading prohibitions under those Acts.

In the Dodd-Frank Act, however, Congress repealed the CFMA exclusions and instead categorized a wide range of swaps and other derivatives relating to securities as security-based swaps. [98.45] In addition, the Dodd-Frank Act amended the definition of "security" in the Acts to include any "security-based swap." At the same time, the Dodd-Frank Act categorized certain swaps linked to securities both as "swaps" subject to plenary CFTC jurisdiction and also as "security-based swap agreements" subject to SEC antifraud jurisdiction, but not defined as "securities." Still other swap transactions are exclusively subject to CFTC jurisdiction. Finally, as noted above, options on securities are separately regulated as "securities," and excluded from regulation as a "swap" or "security-based swap."

[x] *Swaps on Single Nonexempt Securities and Narrow-Based Securities Indices*

The Dodd-Frank Act defines any swap based on a single nonexempt security or loan or based on a narrow-based security index as a "security-based swap." [98.46] It then defines any security-based swap as a security. [98.47] As a result, many instruments previously excluded by the CFMA from substantive regulation by the SEC are subject to the full range of federal securities laws and regulations and self-regulatory organization rules applicable to securities, although the SEC and FINRA have granted interim relief for security-based swaps. [98.48]

[xi] *Swaps on Single Exempt Securities and Broad-Based Securities Indices*

p. 12-38
p. 12-39

The Dodd-Frank Act defines any swap based on a single exempt security (other than a municipal security) or based on a broad-based security index as a "swap." Swaps are subject to regulation by the CFTC and are not defined as "securities." However, the Dodd-Frank Act also defined swaps based on a single exempt security (other than a municipal security) or based on a broad-based security index as "security-based swap agreements," which are subject to SEC antifraud and antimanipulation jurisdiction.

[xii] *Other Swaps*

Swaps based on interests or measures, such as interest rate swaps or swaps based on nonfinancial interests, are categorized under the Dodd-Frank Act as "swaps." They are also subject to exclusive CFTC jurisdiction if traded on a designated contract market ("DCM") or swap execution facility ("SEF"). [98.49] As a result, such instruments should not be subject to SEC jurisdiction or regulation as securities.

[g] Other Instruments

The cases discussed in this section demonstrate that the definitions of "security" in the Acts enumerate instruments that would not ordinarily be considered securities when examined in their commercial contexts. It is also true that instruments that are not enumerated may nonetheless be securities subject to the Acts.

Claimants (including the SEC) wishing to bring a non-enumerated instrument within the definitions have generally argued that the instrument shares so many characteristics with an enumerated security that it should be considered equivalent to the enumerated security. Where the non-enumerated instrument is not similar to an enumerated security, claimants have often argued instead that the instrument should be treated as an "investment contract" or an "instrument commonly known as a security" (terms that are often used together as catchall provisions in the definitions). In each case, the relevant factors in the analysis may include the manner of the offering, type of investor audience, manner of promotion, expectation of the parties and nature of the return on the investment. For example, as is demonstrated in the cases discussed above, an instrument is more likely to be considered a security if it is marketed to the general public, its purchasers are passive investors without expertise in the particular business area

p. 12-39

p. 12-40

involved, [99] the parties or the public would generally consider the instrument a security or, with respect to investment contracts, the return on the investment is contingent on the profits of the enterprise.

In recent years, a host of new instruments has been developed that represent "repackaged" underlying instruments. The underlying instruments may not be securities when examined individually. However, a separate analysis of the new instrument is necessary.

For example, many originators of residential mortgage loans have repackaged their mortgage loans as mortgage-backed securities. Typically, ownership of a pool of mortgages is transferred to a trust that issues instruments evidencing a right to receive a proportional share of future payments on the pool of loans. The loan originator thus transfers the risk of loss on the loans and earns cash from the sale of the instruments. In addition, the originator often retains a contractual right to "service" the loans (*i.e.*, collect payments, run foreclosure proceedings, *etc.*), for which it receives a fee. Under *Reves*, the underlying mortgage loans are not securities. [100] However, instruments evidencing interests in a pool of mortgage loans typically are considered securities under an "investment contract" analysis because investors anticipate a profit that is based at least partially on the efforts of the originator and servicer of the loans. [101]

Footnotes

1 § 2(a)(1) of the Securities Act.

2 § 3(a)(10) of the Exchange Act.

3 In addition to listing categories of instruments that are securities, both Acts list "exempted securities." Exempted securities listed in the Securities Act include *inter alia* securities issued or guaranteed by the United States, any state or any political subdivision of a state, certain securities issued by banks or savings and loan associations, certain short-term commercial paper, certain insurance company securities and certain security futures. *See* § 3 of the Securities Act. Security futures are generally defined as futures contracts on individual nonexempt securities or narrow-based groups or indices thereof. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.16[5][c]. Security futures are exempted securities for purposes of the Securities Act if they are listed on a national securities exchange or national securities association and are cleared by a registered securities clearing agency or derivatives clearing organization. § 3(a)(14) of the Securities Act. Exempted securities listed in the Exchange Act include *inter alia* certain securities issued or guaranteed by the United States, municipal securities (a term that includes certain securities issued or guaranteed by a state or an agency, instrumentality or political subdivision of a state) and certain insurance company securities. *See* § 3(a)(12) of the Exchange Act. Notwithstanding their categorization as "exempted securities," these securities generally may not be exempt from certain provisions of the related Act. For example, municipal securities that are exempted securities under the Exchange Act are not exempt from certain provisions of that Act relating to broker-dealer registration. *See* § 3(a)(12)(B)(ii) of the Exchange Act.

4 *Marine Bank v. Weaver*, 455 U.S. 551, 555 n.3 (1982) (citing *United Housing Foundation, Inc. v. Forman*, 421 U.S. 837, 847 n.12 (1975). *But see Financial Security Assurance, Inc. v. Stephens, Inc.*, 500 F.3d 1276 (11 Cir. 2007) (rejecting the standing of an insurer of municipal bonds that became the owner of the bonds upon a default by the issuer to bring a Rule 10b-5 claim in part because guarantees are not within the definition of "security" in § 3(a)(10) of the Exchange Act).

5 *See* § 2(a)(36) of the Investment Company Act and § 202(a)(18) of the Investment Advisers Act; *see, e.g.*, CAL. CORP. CODE § 25019 and DEL. CODE ANN. tit. 6, § 73-103(20).

6 In fact, although bank certificates of deposit were effectively excluded from the Securities Act's definition of security in *Marine Bank v. Weaver*, 455 U.S. 551 (1982), Congress amended the Investment Company Act's definition in 1982 *inter alia* to make clear that such obligations would be included. Act of October 13, 1982, Pub. L. No. 97-303, § 5, 96 Stat. 1409 (1982).

7 For example, the Commodity Futures Modernization Act of 2000 ("CFMA") expanded the definitions to expressly include any "security future." *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.16. More recently, § 761(a) of the Dodd-Frank Act has expanded the definition to include any "security-based swap," which had formerly been excluded from the definition of "security" by the CFMA. In addition, the SEC has in the past called for legislative amendment of the definition of "security" to include loan participations under certain circumstances. SEC TODAY, Vol. 94-190, Oct. 5, 1994. Because the Commodity Exchange Act ("CEA") vests the Commodity Futures Trading Commission ("CFTC") (and not the SEC) with exclusive jurisdiction over certain commodity options, such options are not securities. These commodity options, as well as other instruments that may be subject to the commodities laws, are discussed more fully in U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.17[2].

8 It is fair to say that participants in financial transactions in the United States assert often self-serving interpretations of the definitions that may vary over the course of a transaction and from transaction to transaction. Thus, many transactions have been characterized in complaints as the purchase and sale of securities, requiring the courts to decide what types of instruments should be included in the Acts' definitions of "security."

9 *Marine Bank v. Weaver*, 455 U.S. 551, 559 (1982). The U.S. Supreme Court has further articulated this congressional intent as a balance between the following two concerns: Congress intentionally defined "security" in broad and general terms because it intended its definition of "security" to be "sufficiently broad to encompass virtually any instrument that might be sold as an investment." *Reves v. Ernst & Young*, 494 U.S. 56, 61 (1990), *reh'g denied*, 494 U.S. 1092 (1990). However, Congress could not have intended its definitions to be all-inclusive because it did not want the Acts to "provide a broad federal remedy for all fraud." *Reves v. Ernst & Young*, 494 U.S. 56, 61 (1990), *reh'g denied*, 494 U.S. 1092 (1990) (quoting *Marine Bank v. Weaver*, 455 U.S. 551, 556 (1982)).

10 The Supreme Court has stated, for example, that it would be inappropriate to subject a "note" to the same analysis under which it had determined that an "investment contract" was a security in *SEC v. W.J. Howey Co.*, 328 U.S. 293 (1946). *Reves v. Ernst & Young*, 494 U.S. 56, 64 (1990), *reh’g denied*, 494 U.S. 1092 (1990).

11 *Reves v. Ernst & Young*, 494 U.S. 56 (1990), *reh’g denied*, 494 U.S. 1092 (1990).

12 *See, e.g.*, *Landreth Timber Co. v. Landreth*, 471 U.S. 681, 694 (1985) ("‘[N]ote’ may now be viewed as a relatively broad term that encompasses instruments with widely varying characteristics, depending on whether issued in a consumer context, as commercial paper, or in some other investment context.").

13 *See, e.g.*, *Arthur Young & Co. v. Reves*, 856 F.2d 52, 54 (8th Cir. 1988), *rev'd sub nom. Reves v. Ernst & Young*, 494 U.S. 56, *reh'g denied*, 494 U.S. 1092 (1990). Investment contracts are discussed in § 12.01[2][d].

14 *See, e.g.*, *Futura Development Corp. v. Centex Corp.*, 761 F.2d 33, 40–41 (1st Cir. 1985), *cert. denied*, 474 U.S. 850 (1985). The Supreme Court noted in *Reves* that it regarded this "investment versus commercial" test as merely another way of "formulating the same general approach" as the "family resemblance" test it adopted. *Reves v. Ernst & Young*, 494 U.S. 56, 64 (1990), *reh’g denied*, 494 U.S. 1092 (1990).

15 *See, e.g.*, *Exchange National Bank of Chicago v. Touche Ross & Co.*, 544 F.2d 1126, 1137 (2d Cir. 1976); *Chemical Bank v. Arthur Andersen & Co.*, 726 F.2d 930 (2d Cir. 1984), *cert. denied*, 469 U.S. 884 (1984) (modifying *Exchange National Bank holding*).

16 *Reves v. Ernst & Young*, 494 U.S. 56, 65 (1990), *reh’g denied*, 494 U.S. 1092 (1990) (adopting the list of

notes identified by the Second Circuit as not being securities in *Exchange National Bank of Chicago v. Touche Ross & Co.*, 544 F.2d 1126, 1137 (2d Cir. 1976) and *Chemical Bank v. Arthur Andersen & Co.*, 726 F.2d 930 (2d Cir. 1984)) (internal quotation marks and citations omitted).

17 *Reves v. Ernst & Young*, 494 U.S. 56, 66–67 (1990), *reh'g denied*, 494 U.S. 1092 (1990) (internal quotation marks and citations omitted).

18 *Reves v. Ernst & Young*, 494 U.S. 56, 67 (1990), *reh'g denied*, 494 U.S. 1092 (1990); *see also Stoiber v. SEC*, 161 F.3d 745 (D.C. Cir. 1998) (finding certain promissory notes to be securities under the *Reves* test despite their distribution to a limited number of individuals and the absence of any secondary trading), *cert. denied*, 526 U.S. 1069 (1999).

19 *Reves v. Ernst & Young*, 494 U.S. 56, 58–59 (1990), *reh'g denied*, 494 U.S. 1092 (1990).

20 *Reves v. Ernst & Young*, 494 U.S. 56, 67–68 (1990), *reh'g denied*, 494 U.S. 1092 (1990); *see also SEC v. Smart*, No. 2:09-CV-00224 (DAK), 2011 WL 2297659 (D. Utah, June 8, 2011), *aff'd*, 678 F.3d 850 (10th Cir. 2012); *SEC v. Novus Technologies, LLC*, No. 2:07-CV-235-TC, 2010 WL 4180550 (D. Utah Oct. 20, 2010), *aff'd*, 732 F.3d 1151 (10th Cir. 2013) (each holding that instruments an issuer called "promissory notes" were securities under both the *Reves* and *Howey* tests).

21 *Reves v. Ernst & Young*, 494 U.S. 56, 67–68 (1990), *reh'g denied*, 494 U.S. 1092 (1990). *See also* § 12.01[2][d] for a discussion of "profits" in the context of notes.

22 *Reves v. Ernst & Young*, 494 U.S. 56, 68 (1990), *reh'g denied*, 494 U.S. 1092 (1990).

23 *Reves v. Ernst & Young*, 494 U.S. 56, 69 (1990), *reh'g denied*, 494 U.S. 1092 (1990).

24 *Reves v. Ernst & Young*, 494 U.S. 56, 69 (1990), *reh'g denied*, 494 U.S. 1092 (1990).

25 *Landreth Timber Co. v. Landreth*, 471 U.S. 681 (1985) ("*Landreth Timber*").

26 *Landreth Timber Co. v. Landreth*, 471 U.S. 681, 684–85 (1985).

27 *Landreth Timber Co. v. Landreth*, 471 U.S. 681, 687 (1985).

28 *Landreth Timber Co. v. Landreth*, 471 U.S. 681, 686 (1985) (citing *United Housing Foundation, Inc. v. Forman*, 421 U.S. 837, 851 (1975)). The Court emphasized that such "usual characteristics" were derived from common stock and that "[v]arious types of preferred stock may have different characteristics and still be covered by the Acts." *Landreth Timber Co. v. Landreth*, 471 U.S. 681, 686 n.2 (1985); *see also, Bass v. Janney Montgomery Scott, Inc.*, 210 F.3d 577 (6th Cir. 2000) (concluding that stock warrants received by an investor in exchange for bridge loans qualified as securities, regardless of the circumstances in which they changed hands); *cf. Wharf (Holdings) Ltd. v. United International Holdings, Inc.*, 532 U.S. 588 (2001) (assuming in an action under Rule 10b-5 under the Exchange Act, citing plaintiff's failure to challenge it on appeal, that an option to purchase stock on a cable television system was a "security"). In contrast, an instrument named "stock" that does not share the characteristics of common stock is not *per se* a security. The Supreme Court held in *United Housing Foundation, Inc. v. Forman*, 421 U.S. 837 (1975), that shares of stock in a government-subsidized cooperative apartment corporation were not securities. The shares lacked several characteristics of common stock: they did not carry the right to receive dividends upon an apportionment of profits, were not negotiable, could not be pledged or hypothecated, conferred no voting rights in proportion to the number of shares owned and could not appreciate in value. *See also Giuffre Organization Ltd. v. Euromotorsport Racing, Inc.*, 141 F.3d 1216 (7th Cir. 1998) (holding a "share of stock" in Championship Auto Racing Teams, Inc., not to be a security for purposes of the federal securities laws because the linkage between investment and participation in automobile racing competition resulted in the share being more similar to a franchise than to an investment in corporate securities). Courts have also rejected the argument that equity interests similar to stock in certain respects, such as membership interests in limited liability companies or limited partnerships, constitute stock for purposes of the definition of security, while either leaving open the possibility that such interests may be investment contracts under appropriate circumstances, *see Robinson v. Glynn*, 349 F.3d 166 (4th Cir. 2003), or holding that such interests were investment contracts, *see Liberty Property Trust v. Republic Properties Corp.*, 577 F.3d 335 (D.C. Cir. 2009); *United States v. Leonard*, 529 F.3d 83 (2d Cir. 2008); *SEC v. Merchant Capital, LLC*, 483

F.3d 747 (11th Cir. 2007). *But see Haddad v. RAV Bah., Ltd.*, 240 F. App'x 821 (11th Cir. 2007) (holding that an interest may be considered a security where the agreement between the parties is titled "Shareholder's Agreement," discusses securities, and refers to holders of the interest as "stockholders").

29 Rule 10b-5 under the Exchange Act is discussed in § 11.04[2].

30 *Marine Bank v. Weaver*, 455 U.S. 551, 559 (1982); *see also Dubach v. Weitzel*, 135 F.3d 590, 592 (8th Cir. 1998) (applying *Marine Bank* to a certificate of deposit issued by a credit union). A certificate of deposit is a time deposit with a specific maturity evidenced by a certificate. Certificates of deposit issued by U.S. banks or savings and loan associations are usually federally insured. Many foreign certificates of deposit are also government insured.

31 *Marine Bank v. Weaver*, 455 U.S. 551, 553–54 (1982).

32 *Marine Bank v. Weaver*, 455 U.S. 551, 557–59 (1982).

33 *Marine Bank v. Weaver*, 455 U.S. 551, 560 n.11 (1982).

34 At that time, the federal insurance limit was $40,000. The face amount of the CD in *Marine Bank* was $50,000.

35 The Court in *Marine Bank* appeared to take some comfort in the 1980 Annual Report of the Federal Deposit Insurance Corporation ("FDIC"), which, according to the Court, stated that since inception of federal banking insurance, "nearly all depositors in failing banks insured by the FDIC have received payment in full, even payment for the portions of their deposits above the amount insured." *Marine Bank v. Weaver*, 455 U.S. 551, 558 (1982). The FDIC's 2009 Annual Report emphasized that even with the increase in bank failures in 2009, all insured deposits were paid, and depositors with account values in excess of the insurance limit nevertheless received $21 million in disbursements. 2009 Annual Report of the [FDIC] 46 (2010), *available at* http://www.fdic.gov/about/strategic/report/2009annualreport/AR09final.pdf. Similarly, all insured deposits were also paid in connection with bank failures in 2010, and depositors with account values in excess of the insurance limit received a total of $5 million. 2010 Annual Report Highlights of the [FDIC] (2011), *available at* http://www.fdic.gov/about/strategic/report/2010highlight/chpt1-03.html.

36 *See, e.g.*, *Wolf v. Banamex*, 739 F.2d 1458 (9th Cir. 1984), *cert. denied*, 469 U.S. 1108 (1985) ("*Banamex*"); *Tafflin v. Levitt*, 865 F.2d 595 (4th Cir. 1989); *contra Holloway v. Peat, Marwick, Mitchell & Co.*, 879 F.2d 772 (10th Cir. 1989), *vacated and remanded*, 494 U.S. 1014, *aff'd on reh'g*, 900 F.2d 1485 (10th Cir. 1990), *cert. denied*, 498 U.S. 958 (1990) ("*Holloway*").

37 *Wolf v. Banamex*, 739 F.2d 1458, 1463 (9th Cir. 1984), *cert. denied*, 469 U.S. 1108 (1985). *See generally* Randall W. Quinn, *After Reves v. Ernst & Young*, *When are Certificates of Deposit Notes Subject to Rule 10b-5 of the Securities Exchange Act?*, 46 BUS. LAW. 173 (Nov. 1990) ("*Quinn*").

38 *Tafflin v. Levitt*, 865 F.2d 595, 599 (4th Cir. 1989). Note also the discussion of *Gary Plastics Packaging Corp. v. Merrill Lynch, Pierce, Fenner & Smith, Inc*. at *infra* Note 46 and accompanying text, where the Second Circuit distinguished the facts of *Marine Bank* and held that the certificates of deposit at issue were securities because the court found them to be investment contracts entered into pursuant to a marketing program.

39 Quinn at 182, citing Brief for the SEC as Amicus Curiae, *Wolf v. Banamex*, 739 F.2d 1458 (9th Cir. 1984), *cert. denied*, 469 U.S. 1108 (1985), at 10. This article also notes that the SEC has sidestepped the issue of the interplay between *Marine Bank* and state regulation, stating that "[the SEC's] brief in *Holloway* argued that because Oklahoma trust company regulation was not as comprehensive as Oklahoma bank regulation, the court need not reach the question of whether state regulation might ever be sufficient to invoke the *Marine Bank* exclusion." Quinn at 182.

40 *SEC v. W.J. Howey Co.*, 328 U.S. 293 (1946) ("*Howey*").

41 *SEC v. W.J. Howey Co.*, 328 U.S. 293, 298–99 (1946).

42 In a case decided three years before *Howey*, the Court held that an investment scheme involving the assignment of oil leases and the drilling of test wells by the promoters was an investment contract under the Securities Act. *See SEC v. C. M. Joiner Leasing Corp.*, 320 U.S. 344 (1943).

43 *See, e.g., Matassarin v. Lynch*, 174 F.3d 549 (5th Cir. 1999), *reh'g en banc denied*, 189 F.3d 471 (1999), *cert. denied*, 528 U.S. 1116 (2000) (holding interests in an employee stock ownership plan not to be securities under the *Howey* test because the interest did not involve a voluntary investment choice); *Allen v. Lloyd's of London*, 94 F.3d 923 (4th Cir. 1996) (holding neither the initial investment by Lloyd's Names nor their interests under a Lloyd's settlement plan to restructure insurance underwriting interests to be securities under the *Howey* test); *Procter & Gamble Co. v. Bankers Trust Co.*, 925 F. Supp. 1270, 1282–83 (S.D. Ohio 1996) ("*Procter & Gamble*") (finding that two leveraged derivatives did not satisfy the *Howey* criteria and thus were not "investment contracts" or "instruments commonly known as securities"); *In re J.P. Jeanneret Associates, Inc.*, 769 F. Supp. 2d 340 (S.D.N.Y. 2011) (finding discretionary investment management contracts to be "securities" under the *Howey* test).

44 *SEC v. W.J. Howey Co.*, 328 U.S. 293, 295–96 (1946).

45 *SEC v. W.J. Howey Co.*, 328 U.S. 293, 300 (1946).

55 *SEC v. Edwards*, 540 U.S. 389, 394 (2004).

56 *SEC v. Edwards*, 540 U.S. 389, 395 (2004).

57 *SEC v. Edwards*, 540 U.S. 389, 397 (2004).

58 *Reves v. Ernst & Young*, 494 U.S. 56, 68 n.4 (1990), *reh’g denied*, 494 U.S. 1092 (1990).

59 *SEC v. Edwards*, 540 U.S. 389, 396–97 (2004).

60 *Robinson v. Glynn*, 349 F.3d 166 (4th Cir. 2003).

61 The court also rejected the argument that an LLC membership interest constituted stock. *See supra* Note 29.

62 *Robinson v. Glynn*, 349 F.3d 166, 170–71 (4th Cir. 2003).

63 *SEC v. Merchant Capital, LLC*, 483 F.3d 747 (11th Cir. 2007).

64 The Eleventh Circuit characterized registered limited liability partnerships as a "hybrid between general and limited partnerships." *SEC v. Merchant Capital, LLC*, 483 F.3d 747, 756 (11th Cir. 2007).

65 *SEC v. Merchant Capital, LLC*, 483 F.3d 747, 765–66 (11th Cir. 2007) (applying a test set forth in *Williamson v. Tucker*, 645 F.2d 404 (5th Cir. 1981), to determine when partnership interests are investment contracts); *see also United States v. Wetherald*, 636 F.3d 1315, 1326 (11th Cir. 2011) (relying on *Williamson v. Tucker* to hold that partnership interests were securities where investors in those interests had no industry experience, were not asked to vote on important decisions, sat on partnership committees that "were largely symbolic," had a "minimal" time commitment, "did not control disbursement of funds," were not consulted in filing a petition for bankruptcy and "had no say in the operations of the company").

66 *United States v. Leonard*, 529 F.3d 83 (2d Cir. 2008).

67 *United States v. Leonard*, 529 F.3d 83, 90–91 (2d Cir. 2008) (citing *SEC v. Merchant Capital, LLC*, 483 F.3d

747 (11th Cir. 2007); *Robinson v. Glynn*, 349 F.3d 166 (4th Cir. 2003); and *Williamson v. Tucker*, 645 F.2d 404 (5th Cir. 1981)). *Accord Affco Investments 2001 LLC v. Proskauer Rose L.L.P.*, 625 F.3d 185, 191 (5th Cir. 2010) (holding that LLC interests were securities because the investors who held them were "passive" and "depended—both in reality and according to their investment contracts—upon the efforts of others for their profits").

68 *SEC v. Life Partners, Inc.*, 87 F.3d 536 (D.C. Cir. 1996), *reh'g denied*, 102 F.3d 587 (D.C. Cir. 1996), *on remand*, 986 F. Supp. 644 (D.D.C. 1997).

69 Viatical settlement contracts are investment contracts in which the investor purchases an interest in the life insurance policy of a terminally ill individual, usually at a discount. Upon the death of the insured, the investor receives the proceeds of the insurance less certain costs and expenses. Viatical settlements first became increasingly common in the context of the AIDS epidemic.

70 *SEC v. Life Partners, Inc.*, 87 F.3d 536, 538 (D.C. Cir. 1996); *see also Steinhardt Group Inc. v. Citicorp*, 126 F.3d 144 (3d Cir. 1997) (holding an interest in a highly structured securitization transaction not to be a security under the *Howey* test because the investor retained "pervasive control" over the investment).

71 *SEC v. Life Partners, Inc.*, 87 F.3d 536, 539–40 (D.C. Cir. 1996).

72 *SEC v. Life Partners, Inc.*, 87 F.3d 536, 543 (D.C. Cir. 1996).

73 *SEC v. Life Partners, Inc.*, 87 F.3d 536, 543–44 (D.C. Cir. 1996).

74 *SEC v. Life Partners, Inc.*, 87 F.3d 536, 548 (D.C. Cir. 1996).

75 *SEC v. Life Partners, Inc.*, 87 F.3d 536, 549 (D.C. Cir. 1996). Significantly, the Eleventh Circuit and at least three federal district courts have declined to follow *Life Partners* and have held that viatical settlements are securities. *SEC v. Mutual Benefits*, 408 F.3d 737, 744. In *SEC v. Tyler*, No. A3:02-CV-0282-P, 2002 WL 32538418 (N.D. Tex. Feb. 21, 2002), the District Court for the Northern District of Texas distinguished *Life Partners* and held that the viatical settlements sold by the defendants were securities, based on the post-purchase efforts of the defendants to provide liquidity and despite the fact that many of the elderly purchasers were in fact unaware that they were buying viatical settlements or that the value of their investment derived in part from the defendants' post-purchase functions. Later, the District Court for the Northern District of Ohio observed in *Wuliger v. Christie*, 310 F. Supp. 2d 897 (N.D. Ohio 2004), that state courts in Arizona, Colorado, Indiana, Michigan and Ohio that had considered viatical settlements under their state securities laws had either rejected or distinguished *Life Partners*. The court found the reasoning in *Life Partners* unpersuasive, on the ground that "it is not the date of the viator's death which establishes the success of the investment but the selection by the promoter of the policy into which the investor's money is placed, based upon its expertise in assessing the viator's life expectancy and other variables, which drives the success of the investment." *Wuliger v. Christie*, 310 F. Supp. 2d 897, 907 (N.D. Ohio 2004). Accordingly, the court held the last prong of the *Howey* test to be satisfied. In 2013, the District Court for the Northern District of Illinois acknowledged recent challenges to the *Life Partners* holding and chose to adopt the Eleventh Circuit's reasoning in *Mutual Benefits*, holding that life settlements should be considered securities under federal and Illinois securities laws. *See Giger v. Ahmann*, Fed. Sec. L. Rep. (CCH) ¶ 97,773 (N.D. Ill. 2013). In 2015, the Texas Supreme Court held that viatical settlements do constitute securities under Texas securities laws, abrogating a prior decision by a Texas appellate court that had followed *Life Partners*. *See Life Partners, Inc. v. Arnold*, 464 S.W.3d 660 (Tex. 2015); *Griffitts v. Life Partners, Inc.*, No. 10-01-00271-CV, 2004 Tex. App. LEXIS 4844, 2004 WL 1178418 (Tex. Ct. App. May 26, 2004).

76 *Liberty Property Trust v. Republic Properties Corp.*, 577 F.3d 335 (D.C. Cir. 2009).

77 *Liberty Property Trust v. Republic Properties Corp.*, 577 F.3d 335, 337, 341 (D.C. Cir. 2009).

78 *Liberty Property Trust v. Republic Properties Corp.*, 577 F.3d 335, 341 (D.C. Cir. 2009); *see also Shirley v. JED Capital, LLC*, 724 F. Supp. 2d 904, 911–12 (N.D. Ill. 2010) (finding that LLC interests held by a 20% equity holder constituted an investment contract because another equity holder owned two-thirds of the LLC and served as its manager with veto power over any change in manager).

79 *Liberty Property Trust v. Republic Properties Corp.*, 577 F.3d 335, 341 (D.C. Cir. 2009).

80 *SEC v. Edwards*, 540 U.S. 389 (2004).

81 *But see* CFTC Order Exempting the Trading and Clearing of Certain Products Related to SPDR ® Gold Trust Shares, 73 Fed. Reg. 31,981 (June 5, 2008), and CFTC Exemptive Order for SPDR ® Gold Futures Contracts, Comm. Fut. L. Rep. (CCH) ¶ 30,863 (June 5, 2008) (implicitly questioning whether certain exchange-traded funds owning commodity interests satisfy the "efforts of others" prong of the *Howey* investment contract criteria).

82 In a loan participation, a single bank makes a loan and assigns interests in the loan to other financial institutions. However, there is no direct contractual relationship between the borrower and the other institutions. A syndication has a similar structure, but each institution is a direct lender with respect to its portion of the loan. Commercial banks sell loan participations, arrange syndicated loans and use various other loan derivative products (*e.g.*, the fractional assignment of pieces of loans) to diversify risk, improve liquidity or comply with capital requirements and lending limits.

83 *See, e.g.*, *Union Planters National Bank of Memphis v. Commercial Credit Business Loans, Inc.*, 651 F.2d 1174 (6th Cir. 1981), *cert. denied*, 454 U.S. 1124 (1981) ("*Union Planters*"). *Compare Steinhardt Group Inc. v. Citicorp*, 126 F.3d 144 (3d Cir. 1997) (holding that a securitization transaction did not constitute an investment contract because the investor had significant powers to control the business enterprise).

84 *See, e.g.*, *McVay v. W. Plains Service Corp.*, 823 F.2d 1395 (10th Cir. 1987).

85 *SEC v. Edwards*, 540 U.S. 389 (2004).

86 *Compare Union National Bank of Little Rock v. Farmers Bank*, 786 F.2d 881 (8th Cir. 1986) (holding that a fixed rate, short-term commercial note is not a security in part because there was no expectation of profit or capital appreciation) with *Southwest Investments I v. Midland Energy Co.*, 596 F. Supp. 219 (E.D. Mo. 1984) (holding that a contingent rate of return is expectation of profit under the *Howey* test).

Farmers Bank and similar cases turn on the underlying loan's being a normal commercial lending transaction. Therefore, loan participations not involving a normal commercial lending transaction (because, for example, the borrower is not creditworthy, there is inadequate collateral, returns on the loan are contingent on the borrower's profits, the loan participation trades at a steep discount (indicating that the "lender" probably seeks profits through increase in the resale value of the participation rather than from payment of interest on the loan)) or, where the lender is not institutional, may be investment contracts under *Howey*.

Even prior to *SEC v. Edwards*, 540 U.S. 389 (2004), plaintiffs could have argued that cases holding that a fixed rate of return fail to pass the investment contract test are no longer valid in light of the Supreme Court's statement in *Reves v. Ernst & Young*, 494 U.S. 56 (1990), *reh'g denied*, 494 U.S. 1092 (1990), that "profit" includes a "valuable return on an investment" and specifically includes interest. In *Reves*, the court had noted that it was appropriate for "profit" to be defined differently depending on whether an instrument is being analyzed as a "note" or an "investment contract." In *Edwards*, however, the Court rejected this prior statement. *See supra* Note 59 and accompanying text.

87 *Banco Espanol de Credito v. Security Pacific National Bank*, 973 F.2d 51 (2d Cir. 1992), *cert. denied*, 509 U.S. 903 (1993) ("*Banco Espanol*").

88 Brief of the SEC, *Amicus Curiae*, *Banco Espanol de Credito v. Security Pacific National Bank*, 973 F.2d 51 (2d Cir. 1992), *cert. denied*, 509 U.S. 903 (1993).

89 *Banco Espanol de Credito v. Security Pacific National Bank*, 973 F.2d 51, 55–56 (2d Cir. 1992), *cert. denied*, 509 U.S. 903 (1993).

90 *Banco Espanol de Credito v. Security Pacific National Bank*, 973 F.2d 51, 55 (2d Cir. 1992), *cert. denied*, 509 U.S. 903 (1993). The lower court opinion, 763 F. Supp. 36 (S.D.N.Y. 1991), which the Second Circuit affirmed, had also ruled that the participations were not investment contracts under the *Howey* test. The Second Circuit did not consider the investment contract analysis.

91 Brief of the SEC at 3, *Amicus Curiae, Banco Espanol de Credito v. Security Pacific National Bank*, 973 F.2d 51 (2d Cir. 1992), *cert. denied*, 509 U.S. 903 (1993).

92 Some commercial paper is exempt from the registration requirements of the Securities Act pursuant to § 3(a)(3) thereof, and sales of other commercial paper may be structured to be exempt from registration in reliance on the exemptions provided by § 4(2) of the Securities Act or Rule 144A thereunder. *See* § 3.05[3]. However, notwithstanding these exemptions from registration, commercial paper is a security under the Securities Act, and issuers and sellers of commercial paper are subject to the fraud provisions of the Securities Act. If loan participations sold under programs like Security Pacific's were treated as securities, the sales could also be structured to be exempt from registration under the Securities Act.

93 Since the mid-1980s, banks have been selling "loan notes" similar to those sold by Security Pacific in an effort to compete with short-term commercial paper that was being offered by investment banks at a lower cost than traditional bank financing.

94 In *Pollack v. Laidlaw Holdings, Inc.*, 27 F.3d 808 (2d Cir. 1994), *cert. denied*, 513 U.S. 963 (1994), the Second Circuit applied the *Reves* test to mortgage participations that were sold to certain "unsophisticated investors" by way of a discretionary account. The court held that the instruments were securities, noting that (i) although it may have been a close question as to whether the sellers' motivation was accurately characterized as investment rather than commercial, the buyers' motivation was clearly investment-related, (ii) the broad-based, unrestricted nature of the sales of the instruments distinguished this case from *Banco Espanol* and supported a finding that the instruments were subject to the federal securities laws, (iii) the buyers could reasonably expect that the instruments were securities, particularly in light of their instructions to the broker for their discretionary account to make conservative, low-risk investments, most of which consisted of investment-grade bonds, and (iv) there were no other factors that reduced the risks inherent in the instruments, such as independent regulation or collateral. *Pollack v. Laidlaw Holdings, Inc.*, 27 F.3d 808, 812–15 (2d Cir. 1994).

95 In fact, the court in *Banco Espanol* recognized that some loan participations may be securities, stating explicitly that "even if an underlying instrument is not a security, the manner in which participations in that instrument are used, pooled, or marketed might establish that such participations are securities." *Banco Espanol de Credito v. Security Pacific National Bank*, 973 F.2d 51, 56 (2d Cir. 1992), *cert. denied*, 509 U.S. 903 (1993) (citing *Gary Plastic*).

96 *See, e.g., Realtek Industries, Inc. v. Nomura Securities*, 939 F. Supp. 572 (N.D. Ohio 1996) (holding that, because the parties expressly intended to repackage mortgage loans and issue certificates to the general public, such certificates constituted securities).

97 For a general discussion of the treatment of loan participations under the U.S. securities laws, *see* Lee C. Buchheit, *When Is a Loan Not a Loan?*, 9 INT'L FIN. L. REV. 29 (1990).

98 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DRIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.17[6][c].

98.1 For a discussion of banking laws that may be applicable to certain financial instruments issued or entered into by banks, such as deposits, *see* Robert L. Tortoriello, Derek M. Bush and Hugh C. Conroy, Jr., GUIDE TO BANK UNDERWRITING, DEALING AND BROKERAGE ACTIVITIES (21st ed. West 2017).

98.2 For a more detailed discussion of swaps and security-based swaps, *see* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.15[b].

98.3 CEA § 1a(9). Prior to 1974, the term "commodity" included only specified agricultural products. Futures contracts and commodity options involving goods other than the agricultural products specified in the CEA were not regulated under the statute. As the markets for other "goods" (including derivative financial products) developed, exchanges came to trade regulated and unregulated futures contracts side by side. The 1974 Amendments amended the definition of the term "commodity" to include, in addition to specified agricultural products, all other "goods and articles … and all services, rights, and interests in which contracts for future delivery are presently or in the future dealt in" in order to bring all futures contracts under the CEA's statutory and administrative framework. *See* CEA § 1a(9). The 1974 Amendments also included a specific provision, proposed by the Department of the Treasury, to exclude from the CEA's otherwise expanded jurisdiction transactions in foreign currencies and specified financial instruments—as long as those transactions were not transactions involving "the sale thereof for future delivery conducted on a board of trade."

98.4 Futures Trading Act of 1982, Pub. L. No. 97-444, tit. 1, 96 Stat. 2294 (1983). The accord is named for the then-chairmen of the SEC and CFTC.

98.5 For these purposes the term "exempt securities" means certain securities exempted under § 3 of the Securities Act or § 3(a)(12) of the Exchange Act but does not include, among other securities, municipal securities.

98.6 *See* former CEA §§ 2(a)(1)(A)(i), 2(a)(1)(B)(ii) and (iv) and 4c(f) (as amended by the CFMA, current CEA §§ 2(a)(1)(A), 2(a)(1)(C)(ii) and (iv) and 4c(f)).

98.7 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.09[1].

98.8 The Shad-Johnson Accord excluded from regulation under the CEA any "put, call, or other option on one or more securities … including any group or index of such securities, or any interest therein or based on the value thereof." *See* former CEA § 2(a)(1)(B)(i) (now CEA § 2(a)(1)(C)(i)). *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.09 for more information.

98.9 CEA §§ 4c(f) and 4m(2).

98.10 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.16[4][c] for more detailed discussion of hybrid instruments.

98.11 In 1987, the CFTC published for comment an advance notice of proposed rule-making in which it asserted jurisdiction over virtually all hybrid instruments, with only limited exclusions or exemptions for hybrid instruments having "*de minimis*" or "incidental" futures or commodity option features.

98.12 Pub. L. No.106-554 (Appendix E), 114 Stat. 2763, 2763A-365 (2000).

98.13 Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, Pub. L. No. 111-203, 124 Stat. 1376 (2010).

98.14 Title VII of the Dodd-Frank Act also expanded the "security" definition in § 2(a)(1) of the Securities Act and § 3(a)(10) of the Exchange Act to cover security-based swaps.

98.15 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.15[1][a].

98.16 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.16[5][c].

98.17 Under the CFMA, an agreement, contract or transaction between eligible contract participants that provided for the purchase or sale of one or more securities based on the occurrence of a *bona fide* contingency that might reasonably be expected to affect or be affected by the creditworthiness of a party other than a party to the agreement, contract or transaction was excluded from the definition of "security." This exclusion was generally regarded as covering credit default swaps. The Dodd-Frank Act repealed this exclusion, instead subjecting such an agreement, contract or transaction to regulation as a swap or security-based swap.

98.18 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.15.

98.19 *See, e.g.*, § 3(a)(10) of the Exchange Act.

98.20 CEA § 2(a)(1)(C)(i).

98.21 CEA § 1a(47)(B)(iii).

98.22 *Procter & Gamble Co. v. Bankers Trust Co.*, 925 F. Supp. 1270, 1274 (S.D. Ohio 1996).

98.23 The *P&G* court also analyzed a second swap—referred to as the "DM swap"—which, although documented as a "floating-for-floating" interest rate swap, effectively provided for BT to pay to P&G, for four years, 1% on a notional amount of approximately DM 160 million in exchange for the right to receive a "spread" after one year, if the prevailing level of German four-year interest rates (actually, the "DM four-year swap rate") ever traded outside a defined range during the one-year period. This spread would be the fixed rate periodically payable, under a four-year fixed-for-floating interest rate swap, in exchange for the right to receive a floating rate payment based on the DM four-year swap rate.

98.24 The *P&G* court also considered whether the "5s/30s swap" and the "DM swap" were investment contracts under *SEC v. W.J. Howey Co.*, 328 U.S. 293 (1946) ("*Howey*"). The court ruled that the instruments did not satisfy the *Howey* test because "what is missing is the element of a 'common enterprise.'" *Procter & Gamble Co. v. Bankers Trust Co.*, 925 F. Supp. 1270, 1278 (S.D. Ohio 1996). In addition, the court observed, the value of both swaps depended upon market forces, not the entrepreneurial activities of BT. In reaching this conclusion, the court rejected P&G's arguments that P&G and BT had a course of dealing treating the swap agreements as securities and that the P&G swap agreements should be viewed in the context of all of BT's derivatives business.

Notably, the "investment contract" test has been used in lower courts to analyze interest rate futures, which are contracts to buy or sell government securities and which can serve the same general functions as rate protection transactions. In *P&C Investment Club v. Becker*, 520 F. Supp. 120 (E.D. Pa. 1981), the court found that the interest rate futures were not securities because their return was completely dependent on interest rate movements and did not depend on the efforts of others in a common enterprise. *But see Fisher v. Dean Witter Reynolds, Inc*., 526 F. Supp. 558, 560 (E.D. Pa. 1981) (an interest-rate futures contract is a security, as it is a contract for the sale of the underlying security). *See also SEC v. Belmont Reid & Co.*, 794 F.2d 1388, 1390–91 (9th Cir. 1986) (sale of gold coins did not involve profits "'solely' from the efforts of others" because "profits to the coin buyer depended upon the fluctuations of the gold market"). *But see SEC v. Eurobond Exchange, Ltd.*, 13 F.3d 1334, 1341 (9th Cir. 1994) (profits from interest-rate sensitive scheme attributable to promoter's efforts, rather than market movements).

For a more detailed discussion of the *Howey* "investment contract" test, *see* § 12.02[2][d].

In addition, the P&G court analyzed whether the swap agreements should be regarded as notes under *Reves*' "family resemblance test." *Reves v. Ernst & Young*, 494 U.S. 56, 61 (1990), *reh'g denied*, 494 U.S. 1092 (1990) ("*Reves*"). The court found that the swap agreements, unlike traditional notes, did not involve any payment or repayment of principal. The court opined that, on balance, the swap agreements were entered into more for commercial than investment purposes, were customized for P&G and not readily tradable, and the public and, more specifically, P&G did not have a reasonable expectation that the swap agreements were securities. Though the court conceded that there may be no other regulatory scheme designed to protect counterparties to swap agreements, nonetheless, the absence of such a scheme alone was not sufficient to bring the swap agreements within the definition of a note. *Procter & Gamble Co. v. Bankers Trust Co.*, 925 F. Supp. 1270, 1278 (S.D. Ohio 1996). Because the swap agreements were not notes for purposes of the securities laws, the court also held that the swap agreements were not evidences of indebtedness. *Procter & Gamble Co. v. Bankers Trust Co.*, 925 F. Supp. 1270, 1280 (S.D. Ohio 1996).

The conclusion that swaps more generally should not be treated as notes for purposes of the securities laws would seem to be correct for a number of other reasons. Historically, the major terms of each transaction have been individually negotiated in accordance with the business needs of the parties, making it unlikely that a transaction will have equivalent value to nonparties, and these transactions have not been amenable to trading. Moreover, trading of these instruments is commonly restricted by contractual provisions that require that both parties consent to any termination or assignment of the instrument. While what is sometimes referred to as a "secondary market" in swaps and rate protection transactions has developed, this is not a market in which these instruments are traded; rather, it is a source of quotations and other information for parties seeking to enter into new transactions. A party seeking to exit an existing transaction generally would not transfer or assign such transaction, but instead would terminate the transaction at a negotiated price. When an assignment of an existing transaction does occur, it is generally the product of negotiations between the parties. If a party wishes to get out of a transaction without seeking the consent of its counterparty, or in circumstances where such consent is not forthcoming, the party may enter into a new transaction that offsets its economic position in the original transaction. In light of these characteristics, it is clear that the so-called "secondary market" in swaps and rate protection transactions does not constitute a secondary trading market as that term is commonly understood in the context of securities trading. Although the amendments to the CEA by the CFMA permitting greater standardization, and electronic trading, of swap agreements led to the development of markets through which new swap agreements may be entered into, that development should not affect the conclusion that swaps should not generally be treated as notes for purposes of the securities laws. Moreover, the Dodd-Frank Act excluded "notes" subject to the Acts from the definition of "swap," thereby clearly expressing congressional intent that notes be distinguished from swaps. *See* CEA § 1a(47)(B)(vii).

For a more detailed discussion of the *Reves* "family resemblance" test, *see* § 12.02[2][d].

98.25 *See Procter & Gamble Co. v. Bankers Trust Co.*, 925 F. Supp. 1270, 1281 (S.D. Ohio 1996). Although the definition of security includes "any put, call, straddle, option, or privilege on any security, certificate of deposit, or group or index of securities (*including any interest therein or based on the value thereof*).…" (emphasis added), § 2(a)(1) of the Securities Act; § 3(a)(10) of the Exchange Act, the court concluded that the underscored parenthetical modified only the phrase "group or index of securities," and not the terms "security" or "any option." The court went on expressly to limit its holdings to the particular leveraged derivative instruments at issue in the case, observing that "[s]ome of these derivative instruments, because of their structure, may be securities." *Procter & Gamble Co. v. Bankers Trust Co.*, 925 F. Supp. 1270, 1283 (S.D. Ohio 1996); *see infra* Note 29.

98.26 SEC Release No. 33-7124 (Dec. 22, 1994).

98.27 SEC Release No. 33-7124, Fed. Sec. L. Rep. (CCH) ¶85,477, p. 86,112 n.6 (Dec. 22, 1994).

98.28 In addition to the numerous other transactions entered into between Gibson Greetings and BT Securities over a period of several years, BT wrote a cash-settled call option based on the yield of a particular 30-year Treasury security. The option was exercisable at maturity and would expire if the yield on the 30-year Treasury security dropped below a designated level. SEC Release No. 33-7124 (Dec. 22, 1994). It is apparent from the SEC's characterization of this transaction that because the yield on a given security is based on its price, the SEC regards an option based on the yield of a specified debt security as an option "on any security … or group or index of securities (including any interest therein or based on the value thereof)." § 2(a)(1) of the Securities Act.

98.29 The court in *Proctor & Gamble* might have based its holding that the P&G swap was not a security on the specific characteristics of the swap (*i.e.*, the fact that the option was an embedded, nonseverable component of a bilateral executory agreement). The court's articulated reasoning, however, is unsatisfactory in a number of respects. First, the court offered no predicate analysis of the statutory text justifying reference to the legislative history of the provision. In connection with its discussion of the provision's legislative history, the court also neglected to consider whether its holding was consistent with the jurisdictional framework established under the CFTC-SEC jurisdictional accord of which the relevant statutory text formed a part and ignored relevant text in parallel provisions of the CEA. Finally, the court's discussion of the statutory term "option" was largely conclusory.

98.30 *Caiola v. Citibank*, 295 F.3d 312 (2d Cir. 2002); *see also* § 11.11[2].

98.31 *Caiola v. Citibank*, 137 F. Supp. 2d 362 (S.D.N.Y. 2001), *rev'd*, 295 F.3d 312 (2d Cir. 2002).

98.32 Caiola also claimed that the provisions of the CFMA that amended § 10(b) of the Exchange Act to reach swap agreements should be applied retroactively even if the arrangements were not securities themselves. However, the Second Circuit declined to address the question of retroactivity as it found that Caiola failed to properly raise the issue in the district court. *See Caiola v. Citibank*, 295 F.3d 312, 327 (2d Cir. 2002).

98.33 *See Caiola v. Citibank*, 295 F.3d 312, 326 (2d Cir. 2002). The court noted that an option on an index of securities, which is defined as a security under § 3(a)(10), is settled by cash since physical delivery is not possible. The court continued that "there is no basis for reading into the term 'option' as used in the phrase [in § 3(a)(10)] 'option … on any security' a limitation requiring a particular method of settlement—a limitation that clearly does not apply to 'option' as used in the phrase 'option … on any … index of securities.'" *Caiola v. Citibank*, 295 F.3d 312, 327 (2d Cir. 2002). There are several other instances where the SEC has taken the position that options whose value is derivatively based on the value of a security or group of securities—even at multiple levels of abstraction—are securities. For example, the SEC has noted that it would treat options on the S&P 500 Dividend Index as securities. *See* CBOE Rule Change, SEC Tracker Daily, SR-CBOE-2009-022 (Dec. 10, 2009). In another release, the SEC has stated that it would treat options based on the occurrence of credit events in the debt securities of one or more issuers as securities: "the credit default options proposed by CBOE are securities because they are options based on the value of a security or securities and because they are options on an interest in, or based on the value of an interest in, a security or securities." *See* Order Granting Approval of a Proposed Rule Change to List and Trade Credit Default Basket Options, as Modified by Amendment No. 3, and Designating Credit Default Basket Options as Standardized Options under Rule 9b-1 of the Securities Exchange Act of 1934, SEC Release No. 34-56275 (Aug. 17, 2007). Lastly, we note that the SEC has treated options on volatility indices based on the value of securities as securities. *See* Order Granting Approval to the Proposed Rule Change and Notice of Filing and Order Granting Accelerated Approval to Amendment No. 2 Relating to Options on Certain CBOE Volatility Indexes, SEC Release No. 34-49563 (Apr. 14, 2004). In this order, the SEC does not explicitly state that such options are securities under § 3(a)(10) of the Exchange Act; however, the context of the order and the SEC's statement that "the CEA does not apply to the volatility index options CBOE proposes to list and trade" make it clear that the SEC believes they are. Order Granting Approval to the Proposed Rule Change and Notice of Filing and Order Granting Accelerated Approval to Amendment No. 2 Relating to Options on Certain CBOE Volatility Indexes, SEC Release No. 34-49563 (Apr. 14, 2004).

98.34 A collar has option-like characteristics in that, for example, one party's exposure to loss has been limited in the context of a decline in the price of the stock to the strike price of the put option. A collar has swap-like or futures-like features in that each party has contingent exposure to loss and contingent opportunity for gain. As the exercise prices of the two options converge, the instrument becomes more similar economically to an equity swap or futures contract.

98.35 An example of a deep-in-the-money option is an option in which Party A has the right to purchase from Party B in three months for $25 per share a stock that has a current market value of $100 per share. Such an agreement has option-like characteristics in that, for example, Party A's exposure to loss has been limited to its premium, Party A has no additional exposure to loss resulting from a decline in the price of the stock below $25, and Party A is not contractually obligated to purchase the stock. The agreement may be characterized as having swap-like or futures-like features in that each party has contingent exposure to loss and contingent opportunity for gain. Party A may be said to have prepaid its contingent future loss through the payment of the intrinsic value component (the "in-the-money"—as opposed to the "time value"—component) of the option premium.

98.36 This discussion is not intended to address situations in which similar economic results are obtained by the execution of two or more independent option transactions. An analysis of the circumstances in which multiple contemporaneous option transactions would be integrated for regulatory purposes would necessarily be fact-dependent. *Cf. In re Thrifty Oil Co.*, 212 B.R. 147 (Bankr. S.D. Cal. 1997) (declining to integrate related contemporaneous interest rate swap and loan transactions).

98.37 *See, e.g.*, Title VII Product Definitions Final Rule, 77 Fed. Reg. 48,208, 48,260 (Aug. 13, 2012) (explaining that the name or label used by the parties to refer to a transaction is not determinative of whether it is a swap or security-based swap); *In re Wright*, CFTC Docket No. 97-02 (Oct. 25, 2010) ("[T]he Commission applies a 'facts and circumstances' test rather than a bright-line test focused on the contract's terms.").

98.38 *See, e.g.*, *Tcherepnin v. Knight*, 389 U.S. 332, 336 (1967) (evaluating whether a particular instrument was a security); *Chicago Mercantile Exchange v. SEC*, 883 F.2d 537 (7th Cir. 1989); *CFTC v. Co Petro Marketing Group, Inc.*, 680 F.2d 573 (9th Cir. 1982) (evaluating whether particular transactions constituted futures contracts); *Chicago Mercantile Exchange v. SEC*, 883 F.2d 537, 547 (7th Cir. 1989) ("Words are useful only to the extent they distinguish some things from others; symbols that comprise everything mean nothing").

98.39 *See, e.g.*, *Progressive Corp. v. United States*, 970 F.2d 188, 193–94 (6th Cir. 1992) (call option should be treated for tax purposes as the equivalent of a contractual obligation to sell where it is so deep-in-the-money that exercise is "virtually guaranteed"); IRS Revenue Ruling 82-150, 1982-2 C.B. 110 (taxpayer who purchased a call option with strike price equal to 30% of the fair market value of the underlying stock treated as the owner of the stock); *In re Berge*, 32 B.R. 370, 372 (Bankr. W.D. Wis. 1983) (equipment lease with an option to purchase was not a true lease where the purchase option was for a price so nominal that, at the time the lease was entered into, exercise of the option was "virtually certain" as a matter of rational business judgment); *Gordon & Co. v. Board of Governors of the Federal Reserve System*, 317 F. Supp. 1045 (D. Mass. 1970) (declining, based on improbability of success on the merits, to enjoin an interpretation of the Board that a 30-day call option on a stock with a strike price of 70% of the stock's market value constituted an extension of credit because the likelihood that the option would be exercised would render the transaction more akin to a present sale of the stock with a 30% down payment and an extension of credit for the remaining 70% of the purchase price).

98.40 CFTC Interpretative Letter No. 94-32, Comm. Fut. L. Rep. (CCH) ¶26,042 (Feb. 4, 1994); *see also* CFTC Interpretative Letter No. 94-93, Comm. Fut. L. Rep. (CCH) ¶26,249 (July 27, 1994) (status of financial Instruments indexed to individual stocks) (financial instruments economically equivalent to options on individual stocks—§ 2(a)(1)(B)(v)).

98.41 CFTC Interpretative Letter No. 94-32 (status of financial instruments indexed to individual stocks), Comm. Fut. L. Rep. (CCH) ¶26,042 (Feb. 4, 1994).

98.42 This is an amount, calculated on the basis of the historical price performance of the stock over the preceding one-year period, equal to the maximum deviation from the forward value of the stock over a one-year period that is likely to be exceeded only with a probability of roughly 32%. By way of example, given a mean forward stock price of $25 and an annualized standard deviation of 20% (or $5.00), there would be a 68% probability, at the end of one year, that the value of the stock would fall within the range bounded on the lower side by $20 ($25 minus $5) and on the higher side by $30 ($25 plus $5). Conversely, there would be a roughly 16% likelihood that the price of the stock would fall above, and a 16% likelihood that the price of the stock would fall below, the specified range. This translates, in the case of an individual option, to a probability of non-exercise roughly equal to 16%. If one were to employ the framework for analysis suggested by decisions such as those cited in *supra* Note 39, a compelling argument can be made that an option having a 16% probability of nonexercise (such as the options proposed in the no-action request) is not virtually certain of exercise and, accordingly, should be respected as an option.

98.43 CFTC Interpretative Letter No. 94-32, Comm. Fut. L. Rep. (CCH) ¶26,042 (Feb. 4, 1994), at 41,344.

98.44 CFTC Interpretative Letter No. 94-32, Comm. Fut. L. Rep. (CCH) ¶26,042 (Feb. 4, 1994), at 41,346 (citing *Chicago Mercantile Exchange v. SEC*, 883 F.2d 537 (7th Cir. 1989), and observing that the one-way indexing characteristic of an option derives from its having a strike price that is out-of-the-money).

98.45 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.14. Certain swaps based on loans are also security-based swaps under the Dodd-Frank Act. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.17[3].

98.46 § 3(a)(68) of the Exchange Act.

98.47 § 3(a)(10) of the Exchange Act.

98.48 *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.01.

98.49 CEA § 2(a)(1)(A).

99 For example, the Supreme Court implied in *Howey* that the land and service contract transactions might not

have been considered to involve securities if the investors had lived near the citrus groves and had expertise and equipment to manage the groves sufficient to lessen their reliance on defendants.

100 Analyzing the instruments under *Reves*, the court noted that the transaction was fundamentally commercial in nature in that the repackaged loans were effectively the seller's inventory rather than an investment whose outcome was tied to the profitability of the seller. In addition, the instruments were sold to a very specialized and sophisticated secondary market and the existence of collateral was a risk-reducing factor leading the court to hold that the instruments were not notes. *Resolution Trust Corp. v. Stone*, 998 F.2d 1534, 1528–29 (10th Cir. 1993). The court also found that the instruments were not investment contracts under the *Howey* test because investors received specified interest payments rather than dividends tied to the profitability of the seller. *Resolution Trust Corp. v. Stone*, 998 F.2d 1534, 1540–41 (10th Cir. 1993).

101 Several structures have been used to repackage mortgage loans. For example, the resulting instrument may evidence an equity-type interest in the pool of loans (such as mortgage pass-through certificates) entitling the holder to a proportional share of payments on the underlying loans. In other structures (for example, collateralized mortgage obligations), the instrument is characterized as a debt obligation that is collateralized by the underlying mortgage loans. *But see Resolution Trust Corp. v. Stone*, 998 F.2d 1534 (10th Cir. 1993) (holding that car loans, repackaged with enhancements such as a buy-back guarantee and insurance, and sold on the secondary market, were not securities).

U.S. Regulation of the International Securities and Derivatives Markets, § 13.01, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.01 (11th and 12th Editions 2014-2017)

p. 13-3

The SEC has long recognized that U.S. disclosure requirements generally are the most rigorous in the world and that foreign issuers often have excluded the U.S. public from multinational securities offerings to avoid the need to comply with U.S. disclosure standards. The U.S. disclosure requirements for public offerings often require foreign issuers to expand their selling documents to include information not required under the rules of their home jurisdiction. The need to comply with U.S. disclosure rules as well as those of the home jurisdiction can add substantial costs to an offering and can cause delays—accountants and lawyers have to be retained in both jurisdictions and additional time is usually required because of the need to comply with two sets of rules. Any delay caused by U.S. regulatory requirements can be a significant impediment because advantageous market conditions for a particular securities issue may last for only a short period. These concerns are relevant not only for traditional public offerings but also for tender and exchange offers, offers in connection with business combinations and rights offerings. In these latter cases, the practical effect of the offeror's unwillingness to comply with U.S. requirements is that U.S. securityholders are not treated on an equal basis with non-U.S. holders.

The multijurisdictional disclosure system (the "MJDS") [1] between the SEC and provincial securities regulators in Canada (the "Canadian Securities Administrators," or the "CSA") was the SEC's first comprehensive effort toward

p. 13-3

p. 13-4

meeting these concerns. [2] The MJDS, which became effective July 1, 1991, is a complex reciprocal initiative, adopted by the SEC and the CSA, intended to facilitate certain U.S./Canadian cross-border securities offerings, business combinations and tender and exchange offers by allowing such transactions to

p. 13-4

p. 13-5

proceed in both jurisdictions on the basis principally of home country disclosures and rules, and by permitting issuers that have used the system (as well as other eligible issuers) to satisfy their ongoing disclosure obligations in both jurisdictions through the use of home country disclosures, supplemented as necessary by disclosures mandated by the Sarbanes-Oxley and Dodd-Frank Acts (and the equivalent regulations in Canada, where applicable). The MJDS also provides accommodations in related areas, including regulation of trust indentures and trustees and market regulation. In conjunction with the MJDS, the SEC extended its "foreign private issuer integrated disclosure system" (the "FPI System") to Canadian issuers on an equal basis with other foreign issuers, which, among other things, gives all Canadian foreign private issuers a complete exemption from the U.S. proxy requirements and insider reporting/short-swing profit recovery rules. [3]

The MJDS represented a significant milestone for the SEC in terms of its recognition of the securities laws of Canada. Since its adoption, the system has made it substantially easier for eligible Canadian issuers to access the U.S. capital markets and has encouraged the equal treatment of U.S. securityholders in

p. 13-5

p. 13-6

rights offerings and offers in connection with business combinations, exchange offers and tender offers eligible for MJDS treatment. The mutual recognition premise of the MJDS has become an outlier in SEC regulatory policy, however, as following its adoption the SEC shifted away from mutual recognition and toward a unified system of disclosure for foreign private issuers. [4] The two most notable examples of this shift are the SEC's revised Form 20-F, which replaced almost all of the former Form 20-F requirements with international disclosure standards adopted by the International Organization of Securities Commissions ("IOSCO"), and the SEC's acceptance from foreign private issuers of financial statements prepared in accordance with the International Financial Reporting Standards ("IFRS") as issued by the IASB. [5]

An earlier indication of the SEC's ambivalence toward the MJDS mutual recognition approach was the so-called "Aircraft Carrier Release" of 1998, whose sweeping proposed revisions to the securities offering process likely would have eliminated the MJDS if they had been adopted. [6] The proposed elimination of the MJDS never occurred, partially due to criticism from both Canadian and U.S. groups, including Canadian securities regulators, Canadian issuers, the Investment Industry Regulatory Organization of Canada (formerly the Investment Dealers Association) and the Securities Law Committee of the Business Law Section of the New York State Bar Association, which argued that the elimination of the MJDS would increase disclosure costs, result in regulatory and

p. 13-6

p. 13-7

administrative impediments to cross-border Canadian offerings (which had been eliminated for MJDS-eligible offerings) and effectively reduce U.S. investor access to securities of Canadian issuers. [7]

Footnotes

1 SEC Release No. 33-6902 (July 1, 1991) (the "Adopting Release"). The MJDS was initially introduced in Canada as National Policy Statement No. 45, 14 O.S.C.B. 2889 (June 28, 1991), which was replaced by National Instrument 71-101, The Multijurisdictional Disclosure System, 21 O.S.C.B. 5104 (Aug. 14, 1998) ("National Instrument 71-101") and Companion Policy 71-101CP, 21 O.S.C.B. 5136 (Aug. 14, 1998).

The development of the MJDS was initiated by the SEC in 1985 with the issuance of a concept release, SEC Release No. 33-6568 (Feb. 28, 1985), requesting comment on two alternative methods of facilitating multijurisdictional offerings: the "common prospectus" or "harmonization" approach, which would require participating jurisdictions to agree on a common set of disclosure requirements; and the "reciprocal prospectus" or "mutual recognition" approach, which would provide that a prospectus prepared pursuant to the requirements of the issuer's home jurisdiction would be accepted for securities offerings in every other participating jurisdiction. Originally proposed in July 1989 (SEC Release No. 33-6841 (July 24, 1989); Multijurisdictional Disclosure System (Outline) 12 O.S.C.B. 2919 (July 28, 1989); and reproposed in October 1990, SEC Release No. 33-6879 (Oct. 16, 1990); Draft National Policy Statement No. 45, 13 O.S.C.B. 4573 (Nov. 2, 1990)), the MJDS is a hybrid of the two approaches—although the SEC generally recognizes and accepts Canadian disclosures, it requires U.S. disclosures in limited (but important) areas, such as certain disclosures required under the Sarbanes-Oxley and Dodd-Frank Acts. The greatest burden historically faced by issuers was the requirement to include a Canadian GAAP to U.S. GAAP reconciliation of financial statements in certain offerings. However, for fiscal years beginning on or after January 1, 2011 (or January 1, 2012 in the case of certain issuers in rate-regulated industries), Canadian public companies are required to report under IFRS as issued by the International Accounting Standards Board ("IASB") rather than Canadian GAAP, pursuant to National Instrument 52-107, Acceptable Accounting Principles and Auditing Standards, and related amendments. As the SEC exempts foreign private issuers reporting under IFRS as issued by IASB from the requirement to provide a U.S. GAAP reconciliation, the transition from Canadian GAAP to IFRS has eliminated the need for Canadian foreign private issuers to provide a U.S. GAAP reconciliation under the MJDS. *See* 4.05[1] and § 13.02.

The SEC chose Canada as its initial partner for the MJDS because of the similarity of the U.S. and Canadian regulatory regimes and the significant presence of Canadian companies in the U.S. trading markets. In his opening statement at the meeting adopting the MJDS, then-SEC Chairman Breeden stated:

> [The] MJDS was developed initially in Canada due to its developed capital markets and strong regulatory tradition. While the disclosure requirements of the United States and Canada differ in detail, the regulatory systems share the common purpose of ensuring that investors are given information adequate to make an informed investment decision. This system represents in a sense reciprocity based on equality of reporting and disclosure.

Richard C. Breeden, Chairman, SEC, Opening Statement on Adoption of Rules, Forms and Schedules for Multijurisdictional Disclosure with Canada at Open Meeting (May 30, 1991).

Interestingly, the "equality" of Canadian and U.S. requirements was achieved in certain important respects by initiatives adopted in Canada during the negotiation of the MJDS. *See*, *e.g.*, Ontario Securities Commission ("OSC") Policy Statement 5.10, O.S.C.B. 4275 (1989) (adopting "management's discussion and analysis" requirement); National Policy Statement No. 44, 14 O.S.C.B. 1844 (1991) (adopting shelf and post-receipt pricing rules); Amendments to OSC Policy Statement 5.1 and OSC Policy Statement 5.6, 14 O.S.C.B. 2956 (1991) (requiring prospectus-level disclosure in proxy materials used for business combinations); Market Regulation Amendments to OSC Policy Statement 5.1, 14 O.S.C.B. 4137 (1991); Policy Statement Q-26, Volume XXII, Issue 35, Quebec Securities Commission Bulletin 2 (Aug. 30, 1991) (adding certain market regulation requirements). Each of the foregoing has been amended, reformulated or replaced one or more times since it was originally issued.

2 The SEC's efforts in this area continued with its adoption in 2000 of a number of exemptions to the tender offer rules and registration requirements under the U.S. securities laws to facilitate the extension of a broad class of cross-border tender and exchange offers, business combinations and rights offerings to U.S. holders, regardless of the issuer's home jurisdiction. Effective January 24, 2000, these rules established principally: (i) an exemption from most of the rules under the Exchange Act governing tender offers for securities of non-U.S. companies if U.S. ownership is 10% or less, (ii) more limited relief from rules under the Exchange Act to eliminate conflicts between U.S. and foreign takeover regimes in tender offers where U.S. ownership is 40% or less, and (iii) an exemption from the registration requirements of the Securities Act for securities issued to holders of securities in non-U.S. companies in exchange offers, business combinations and rights offerings, in each instance if U.S. ownership is 10% or less. *See* SEC Release No. 34-42054 (Oct. 22, 1999). In 2008, the SEC further amended these rules and provided additional guidance on how U.S. registration and tender offer rules legitimately may be avoided in cross-border business combination transactions. *See* SEC Release No. 33-8957 (Sept. 19, 2008); *see also* text accompanying *infra* Notes 28, 48 and 54; § 10.05[2] (for a discussion of cross-border rights offerings in light of the 1999 and 2008 SEC releases and resulting reforms); § 9.05 (for a discussion of cross-border tender and exchange offers). As noted in §§ 13.04 and 13.05, for certain Canadian companies, utilizing the MJDS for business combinations/exchange offers may be a superior alternative.

Securities regulators in Canada are working towards the creation of a national cooperative regulatory regime expected to come into force no earlier than 2018. Current drafts of the rules and regulations of the cooperative regulatory regime adopt the current MJDS system with conforming/ consequential amendments to reflect the new regime and provide for certain additional exemptions available to issuers who comply with National Instrument 71-101.

3 The extension of the FPI System to Canadian foreign private issuers was the culmination of a shift in SEC policy toward equal treatment of Canadian foreign private issuers. Historically, the SEC had taken the position that, due to the geographical proximity of the United States, Canada and Mexico and the substantial economic links among the three countries, Canadian and Mexican companies should be treated similarly to U.S. companies for certain purposes under the U.S. securities laws. As a result, Canadian and Mexican

foreign private issuers were generally required to comply with U.S. domestic issuer registration forms and reporting requirements. In SEC Release No. 33-6437 (Nov. 19, 1982), the SEC eliminated its definition of "North American issuer" and began treating Mexican foreign private issuers the same as other foreign private issuers; however, the special treatment of Canadian foreign private issuers was retained. With the adoption of Regulation S under the Securities Act in April 1990 (Regulation S governs offers and sales of securities outside the United States), the SEC signaled its changing position toward Canada by treating offers and sales of securities in Canada (and by Canadian issuers) the same as offers and sales involving other foreign countries. *See* the discussion of Regulation S in § 8.02.

The SEC historically accorded special treatment in one respect to Canadian issuers not filing under either the MJDS or the FPI System. Whereas other non-U.S. issuers not meeting the definition of foreign private issuer were required to prepare financial statements included in Securities Act registration statements in accordance with U.S. GAAP, the SEC allowed non-MJDS, nonforeign private issuer Canadian issuers to prepare their financial statements under Canadian GAAP, but file Securities Act registration statements on U.S. domestic forms (the "S" forms), provided they also prepared a U.S. GAAP reconciliation pursuant to Item 18 of Form 20-F. In connection with Canada's transition to IFRS, the SEC determined that "[a] Canadian company that is not a foreign private issuer that has historically used Canadian GAAP and Canadian dollars in filings with the SEC may continue to do so for fiscal years prior to 2011[;]" however, "[b]eginning with fiscal year 2011, a Canadian company that is not a foreign private issuer must use U.S. GAAP in filings with the SEC. The financial statements and selected financial data should be recast into U.S. GAAP for all periods presented in the financial statements." *See* SEC, Division of Corporation Finance, Financial Reporting Manual, Topic 6120.5 (Mar. 17, 2016 Ed.). *See also infra*, Note 10.

4 Outside the offering and exchange context, the SEC has appeared more open toward mutual recognition regimes. In 2008, the SEC entered into a mutual recognition arrangement with the Australian government and the Australian Securities and Investments Commission, permitting U.S. and eligible Australian stock exchanges and broker-dealers to operate in both jurisdictions without the need in certain respects for separate regulation in both countries. *See* Press Release, SEC, SEC, Australian Authorities Sign Mutual Recognition Agreement (Aug. 25, 2008). Similarly, the SEC and the Chairmen of four Canadian securities regulators announced in 2008 a schedule for completing a U.S.-Canadian mutual recognition process agreement, which was to lay out the process for discussion of an eventual U.S.-Canada stock exchange and broker-dealer mutual recognition agreement. *See* Press Release, SEC, Schedule Announced for Completion of U.S.-Canadian Mutual Recognition Process Agreement (May 29, 2008). No process agreement, however, has yet been signed. The financial crisis and the departure of then-SEC Chairman Christopher Cox, a supporter of mutual recognition regimes, drew resources and attention away from the mutual recognition process, which appears to be on hold.

5 *See* SEC Release No. 33-7745 (Sept. 28, 1999) (revised 20-F); SEC Release No. 33-8879 (Dec. 21, 2007) (acceptance of IFRS); *see also* the discussions of Form 20-F in §§ 3.03[1][b] and 4.04 and of the SEC's acceptance of IFRS from foreign private issuers in § 4.05[1]. The acceptance of IFRS also contributed to the elimination of Form F-9. *See* text accompanying *infra* Note 21.

6 *See* SEC Release No. 33-7606 (Nov. 3, 1998), amended by SEC Release No. 33-7606A (Nov. 13, 1998). The Aircraft Carrier Release was largely withdrawn. *See* § 1.01. Portions of the proposal, however, have been pursued individually (*see*, *e.g.*, SEC Release No. 33-7943 (Jan. 26, 2001) (discussing mixed public/private offerings and Rule 155, dealing with integration concerns)), and in 2005 the SEC adopted new rules that implemented significant reforms to the U.S. public securities offering process. *See* § 3.02.

U.S. Regulation of the International Securities and Derivatives Markets, § 13.02, U.S. OFFERINGS BY "SUBSTANTIAL" CANADIAN ISSUERS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.02 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

The centerpiece of the MJDS is its provision for "substantial" Canadian issuers (*i.e*., those meeting certain Canadian reporting history and "size" tests) to offer securities in the United States by means of a prospectus prepared in accordance with Canadian disclosure requirements (with certain U.S. additions). [8] Such offerings may be made in conjunction with a contemporaneous Canadian offering or on a "U.S.-only" basis. For Canadian issuers eligible to use Canada's short-form system, the Canadian prospectus may be a "short-form" prospectus. [9]

With the adoption of IFRS by Canadian public companies on January 1, 2011, [10] which generally eliminated the need for U.S. GAAP reconciliations, very little additional information is required to be included in MJDS prospectuses. Other than the home country prospectus, Canadian issuers need only include a

p. 13-8

few informational legends and similar technical disclosures. [11] Significantly, however, MJDS prospectuses are required to include all "material" information (within the meaning of the U.S. securities laws), [12] and issuers and underwriters (as well as other statutorily responsible parties) are subject to liability under the U.S. civil liability and antifraud provisions if the MJDS filing contains a material misstatement or omission.

The application of the U.S. antifraud rules to MJDS offerings particularly needs to be borne in mind in light of the additional disclosures mandated by the Sarbanes-Oxley and Dodd-Frank Acts and the related SEC rules and proposals, [13] particularly in circumstances in which responsive disclosures in annual reports on Form 40-F may need to be updated in MJDS registration statements even when not literally required by those acts and rules, as they may be considered indicia of complete and accurate disclosure.

[1] Eligibility for MJDS "Substantial Issuer" Forms

p. 13-8

p. 13-9

To be eligible to use the SEC "substantial issuer" Form F-10 [14] to register a public offering of securities in the United States under the MJDS, an issuer must:

- be incorporated or organized in Canada;
- be a "foreign private issuer"; [15]
- have a 12-month reporting history with one or more of the provincial securities authorities in Canada; [16]

p. 13-9

p. 13-10

- be in compliance with its Canadian reporting obligations; and
- not be an "investment company" registered or required to be registered under the U.S. Investment Company Act.

Where a Canadian foreign private issuer that does not satisfy one or more of these criteria is required to file a Securities Act registration statement or Exchange Act report with the SEC, it must use the forms prescribed for foreign private issuers generally. [17]

MJDS offerings by "substantial issuers" are registered with the SEC by filing the Canadian prospectus under cover of a "wrap-around" registration statement on Form F-10. The "wrap-around" registration statement consists of a cover page, the Canadian prospectus, a signature page, [18] required U.S. disclosure regarding indemnification and certain specified exhibits. [19] The MJDS is not

p. 13-10

p. 13-11

available if no Canadian offering document is prepared because the issuer is relying on an exemption from prospectus requirements in Canada. [20]

In 2011, the SEC released a final rule relating to the use of security ratings by credit rating agencies in SEC rules and forms, pursuant to the requirements of § 939A of the Dodd-Frank Act. [21] Among other items, the rule "rescind[ed] Form F-9 and adopt[ed] amendments to the Securities Act and Exchange Act forms and rules that refer to Form F-9 to eliminate those references." The elimination of Form F-9 primarily reflected the transition among Canadian public companies from Canadian GAAP to IFRS effective January 1, 2011 and took effect on December 31, 2012, by which time all Canadian public companies had transitioned to IFRS. The primary difference in disclosure requirements between Form F-9 and Form F-10 is that Form F-9 did not require a U.S. GAAP reconciliation of financial statements prepared using Canadian GAAP. The transition to IFRS, however, means that issuers on Form F-10 are also no longer required to provide a U.S. GAAP reconciliation. As the disclosure requirements would have been the same under each form, the SEC viewed Form F-9 as "unnecessary."

Although the disclosure requirements between Forms F-9 and F-10 converged, different eligibility standards between the two forms means that not all issuers that were eligible to use Form F-9 are able to use Form F-10 for their offerings. In particular, investment grade majority-owned subsidiaries may lack the U.S. $75 million public float or parent guarantee required by Form F-10, which was not required for offerings of nonconvertible securities under Form F-9. [22]

Form F-10 is used for all "substantial issuer" offerings under the MJDS, including offerings of (i) common shares, (ii) noninvestment grade debt or preferred shares (iii) convertible debt or preferred shares that may be converted

p. 13-11

p. 13-12

within one year of issuance and (iv) “A/B” exchange offers. [22.1] Issuers wishing to use Form F-10 must have a public float of U.S. $75 million or more. [23]

Form F-10 may not be used for offerings of derivative securities except for (i) warrants, options and rights where such securities and the underlying securities are issued by the registrant, its parent or an affiliate of either and (ii) convertible securities that are convertible into securities of the registrant, its parent or an affiliate of either. Accordingly, securities such as currency warrants, stock index warrants and debt securities paying interest based on the performance of a stock index may not be offered on Form F-10.

A majority-owned, Canadian-incorporated subsidiary of a parent that meets all of the applicable eligibility tests for Form F-10 may use such form to offer debt securities or preferred shares even though the subsidiary does not have a 12-month Canadian reporting history or does not meet the public float test (if applicable), provided that the parent fully and unconditionally guarantees the securities being registered and the securities, if convertible or exchangeable, are convertible or exchangeable only into securities of the parent.

The Canadian shelf and post-receipt pricing ("PREP") rules [24] may be used in the United States as well as in Canada in the context of MJDS offerings. Eligible Canadian issuers may establish a single "cross-border shelf," based on Canadian disclosures and shelf rules that may be used for takedowns in either jurisdiction as market conditions warrant. [25] Cross-border medium-term note programs can be established in this manner. [26] The PREP rules are available to all issuers and are not restricted to short-form system issuers (generally issuers

p. 13-12

p. 13-13

whose equity securities are listed on certain recognized Canadian stock exchanges). [27] Offering procedures under the Canadian shelf rules are generally comparable to the procedures that have developed under the SEC's Rule 415, which served as the model for the Canadian rules. [28] SEC Rules 415 and 430B do not apply to MJDS offerings by Canadian issuers. [29]

[2] SEC Review

As adopted, the MJDS provides that, absent special circumstances, the SEC staff will not review MJDS registration statements, but will instead rely on review procedures applied in Canada. [30] Where the MJDS is used for the U.S. portion of an offering being made simultaneously in Canada and the United States, the registration statement on Form F-10 is effective upon filing with the SEC (unless designated as preliminary material on the form, *e.g.*, where the Canadian preliminary prospectus will be used for marketing in the United States). Accordingly, the U.S. offering can proceed immediately after the final prospectus has been cleared in Canada without any special notice or certification to the SEC. [31] The virtual elimination of SEC review was one of the most important aspects of the MJDS as adopted and has to date solved, in most cases, what had previously been a difficult coordination problem for offerings made simultaneously in both jurisdictions (*i.e.*, the fact that SEC review generally takes substantially longer than review in Canada).

For U.S.-only offerings, the issuer is required to designate a review jurisdiction in Canada and file a copy of the registration statement and prospectus

p. 13-13

p. 13-14

with the review jurisdiction concurrently with the SEC filing. [32] The issuer may designate on the cover page of the registration statement a date and time for the registration statement to become effective that is not earlier than seven calendar days after the date of filing with the SEC, and the registration statement will become effective in accordance with the designation, unless (i) the filing is selected for review by the review jurisdiction, in which case effectiveness may be delayed, or (ii) the review jurisdiction issues a receipt or notification of clearance prior to the designated date, in which case effectiveness may be accelerated by order of the SEC. [33] MJDS offerings are subject to the SEC's "stop order" authority to stop an offering for the public interest and for the protection of investors.

Footnotes

8 *See* Rule 467 under the Securities Act and § 13.02[2]. Although the SEC reserves the right to review any MJDS registration statement, MJDS filings are automatically effective in the United States (unless designated as preliminary material), so any review would generally be after effectiveness (absent the issuance of a stop order pursuant to § 8(d) of the Securities Act).

9 The short-form system, available to Canadian issuers meeting specified eligibility tests, provides for the qualification of offerings of securities by means of a "short-form" prospectus that incorporates by reference the issuer's Canadian continuous disclosure filings. The short-form system provides for an expedited regulatory review period of three business days in the principal review jurisdiction. It essentially parallels the provisions for Form S-3 issuers in the SEC's integrated disclosure system.

The MJDS is particularly attractive to Canadian short-form system issuers that have not previously had access to the U.S. markets. Without the MJDS, such issuers, although qualifying for a short-form prospectus in Canada, would be required to prepare a long-form prospectus (generally, Form F-1) to offer securities in the United States. By allowing Canadian short-form prospectuses to be used in the United States under the MJDS, the SEC recognized the Canadian integrated disclosure system, even though many eligible Canadian issuers have no substantial market following in the United States.

10 Calendar year-end reporting issuers began reporting using IFRS as of January 1, 2011, followed by noncalendar year-end reporting issuers at the start of their next fiscal year thereafter. *See* CSA National Instrument 52-107, Acceptable Accounting Principles and Auditing Standards. In connection with Canada's transition to IFRS, the SEC determined that "[a] Canadian company that is not a foreign private issuer must

use U.S. GAAP in filings with the SEC. The financial statements and selected financial data should be recast into U.S. GAAP for all periods presented in the financial statements." *See* SEC, Division of Corporation Finance, Financial Reporting Manual, Topic 6120.5 (Mar. 17, 2016 Ed.)

11 MJDS prospectuses must include four SEC-mandated legends addressing, respectively, use of foreign disclosures, tax consequences, enforcement of U.S. civil liabilities and absence of SEC approval of the prospectus. Any legends required under state securities laws must also be included. The SEC's "red herring" legend (which states that the information is subject to completion or amendment and that offers and sales may not be made until the related registration statement becomes effective) must be included in all preliminary prospectuses under the MJDS. MJDS prospectuses must include a list of all documents filed with the SEC as part of the MJDS registration statement, including all documents incorporated by reference in the prospectus. Incorporated documents need not be delivered to offerees together with the prospectus unless required under the laws of the principal jurisdiction in Canada. If the prospectus is in the French language only, it must be translated into English.

Certain required Canadian disclosures applicable solely to Canadian offerees or purchasers (and not material to offerees or purchasers in the United States) may be omitted from MJDS prospectuses. These items include: (i) the "red herring" legend used in Canada, (ii) any discussion of Canadian tax considerations not material to U.S. offerees or purchasers, (iii) the names of any Canadian underwriters not acting as underwriters in the United States and a description of the Canadian plan of distribution (except to the extent necessary to describe the material facts of the U.S. plan of distribution), (iv) any description of purchasers' statutory rights under applicable Canadian, provincial or territorial securities laws (except where such rights are available to U.S. purchasers), and (v) issuer's and underwriters' prospectus certificates. These omissions are permitted in order to allow MJDS prospectuses to have a "U.S. look."

Companies should also take into consideration other cross-border harmonizing issues, including coordination on the content of "road show" presentations and other marketing materials. These marketing materials may be required to be filed with the OSC in Canada, but are customarily not filed with the SEC in the United States. *See* § 3.02[3][c][iii][B] for more information about road shows.

12 *See, e.g.*, Form F-10, General Instruction II.C.; Adopting Release, 56 Fed. Reg. 30,036, 30,087 (June 21, 1991); *see also* Chapter 11. In addition to the supplemental prospectus information required by the MJDS rules, certain additional disclosures (*e.g.*, a discussion of U.S. tax consequences, disclosure of exchange rates, *etc.*) historically have been provided because of their relevance to U.S. purchasers. Marketing considerations and investor expectations in the United States increasingly have led issuers also to include certain supplemental disclosures not required in Canada but normally included in U.S. disclosure documents (*e.g.*, capitalization tables and summary financial information).

13 *See* §§ 4.07 and 4.08.

14 Pursuant to the requirements of the Dodd-Frank Act, the SEC rescinded Form F-9, effective December 31, 2012, in a release relating to the use of security ratings by credit agencies in SEC rules and forms. SEC Release No. 33-9245 (July 27, 2011). This release is further discussed later in this chapter.

15 *See* § 3.01, Note 1 for a discussion of the "foreign private issuer" definition. Issuers are required to test their foreign private issuer status annually on the last day of their second fiscal quarter. *See* SEC Release No. 33-8959 (Sept. 23, 2008).

Prior to December 31, 2012, a "crown corporation" was also eligible to use a "substantial issuer" form. A "crown corporation" is a corporation all of whose common shares or comparable equity shares are owned directly or indirectly by the government of Canada or a province or territory of Canada. Because the MJDS relies on Canadian disclosure requirements and Canadian regulatory review as a replacement for the SEC's disclosure rules and review procedures, only those crown corporations that file prospectuses with Canadian securities regulators are able to use the MJDS for U.S. financings. Relatively few Canadian crown corporations are subject to prospectus requirements in Canada, as they generally finance through exempt transactions with government guarantees. Moreover, because crown corporations, by definition, do not have a "public float," their use of the MJDS was effectively limited to offering nonconvertible investment grade debt or preferred shares on Form F-9, due to there being no public float eligibility test for such offerings. Following the rescission of Form F-9 effective December 31, 2012, crown corporations are no longer eligible to use the MJDS for these offerings.

16 A special reporting history test is provided under Form F-10 (and other MJDS forms that include a reporting history eligibility requirement) for successor issuers (*i.e.*, issuers subsisting after a business combination) that do not themselves have the requisite reporting history. An alternative test is important in these circumstances because under corporate statutes in Canada, the surviving corporation in a business combination is generally viewed as a new entity (as in a consolidation in the United States). The test is satisfied if each company participating in the business combination other than the successor issuer has been a reporting company for at least 12 calendar months. A predecessor company may be disregarded for purposes of the test if the assets and gross revenues from continuing operations of the remaining predecessor(s) account for at least 80% of the successor issuer's *pro forma* combined assets and gross revenues from continuing operations, as measured based on *pro forma* combination of the participating companies' most recently completed fiscal years. A similar test applies to successor issuers subject to a listing history eligibility requirement (*e.g.*, for use of Form F-7 in connection with a rights offering, *see* § 13.03, or Form F-8 or F-80 in connection with a business combination, *see* § 13.04, or exchange offer, *see* § 13.05) that do not themselves have the requisite listing history.

17 For a discussion of forms prescribed for foreign private issuers generally, *see* §§ 3.03[1][b], 4.04 and 4.02[3][c]. In addition, some Canadian issuers do not satisfy one or more of the criteria for foreign private issuer status. When any such issuer is required to file a Securities Act registration statement or Exchange Act report, it must use the forms prescribed for U.S. domestic issuers.

18 The MJDS Securities Act registration forms specifically exempt Canadian issuers from complying with Regulation C under the Securities Act, which sets forth requirements for preparing and filing registration statements and prospectuses. Each such registration form states that "[t]he rules comprising Regulation C under the Securities Act shall not apply to filings on this form unless specifically referred to in the form." Thus, among other requirements, the plain English requirements are not applicable to the MJDS Securities Act registration forms. Similarly, Form 40-F, the Exchange Act annual report form available to MJDS issuers, states that "Rules 12b-2, 12b-5, 12b-10, 12b-11, 12b-12, 12b-13, 12b-14, 12b-21, 12b-22, 12b-23, 12b-25, 12b-33 and 12b-37 under the Exchange Act," which govern the form and method of preparation of Exchange Act reports, "shall not apply to filings on this [f]orm." Each of the MJDS Securities Act registration forms and Form 40-F specify that, instead, "the rules and regulations applicable in the home jurisdiction regarding the form and method of preparation of disclosure documents shall apply." As of November 4, 2002, all foreign private issuers, including MJDS filers, are required to make filings with the SEC electronically using the EDGAR system. SEC Release No. 33-8099 (May 14, 2002). The SEC's rule requiring interactive data reporting using XBRL applies to Forms F-10 and 40-F, but did not require or permit the filing of interactive data related to these forms when the financial statements are prepared in accordance with Canadian GAAP or as a U.S. GAAP reconciliation. SEC Release No. 33-9002 (Jan. 30, 2009), as amended by SEC Release No. 33-9002A (Apr. 1, 2009). As Canadian MJDS filers transitioned to reporting under IFRS by January 1, 2011, they were required to comply with the interactive data requirements applicable to those filings. The SEC, however, has issued a no-action letter relieving foreign private issuers of their obligation to submit interactive data files with their IFRS financial statements until the SEC has specified a taxonomy for preparing such information. *The Center for Audit Quality* (avail. Apr. 8, 2011). The SEC staff is continuing to review taxonomies for use by foreign private issuers. The IFRS Foundation periodically publishes versions of the IFRS taxonomy for public comment.

19 Required exhibits include (i) all publicly available documents filed concurrently with the prospectus in Canada, (ii) copies of all documents incorporated by reference and (iii) consents of experts named in the filing. These documents must be filed electronically using the SEC's EDGAR system. *See* SEC Release No. 33-8099 (May 14, 2002).

20 In the case of U.S.-only offerings on Form F-10, the MJDS may be used despite the availability of an exemption from the Canadian prospectus requirements as long as a Canadian offering document is

prepared and filed with the Canadian securities regulator in the review jurisdiction. *See* § 13.02[2].

21 SEC Release No. 33-9245 (July 27, 2011). Section 939A of the Dodd-Frank Act required that the SEC "review any regulation issued by the SEC that requires the use of an assessment of credit-worthiness of a security or money market instrument and any references to or requirements in such regulations regarding credit ratings." Following this review, the Dodd-Frank Act required the SEC to modify its regulations to "remove any reference to or requirement of reliance on credit ratings and to substitute in such regulations such standard of credit-worthiness" as the SEC determined to be appropriate.

22 To address this issue, the SEC introduced a temporary "grandfather" provision for Form F-9 filers. This provision, which expired on December 31, 2015, allowed any issuer that disclosed in its registration statement that it had a reasonable belief that it would have been eligible to make an offering of investment grade, nonconvertible securities on Form F-9 as of December 31, 2012, and disclosed the basis for that belief, to file a final prospectus for an offering on Form F-10. *See* SEC Release No. 33-9245 (July 27, 2011).

22.1 For more information about "A/B" exchange offers, *see* SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Forms, Question 109.06 (Feb. 27, 2009) and § 7.05[2].

23 *See* § 4.05[1]. Filings on Form F-10 must include a full U.S. GAAP reconciliation of all financial statements in the Canadian prospectus to the extent that the required financial statements have not been prepared in accordance with IFRS. Given that all Canadian issuers must present their financial statements in accordance with IFRS, however, this requirement is moot. Historically, the U.S. GAAP reconciliation requirement imposed substantial costs and was, for some Canadian issuers, an impediment to their use of MJDS.

24 *See* National Instrument 44-102, Shelf Distributions, 23 O.S.C.B. (Supp) 985 (Dec. 22, 2000) (amended by 28 O.S.C.B. 10449 (Dec. 30, 2005)) and Companion Policy 44-102, 23 O.S.C.B. (Supp) 1005 (Dec. 22, 2000) (amended by 28 O.S.C.B. 10456) (Dec. 23, 2005), and by National Instrument 44-103, Post-Receipt Pricing, 23 O.S.C.B. (Supp) 1013 (Dec. 22, 2000) (amended by 28 O.S.C.B. 10458) and Companion Policy 44-103CP, 23 O.S.C.B. (Supp) 1025 (amended by 28 O.S.C.B. 10460).

25 A number of large Canadian issuers eligible to use the short-form registration statement for U.S. domestic issuers (Form S-3) currently have shelf debt programs in the United States. Without the MJDS, Canadian issuers would need, among other things, to establish a 12-month U.S. reporting history in order to be eligible to use the U.S. shelf procedures.

26 Interest income paid to U.S. residents on certain Canadian issuer debt securities previously may have been subject to Canadian withholding tax. However, since January 1, 2008, Canadian tax legislation eliminated Canadian withholding tax on interest paid or credited on all arm's-length and nonparticipating debt to non-Canadian lenders.

27 Short-form eligible exchanges include the Toronto Stock Exchange, Tier 1 and Tier 2 of the TSX Venture Exchange, Aequitas NEO Exchange Inc., and the Canadian Securities Exchange.

28 Like the U.S. shelf rules, the Canadian shelf procedures permit offerings to be made on a continuous or delayed basis after a "base" prospectus has been cleared by the Canadian securities regulatory authorities as evidenced by the issuance of a final receipt. Once the terms of a particular tranche are determined, the specific terms are provided by a supplement to the prospectus that is not subject to advance clearance by the Canadian securities regulatory authorities.

29 Allowing the U.S. rules to apply in place of the Canadian rules would put home jurisdiction regulators in Canada (who have the responsibility for reviewing MJDS filings) in the difficult position of having to evaluate disclosures prepared under U.S. rules (*e.g.*, the content and format of the "base" prospectus used for a shelf program).

30 The Adopting Release states the SEC's review standard as follows: "[E]xcept in the unusual case where the [SEC] staff has reason to believe there is a problem with the filing or the offering, the documents generally will be given a ‘no review’ status.…" Adopting Release, 56 Fed. Reg. 30,036, 30,046 (June 21, 1991).

31 Note, however, that FINRA review may still be required in certain circumstances. For example, FINRA Rule

5110(b)(7)(C)(ii) exempts F-10 filings from FINRA review only if the securities are offered pursuant to Canadian shelf prospectus offering procedures.

32 A jurisdiction designated to act as the review jurisdiction must agree to act in that capacity. The securities regulatory authorities of New Brunswick, Prince Edward Island, Newfoundland, the Yukon Territory and the Northwest Territories have indicated that they will not act as the review jurisdiction in connection with U.S.-only offerings. As a practical matter, based on the home jurisdictions of Canadian companies, most U.S.-only offerings are cleared through Ontario, Quebec, Alberta or British Columbia.

33 The SEC's effective no-review policy with respect to MJDS filings has continued despite concerns expressed regarding compliance by certain filings with MJDS requirements. In 1996, a member of the SEC accounting staff publicly indicated that the staff had conducted an informal review of selected filings under the MJDS, which review had revealed instances of noncompliance with, or significant inaccuracies with respect to, the U.S. GAAP reconciliation requirement, as well as noncompliance with certain other technical requirements of the MJDS. As a result of these shortcomings, and in particular the inadequate compliance with the U.S. GAAP reconciliation requirement, the SEC staff member indicated at that time that MJDS filings, especially annual reports on Form 40-F but also potentially filings to register securities for offering in the United States (in particular Form F-10, which requires a U.S. GAAP reconciliation for financial statements not prepared in accordance with IFRS), might be subject to review by the SEC, either in conjunction with that of the securities regulatory authority in the Canadian review jurisdiction or in lieu of a review by such regulatory authority. Having in effect placed issuers and others on notice as to the possibility of SEC review (perhaps in an effort to bring about voluntary compliance without undermining a key aspect of the MJDS), the SEC has continued its MJDS no-review practice other than to the extent review is required under the Sarbanes-Oxley Act. (The fact that financial statements of Canadian filers are now prepared in accordance with IFRS as a practical matter may further reduce the likelihood of SEC review.) *See supra* Note 30.

Because many Canadian companies, including those that have not financed in the United States or established a U.S. trading market for their securities, have U.S. shareholders, U.S. regulatory requirements are frequently implicated in Canadian rights offerings. Prior to adoption of the MJDS, U.S. shareholders of Canadian companies were frequently excluded from rights offerings or "cashed out" to avoid the need for the issuer to comply with the U.S. securities laws. As a result, U.S. shareholders lost the opportunity to participate in the offering on

p. 13-15

an equal basis with Canadian and other non-U.S. holders. The rights offering provisions of the MJDS (as well as the provisions governing business combinations, exchange offers and tender offers discussed below) are intended to encourage equal treatment of U.S. shareholders by reducing the burdens on Canadian issuers extending such offers into the United States. [34]

Eligible Canadian issuers may use the MJDS to extend rights offerings to U.S. shareholders by means of a Canadian prospectus or rights offering circular. The Canadian disclosure document is filed with the SEC under cover of a "wrap-around" registration statement on Form F-7. [35] To be eligible to use Form F-7, an issuer must:

- be incorporated or organized in Canada;
- be a foreign private issuer;
- have had a class of its securities listed on the Toronto Stock Exchange ("TSX") or the TSX Venture Exchange [36] for the 12 calendar months immediately preceding the filing;
- have a three-year reporting history with one or more of the provincial securities authorities in Canada;
- be in compliance with its Canadian listing and reporting obligations; and
- not be an "investment company" registered or required to be registered under the U.S. Investment Company Act.

p. 13-15

p. 13-16

Canadian issuers need not meet any "size" tests to use the MJDS for rights offerings, and no U.S. GAAP reconciliation is required for financial statements included in the Canadian offering document using IFRS. Thus, a broad class of Canadian issuers is eligible for the rights offering component of the MJDS, which is appropriate because rights offerings were included in the system to encourage equal treatment of U.S. shareholders. The MJDS contains other special accommodations intended to encourage rights offerings. [37]

Form F-7 requires that the rights granted to securityholders in the United States be granted on terms and conditions not less favorable than those extended to any other holder of the same class of security. The rights granted to U.S. holders [38] may not be transferred except outside the United States in accordance with Regulation S under the Securities Act. [39] Securities purchased by U.S. holders upon exercise of rights are, however, not restricted and therefore are freely transferable in the United States. Unlike Rule 801 rights offerings by foreign private issuers, [40] Form F-7 is available without regard to the percentage of the class of securities being issued that is held by U.S. holders.

Registration statements on Form F-7 are effective upon filing with the SEC. Accordingly, the rights may be issued in the United States as soon as the Canadian securities regulators have completed their review of the Canadian prospectus or rights offering circular and have cleared the issuance of the rights in Canada.

Although the MJDS rules are intended to make it as easy as possible for Canadian issuers to extend their rights offerings to U.S. shareholders, the system does not eliminate all the potential burdens for Canadian issuers. Many Canadian rights offerings are made pursuant to an exemption from Canadian prospectus requirements that permits the rights to be offered by means of a rights offering circular, a brief disclosure document that is not required to contain

p. 13-16

p. 13-17

Canadian "prospectus-level" disclosure and typically includes very little information about the issuer. Although the MJDS expressly contemplates the use of rights offering circulars, the fact that the disclosure is less complete than Canadian prospectus disclosures can, in certain circumstances, raise concerns under the U.S. civil liability and antifraud rules. This result may lead issuers to involve U.S. lawyers in the preparation of the disclosure document, which increases the costs of the offering. [41]

State securities laws [42] can also increase the difficulty and costs of MJDS rights offerings. For Canadian issuers that cannot rely on the federal preemption of state securities registration requirements provided by the National Securities Markets Improvement Act of 1996 (the "NSMIA") [43] applicable to certain "covered securities" (*e.g.*, based on an NYSE or Nasdaq listing), a number of states will subject the rights offering to their "merit review" procedures, potentially delaying the offering or making it impossible to extend the rights offering to shareholders in those states. Determining and complying with applicable state law requirements demands specialized U.S. lawyers, raising offering costs.

Footnotes

34 In 2000, the SEC adopted rules that facilitate cross-border tender and exchange offers, business combinations and rights offerings of equity securities by all foreign private issuers (including Canadian issuers) by, among other things, extending the MJDS principle of recognition of home country disclosures. *See* text accompanying *supra* Note 2 and text accompanying *infra* Notes 52 and 60; *see also* §§ 10.05[2] and 9.05. Consistent with the approach taken in the MJDS, rights offerings under Rule 801 under the Securities Act generally must be extended to U.S. holders on terms and conditions not less favorable than those extended to any other holder of such securities, and issuers using Rule 801 remain subject to the civil liability and antifraud provisions of the U.S. securities laws. *See* § 10.05[2].

35 The securities registered on Form F-7 are those issued upon exercise of the rights. The rights themselves generally are not required to be registered based on a "no-sale" theory. It does not appear that Form F-7 (or the documents used for rights offered to existing Canadian shareholders pursuant to a prospectus exemption under National Instrument 45-101) allows for rights to be offered to persons who do not hold the securities in respect of which the rights were issued. Any offering of a "rump" would have to be qualified by another prospectus or pursuant to an exemption from registration in Canada and not pursuant to Form F-7 in the United States. One possible option would be to rely on the private placement rules of both regimes.

36 Form F-7 also references the Montreal Exchange and the Senior Board of the Vancouver Stock Exchange. Both of these exchanges have since been merged into the TSX and the TSX Venture Exchange.

37 For example, the SEC's auditor independence rules, discussed in § 13.07[4], do not apply to MJDS rights offerings, and Form F-X, which provides, among other things, for the appointment of an agent for service of process, is not required in connection with MJDS rights offerings (*but see infra* Note 68). Although the special MJDS exemption from the reporting requirements of § 15(d) of the Exchange Act contained in Rule 12g3-2(b) under the Exchange Act has been eliminated, MJDS filers can qualify for the exemption on the same basis as other foreign private issuers. *See* § 13.10.

38 "U.S. holder" is defined to include "any person whose address appears on the records of the registrant, any

voting trustee, any depositary, any share transfer agent or any person acting on behalf of the registrant as being located in the United States." 17 C.F.R. § 239.37(d).

39 Regulation S under the Securities Act provides a safe harbor from SEC registration for persons (other than the issuer, a distributor, their respective affiliates and any person acting on behalf of any of the foregoing) reselling securities in an offshore transaction (including offers and sales on the TSX and the TSX Venture Exchange not prearranged with a U.S. buyer) and without directed selling efforts in the United States. *See* § 8.02.

40 *See* § 10.05[2].

41 Despite potential concerns as to the U.S. civil liability and antifraud rules, many rights offerings circulars filed under Form F-7 have been prepared following the standard Canadian approach to rights offerings with little or no modification to conform to U.S. disclosure practices.

42 *See* § 13.07[7].

43 National Securities Markets Improvement Act of 1996, Pub. L. No. 104-290, 110 Stat. 3416 (1996).

U.S. Regulation of the International Securities and Derivatives Markets, § 13.04, BUSINESS COMBINATIONS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.04 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

The MJDS permits the registration in the United States of securities issued by Canadian corporations in connection with a statutory amalgamation, merger, arrangement or other reorganization requiring the vote of shareholders of the participating companies (a "business combination"). [44] Eligible Canadian issuers may register these securities with the SEC by filing the information circular prepared in accordance with applicable proxy solicitation rules in Canada [45] under cover of a "wrap-around" registration statement on SEC Forms F-8 or F-80

p. 13-18

(or Form F-10 if the applicable eligibility tests are satisfied). Forms F-8 and F-80 do not require a U.S. GAAP reconciliation of the financial statements included in the Canadian information circular. The MJDS is not available if no information circular is prepared because of the availability of an exemption from such requirements. [46]

To be eligible to use the MJDS in connection with a business combination, each corporation participating in the business combination (other than the successor registrant) must satisfy the eligibility criteria identified above for use of the MJDS in connection with a rights offering and must also have a public float of at least U.S. $75 million. [47] However, a participating company is not required to satisfy the public float or the reporting and listing eligibility criteria if other participating companies that do satisfy these criteria have assets and gross revenues from continuing operations that in the aggregate would contribute, on a *pro forma* basis for the most recently completed fiscal year, at least 80% of the successor registrant's total assets and gross revenues from continuing operations. In addition, the successor registrant must be a foreign private issuer that is incorporated or organized in Canada.

The securities being registered under the MJDS in connection with a business combination must be issued to U.S. holders on terms and conditions not less favorable than those extended to any other holder of the same class of security. For Form F-8, less than 25%, and for Form F-80, less than 40%, of the class of securities being offered by the successor registrant in connection with the business combination must be held by U.S. holders [48] measured on a *pro forma* basis as of immediately after completion of the business combination. The disclosure

p. 13-18

p. 13-19

requirements under Forms F-8 and F-80 are the same. [49] Registration statements on Forms F-8 and F-80 are effective upon filing with the SEC.

Registrants participating in business combinations that are ineligible to use Forms F-8 or F-80 because, for example, the limitation on securities issued to U.S. holders is not satisfied (*i.e.*, if more than 40% of the class of securities being offered by the successor registrant will be held by U.S. holders) may use Form F-10 if participating companies accounting for at least 80% of the total assets and gross revenues from continuing operations of the successor registrant meet the eligibility criteria for Form F-10.

The business combination (and exchange offer) provisions of the MJDS are limited to transactions in which all of the participating companies are Canadian. Thus, although Form F-10-eligible Canadian companies can use Canadian disclosures under the MJDS to make a traditional common share offering in the United States and to list common shares on a U.S. stock exchange, these companies, even after a longstanding U.S. presence, will be required to use the FPI System forms or U.S. domestic issuer forms (with the attendant costs and delays) [50] to register securities offered in business combinations or exchange offers involving U.S. companies.

Canadian issuers are also eligible to use the rules adopted by the SEC in January 2000 and October 2008 [51] for cross-border tender and exchange offers, business combinations and rights offerings. These rules include Rule 802 under the Securities Act, under which exchange offers for a foreign private issuer's securities and securities issued in business combinations involving foreign private issuers are exempt from the registration requirements of the Securities Act if U.S. securityholders hold 10% or less of the subject class of securities. [52]

Footnotes

44 Many Canadian business combinations can be structured so that they are effected with the approval of a Canadian court, in which case the securities being offered are generally exempt from Securities Act registration requirements pursuant to § 3(a)(10) of the Securities Act. For a discussion of issues that frequently arise in connection with this exemption, *see* SEC, Division of Corporation Finance, Staff Legal Bulletin No. 3A, Fed. Sec. L. Rep. (CCH) ¶60,003 (June 18, 2008).

45 Provincial securities laws generally exempt securities issued in a business combination from prospectus requirements on the theory that the information circular required under the proxy rules provides sufficient disclosure to shareholders. Canadian securities regulators have taken action to require prospectus-level disclosure in information circulars prepared in connection with business combinations, which enabled the SEC to determine that such circulars are adequate for purposes of the MJDS. *See* OSC Rule 51-801, Implementing National Instrument 51-102, Continuous Disclosure Obligations (the "Implementing Rule"), 27 O.S.C.B. 3555 (Mar. 30, 2004) (amended by 28 O.S.C.B. 4559 (May 16, 2005), amended by 29 O.S.C.B. (Supp-2) (Dec. 29, 2006), a local Ontario rule implementing National Instrument 51-102, Continuous Disclosure Obligations, 27 O.S.C.B. 3439 (in force on Mar. 30, 2004) (amended by 28 O.S.C.B. 10384 (June 1, 2005), amended by 28 O.S.C.B. 10463 (Dec. 30, 2005), amended by 30 O.S.C.B. (Supp-1) 1 (Dec. 29, 2006) ("NI 51-102"), in Ontario. NI 51-102 requires prospectus-level disclosure, including updated financial statements, for information circulars prepared in connection with a business combination.

46 *See supra* Note 23.

47 For second-step business combinations occurring within 12 months after the termination of an exchange offer or cash tender offer that was or could have been extended into the United States under the MJDS, public float may be measured as of the date immediately prior to the commencement of the exchange offer or cash tender offer (and therefore prior to any reduction in a participating company's public float resulting from the offer).

48 For purposes of applying the U.S. holder tests under Forms F-8 and F-80 (used in connection with business combinations and exchange offers) and Schedules 14D-1F and 13E-4F (used in connection with third-party and issuer tender offers), except as described in § 13.06 in certain cases involving competing tender offer bids, the calculation of U.S. holders is made as of the end of the participating companies' (in business combinations) or subject issuer's (in exchange offers) last quarter (or, if such quarter terminated within 60 days of the filing date, as of the end of the preceding quarter).

49 The distinction between Forms F-8 and F-80 is limited to the permissible percentage ownership of the subject securities by U.S. holders (25% for Form F-8 and 40% for Form F-80). The SEC provided separate forms as an accommodation to state securities regulators, who have not been willing to recognize a threshold above 25% for purposes of the application of four model rules (discussed in § 13.07[7]) that provide for, *inter alia*, expedited review of MJDS registration statements by the state securities regulators. Offers for which the 25% threshold is exceeded are filed on Form F-80 so that they may be readily identified by the states for review purposes.

50 Canadian companies meeting certain specified eligibility requirements and having previously filed annual reports on Form 40-F will be entitled, however, to incorporate by reference such reports into a registration statement on Form F-4, the form under the FPI System used to register securities in the case of business

combinations, to satisfy the disclosure requirements concerning the acquiror, thereby limiting certain of the additional costs and delays. In the case of a Canadian company that does not meet these requirements, the company would be required to provide in the Form F-4 the information required by the long-form foreign private issuer registration form (*i.e.*, Form F-1).

51 *See* SEC Release No. 33-8957 (Sept. 19, 2008).

52 *See* text accompanying *supra* Notes 2 and 34 and text accompanying *infra* Note 60; *see also* § 9.05[9].

U.S. Regulation of the International Securities and Derivatives Markets, § 13.05, EXCHANGE OFFERS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.05 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

p. 13-20

Exchange offers for a Canadian issuer's securities may be extended into the United States under the MJDS through use of Forms F-8 or F-80 (or Form F-10 if the applicable eligibility tests are satisfied), which "wrap-around" the Canadian securities exchange takeover bid circular or issuer bid circular. [53] The MJDS is not available if no takeover or issuer bid circular is prepared due to the availability of an exemption from such requirements.

The eligibility criteria applicable to registrants for the use of Forms F-8 or F-80 in an exchange offer are the same as identified above for use of the MJDS in connection with a rights offering, except that, for third-party exchange offers, the registrant must also have a public float of at least U.S. $75 million. [54] The target must be a foreign private issuer that is incorporated or organized in Canada and must not be an "investment company" registered or required to be registered under the U.S. Investment Company Act. The registrant must offer its securities to U.S. holders on terms and conditions not less favorable than those offered to any other holder of the same class of securities subject to the exchange offer.

For Form F-8, less than 25%, and for Form F-80, less than 40%, of the class of subject securities outstanding may be held by U.S. holders. For third-party exchange offers, the registrant may rely on a conclusive presumption [55] that the target is a foreign private issuer and that less than 25% (for Form F-8) or 40% (for Form F-80) of the subject securities is held by U.S. holders, unless (i) published data on trading volumes indicates that the aggregate trading volume of the subject securities in the United States exceeds the aggregate trading volume in Canada, (ii) the most recent annual report filed in Canada or the United States by the target indicates that the applicable threshold is exceeded or (iii) the registrant has actual knowledge to the contrary. As discussed with respect to business combinations and tender offers, Canadian issuers are also eligible to use the rules adopted by the SEC for certain foreign private issuer cross-border tender and exchange offers, business combinations and rights offerings, including Rule 802 under the Securities Act. [56]

Footnotes

53 Exchange offers made in the United States are generally subject to the requirements of the Williams Act in addition to the registration requirements of the Securities Act. The MJDS relief from Williams Act requirements is discussed in § 13.06.

54 There is an additional eligibility requirement for third-party exchange offers because, unlike in a rights offering or issuer exchange offer, the investor has not made a prior investment decision with respect to the issuer.

55 There is no presumption (either in Form F-8 or F-80 or in the tender offer provisions of the MJDS) regarding the target's investment company status.

56 *See* text accompanying *supra* Notes 2, 34 and 52 and text accompanying *infra* Note 60; *see also* § 9.05[9].

U.S. Regulation of the International Securities and Derivatives Markets, § 13.06, TENDER OFFERS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.06 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

p. 13-21

Under the MJDS, eligible third-party and issuer cash tender offers or exchange offers for a class of securities of a Canadian issuer may be extended to U.S. securityholders, without regard to the application of the Williams Act and the SEC rules thereunder governing such offers, by using a Canadian takeover or issuer bid circular and complying with Canadian procedural rules governing the offers, provided that the transaction is subject to and not exempt from the substantive provisions of Canadian law governing the terms and conditions of the offer. [57] SEC Schedules 14D-1F (for third-party offers) and 13E-4F (for issuer offers), which "wrap-around" the Canadian takeover or issuer bid circular, are filed with the SEC concurrently with filing in Canada.

The target must be a foreign private issuer incorporated or organized in Canada, must not be an "investment company" registered or required to be registered under the U.S. Investment Company Act and less than 40% of the Canadian target's securities that are subject to the tender offer may be held by U.S. holders (including affiliates of the target). [58] There are no eligibility requirements for bidders in third-party cash tender offers and such bidders accordingly may include U.S. entities. The bidder must extend the cash tender offer to U.S. holders on terms and conditions not less favorable than those extended to any other holder of such securities.

Third-party bidders in a tender offer may rely on a conclusive presumption that the target is a foreign private issuer and that less than 40% of the subject securities are held by U.S. holders on the same basis as described above for exchange offers. There are no market value or public float tests for tender offers under the MJDS. However, if securities form part of the consideration, the MJDS

p. 13-21

p. 13-22

requirements discussed above for registering the exchange offer under the Securities Act are applicable. [59] As a result, a U.S. bidder may follow Canadian bid rules if the MJDS eligibility requirements are met and the offer is limited to cash, but must comply with the normal U.S. registration requirements if securities are offered as part of the consideration, which could put a U.S. bidder at a disadvantage.

In addition, Canadian issuers are eligible to use rules adopted by the SEC to facilitate certain foreign private issuer cross-border tender and exchange offers, business combinations and rights offerings, extending the MJDS principle of recognition of home country disclosure and bid rules. [60] In the case of tender offers, these rules establish a two-tier system. The "Tier I exemption" provides that where 10% or less of the subject securities is held by U.S. holders, [61] third-party and issuer tender offers for a foreign private issuer may be conducted in the United States in accordance with the procedural and disclosure requirements of the target's home jurisdiction and without compliance with the Williams Act. Under the Tier I exemption, offering materials required by the target's home jurisdiction are to be submitted to the SEC under cover of Form CB. The "all-holders" and "best price" rules of Rule 14d-10 under the Exchange Act, as well as the "going private" disclosure and procedural requirements of Rule 13e-3 and Rule 14e-5 under the Exchange Act (which restricts purchases of securities outside a tender or exchange offer), are inapplicable to Tier I exempt offers.

The "Tier II exemption" provides more limited relief from the U.S. tender offer rules and applies where 40% or less of the subject securities is held by U.S. holders. [62] Under the Tier II exemption, the offeror has a right to divide a bid into two separate offers, one for U.S. and the other for non-U.S. holders, to offer "loan notes" or similar securities to non-U.S. holders only and to announce extensions of an offer in accordance with home jurisdiction practice rather than under U.S. rules. Furthermore, the Tier II exemption permits relaxation of the prompt payment rules to permit an offeror to pay for securities in accordance with requirements of the subject company's home jurisdiction and allows an offeror to reduce or waive the minimum tender condition without extending the offer if certain disclosure procedures and timing requirements are met. Offerors relying on the Tier II exemption are subject to the SEC's disclosure and filing obligations, certain other procedural obligations and the "going private" requirements of Rule 13e-3 under the Exchange Act. In addition, Rule 14e-5 under the Exchange Act continues to apply to bids made under the Tier II exemption, with limited exceptions. With respect to the Securities Act registration requirements

p. 13-22

p. 13-23

for cross-border exchange offers, the rules establish an exemption from registration under Rule 802 where the Tier I exemption is available. Consistent with the approach taken in the MJDS, under the rules the offeror generally must extend the cash tender or exchange offer to U.S. holders on terms and conditions not less favorable than those extended to any other holder of such securities, and issuers and bidders remain subject to the civil liability and antifraud provisions of the U.S. securities laws.

Footnotes

57 Certain tender offers are exempt from provincial or territorial securities regulation, including, for example, issuer bids conducted on a recognized Canadian stock exchange such as the TSX, provided that the bid is conducted in accordance with the rules and policies of such exchange. The MJDS is available if the tender offer remains fully subject to at least one set of bid rules in Canada.

An issuer that has obtained a limited grant of exemptive relief from the application of bid regulations in Canada, which relief implicates protections corresponding to certain Williams Act protections, must seek an SEC order for the offer to proceed under the MJDS. The order may be conditioned on compliance with the relevant Williams Act provisions with respect to U.S. holders or without conditions. The SEC has indicated that it will respond to requests for such orders on an expedited basis.

58 If a Schedule 14D-1F or 13E-4F is filed while another cash tender or exchange offer for the same class of securities is ongoing and the earlier offer was commenced or was eligible to be commenced under the MJDS, the calculation of U.S. holders for purposes of the 40% limit is made as of the date applicable to the initial bid. Although the MJDS treatment of tender offers is intended by the SEC to encourage Canadian issuers to extend predominantly Canadian offers into the United States by removing the costs associated with complying with applicable U.S. securities regulations, the SEC has indicated that its adoption of a U.S. ownership threshold is not indicative of any belief that it may lack the jurisdiction to compel extension into the United States of a predominantly Canadian offer.

59 *See* § 13.05.

60 *See* § 9.05[9].

61 *See* § 9.05[9][a].

U.S. Regulation of the International Securities and Derivatives Markets, § 13.07, OTHER RELEVANT U.S. LEGAL CONSIDERATIONS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.07 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

The SEC's accommodations for MJDS securities offerings consist principally of the acceptance of Canadian disclosure documents and waiver of SEC review (although both accommodations are now directly or indirectly affected by the additional requirements of the Sarbanes-Oxley and Dodd-Frank Acts—namely, substantive disclosure requirements and mandate for SEC review of company disclosures once every three years [63]). MJDS securities offerings generally are subject to all other customary requirements for U.S. public offerings (*e.g.*, broker-dealer registration requirements for underwriters, prospectus delivery obligations, [64] limitations on publicity during the offering period, [65] *etc.*). The continued application of certain U.S. requirements, discussed below, may offset some of the benefits of the MJDS for Canadian issuers.

[1] U.S. Liability Rules

As noted above, the MJDS does not affect the applicability of U.S. civil liability and antifraud rules. Thus, Canadian issuers using the MJDS are subject to potential liability under U.S. law if their registration statements, prospectuses, circulars, Exchange Act disclosure filings or other communications contain material misstatements or omissions, with "materiality" and other elements of claims determined under U.S. law. [66] Although the relevant U.S. liability provisions for registration statements and prospectuses are phrased much like their Canadian counterparts, [67] Canadian issuers generally have been concerned that their potential exposure to civil liabilities is greater in the United States due to, among other things, differences in certain procedural rules (*e.g.*, the wider availability of class

p. 13-24

actions and contingency fee arrangements in the United States) and the generally higher incidence of securities litigation in the United States. [68]

The SEC clarified in the Adopting Release that, by adopting the MJDS, it in essence was adopting as its own requirements the disclosure requirements of the applicable Canadian forms, with the same effect as if such requirements were specifically spelled out in the MJDS forms. Accordingly, "good faith compliance with the disclosure requirements of the home jurisdiction, as construed by Canadian regulatory authorities, will constitute compliance with the applicable U.S. federal securities disclosure requirements, even if such compliance results in the omission of information which might otherwise have been required as a line item in registration statements filed by U.S. issuers on the [SEC's] other registration forms." [69] As to certain specified disclosures, however, the Sarbanes-Oxley and Dodd-Frank Acts have in effect modified the MJDS to impose such disclosure requirements on Form 40-F filers.

Although the clarification in the Adopting Release confirmed that the SEC did not expect Canadian issuers using the MJDS to comply with the line-item disclosure requirements of other U.S. disclosure forms, the requirement that MJDS disclosure documents contain all "material information" necessary to make the required statements "not misleading" (within the meaning of the U.S. securities laws) and the applicability of the U.S. civil liability and antifraud rules effectively require Canadian issuers to consider general U.S. disclosure principles and practices in preparing their MJDS filings. [70] Moreover, to help establish their "due diligence" defense under § 11 of the Securities Act, U.S. underwriters in MJDS offerings generally request Canadian issuers to provide,

p. 13-24

among other things, customary representations, and, under certain circumstances, a legal opinion or negative comfort letter from U.S. counsel, [71] as to the adequacy of the disclosure (from the perspective of the U.S. liability rules) in MJDS registration statements and prospectuses.

[2] Investment Companies

The restrictions of the U.S. Investment Company Act apply to MJDS offerings. Accordingly, Canadian issuers that are registered or required to register as an "investment company" under the U.S. Investment Company Act may not make securities offerings under the MJDS. The definition of "investment company" under the U.S. Investment Company Act is very broad, [72] and Canadian issuers whose assets include a substantial proportion of securities may constitute "investment companies." Thus, absent an exemption, such issuers may not use the MJDS for U.S. securities offerings.

Rule 3a-6 under the U.S. Investment Company Act excludes from the definition of "investment company" foreign banks and insurance companies and specifically extends the exclusion to Canadian trust and loan companies, which otherwise might not satisfy the rule's definition of "foreign bank." [73] Entities within the scope of the rule are not subject to regulation under the act and are therefore able to use the MJDS for offerings of any type, including common share offerings. In addition, by operation of the rule, finance subsidiaries of those entities (and of their holding companies) that make U.S. offerings of guaranteed debt or nonvoting preferred stock are eligible for an exemption from the U.S. Investment Company Act pursuant to Rule 3a-5 thereunder. Similarly, because

p. 13-25

p. 13-26

foreign banks and insurance companies are effectively treated as operating companies by virtue of Rule 3a-6, the exceptions from investment company status available to holding companies of operating entities [74] are also available to foreign bank and insurance holding companies. [75]

Other Canadian issuers that are caught by the broad "investment company" definition (*e.g.*, holding companies with substantial nonmajority or noncontrolling investments) and cannot rely on Rule 3a-1, Rule 3a-5 or Rule 3a-6 or another exemption must seek individual discretionary exemptive orders from the SEC pursuant to § 6(c) of the U.S. Investment Company Act (which can be time-consuming) in order to use the MJDS for public offerings.

[3] Market Regulation Rules

Regulation M under the Exchange Act generally prohibits, during a distribution of securities, bids for or purchases of those securities (and certain "reference securities") by distribution participants (*e.g.*, issuers, underwriters and members of the dealer group and certain of their affiliates), and governs stabilization and certain post-offering activities. [76] Where any part of a distribution is being made in the United States, the SEC staff generally applies these rules to the conduct of both U.S. and non-U.S. distribution participants outside the United States, which can have the effect of disrupting normal market practices in the home jurisdiction. [77]

[4] Auditor Independence

p. 13-26

p. 13-27

Audited financial statements included in MJDS registration statements (other than registration statements on Form F-7 in respect of rights offerings) and in certain other MJDS filings are subject to the SEC's auditor independence requirements commencing with the most recent fiscal year for which audited financial statements are presented. For prior periods, compliance with Canadian independence standards is sufficient. Accordingly, where the auditor for a Canadian issuer does not meet the U.S. independence requirements on a current basis and cannot obtain discretionary relief from the SEC staff, the issuer will not be able to effect such an MJDS offering without undertaking one of the following steps: (i) engaging an independent accounting firm to audit at least the most recent fiscal year or (ii) adopting the SEC's auditor independence requirements and allowing at least one year to pass so that the report of an independent accounting firm would cover the then most recently completed fiscal year.

[5] "Bought Deals"

Securities laws in Canada allow short-form system issuers to sell securities in "bought deals" in which the underwriters that have committed to purchase an issue are permitted to solicit indications of interest during a four-day window period after an underwriting agreement is signed but before the preliminary

p. 13-27

p. 13-28

prospectus is filed. [78] Bought deals are an important distribution technique in Canada, both for common stock and debt offerings.

The MJDS does not change the basic Securities Act prohibition against public offers prior to the filing of a registration statement. Accordingly, if the normal Canadian bought deal timing is followed and the MJDS registration statement is not filed until the Canadian preliminary prospectus is filed four business days after the underwriting agreement is signed, U.S. underwriters and dealers will not be permitted to engage in any solicitation activities during the four-business day window period. In a successful bought deal, however, Canadian underwriters generally would expect to have obtained indications of interest from prospective investors covering the entire amount of securities being offered well before the end of the window period. Therefore, to the extent that marketing efforts for the U.S. offering can begin only after the end of the window period, the U.S. offering would serve the function only of a delayed "safety valve" for the Canadian underwriters—that is, the U.S. market would be tapped only if marketing efforts in Canada during the window period did not produce sufficient indications of interest from Canadian investors.

To address this issue and permit the U.S. and Canadian markets to be accessed simultaneously on a public basis, an "accelerated filing" bought deal technique has been used in a number of transactions. [79] Under this approach, the filings of the preliminary prospectus in Canada and the MJDS registration statement in the United States are accelerated and made either concurrently with the signing of the underwriting agreement, if the agreement is signed in the morning, or at the open of business the following morning if the agreement is signed in the evening after the close of the Canadian stock exchanges. This approach makes it possible for U.S. marketing efforts to begin as soon as solicitation activity begins in Canada. As bought deals are often commenced with little prior

p. 13-28

p. 13-29

notice, this approach is a practicable alternative only if the issuer has a form of Canadian bought deal prospectus (and MJDS registration statement) prepared in advance of a bought deal proposal. [80]

In circumstances where a public offering in the United States is either not desired by the issuer or is impracticable because the preliminary prospectus cannot be made available on an accelerated basis, Canadian underwriters may resell securities purchased in bought deals in the U.S. private market through their U.S.-registered broker-dealer affiliates (including resales under Rule 144A under the Securities Act where available or on a § 4(1 ½) basis) [81] because private offers and sales can be effected on the same timetable as offers and sales in Canada. In circumstances where the resale safe harbor under Regulation S under the Securities Act does not provide sufficient liquidity for U.S. private purchasers, the Canadian prospectus, once available and with appropriate additions, could be used under the MJDS in conjunction with the Canadian shelf rules to register the securities sold privately in the United States so that they may be resold freely from time to time by U.S. purchasers. [82]

[6] "At-the-Market" or "Dribble-Out" Offerings

At-the-Market ("ATM" or "dribble-out") offerings are an alternative to traditional follow-on public offerings and bought deals. ATM offerings allow an issuer to sell equity securities into the market from time to time at the market price.

p. 13-29
p. 13-30

MJDS issuers that conduct ATM offerings must file a base shelf prospectus in Canada, which may be reviewed by the Canadian securities regulators and a corresponding registration statement on Form F-10 in the United States, which (absent unusual circumstances) is not reviewed by the SEC. [83] If selected for review by the Canadian securities regulators, the review process generally takes one to two weeks to complete. Upon completion of the Canadian review process, a final base prospectus and an amended registration statement must be filed in Canada and the United States, respectively.

The placement agent or agents and the issuer enter into a distribution agreement for the ATM offering that typically includes customary representations, warranties, covenants and closing conditions. The execution of the distribution agreement in an ATM offering triggers the requirement to file a prospectus supplement disclosing the terms of the ATM offering and a requirement to issue a press release. The prospectus supplement must disclose the identity of the placement agent or agents, the commissions payable to the placement agent or agents and the maximum number of shares to be sold in the offering or the aggregate offering size. [84] Because equity issuances may occur frequently under an ATM program, disclosure of equity issuances off of an ATM shelf is often effected through disclosure in quarterly and annual reports in Canada and the United States.

Generally, Canadian securities laws require a broker-dealer to deliver a prospectus to purchasers of securities. [85] However, because an ATM offering is usually executed anonymously over a securities exchange, it is generally impracticable to physically deliver a prospectus to purchasers in an ATM offering. Therefore, to conduct an ATM offering in Canada, an MJDS issuer must obtain exemptive relief from the requirement to physically deliver a prospectus to each purchaser in an ATM offering and from certain form requirements, including the requirement to include therein a statement regarding the purchasers' statutory rights and a certificate of the issuer, each in the prescribed form. Exemptive relief is typically granted by Canadian securities regulators, subject to a cap on the number of shares sold on the TSX of 25% of the trading volume of shares on the TSX on the trade date. [86] Exemptive relief is not required if the ATM offering

p. 13-30
p. 13-31

is conducted solely on a U.S. securities exchange. [87] An MJDS issuer must also consider whether conducting an ATM offering requires additional disclosure or raises considerations under Regulation M, [88] FINRA rules or securities exchange rules.

[7] State Securities Laws

In addition to the registration requirements of the SEC at the federal regulatory level, state securities or "blue sky" laws are also applicable to MJDS offerings. [89] However, the NSMIA amended the Securities Act to create a number of general exemptions from certain state securities law requirements. As a result, the need to register securities at the state level has been eliminated in connection with virtually all significant securities offerings in the United States by non-U.S. issuers.

As amended by the NSMIA, § 18 of the Securities Act provides exemptions for several categories of "covered securities" (or any security that will be a "covered security" upon completion of a transaction), including:

- securities that are listed on the NYSE or any national securities exchange that the SEC determines has substantially similar listing standards, [90] or securities of the same issuer that are equal or senior in rank to a security that is so listed; and
- securities offered or sold in certain transactions exempt from registration under the Securities Act, including ordinary secondary market transactions (provided the issuer of the security is a reporting issuer under the Exchange Act). [91]

p. 13-31
p. 13-32

A "covered security" is exempt from all state requirements with respect to (i) registration and qualification of securities or securities transactions, (ii) prohibitions, limits or conditions on the use of any offering document "prepared by or on behalf of the issuer" of the security, [92] and (iii) prohibitions, limits or conditions on offers or sales of the security based on the merits of the offering or the issuer. [93] The NSMIA generally does, however, preserve each state's authority to maintain and enforce its own antifraud laws and notice filing requirements. [94]

In circumstances where state law registration requirements do apply, however, absent an available state exemption from registration, the MJDS issuer must register the securities under the applicable state securities statutes (which can involve a filing, comment and clearance process similar in some respects to SEC registration [95]). Because the majority of states have adopted the Uniform Securities Act, the states' securities laws are similar to a substantial degree.

The state securities regulators were consulted extensively during the process of drafting the MJDS. Although state regulators would not agree to recommend a general exemption from state securities laws' registration requirements for MJDS offerings, the North American Securities Administrators Association ("NASAA"), which represents all state securities regulators, endorsed the MJDS and, in 1990, recommended model rules designed to facilitate MJDS offerings in the various states. The rules, as updated in 2005, are designed to accommodate registration of MJDS offerings with the states by, among other things: (i) harmonizing the state review period with Canadian review periods, (ii) providing for state acceptance of financial information presented in the registration statement in accordance with the requirements of the registration statement, and (iii) providing an exemption to facilitate secondary trading in the securities offered under the MJDS. [96]

Adoption of the model rules does not, however, alter the substantive standards of review that may be applied by a state to MJDS offerings subject to state registration. Accordingly, the "merit review" states may continue to apply their

p. 13-32

p. 13-33

standards of fairness to any MJDS offering required to be registered. [97] As a result, certain Canadian issuers wishing to use the MJDS that are unable to rely on federal preemption of a "covered security" or an exemption from blue sky registration may have difficulty obtaining clearance in the merit review states. This difficulty is likely to arise most frequently in MJDS offerings by smaller Canadian companies, such as those electing to use the MJDS for rights offerings. Such issuers may have difficulties clearing their rights offerings in those merit review states (including California) that do not have an exemption for sales of securities to the issuer's existing shareholders.

It therefore remains important for MJDS offerings of securities not subject to the federal preemption under the NSMIA to fall within exemptions from state registration requirements to the extent possible. Where exemptions are not available, the need to obtain state clearances can result in additional costs and delays, and, in certain circumstances, state clearances may be impossible to obtain.

[8] Oil, Gas and Mining Disclosure

The SEC adopted revisions to its oil and gas reporting disclosures that became effective as of January 1, 2010. The revisions are intended to provide investors with a more meaningful and comprehensive understanding of oil and gas reserves to facilitate their assessment of the relative value of oil and gas companies. In its adopting release, the SEC clarified that the new disclosure requirements do not apply to MJDS issuers that file annual reports on Form 40-F so long as they comply with the disclosure requirements of Canadian National Instrument 51-101, Standards of Disclosure for Oil and Gas Activities ("National Instrument 51-101"). [98] In the past, some Canadian issuers obtained exemptions in Canada permitting them to estimate reserves and disclose related oil and gas activities in accordance with SEC oil and gas disclosure requirements instead of complying with National Instrument 51-101. In July 2015, National Instrument 51-101 was amended to significantly alter its disclosure requirements as well as allow Canadian reporting issuers to provide oil and gas disclosure and reserve estimates in accordance with alternative standards, including SEC rules, without the need for a specific exemption. However, reserve estimates must still be prepared and audited by a qualified reserve evaluator or auditor.

In 2016, the SEC proposed changes to its mining disclosure policies, which are designed to modernize its requirements and more closely align them with industry standards, including Canadian National Instrument 43-101, Standards of

p. 13-33

p. 13-34

Disclosure for Mineral Projects ("National Instrument 43-101"). [99] The proposed changes would rescind Industry Guide 7 and update Section 102 of Regulation S -K (for domestic issuers) and Item 4.D of Form 20-F (for foreign private issuers). These changes would apply to Canadian issuers that file as foreign private issuers and prepare annual reports on Form 20-F. However, Canadian issuers that file under MJDS would be exempt and could continue to provide disclosure pursuant to National Instrument 43-101. [100]

Footnotes

63 *See*, *e.g.*, *supra* Note 30.

64 *See* § 3.02[4].

65 *See* § 3.02[3].

66 Although liability for material misstatements or omissions can arise under various federal and state law provisions, the principal provisions under which civil liability can be asserted are §§ 11 and 12(a)(2) of the Securities Act and §§ 18 and 10(b) of, and Rule 10b-5 under, the Exchange Act. *See also* § 11.03[1] and [2].

67 *See*, *e.g.*, § 130 of the Securities Act (Ontario).

68 The provisions of the MJDS relating to consent to service of process may raise related concerns. At the time of filing a registration statement under the MJDS (other than on Form F-7, which separately imposes a requirement to appoint an agent for service of process), as well as certain other MJDS filings, Canadian issuers must file with the SEC a Form F-X containing an irrevocable consent to service of process in SEC proceedings or civil actions arising out of or relating to the offering or the securities being offered, an appointment of a U.S. person as agent for service of process, a consent to service of an administrative subpoena and an undertaking to assist the SEC with an administrative investigation. If the agent for service of process resigns, is dismissed or is unable to continue serving as agent, the issuer generally must appoint a successor agent unless the issuer has ceased filing reports under the Exchange Act for a period of more than six years. The agent for service designated in Form F-X is authorized to accept service of process on the issuer's behalf in connection with any investigations or administrative proceedings conducted by the SEC and any civil suits relating to the offering or the offered securities brought against the issuer in any federal or state court in the United States.

69 Adopting Release, 56 Fed. Reg. 30,036, 30,049 (June 21, 1991).

70 In transactions where there is a high risk of litigation, such as hostile tender or exchange offers, Canadian issuers using the MJDS may elect voluntarily to comply with certain line-item disclosure requirements of the U.S. disclosure forms in an effort to minimize their risk of liability under the U.S. liability rules.

71 In U.S.-only offerings underwritten by U.S. investment banking firms, negative comfort letters generally have been obtained from U.S. counsel to the issuer. Negative comfort letters generally have not been provided by U.S. counsel to the issuer in the context of dual offerings in Canada and the United States that are underwritten on a "bought deal" basis by Canadian investment banking firms (as more fully discussed in § 13.07[5] below) with sales in the United States of a portion of the securities typically effected by the U.S. affiliates of the Canadian underwriters. Negative comfort letters of U.S. counsel to the issuer generally have not been provided in these offerings because of (i) the extra cost being viewed as unwarranted given the relatively small size of the U.S. component of the offering compared to the Canadian component, (ii) insufficient time in the bought deal context for U.S. counsel to undertake the necessary due diligence in

order to deliver such letters and (iii) the fact that generally only the U.S. affiliates of the Canadian underwriters of such offerings have participated in the sales in the United States.

72 *See* § 3(a)(1) of the U.S. Investment Company Act. *See* Chapter 15, for a discussion of U.S. regulation of foreign investment companies.

73 Rule 3a-6 was adopted in SEC Release No. IC-18381 (Oct. 29, 1991) and replaced Rule 6c-9 under the U.S. Investment Company Act, which provided a more limited exemption from the Act for U.S. offerings of debt securities and nonvoting preferred stock by foreign banks and their finance subsidiaries, but did not extend to Canadian trust and loan companies. *See* § 15.05[2].

74 § 3(a)(1)(C) of the U.S. Investment Company Act and Rule 3a-1 thereunder. *See* § 15.05[2].

75 Foreign banks and insurance companies seeking to rely on Rule 3a-6 to make a U.S. registered public offering of their securities, as well as their holding companies and finance subsidiaries relying on Rules 3a-1 and 3a-5, respectively, must file Form F-N under the Securities Act. The Form, which replaced Form N-6C9, calls for certain information about the proposed offering and also includes an appointment of a U.S. agent for receipt of service of process. *See* Rule 489 under the Securities Act. Canadian entities that have filed a Form F-X (*see supra* Note 68) or that are filing a registration statement relating to debt securities or nonvoting preferred stock and have a "currently accurate" Form N-6C9 on file with the SEC are, however, excepted from this requirement. *See* Rule 489(b) under the Securities Act.

76 *See* § 3.02[9].

77 As a result of the SEC's extra-territorial approach and because the applicable rules in the United States and in Canada differ in some respects, problems may arise with respect to market stabilization activities conducted in both jurisdictions. OSC Rule 48-501, Trading During Distributions, Formal Bids and Share Exchange Transactions ("Rule 48-501"), regulates, among other things, trading by issuers and underwriters during a distribution by prospectus of TSX-listed securities. Issuers and underwriters are prohibited, throughout the period of distribution, from bidding for or purchasing the class of securities being distributed by an underwriter or dealer. The period of distribution commences on the later of two trading days prior to fixing the offering price and the date on which the underwriter agrees to participate in the prospectus offering and continues through the period of distribution that is deemed to end when the underwriter has distributed its participation and the stabilization arrangements have terminated. The foregoing restrictions do not apply in connection with market stabilization or market balancing activities that occur at or below the distribution price or last independent sale price for the restricted security for the purpose of maintaining a fair and orderly market by reducing price volatility. Also, the restrictions do not apply to a "highly-liquid security," which is defined as a listed security with an average of at least 100 trades per trading day during a 60-day period and with an average trading value of at least Cdn $1 million per trading day, or a security that is an "actively traded security" under Regulation M. The Universal Market Integrity Rules governing trading on all of Canada's major stock exchanges have been amended to ensure consistency with Rule 48-501.

In connection with the adoption of Regulation M, which became effective in 1997 and replaced the SEC's former market regulation rules set forth in Rules 10b-6, 10b-6A, 10b-7, 10b-8 and 10b-21 under the Exchange Act (the "Prior Trading Rules"), the SEC withdrew its prior exemptive and no-action positions taken with respect to the Prior Trading Rules. As a consequence, the limited exemptive relief granted by the SEC in 1991 with respect to the Prior Trading Rules (the "1991 MJDS Relief") for certain Canadian and other non-U.S. market activities in connection with certain U.S. offerings by Canadian issuers (predicated on the adoption in Canada of certain market regulation rules) is no longer applicable and can no longer be relied on in connection with those market activities. *See* Letter from William H. Heyman, Director, SEC Division of Market Regulation, to Pamela S. Hughes, Director of International Markets Branch, Ontario Securities Commission, and Daniel Laurion, Chief of Registration, *Commission des valeurs mobiliéres du Quebec* (Aug. 22, 1991).

78 An alternative approach often used in practice is for the issuer and the underwriters to sign a binding "bought deal agreement" committing (i) the parties to execute an underwriting agreement within four days, (ii) the issuer to print the preliminary prospectus within four days and (iii) the issuer to issue a press release

announcing the offering upon the signature of the bought deal agreement, among other things. The "bought deal agreement" is a written agreement (i) under which one or more underwriters has agreed to purchase all of the securities to be offered under the short form prospectus on a firm commitment basis (other than any over-allotment option), (ii) does not have a "market-out" clause, (iii) that, other than in the case of an over-allotment option, does not provide an option for any party to increase the number of securities to be purchased and (iv) that, other than in prescribed circumstances, is not conditional on one or more additional underwriters agreeing to purchase any of the securities offered.

79 Some recent examples of MJDS bought deals include Platinum Group Metals, Prospectus Supplement (Oct. 24, 2016), Cordiorne Pharma Corp., Short Form .Prospectus (July 28, 2016), Suncor Energy Inc., Short Form Prospectus (June 8, 2016), Enbridge Inc., Prospectus Supplement (June 19, 2014), Rubicon Minerals Corporation, Short Form Prospectus (Mar. 3, 2014), Novadaq Technologies Inc., Prospectus Supplement (May 1, 20l3).

80 Historically, the U.S. GAAP reconciliation requirement was a particular problem under the quick timetable of bought deals, where the time delay occasioned by the need to prepare a U.S. GAAP reconciliation effectively precluded use of the MJDS unless the issuer had done the necessary work in advance of the offering. For Form F-10 filings, this required advance preparation of a U.S. GAAP reconciliation in accordance with Item 18 of Form 20-F of all the relevant financial statements, which could be time-consuming for issuers that had not previously developed a "long-form" reconciliation. In practice, the U.S. GAAP reconciliation requirement effectively limited use of the MJDS for bought deal offerings to Canadian issuers that were Exchange Act-reporting companies (and thus at a minimum had financial statements that were reconciled to U.S. GAAP in accordance with Item 17 of Form 20-F). The transition to IFRS in Canada has eliminated the need for a U.S. GAAP reconciliation.

81 *See* § 7.04.

82 The registration of the privately placed securities under the MJDS in conjunction with the Canadian shelf rules would, however, impose upon the issuer the costs of having to maintain an "evergreen" registration statement. In addition, the selling shareholders may have statutory underwriters' liability in the United States and may need to be named in the MJDS prospectus. The possibility of incurring such liability in connection with subsequent resales may be significant enough to dissuade certain institutional investors from purchasing in the private placement.

Form F-10 may also be used to register "A/B" exchange offers where the issuer of securities that have been sold in a private placement offers to exchange those securities that are otherwise identical in all respects. SEC, Division of Corporation Finance, Compliance and Disclosure Interpretations, Securities Act Forms, Question 109.06 (Feb. 27, 2009). For further information on “A/B” exchange offers, *see* § 7.05[2].

83 *See* § 13.02[2].

84 Under National Instrument 44-102, the market value of shares distributed in an ATM offering pursuant to a prospectus supplement may not exceed 10% of the aggregate market value of the Canadian issuer's outstanding shares measured at the last trading day of the month before the month in which the first trade under the ATM distribution is made.

85 An ATM offering in Canada may be made pursuant to Part 9 of National Instrument 44-102.

86 For recent examples of exemptive relief granted for ATM offerings, *see* Oncolytics Biotech Inc. and Canaccord Genuity Corp., 39 O.S.C.B. 3612 (Jan. 27, 2016) and Mongolia Growth Group Ltd. and Cantor Fitzgerald Canada Corporation, 37 O.S.C.B. 9913 (June 6, 2014).

87 Although the United States has similar prospectus delivery requirements, under Rule 172 of the Securities Act, access is deemed to equal delivery and ATM offerings require no SEC exemptive relief to be conducted in the United States. *See* SEC Release No. 33-8591 (July 19, 2005). *See* text accompanying *supra* Note 29.

88 *See* § 13.03 and § 3.02[9].

89 *See* § 3.02[8].

90 Rule 146(b)(1) under the Securities Act contains a list of U.S. securities exchanges the SEC has determined

have listing standards substantially similar to those of the NYSE.

91 The practical result of this provision of the NSMIA is to preempt blue sky laws with respect to secondary market trading in securities issued by an SEC-reporting issuer, in addition to all transactions in any security of an issuer with common stock listed on a major U.S. securities exchange. This preemption would not extend to secondary trades in all types of securities; for example, state registration requirements with respect to unlisted securities of a foreign issuer that satisfies the requirements of Rule 12g3-2(b) under the Exchange Act are not preempted.

92 The SEC has adopted Rule 146 under the Securities Act, which defines the phrase "prepared by or on behalf of the issuer" to include an offering document if the issuer or an agent or representative (i) authorizes its production and (ii) approves the document before its use. SEC Release No. 33-7418 (May 6, 1997).

93 *See infra* Note 96.

94 Generally, state notice filings (and corresponding payment of a filing fee) are required in connection with certain private placements of securities and not for offerings registered under the Securities Act or secondary market transactions. However, U.S. sales to qualified institutional buyers, including those made under Rule 144A, and to other institutional investors, as defined by each state, are exempt from state notice filings and filing fee requirements.

95 *But see infra* Note 96.

96 The Adopting Release indicated that NASAA anticipated that substantially all the states would adopt the model rules. Adopting Release, 56 Fed. Reg. 30,036, 30,051 (June 21, 1991). To date, more than 40 states have adopted one of the two versions of the NASAA model rules.

97 "Merit review" states apply a fairness standard of review that differs from the SEC's "full disclosure" requirements. In these states, the securities administrator may deny registration if the offering is determined to be unfair, unjust or inequitable from the individual investor's perspective. *See* § 3.02[8][a].

98 *See* SEC Release No. 33-8995 (Dec. 31, 2008), 74 Fed. Reg. 2157, 2179 (Jan. 14, 2009).

99 *See* SEC Release No. 33-10098 (June 16, 2016).

100 In the proposing release, the SEC clarified that the new regulations would apply the same standards to domestic and foreign private issuers, as the SEC stated that it "[B]elieve[s] that the proposed rules should apply equally to foreign private issuers and domestic registrants."

U.S. Regulation of the International Securities and Derivatives Markets, § 13.08, LISTING OF SECURITIES ON A U.S. NATIONAL SECURITIES EXCHANGE

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.08 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Canadian issuers eligible to use Form F-10 may use Canadian disclosures to list their securities on a U.S. stock exchange and to effect the required registration of such securities under the Exchange Act. [101] The Canadian disclosures filed under the Exchange Act for this purpose are filed under cover of Form 40-F and consist of all information material to an investment decision that the registrant, since the beginning of its last full fiscal year, (i) made or was required to make public pursuant to the law of any Canadian jurisdiction, (ii) filed or was required to file with a stock exchange on which its securities are traded and which was made public by such exchange or (iii) distributed or was required to distribute to its securityholders. The registrant also must provide the portion of its home jurisdiction reports, forms or listing applications that contain a description of the securities to be registered.

Canadian issuers using Form 40-F to register their securities under the Exchange Act also must file a consent to service of process on Form F-X. The SEC's approach of not reviewing MJDS Securities Act registration statements absent unusual circumstances is also applied to Form 40-F registration statements. [102]

Rules adopted by the SEC under § 301 of the Sarbanes-Oxley Act, however, require U.S. national securities exchanges and national securities associations to prohibit the listing of any issuer, including an MJDS issuer, that among other things does not comply with specified requirements concerning the independence of the issuer's audit committee. [103]

Footnotes

101 Section 12(a) of the Exchange Act requires all issuers listing on a U.S. stock exchange to register the listed securities under the Exchange Act.

102 *See* § 13.02[2].

103 *See* Rule 2-01 of Regulation S -X.

U.S. Regulation of the International Securities and Derivatives Markets, § 13.09, EXCHANGE ACT REPORTING REQUIREMENTS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.09 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

p. 13-35

The MJDS provides the broadest relief for Canadian issuers that become subject to the Exchange Act reporting requirements solely as a result of one or more MJDS offerings (*i.e.*, issuers that do not publicly offer securities in the United States on non-MJDS forms, do not obtain a U.S. stock exchange listing for their securities and do not otherwise register their securities under § 12(g) of the Exchange Act). These issuers may use Canadian disclosures (filed on Forms 40-F and 6-K), together with the additional disclosures mandated by the Sarbanes-Oxley Act [104] and Dodd-Frank Act [105] and reflected in Form 40-F, to satisfy their ongoing Exchange Act reporting requirements (which would arise under § 15(d) of the Exchange Act) regardless of whether they continue to satisfy the eligibility requirements of the MJDS Securities Act registration forms subsequent to the offering. If these issuers use only Forms F-7, F-8 or F-80 (relating to rights offerings, business combinations and exchange offers), they may be entitled to a complete exemption from the § 15(d) reporting requirements provided that they comply with the requirements of Rule 12g3-2(b) under the Exchange Act. [106]

The MJDS accommodations for other Canadian issuers are more limited. Canadian issuers that use (or have used) non-MJDS registration forms for U.S. public offerings or that list their securities on a U.S. stock exchange (or otherwise register their securities under § 12(g) of the Exchange Act) must meet the "substantial issuer" eligibility tests (*i.e.*, the eligibility tests for Form F-10, depending on the type of securities to which the reporting obligation relates) [107] in order to use Canadian disclosures (as supplemented by Form 40-F) to satisfy their Exchange Act reporting obligations. [108] These issuers must continue to meet

p. 13-35

p. 13-36

the "substantial issuer" tests in order to remain eligible to use Canadian disclosures in the United States, which raises a potential problem for issuers that do not exceed the relevant eligibility tests by a significant amount. [109]

Canadian issuers using the MJDS for Exchange Act reporting are required to file their Canadian annual information form, audited annual financial statements and management's discussion and analysis, together with the additional disclosures mandated by the Sarbanes-Oxley and Dodd-Frank Acts and reflected in Form 40-F, as an MJDS annual report under cover of Form 40-F, with such annual report certified by the CEO and CFO as required by § 302 and § 906 of the Sarbanes-Oxley Act. Form 6-K is used as a cover form for the issuer's quarterly reports, material change reports and all other material disclosure documents made public in Canada, filed with Canadian stock exchanges or distributed to securityholders. [110]

Footnotes

104 The Sarbanes-Oxley Act generally applies to issuers that file periodic reports under the Exchange Act or registration statements under the Securities Act with the SEC and does not expressly authorize the SEC, in adopting rules thereunder, to draw distinctions between U.S. domestic issuers and foreign private issuers (including MJDS-eligible issuers). As a result, with limited exceptions, all provisions of the Sarbanes-Oxley Act and the rules thereunder that the SEC has adopted apply to MJDS issuers. *See* § 4.02 for a more complete discussion of the Sarbanes-Oxley Act.

105 The Dodd-Frank Act also requires all issuers who file reports with the SEC, including Canadian issuers who

file under the MJDS system, to furnish information to the SEC on Form SD about "conflict minerals" used in their business, as well as payments made to government officials to further the commercial development of oil, natural gas or minerals. *See* § 4.07[4] and [5].

106 *See* SEC Release No. 34-58465 (Sept. 5, 2008). For a discussion of Rule 12g3-2(b) under the Exchange Act, *see* §§ 4.02[3][iv] and 13.10.

107 *See* § 13.02[1] for a discussion of the eligibility requirements for use of Forms F-10 (and, therefore, Form 40-F).

108 These obligations may arise under § 15(d) of the Exchange Act (as the result of a public offering), §§ 12(b) and 13(a) of the Exchange Act (as the result of a stock exchange listing) or §§ 12(g) and 13(a) of the Exchange Act (as the result of an OTC Bulletin Board quotation, exceeding a specified threshold of U.S. shareholders or a voluntary registration under § 12(g)). *See* § 4.02[3].

109 The Adopting Release clarifies that if the "substantial issuer" tests are met as of the end of a fiscal year, the issuer will be presumed to continue to meet such tests until the end of the next fiscal year. *See* Adopting Release, 56 Fed. Reg. 30,036, 30,050 (June 21, 1991).

110 Canadian issuers are required to submit to the SEC, under cover of Form 6-K, information concerning specified matters of relevance to securityholders that is material with respect to the issuer and its subsidiaries and that the issuer (i) makes or is required to make public pursuant to the law of the jurisdiction of its domicile or in which it is incorporated or organized, (ii) files or is required to file with a stock exchange on which its securities are traded and which was made public by that exchange or (iii) distributes or is required to distribute to its securityholders. The certification requirements of §§ 302 and 906 of the Sarbanes-Oxley Act do not apply to reports submitted on Form 6-K. *See* § 5.04[4].

U.S. Regulation of the International Securities and Derivatives Markets, § 13.10, EFFECTS OF SEC DEREGISTRATION RULES AND AMENDMENTS TO EXCHANGE ACT RULE 12g3-2 ON MJDS ISSUERS

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.10 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

In March 2007, the SEC adopted Rule 12h-6 under the Exchange Act to liberalize Exchange Act deregistration rules for foreign private issuers, as well as amendments to Rule 12g3-2 under the Exchange Act, which provides an exemption from Exchange Act registration. [111] The impact of Rule 12h-6 on MJDS issuers has been limited. The SEC stated that it did not expect Rule 12h-6 to have as great an effect on MJDS filers as on other reporting foreign private issuers because, typically, the percentage of an MJDS filer's shares held by U.S. residents and the U.S. trading volume relating to those shares is significant, facts that would disqualify an MJDS filer from meeting the conditions that are necessary for a foreign private issuer to delist under Rule 12h-6 under the Exchange Act. In addition, the SEC expected that due to the close proximity of MJDS filers to the U.S. capital markets, these filers would be less likely to seek to terminate

p. 13-37

their Exchange Act registration, and related U.S. listing, than other foreign private issuers. [112]

Similarly, the March 2007 amendments to Rule 12g3-2 under the Exchange Act have had a limited impact on MJDS issuers. Prior to adoption of those amendments, the Rule 12g3-2(b) exemption from Exchange Act registration requirements generally was not available to foreign private issuers that had an active or suspended reporting obligation under § 15(d) of the Exchange Act as a result of having filed a Securities Act registration statement. The amendments to Rule 12g3-2 made the Rule 12g3-2(b) exemption available to foreign private issuers that terminate § 15(d) reporting obligations pursuant to Rule 12h-6. Even prior to adoption of the amendments, however, the Rule 12g3-2(b) exemption was available to foreign private issuers that had an active or suspended § 15(d) reporting obligation arising from the filing of an MJDS registration statement (*e.g.*, Form F-7, F-8, F-9, F-10 or F-80). In effect, therefore, the amendments simply extended to non-MJDS foreign private issuers a benefit that MJDS issuers had already enjoyed.

In September 2008, the SEC further amended Rule 12g3-2(b), among other things, to eliminate the reporting exemption for MJDS filers. [113] Historically, this rarely used exemption allowed MJDS filers to avoid registration of a class of equity securities under § 12(g) of the Exchange Act based on the submission to the SEC of certain information provided by the issuer in its home country. As a result, the MJDS exemption enabled MJDS filers to claim the Rule 12g3-2(b) exemption in respect of a class of equity securities while simultaneously having Exchange Act reporting obligations regarding a class of debt securities. With the elimination of this special exemption, MJDS issuers are now afforded the 12g3-2(b) reporting exemption on the same basis as other foreign private issuers. As this exemption was, according to the SEC, "rarely used, if at all," the amendment has had minimal impact on MJDS filers. [114]

114 SEC Release No. 34-58465 (Sept. 5, 2008), 73 Fed. Reg. 52,752, 52,761 (Sept. 10, 2008).

U.S. Regulation of the International Securities and Derivatives Markets, § 13.11, PROXY AND INSIDER RULES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.11 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

All Canadian foreign private issuers have a complete exemption from the U.S. proxy requirements and U.S. insider reporting/short-swing profit recovery rules because Canadian issuers are treated on an equal basis with other foreign private issuers under the FPI System. [115] Canadian issuers had traditionally viewed these rules as substantial deterrents to U.S. equity financings. The

p. 13-38

exemption is available whether or not the issuer uses the MJDS or the FPI System. Thus, a Canadian foreign private issuer that files Form 40-F, 20-F or 10-K annual reports is nevertheless exempt from such proxy requirements and insiders are exempt from insider reporting/short-swing profit recovery rules. [116]

Footnotes

115 Like other foreign private issuers, however, holders of voting equity securities of Canadian issuers remain subject to the beneficial ownership reporting requirements of §§ 13(d) and 13(g) of the Exchange Act. *See* §§ 6.04[1] and 6.04[2][a] for a discussion of such requirements.

116 It should be emphasized, however, that Canadian foreign private issuers that choose to file Form 10-K annual reports remain subject to those substantive disclosure requirements of the U.S. proxy requirements that are also required to be included in a Form 10-K filing, specifically in Part III thereof, as to executive compensation, related party transactions and security ownership by management. The SEC staff has accepted an approach whereby a Canadian reporting company incorporates this information by reference from its proxy circular that it attaches as an exhibit to its annual report on Form 10-K. *See also* § 13.13 for a discussion of the Exchange Act reports that are available to Canadian issuers.

U.S. Regulation of the International Securities and Derivatives Markets, § 13.12, TRUST INDENTURE ACT

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.12 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

In connection with the MJDS, the SEC adopted exemptive rules under the U.S. Trust Indenture Act intended to facilitate MJDS debt offerings. Rule 10a-5 under the U.S. Trust Indenture Act generally permits eligible Canadian trust companies (*i.e.*, those subject to supervision or examination under the Trust Companies Act (Canada) or the Canada Deposit Insurance Act) [117] to act as sole trustees under indentures used for MJDS debt offerings, avoiding the need to appoint a U.S. co-trustee. The exemption provided by Rule 10a-5 is self-executing, so that eligible Canadian trustees are not required to file any application or statement of eligibility and qualification on Form T-1. [118] Canadian trustees are required, however, to file a consent to service of process on Form F-X together with the MJDS registration statement.

Rule 4d-9 under the U.S. Trust Indenture Act exempts trust indentures used for MJDS debt offerings from virtually all substantive requirements of the U.S. Trust Indenture Act, provided that the indenture is subject to regulation in Canada under the Canada Business Corporations Act, the Business Corporations Act (Ontario) or the Bank Act (Canada). Section 316(b) of the U.S. Trust

p. 13-39

Indenture Act, which provides that the right of each securityholder to receive principal and interest when due and to institute suit therefor shall not be impaired without the consent of such holder, continues to apply to MJDS offerings because Canadian law does not contain corresponding protections. [119] Rule 4d-9 requires that the Canadian trust indenture be filed with the SEC together with the MJDS registration statement and, for debt offerings with a Canadian trustee, the consent to service of process on Form F-X.

Footnotes

117 Canadian trust companies subject to such Regulation M ay not necessarily be eligible to act as sole trustees under indentures used for MJDS debt offerings. Rules 4d-9 and 10a-5 under the U.S. Trust Indenture Act exempt such trust companies from all but two of the eligibility requirements set forth in § 310(a) of the U.S. Trust Indenture Act: the minimum capital requirement (§ 310(a)(2)) and the requirement that the trustee not be an affiliate of the obligor (§ 310(a)(5)). Although the SEC apparently construed the Canadian trustee eligibility rules as disqualifying affiliates of the obligor from acting as trustees under the obligor's indenture in all cases, this appears to be a fact-specific determination under Canadian law, and affiliation alone may not be deemed to give rise to an impermissible conflict. Consideration, therefore, must be given as to whether, in cases where the trustee and the obligor are affiliates, it is necessary to appoint an eligible co-trustee under an indenture used in connection with MJDS debt offerings.

118 Form T-1 is filed by the trustee in public debt offerings to demonstrate the trustee's compliance with the eligibility requirements under the U.S. Trust Indenture Act.

119 Section 316(b) is intended to protect minority holders from debt restructuring plans that are not supervised by a bankruptcy court.

U.S. Regulation of the International Securities and Derivatives Markets, § 13.13, FOREIGN PRIVATE ISSUER INTEGRATED DISCLOSURE SYSTEM

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.13 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Canadian issuers have equal access to the FPI System, which provides special reduced disclosure forms for public offerings and less burdensome periodic reporting requirements for foreign private issuers (Forms F-1, F-3, F-4, 20-F and 6-K). [120] This availability is most beneficial for smaller Canadian issuers that do not meet the MJDS eligibility tests or for any Canadian company seeking to effect an initial public offering. [121] Historically, before the extension of the FPI System, Canadian issuers were, in many cases, required to file full U.S. domestic issuer Securities Act and Exchange Act forms (*e.g.*, Form S-1 registration statements and Form 10-K annual reports). [122]

The Securities Act registration forms that allow for incorporation by reference of Exchange Act reports (Forms F-1 (to a limited extent), F-3 and F-4) also may be used by Canadian issuers. Canadian issuers are able to incorporate filings on Forms 10-K, 10-Q and 8-K (in addition to Forms 20-F and 6-K) into such registration forms. Thus, eligible Canadian issuers that have used the U.S. domestic issuer forms are able to switch at any time to the FPI System registration forms.

In addition, Canadian issuers are able to incorporate into such registration statements Canadian annual information forms filed under the MJDS under cover of Form 40-F, provided that the issuer is eligible to use Form F-10. [123] Thus, the core "company" disclosures in certain FPI System registration statements filed by "substantial" Canadian issuers can be provided by Canadian continuous disclosure documents filed under the MJDS. Although this accommodation is

significant (and may be particularly useful in the context of acquisitions and related issuances of securities under Form F-4), customary SEC review procedures do apply to FPI System registration statements incorporating Canadian continuous disclosures.

Canadian issuers are not required to use the MJDS or the FPI System and may, at their option, use the Securities Act registration forms for U.S. domestic issuers provided that the issuer files the same Exchange Act reporting forms as U.S. domestic issuers (*i.e.*, Forms 10-K, 10-Q and 8-K). [124] The SEC has not modified such registration forms to permit incorporation of MJDS filings on Forms 40-F and 6-K.

Canadian issuers meeting the "substantial issuer" eligibility criteria have three U.S. disclosure systems from which to choose: (i) Canadian disclosures under the MJDS, (ii) reduced U.S. disclosures under the FPI System, and (iii) full U.S. disclosures of the type filed by domestic U.S. issuers. The determination of which system is most advantageous depends on the particular situation and needs of the issuer. On the one hand, Canadian issuers that are not eligible to use a short-form prospectus under the FPI System or the U.S. domestic issuer regime (and would thus be forced to prepare a long-form prospectus under those systems and would face a high probability of SEC review) may find the MJDS to be the best alternative because it will, among other things, allow U.S. offerings to proceed on the basis of a short-form system prospectus and, absent special circumstances, without SEC review. On the other hand, certain Canadian issuers that have regularly accessed the U.S. markets using the U.S. domestic issuer short-form prospectus (Form S-3) may find it attractive to continue to do so under the U.S. domestic issuer regime based on U.S. investor relations and other considerations. Although the FPI System generally appears to offer "substantial" Canadian issuers few, if any, benefits over the MJDS, the FPI System benefits Canadian issuers that do not meet the "substantiality" tests under the MJDS and do not wish to use the U.S. domestic issuer system.

Footnotes

120 *See* §§ 3.03[1][b], 3.02[1][b], 4.04 and 4.04[3][c].

121 No matter how large, a Canadian company that has not publicly offered or listed its securities will not meet the reporting history requirements of the MJDS.

122 *See supra* Note 3.

123 Form S-8, which may be used to register securities offered in connection with certain employee compensation arrangements, also permits incorporation of Form 40-F and 6-K filings by "substantial" Canadian issuers.

124 *See* § 13.02[1].

U.S. Regulation of the International Securities and Derivatives Markets, § 13.14, USE OF MJDS BY U.S. ISSUERS FOR FINANCINGS IN CANADA

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 13.14 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

The Canadian MJDS is essentially reciprocal to the MJDS adopted by the SEC. Eligible U.S. issuers may use prospectuses prepared in accordance with SEC requirements to offer securities in Canada, generally without Canadian regulatory review. The U.S. shelf rules may be used by eligible U.S. issuers for MJDS shelf offerings in Canada. The relatively small size of the Canadian capital markets and the ability with relative ease for U.S. issuers and their underwriters to access the Canadian capital markets in connection with registered U.S.

p. 13-41

offerings on a Canadian private placement basis, however, has resulted in very limited use of the Canadian MJDS by eligible U.S. issuers. [124.1]

The "northbound" MJDS has been used in recent years by several U.S. mining companies, which have taken advantage of the Canadian capital markets' strength in the resource sector. [125] Such offerings are typically made by filing a shelf prospectus and a supplement or supplements to that shelf. Section 11.3 of National Instrument 71-101, The Multijurisdictional Disclosure System ("National Instrument 71-101") exempts U.S. issuers from having to comply with the Canadian disclosure regime as it relates to mineral exploration and development and mining properties, [126] thus allowing U.S. standards to be incorporated into northbound MJDS prospectuses. [127]

Another noteworthy use of the northbound MJDS involved the offering of common shares into Canada by newly organized General Motors Company ("New GM") as part of its global initial public offering (the "New GM IPO")

p. 13-41

p. 13-42

subsequent to the bankruptcy proceedings involving General Motors Corporation. [128] As a general rule, a company that has not publicly offered or listed its securities will not be MJDS-eligible (northbound or southbound) in light of the reporting history requirements of the MJDS. [129] New GM succeeded in effecting a northbound MJDS offering by obtaining exemptive relief from the certain northbound MJDS requirements, including waiver of the twelve-month reporting history, U.S. $75 million public float and Canadian GAAP reconciliation requirements. [130]

Footnotes

124.1 In 2016, the CSA adopted amendments to the exempt distribution trade requirements in Canada that significantly changed the reporting requirements for issuers, including the United States and other non-Canadian issuers, that sell securities into Canada by way of private placements and rely on a Canadian "wrapper" or Canadian wrapper exemption. The United States and other non-Canadian issuers are still able to take advantage of the use of a Canadian wrapper and wrapper exemption, but the form of post-trade reporting to be filed in provinces where the securities are sold has been amended. The amended form requires additional information about the purchasers and the issuer, which may, in some cases, be difficult or time-consuming to obtain. For example, the new form requires disclosure of information about the specific basis on which the purchaser is relying to qualify as an accredited investor. The form also requires disclosure as to whether the purchaser is a "registrant" or an "insider" of the issuer; the CSA has, however, scaled back these disclosure requirements for non-Canadian issuers provided they meet the criteria of the relief. In addition, the new form requires specific information about the issuer that may not traditionally be included in an offering document. The new form must also be signed by an officer or director of the issuer or the underwriter. All provinces and territories require disclosure of the same information, but they may have different requirements on how and where to submit the form.

125 *See, e.g.*, Royal Gold, Inc., Prospectus (Mar. 12, 2009). Some more recent examples include Royal Gold, Inc., Prospectus Supplements (June 22, 2010, Dec. 22, 2011, Jan. 10, 2012, June 14 and 2012, Oct. 10, 2012), Uranerz Energy Corp., Prospectus Supplements (Nov. 30, 2010, Aug. 27, 2013 and July 17, 2014), Mercer International Inc., Prospectus Supplements (Dec. 14, 2012, July 17, 2013 and Mar. 27, 2014) and Prospectus (Sept. 26, 2016), Allied Nevada Gold Corp., Prospectus (June 14, 2013), General Moly, Inc., Prospectus (Apr. 24, 2014) and Uranium Energy Corp., Prospectus Supplement (Jan. 10, 2014). The "northbound" MJDS has also recently been used in other industries including, pharmaceuticals (Delmar Pharmaceuticals, Inc., Prospectus (Oct. 6, 2016)), oil and gas (Gran Tierra Energy Inc., Prospectus Supplements (Aug. 5, 2016 and Nov. 21, 2016)) and power (Pattern Energy Group Inc., Prospectus (Aug. 8, 2016)).

126 National Instrument 43-101, 34 O.S.C.B. 7043 (June 30, 2011).

127 It is worth noting that Section 11.3 of National Instrument 71-101 does not exempt U.S. oil and gas issuers from the disclosure required by National Instrument 51-101, 26 O.S.C.B 6615 (amended by 28 O.S.C.B 7181, 28 O.S.C.B 10461, 31 O.S.C.B 419 and 33 O.S.C.B 11945). *See also* §§ 4.07 and 4.08 for a discussion of oil and gas issuers in the southbound context.

128 General Motors Company, Prospectus (Nov. 17, 2010).

129 *See supra* Note 122.

130 In the Matter of General Motors Company (Aug. 11, 2010). Canada and the Province of Ontario were each major stockholders in New GM, owning prior to the New GM IPO approximately 11.7% of the common shares of the company through Canada GEN Investment Corporation, a crown corporation. The U.S. Department of the Treasury owned, prior to the New GM IPO, approximately 61% of the common shares of the company. However, given these specific facts and circumstances, this precedent may be of limited applicability in other contexts.

U.S. Regulation of the International Securities and Derivatives Markets, § 14.01, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 14.01 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Securities brokers and dealers (commonly collectively referred to as "broker-dealers") that are required by the Exchange Act to register with the SEC are subject to a comprehensive U.S. federal regulatory scheme that includes stringent financial, recordkeeping, customer protection and other substantive requirements. SEC-registered broker-dealers are also required to become members in one or more securities industry self-regulatory organizations ("SROs") and to comply with the SROs' additional detailed rules. [1]

The regulatory reach of both the SEC and the SROs extends in many respects to all activities of an SEC-registered broker-dealer, not only to its U.S. personnel and activities or to its securities activities. Consequently, the first line of consideration for non-U.S. financial institutions contemplating U.S. activities is whether SEC registration as a broker-dealer is required. If the proposed U.S. activities would require registration, an international financial organization should generally seek to arrange its U.S. securities activities so that they may be conducted in a separate SEC-registered broker-dealer without subjecting the organization's non-U.S. activities or nonsecurities activities to SEC registration and regulation.

Entities that effect transactions in futures contracts or swaps also may be subject to regulation under the Commodity Exchange Act ("CEA") as futures commission merchants ("FCMs"). [2] Entities that deal in security-based swaps may also be subject to regulation by the SEC as security-based swap dealers ("SBSDs") and entities that deal in other types of swaps may be subject to regulation by the U.S. Commodity Futures Trading Commission ("CFTC").

Footnotes

1 In addition, broker-dealers may be subject to registration and regulation in the states where they have offices or customers. Under the National Securities Markets Improvement Act of 1996 (hereinafter the "NSMIA"), Pub. L. No. 104-290, 110 Stat. 3416 (1996), however, a state may not generally impose regulatory requirements (other than the requirement to register with and pay filing fees to the state securities administrator) that differ from or add to those established by the SEC. *See* § 14.12.

2 Entities that effect transactions in security futures products are subject to registration both as broker-dealers under the Exchange Act and FCMs (or introducing brokers) under the CEA, although intermediaries registered as an FCM (or an introducing broker) under the CEA or as a broker-dealer under the Exchange Act, but not both, may avail themselves of a notice registration procedure to register in the other capacity for the limited purpose of trading security futures products. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, Chapter 4. Security futures products generally are defined as futures contracts on individual nonexempt securities or narrow-based groups or indices of nonexempt securities. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.16[5][c].

U.S. Regulation of the International Securities and Derivatives Markets, § 14.02, SEC JURISDICTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 14.02 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

p. 14-6

Section 15(a)(1) of the Exchange Act makes it "unlawful for any broker or dealer … to make use of the mails or any means or instrumentality of interstate commerce [3] to effect any transactions in, or to induce or attempt to induce the purchase or sale of, any security … unless such broker or dealer is registered … [with the SEC]." [4] The literal meaning of this language is to require SEC registration by any non-U.S. broker-dealer that telephones or sends documents into the United States (commonly referred to as using "jurisdictional means") to contact U.S. investors. The SEC endorses this interpretation, stating that a "broker-dealer operating outside the physical boundaries of the United States, but using the U.S. mails, wires, or telephone lines to trade securities with U.S. persons located in this country, would not be… transact[ing] a business in securities without the jurisdiction of the United States." [5] Indeed, the SEC has stated that § 15 of the Exchange Act could require registration by a non-U.S. broker-dealer whose only U.S. contacts are the execution of unsolicited orders from U.S. customers. [6]

The SEC has also claimed authority to require registration in several circumstances that go beyond the literal language of § 15, stating that it could require the registration of any non-U.S. broker-dealer that (i) effected a transaction, even from outside the United States, in a security registered in the United States or listed on a U.S. exchange [7] or (ii) specifically targeted

p. 14-6

p. 14-7

identifiable groups of foreign-based U.S. citizens (*e.g.*, military and embassy personnel). [8]

As discussed below, the SEC has not required broker-dealer registration in all circumstances where its view of the scope of its jurisdiction would permit.

Footnotes

3 Interstate commerce includes any "trade, commerce, transportation, or communication… between any foreign country and any State … [and] any [use of a] facility of a national securities exchange or of a telephone." § 3(a)(17) of the Exchange Act.

4 *See also* §§ 15B(a) and 15C(a) of the Exchange Act (requiring registration of certain dealers in municipal securities and certain brokers and dealers in government securities).

5 SEC Release No. 34-27017 (July 11, 1989) (hereinafter the "Rule 15a-6 Adopting Release"), 54 Fed. Reg. 30,013, 30,016 n.41 (July 18, 1989).

6 *See* Rule 15a-6 Adopting Release at 54 Fed. Reg. 30013, 30017 (July 18, 1989) ("the requirements of section 15(a) do not distinguish between solicited and unsolicited transactions").

7 To illustrate the extent of the SEC's asserted authority to require broker-dealer registration under § 15, the Rule 15a-6 Adopting Release cites, among other cases, *Schoenbaum v. Firstbrook*, 405 F.2d 200, 208 (2d Cir.), *rev'd in part on other grounds*, 405 F.2d 215 (2d Cir. 1968) (*en banc*), *cert. denied sub nom. Manley v. Schoenbaum*, 395 U.S. 906 (1969). Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,016 n.41 (July 18, 1989). That case held that U.S. courts have jurisdiction under the Exchange Act over an antifraud claim relating to a foreign security registered with the SEC and traded on a U.S. exchange. There is some

indication that U.S. courts are more likely to extend U.S. jurisdiction to non-U.S. activities in the context of asserted fraud or manipulation than in matters involving registration or filings. In 2010, in *Morrison v. National Australian Bank Ltd.*, 561 U.S. 247 (2010), the Supreme Court limited the extraterritorial reach of the antifraud provisions of the Exchange Act by providing that § 10(b) of the Exchange Act applied only to securities transactions in the United States or securities listed on U.S. exchanges. A month later, the Dodd-Frank Act restored SEC and Department of Justice (the "DOJ") extraterritorial power (*see* §§ 929P(b) and 929Y of the Dodd-Frank Act), but the *Morrison* transactional test still applies for private rights of action. In 2012, the SEC released a study "on the Cross-Border Scope of the Private Right of Action Under Section 10(b) of the Securities Exchange Act," which did not take a position on whether Congress should override the *Morrison* transactional test for private rights of action. *See* SEC, STUDY ON THE CROSS-BORDER SCOPE OF THE PRIVATE RIGHT OF ACTION UNDER SECTION 10(B) OF THE SECURITIES EXCHANGE ACT OF 1934 AS REQUIRED BY SECTION 929Y OF THE [DODD-FRANK ACT] (Apr. 11, 2012). While the SEC's view is that anyone who facilitates any stock transaction through conduct in the United States must register with the SEC under § 15(a), one federal district court has applied *Morrison* to interpret the Exchange Act more narrowly to exclude certain entities that operate in the United States but where the ultimate and intended purchase and sale is foreign and does not occur on a national securities exchange. *See SEC v. Benger*, 934 F. Supp. 2d 1008, 1013 (C.D. Ill. 2013) ("[A] broker's failure to register under Section 15(a) of the [Exchange] Act is not actionable in those cases where the ultimate and intended purchase and sale was foreign and thus, itself, outside the scope of the Act."). For additional discussion on *Morrison*, *see* § 11.10[3].

8 *See SEC v. Siamerican Securities, Ltd.*, SEC Litigation Release No. 6937 (June 17, 1975) (charging a broker-dealer that solicited securities transactions from U.S. servicemen stationed abroad for execution primarily in U.S. markets with failure to register); *see also* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,017 (July 18, 1989).

U.S. Regulation of the International Securities and Derivatives Markets, § 14.03, SEC REGISTRATION AS A BROKER-DEALER

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 14.03 (11th and 12th Editions 2014-2017)

Notwithstanding the broad jurisdictional reach of § 15 of the Exchange Act, there are circumstances in which non-U.S. (and U.S.) financial institutions engaged in securities activities using jurisdictional means are not subject to SEC registration. [9] Broadly speaking, a conclusion that SEC registration is not required can follow from any one of three determinations: the financial institution is not a "broker" or "dealer"; the financial institution, although a "broker" or "dealer," engages only in activities that do not require registration under § 15; or the financial institution is not based in the United States and engages only in those U.S. activities that the SEC permits (often subject to various conditions) to foreign broker-dealers. [10]

[1] Definition of Broker and Dealer

The registration requirement under § 15 of the Exchange Act is applicable only to "brokers" and "dealers" in "securities."

[a] Broker

p. 14-8

Prior to the enactment of the Gramm-Leach-Bliley Act (the "GLB Act") in 1999, the term "broker" was defined in § 3(a)(4) of the Exchange Act as "any person engaged in the business of effecting transactions in securities for the account of others, but … not … a bank." [11] The GLB Act modified the Exchange Act definition of "broker" by replacing the blanket bank exclusion with a number of specified exceptions. [12] In September 2007, the SEC and the Board of Governors of the Federal Reserve System (the "Board") jointly adopted Regulation R implementing the broker exceptions and setting forth related exemptions and definitional clarifications. [13]

To be "engaged in the business" of effecting securities transactions for others generally requires a regularity of securities activity, but not that such activity be an entity's principal business or source of income. An entity may be a "broker" even though its securities transactions are a small part of its business activities or its income. [14]

In the SEC's view, the term "broker" includes two types of entities that might not ordinarily be considered to be engaged in the business of effecting securities transactions for others. First, an entity or individual that engages in activities related to corporate mergers and acquisitions may be deemed a "broker." [15] Entities that do nothing more than bring merger-and acquisition-minded companies or investors and companies together (*i.e.*, "finders"), who do not participate in negotiations or in the distribution of securities and who are paid on an hourly or flat fee basis generally are not deemed to be brokers. [16] On the other

p. 14-8

p. 14-9

hand, entities that negotiate merger or acquisition transactions involving securities (*e.g.*, all of the stock of a target company), as opposed to assets, engage in other activities to consummate the transactions, advise whether to enter into transactions and receive fees that are contingent upon the completion, or proportional to the size, of the transactions are more likely to be considered brokers. [17]

In 2014, the SEC issued no-action relief to "M&A Brokers" in connection with the transfer of ownership of a privately-held company without registering as a broker or dealer. [18] For purposes of the relief, an M&A Broker was defined as "a person engaged in the business of effecting securities transactions solely in connection with the transfer of ownership and control of a privately-held company through the purchase, sale, exchange, issuance, repurchase, or redemption of, or a business combination involving, securities or assets of the company, to a buyer that will actively operate the company or the business conducted with the assets of the company." [19] To avail itself of the relief, the M&A Broker cannot bind any party to the relevant transaction, cannot provide financing (directly or indirectly through an affiliate) for the transaction, cannot handle or control

p. 14-9

p. 14-10

funds or securities in connection with the transaction for the account of others, cannot assist in the formation of the group of buyers and must abide by certain other restrictions contained in the letter. [20]

Second, the term "broker" may include employees of an issuer who participate in the sale of the issuer's securities. Generally, however, an issuer's employees would not be considered brokers where they are not employed solely or primarily to market securities, their compensation is not tied to the sale of securities and certain other requirements are satisfied. [21]

The SEC has had the opportunity to consider broker-dealer registration issues in connection with the provision of access to financial services on the Internet. For instance, the SEC has granted no-action relief allowing an online service provider, such as America Online or CompuServe, to provide subscribers access to the services of a broker-dealer without the online service itself having to register as a broker-dealer. [22] The SEC has also permitted an online research center to provide subscribers with direct communication links to registered broker-dealers as well as access to financial and business information such as market quotations, economic indicators, annual and quarterly reports for listed companies, new offering filings and press releases without the research center itself having to register as a broker-dealer. [23] The SEC has also granted no-action relief to a company that provides a computerized platform linking registered broker-dealers to one another, permitting broker-dealers to send electronic messages that communicate buy and sell orders to other broker-dealers participating on the platform with whom a sending broker has a pre-existing brokerage relationship. [24] In all three instances, the relief granted is subject to several assumptions and conditions, one of the more prominent being that the compensation to the service provider from the broker-dealer will be a flat fee on a per order or per usage basis and will not vary with the number or value of the shares in any order placed through the service or depend on whether such an order results in an executed trade.

In 2000, however, the SEC refused to grant a no-action request submitted by MuniAuction Inc., a web-based municipal bond auction site, in which

p. 14-10

p. 14-11

MuniAuction stated that it did not "(1) actively solicit investors, (2) advise investors as to the merit of an investment, (3) act with ‘certain regularity of participation in securities transactions' [or] (4) receive commissions or transaction-based compensation." [25] In its response letter to MuniAuction (the "MuniAuction Letter"), the SEC staff described the key elements it uses to determine "broker" status. First, the SEC noted that "[a] person effects transactions in securities if he or she participates in such transactions ‘at key points in the chain of distribution.’" Such participation includes, among other activities:

- assisting an issuer to structure prospective securities transactions;
- helping an issuer to identify potential purchasers of securities;
- soliciting securities transactions; and
- participating in the order-taking or order-routing process. [26]

The MuniAuction Letter stated that "[f]actors indicating that a person is ‘engaged in the business' include, among others: receiving transaction-related compensation; holding one's self out as a broker, as executing trades, or as assisting others in settling securities transactions; and participating in the securities business with some degree of regularity. In addition to indicating that a person is ‘effecting transactions,’ soliciting securities transactions is also evidence of being 'engaged in the business.'" [27]

Noting, among other factors, that "MuniAuction brings buyers and sellers of securities together for a fee … solicits issuers and other securities holders to use its auction services to sell securities through its site … [and] participates in the order-taking process through purchasers' submission of their bids on issuers' and other holders' securities through its website," the staff stated its belief that MuniAuction was acting (and should register) as a "broker" within the meaning

p. 14-11

p. 14-12

of § 3(a)(4) of the Exchange Act and further cautioned that, given its activities, MuniAuction may also be required to register as an exchange or satisfy the exemption from exchange registration provided for so-called "alternative trading systems" by Regulation ATS. [28]

In November 2015, the SEC adopted Regulation Crowdfunding, a set of new rules permitting the limited offering and sale of securities through Internet crowdfunding without the registration of such securities. [29] Regulation Crowdfunding is intended to provide a balance between protecting investors and enabling small businesses to raise capital through small investments from ordinary investors without overburdening them with regulation. The new rules, which took effect in May 2016, require that crowdfunding transactions be conducted exclusively through an intermediary that is registered as a broker or a "funding portal," a new form of SEC registrant subject to strict limitations on its activities. [30] A maximum of $1 million can be raised by an issuer through crowdfunding in a twelve-month period, and only certain categories of issuers are eligible to take advantage of Regulation Crowdfunding. [31] In addition, the securities purchased by investors in a crowdfunded offering are subject to restrictions on resale and generally cannot be transferred for at least a year. [32] The rules require that all filings use a new Form C, which generally demands less extensive disclosure than that required in registered offerings.

For the new funding portals, Regulation Crowdfunding finalized a new form for funding portal registration ("Form Funding Portal"), which requires similar, but less extensive and costly, information as that required by Form BD. [33] For funding portals that register with the SEC, the rules provide a non-exclusive, conditional safe-harbor from the broker-dealer registration requirements of the Exchange Act. [34] In addition to SEC registration, funding portals are required to become members of FINRA. [35] The activities in which a funding portal may engage are far more limited than those of a registered broker-dealer and include: (1) limited offerings on the funding portal platform; (2) highlighting and displaying offerings on the platform; (3) providing communication channels for potential investors and issuers; (4) providing search functions on the platform; (5) advising issuers on the structure or content of offerings; (6) compensating

p. 14-12

p. 14-13

others for referring persons to the funding portal and for other services; and (7) advertising the funding portal's existence. [36] Funding portals are prohibited from most other broker-dealer activities, including offering investment advice or soliciting purchases and sales.

Because of the low offering limit and still substantial disclosure requirements, it is unlikely that, outside of small Internet startups, most issuers will take advantage of Regulation Crowdfunding.

[b] Dealer

Prior to the enactment of the GLB Act, the term "dealer" was defined in § 3(a)(5) of the Exchange Act as "any person engaged in the business of buying and selling securities for his own account, through a broker or otherwise," but not a bank, or any person insofar as he "buys or sells securities for his own account, either individually or in some fiduciary capacity, but not as a part of a regular business." [37] The GLB Act modified the Exchange Act definition of "dealer" by replacing the blanket bank exclusion with a number of specified exceptions. [38] Banks have been required to comply with the revised definition of "dealer" and related rules adopted by the SEC since September 30, 2003. [39]

Title VII of the Dodd-Frank Act further modified the Exchange Act definition of "dealer" by specifically excluding persons engaged in the business of buying and selling security-based swaps, other than security-based swaps with or for persons that are not eligible contract participants. [40]

To be a "dealer," one must be "engaged in the business" of buying and selling securities for one's own account. However, the term does not include a person whose buying and selling are "not … part of a regular business." [41]

"Dealer" status is generally a more complicated matter than "broker" status. There are numerous entities and individuals (*e.g.*, insurance companies, hedge funds and other private investment partnerships and individual investors) that engage as principals in securities transactions to an extent that might, for other purposes, be regarded as "engaged in business" or in a "regular business." Moreover, interposition of a "broker" in a principal's trading activities does not exclude the principal from "dealer" status, since the term "dealer" includes principals who trade "through a broker or otherwise." The SEC has, however,

p. 14-13
p. 14-14

interpreted the definition of "dealer" to exclude "investors," including those whose activity is large and frequent enough to make them "active traders." [42] On the other hand, the SEC has indicated that a low volume of securities activity by itself does not establish that an entity is not a dealer. [43]

It is often the case that no single factor will determine whether an entity is an "investor" or "trader" as opposed to a "dealer." A conclusion must be reached that takes into account each of the entity's securities-related activities. In the SEC's view, the following activities would ordinarily be engaged in by a dealer, but not by an investor or trader:

- issuing or originating securities; [44]
- participating in a selling group or underwriting securities; [45]
- purchasing or selling securities as principal from or to customers rather than from or to only brokers or dealers; [46]
- carrying a dealer inventory; [47]
- quoting a market in securities or publishing any quotations on or through any quotation system used by dealers, brokers or institutional investors or otherwise quoting prices other than on a limited basis through a retail screen broker; [48]
- holding oneself out as a dealer or market-maker or as otherwise willing to buy or sell particular securities on a continuous basis; [49]

p. 14-14
p. 14-15

- rendering incidental investment advice; [50]
- handling other people's money or securities or executing securities transactions on other people's behalf; [51]
- extending or arranging for the extension of credit to others in connection with securities; [52]
- conducting processing or clearing activities; [53]
- obtaining a regular clientele; [54] and
- engaging in trading transactions for the benefit of others, rather than consistently with one's own judgment, investment and liquidity objectives. [55]

[c] Banks

Unlike a broker or dealer, which may be a person of any nationality, the term "bank" as defined in the Exchange Act is limited to U.S. federal and state organized and regulated banks and savings associations with deposits insured by the Federal Deposit Insurance Corporation ("FDIC"). [56] A foreign bank is thus

p. 14-15
p. 14-16

not a "bank" for purposes of the Exchange Act, although a U.S. branch of a foreign bank is generally considered to be a "bank" for purposes of the Exchange Act. [57] A bank holding company or nonbank subsidiary or affiliate of a bank is likewise not a "bank" for Exchange Act purposes.

As discussed above, prior to the enactment of the GLB Act, U.S. banks enjoyed a blanket exclusion from the Exchange Act definitions of both "broker" and "dealer." [58] However, the GLB Act eliminated these blanket exclusions and replaced them with more limited exceptions, effectively requiring banks to "push out" into registered broker-dealers activities that do not come within the exceptions. [59]

Under the GLB Act amendments to the definition of "broker," a bank is not considered to be a broker merely because it engages in the following activities:

- so-called "networking" or "kiosking" arrangements with third-party brokers or dealers (subject to restrictions on advertising and restrictions on incentive compensation);
- trust and fiduciary activities (subject to restrictions on advertising and restrictions on incentive compensation);
- transactions in commercial paper, bankers' acceptances, commercial bills, exempt U.S. or Canadian federal, state, provincial or municipal government or agency securities ("specified exempt securities") or "Brady bonds";
- transactions for employee benefit, dividend reinvestment and shareholder plans (subject to certain conditions);
- sweep account transactions into money market mutual funds registered with the SEC;
- transactions for the account of an affiliate (other than a U.S. broker-dealer or merchant banking affiliate);
- private placements (subject to certain limits); however, the private placement exception is not available if, at any time after November 11, 2000, the bank is affiliated with a broker-dealer that has been registered for more than one year in accordance with the Exchange Act and engages in dealing, market-making or underwriting activities (other than with respect to specified exempt securities);

p. 14-16
p. 14-17

- safekeeping and custody services (subject to certain conditions);
- transactions in "identified banking products"; [60]
- transactions in municipal securities; or
- transactions pursuant to a *de minimis* exception (up to 500 transactions per year, [61] which may not be effected by staff shared with a broker-dealer affiliate). [62]

The Financial Services Regulatory Relief Act of 2006 (the "FSRRA") [63] required the SEC and the Board to issue joint rules implementing the broker push-out exceptions. In 2007, the SEC and the Board jointly adopted new Regulation R, which implements four of the exceptions from the definition of "broker" available to banks: "networking" arrangements, trust and fiduciary activities, sweep accounts, and safekeeping and custody activities. [64] In addition, Regulation R also provides several conditional exemptions for activities in which a bank may engage without being deemed a "broker" under the Exchange Act, including exemptions permitting banks to engage in:

- certain transactions effected in securities issued pursuant to Regulation S ;
- certain securities lending transactions;

- certain transactions in mutual funds and variable insurance contracts; and
- certain transactions in a company's securities for its employee benefit plans. [65]

p. 14-17
p. 14-18

Regulation R also provides banks with a limited "good faith" exemption from contract rescission liability under § 29(b) of the Exchange Act for violation of the broker-dealer registration requirements. [66]

Under the GLB Act amendments to the definition of "dealer," a bank is not considered to be a dealer merely because it:

- buys or sells commercial paper, bankers' acceptances, commercial bills, specified exempt securities or "Brady bonds";
- buys or sells securities for investment, trust or fiduciary purposes;
- engages in the issuance or sale of asset-backed securities, if the underlying assets are predominantly originated [67] by the bank, an affiliate that is not a broker-dealer or (if the asset-backed securities are mortgage or consumer-related) a syndicate of banks [68] of which it is a member; or

p. 14-18
p. 14-19

- buys or sells "identified banking products." [69]

In addition to clarifying these statutory exceptions, the SEC adopted, in the Dealer Release, an exemption from the definition of "dealer" for banks engaging in certain securities lending transactions in which the bank is acting as a conduit lender or agent and is conducting such transactions with or on behalf of (i) a qualified investor (as defined in § 3(a)(54) of the Exchange Act), or (ii) any employee benefit plan that owns and invests on a discretionary basis not less than $25,000,000 in investments. [70] The SEC has also adopted an exemption permitting banks to engage in certain riskless principal transactions in Regulation S securities with non-U.S. persons. [71]

[d] U.S. Branches and Agencies of Foreign Banks

The Exchange Act definition of "bank" includes "any other banking institution … doing business under the laws of any state or of the United States, a substantial portion of the business of which consists of receiving deposits or exercising a fiduciary power." [72] It has long been understood that U.S. branches of foreign banks were entitled to the benefits of the Exchange Act "bank" exclusion from broker-dealer registration. [73] However, with the elimination of the bank exclusion by the GLB Act, those U.S. branches of foreign banks that continue to qualify as "banks" for purposes of the Exchange Act are, like U.S. domestic banks, subject to potential registration and regulation as "brokers" or "dealers."

Whether a U.S. agency of a foreign bank can qualify as a "bank" for purposes of the Exchange Act depends on the particular agency's activities, which may in turn depend on the particular regulatory scheme to which it is subject. Historically, a key distinction between foreign banks' U.S. branches and their

p. 14-19
p. 14-20

agencies was that branches could take deposits while agencies could not. [74] Currently, however, agencies in a number of states can take deposits from nonresidents. For example, New York agencies can issue deposit-type obligations to institutions in denominations of $100,000 or more; [75] New York law also permits agencies (like branches) to exercise fiduciary powers with special authorization from the New York Superintendent of Financial Services. [76] Federal agencies, on the other hand, cannot accept deposits or exercise fiduciary powers. [77]

[e] Business in Securities

A broker or dealer is only required to register with the SEC if it conducts a business in "securities." The term "security" is defined in § 3(a)(10) of the Exchange Act (and discussed in Chapter 12). [78] An entity engaged in activities involving exclusively nonsecurities is therefore not required to register as a broker or a dealer. [79] However, both the securities and nonsecurities activities of an entity that is required to register are subject to regulation. As a result, most financial institutions that provide financial services with respect to both securities and nonsecurities conduct their securities activities in a registered broker-dealer and have established one or more separate affiliates to carry out wholly nonsecurities activities in areas such as real estate, currencies, lending and certain derivative instruments. [80]

[2] Exclusions

p. 14-20

p. 14-21

There are a number of additional explicit exclusions from the registration requirement under § 15 of the Exchange Act. [81]

[a] Business Exclusively Intrastate

Section 15 of the Exchange Act does not require registration of a broker or dealer "whose business is exclusively intrastate." As any communication from outside the United States into a state is "interstate" rather than "intrastate," a foreign broker-dealer using jurisdictional means cannot make use of this exclusion. [82] Even for U.S.-based broker-dealers, the scope of the intrastate exemption is so limited that it is of little utility. [83]

[b] Business Exclusively in Certain Instruments

A broker or dealer whose business is exclusively in "commercial paper," bankers' acceptances, commercial bills or "exempted securities" [84] is also not required by § 15(a) of the Exchange Act to register with the SEC.

[i] *Commercial Paper*

The term "commercial paper" is not defined in the Exchange Act. By current practice, however, it is understood that this term is coextensive with the exemption from registration provided under the Securities Act for notes used to

p. 14-21

p. 14-22

finance current transactions and having a maturity of less than nine months. [85] The general Securities Act requirements for establishing that a note is of the type commonly referred to as "commercial paper" are that it: (i) is of prime quality and negotiable, (ii) is of a type not ordinarily purchased by the general public, (iii) has a maturity of less than nine months, and (iv) is issued solely to derive proceeds that fund "current transactions." [86]

[ii] *U.S. Government Securities*

U.S. government securities are "exempted securities" for purposes of § 15(a) of the Exchange Act; accordingly, broker-dealers conducting a securities business exclusively in U.S. government securities need not register under that section. [87] However, § 15C of the Exchange Act requires all U.S. government securities broker-dealers (i) that are not banks or similar financial institutions to register with the SEC or (ii) that are banks or similar financial institutions to give notice of their government securities activities to the "appropriate regulatory agency," [88] generally the agency responsible for regulation of their banking activities.

[3] Exemptions Available to Foreign Broker-Dealers

p. 14-22

p. 14-23

[a] Background; Rule 15a-6

In 1989, the SEC adopted a general exemptive rule—Rule 15a-6 under the Exchange Act [89]—which specified a variety of circumstances in which foreign broker-dealers may have contact with U.S. investors and use U.S. jurisdictional means without registering as a broker or dealer with the SEC. [90]

Certain of the registration exemptions provided by Rule 15a-6 are available to all foreign broker-dealers ("general exemptions"). The remaining Rule 15a-6 exemptions from registration are available only to those foreign broker-dealers that comply with certain additional conditions specified in the rule ("conditional exemptions"). A precondition to both types of exemptions is that, except as specifically permitted by the rule (or subsequent liberalizing interpretations

p. 14-23
p. 14-24

discussed below), the foreign broker-dealer has no physical presence conducting securities activities in the United States. [91]

[b] General Exemptions

The general exemptions provided in Rule 15a-6 under the Exchange Act fall into three categories. All foreign broker-dealers may: (i) effect "unsolicited" securities transactions with U.S. persons, (ii) solicit and effect securities transactions for specified categories of counterparties, and (iii) provide research to "major U.S. institutional investors." The Rule 15a-6 Adopting Release also recognizes additional mechanisms by which all foreign broker-dealers may distribute research reports generally in the United States, provide quotations to U.S. investors and execute trades through linkages with U.S. securities exchanges.

[i] *Unsolicited Transactions*

Rule 15a-6 provides that all foreign broker-dealers may effect "unsolicited" transactions with U.S. persons. [92] Rule 15a-6 itself does not define "solicitation," and the Rule 15a-6 Adopting Release states that the SEC will determine the term's meaning on a case-by-case basis, taking into account SEC precedents.

The Rule 15a-6 proposing release defines "solicitation" generally as "including any affirmative effort by a broker or dealer intended to induce transactional business for the broker-dealer or its affiliates.…[It] includes efforts to induce a single transaction or to develop an ongoing securities business relationship." [93] "Solicitation" has also been interpreted as including the following activities:

- telephone calls from a broker-dealer to a customer encouraging the use of the broker-dealer to effect transactions;
- transmission of a market-maker's bid/ask quotations into the United States;
- any attempt by a broker-dealer to make its business known in the United States, whether through an individual introductory meeting with a potential customer or through advertisement of its services on a television or radio

p. 14-24
p. 14-25

  broadcast into the United States or in a publication of "general circulation" [94] in the United States;
- the conduct by a foreign broker-dealer of investment seminars for U.S. investors, even though the seminar is hosted by a registered broker-dealer and the subject of the seminar is not specific securities but a general explanation of regulation in an overseas securities market in which the foreign broker-dealer is active; [95]
- the making of any recommendation of a security in an instance in which the recommendation is likely to lead to a transaction with the recommending broker-dealer;

- the provision by a broker-dealer of research to investors, even to investors who have actively sought out and requested the research; [96] and
- a series of frequent transactions or a significant number of transactions between a foreign broker-dealer and a U.S. investor. [97]

The distribution of research to U.S. investors is such a strong indicator of solicitation that, in the SEC's view, a foreign broker-dealer should establish "adequate procedures to avoid transmission of research reports into U.S. markets," except as permitted by Rule 15a-6, in order to avoid the conclusion that the broker-dealer is using the research to induce U.S. customer transactions. [98]

p. 14-25
p. 14-26

In sum, the SEC views "solicitation" as including any action by a broker-dealer intended to induce transactions, to develop customer goodwill or to make itself known. A good illustration of the breadth of the concept in the SEC's view is its statement that a foreign broker-dealer could be deemed to have solicited a U.S. investor who on his own initiative opened an account with the foreign broker-dealer and became a "regular customer." [99]

In 2013, the staff of the SEC's Division of Trading and Markets clarified that a foreign broker-dealer that administers or seeks to administer an employee stock option plan or other employee benefit plan established and administered in accordance with foreign law for a foreign issuer that is organized outside the United States and whose principal office and place of business are located outside the United States would not, solely because of that activity, be considered to have solicited the U.S. employees or U.S. subsidiary, provided that the foreign broker-dealer deals exclusively with management and employee benefit representatives from the foreign issuer (located outside the United States) in administering the plan and limits its activities with respect to U.S. persons to certain activities. [100] Permitted activities include facilitating the transfer of the foreign issuer's securities to a U.S. person employed for the foreign issuer or its U.S. subsidiary; sending required plan documents, account statements, confirmations, privacy notices, prospectuses, proxy statements or other legally required documents to the employee; and selling, transferring or otherwise disposing of the foreign issuer's securities, so long as the activities relate solely to foreign securities acquired by U.S. persons pursuant to the applicable employee benefit plan. [101]

[ii] *Activities with Selected Counterparties*

Rule 15a-6 specifies categories of counterparties who all unregistered foreign broker-dealers may solicit and with whom they may engage in transactions. These counterparties are: SEC-registered broker-dealers, banks acting in a broker or dealer capacity, certain supranational organizations, certain foreign persons temporarily visiting the United States and U.S. persons resident outside the United States.

[A] Registered Broker-Dealers and Banks Acting Under a Broker or Dealer Exception

p. 14-26
p. 14-27

All foreign broker-dealers may solicit and engage in transactions with "a registered broker-dealer, whether … acting as principal for its own account or as agent for others, or a bank acting pursuant to certain exceptions from the Exchange Act definition of 'broker' or 'dealer.'" [102] This exemption, which predates the adoption of Rule 15a-6, [103] recognizes that, if investors are to be able to buy securities traded in markets outside their home countries, broker-dealers must be able to do business with each other across national borders. [104] It also recognizes that U.S. banks (including U.S. branches and agencies of foreign banks) engage in broker and, to a more limited extent, dealer activity, though these activities have been curtailed by the full implementation of the push-out provisions of the GLB Act. [105] Although Rule 15a-6 is not explicit on this point, it seems clear that the exempted transactions in which registered broker-dealers or U.S. banks purchase securities as principal include purchases for investment purposes as well as those for dealing inventory.

Certain members of the SEC staff have expressed the view, on an informal basis, that the exemption for transactions between foreign broker-dealers and U.S. broker-dealers pursuant to Rule 15a-6(a)(4)(i) in which the U.S. broker-dealer acts as agent for a U.S. customer may not be available for certain over-the-counter ("OTC") derivative transactions involving the purchase and sale of a security where there is contractual privity between the foreign broker-dealer and the U.S. customer and the obligations of the counterparties are ongoing. However, there has been no published authority explicitly addressing this informal staff position and this interpretation does not appear to be consistent with either

p. 14-27
p. 14-28

the structure of Rule 15a-6 or the policy considerations articulated by the SEC in connection with the rule's adoption. [106]

[B] Supranational Organizations

Rule 15a-6 contains a list of supranational organizations that foreign broker-dealers may solicit and with which they may engage in transactions in the United States. [107] The listed supranational organizations are the African Development Bank, the Asian Development Bank, the Inter-American Development Bank, the International Bank for Reconstruction and Development (commonly referred to as the "World Bank"), the International Monetary Fund, the United Nations, and their respective agencies, affiliates and pension funds.

[C] Foreign Persons Temporarily in the United States

Any foreign broker-dealer may solicit and effect transactions for a foreign person temporarily present in the United States with whom the foreign broker-dealer had a "*bona fide*, pre-existing relationship before the foreign person entered the United States." [108] For this purpose, a non-U.S. citizen can be treated

p. 14-28
p. 14-29

as "temporarily present" in the United States so long as such person has not become a lawful permanent resident of the United States (*i.e.*, a "Green Card holder"). [109]

This exemption evidences the SEC's greater willingness than in the past to avoid application of U.S. regulatory schemes to situations involving only foreign investors, [110] as well as a willingness to apply pragmatically the SEC's traditional territorial approach to securities law jurisdiction. [111]

U.S. advisers acting for non-U.S. persons are specifically treated as non-U.S. persons for purposes of Regulation S under the Securities Act. [112] However, Rule 15a-6 under the Exchange Act does not contain a similar provision. Accordingly, technical compliance with Rule 15a-6 requires that an SEC-registered broker-dealer be interposed in transactions with U.S.-based advisers for non-U.S. persons, which can result in greater restrictions on such U.S.-based advisers and place them at a competitive disadvantage *vis-á-vis* their non-U.S.-based counterparts. In an effort to alleviate these competitive disadvantages, the SEC issued in 1996 a no-action letter that grants relief from broker-dealer registration requirements to certain foreign broker-dealers affiliated with U.S.-registered

p. 14-29
p. 14-30

broker-dealers that directly contact and effect transactions with certain U.S.-resident professional fiduciaries that act for "offshore clients" in connection with transactions in "foreign securities." [113]

[D] U.S. Persons Abroad

Foreign broker-dealers may solicit (i) an agency or branch of a U.S.-organized entity permanently located outside the United States and (ii) a U.S. citizen resident outside the United States, provided in each case that the resulting securities transactions "occur outside the United States." [114] However, in the case of U.S. citizens resident abroad, foreign broker-dealers may not direct their selling efforts to "identifiable groups" of U.S. citizens, [115] *e.g.*, military and embassy personnel. [116] This treatment of U.S. persons abroad under Rule 15a-6 is

p. 14-30

p. 14-31

generally consistent with their treatment for purposes of Regulation S under the Securities Act. [117]

[iii] *Provision of Research Reports*

[A] To Major U.S. Institutional Investors

Rule 15a-6(a)(2) provides that all foreign broker-dealers may provide research reports, without involvement by a U.S. broker-dealer in the review, approval or distribution of the reports, to "major U.S. institutional investors" and effect any resulting transactions. [118] Major U.S. institutional investors are certain "U.S. institutional investors" that have, or have under management, total assets exceeding $100 million. [119] Under the definitions set forth in Rule 15a-6, however, a corporation or partnership generally will not qualify as a "major U.S. institutional investor," even if it owns or manages $100 million in assets and is, for example, a "qualified institutional buyer" within the meaning of Rule 144A under the Securities Act. [120] This limitation, which significantly reduced the utility of, and reliance on, the rule, has been largely eliminated by SEC no-action

p. 14-31

p. 14-32

relief granted in 1997 to the effect that qualifying foreign broker-dealers may provide research reports to, and under the conditional exemption discussed below, may enter into transactions with, institutional entities (including corporations and partnerships) that own or control (or, in the case of registered or unregistered investment advisers, have under management) in excess of $100 million in aggregate financial assets ("$100 Million Entities"). [121] The SEC staff's expanded view of the term "major U.S. institutional investor" applies to all provisions of Rule 15a-6 in which that term is used. [122]

This exemption is subject to the following conditions:

- the research reports do not recommend the use of the foreign broker-dealer to effect trades in any security;
- the foreign broker-dealer does not initiate contact to follow up on the research reports and does not otherwise attempt to induce securities transactions by those investors;
- the foreign broker-dealer does not provide research pursuant to any express or implied understanding that those U.S. investors will direct commission income to the foreign broker-dealer (*i.e.*, there may not be any "soft dollar" arrangements between the U.S. investors and the foreign broker dealer); [123] and
- if the foreign broker-dealer enters into a so-called "chaperoning" arrangement with an SEC-registered broker-dealer (as described in § 14.03[3][c][ii] below), any trades with the recipient of the research in securities that were discussed in the research reports must be effected "through" such registered broker-dealer. [124]

[B] To Other Investors

p. 14-32

p. 14-33

The Rule 15a-6 Adopting Release specifies conditions under which all foreign broker-dealers may distribute research to any U.S. investor. These conditions are that: (i) a registered broker-dealer "accepts responsibility" for the research and the research report states this prominently, [125] (ii) the research report prominently indicates that any U.S. persons wishing to effect transactions in the securities discussed in the research do so through the registered broker-dealer, and (iii) all resulting transactions are in fact effected by the registered broker-dealer. [126] One consequence of these conditions has been to make this exemption of practical utility primarily to those foreign broker-dealers that have an affiliated registered broker-dealer. [127]

[iv] *Participation in Third-Party Quotation Systems*

A non-U.S. broker-dealer's provision of bid/ask quotations into the United States is a form of "solicitation" that, in the view of the SEC, generally requires the broker-dealer's registration. However, the provision of quotations to registered broker-dealers and to banks excepted or exempt from the Exchange Act definitions of "broker" or "dealer" is an exempted activity under Rule 15a-6. [128]

Prior to 1997, the SEC position, as stated in the Rule 15a-6 Adopting Release, was that the SEC also would grant interpretive relief from broker-dealer registration to permit the use of certain "third-party" quotation systems (that is, systems not controlled by an individual broker-dealer). Specifically, relief would be granted for distribution of quotations on "systems operated by foreign marketplaces or by private vendors, that distributed these quotations primarily in foreign countries … [and only to those] third-party systems that did not allow securities transactions to be executed [directly online]." [129] However, the Rule 15a-6 Adopting Release indicated that the SEC would not approve a "direct dissemination" quotation system (that is, a system controlled by an individual foreign broker-dealer) [130] and that the SEC would have "reservations" concerning any "specialized" quotation system, such as a system that disseminated quotes only for large block trades. [131]

Under the 1997 Cleary Letter, the SEC reconsidered its prior position on electronic quotation systems in light of increasing globalization and technological changes in the securities markets. First, the SEC eliminated the qualification for relief that quotations are distributed "primarily in foreign countries." Furthermore, providing U.S. investors with access to proprietary and third-party screen-based quotation systems that supply quotations, prices and other trade-reporting information input directly by foreign broker-dealers will not constitute an impermissible "contact" with a foreign broker-dealer, so long as any transactions between the U.S. investor and the foreign broker-dealer are effected in accordance with the requirements (including, to the extent required, the intermediation requirements) of Rule 15a-6. The SEC has indicated that it would also be willing to provide individual firms with additional guidance regarding the execution of such intermediated transactions through an automated trading system operated by the registered U.S. broker-dealer intermediary. [132]

[v] *Trades Through Stock-Exchange Linkages*

p. 14-34

p. 14-35

The SEC has stated that it "generally views agreements between U.S. and foreign securities exchanges [permitting the transfer of orders between the exchanges] as positive developments." [133] The SEC has approved three linkages between Canadian and U.S. exchanges: the Montreal Stock Exchange with the Boston Stock Exchange, [134] and the Toronto Stock Exchange with each of the AMEX [135] and the Chicago Stock Exchange (formerly, the Midwest Stock Exchange). [136] In all three cases, the linkage was limited to dual-listed stocks. In addition, in 2000, the NYSE announced its intention to establish a 24-hour "Global Equity Market," linking the NYSE to nine other foreign exchanges, [137] but none of the linkages between the NYSE and the foreign exchanges is currently in operation. [138]

[vi] *Participation in Exempt Exchanges*

In 1999, the SEC granted exemptive relief to Tradepoint Financial Networks plc ("Tradepoint") permitting it to operate the Tradepoint Stock Exchange (a screen-based electronic market regulated as a recognized investment exchange

p. 14-35

p. 14-36

in the United Kingdom) in the United States without registering as a national securities exchange. [139] Under the terms of the exemptive relief and later no-action relief, certain U.S. institutions and brokers are permitted to become members of Tradepoint and to trade on Tradepoint certain stocks eligible to be traded on the London

Stock Exchange directly from terminals located in the United States (subject to certain limitations on the trading of "restricted securities" under the Securities Act). [140] There are currently no other non-U.S. securities exchanges permitted to place electronic trading terminals in the United States.

[c] Conditional Exemptions

Rule 15a-6(a)(3) under the Exchange Act permits unregistered foreign broker-dealers, acting from outside the United States (except to the limited extent that the rule permits U.S. visits), to solicit and take orders for securities transactions from "U.S. institutional investors" and "major U.S. institutional investors," [141]

p. 14-36
p. 14-37

provided that certain conditions are met. [142] These conditions are briefly summarized as follows:

- the foreign broker-dealer must enter into an arrangement (a "Rule 15a-6 arrangement") with an SEC-registered broker-dealer, pursuant to which the SEC-registered broker-dealer must agree to effect all securities transactions resulting from contacts undertaken in reliance on the conditional exemptions and take on certain other responsibilities with respect to securities-related contacts and transactions between the foreign broker-dealer and U.S. investors (such SEC-registered broker-dealer is hereinafter referred to as a "chaperoning broker-dealer"); and
- the foreign broker-dealer and those of its personnel involved in transactions pursuant to the exemptions must consent to the service of process in the United States and comply with certain additional conditions specified in the rule (a foreign broker-dealer that has entered into such an arrangement and has complied with such additional conditions is hereinafter referred to as a "qualifying foreign broker-dealer").

[i] *Qualifying Foreign Broker-Dealer*

A foreign broker-dealer seeking to rely on the conditional exemptions set forth in Rule 15a-6(a)(3) must enter into a Rule 15a-6 arrangement with a chaperoning broker-dealer. [143] The chaperoning broker-dealer may, but need not, be an affiliate of the qualifying foreign broker-dealer, and may (so long as it is properly registered with the SEC) be located in a jurisdiction (including the foreign broker-dealer's home country) outside the United States. [144] A qualifying foreign broker-dealer may enter into Rule 15a-6 arrangements with any number of chaperoning broker-dealers. [145]

p. 14-37
p. 14-38

As part of the Rule 15a-6 arrangement, a qualifying foreign broker-dealer must consent to service of process for any civil action brought by, or proceeding before, the SEC or an SRO, and this consent must be maintained by the chaperoning broker-dealer as part of its books and records. Once this consent has been executed and submitted to the chaperoning broker-dealer, there appears to be no limit as to the purposes for which process may be served. In other words, the SEC apparently takes the view that its jurisdiction under the rule over a qualifying foreign broker-dealer is as extensive as if the foreign broker-dealer were registered with the SEC, and thus it is not restricted to taking action concerning only those transactions which the qualifying foreign broker-dealer effects under Rule 15a-6, through the chaperoning broker-dealer or even with U.S. persons. [146]

In addition to consenting to service of process, a qualifying foreign broker-dealer also must provide the SEC "with any information or documents within [its]… possession, custody, or control … any testimony of foreign associated persons, and any assistance in taking the evidence of other persons, wherever located, that the [SEC] requests and that relates to transactions [effected pursuant to the conditional exemptions]." [147]

[A] Associated Persons of Qualifying Foreign Broker-Dealers

Each employee or other "associated person" of a qualifying foreign broker-dealer who proposes to solicit or otherwise engage in contacts with U.S. investors pursuant to the conditional exemptions must consent to service of process in the same manner as the qualifying foreign broker-dealer and provide certain employment and other background information to the chaperoning broker-dealer so that the chaperoning broker-dealer can determine whether to approve the associated person's participation in the Rule 15a-6 arrangement (each such approved associated person is hereinafter referred to as a "qualifying foreign associated person"). [148]

[B] Oral Communications from Outside the United States

p. 14-38
p. 14-39

Qualifying foreign associated persons may engage in oral communications (*e.g.*, by telephone), from outside the United States, with U.S. institutional investors, major U.S. institutional investors and, pursuant to the 1997 Cleary Letter, $100 Million Entities, provided that, in the case of oral communications with U.S. institutional investors that are not major U.S. institutional investors or $100 Million Entities, either (i) a duly licensed employee of the chaperoning broker-dealer participates in such communication, or (ii) in accordance with the 1997 Cleary Letter, such communication takes place outside NYSE trading hours and no orders to effect transactions other than those involving foreign securities (as defined in the 1996 Cleary Letter) are accepted. [149]

[C] Visits to the United States

Under Rule 15a-6, qualifying foreign associated persons may visit U.S. institutional investors and major U.S. institutional investors in the United States provided that a duly licensed employee of the chaperoning broker-dealer chaperones these visits. [150] The chaperone must be familiar with any research reports discussed during these visits, must conduct a prior review of any written materials that are to be distributed and of any summaries or outlines of the qualifying foreign associated person's oral presentation and must know whether the qualifying foreign associated person's statements are consistent with the qualifying foreign broker-dealer's current recommendations. The Rule 15a-6 Adopting Release states that the responsibility imposed on the chaperoning broker-dealer and its employees for these visits is the same as if the chaperoning broker-dealer were acting directly on its own behalf. [151] In addition, pursuant to the 1997 Cleary Letter, a qualifying foreign associated person may also have in-person, unchaperoned contacts during visits to the United States with major U.S. institutional investors and $100 Million Entities so long as the number of days on which such contacts occur does not exceed 30 per year and the qualifying foreign associated

p. 14-39
p. 14-40

person does not accept orders to effect any securities transactions (whether involving U.S. or foreign securities) while in the United States. [152]

[D] Manner of Effecting Transactions

All transactions entered into pursuant to the Rule 15a-6 arrangement must be "effected" by the chaperoning broker-dealer. [153] This condition will be deemed fulfilled if the chaperoning broker-dealer performs each of the following activities: [154]

- effecting the transactions (other than negotiating their terms);
- issuing all required confirmations and statements to U.S. investors; [155]
- as between the qualifying foreign broker-dealer and the chaperoning broker-dealer, extending or arranging for the extension of any credit to U.S. investors in connection with the transactions; [156]
- maintaining Exchange Act-required books and records relating to the transactions; [157]

p. 14-40
p. 14-41

- complying with the SEC's net capital and customer protection rules; [158] and

- receiving, delivering and safeguarding funds and securities in connection with the transactions.

The requirement that the chaperoning broker-dealer actually "effect" the transactions entered into between the qualifying foreign broker-dealer and U.S. counterparties would still be met even if the chaperoning broker-dealer were to delegate to the qualifying foreign broker-dealer the task of physically executing foreign securities trades in foreign markets or on foreign exchanges. [159] Further, the qualifying foreign broker-dealer may be appointed to process all records related to the transaction, as long as the records comply with applicable requirements under U.S. law and the chaperoning broker-dealer retains responsibility for, and maintains the originals or copies of, the records. [160]

[ii] *Chaperoning Broker-Dealer*

In addition to being responsible for the mechanics of effecting securities transactions between qualifying foreign broker-dealers and U.S. institutional investors, major U.S. institutional investors and $100 Million Entities, a chaperoning broker-dealer should treat the investor as its customer for purposes of

p. 14-41
p. 14-42

applicable sales practice and other requirements. [161] The Rule 15a-6 Proposing Release would have required the chaperoning broker-dealer to be responsible for taking steps to assure itself that there was a reasonable basis for all recommendations made by a qualifying foreign broker-dealer. [162] While the Rule 15a-6 Adopting Release did not adopt such a requirement, it does state that the chaperoning broker-dealer has "a responsibility to review … [Rule 15a-6] trades for indications of possible violations of the federal securities laws … [and] an obligation, as it has for all customer accounts, to review any Rule 15a-6 account for indications of potential problems." [163] For example, it can be expected that the SEC would take the position that such reviews require monitoring likely instances of insider trading or fraud by the qualifying foreign broker-dealer where the chaperoning broker-dealer arguably should know of such activities. [164] These reviews should include periodic examination of the accounts, any transactions, related correspondence and lending activity.

[d] Government Securities Activities

After the SEC's adoption of Rule 15a-6 under the Exchange Act, the U.S. Treasury department adopted an exemptive rule under § 15C of the Exchange Act covering government securities activities that essentially parallels Rule 15a-6. [165] Moreover, the Treasury staff has indicated that the relief provided in the 1997 Cleary Letter applies equally to those entities subject to § 15C. [166] Treasury's exemptive rule (as modified by the 1997 Cleary Letter), like Rule 15a-6, permits execution of unsolicited transactions, transactions with the selected counterparties described in Rule 15a-6 and the 1997 Cleary Letter, the distribution of research reports to major U.S. institutional investors and $100 Million Entities and the limited solicitation of major U.S. institutional investors, U.S.

p. 14-42
p. 14-43

institutional investors and $100 Million Entities by qualifying foreign broker-dealers. [167]

[e] Violations of U.S. Law

The Rule 15a-6 Adopting Release provides that the SEC would not view isolated violations of § 15 of the Exchange Act by virtue of a foreign broker-dealer's failing to comply with the exemptions provided by Rule 15a-6 under the Exchange Act as preventing the foreign broker-dealer's reliance on the rule with respect to its other activities. However, if a foreign broker-dealer "repeatedly engaged in nonexempt … activities intermittently with exempt … activities," the SEC could conclude that all the foreign broker-dealer's U.S. activities had been conducted in violation of the § 15 registration requirement. [168]

A foreign broker-dealer's violation of the Exchange Act registration requirement would be deemed to have concluded when it had "completely ceased to conduct U.S. securities activities … not exempt under the Rule" or registered with the SEC. [169] The foreign broker-dealer would, however, remain liable for the violations it had committed, and in particular, could be liable to private investors with whom the foreign broker-dealer had wrongfully effected transactions. [170] In addition, even foreign broker-dealers that conduct their U.S. activities in compliance with Rule 15a-6 remain subject to the various antifraud provisions of the U.S. securities laws. [171]

[f] The Recognition Concept Release

At the time it adopted Rule 15a-6 under the Exchange Act, the SEC also issued a concept release on Recognition of Foreign Broker-Dealer Regulation, which proposed and requested comment regarding the concept of a conditional exemption from registration for certain limited categories of foreign broker-dealers located in foreign countries (i) with regulatory schemes "comparable" to

p. 14-43
p. 14-44

that provided by the Exchange Act and (ii) whose local securities authority and the SEC have in place a Memorandum of Understanding or treaty providing for "the fullest mutual assistance possible." [172] Although reaction to the proposal was generally negative at the time and it was not pursued, [173] there was a resurgence of interest in 2007 to 2008 in the implementation of a "mutual recognition" approach. This interest has been reflected in numerous articles and speeches by senior SEC staff, commissioners and others and, in June 2007, the SEC sponsored a Roundtable on Selective Mutual Recognition. [174] In August 2008, the SEC announced its entry into a mutual recognition arrangement that provides a framework for the SEC, the Australian government, and the Australian Securities and Investment Commission to consider regulatory exemptions that would permit U.S. and eligible Australian stock exchanges and broker-dealers to operate in both jurisdictions, without the need for these entities (in certain aspects) to be separately regulated in both countries. [175] In addition, in 2008 the SEC staff began working with the Committee of European Securities Regulators and, separately, with four Canadian securities regulators, to define the process to be followed in discussing mutual recognition arrangements. [176] No further progress has been made on these mutual recognition arrangements since that time; however,

p. 14-44
p. 14-45

it is possible that the acceptance by other U.S. and non-U.S. regulators of equivalent or comparable foreign regulation would lead the SEC to once again consider accepting equivalent foreign broker-dealer regulation. [177]

[g] Increasing Reliance on Rule 15a-6

There is no publicly available information on the number of foreign broker-dealers that are relying on the conditional exemption provided by Rule 15a-6(a)(3) under the Exchange Act; however, by most accounts the number continues to increase. In the period immediately following the adoption of Rule 15a-6, the benefits of complying with the conditional exemption were viewed as quite limited because, for example, the conditional exemption could not (until the issuance of the 1997 Cleary Letter) be used by foreign broker-dealers to contact U.S. operating companies, no matter how large, even those that satisfied the definition of "qualified institutional buyer" for purposes of Rule 144A under the Securities Act. In addition, the broad consent to SEC jurisdiction required from foreign broker-dealers also appears to have discouraged foreign broker-dealers from relying on the conditional exemption. [178] Accordingly, foreign broker-dealers that had a registered U.S. affiliate generally elected to rely upon that affiliate to contact U.S. investors, including through so-called "dual employees" stationed outside the United States, [179] rather than comply with the terms of the conditional exemption.

Over time, however, a number of countervailing considerations seem to have encouraged more foreign broker-dealers to rely on Rule 15a-6(a)(3). First, as the SEC has increased its own ability to obtain information about foreign

p. 14-45
p. 14-46

broker-dealers from foreign securities regulatory authorities, [180] there may seem less disadvantage to foreign broker-dealers in permitting the SEC to obtain information directly from the foreign broker-dealers.

Second, as U.S. investors become increasingly sophisticated about foreign securities, they want the ability to speak directly with foreign research analysts and foreign traders. In theory, the demands of U.S. investors to talk to analysts, traders or other employees of foreign broker-dealers could be accommodated by such employees becoming dual employees of the foreign broker-dealer and a U.S. broker-dealer. In practice, it is difficult, at least on a large scale, for non-U.S. employees of foreign broker-dealers to comply with the testing and other requirements imposed on personnel of U.S. broker-dealers, [181] and the maintenance of dual employees overseas may raise branch office, as well as tax and other, issues for both the U.S. and non-U.S. entities. [182]

Finally, and perhaps most importantly, the 1997 Cleary Letter significantly expanded the utility of the exemption from broker-dealer registration provided by Rule 15a-6(a)(3) by permitting qualifying foreign broker-dealers to rely on the exemption in the context of contacts with $100 Million Entities (rather than just the narrowly defined categories of "major U.S. institutional investors" set forth in the Rule). [183] Furthermore, the 1997 Cleary Letter substantially liberalized the chaperoning requirements of the rule by providing that qualifying foreign associated persons may, without the participation of an employee of the chaperoning broker-dealer, (i) engage in oral communications from outside the United States with U.S. institutional investors if such communications take place outside the trading hours of the NYSE and no orders to effect securities transactions are accepted other than those involving foreign securities [184] and (ii) have in-person contacts during visits to the United States with major U.S. institutional investors and $100 Million Entities so long as the number of days on which such in-person contacts occur does not exceed 30 per year and the foreign associated person does not accept orders to effect any securities transactions while in the United States. [185]

p. 14-46

p. 14-47

Nonetheless, even after the issuance of the 1997 Cleary Letter, the limitations of Rule 15a-6 and the complicated mechanics of compliance result in continuing requests by U.S.-registered broker-dealers and their non-U.S. affiliates for further relaxation of the rule's requirements. [186]

[h] Certain M&A Activities

In 2013, the staff of the SEC's Division of Trading and Markets issued a no-action letter to a non-U.S. broker offering strategic consultancy to non-U.S. clients in connection with merger and acquisition ("M&A") transactions. [187] The letter allowed the non-U.S. broker, acting on behalf of a non-U.S. client, to contact buyers or sellers in the United States, or the U.S. parent of a non-U.S. buyer or seller (the "U.S. Target"), without registering as a broker-dealer with the SEC. [188] To rely on the letter, the U.S. Target would have to qualify as a major U.S. institutional investor or $100 Million Entity. [189] In addition, the letter allowed the non-U.S. broker to develop and manage the data room and the information process, conduct negotiations on behalf of the non-U.S. client and advise the non-U.S. client on the terms of the transaction, provided (1) the U.S. Target uses the services of an external advisor, such as a broker-dealer, attorney or other professional with relevant experience, or, (2) if the U.S. Target does not use an external advisor, such U.S. Target uses internal or group level personnel with relevant M&A experience to negotiate the transaction and the non-U.S. broker's personnel engaged in any contacts with the U.S. Target in the United States are limited to persons whom the non-U.S. broker determines satisfy the requirements for "foreign associated persons" in Rule 15a-6(a)(3)(ii)(B). [190] In addition, in order to rely on the relief, the non-U.S. broker should not represent or advise

p. 14-47

p. 14-48

any U.S. Target or receive, acquire or hold funds and securities in connection with a transaction it engages in with a U.S. Target. [191]

[i] NAFTA

On January 1, 1994, the North American Free Trade Agreement ("NAFTA") went into effect following formal ratification procedures in Canada, Mexico and the United States. Chapter 14 of NAFTA ("NAFTA Chapter 14"), which governs trade and investment in financial services among the three countries, generally requires each of the party countries to provide investors and financial institutions of the other NAFTA countries with treatment no less favorable than the country provides its own investors and financial institutions under like circumstances. In addition, each party country is required to provide "most favored nation" treatment to investors and financial institutions of the other NAFTA countries, defined as treatment no less favorable than it provides to investors and financial institutions of any other country under like circumstances. [192] A party country also must ensure that the obligations of NAFTA Chapter 14 are observed by any of that country's SROs in which membership or participation is required of any investor or financial institution of another NAFTA country. [193]

As a general matter, the requirements of the Exchange Act imposed upon broker-dealers registered with the SEC are not more favorable to broker-dealers that are organized and physically located in the United States than to those that are not; accordingly, NAFTA has not had any significant effect on U.S. regulation of broker-dealers. However, it is possible that a Canadian or Mexican securities firm could challenge certain SEC requirements imposed solely on nonresident broker-dealers, such as the requirement that nonresidents provide the SEC with a power of attorney designating the SEC as its agent for service of process in certain civil suits. [194] Similarly, an argument could be made that certain rules of the SROs that impose special requirements on nonresident broker-dealers violate NAFTA. [195]

These potential challenges to U.S. regulation may be defeated by two overriding limitations in NAFTA Chapter 14: (i) the "prudential carve-out" and (ii) various reservations to the chapter that have been or may be taken by the parties. The prudential carve-out allows the party countries, notwithstanding the obligations set forth in NAFTA Chapter 14, to adopt and maintain any measure

p. 14-48

p. 14-49

that is "reasonable" and adopted or maintained "for prudential reasons," such as the protection of investors or the maintenance of the safety, soundness, integrity or financial responsibility of financial institutions and the financial system. [196]

In addition, the United States has "reserved" the right to enforce certain measures of federal law that are not otherwise consistent with NAFTA Chapter 14. Examples include certain provisions of the Exchange Act, [197] the Primary Dealers Act of 1988 [198] and the Advisers Act. [199]

Measures adopted or maintained by state and provincial governments generally are subject to the same NAFTA Chapter 14 standards that apply to federal measures. [200] Consequently, various states have also "reserved" certain provisions of their securities or "blue sky" laws. For example, among various other types of reservations, many states have reserved certain provisions in their laws that deny U.S. branches or agencies of foreign banks exemptions from state broker-dealer and investment adviser registration requirements (exemptions that are generally available to U.S. banks). [201]

p. 14-49

p. 14-50

Certain reservations previously taken by a number of states relating to transactions in securities have since been superseded by the NSMIA, which in general preempts many state registration requirements with respect to securities transactions and certain aspects of state broker-dealer regulation. [202] However, the NSMIA has not preempted those state reservations that effectively subject U.S. branches and agencies of foreign banks to state broker-dealer and investment adviser registration requirements.

NAFTA Chapter 14 also provides that the regulation of cross-border financial services may not be made more restrictive than it was on January 1, 1994, the date that NAFTA entered into force (the so-called "standstill" on cross-border services). [203] Canada has taken a reservation against this obligation with respect to cross-border trade in securities services generally, and the United States in turn has taken a reservation against this obligation with respect to its cross-border securities trade with Canada.

[j] Memoranda of Understanding

Concomitant with the growth in international securities trading over the past decade, the SEC has sought to overcome extraterritorial limitations on its ability to gather information located outside the United States regarding possible violations of U.S. securities laws. [204] Bilateral information gathering and sharing agreements between the SEC and foreign financial regulatory authorities, commonly referred to as Memoranda of Understanding ("MOUs"), have helped in this regard by defining and formalizing procedures to request and provide such information. [205]

Since signing its first MOU with Switzerland in 1982 and as of the date this book went to press, [206] the SEC has entered into MOUs, as well as less comprehensive formal information-sharing agreements and training and technical

p. 14-50

p. 14-51

assistance agreements, with foreign authorities in 49 countries. [207] In addition, multilateral organizations, like the Council of Securities Regulators of the Americas and the International Organization of Securities Commissions ("IOSCO"), have adopted resolutions providing for mutual assistance in investigating and gathering information regarding violations of a member nation's securities laws. [208]

The SEC's MOU with the U.K. securities regulatory authorities (the "UK MOU") [209] is one of the most far-reaching of the SEC's MOUs, making assistance available in virtually all types of cases that could arise under the securities and futures laws of the United States and the United Kingdom. [210] Upon request of an authority that is a party to the MOU, it allows each other regulatory authority to provide access to information in its files, to compel testimony and production of information or documents from persons using its subpoena powers, to conduct compliance inspections or examinations of investment businesses and to permit the representatives of the requesting authority to participate in the conduct of the investigations made by the requested authority, all without regard to

p. 14-51

p. 14-52

whether the conduct on which information is sought would constitute a violation of the requested authority's laws or regulations. [211]

While the UK MOU is very broad, in the past, there has been some reluctance from certain other foreign authorities to agree to providing open-ended assistance to SEC investigations of domestic financial entities, particularly where local securities disclosure and bank secrecy laws differ markedly from those in the United States. [212] More recently, however, the trend has moved toward broader cooperation. Both Switzerland and Japan, once examples of such reluctance, have since expanded and reconfirmed their commitment toward cooperation and information sharing.

In 1993, Switzerland amended its fairly restrictive 1987 MOU to include violations of law concerning securities, futures, or options, in other than penal proceedings, including cooperation with formal investigations that may lead to such proceedings. [213] The 1993 Swiss MOU, however, still only extends its commitment to information sharing to the "extent feasible."

In 2002, Japan and the United States signed a Statement of Intent that established a framework of cooperation much like the MOUs the United States has with other countries, extending their commitment to provide the "fullest assistance permissible under the laws of the United States and Japan." [214] That MOU represented a significant departure from the previous Japanese MOU, which had no procedures or guidelines for information requests. [215]

In 2003, IOSCO publicly introduced the Multilateral Memorandum of Understanding Concerning Consultation and Cooperation and the Exchange of

p. 14-52

p. 14-53

Information (the "Multilateral MOU"). [216] The Multilateral MOU is the first global multilateral information sharing arrangement among securities regulators. It specifies the particular types of information a signatory is expected to provide to counterparts upon request, including client identifying records from bank and brokerage accounts, bank and brokerage transaction records, and beneficial ownership information of non-natural persons organized in the jurisdiction of the requested authority. [217] There are now 109 signatories to the Multilateral MOU, including the SEC and the CFTC. [218]

Footnotes

9 This section does not deal with the potential applicability of state registration requirements. *See* § 14.12.

10 Section 15(a)(2) of the Exchange Act gives the SEC the power—exercisable "as it deems consistent with the public interest and the protection of investors," either in individual cases or on a general basis, and conditionally or unconditionally—to exempt broker-dealers from the registration requirement.

11 § 3(a)(4) of the Exchange Act (as amended by the Gramm-Leach-Bliley Act, Pub. L. No. 106–102, § 201, 113 Stat. 1338, 1385 (1999)).

12 § 201 of the GLB Act; *see* § 3(a)(4) of the Exchange Act. For a discussion of related changes the GLB Act made to the application of the definition of "dealer" in § 3(a)(5) of the Exchange Act to banks, *see* § 14.03[1][b]. *See also* § 14.03[1][c] (discussing bank "broker" and "dealer" activities after the GLB Act) and ROBERT L. 37 § 3(a)(5) of the Exchange Act (as amended by GLB Act § 202).

38 GLB Act § 202; *see* § 3(a)(5) of the Exchange Act. For a discussion of related changes the GLB Act made to the application of the definition of "broker" to banks, *see* § 14.03[1][a]. *See also* § 14.03[1][c] (discussing bank "broker" and "dealer" activities after the GLB Act).

39 *See* SEC Release No. 34-47364 (Feb. 13, 2003) (hereinafter the "Dealer Release").

40 Section 761 of the Dodd-Frank Act, among other things, also added "security-based swaps" to the definition of "security" in § 3(a)(10) of the Exchange Act.

41 § 3(a)(5)(B) of the Exchange Act.

42 *See*, *e.g.*, *Burton Securities* (avail. Dec. 5, 1977); *see also Acqua Wellington North American Equities Fund, Ltd.* (avail. Oct. 11, 2001) (investing in equity lines of credit and agreeing to buy common stock of a company, absent any of enumerated "dealer" activities, does not require registration as a broker-dealer).

43 *See*, *e.g.*, *United Trust Company* (avail. Sept. 6, 1978) (entity that engages in low volume of municipal securities activity but does so in response to customer requests may be a municipal securities dealer).

44 *Fairfield Trading Corp.* (avail. Jan. 10, 1988); *Continental Grain Company* (avail. Nov. 6, 1987).

45 *Continental Grain Company* (avail. Nov. 6, 1987).

46 *Continental Grain Company* (avail. Nov. 6, 1987).

47 *Continental Grain Company* (avail. Nov. 6, 1987).

48 *Continental Grain Company* (avail. Nov. 6, 1987); *Burton Securities* (avail. Dec. 5, 1977).

49 *Continental Grain Company* (avail. Nov. 6, 1987); *Burton Securities* (avail. Dec. 5, 1977). In *United Trust Company* (avail. Sept. 6, 1978), the SEC refused to grant a no-action request with respect to an entity's status as a municipal securities dealer based in large part on the company's "apparent willingness … to engage in municipal securities activity when requested to do so by customers." By way of contrast, in each of *Continental Grain Company* (avail. Nov. 6, 1987) and *Louis Dreyfus Corporation* (avail. July 23, 1987), the SEC granted a no-action position in the context of requests emphasizing that the subject entities were "under no obligation" to enter quotes, nor would they "ever do so at the request of another party."

50 *Fairfield Trading Corp.* (avail. Jan. 10, 1988); *Robert C. DeFazio* (avail. Dec. 17, 1981); *Burton Securities* (avail. Dec. 5, 1977).

51 *National Council of Savings Institutions* (avail. July 27, 1986); *Robert C. DeFazio* (avail. Dec. 17, 1981); *Burton Securities* (avail. Dec. 5, 1977).

52 *Fairfield Trading Corp.* (avail. Jan. 10, 1988); *Continental Grain Company* (avail. Nov. 6, 1987); *Citicorp Homeowner, Inc.* (avail. Oct. 7, 1987); *Burton Securities* (avail. Dec. 5, 1977).

53 *United Mercantile Bank & Trust Company* (avail. Dec. 4, 1986).

54 *National Council of Savings Institutions* (avail. July 27, 1986).

55 *National Council of Savings Institutions* (avail. July 27, 1986); *United Mercantile Bank & Trust Company* (avail. Dec. 4, 1986). With respect to government securities, the following may be added to the list of activities that ordinarily would not be engaged in by an entity other than a broker-dealer: (i) using an interdealer broker or a broker's broker and (ii) running a matched book of repurchases and reverse repurchases of securities. *Fairfield Trading Corp.* (avail. Jan. 10, 1988); *Continental Grain Company* (avail. Nov. 6, 1987); *International Investment Group, Inc.* (avail. July 23, 1987).

56 Section 3(a)(6) of the Exchange Act defines a "bank" as:

> (A) a banking institution organized under the laws of the United States or a Federal savings association, as defined in section 2(5) of the Home Owners' Loan Act, (B) a member bank of the Federal Reserve System, (C) any other banking institution or savings association, as defined in section 2(4) of the Home Owners' Loan Act, whether incorporated or not, doing business under the laws of any State or of the United States, a substantial portion of the

> business of which consists of receiving deposits or exercising a fiduciary power similar to those permitted to national banks under the authority of the Comptroller of the Currency … which is supervised and examined by State or Federal authority having supervision over banks or savings associations.…

57 *See*, *e.g.*, *United States v. Weisscredit Banca, Commerciale E D'Investimenti*, 325 F. Supp. 1384 (S.D.N.Y. 1971); *see also* § 14.03[1][d].

58 *See* § 14.03[1][a] and [b]. For a further discussion of the GLB Act, *see* GUIDE Part IX. B.3.

59 SEC Release No. 34-56501 (Sept. 24, 2007).

60 Under the GLB Act, an "identified banking product" means (i) a deposit account, savings account, certificate of deposit, or other deposit instruments issued by a bank, (ii) a banker's acceptance, (iii) a letter of credit issued or loan made by a bank, (iv) a debit account at a bank arising from a credit card or similar arrangement, (v) a participation in a loan that the bank or an affiliate of the bank (other than a broker or dealer) funds, participates in, or owns that is sold to "qualified investors" or other sophisticated investors or (vi) any swap agreement, including credit and equity swaps (but only if equity swaps are not sold by the bank directly to any person other than a qualified investor). *See* § 206(a) of the GLB Act.

61 The Dealer Release clarified that this exception would also apply to the definition of "dealer." Furthermore, the SEC stated in the Dealer Release that a riskless principal transaction will count as one transaction toward the annual 500 limit (although the SEC stated that if a "bank acts as an intermediary between one counterparty and multiple counterparties by arranging multiple transactions, the bank must count each of the transactions on the side of the intermediation that involves the largest number of transactions as a separate transaction against the annual 500 transaction-limit"). *See* Dealer Release, 68 Fed. Reg. 8686, 8690 n.38 (Feb. 24, 2003).

62 *See* § 201 of the GLB Act.

63 Financial Services Regulatory Relief Act of 2006, Pub. L. No. 109-351, 120 Stat. 1966 (2006).

64 *See* SEC Release No. 34-56501 (Sept. 24, 2007).

65 12 C.F.R. § 218.

66 The "good faith" exemption is only available if: (i) at the time the contract was created, the bank acted in good faith and had reasonable policies and procedures in place to comply with the definition of "broker" and the related rules and regulations; and (ii) any violation of the broker-dealer registration requirements did not result in "any significant harm, financial loss or cost to the person seeking to void the contract." Regulation R Rule 771, 17 C.F.R. §247.780.

67 As clarified and amended in the Dealer Release, the term "predominantly originated" means that "no less than 85% of the value of the obligations in any pool were originated by: (1) [t]he bank or its affiliates, other than its broker or dealer affiliates; or (2) [b]anks that are members of a syndicate of banks and affiliates of such banks, other than their broker or dealer affiliates, if the obligations or pool of obligations consist of mortgage obligations or consumer-related receivables; (3) [f]or this purpose, the bank and its affiliates include any financial institution with which the bank or its affiliates have merged but does not include the purchase of a pool of obligations or the purchase of a line of business." *See* Dealer Release, 68 Fed. Reg. 8686, 8700-01 (Feb. 24, 2003); Rule 3b-18(g) under the Exchange Act. In addition, the term "originated" means: "(1) [f]unding an obligation at the time that the obligation is created; or (2) [i]nitially approving and underwriting the obligation, or initially agreeing to purchase the obligation, provided that: (i) [t]he obligation conforms to the underwriting standards or is evidenced by the loan documents of the bank or its affiliates, other than its broker or dealer affiliates; and (ii) [t]he bank or its affiliates, other than its broker or dealer affiliates, fund the obligation in a timely manner, not to exceed six months after the obligation is created." *See* Dealer Release, 68 Fed. Reg. 8686, 8700 (Feb. 24, 2003); Rule 3b-18(e) under the Exchange Act.

68 As clarified and amended in the Dealer Release, the term "member of a syndicate of banks" has been

replaced with separate definitions of "member" and "syndicate of banks." The term "member" as it relates to a "syndicate of banks" means "a bank that is a participant in a syndicate of banks and together with its affiliates, other than its broker or dealer affiliates, originates no less than 10% of the value of the obligations in a pool of obligations used to back the securities issued through a grantor trust or other entity." *See* Dealer Release, 68 Fed. Reg. 8686, 8700 (Feb. 24, 2003); Rule 3b-18(c) under the Exchange Act. The term "syndicate of banks" means "a group of banks that acts jointly, on a temporary basis, to issue through a grantor trust or other separate entity, securities backed by obligations originated by each of the individual banks or their affiliates, other than their broker or dealer affiliates." *See* Dealer Release, 68 Fed. Reg. 8686, 8701 (Feb. 24, 2003); Rule 3b-18(h) of the Exchange Act.

69 *See* § 202 of the GLB Act. The Comptroller has taken the position that certain banks may hedge equity derivatives by purchasing, holding and selling the underlying equity securities. *See generally* GUIDE II.E.

70 *See* Dealer Release, 68 Fed. Reg. 8686, 8692 (Feb. 24, 2003) (adopting Rule 15a-11 under the Exchange Act). As originally adopted, Rule 15a-11 under the Exchange Act also provided banks engaging in such activities an exemption from the definition of "broker." In a companion release to the Regulation R adopting release, the SEC redesignated Rule 15a-11 as Rule 3a5-3 and deleted the broker-related provisions of the rule. *See* SEC Release No. 34-56502 (Sept. 24, 2007). The SEC and the Board included the broker exemption for banks engaging in securities lending transactions in Regulation R. *See supra* Note 61.

71 *See* SEC Release No. 34-56502 (Sept. 24, 2007).

72 § 3(a)(6) of the Exchange Act.

73 *See*, *e.g.*, Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,015 n.16 (July 18, 1989) (noting the SEC's treatment of a branch or agency of a foreign bank supervised and examined by a banking authority as a "bank" for purposes of §§ 3(a)(4) and 3(a)(5) of the Exchange Act).

74 N.Y. BANKING LAW § 202-a (McKinney's 2013).

75 N.Y. BANKING LAW § 202-a(1) (McKinney's 2013).

76 N.Y. BANKING LAW § 201-b (McKinney's 2013).

77 *See* 12 U.S.C. § 3102(d).

78 Following enactment of the CFMA in 2000, the definition of "security" in § 3(a)(10) of the Exchange Act was amended to exclude "any non-security based swap agreements." Effective the later of July 6, 2011 or not less than 60 days after adoption of relevant rules or regulations, the Dodd-Frank Act further amended the definition of "security" in § 3(a)(10) of the Exchange Act to include "security-based swaps." § 12.01[1]. The determination of whether certain business activities involve "securities" can raise difficult legal issues. Of course, even entities that effect transactions in financial instruments that are not securities may still be subject to U.S. regulation. For a discussion of the regulation of entities that effect transactions in futures contracts, swaps and other derivatives, *see* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, Chapter 4.

79 An entity that acts as a dealer in security-based swaps will be required to register with the SEC as an SBSD once the rules regulating such registration are effective. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 6.02.

80 *But see* § 14.08[3][b] (regarding reporting requirements imposed with respect to certain unregistered affiliates of registered broker-dealers pursuant to rules adopted by the SEC under § 17(h) of the Exchange Act and for a discussion of the position advanced by the Government Accountability Office (the "GAO") that the SEC use its authority under this provision to determine whether regulation of such affiliates is warranted).

81 The Exchange Act also provides a mechanism for limited purpose registration as broker-dealers for FCMs whose customer-driven securities activities are limited to certain transactions in security futures products. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 4.07[2].

82 *See* § 3(a)(17) of the Exchange Act (defining "interstate commerce").

83 *See generally Legacy Motors, Inc.* (avail. July 31, 1991) (rejecting a no-action request with respect to officers, directors and employees of a company due to "absence of a representation that the past securities activities [of the persons] were strictly limited to intrastate transactions"); *Don Chamberlin* (avail. Aug. 10, 1979) (interpreting "exclusively intrastate" to turn principally on the residence of the broker-dealer's customers, including the securities issuer).

84 § 15(a)(1) of the Exchange Act. Broker-dealers that engage in transactions in government securities, however, may have to register under § 15C of the Exchange Act. *See* § 14.03[2][b][ii]. Municipal securities are exempted securities for certain purposes of the Exchange Act, although not for purposes of § 15. Accordingly, nonbank broker-dealers in municipal securities must register under § 15 of the Exchange Act. A bank, or a separately identifiable division or department of a bank, that is engaged in the business of buying or selling municipal securities, otherwise than in a fiduciary capacity, is required to register with the SEC as a "municipal securities dealer" under § 15B of the Exchange Act. *See* §§ 3(a)(30) and 15B(a)(1) of the Exchange Act.

85 *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,015 n.21 (July 18, 1989); § 3(a)(3) of the Securities Act. Although the definition of "security" contained in § 3(a)(10) of the Exchange Act by its terms excludes "any note, draft, bill of exchange, or banker's acceptance, which has a maturity at the time of issuance of not exceeding nine months," the SEC staff has on various occasions expressed the view that the additional requirements applicable to the commercial paper exemption in § 3(a)(3) of the Securities Act should be read into the § 3(a)(10) exclusion. *See*, *e.g.*, *Prescient Markets, Inc.* (avail. Apr. 2, 2001) (in which the SEC staff took the position that a commercial paper trading platform did not have to be registered as a broker-dealer if its registered broker-dealer affiliate took full responsibility for the operation of the platform with respect to § 4(a)(2) commercial paper transactions). Several courts have also taken this approach when analyzing whether a short-term note should be viewed as a "security" for purposes of various provisions of the Exchange Act. *See*, *e.g.*, *Zeller v. Bogue Electric Manufacturing Corp.*, 476 F.2d 795 (2d Cir.), *cert. denied*, 414 U.S. 908 (1973) (holding that Rule 10b-5 under the Exchange Act could apply to a note with less than nine months maturity notwithstanding the definition of a security in the Exchange Act); *UBS Asset Management (New York) Inc. v. Wood Gundy Corp.*, 914 F. Supp. 66 (S.D.N.Y. 1996) (exclusion in § 3(a)(10) "applies only to 'prime quality negotiable commercial paper'"); *SEC v. R.G. Reynolds Enterprises, Inc.*, 952 F.2d 1125, 1132 (9th Cir. 1991) ("[T]he presumption that a note is a security applies equally to notes of less than nine months maturity that are not commercial paper.").

86 *See generally* SEC Release No. 33-4412 (Sept. 20, 1961) (discussing § 13(a)(3) of the Exchange Act and the determining factors of "commercial paper"); § 3.05[3].

87 *See* § 3(a)(12) of the Exchange Act (defining "exempted securities").

88 *See* § 3(a)(34) of the Exchange Act (defining "appropriate regulatory agency").

89 *See* Rule 15a-6 Adopting Release; *see also* SEC Release No. 34-25801 (June 14, 1988) (hereinafter the "Rule 15a-6 Proposing Release"). These two releases discuss, or at least cite, virtually all of the prior significant SEC pronouncements on the U.S. activities of foreign broker-dealers. As indicated in the text, in many cases Rule 15a-6 follows from these prior positions. Certain SEC no-action letters that predate Rule 15a-6, and which are arguably broader than Rule 15a-6, *see*, *e.g.*, *Chase Manhattan Corp.* (avail. July 28, 1987), apparently may still be relied upon since the Rule 15a-6 Adopting Release, at Part IV.A.3, provides that such letters remain valid unless expressly modified or withdrawn. 54 Fed. Reg. 30,013, 30,019 (July 18, 1989).

Foreign broker-dealers intending to offer security futures products to U.S. investors in reliance on Rule 15a-6 will also need to consider U.S. commodities law requirements and exemptions applicable to such activity under the CEA. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, Chapter 4. Security futures products generally are defined as futures contracts on individual nonexempt securities or narrow-based groups or indices of nonexempt securities. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 2.16[c].

90 In 2008, the SEC proposed significant amendments to Rule 15a-6. If adopted, the amendments would have: (i) broadened substantially the categories of U.S. investors with which a foreign broker-dealer may interact without registering as a broker-dealer under the Exchange Act (in particular, references under the current rule, which are discussed further below, to "major U.S. institutional investors" and "U.S. institutional investors" would be replaced by references to "qualified investors" as defined in § 3(a)(54) of the Exchange Act, which includes institutional entities as well as natural persons that have at least $25 million in investments), (ii) effectively eliminated the requirement that a U.S. broker-dealer "chaperone" contacts between a foreign broker-dealer and qualified investors, (iii) substantially reduced the obligation of a U.S. broker-dealer to "intermediate" transactions between a foreign broker-dealer and qualified investors (and, if the foreign broker-dealer conducts a "foreign securities business," as such term is defined in the proposed amendments and, subject to the other conditions specified therein, permit it to provide full-service brokerage and perform related custody activities for qualified investors), and (iv) codified (and, in some respects, expanded) certain aspects of current SEC staff interpretive guidance issued in connection with Rule 15a-6. *See* SEC Release No. 34-58047 (June 27, 2008). This proposal was withdrawn on November 1, 2013, but the SEC noted that it may consider it at a future date. *See* SEC, RIN 3235-AK15 (Fall 2013).

91 *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,016 & n.43 (July 18, 1989) (withdrawing prior no-action letters that had permitted unregistered broker-dealers located in the United States to do business exclusively with non-U.S. persons).

92 Rule 15a-6(a)(1) under the Exchange Act.

93 Rule 15a-6 Proposing Release, 53 Fed. Reg. 23,645, 23,650 (June 23, 1988).

94 The term "general circulation" is not defined in Rule 15a-6. The meaning of the term may, however, be informed by reference to Rule 902(c)(2) of Regulation S under the Securities Act. *See* § 8.02[1][b].

95 *But see The London International Financial Futures Exchange* ("LIFFE") (avail. May 1, 1992) (permitting LIFFE and certain foreign broker-dealers not registered with the SEC to provide qualified institutional buyers information concerning LIFFE-traded options). *See also Tokyo Stock Exchange, Inc.* (avail. Nov. 20, 2006); *Eurex Deutschland* (avail. July 27, 2005); *Borsa Italiana S.p.A.* (avail. Sept. 24, 2004); *EDX London Limited* (avail. Oct. 29, 2003); *Tokyo Stock Exchange, Inc.* (avail. Nov. 15, 2002); *ParisBourse SA* (avail. Dec. 6, 1999); *Tokyo Stock Exchange* (avail. July 27, 1999); *Osaka Securities Exchange* (avail. July 23, 1999); *Mercato Italiano dei Derivati* (avail. Sept. 1, 1998); *Société de Compensation des Marchés Conditionnels* (avail. June 17, 1996); *The London International Financial Futures and Options Exchange* (avail. Mar. 6, 1996); *Hong Kong Futures Exchange Limited* (avail. Sept. 26, 1995).

96 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,021 (July 18, 1989).

97 SEC, Division of Trading and Markets, "Frequently Asked Questions Regarding Rule 15a-6 and Foreign Broker-Dealers," Question 9 (Mar. 21, 2013 (updated Apr. 14, 2014)) (hereinafter, the "2013 15a-6 FAQ").

98 Rule 15a-6 Proposing Release, 53 Fed. Reg. 23,645, 23,651 (June 23, 1988). However, Rule 15a-6 and the Rule 15a-6 Adopting Release detail circumstances and procedures under which distribution of research reports is permitted without triggering a broker-dealer registration requirement. *See* § 14.03[3][b][iii].

99 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,022 n.103 (July 18, 1989). However, a foreign broker-dealer effecting unsolicited transactions on behalf of a U.S. investor in reliance on Rule 15a-6(a)(1) may send confirmations and account statements directly to the U.S. investor in connection with such transactions. 2013 15a-6 FAQ at Question 3.

100 2013 15a-6 FAQ, Question 2.

101 2013 15a-6 FAQ, Question 2.

102 Rule 15a-6(a)(4)(i) under the Exchange Act. Unlike the treatment of broker-dealers and banks for purposes of "qualified institutional buyer" status in Rule 144A under the Securities Act, there is no requirement that any solicited broker-dealers or banks own securities of a minimum value or, in the case of banks, have a minimum net asset value.

103 *See*, *e.g.*, *Wood Gundy, Inc.* (avail. Dec. 9, 1985) (permitting an unregistered foreign broker-dealer to

execute unsolicited orders received from registered broker-dealers filling orders of their U.S. customers); *Bear Stearns/Sun Hung Kai* (avail. Feb. 6, 1976) (permitting an unregistered foreign broker-dealer to fill its own customers' orders for U.S. securities and to maintain an account for its own customers with a registered broker-dealer).

104 For a discussion of certain consequences that may arise when the foreign and U.S. broker-dealer are affiliated, *see* § 14.04.

105 *See* § 14.03[1][c]. The acknowledgment in Rule 15a-6(a)(4)(i) that banks may act in a broker or dealer capacity codified positions taken in pre-Rule 15a-6 no-action letters. *See*, *e.g.*, *National Westminster Bank PLC* (avail. July 7, 1988); *Security Pacific Corp.* (avail. Apr. 1, 1988).

106 The writing of a derivative instrument by a foreign dealer (or any other entity) that may be characterized as a security may be viewed as the offer and sale of that security requiring registration under the Securities Act unless an exemption is available. *See* § 1.02.

The question also arises whether a foreign dealer is an investment company that, if its securities (including possibly OTC instruments it has written that are classified as securities) are held by more than 100 U.S. persons and such persons do not all satisfy the definition of "qualified purchaser," is required to register with the SEC under the Investment Company Act. *See* § 15.06. Many dealers (or their affiliates engaged in derivative transactions and other financial activities) have assets consisting predominantly of securities, as a result of which they might be classified as investment companies. Section 3(c)(2) of the Investment Company Act excludes broker-dealers from the definition of investment company, but the SEC staff has apparently suggested on at least some occasions, though it would appear without statutory support, that the exclusion applies only to those broker-dealers registered with the SEC.

Section 3(c)(2) of the Investment Company Act also excludes companies whose primary activities include "acting as a market intermediary." A "market intermediary" is any person that regularly holds itself out as being willing contemporaneously to engage in, and that is regularly engaged in, the business of entering into "financial contracts" (*e.g.*, options, swaps and repurchase agreements). *See* § 3(c)(2)(B)(i) of the Investment Company Act.

107 Rule 15a-6(a)(4)(ii) under the Exchange Act. Each of these supranational organizations is also deemed a non-U.S. person for purposes of Regulation S under the Securities Act. *See* Rule 902(k)(2)(vi) under the Securities Act; § 8.02.

108 Rule 15a-6(a)(4)(iii) under the Exchange Act (emphasis added). Although the direct solicitation of certain non-U.S. investors temporarily present in the United States is authorized under Rule 15a-6, such solicitation may be subject to the antifraud or other provisions of the U.S. securities laws. In one case, however, the court found that an alleged offer and sale—through phone calls and facsimiles—of foreign securities by a foreign broker-dealer to a non-U.S. person vacationing in the United States were not sufficient to establish jurisdiction for purposes of the antifraud provisions of the Exchange Act under that court's tests regarding the "conduct" and "effect" of the foreign broker-dealer's activities, even if misrepresentations and reliance thereon occurred in the United States. *See Europe & Overseas Commodity Traders S.A. v. Banque Paribas London* 147 F.3d 118 (2d Cir. 1998), *cert. denied*, 525 U.S. 1139 (1999); *see also Interbrew S.A. v. EdperBrascan Corp.*, 23 F. Supp. 2d 425 (S.D.N.Y. 1998). *In Morrison v. National Australian Bank Ltd.*, the Supreme Court replaced the "conducts" and "effects" tests with a "transactional" test (*i.e.*, purchases and sales in the United States or securities listed on U.S. exchanges). The Dodd-Frank Act restored the "conducts" and "effects" tests for actions brought by the SEC or the DOJ and mandated the SEC to study whether such tests should replace the Morrison "transactional" test with respect to private rights of action as well. *See Morrison v. National Australian Bank Ltd.*, 561 U.S. 247 (2010); §§ 929P and 929Y of the Dodd-Frank Act. The SEC released a study in 2012 "on the Cross-Border Scope of the Private Right of Action Under Section 10(b) of the Securities Exchange Act," which did not take a position on whether Congress should override the *Morrison* transactional test for private rights of action. *See* SEC, STUDY ON THE CROSS-BORDER SCOPE OF THE PRIVATE RIGHT OF ACTION UNDER SECTION 10(B) OF THE SECURITIES EXCHANGE ACT OF 1934 AS REQUIRED BY SECTION 929Y OF THE [DODD-FRANK ACT] (Apr.

11, 2012).

109 2013 15a-6 FAQ, Question 1.

110 *See* Rule 15a-6 Proposing Release, 53 Fed. Reg. 23,645, 23,649 (June 23, 1988) ("[T]he primary responsibility for protecting foreign investors from wrongful conduct of foreign securities professionals properly lies with foreign securities regulators.").

111 *Cf.* SEC Release No. 34-42906 (June 7, 2000) (granting an Order pursuant to § 15(a)(2) of the Exchange Act exempting certain Canadian broker-dealers from the requirements of § 15(a)(1) of the Exchange Act when soliciting or effecting transactions in securities for U.S. residents or those temporarily in the United States with respect to their Canadian Retirement Accounts); *see also* Rule 237 under the Securities Act and Rule 7d-2 under the Investment Company Act; SEC Release No. 33-7860 (June 7, 2000).

112 *See* § 8.02[1][a].

113 *Cleary, Gottlieb, Steen & Hamilton* (avail. Nov. 22, 1995, revised Jan. 30, 1996) (hereinafter the "1996 Cleary Letter"). An "offshore client" is defined for this purpose as (i) any entity not organized or incorporated under the laws of the United States and not engaged in a trade or business in the United States for U.S. federal income tax purposes, (ii) any natural person who is not a U.S. resident, or (iii) any entity not organized or incorporated under the laws of the United States substantially all of the outstanding voting securities of which are beneficially owned by a person described in (i) or (ii) above. A condition of the relief in the 1996 Cleary Letter is that the foreign broker-dealer will obtain written assurance from the U.S.-resident professional fiduciaries that the account is managed for an offshore client. Note that the definition of "offshore client" is not the same as the definition of "non-U.S. person" in Regulation S and, in those cases in which the offshore client definition is narrower than the non-U.S. person definition, a foreign broker-dealer effecting a Regulation S transaction with a U.S.-based adviser for the non-U.S. person will not be able to rely on the relief provided by the 1996 Cleary Letter.

A "foreign security" is defined for purposes of the 1996 Cleary Letter as (i) a security issued by an issuer not organized or incorporated under the laws of the United States when the transaction in such security is not effected on a U.S. exchange or through the Nasdaq system (including a depositary receipt issued by a U.S. bank, but only if it is initially offered and sold outside the United States in accordance with Regulation S), (ii) a debt security (including a convertible debt security) issued by an issuer organized or incorporated in the United States in connection with a distribution conducted outside the United States, or (iii) any OTC derivative instrument on an instrument described in (i) or (ii) above; *provided*, *however*, that debt securities of an issuer organized or incorporated under the laws of the United States do not constitute "foreign securities" if they are offered and sold as part of a "global offering" involving both a distribution of the securities in the United States under a Securities Act registration statement and a contemporaneous distribution outside the United States.

Although the no-action position set forth in the 1996 Cleary Letter is technically applicable only to those SEC-registered broker-dealers cited in the letter and their non-U.S. affiliates, it should be possible for other broker-dealers to rely on the position taken in the letter so long as all other requirements of the letter are met.

114 Rule 15a-6(a)(4)(iv) and (v) under the Exchange Act.

115 Rule 15a-6(a)(4)(v) under the Exchange Act.

116 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,017 & n.51 (July 18, 1989).

117 For purposes of certain of the safe harbor rules under Regulation S, an agency or branch of a U.S. person located outside the United States is a U.S. person unless the agency or branch (i) operates for valid business reasons and (ii) is engaged in the business of insurance or banking and is subject to substantive insurance or banking regulation by the relevant foreign jurisdiction. *See* Rule 902(k)(2)(v) under the Securities Act. (Rule 15a-6 under the Exchange Act contains no comparable conditions for agencies or branches permanently located outside the United States to be treated as non-U.S. persons.) In addition, the general statement of territorial jurisdiction of the registration provisions of the Securities Act in Regulation S and the Regulation S safe harbor provisions for "Category 1" issuers permit offers and sales outside the

United States even to U.S. residents. *See* § 8.02[1][c][i].

118 In conjunction with the adoption of Rule 15a-6, the SEC issued no-action letters that permitted foreign broker-dealers to distribute research reports in accordance with Rule 15a-6 without such activity triggering a requirement to register under the Advisers Act. *See*, *e.g.*, *Dean Witter Reynolds (Canada)* (avail. Mar. 1, 1990).

119 *See* Rule 15a-6(b)(4) under the Exchange Act.

"U.S. institutional investor" means: (i) a registered investment company, or (ii) a bank, savings and loan association, insurance company, business development company, small business investment company or employee benefit plan as defined in Rule 501(a)(1) of Regulation D under the Securities Act; a private business development company as defined in Rule 501(a)(2); an organization described in § 501(c)(3) of the I.R.C., as defined in Rule 501(a)(3); or a trust as defined in Rule 501(a)(7). *See* Rule 15a-6(b)(7) under the Exchange Act. U.S. branches and agencies of foreign banks are "banks" for purposes of the definition of U.S. institutional investor. *See* § 14.03[1][d].

120 The SEC Release reproposing Rule 144A, which was issued the same day that Rule 15a-6 was adopted, suggested that the "qualified institutional buyer" and "major U.S. institutional investor" definitions were intended to be identical. *See* SEC Release No. 33-6839 (July 11, 1989), 54 Fed. Reg. 30,076, 30,079 n.17 (July 18, 1989). Further, the Rule 15a-6 Proposing Release had provided that corporations generally could be within the definition of "U.S. institutional investor." *See* Rule 15a-6 Proposing Release, 53 Fed. Reg. 23,645, 23,654 n.73 (June 23, 1988). The Rule 15a-6 Adopting Release did not explain why the "institutional investor" definition was revised between proposal and adoption. It is thus not clear whether the different treatment of corporations in Rules 144A and 15a-6 was the result of an unexplained SEC policy decision or was inadvertent.

121 *See Cleary, Gottlieb, Steen & Hamilton* (avail. Apr. 9, 1997); *Cleary, Gottlieb, Steen & Hamilton* (avail. Apr. 28, 1997) (hereinafter collectively the "1997 Cleary Letter"). "Aggregate financial assets" include cash, money-market instruments, securities of unaffiliated issuers, futures and options on futures and other derivative instruments. *See* 1997 Cleary Letter. *See also Roland Berger Strategy Consultants* at n.3 (avail. May 28, 2013).

122 *See* 2013 15a-6 FAQ.

123 The Rule 15a-6 Adopting Release emphasized that even "implied" soft dollar arrangements constitute solicitation. Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,023 (July 18, 1989). For a brief description of "soft dollar" arrangements, *i.e.*, the use of brokerage commission payments to compensate for the provision of research, *see* §§ 14.07[1][a] and 16.09.

124 This condition by its express terms applies only to securities that have been the subject of a research report. *But see* the discussion of "solicitation" in § 14.03[3][b][i].

125 A registered broker-dealer "accepts responsibility" by taking "reasonable steps to satisfy itself regarding key statements in the research," or, where limited information is available, making "certain that neither the facts nor the analysis appear inconsistent with outstanding information regarding the issuer." Rule 15a-6 Adopting Release, 54 Fed. Reg. 30013, 30023 n.116 (July 18, 1989). In addition, research prepared by a foreign broker-dealer that is distributed by a U.S. broker-dealer must contain certain additional disclosures required by applicable SRO rules. *See* § 14.07[3][a] for a discussion of these rules.

126 Subject to these conditions, research also may be distributed *via* an electronic database. *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,023 n.114 (July 18, 1989); *see also James Capel* (avail. Dec. 6, 1989) (permitting a foreign broker-dealer to receive a fee for making its research available electronically).

127 Foreign broker-dealers that are affiliated with SEC-registered broker-dealers and that distribute research reports to U.S. investors are, however, subject to the certification requirements of Regulation AC, whereas foreign broker-dealers without such affiliation that issue research reports to U.S. investors solely in reliance on the exemption from registration provided by Rule 15a-6(a)(2) are exempt from Regulation AC's certification requirements. *See* § 14.07[5][a] for a further discussion of Regulation AC.

128 *NASD* (avail. Dec. 5, 1989).

129 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,018 (July 18, 1989). Transactions resulting from the distribution of quotations on such a quotation system would be deemed "unsolicited."

130 *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,018–30,019 (July 18, 1989).

131 *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,018 n.66 (July 18, 1989). Among the third-party quotation systems as to which the SEC provided relief is one run by Topic Services, Inc., which disseminated quotations of market-makers in securities listed on the Irish Stock Exchange's Stock Exchange Automated Quotations and SEAQ International Systems (the "Topic System"). The Topic System, at the time of the SEC's approval, provided quotations to approximately 40 U.S. subscribers, made up of a mix of registered broker-dealers and large institutional investors. *See generally* SEC Release No. 34-30033 (Dec. 4, 1991). *Cf. London Traded Options Market* (avail. Sept. 4, 1990); SEC Release Nos. 34-28331 (Aug. 13, 1990), 34-25457 (Mar. 14, 1988) (NASD-Stock Exchange of Singapore). *See Topic Services, Inc.* (avail. Oct. 4, 1989); *Topic Services, Inc.* (avail. Dec. 23, 1987); *Topic Services, Inc.* (avail. June 3, 1987); *Topic Services, Inc.* (avail. Aug. 2, 1986). With respect to other third-party systems, *See NASD* (avail. Dec. 5, 1989); *NASD* (avail. Mar. 18, 1988); *NASD* (avail. June 9, 1987); *NASD* (avail. Oct. 22, 1986); *NASD* (avail. May 7, 1986) (NASD-ISE); *see also Topic Services, Inc.* (avail. Nov. 28, 1986).

132 *See* 1997 Cleary Letter.

133 SEC Release No. 34-27080 (July 31, 1989), 54 Fed. Reg. 32,403, 32,404 (Aug. 7, 1989). The SEC's approval for any individual stock exchange linkage will depend upon the SEC being "satisfied that adequate safeguards and procedures have been established and implemented to protect investors and detect fraudulent or manipulative acts or practices." *See* SEC Release No. 34-27080, 54 Fed. Reg. 32,403, 32,404 (Aug. 7, 1989) (July 31, 1989).

134 SEC Release No. 34-35116 (Dec. 19, 1994); SEC Release No. 34-21925 (Apr. 8, 1985).

135 SEC Release No. 34-22442 (Sept. 20, 1985).

136 SEC Release No. 34-23075 (Mar. 28, 1986).

137 The other exchanges are the Australian Stock Exchange, Euronext (Amsterdam, Brussels, Paris), the Hong Kong Exchanges and Clearing Ltd., the Bolsa Mexicana de Valores, the Bolsa de Valores de Sao Paulo, the Tokyo Stock Exchange and the Toronto Stock Exchange. *See* Press Release, NYSE, 10 Leading Equities Exchanges Jointly Announce Global Equity Market Partnership Talks (June 7, 2000).

138 Subsequent to the adoption of Rule 15a-6, the SEC approved the establishment on a pilot basis of the Nasdaq International Service ("Nasdaq International"), an automated trading system that operated from 3:30 A.M. to 9:00 A.M., New York time, and that was primarily intended to accommodate institutional investors wishing to trade U.S. securities when markets are open in Europe. *See* SEC Release No. 34-29812 (Oct. 11, 1991); *see also* NASD Notice to Members 91-70 (Nov. 1991). In connection with the SEC's approval of Nasdaq International, the SEC staff issued a no-action letter permitting U.K. broker-dealers, not themselves registered with the SEC but affiliated with SEC-registered broker-dealers, to participate in Nasdaq International by executing transactions as agents for their SEC-registered affiliates. *See Nasdaq International Service* (avail. Oct. 11, 1991, revised Jan. 11, 1993); *see also* SEC Release No. 34-46589 (Oct. 2, 2002) (extending the expiration of the Nasdaq International pilot program to October 9, 2003). The Nasdaq International pilot program expired in 2003 and the related NASD rules were removed in 2006. *See* SEC Release No. 34–54084 (June 30, 2006).

139 SEC Release No. 34-41199 (Mar. 22, 1999) (granting relief to Tradepoint based on its small volume) (hereinafter the "Tradepoint Release"). Tradepoint Financial Networks plc was renamed "Virt-X plc" and the Tradepoint Stock Exchange was renamed "Virt-X Exchange Limited." *See Virt-X* (avail. June 21, 2001). In 2008, Virt-X changed its name to SWX Europe. As of April 30, 2009, SWX Europe ceased trading and all business was transferred to the SIX Swiss Exchange. *See* SIX Swiss Exchange message no. 20/2009 (Apr. 17, 2009), *available at* http://www.six-swiss-exchange.com/swx_messages/online/swx_message_200904171332_en.pdf.

140 Under the terms of the exemption, as extended by later no-action relief, Tradepoint's exemption is subject to certain conditions, including that: (i) the average daily dollar value of trades involving a U.S. member (measured on a quarterly basis) does not exceed U.S.$40 million, (ii) Tradepoint's worldwide average trading daily volume (calculated on a dollar basis and measured quarterly) does not exceed ten percent of the average daily volume on the London Stock Exchange, (iii) Tradepoint only offers trading in securities that are both eligible to be traded on the London Stock Exchange and listed by a competent European listing authority in a European Union member state, Norway or Switzerland, and (iv) Tradepoint provides the SEC with a quarterly certification that no trades by U.S. members have been effected in Swiss blue chip securities (in which Tradepoint was expected to obtain a substantial market share through an arrangement with the Swiss Stock Exchange). In addition, Tradepoint must comply with a number of additional conditions, including recordkeeping and reporting requirements, SEC access to books and records, SEC access to real-time quotes and trading information, procedures to ensure the nondisclosure of confidential information, compliance with U.S. trading halts and cooperation with SEC investigations. *Virt-X* (avail. June 21, 2001).

141 *See supra* Note 119. In 2012, the SEC provided no-action relief to the foreign affiliate of a U.S.-registered broker-dealer whereby such foreign affiliate could, through a chaperoning arrangement with the U.S.-registered broker-dealer, engage in certain merger and acquisition activities with certain U.S. customers who, despite having at least $100 million in assets, did not meet the definition of major U.S. institutional investor in Rule 15a-6 or $100 Million Entities in the 1997 Cleary Letter. *See Ernst & Young Corporate Finance (Canada) Inc.* (avail. July 12, 2012). The SEC's relief was limited to situations in which the customer had $100 million in total assets (not just financial assets) and the merger and acquisition activities involved a private placement and resulted in the transfer of control of an entire company or business unit. *See Ernst & Young Corporate Finance (Canada) Inc.* (avail. July 12, 2012).

142 *See Chase Manhattan Corp.* (avail. July 28, 1987); *see generally* § 14.03[3][a].

143 According to the Rule 15a-6 Adopting Release, the chaperoning broker-dealer may not be a bank, even if the bank is acting in a broker or dealer capacity. *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,026 (July 18, 1989). This statement was made in recognition of the fact that banks were at the time exempt from the definitions of "broker" and "dealer" under the Exchange Act. Presumably, since banks now no longer enjoy a blanket exemption from the definitions of "broker" and "dealer," a bank registered as a broker or dealer would be eligible to act as the chaperoning broker-dealer for this purpose (however, as a practical matter, bank registration as a broker or dealer is unlikely). *See* § 14.03[1][a]–[c].

144 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,024 & 30,025 n.149 (July 18, 1989).

145 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,024 n.133 (July 18, 1989). A registered broker-dealer likewise could serve, consistent with its responsibilities as discussed in § 14.03[3][c][ii], as the chaperoning broker-dealer for any number of qualifying foreign broker-dealers.

146 Rule 15a-6 Adopting Release.

147 Rule 15a-6(a)(3)(i)(B) under the Exchange Act. This condition is subject to the limitation that it will not be deemed to have been violated if the qualifying foreign broker-dealer uses its best efforts to obtain requested information, including seeking government assistance and consent of its customers where necessary, but is prevented from providing it by applicable foreign law or regulation. However, if not legally able to respond to the SEC's request for information because of a "blocking statute" or otherwise, a qualifying foreign broker-dealer may have its "qualifying" status and its ability to rely on the Rule 15a-6(a)(3) exemption revoked by the SEC. Revocation would be prospective only, and would be by notice and hearing to which ordinary procedural rights would attach.

148 *See* Rules 15a-6(a)(3)(iii)(C) and (D) and 15a-6(b)(2) under the Exchange Act. The information that the chaperoning broker-dealer must obtain with respect to the qualifying foreign broker-dealer's personnel is specified in Rule 17a-3(a)(12) under the Exchange Act and the review the chaperoning broker-dealer must perform is substantially the same as it would perform for its own personnel. In particular, the chaperoning broker-dealer must determine that these persons are not subject to a "statutory disqualification" (as defined

at § 3(a)(39) of the Exchange Act) and have not been the subject of any foreign sanction "substantially equivalent" to those that would require statutory disqualification. Rule 15a-6(a)(3)(ii)(B) under the Exchange Act; *see* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,028 (July 18, 1989); *see also* Rule 15a-6 Proposing Release, 53 Fed. Reg. 23,645, 23,653 n.70 (June 23, 1988). *See generally* § 14.08[1].

149 *See* Rule 15a-6(a)(3)(iii)(B) under the Exchange Act; 1997 Cleary Letter.

150 *See* Rule 15a-6(a)(3)(ii) under the Exchange Act. This condition of participation by a chaperone applies to visits within the United States to major U.S. institutional investors even though no similar condition applies when the solicitation is done from outside the United States. Participation by the chaperone may be in person or by telephone. *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,029 n.191 (July 18, 1989).

151 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,028 n.179 (July 18, 1989).

152 *See* 1997 Cleary Letter. The 30-day limit is not applied to the foreign broker-dealer as a whole, but separately to each foreign associated person. *See* 2013 15a-6 FAQ, Question 17.

153 *See* Rule 15a-6(a)(3)(i)(A) and (iii)(A)(1) under the Exchange Act.

154 *See* Rule 15a-6(a)(3)(iii)(A) under the Exchange Act.

155 To the extent required by foreign law or as required by a firm's internal policies and procedures applicable to its global business operations, a foreign broker-dealer may send confirmations and account statements directly to U.S. counterparties. However, the chaperoning broker-dealer maintains the obligation to make sure that confirmations and account statement sent to the investor comply with all applicable U.S. requirements. Such statements must clearly identify the U.S. broker-dealer on whose behalf the document is sent. *See* 2013 15a-6 FAQ, Question 4.

156 The margin regulations provide that a registered broker-dealer may arrange for a foreign person (including a foreign broker-dealer) to extend credit for the purpose of purchasing or carrying securities, subject to compliance with the Board's margin regulations applicable to the borrower and lender. *See* § 14.07[6][a]. Note, however, that credit arranged by the registered broker-dealer may be subject to the restrictions of § 11(d)(1) of the Exchange Act. *See* § 14.07[6][c].

157 Rule 17a-7 under the Exchange Act provides that a registered broker-dealer located outside the United States either must maintain all Exchange Act-required records in the United States or provide the SEC with a written undertaking to send its records to the SEC promptly upon the SEC's request. However, the Rule 15a-6 Adopting Release states that all Rule 15a-6-required records must be kept in the United States. Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,029 & n.198 (July 18, 1989).

The 2013 15a-6 FAQ states that the chaperoning broker-dealer must comply with Rules 17a-3 and 17a-4, discussed at § 14.08. While the chaperoning broker-dealer may obtain this information from the foreign broker-dealer or another source, it is responsible for the accuracy of its books and records. *See* 2013 15a-6 FAQ, Question 16.

158 The net capital and customer protection rules are discussed at § 14.07[2]. The responsibilities of the chaperoning broker-dealer include taking net capital charges for any failed transactions. *See* 2013 15a-6 FAQ, Question 15. Note that the customer protection rule provides for the use of designated foreign control locations, so foreign securities need not actually be kept in the United States. *See* Rule 15c3-3(c)(4) under the Exchange Act. *See also* 2013 15a-6 FAQ, Questions 10, 11, 13, 14 and 15. The chaperoning broker-dealer may be a registered introducing broker-dealer as long as the chaperoning broker-dealer has in effect a fully disclosed carrying agreement with another registered broker-dealer that has agreed to comply with the financial responsibility rules. *See* 2013 15a-6 FAQ, Question 12.

159 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,025 & n.150 (July 18, 1989). In addition, under the 1997 Cleary Letter, transactions involving foreign securities, *See supra* Note 121, or U.S. Government securities effected in reliance on Rule 15a-6(a)(3) may now be cleared and settled through the direct transfers of funds and securities between the U.S. investor and the qualifying foreign broker-dealer in situations where the qualifying foreign broker-dealer is not acting as the custodian of the funds or securities

of the U.S. investor. *See* 1997 Cleary Letter. Moreover, in countries whose laws and regulations make some of the above-listed activities illegal or highly impractical for the chaperoning broker-dealer to perform, the SEC has shown a willingness to grant relief on a firm-by-firm, country-by-country basis. *See*, *e.g.*, *Morgan Stanley India Securities Pvt. Ltd.* (avail. Dec. 20, 1996) (staff would not recommend enforcement where chaperoning broker-dealer barred by the law of India from holding funds and securities on behalf of its U.S. customers transacting in Indian securities and Indian trades generally are not entered onto the chaperoning broker-dealer's books and records).

160 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,025 (July 18, 1989).

161 *See generally* § 14.07[1][a].

162 *See* Rule 15a-6 Proposing Release, 53 Fed. Reg. 23,645, 23,654 (June 23, 1988).

163 *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,025 (July 18, 1989).

164 *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,026 (July 18, 1989). The release states that "if the registered broker-dealer ignores indications of irregularity that should alert the registered broker-dealer … that the foreign broker-dealer is taking advantage of U.S. customers or otherwise violating U.S. securities laws, … the registered broker-dealer's role in the trades may give rise to possible violations of the federal securities laws."

165 *See* Treas. Reg. § 401.7; *see also* 55 Fed. Reg. 27,461 (July 3, 1990) (adopting Treasury exemptive rule); 55 Fed. Reg. 7733 (Mar. 5, 1990) (proposing Treasury exemptive rule). Additional exemptive action was necessary as it is the Treasury, rather than the SEC, that had authority to exempt government securities broker-dealers from Exchange Act registration. *See* § 15C(a)(5) of the Exchange Act. (Rule 15a-6 does by its terms, however, apply to municipal securities activities.)

166 *See* 1997 Cleary Letter.

167 Treasury's exemptive rule differs from Rule 15a-6 in two respects. First, a foreign government securities broker-dealer may, in making use of Treasury's conditional exemptions, enter into a chaperoning relationship not only with a registered broker-dealer but also with a registered government securities broker-dealer or with a financial institution that has given notice of its government securities broker-dealer activities to the appropriate regulatory agency. Second, a foreign government securities broker-dealer that has established a chaperoning relationship with a registered broker-dealer must disclose that fact in any research reports concerning government securities that the foreign broker-dealer distributes to major U.S. institutional investors and $100 Million Entities.

168 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,021 (July 18, 1989).

169 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,021 (July 18, 1989).

170 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,021 & n.94 (July 18, 1989); *see* § 14.11[2] regarding penalties for violation of the Exchange Act.

171 *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,021 n.94 (July 18, 1989).

172 SEC Release No. 34-27018 (July 11, 1989), 54 Fed. Reg. 30,087, 30,090 (July 18, 1989).

173 The SEC briefly revived the concept of reliance on home-country regulation in a concept release regarding the regulation of exchanges and alternative trading systems. SEC Release No. 34-38672 (May 23, 1997). In that release, the SEC suggested that one approach to regulating the activities of foreign markets—as opposed to foreign broker-dealers—in the United States would be to rely on the foreign markets' home-country regulation. SEC Release No. 34-38672 (May 23, 1997).

174 *See*, *e.g.*, Ethiopias Tafara & Robert Peterson, *A Blueprint for Cross-Border Access to U.S. Investors: A New International Framework*, 48 HARV. INT'L L.J. 31 (2007); Erik R. Sirri, Director, SEC Division of Market Regulation, Trading Foreign Shares (Mar. 1, 2007); Roel C. Campos, Commissioner, SEC, SEC Regulation Outside the United States (Mar. 8, 2007) (identifying "thorny issues [that] must be resolved" before implementing mutual recognition); Annette L. Nazareth, Commissioner, SEC, Remarks Before the Brown Spring Forum: Economics, Entrepreneurship & Technology (Apr. 28, 2007); Christopher Cox, Chairman, SEC, Address to the Security Traders Association 11th Annual Washington Conference (May 9, 2007);

Paul S. Atkins, Commissioner, SEC, Remarks before AmCham Germany (May 30, 2007); *see also* Edward F. Greene, *Resolving Regulatory Conflicts between the Capital Markets of the United States and Europe*, 2 CAPITAL MARKETS L.J. 5 (Winter 2007); Edward F. Greene, *Beyond Borders: Time To Tear Down the Barriers to Global Investing*, 48 HARV. INT'L L.J. 85 (Winter 2007); Edward F. Greene, *Beyond Borders Part II: A New Approach to the Regulation of Global Securities Offerings* (SEC Historical Society Paper, May 2007).

175 Press Release, SEC, SEC, Australian Authorities Sign Mutual Recognition Agreement (Aug. 25, 2008). The Australian mutual recognition agreement has not yet been used by the SEC.

176 Press Release, SEC, Schedule Announced for Completion of U.S.-Canadian Mutual Recognition Process Agreement (May 29, 2008); Press Release, SEC, Statement of the European Commission and the [SEC] on Mutual Recognition in Securities Markets (Feb. 1, 2008).

177 *See*, *e.g.*, CFTC Interpretive Guidance and Policy Statement Regarding Compliance With Certain Swap Regulations, 78 Fed. Reg. 45292 (July 26, 2013) (Adopting a policy that, if the CFTC has determined that certain laws and regulations of a foreign jurisdiction are comparable to and as comprehensive as a corresponding category of U.S. laws and regulations, entities or transactions in that foreign jurisdiction that comply with those foreign laws and regulations will be deemed in compliance with such corresponding category of U.S. laws and regulations.); CFTC Rule 23.160, allowing swap dealers and major swap participants to satisfy certain margin obligations to non-U.S. persons by posting margin as required by foreign regulations where the CFTC has issued a "comparability determination" with respect to the foreign jurisdiction's requirements (§17 C.F.R. 23.160); Commission Implementing Decision (EU) 2016/377 of 15 March 2016, 2016 O.J. (L 70) 32 (European Union decision implementing equivalence treatment for U.S. central clearing counterparties registered with the CFTC).

Although the shape of the British exit from the European Union is currently unknown, it is possible that it will further expand the acceptance by the European Union of equivalent foreign regulation, which could lead U.S. regulators (including the SEC) to also consider expanding their recognition of equivalent or comparable foreign regulation.

178 *See* § 14.03[3][c][i].

179 *See* § 14.04[2].

180 *See* § 14.03[3][i].

181 *See* § 14.08[1].

182 *See* § 14.04[2].

183 *See* 1997 Cleary Letter.

184 "Foreign security," for this purpose, is defined by reference to the 1996 Cleary Letter. *See* § 14.03[3][b][ii][C]; *supra* Note 113.

185 In addition, the 1997 Cleary Letter clarifies that a foreign broker-dealer may initiate follow-up contacts with major U.S. institutional investors and $100 Million Entities to whom it has furnished research reports without violating the limitations of Rule 15a-6(a)(2)(ii), if such follow-up contacts occur in the context of a "chaperoning" relationship between a foreign broker-dealer and a U.S. intermediary broker-dealer under paragraph (a)(3) of the rule.

186 Although several prior Regulatory Flexibility Agendas published by the SEC had included a specific reference to consideration of a revision to Rule 15a-6 to focus on the types of securities that are sold by non-U.S. broker-dealers to allow institutional investors to take advantage of the efficiencies of foreign markets, the most recent Regulatory Flexibility Agendas have omitted this item and certain SEC staff members have indicated that further consideration of Rule 15a-6 is not anticipated in the near term. *See*, *e.g.*, SEC Release No. 34-50445 (Sept. 20, 2004); SEC Release No. 34-46512 (Dec. 9, 2002); SEC Release No. 34-45627 (Mar. 22, 2002); SEC Release No. 34-44909 (Oct. 5, 2001); SEC Release No. 34-44154 (Apr. 5, 2001). On the other hand, renewed interest in a "mutual recognition" approach, *see* § 14.03[3][f], may lead the SEC to reconsider its position on making further changes to Rule 15a-6.

187 *Roland Berger Strategy Consultants* (avail. May 28, 2013).

188 In the letter, the staff noted that such contact might include telephone calls, e-mails, and related mailing of general pitch materials regarding the proposed transaction. *See Roland Berger Strategy Consultants* (avail. May 28, 2013).

189 *See Roland Berger Strategy Consultants* (avail. May 28, 2013).

190 *See Roland Berger Strategy Consultants* (avail. May 28, 2013).

191 *See Roland Berger Strategy Consultants* (avail. May 28, 2013).

192 NAFTA, Art. 1406.

193 NAFTA, Art. 1402.

194 *See* § 14.06[1][b].

195 *See* § 14.06[2][b] (regarding certain special requirements imposed by U.S. SROs on nonresident broker-dealers).

196 NAFTA, Art. 1410(1); *see*, *e.g.*, SEC Release No. 34-52209 (Aug. 4, 2005), 70 Fed. Reg. 46,557, 46,558 n.18 (Aug. 10, 2005) (approving changes to NASD Rule 2790 over the objection that it unduly burdened Canadian mutual funds in violation of NAFTA on the ground that "the [SEC] believes that the Rule is grounded in investor protection concerns and is not intended to unduly burden foreign investment companies").

197 *See* Rule 15c3-3(a)(7) under the Exchange Act (permitting broker-dealers whose principal place of business is in Canada to maintain required reserves at a Canadian-regulated bank while requiring broker-dealers whose principal place of business is in any other country to maintain reserves in the United States).

198 *See* 22 U.S.C. §§ 5341–5342 (prohibiting foreign firms from being designated as primary dealers in U.S. government debt obligations unless the home country of the foreign firm accords to U.S. firms the same competitive opportunities as are accorded to domestic firms in the underwriting and distribution of government debt instruments in the firm's home country).

199 The Advisers Act generally requires foreign banks wishing to engage in securities advisory services with the public in the United States to register with the SEC, while domestic banks are generally exempt from registration. (Pursuant to the GLB Act, the Advisers Act was amended, effective May 12, 2001, to require U.S. domestic banks, or departments or divisions thereof, to register with the SEC to the extent they serve as investment advisers to registered investment companies.) *See* § 16.03[2][a].

The United States has also taken reservations for certain provisions of the Trust Indenture Act, the CEA, legislation regulating the provision of surety bonds for U.S. government contracts (31 U.S.C. § 9304) and several banking statutes. *See* NAFTA, Annex VII(A)—United States.

200 The principal obligations of NAFTA Chapter 14 do not apply to existing measures (as of January 1, 1994) maintained by local (*e.g.*, municipal) governments. NAFTA, Art. 1409(1)(a)(iii). Local governments may not, however, enact new measures after NAFTA's entry into force that violate the obligations of NAFTA Chapter 14.

201 However, state law registration of federally licensed branches of foreign banks may be preempted. *See*, *e.g.*, Comptroller, Interpretive Letter No. 590, Fed. Banking L. Rep. (CCH) ¶83,415 (June 18, 1992) (stating that Illinois restrictions on the establishment of Federal branches do not limit the authority of the Comptroller to license Federal branches of foreign banks in Illinois). For a discussion of the federal broker-dealer push-out rules, *see* § 14.03[1][c].

202 *See* §§ 3.02[8][a] and 14.12.

203 NAFTA, Art. 1404.

204 For example, while the SEC has broad powers to subpoena witnesses and evidence, it cannot serve or enforce its subpoenas abroad. *See* § 21(b) under the Exchange Act; *CFTC v. Nahas*, 738 F.2d 487 (D.C. Cir. 1984); *SEC v. Zanganeh*, 470 F. Supp. 1307 (D.D.C. 1978). In addition, foreign banks or other financial record-holding institutions are often forbidden by their domestic laws from divulging information to the SEC.

See § 11.10[4].

205 Congress granted the SEC the legislative authority to gather and provide information and access to its nonpublic records to foreign securities regulatory authorities by amending the Exchange Act; it now allows the SEC to conduct investigations and compel the testimony of witnesses and the production of documents in the United States on behalf of such authorities, even if the alleged conduct would not constitute a violation of U.S. law. *See* §§ 21(a)(2) and 24(c) of the Exchange Act.

206 MOU to Establish Mutually Acceptable Means for Improving Law Enforcement in the Field of Insider Trading (Aug. 31, 1982), reprinted in 22 I.L.M. 1 (1983) (the "1982 Swiss MOU"). The 1982 Swiss MOU was an interim measure to address problems of insider trading because at the time, insider trading was not specifically a violation of Swiss law. Subsequent to the passage of a Swiss insider trading law in 1988, the Swiss MOU ceased to be in effect. In 1987, Switzerland and the United States signed a new MOU (the "1987 Swiss MOU") that provides procedures for collecting information using the 1977 Treaty for Mutual Assistance in Criminal Matters between the Swiss Confederation and the United States. 27 U.S.T. 2019, T.I.A.S. 8302 (entered into force Jan. 23, 1977); MOU, U.S.—Switzerland (Nov. 10, 1987), *reprinted in* 19 SEC. REG. & L. REP. (BNA) 1729 (Nov. 13, 1987). *See infra* Note 213 and accompanying text for discussion of the further amended 1993 Swiss MOU.

207 Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Canada, Cayman Islands, Chile, China, Costa Rica, Cyprus, Czech Republic, Denmark, Egypt, Estonia, Finland, France, Germany, Greece, Hong Kong, Hungary, Iceland, India, Indonesia, Ireland, Israel, Italy, Japan, Jersey, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Mexico, The Netherlands, Norway, Poland, Portugal, Romania, Russia, Singapore, Slovak Republic, South Africa, Spain, Sweden, Switzerland and the United Kingdom. In addition, the SEC has information sharing arrangements with the European Commission, the College of Euronext Regulators, the Inter-American Development Bank and the United Nations Economic Commission for Latin America and the Caribbean. *See* Office of International Affairs, Cooperative Arrangements with Foreign Regulators, http://www.sec.gov/about/offices/oia/oia_cooparrangements.shtml.

208 *See* Office of International Affairs, Bilateral Information Sharing Arrangements, *The SEC Speaks in 2004* (Mar. 2004).

209 MOU on Exchange of Information Between the SEC and the CFTC and the United Kingdom Department of Trade and Industry and Securities and Investment Board (the "SIB," now the FSA) on Matters Relating to Securities, SEC Release No. IS-323 (Sept. 30, 1991); *see also* MOU between the SEC and the FSA (as of 2013, the Financial Conduct Authority (FCA)) Concerning Consultation, Cooperation and the Exchange of Information Related to Market Oversight and the Supervision of Financial Services Firms (Mar. 14, 2006).

U.S. Regulation of the International Securities and Derivatives Markets, § 14.04, SEPARATELY ORGANIZED AND REGISTERED U.S. AFFILIATES

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 14.04 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Notwithstanding Rule 15a-6 and SEC no-action relief granted in connection therewith, the range of U.S. securities activities an unregistered foreign broker-dealer is permitted to undertake remains limited. However, since SEC regulation of a broker-dealer is of the legal entity only and not of an affiliated group, it is possible for an international financial organization to establish a separately incorporated and SEC-registered broker-dealer affiliate that can carry out activities in the United States without subjecting the rest of the organization to SEC registration and regulation. [219]

[1] Regulation of SEC-Registered Affiliates

Registration of a U.S. broker-dealer affiliate by an international financial organization does not of itself increase the activities that a foreign unregistered broker-dealer that is part of that organization or its personnel may undertake in the United States. Nonetheless, the existence of a registered U.S. broker-dealer affiliate can facilitate the unregistered broker-dealer's undertaking of its U.S.-related activities. The registered U.S. broker-dealer affiliate can act as the chaperoning broker-dealer that is necessary for a qualifying foreign broker-dealer to take advantage of the conditional exemptions provided by Rule 15a-6 under the Exchange Act. [220] The registered affiliate can also provide the review and approval and satisfy the other requirements necessary to permit a non-U.S.

p. 14-54

broker-dealer to disseminate research in the United States. [221] The foreign unregistered broker-dealer and the SEC-registered broker-dealer may also trade with each other, both for their own accounts and for the accounts of their respective customers. [222]

A number of aspects of the relationship between a foreign broker-dealer and its affiliated U.S. broker-dealer may raise legal issues. In addition to the question of whether foreign broker-dealers can enter into transactions involving ongoing contractual relationships with U.S. investors, [223] such issues include the use of dual employees, the extent to which the U.S. and foreign broker-dealers can trade with discretion for the account of the other, the extent to which U.S. activity is attributed to the foreign broker-dealer and therefore raises the risk that the foreign broker-dealer is carrying out activities within the United States and the extent to which the foreign broker-dealer may be subject to U.S. taxes in respect of its business with U.S. investors.

[2] Dual Employees

A number of international broker-dealer organizations with both SEC-registered and foreign unregistered entities use personnel that are employees both of the foreign broker-dealer and of the U.S. registered broker-dealer ("dual employees") in contacts with U.S. investors. This practice was approved in the Rule 15a-6 Adopting Release in instances in which the dual employees were "subject to the registered broker-dealer's supervision and control and satisfied all U.S. SRO qualification standards" and were "stationed outside the United States." [224] Where the personnel in question are stationed inside the United States,

p. 14-54

p. 14-55

are registered under the auspices of the registered broker-dealer with the appropriate SRO, are subject to the supervision and control of the registered broker-dealer and their activities and transactions are on behalf of, and recorded on the books of, the registered broker-dealer, the practice of dual employment likewise would seem to comport with the requirements of the Exchange Act. However, failure of proper supervision and control by, or of proper attribution of the activities to, the registered broker-dealer could result in difficulties for the registered broker-dealer for failure to supervise its employees properly and for the foreign broker-dealer (and the employee) for failure to register under the Exchange Act. [225]

[3] Relations Between Registered and Unregistered Affiliates

Rule 15a-6 under the Exchange Act permits registered U.S. broker-dealers and unregistered foreign broker-dealers, whether affiliated or not, to trade with each other. [226] In connection with such transactions, the U.S. broker-dealer may be acting as agent or as riskless principal in transactions ultimately between a U.S. customer and a foreign broker-dealer. However, the SEC has expressed concern about dealing activities of foreign broker-dealers in the United States carried out through U.S. affiliates that are effectively controlled by the foreign dealer. In this regard, the SEC stated in the Rule 15a-6 Adopting Release that it

> does not intend this exemption to permit the foreign broker-dealer *to act as a dealer* in the United States through an affiliated registered broker-dealer. The … [SEC] recognizes that dealers in foreign markets may transmit securities positions to U.S. broker-dealer affiliates after the foreign markets close, so that the U.S. affiliates can continue trading those securities. If, however, the foreign broker-dealer *controlled* the registered broker-dealer's *day to day market-making activities* by explicit restrictions on the U.S. broker-dealer's ability to execute orders against the foreign broker-dealer's positions or to take independent positions, *the foreign broker-dealer could be considered a dealer subject to U.S. broker-dealer registration requirements*. [227]

p. 14-55

p. 14-56

A similar concern likely would arise if a U.S.-registered broker-dealer were acting as a dealer, even with the ability to take independent positions, as to securities positions that were held offshore by an entity that was not a *bona fide* "foreign dealer" within the meaning of Rule 15a-6, which requires that the dealer be a "non-U.S. resident person." [228] Among the factors that might be relevant to whether a dealer is properly characterized as "foreign" are the nature and level of its activities outside the United States and whether it would be deemed to be carrying out its activities within the United States, for example, by virtue of the fact that actual control over its activities or a portion thereof was exercised by persons in the United States. Certainly a U.S.-registered broker-dealer conducting dealer activities with complete discretion as to securities positions held by an unregistered U.S. affiliate would raise serious questions regarding the broker-dealer registration obligation of that affiliate.

In a 1992 release, the SEC expressed concern about U.S. broker-dealers that arranged trades in U.S. stocks with U.S. institutional customers, which trades were then shown as having been "executed" on the books of a foreign affiliate. [229] This release expressed the view that such transactions are "'overseas' in name only," and are executed overseas to evade U.S. trade reporting requirements, exchange fees or other regulations. Following this SEC statement, the NYSE adopted Rule 410B requiring, among other things, that trades in NYSE-listed securities in the United States that are arranged by an NYSE member but executed by a foreign affiliate be reported to the exchange. [230]

Other factors that may appropriately be the subject of consideration in determining whether activities are carried out within the United States include allocations of profit and loss or capital.

[a] Citicorp/Vickers Exemptive Order

p. 14-56
p. 14-57

The single precedent cited by the SEC in connection with its stated concern regarding foreign broker-dealer control of a registered broker-dealer was its 1986 exemptive order to Citicorp and its indirect subsidiary Vickers da Costa Securities, Inc. ("Vickers"), a registered broker-dealer. [231] The order permitted various Citicorp subsidiaries that were unregistered foreign broker-dealers ("Citicorp's Foreign Dealers") and Vickers to enter into an arrangement in which Vickers would serve as broker, or as "riskless principal," in trades ultimately between Vickers' U.S. customers and Citicorp's Foreign Dealers. [232]

The aspect of the Vickers exemptive order cited in the Rule 15a-6 Adopting Release related to the ability of Vickers to act as a Nasdaq market-maker in certain securities. A Nasdaq market-maker in a security must stand ready to continuously buy and sell such security for its own account. [233] However, due to the banking law restrictions then applicable to Vickers as a subsidiary of a bank affiliate, Vickers was not permitted to maintain a position in equity securities. Accordingly, Vickers could act as a Nasdaq market-maker only by immediately passing each long or short position it took to one of Citicorp's Foreign Dealers. The SEC exemptive order approving the Vickers arrangement provided that for each security in which Vickers acted as a Nasdaq market-maker, Citicorp's Foreign Dealers would place with Vickers standing buy/sell orders in a size large enough to permit Vickers to fulfill its market-making responsibilities. The orders were to be placed each week before the opening of trading in the United States. All standing buy/sell orders would contain broad price parameters (either 10% of the market price as of the close at the end of the preceding week or $2 per share, whichever was greater) and give Vickers discretion to execute trades within those parameters. [234] The SEC's exemptive order also provided that Citicorp's Foreign Dealers were "not permit[ted]" to alter their buy/sell orders during the course of the week; however, "in response to significant market changes … [Vickers could] request additional instructions." [235]

p. 14-57
p. 14-58

The most plausible interpretation of the SEC's citation to Vickers in the Rule 15a-6 Adopting Release is that it was intended to indicate that, even following adoption of Rule 15a-6, the degree of control possessed by Citicorp's Foreign Dealers over Vickers was so great that, absent specific additional relief, these dealers would be required to register with the SEC. This is particularly the case since the Vickers exemptive order itself provided, as the Rule 15a-6 Adopting Release notes, various "regulatory safeguards" not included in Rule 15a-6 intended to limit the degree of "control" Citicorp's Foreign Dealers had over Vickers. [236]

Another aspect of the Vickers arrangement was not mentioned in the Rule 15a-6 Adopting Release. For securities not quoted on Nasdaq, the SEC exemptive order permitted Vickers to enter quotations into the daily "pink sheets," which provide a quotation medium for these securities. [237] The Vickers exemptive order did not place explicit restrictions upon Citicorp's Foreign Dealers changing through the day the price and size parameters of orders for these non-Nasdaq securities.

[b] Security Pacific No-Action Letter

Between the issuance of the Vickers exemptive order and the adoption of Rule 15a-6, the SEC issued several no-action letters to U.S. and foreign banking groups proposing that group members that were registered U.S. broker-dealers would act as agents in transactions between the registered broker-dealer's U.S. customers and its unregistered foreign broker-dealer affiliates where there was no contact between the U.S. customers and the foreign affiliates. These banking groups received no-action letters rather than exemptive orders. Moreover, as previously quoted, the SEC stated specifically in the Rule 15a-6 Adopting Release that, subject to avoiding a foreign broker-dealer's "control" over an affiliated U.S. broker-dealer's market-making activities, a foreign broker-dealer can "transmit" its close-of-business securities positions to an affiliated U.S. broker-dealer, which "can continue trading those securities." [238] Consequently, it seems quite clear that, had Rule 15a-6 been effective at the time the no-action letters were issued, the rule would have made recourse to no-action relief unnecessary.

p. 14-58

p. 14-59

For this reason it is instructive to describe the significant aspects of the SEC's letter to Security Pacific Corporation ("Security Pacific"), the no-action letter describing the widest range of activity in the United States by a registered broker-dealer acting on behalf of its unregistered foreign affiliates, to illustrate a situation that even pre-Rule 15a-6 did not raise SEC "control" concerns as Vickers did. [239]

The Security Pacific no-action letter permitted Security Pacific's registered broker-dealer subsidiary, Burns Fry Hoare Govett ("BFHG"), to act either as agent (broker) or as riskless principal [240] in executing orders placed with it by foreign dealer affiliates. These orders could be specific as to price and volume or could set price and volume parameters. BFHG was to execute as placed the orders that were specific as to price and volume and to execute the other orders as it deemed appropriate within the given parameters (which could be changed at any time).

Unlike Vickers (with respect to securities held on the books of its affiliated foreign dealers), BFHG did not propose to act as a market-maker. BFHG stated that it would not (i) quote a market in those securities or publish such quotes or (ii) advertise or otherwise make known a willingness to buy and sell those securities (except as riskless principal) on a continuing basis. Further, the SEC's letter provided that "where standing buy and sell orders in a security are held by [BFHG, BFHG would not]… execute orders of any of its U.S. customers against those standing orders." [241] While the terms of the no-action letter did not permit BFHG to offer "to buy and sell simultaneously on a continuing basis" [242] on behalf of its foreign dealer affiliates, the SEC apparently did not object to BFHG changing the position it took on behalf of its foreign affiliates from the buy to the sell side, or *vice versa*, of any given security within the course of a day. [243]

227 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,030 (July 18, 1989) (emphasis added); *see also* § 14.08[2].

For markets in certain securities, including particularly U.S. Treasury securities and Japanese and other government securities, but also extending to other "books" of fixed income securities and the most widely traded equity securities, trading takes place on markets other than the principal domestic markets for the securities. For some securities, there is even 24-hour trading, with activity moving from New York to Tokyo to London affiliated broker-dealers as one market closes and the next opens. For other securities there is trading across the business hours of London and New York. These activities require having one affiliate trading securities positions maintained on the books of another.

228 The term "foreign broker or dealer" is defined as "any non-U.S. resident person (including any U.S. person engaged in business as a broker or dealer entirely outside the United States, except as otherwise permitted by [Rule 15a-6])… whose securities activities, if conducted in the United States, would be described by the definition of 'broker' or 'dealer' in [the Exchange Act]." Rule 15a-6(b)(3) under the Exchange Act.

229 *See* SEC Release No. 34-30920 (July 14, 1992), 57 Fed. Reg. 32,587, 32,592 (July 22, 1992).

230 *See* NYSE Information Memo No. 92-32 (Nov. 13, 1992); NYSE Rules, Rule 410B.

231 *See* Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,030 n.205 (July 18, 1989); *Citicorp* (avail. Sept. 14, 1986).

232 *See* GUIDE IX.A and XI.E.

233 *See* Nasdaq OMX Stock Market Rules, Rules 4613 and 4751(C)(2).

234 As the Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,030 n.205 (July 18, 1989), makes clear, from a securities law point of view, the greater the trading discretion allowed Vickers and the lesser the control by Citicorp's Foreign Dealers over Vickers, the stronger the argument that Citicorp's Foreign Dealers need not register as dealers with the SEC. However, the greater the trading discretion allowed Vickers, the stronger the potential argument that Vickers would be engaged in dealing activities in the United States that might be prohibited by applicable banking law. In fact, it has been reported that opposition from the Board led to a determination not to implement the Vickers arrangement. *See generally* GUIDE IX.A and XI.E.

235 *Citicorp* (avail. Sept. 14, 1986).

236 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,030 n.205 (July 18, 1989); *Citicorp* (avail. Sept. 14, 1986). The Vickers exemptive letter contained, in addition to the conditions regarding foreign dealers' control over Vickers, a number of other conditions not included in Rule 15a-6, including that Vickers maintain its net capital at a level higher than ordinarily required by the SEC's net capital rule, apparently to take into account some measure of credit risk from Vickers' exposure to Citicorp's Foreign Dealers. The exemption also contained conditions similar to those required of qualifying foreign broker-dealers under Rule 15a-6, as discussed in § 14.03[3][c].

237 *See* § 3.01, Note 32 for a discussion of pink sheets.

238 Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,030 (July 18, 1989).

239 *See Security Pacific Corp.* (avail. July 7, 1988). In 1987, Chase Manhattan Corp. received a no-action letter permitting it to conduct a narrower range of activity than was later afforded to Security Pacific. *See Chase Manhattan Corp.* (avail. July 28, 1987). Subsequent to the issuance of the Security Pacific letter, the SEC issued substantially identical no-action letters to *National Westminster Bank PLC* (avail. July 7, 1988) and *The Bank of Montreal* (avail. June 20, 1989).

240 The Board, however, did not permit the registered broker-dealer to act as riskless principal on behalf of its foreign dealer affiliates, stating that such an activity would fall within the dealing prohibitions of the Glass-Steagall Act. Letter from William W. Wiles, Secretary of the Board, to Dan C. Aardal, Assistant General Counsel, Security Pacific Corp. (Apr. 18, 1988). *See* GUIDE XI.E.

241 *Security Pacific Corp.* (avail. July 7, 1988).

242 Compare the SEC's description of the Vickers arrangement in the Rule 15a-6 Adopting Release, 54 Fed. Reg. 30,013, 30,030 n.205 (July 18, 1989), which is the source of the quoted language.

243 That BFHG could change sides during the course of a day is indicated by, among other things, the fact that

BFHG's foreign dealer affiliates were not explicitly restricted in their ability to change their orders to BFHG during the course of a day, and that BFHG was to report daily to its foreign affiliates "net changes" (presumably meaning buys netted against sells in a security) in their respective accounts.

U.S. Regulation of the International Securities and Derivatives Markets, § 14.05, INTRODUCTION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 14.05 (11th and 12th Editions 2014-2017)
11th and 12th Editions

A foreign entity that establishes an affiliate to engage in activities requiring SEC broker-dealer registration (or determines to engage in such activities itself) will subject the affiliate (or itself) to the most comprehensive and detailed regulatory regime that exists for securities market participants under the U.S. securities laws. [244] The substantive requirements can extend into all areas of a registered broker-dealer's business; the recordkeeping requirements are comprehensive; and audit and inspection by both the SEC and SROs [245] are more frequent and detailed than anything to which other market participants are subject. Further, registered broker-dealers are subject to closer scrutiny, and have greater affirmative obligations, with respect to the prevention of fraudulent and manipulative activity than other market participants. The regulation of registered broker-dealers also extends to their finances and accounting, and therefore officers and employees and outside advisers with financial and accounting expertise are required to cope with the regulatory scheme.

Responsibility for monitoring compliance with the regulatory scheme begins with the registered broker-dealer itself, which is required to institute internal control, supervisory and procedural systems. Primary outside oversight is provided by the SROs, which are responsible for enforcing compliance by their members with the securities laws. Each registered broker-dealer has a designated SRO (the "designated examining authority") charged with primary responsibility for conducting on-site inspections and other reviews of the broker-dealer, including financial and books and records reviews. The SEC also has the power to, and regularly does, conduct audits and inspections, sometimes in coordination with the firm's designated examining authority or other SRO. Both the SROs (subject

p. 14-61

to SEC review) and the SEC may discipline registered broker-dealers for failure to conform to the regulatory scheme. [246]

Footnotes

244 Broker-dealers effecting customer transactions in security futures products are also subject to registration and other requirements under the CEA. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, Chapter 4. Additionally, under Title VII of the Dodd-Frank Act, dealers in swaps and security-based swaps will be required to register with the CFTC and the SEC as swap and security-based swap dealers, respectively. *See* SEC Release No. 34-75611 (Aug. 5, 2015), 80 Fed. Reg. 48,964 (Aug. 14, 2015); CEA § 4s(b)(5); Registration of Swap Dealers and Major Swap Participants, 77 Fed. Reg. 2613 (Jan. 19, 2012); *see also* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 5.02 (regarding swap dealers) and Chapter 6 (regarding security-based swap dealers).

245 *See* text accompanying *infra* Note 269.

246 Broker-dealers in government securities are subject to a specialized scheme of regulation, the most notable provisions of which are found in § 15C of the Exchange Act and applicable U.S. Treasury Department ("Treasury") rules and regulations. *See*, *e.g.*, Treas. Reg. §§ 400–50. The regulation of government securities broker-dealers is in many respects comparable to, although not as extensive as, that of broker-dealers in nonexempted securities. The Treasury regulations incorporate many of the compliance

requirements contained in the SEC's rules applicable to broker-dealers in other securities. Certain of the more important features of the government securities regulatory scheme are touched upon in the footnotes to this Part B.

There are also certain specialized aspects of the municipal securities regulatory scheme, including a requirement that banks, or identifiable departments or divisions of banks, that are dealers in municipal securities register pursuant to § 15B of the Exchange Act. Broker-dealers and banks (or separately identifiable departments or divisions thereof) engaging in activities in municipal securities, or persons providing advice to or on behalf of municipal entities (or obligated persons) with respect to municipal financial products or municipal securities issuances or soliciting municipal entities (or obligated persons), that require registration under § 15 or § 15B of the Exchange Act must also comply with the rules promulgated by the Municipal Securities Rulemaking Board. Participation by non-U.S. financial organizations in the municipal securities market is quite limited and, accordingly, this Part B does not further discuss the specialized aspects of municipal securities regulation.

Registered broker-dealers providing investment advice that is not solely incidental to the conduct of their business as brokers or dealers or for which they receive special compensation also may be required to register as investment advisers with the SEC under the Advisers Act. *See* § 202(a)(11)(C) of the Advisers Act; § 16.03[2][b].

In order to register as a broker-dealer with the SEC, [247] the broker-dealer must also become a member of a national securities association (unless it confines its activities to transactions on national securities exchanges of which it is a member). [248]

[1] SEC Registration and FINRA Membership

p. 14-62

The only existing national securities association is the Financial Industry Regulatory Authority, Inc., or "FINRA." [249] SEC registration and FINRA membership is a combined process that entails the filing of an application, [250] which includes extensive information regarding the proposed business of the broker-dealer (the "Applicant"), its personnel and how it will comply with applicable regulatory requirements. The application process enables the SEC and FINRA to prevent those with histories of violations of the securities laws or comparable offenses, or that are not otherwise qualified, from registering as broker-dealers. [251]

[a] Elements of the Application

p. 14-62

p. 14-63

Key elements of the application package include:

- advance reservation of a name, subject to FINRA approval; [252]
- application fees funded to a CRD general account from which registration fees will be paid; [253]
- the Uniform Application for Broker Dealer Registration ("Form BD"), discussed below, used by the SEC, SROs and the 50 states;
- an executed entitlement program agreement for access to FINRA's web-based systems; [254]
- a list of all "associated persons" [255] of the Applicant, a Uniform Application for Registration or Transfer ("Form U-4") for each person that will act in a

  p. 14-63

  p. 14-64

  registered representative or principal capacity for the Applicant and fingerprint cards for all associated persons of the Applicant; [256]
- a Uniform Branch Office Registration form ("Form BR") for all branch offices of the Applicant; and
- a New Member Application form ("Form NMA"). [257]

Additional information submitted electronically on Form NMA and related attachments includes, among other things: [258]

- a detailed business plan;
- documentation of certain regulatory or criminal proceedings against, adverse licensing or registration

determinations with respect to, investigations of, or remedial actions imposed on, the Applicant or any of its associated persons;

- copies of final or proposed contracts with banks, clearing entities or service bureaus, and a general description of any other final or proposed contracts;
- a description of the nature and source of the Applicant's capital, with supporting documentation;
- a description of the Applicant's financial controls;
- descriptions of the Applicant's communications, supervisory, recordkeeping and operational systems;
- copies of the Applicant's compliance policies, written supervisory procedures and continuing education programs; and
- a description of the number, experience, qualifications and responsibilities of supervisors and principals.

Form BD, required to register with the SEC and FINRA, requires the disclosure of certain basic information regarding the broker-dealer, including:

- name, address and telephone number of the broker-dealer;

p. 14-64
p. 14-65

- form of business organization of the broker-dealer; [259]
- names of officers and directors of the broker-dealer;
- names and addresses of all affiliates (including those located outside the United States) engaged in the securities or investment advisory business;
- proposed lines of business of the broker-dealer;
- information regarding any disciplinary action taken against the broker-dealer and/or its "control affiliates," [260] including, among others, sanctions for violations of U.S. or non-U.S. criminal laws and securities laws and sanctions imposed by the United States or a foreign government, court, regulatory agency or securities exchange for conduct relating to securities activities or for fraudulent conduct; and
- descriptions of any clearing or recordkeeping arrangements. [261]

The business plan to be filed with the application must set forth all material aspects of the Applicant's business, including an estimate of projected monthly income and expenses for its first year of business, a balance sheet and supporting schedules and a net capital computation. [262] The business plan should provide a description of the Applicant's business activities and marketing plan, its organizational structure, its personnel, its office facilities and branch office structure (if applicable), the technology, communications and operational systems to be employed, contingency plans in the event of systems failures, disaster recovery plans and systems security procedures.

p. 14-65
p. 14-66

The procedures to be filed with the application include the Applicant's written supervisory procedures, internal operating procedures (including operational and internal controls), internal inspections plan, written approval process and qualifications investigations procedures. The written supervisory and compliance procedures should detail who will have responsibility for compliance with various regulatory requirements, including such areas as recordkeeping; transaction review; new account documentation; review of advertising and communications; and execution, clearance and settlement procedures. These procedures should also contain, among other things, the Applicant's policies with respect to money laundering, insider trading and confidentiality.

[b] Foreign Applicants

An Applicant for registration as a broker-dealer need not be located in the United States. However, a nonresident Applicant must provide the SEC with an irrevocable consent and power of attorney designating the SEC as its agent for service of process in any civil suit subject to U.S. jurisdiction that: (i) accrues during the period in which it is registered as a broker-dealer, (ii) arises out of its activities as a broker-dealer and is subject to U.S. jurisdiction and (iii) is founded on the Securities Act, the Exchange Act, the Trust Indenture Act, the Investment Company Act or the Advisers Act. [263] A copy of the consent to service must also be forwarded to the CRD with the Form BD application. [264] Nonresident registered broker-dealers are required to keep copies of all Exchange Act required books and records at a location in the United States or must undertake to provide the SEC promptly with all requested records. [265]

[c] Approval Process

After all required documentation, and any other information requested, has been submitted to, and reviewed by, FINRA, an interview will be arranged between the broker-dealer's senior management (generally including, at a minimum, the broker-dealer's president and chief financial officer) and the FINRA analysts assigned to review the application.

The purpose of the interview is to assure FINRA that the broker-dealer's senior management understands its regulatory and compliance responsibilities and has the necessary business experience to engage in the business activities proposed. In addition, if the broker-dealer employs any technology vital to its

business plan (*e.g.*, if the broker-dealer is going to operate an electronic trading platform), FINRA may request a demonstration of such technology.

Following the pre-membership interview, FINRA will issue a decision as to whether membership will be granted or denied. Written notification as to whether the application has been approved will be sent to the Applicant within 30 days after the later of the conclusion of the pre-membership interview and the submission to FINRA of any required additional information. Subject to limited exceptions, FINRA is required to process new membership applications within 180 calendar days from the date of filing. [266]

Assuming the application for SEC registration and FINRA membership has been approved by FINRA, the broker-dealer will be required to sign a "new membership agreement." The new membership agreement sets forth the parameters of the broker-dealer's permitted activities, which are based on the broker-dealer's business plan and can be the subject of detailed negotiations with FINRA. Business operations will only be permitted to commence after FINRA has received the executed new membership agreement.

The SEC does not automatically approve applications for broker-dealer registration. However, the SEC must within 45 days of receipt of a completed application either grant the application or institute proceedings to determine whether it should be denied. [267] In addition, the SEC may for good cause extend such proceedings by 90 days.

Section 15(b)(4) under the Exchange Act lists a variety of offenses for which the SEC may discipline broker-dealers and which also may be used as a basis for delaying approval of, or denying, an application for registration (or, alternatively, for which the SEC may place limits upon the activities of a broker-dealer once registered). Such offenses include having undertaken activities requiring registration prior to registering, having filed a false or misleading Form BD, having been convicted in the United States or abroad of one of a number of enumerated offenses or having been found by a U.S. or foreign financial regulatory authority to have committed a securities law violation.

[2] SRO Membership

As discussed above, even if registered with the SEC, a broker-dealer generally may not commence securities activities until it becomes a member of FINRA. [268] In addition to joining FINRA, a registered broker-dealer may become

p. 14-67

p. 14-68

a member of one or more of the SEC-registered national securities exchanges, such as the NYSE and the Nasdaq Stock Market.

FINRA and the national securities exchanges are industry self-regulatory membership organizations, known collectively as "SROs," that are required by the Exchange Act to regulate their member broker-dealers' compliance with both the rules of the SEC and their own rules. Thus, a broker-dealer's membership in, and resulting regulation by, one or more SROs is a crucial element of the U.S. broker-dealer regulatory scheme. [269]

[a] SRO Membership Requirements

Membership in an SRO requires meeting its employee licensing requirements [270] and other standards. Prospective members of an SRO must of course also pay the organization's fees and, in the case of a national securities exchange, obtain membership or the right to trade on that exchange (traditionally referred to as having a "seat" on the exchange).

[b] Members Residing Outside the United States

There is no requirement that a FINRA member have an office in the United States. However, a "foreign FINRA member" must: (i) keep all records and reports required by the SEC and FINRA in English, keep its accounts in U.S. dollars and have available a person fluent in English to assist FINRA in examinations, (ii) reimburse FINRA for additional examination expenses due to the fact that FINRA inspectors must travel further to examine the member, and (iii) clear all transactions with other FINRA members through a registered broker-dealer, registered clearing agency or bank located in the United States, except where the counterparty agrees otherwise. [271]

[c] Designated Examining Authority

FINRA is the "designated examining authority" for all securities firms doing business with the public in the United States. The designated examining authority for a newly registered broker-dealer is required by the SEC, within six months of the broker-dealer's registration, to examine the new broker-dealer as to its compliance with applicable financial responsibility rules and, within a year

p. 14-68

p. 14-69

of the new broker-dealer's registration, to conduct a full inspection of the broker-dealer as to its compliance with all securities laws. [272] Further, the designated examining authority has continuing primary responsibility for the regulatory oversight of that broker-dealer's activities.

Footnotes

247 The registration process discussed in this section does not apply in the case of FCMs that become broker-dealers for the limited purpose of dealing or effecting customer transactions in security futures products through the notice registration procedures available under § 15(b)(11) of the Exchange Act. *See* U.S. REGULATION OF THE INTERNATIONAL SECURITIES AND DERIVATIVES MARKETS, TWELFTH EDITION, DERIVATIVES MARKETS, § 4.07[2].

248 *See* § 15(b)(8) of the Exchange Act.

Registered government securities broker-dealers are also required to become members of a national securities association (or national securities exchange). *See* § 15C(e) of the Exchange Act. Government-noticed financial institutions (as defined below), which are not required to register with the SEC as brokers or dealers, are not required to become members of a national securities association (or national securities exchange).

249 In 2007, the SEC approved the consolidation of the NASD and the member regulation, arbitration and enforcement functions of the NYSE into a single SRO known as FINRA. *See* SEC Release 34-56145 (July 26, 2007). FINRA is now responsible for regulating all securities firms that do business with the public, including with respect to professional training, testing and licensing of registered persons, arbitration and mediation. FINRA is also responsible, by contract, for regulating, at least in part, Bats BZX Exchange, Bats BYX Exchange, C2 Options Exchange, Chicago Board Options Exchange, Chicago Stock Exchange, Bats EDGA Exchange, Bats EDGX Exchange, International Securities Exchange, ISE Gemini, NASDAQ BX, NASDAQ PHLX, Nasdaq Stock Market, National Stock Exchange, New York Stock Exchange, NYSE Arca and NYSE MKT. Finally, FINRA is responsible for operating industry utilities, such as trade reporting facilities and other OTC operations. In 2010, NYSE Euronext and FINRA entered into an agreement whereby FINRA assumed responsibility for performing market surveillance and enforcement functions, although the NYSE will remain ultimately responsible for oversight of FINRA's performance. *See* Press Release, FINRA and NYSE Euronext, FINRA and NYSE Euronext Complete Agreement for FINRA to Perform NYSE Regulation's Market Oversight Functions (June 14, 2010).

FINRA is now in the process of creating a new consolidated rulebook "intended to achieve, to the extent practicable, substantive harmonization" of the NYSE and NASD rules. *See* SR-NYSE-2007-22 (Feb. 27, 2007); SEC Release No. 34-56142 (July 26, 2007); FINRA Information Notice, Rulebook Consolidation Process (Mar. 12, 2008). The rule proposals will substantially conform the NYSE rules to those of the NASD (although in certain instances the industry committees that were part of the process recommended that FINRA instead adopt the corresponding NYSE rule). The harmonization process is expected to continue until there is a single rulebook. In the interim, FINRA has incorporated into its rulebook certain existing NYSE rules (referred to as the Incorporated NYSE Rules) and will apply them solely to NYSE members in accordance with existing NYSE guidance regarding their application. As the consolidation process is ongoing, this book will refer to the FINRA rule, if consolidated, and to the NASD rule or Incorporated NYSE rule, if not yet consolidated.

250 Generally, applications for registration with the SEC and membership with FINRA are required to be filed through an electronic process to the Central Registration Depository ("CRD"), which is operated by FINRA.

251 Section 15C(a) of the Exchange Act similarly requires government securities broker-dealers that are not either registered broker-dealers under Exchange Act § 15(a) or "financial institutions" to register with the SEC. A government securities broker-dealer that is a "financial institution" need not register with the SEC; however, it must give notice of its government securities activities to the "appropriate regulatory agency."

The term "financial institution" includes both "banks" (as defined in § 3(a)(6) of the Exchange Act) and foreign banks. *See* § 3(a)(46) of the Exchange Act. Government securities broker-dealers registered with the SEC pursuant to § 15C of the Exchange Act are hereinafter referred to as "registered government securities broker-dealers." Financial institutions that are government securities broker-dealers and have given notice of such activities to the appropriate regulatory authority are referred to herein as "government-noticed financial institutions." *See* § 14.03[1][a]–[c] for a discussion of the changes to the broker-dealer registration requirements with respect to banks following the enactment of the GLB Act.

252 Before filing a new membership application ("Form NMA"), the Applicant must apply to FINRA's Department of Registration and Disclosure to reserve a proposed name, subject to certain prohibited names. *See* 18 U.S.C. § 709. Upon approval, the name will be reserved for 120 days and the Form NMA should be filed during this name-reservation period. In general, if an application or amendment is not received within the 120 days, the name reservation is cancelled automatically unless the Applicant applies for and receives an extension.

253 FINRA requires applicants to fund, *via* electronic funds transfer, the general account from which the application, examination, state and other registration fees will be drawn. An Applicant must also submit registration fees for the states in which it will conduct business, as well as all licensing and registration fees for each associated person (as defined below).

254 *See* NASD Rule 1013, FINRA MANUAL. *See generally* FINRA, Registration and Qualification, *available at*

http://www.finra.org/industry/registration-qualification (last visited Oct. 11, 2016).

255 For purposes of the application, the term "associated person" means: (i) a natural person registered under FINRA Rules, or (ii) a sole proprietor, or any partner, officer, director, branch manager of the Applicant, or any person occupying a similar status or performing similar functions, (iii) any company, government or political subdivision or agency or instrumentality of a government controlled by or controlling the Applicant, (iv) any employee of the Applicant, except any person whose functions are solely clerical or ministerial, (v) any person directly or indirectly controlling the Applicant whether or not such person is registered or exempt from registration with FINRA, (vi) any person engaged in an investment banking or securities business controlled directly or indirectly by the Applicant whether such person is registered or exempt from registration with FINRA, or (vii) any person who will be or is anticipated to be a person described in (i) through (vi) above. NASD Rule 1011(b), FINRA MANUAL.

256 *See* § 14.07[3][b].

257 These forms should be submitted at the same time as the Form BD, to FINRA's Department of Registration and Disclosure. FINRA will provide access to the Firm Gateway upon notification that an Applicant's hard-copy forms have been processed. The Firm Gateway provides access to other required forms and is used to prepare and submit forms and documents for a new member application.

258 *See* NASD Rule 1013(a)(1), FINRA MANUAL.

259 There is no requirement that an Applicant have a particular form of organization; corporations, partnerships, limited liability companies, sole proprietorships and individual persons may register. In the case of an Applicant that is a corporation, the Applicant must disclose the identity of all persons who own directly more than 5% of the Applicant's voting shares. If such 5% share owners are not subject to the reporting requirements of the Exchange Act, the Applicant must disclose the identity of all persons who in turn own 25% of the voting shares of such 5% share owners. Applicants must also disclose whether such direct and indirect owners are individuals, domestic entities or entities incorporated or domiciled in a foreign country. For a discussion of the required disclosure of corporate share owners on Form ADV (for registration of investment advisers under the Advisers Act), which is comparable to Form BD, *see* § 16.04.

260 The term "control affiliate" is defined to include those who hold, or have the power to sell or direct the sale of, 25% or more of any class of voting security of a broker-dealer and certain of its officers and each of its directors. *See* Form BD, Explanation of Terms.

261 The Form BD must be amended as necessary to keep it current (even after the broker-dealer's application has been approved by the SEC) and all changes in information must be promptly reported to the SEC. *See* Rule 15b3-1 under the Exchange Act.

262 The business plan and other supporting information submitted to FINRA as part of the membership process are kept confidential.

263 Rule 15b1-5 under the Exchange Act.

264 *See* SEC Release No. 34-31660 (Dec. 28, 1992).

265 Rule 17a-7 under the Exchange Act; *see also* § 14.08[3].

266 Typically, the clock will not begin to run with respect to this time frame unless the application, when filed, is substantially complete, and, indeed, an application that is not substantially complete when filed will likely be rejected.

267 § 15(b)(1) of the Exchange Act.

268 *See* § 14.06[1].

269 *See* §§ 6(b)(2) and 6(c) of the Exchange Act (regulating national securities exchanges) and §§ 15A(b)(3) and 15A(g) of the Exchange Act (regulating FINRA); *see also* § 19(g) of the Exchange Act (requiring SROs to regulate their member broker-dealers).

270 *See* § 14.07[3][b].

271 NASD Rule 1090, FINRA MANUAL.

272 *See* Rule 15b2-2 under the Exchange Act.

U.S. Regulation of the International Securities and Derivatives Markets, § 14.07, SUBSTANTIVE REGULATION

U.S. Regulation of the International Securities and Derivatives Markets
1 Edward F. Greene, Alan L. Beller, Edward J. Rosen, Leslie N. Silverman, Daniel A. Braverman, Sebastian R. Sperber, Nicolas Grabar & Adam E. Fleisher, U.S. Regulation of the International Securities and Derivatives Markets § 14.07 (11th and 12th Editions 2014-2017)
11th and 12th Editions

Click to open document in a browser

Registered broker-dealers are subject to the most detailed substantive regulation of all U.S. securities industry participants. This regulation is intended to protect both securities customers and securities markets. While a comprehensive review of such regulation is beyond the scope of this book, this section summarizes the principal aspects of substantive regulation in certain important areas: fraud against customers and insider trading, financial responsibility, activities regulated by SROs, anti-money laundering requirements, research analyst conflicts of interest and borrowing and lending by broker-dealers. [273]

[1] Antifraud Regulation

The general prohibitions against fraudulent activity and manipulation discussed elsewhere in this book of course apply to registered broker-dealers. [274] In addition, antifraud provisions have been applied against registered broker-dealers in distinct ways to prohibit a variety of activities *vis-à-vis* customers, and registered broker-dealers are also subject to some important additional procedural requirements designed to increase broker-dealers' own efforts to police against and prevent insider trading. [275]

[a] Fraud Against Customers

Sections 10(b), 15(c)(1) and 15(c)(2) of the Exchange Act and the rules thereunder prohibit, in broad language, the use of fraudulent, manipulative or

p. 14-70

deceptive devices in connection with the purchase or sale of securities by broker-dealers. [276] Broker-dealers may be found to have committed fraudulent practices if, for example, they fail to send proper confirmations meeting the SEC's requirements, [277] sell (or purchase) a security at a price not related to the market price or with an excessively high mark-up (or mark-down), [278] recommend securities to a customer without having a reasonable basis for the recommendation, [279] churn a customer's account, [280] violate the financial responsibility rules or, unless an exemption is available, sell low-priced stocks of small companies ("penny stocks") except through procedures designed to ensure that the security is a suitable investment for the customer. [281]

Some of these antifraud prohibitions derive from specific provisions of the Exchange Act or the rules thereunder. However, in many cases the courts and the SEC have based antifraud actions on the grounds that a broker-dealer owes a special level of duty to its customers. This duty has been described as a "fiduciary" duty of the sort that an agent owes its principal, but in the broker-dealer context this agency law analysis has been applied even where the broker-dealer is acting

p. 14-70

p. 14-71

as principal, at least where the customer is not sophisticated. [282] Another justification for imposing such a duty on a broker-dealer has been the theory that when a broker-dealer "hangs out its shingle," it is making an implied representation that it will deal fairly with its customers; a breach of this implied representation thus gives rise to liability for antifraud violations (the so-called "shingle theory"). [283] Under this theory, which would apply whether the broker-dealer were acting as agent (broker) or principal (dealer), if a broker-dealer charges too much, recommends a security without a reasonable basis or otherwise breaches its implied representation that it will deal fairly, an antifraud violation has occurred. Whatever the theory, the consequences for broker-dealers are clear: behavior perceived as unfair or over-reaching risks being found fraudulent.

A number of practices involving the division of brokerage commissions have been the subject of examination as to whether a broker-dealer's customers are receiving both fair treatment in, and full disclosure of, the division of the commissions that they paid. Among the commission arrangements that have been questioned are:

- "soft dollar" arrangements, in which an investment adviser uses commission dollars to compensate a broker for research or execution-related services provided to the adviser by the broker; [284]
- "directed brokerage," whereby an account fiduciary (such as a pension plan sponsor) directs an investment adviser to route brokerage business to a

p. 14-71
p. 14-72

  specified broker-dealer, which in turn agrees to compensate the account through cash payments, the provision of services or otherwise; [285] and
- "payment for order flow," [286] whereby cash payments and other incentives are provided by executing dealers, exchanges and other trading systems that execute customer orders to brokers who direct their own customers' orders to the dealer, exchange or other system that makes the payment. [287]

In addition, § 15 of the Exchange Act was amended by the Dodd-Frank Act to permit the SEC to promulgate rules providing that the standard of conduct applicable to broker-dealers in connection with providing personalized investment advice about securities to retail customers "and such other customers as the [SEC] may by rule provide" shall be the fiduciary standard under § 211 of the Advisers Act applicable to investment advisers, and to provide the SEC with enforcement authority (including sanctions) to enforce such standard. [288] As amended by the Dodd-Frank Act, § 15(k) of the Exchange Act also clarifies that commission-based compensation or other standard compensation in and of itself is not sufficient to establish violation of the standard of conduct as applied to broker-dealers and that broker-dealers do not have a duty of care or loyalty to such customer on an ongoing basis after providing them with personalized investment advice about securities. [289] In 2013, the SEC requested data and information relating to the benefits and costs of implementing various standards of

p. 14-72
p. 14-73

conduct for broker-dealers and investment advisers, including a uniform fiduciary standard of conduct. [290] The SEC has not yet proposed a rule pursuant to its authority under § 15(k) of the Exchange Act, and it is not expected that any action will be taken in this regard during the remainder of Chair White's tenure. [291]

In April 2016, however, the Department of Labor issued a final rule defining who is a "fiduciary" of an employee benefit plan under ERISA or an individual retirement account ("IRA") or other plan under the tax code by reason of providing investment advice to the plan or account or its participants or beneficiaries. [292] The rule expands the investor protections afforded by ERISA and the Bankruptcy Code by expanding the circumstances in which a broker-dealer would be considered to be a fiduciary, especially in respect of smaller plans and IRAs that participate in the retail market for retirement products. The rule is designed to address conflicts of interest that arise from compensation paid to financial service providers that could affect their advice to clients. Generally, the rule will require broker-dealers to substantially limit the types of conversations that they may have with clients that might constitute "investment advice" or, alternatively, restructure fee and compensation arrangements, and take other steps, to minimize the impact of those arrangements on the advice given. The rule has been and continues to be controversial, especially as it results in the establishment of a new fiduciary standard for brokers and investment advisers

p. 14-73
p. 14-74

not by the SEC or FINRA but by the Department of Labor. The rule applies only to ERISA plans and IRAs, but the structural changes required will likely affect practices with respect to other retail clients. The final rule was effective June 7, 2016, but it will not be applicable until April 10, 2017 in order to provide plans and their affected financial service providers an additional transition period. [293]

[b] Prevention of Insider Trading

The general antifraud provisions of § 10(b) of the Exchange Act and Rule 10b-5 thereunder prohibit the purchase or sale of securities by certain persons while knowingly in possession of material nonpublic information relating to those securities in breach of a duty owed to shareholders of the corporation or the source of the information. [294] The general prescription to avoid liability for insider trading has been to disclose the inside information or to abstain from trading until it becomes public.

However, certain financial institutions, particularly full-service broker-dealers that engage in both customer and proprietary sales, trading activities and corporate finance activities, frequently find themselves in possession of inside information regarding corporate finance clients. They thus have had to devise mechanisms to protect against "use" of the inside information in their other activities in order to avoid having to stop sales, trading and research activity in the securities in question. [295] As a result, procedures have been developed by

p. 14-74
p. 14-75

broker-dealers and their counsel that generally include (i) “restricted” [296] and "watch" [297] lists made up of securities concerning which inside information has been received somewhere in the organization and (ii) "information barrier" mechanisms (sometimes referred to as "Chinese Walls") to restrict dissemination of inside information. Information barriers involve procedural restrictions on the dissemination of information and, where appropriate, physical separations and restrictions between departments of an organization, particularly between corporate finance personnel and research, sales and trading personnel. [298] Information barriers are designed to regulate, and permit the tracing of, the transmission of inside information. With this combination of procedures, a broker-dealer can attempt to restrict the flow of inside information and trading activity, so that in certain circumstances the broker-dealer can continue certain activities in a security as to which a portion of the organization possesses inside information. These procedures were also originally used to bolster a defense against a charge of insider trading on the basis that the information in question had not been improperly "used."

The SEC moved toward making information barriers mandatory in 1980 when it adopted Rule 14e-3 under the Exchange Act, making it unlawful to engage in trading of securities while "in possession of" information regarding an undisclosed tender offer. [299] Although use by the purported violator no longer had

p. 14-75
p. 14-76

to be demonstrated as an element of the offense, a demonstration by the defendant that appropriate information barrier procedures were in place and that the inside information was not in fact used was made an affirmative defense. [300]

The Insider Trading and Securities Fraud Enforcement Act of 1988 (the "Insider Trading Act") [301] took the next step by making information barriers and related procedures mandatory for broker-dealers generally. Broker-dealers are required to "establish, maintain, and enforce written policies and procedures reasonably designed, taking into consideration the nature of [the broker-dealer's] business, to prevent the misuse … of material, nonpublic information." [302] An insider trading violation by any person directly or indirectly controlled by the broker-dealer will result in a finding of liability against the broker-dealer if the SEC can demonstrate that the broker-dealer "knowingly or recklessly failed to establish, maintain or enforce any policy or procedure required … and such failure substantially contributed to or permitted the occurrence of the act or acts constituting the violation." [303] This law caused most broker-dealers that had not adopted procedures, or that had relied on informal procedures, to adopt and distribute written information barrier and other compliance procedures and to move further toward physical separation of and restricted physical access to departments in possession of sensitive information.

In addition to requiring that broker-dealers institute procedures to prevent insider trading, the Exchange Act provides the SEC with rulemaking authority to mandate the adoption of specific procedures. [304] Pursuant to this authority, the

p. 14-76
p. 14-77

SEC's Division of Trading and Markets (at that time, the Division of Market Regulation) released a report in 1990 (the "1990 Information Barrier Report") summarizing its review of the adequacy of broker-dealers' existing information barrier procedures. [305] The review determined that broker-dealers' information barrier procedures "generally [were]… well conceived and conscientiously executed" and thus concluded that the SEC should not then use its rulemaking authority to require broker-dealers to adopt uniform procedures. [306] Although the 1990 Information Barrier Report endorsed a flexible approach to information barrier procedures, it also concluded that the minimum elements of acceptable information barrier procedures include the following:

- substantial control (preferably by the compliance department) of interdepartmental communications;
- the review of employee trading through the effective maintenance of some combination of watch, restricted and rumor lists;
- memorialization of information barrier procedures; and
- the heightened review or restriction of proprietary trading while the firm is in possession of material nonpublic information.

Surveillance of firm, customer and employee trading was said by the report to be the "single most significant element" of information barrier procedures. [307]

The 1990 Information Barrier Report also emphasized the role of the SROs in ensuring that their members' internal procedures are adequate. Responding to the report, the NYSE and the NASD published for their members a joint statement containing certain minimum elements of adequate broker-dealer information barrier procedures. [308] In addition to emphasizing the need for formal written procedures incorporated within a firm's operating manual, [309] the joint statement

p. 14-77
p. 14-78

encouraged the use of restricted and watch lists, with adequate written standards governing their use. The joint statement also emphasized the need for continuing employee education and training regarding applicable federal and state law and the requirements of SROs, as well as the firm's own procedures to prevent the misuse of material nonpublic information. [310] A firm's practices in this regard should provide that policy statements are provided or made available to employees, including revisions to such policies, and that each employee sign an attestation as to his or her understanding of those policies.

The nature of procedures adopted by individual firms has varied. In particular, procedures have appropriately varied depending on the nature of a firm's activities and its access to material nonpublic information. A firm that engages only in mutual fund brokerage may have very simple procedures. A "boutique" broker-dealer engaging in merger and acquisitions advisory activity would normally be expected to have procedures in place to police employee trading and physical safeguarding of inside information and have distributed rules restricting transmission of material nonpublic information. However, such a firm's activities, and therefore its appropriate procedures, might not extend to customer or firm principal trading. The most complex procedures have, of course, been devised by full-service institutions, whose rules commonly involve physical separation of personnel, physical safeguarding of information, restriction of communications between corporate finance, research and sales and trading personnel, review of firm, employee and customer trading for indications of unusual activity, maintenance of "restricted" and "watch" lists, detailed procedures regarding violations and possible violations or regarding seeking appropriate exceptions to procedures involving legal and compliance personnel and many other safeguards. [311]

[c] Prevention of Fraudulent Short Sales

p. 14-78
p. 14-79

In addition to the generally applicable antifraud provisions of the Exchange Act, [312] broker-dealers are subject to specific requirements in connection with effecting short sales [313] designed to prevent them from being used for fraud or manipulation. Until 2007, the price at which a broker-dealer (or other person) could effect short sales was restricted by the Rule 10a-1 "tick test," adopted in 1938 and designed to restrict short sellers from effecting short sales in an exchange-traded security when the price of that security is declining, and similarly designed price tests imposed by the SROs. In 2007, after the results of a pilot program indicated that the short sale restrictions had little effect on liquidity and price efficiency, [314] the SEC eliminated Rule 10a-1 and the tick test and prohibited the SROs from imposing price tests on the short sale of any security. [315] However, in 2010, the SEC adopted new short sale restrictions in Rule 201 of Regulation S HO in response to the rapid and steep price declines in securities during the fall of 2008. Among other things, under the short sale price restrictions, a circuit breaker triggers any time a stock has dropped 10% in one day—prohibiting short selling in that security unless the price is above the current national best bid. [316]

Broker-dealers also remain subject to specific requirements under Exchange Act Regulation S HO [317] that are designed to prevent abusive "naked"

p. 14-79
p. 14-80

short sales [318] and to address extended "fails to deliver." [319] Under Regulation S HO, broker-dealers must mark all sales of equity securities "long" or "short." [320] A sale may be marked "long" only if the seller owns the security and the broker-dealer reasonably expects to have physical possession or control of the security by the settlement date of the transaction; all other sales must be marked "short" or "short exempt." [321] If a sale is marked "long," the broker-dealer generally must make delivery when due and cannot use borrowed securities to do so. [322] Broker-dealers generally may not accept or execute short sales of equity securities without borrowing or entering into a *bona fide* arrangement to borrow the security or having reasonable grounds to believe the security can be borrowed in time for delivery. [323] Finally, Regulation S HO imposes additional

p. 14-80
p. 14-81

delivery requirements on broker-dealers that are participants in registered clearing agencies. Subject to certain limited exceptions, such broker-dealer participants must purchase or borrow securities to close out any fail to deliver positions by no later than the beginning of regular trading hours on the settlement day following the day the participant incurred the fail to deliver position. [324] Broker-dealers subject to this close-out requirement are also generally prohibited from effecting short sales in the relevant security without borrowing or entering into a *bona fide* agreement to borrow the security. [325]

[2] SEC Net Capital and Other Financial Responsibility Rules

Registered broker-dealers are subject to capital and other financial rules intended to protect their own customers [326] against financial failure of the broker-dealer, as well as to protect market participants generally by preventing a chain reaction of failures that might otherwise occur in a highly interrelated financial system when one financial intermediary fails. [327]

Section 15(c)(3) of the Exchange Act requires that broker-dealers conform to the SEC's rules on "financial responsibility" and related matters including "custody and use of customers' securities and … [cash] balances." [328] Under that

p. 14-81
p. 14-82

provision of the Exchange Act, the SEC has adopted (i) the "customer protection rule" (Rule 15c3-3), which governs a broker-dealer's handling of customer funds and securities, and (ii) the "net capital rule" (Rule 15c3-1), which regulates the minimum liquid net assets and maximum debt/equity ratio of a broker-dealer. [329] These rules go well beyond requiring balance-sheet solvency of a broker-dealer. They are intended to assure that a broker-dealer's customer-related assets are protected and that these assets are sufficient to pay its obligations to its customers even in a forced and rapid liquidation during difficult market conditions and in periods of limited liquidity. [330]

In the event that a broker-dealer fails and lacks sufficient assets to repay its customers, SIPA provides for the availability of limited protection to compensate a broker-dealer's customers for certain losses. [331]

While the SEC's net capital and other financial responsibility rules are far too detailed to be considered in full, we discuss certain of their principal areas of coverage below.

[a] SEC Customer Protection Rule

The customer protection rule is intended to separate a firm's activities on behalf of its customers from the risks of the firm's proprietary underwriting and dealing activities by requiring that a broker-dealer hold its customers' assets apart from its own, and thus not put customer assets at risk in the broker-dealer's business. [332] The rule has two parts, one dealing with the treatment of customer securities and the other requiring the broker-dealer to make deposits into a special account intended to benefit its customers.

[i] *Customer Securities and PAB Account Securities*

p. 14-82

p. 14-83

The customer protection rule requires a broker-dealer to make a daily determination to ensure that it has possession or "control" [333] of all fully paid securities and "excess margin securities" [334] of its customers. [335] Effective in 2014, this obligation was extended to include fully paid and excess margin securities in accounts containing the proprietary securities and cash of other broker-dealers ("PAB accounts"), except for the PAB accounts of other broker-dealers that did not object after receiving written notice that the carrying broker-dealer

p. 14-83

p. 14-84

would be able to use their securities in the ordinary course of its business. [336] Broker-dealers with customer or PAB account securities that should be, but are not, within their possession or control must take action to obtain possession or control. Generally, a broker-dealer must buy in, or otherwise obtain, fully paid or excess margin securities carried on its books as "fails to receive" [337] for more than 30 days. [338] As trades in markets outside the United States may require a longer period to settle than those in the United States, the SEC staff has provided that in the case of fails to receive of foreign-settled, foreign-issued securities a broker-dealer may, in certain circumstances, take a charge to its net capital rather than buying in undelivered securities. [339]

This part of the customer protection rule is supplemented by Rules 8c-1 and 15c2-1 under the Exchange Act, which among other restrictions require that customer margin securities (*i.e.*, those securities that a broker-dealer is not required to keep in its possession or control) may not be subjected to any lien greater in amount than the amount that a broker-dealer's customers collectively owe the broker-dealer. For purposes of these rules, a broker-dealer's "customers" include other broker-dealers whose accounts it carries. [340]

[ii] *Customer Reserve Account and PAB Reserve Account*

The second part of the customer protection rule requires a broker-dealer to make two weekly computations in accordance with a "Reserve Formula." [341] The first computation determines how much money the broker-dealer is holding that is either customers' money or money the broker-dealer has obtained from the use of customer securities that are not in the broker-dealer's possession or control ("customer credits"). From these customer credits, the broker-dealer subtracts the

p. 14-84

p. 14-85

amount of money that it is owed by its customers or in customer-related transactions ("customer debits"). [342] If a broker-dealer's customer credits are in excess of its customer debits, the broker-dealer must deposit cash or "qualified securities" [343] representing the excess in a special reserve bank account for the exclusive benefit of customers (commonly called the "customer reserve account"). The second computation is an essentially identical calculation with respect to the broker-dealer's PAB accounts to determine an amount that must be maintained in a special reserve bank account for the exclusive benefit of PAB account holders (commonly called the "PAB reserve account"). [344]

The effect of the two parts of the customer protection rule, and of Rules 8c-1 and 15c2-1 under the Exchange Act, is to create a system in which the excess of the amount a broker-dealer owes to its customers and PAB account holders (or to others in connection with their securities positions) over the amount customers and PAB account holders owe to the broker-dealer (or third parties owe to the broker-dealer in connection with the customers' and PAB account holders' securities positions) is placed in segregated bank accounts, and securities belonging to customers and PAB account holders generally are either kept in the broker-dealer's control or used to secure loans not greater in amount than the aggregate amount the broker-dealer has loaned its customers or PAB account holders on such securities.

[b] SEC Net Capital Rule

p. 14-85
p. 14-86

The term "net capital" as used in the SEC's net capital rule does not refer to capital in the ordinary accounting sense of the word but only to that portion of a broker-dealer's net assets that are considered under the rule to be liquid and immediately available to meet the obligations of the broker-dealer. [345] The net capital rule requires that registered broker-dealers maintain regulatory "net capital" in a specified minimum amount, [346] calculated in accordance with the "basic" or the "alternative" method discussed below. [347] The effect of the net capital rule is to limit a broker-dealer's ability to use financial leverage and ensure that its liquid assets are sufficient to meet its obligations. [348]

p. 14-86
p. 14-87

Under the "basic" method of calculation, a broker-dealer is generally required to maintain liquid net capital in an amount not less than one-fifteenth of its unsecured indebtedness (as defined in the net capital rule, "aggregate indebtedness"). [349] The consequence of this requirement is that the broker-dealer is required to have a cushion of net liquid assets equal to one-fifteenth of its aggregate indebtedness. Under the "alternative" method of calculation, a broker-dealer is required to maintain net capital equal to the greater of $250,000 or 2% of the aggregate of the debit items as calculated in the reserve formula described in § 14.07[2][a][ii]. The consequence of this requirement is that the broker-dealer is required to cover the amount it owes to its customers with a combination of the amount it deposits in its reserve accounts and the amount that its customers owe to it, calculated in each case in accordance with the customer protection rule, plus a cushion of liquid net capital equal to 2% of what its customers owe to it.

Most broker-dealers calculate their net capital requirement by the basic method; however, the largest broker-dealers (and often smaller broker-dealer affiliates within the same holding company organization) typically calculate by the alternative method. [350] Whichever method a broker-dealer uses to calculate net capital, the minimum amount of net capital that a broker-dealer must maintain, taking into account its aggregate indebtedness or debits, is referred to herein as its "minimum capital requirement."

[i] *Method of Computation*

The computation of net capital by both the basic and alternative methods begins with net worth, as determined under U.S. GAAP. [351] In computing net

p. 14-87
p. 14-88

worth, the broker-dealer's securities and commodities positions are marked to the market. To that number are added back satisfactorily subordinated liabilities that generally must, among other requirements, have a term of at least one year. [352] The value of the broker-dealer's assets is then discounted to reflect conservative assumptions about its ability quickly to convert its assets into cash during an environment of difficult liquidity. Nonfinancial and illiquid assets (goodwill, furniture and fixtures, buildings, prepaid expenses and exchange seats) are deducted in their entirety. Certain operational and bookkeeping charges are also deducted. Most unsecured receivables are treated as illiquid assets and deducted from net worth. These deductions leave a remainder consisting of virtually only cash and securities. [353]

The net capital rule requires a broker-dealer to take a 100% charge to its net worth for its securities positions that cannot be sold and payment received reasonably promptly. Thus, securities that have no "ready market," such as certain restricted private placement securities, may have zero value for net capital purposes. [354]

p. 14-88
p. 14-89

Broker-dealers are also required to reduce their net worth in the calculation of net capital by certain percentages (commonly called "haircuts") of the market value of their securities and financial assets that do have a ready market. [355] Haircuts are deducted to provide a margin of safety against losses that may be incurred by broker-dealers in liquidating their securities positions; the amount of the haircut depends on the nature, term and liquidity of the security.

p. 14-89
p. 14-90

For example, these haircuts range from no haircut at all for U.S. and Canadian government bonds maturing in less than three months [356] to 15% of the market value of equity and noninvestment grade bond positions. [357] Contractual commitments to buy or sell securities are viewed as positions in the securities themselves but with limited offset against other positions. [358]

After all the required deductions have been taken, a broker-dealer with positive net capital has more than one dollar of liquid assets for each dollar of liabilities (except for those liabilities properly subordinated to customers and other creditors). Of course, it is not enough that a broker-dealer have positive net capital; the broker-dealer's net capital must exceed its minimum net capital requirement. [359]

[ii] *Early Warning Requirements*

p. 14-90
p. 14-91

In addition to the minimum net capital requirement, the net capital rule and the rules of the SROs specify early warning levels below which a broker-dealer's net capital may not fall without adverse consequences. [360] For example, a broker-dealer computing net capital on the alternative method may not withdraw equity capital in any form to pay shareholders if its net capital is less than the greater of 5% of its debits computed in accordance with the reserve formula or (if also registered under the CEA) 7% of the funds required to be segregated pursuant to the CEA. [361]

The well-publicized closing of the registered broker-dealer Drexel Burnham Lambert ("Drexel") was preceded by large withdrawals of capital from Drexel by its parent holding company, which was not a registered broker-dealer. Shortly thereafter, the holding company filed for bankruptcy. In the wake of these events, the SEC adopted amendments to the net capital rule that require, under certain circumstances, a registered broker-dealer to notify the SEC two business days before withdrawing capital for the benefit of an owner, employee or affiliate. [362] The SEC issued only one order under these amendments before modifying the provision in 2013. [363] As amended in 2013, Rule 15c3-1(e)(3) gives the SEC authority to restrict withdrawals, advances and loans "under such terms and conditions as the Commission deems necessary or appropriate in the public interest or consistent with the protection of investors" for a period of up to 20 business days if the SEC finds that the withdrawals, advances or loans could "be detrimental to the financial integrity of the broker or dealer or may unduly jeopardize the broker or dealer's ability to repay its customer claims or other liabilities." [364]

These net capital rule amendments pertain specifically to transactions between a broker-dealer and its affiliates. The amendments provide that "any transaction" between a broker-dealer and an affiliate that "results in a diminution of the [broker-dealer's] net capital shall be deemed to be an advance or loan of net capital" [365] and thus could require, subject to the other provisions in the rule amendments, the prior approval of the SEC. In 2013, the SEC amended the net capital rule to require that a broker-dealer treat as a liability any capital that is contributed under an agreement giving the investor the option to withdraw it or that is contributed with the intent to withdraw the capital within one year. [366]

[iii] *Alternative, Risk-Based Requirements for Broker-Dealers Subject to Consolidated Supervision*

In 2004, the SEC amended the net capital rule to permit a broker-dealer that maintains $1 billion of "tentative net capital" [367] and $500 million of net capital to apply to the SEC for a conditional exemption from the net capital rule that would allow the broker-dealer to use an alternative, risk-based method for calculating deductions from net capital for market and derivatives-related credit risk. [368] In order to qualify for the exemption, the broker-dealer must comply with certain enhanced net capital, early warning, recordkeeping, reporting and other requirements, and must implement and document an internal risk management system.

In addition—until the program ended in 2008—the broker-dealer's holding company and affiliates (referred to collectively as a "consolidated supervised entity" ("CSE")) were required to consent to group-wide supervision by the SEC and comply with certain other requirements through its CSE Program. Under the CSE Program, the holding company, depending on whether it had a principal regulator (as defined in the rules), was required, among other things, to provide the SEC with information regarding its activities and risk exposures; consent to SEC examination of its nonregulated affiliates; and as part of its reporting requirements, compute, on a monthly basis, group-wide allowable capital and allowances for market, credit and operational risk in accordance with standards adopted by the Basel Committee on Banking Supervision. However, after the near collapse of Bear Stearns and the collapse of Lehman Brothers (two of the

p. 14-92

p. 14-93

five CSE investment bank holding companies), [369] the SEC terminated the CSE Program entirely. [370] The remaining CSE holding companies have converted into bank holding companies and are now subject to consolidated supervision by the Federal Reserve, rather than the SEC. The broker-dealers originally owned by CSE holding companies continue to use the alternative, risk-based computation method to compute net capital but the SEC has instructed these broker-dealers to take standardized net capital charges on certain less liquid asset-backed securities positions. [371]

[iv] *Solvency Requirement*

In 2013, the SEC amended Rule 15c3-1(a) to require that, in addition to maintaining net capital no less than its minimum net capital requirement, the broker-dealer must otherwise not be "insolvent." [372] By making solvency a requirement of Rule 15c3-1, the SEC required a broker-dealer to cease conducting a securities business upon insolvency. The SEC defined "insolvent" in Rule 15c3-1(c) to mean circumstances in which the broker-dealer (1) is the subject of any bankruptcy, equity receivership proceeding or any other proceeding to reorganize, conserve, or liquidate such broker-dealer or its property or to apply for the appointment or election of a receiver, trustee, or liquidator or similar official for such broker or dealer or its property; (2) has made a general assignment for the benefit of creditors; (3) is insolvent within the meaning of Section 101 of the United States Bankruptcy Code, or is unable to meet its obligations as they mature, and has made an admission to such effect in writing or in any court or before any agency of the United States or any State; or (4) is unable to make such computations as may be necessary to establish compliance with Rule 15c3-1 or Rule 15c3-3.

[c] Securities Investor Protection Act

p. 14-93
p. 14-94

One primary purpose of SIPA is to detail procedures for the liquidation of failed broker-dealers. [373] The second major purpose of SIPA is to provide limited insurance to customers of failed broker-dealers. Such insurance is provided through the Securities Investor Protection Corporation ("SIPC"), [374] a membership corporation that registered broker-dealers are generally required to join, [375] and the SIPC fund created through SIPC's assessments on its member broker-dealers. [376]

SIPA provides that customers of a failed broker-dealer have priority over other unsecured creditors in the distribution of the broker-dealer's customer-related property. Each "customer" of a failed broker-dealer is entitled to receive all of that customer's "customer name securities" and a ratable share of all "customer property" held by the failed broker-dealer. [377]

p. 14-94
p. 14-95

The SIPC fund will pay the unsatisfied portion of any claim of a customer up to $500,000, up to $250,000 of which can be for cash the customer had on account with the broker-dealer. [378] Banks, brokers and dealers (each as defined in the Exchange Act) are not eligible to collect SIPC fund insurance. [379] However, a broker-dealer or bank that can establish that assets held with a failed broker-dealer were for the benefit of its own customers will be deemed to stand in the shoes of its customers, and thus would be entitled (to the extent its own customers were so entitled) to SIPC fund insurance. [380]

[3] Self-Regulatory Organizations

As noted above, regulation of broker-dealers by SROs is a crucial element of the broker-dealer regulatory scheme. SROs themselves register with the SEC under the Exchange Act and are subject to substantial SEC regulation. [381] SRO

p. 14-95
p. 14-96

proposals to amend their rules generally must be submitted for approval to the SEC. [382] In addition, the SEC has the authority, by rule and in accordance with procedures specified in the Exchange Act, to abrogate, add to and delete from an SRO's rules. [383]

The Exchange Act requires SROs to enforce their own rules and the U.S. securities laws generally against their members. [384] All resulting disciplinary proceedings of an SRO against a broker-dealer or associated person must meet certain standards intended to guarantee due process [385] and the results of such proceedings are subject to SEC review. [386]

[a] SRO Regulation of Broker-Dealers

SROs all have rules that govern conduct by members in order to protect investors, securities markets and the trading markets operated by the SRO in question. [387] While most of the SROs' rules are detailed and focus on specific behavior, the SROs also have general injunctions requiring "fair," "just" or otherwise proper behavior in terms that are less explicit than those found in the securities laws or the SEC's rules. For example, FINRA Rule 2010 provides that members shall in the conduct of their business "observe high standards of commercial honor and just and equitable principles of trade." [388] Such rules have been used, as discussed below, as the authority for enforcing very specific standards of behavior and for carrying out significant disciplinary proceedings against members.

p. 14-96
p. 14-97

While there are 20 active securities exchanges that are registered under the Exchange Act [389] and function as SROs, the most important SRO with respect to broker-dealer regulation is FINRA. [390] The following discussion will focus on FINRA rules, but the rules of any other SROs of which a broker-dealer is a member must of course also be followed. While FINRA rules are far too detailed to be considered in full, certain of their principal areas of coverage are worth noting.

[i] *FINRA Rules*

Many of the most important FINRA rules and interpretations derive from FINRA Rule 2010, which requires members, in the conduct of their business, to "observe high standards of commercial honor and just and equitable principles of trade." In many respects, this rule has been interpreted to produce results with respect to customer protection that are similar to those of the "shingle theory" under the antifraud provisions of the securities laws applicable to broker-dealers. [391] In some cases, however, FINRA rules (including NASD rules and Incorporated NYSE rules), including FINRA Rule 2010, and interpretations of those rules go beyond the SEC's positions under the securities laws.

p. 14-97
p. 14-98

Certain FINRA rules regulate activities in connection with public securities distributions. FINRA Rule 5110 governs the amount of underwriting compensation that an underwriter may receive in connection with a public offering of securities, [392] FINRA Rule 5130 prohibits an underwriter from selling new issues of equity securities to certain categories of "restricted persons," [393] while FINRA Rule 5131 restricts underwriters from selling new issues of equity securities to certain executive officers or directors of public companies and covered nonpublic companies and from engaging in certain other activities in connection with such new issues. [394] Price maintenance in fixed price public offerings is governed by FINRA Rule 5141, intended to prevent broker-dealers from giving price advantages to certain customers in such offerings (*e.g.*, by giving discounts to institutional but not retail customers) or failing to make a *bona fide* offering of the securities to the public (*e.g.*, by selling the securities to "related persons" of the broker-dealer). [395]

Many of FINRA's Rules cover subjects such as discretionary accounts and activities in connection with the distribution of investment company securities, in which FINRA members are particularly likely to be involved with retail customers. [396] FINRA Rule 2111 requires that members have a reasonable basis to believe that securities they recommend to a customer are suitable for the customer, based on information obtained through the reasonable diligence of the member or associated person to ascertain the customer's investment profile. [397]

p. 14-98
p. 14-99

FINRA Rule 5310 requires that the broker-dealer use reasonable diligence to obtain a price for the customer that is as favorable as possible under prevailing market conditions (often referred to as the duty of "best execution"), [398] and FINRA Rules 2121 and 2122, respectively, require that prices and commissions charged in over-the-counter securities transactions be "fair" [399] and that charges for services be reasonable and not unfairly discriminatory. [400] Additionally, the SEC adopted rules in 2000 to improve public disclosure of order execution and routing practices. [401] These rules are intended to spur more vigorous competition among market participants to provide the best prices for investor orders. Certain rules provide the authority for more specific interpretations. For example, FINRA Rule 2121 regarding prices and commissions is the authority for detailed interpretations promulgating the so-called "5% policy," to the effect that sales to customers at mark-ups in excess of 5% over the inter-dealer price are almost always excessive and that, depending on the circumstances, lower mark-ups may

p. 14-99
p. 14-100

also be excessive. [402] Other important activities covered in the FINRA Rules include the following:

- margin limitations on the extension of credit to customers; [403]
- the sending of advertising materials to customers; [404]
- special rules governing the sale of particularly complex or risky products to customers, including options, warrants, investment company securities, variable contracts of investment companies, limited

partnership interests, collateralized mortgage obligations and security futures; [405]

- members trading as principal while holding an order from a customer on the same side for the security in question; [406]
- members' trading activities that occur in anticipation of the firm's issuance of research reports regarding a security; [407] and
- member's publication or circulation of transactions and quotations. [408]

FINRA has separate rules governing, among other things, relations between its member broker-dealers, arbitration, trade reporting and settlement. [409]

FINRA rules are in certain respects more demanding than those of the SEC. For example, while the SEC's Rule 15c3-1 generally permits broker-dealers to have aggregate indebtedness that is 15 times net capital, [410] FINRA generally does not permit its member broker-dealers to have aggregate indebtedness in excess of 12 times net capital. [411] Further, FINRA may in fact require

p. 14-100

p. 14-101

its members to have more capital than its written rules require. FINRA requires that its members impose initial and maintenance margin requirements on their customers' securities-related borrowings, while the Board's rules under the Exchange Act impose only an initial margin requirement. [412] In addition, FINRA members generally cannot disseminate research reports or make recommendations regarding publicly outstanding equity or noninvestment grade debt securities of their direct or indirect parent companies or other "material associated persons" (as defined in Rule 17h-1T under the Exchange Act). [413] FINRA also reserves the right to disapprove of the outside activities of the controlling persons of a member so as to ensure that these persons will, among other things, not be subject to conflicts of interest. [414] Furthermore, FINRA imposes minimum qualification requirements for high-level personnel. [415] The NYSE and the other exchanges also, of course, have detailed rules governing exchange trading and settlements.

Effective in 2017, FINRA has established a streamlined set of rules for "capital acquisition brokers" ("CABs"). Capital acquisition brokers register as broker-dealers with the SEC but elect to be subject to FINRA's CAB Rules (rather than FINRA's regular rules) and to limit their activities to one or more of:

(A) advising an issuer, including a private fund, concerning its securities offerings or other capital raising activities;

(B) advising a company regarding its purchase or sale of a business or assets or regarding its corporate restructuring, including a going-private transaction, divestiture or merger;

(C) advising a company regarding its selection of an investment banker;

(D) assisting in the preparation of offering materials on behalf of an issuer;

(E) providing fairness opinions, valuation services, expert testimony, litigation support, and negotiation and structuring services;

p. 14-101

p. 14-102

(F) qualifying, identifying, soliciting, or acting as a placement agent or finder (i) on behalf of an issuer in connection with a sale of newly-issued, unregistered securities to institutional investors or (ii) on behalf of an issuer or a control person in connection with a change of control of a privately-held company; [416] and

(G) effecting securities transactions solely in connection with the transfer of ownership and control of a privately-held company through the purchase, sale, exchange, issuance, repurchase, or redemption of, or a business combination involving, securities or assets of the company, to a buyer that will actively operate the company or the business conducted with the assets of the company, in accordance with the terms and conditions of an SEC rule, release, interpretation or "no-action" letter that permits a person to engage in such activities without having to register as a broker or dealer pursuant to § 15(b) of the Exchange Act. [417]

FINRA's CAB Rules differ from FINRA's regular rules principally by elimination of FINRA rules that would not be applicable to a FINRA member engaged only in the limited business of a capital acquisitions broker; however, there are some potential material advantages to operating under the CAB Rules, including:

- Capital acquisition brokers are not subject to FINRA Rules 2121 and 2122, which require FINRA members to charge fair prices and commissions for securities transactions and levy charges for other services that are reasonable and not unfairly discriminatory. Capital acquisition brokers are, however, subject to FINRA Rule 2010, which requires members to observe high standards of commercial honor and just and equitable principles of trade; [418]
- Capital acquisition brokers are subject to a streamlined rule relating to communications with the public that does not prohibit communications from including predictions or projections of performance; [419] and
- The supervisory rules applicable to capital acquisition brokers do not require annual compliance meetings, review and investigation of securities transactions, specific documentation and supervisory procedures, internal inspections or CEO certification about compliance procedures. [420]

There are also some material disadvantages to operating under the CAB Rules, most notably the limitation on the capital acquisition broker's business activities and a prohibition on any person associated with a capital acquisition broker engaging in any securities transaction outside the regular course or scope of that person's employment with the capital acquisition broker (other than investing on his or her own behalf and transactions among immediate family members for which no associated person received selling compensation). [421] This means that capital acquisition broker personnel generally could not be dual employees with another broker, bank or financial institution unless they did not participate in any securities transactions for that other broker, bank or financial institution.

[b] SRO Regulation of Broker-Dealer Personnel

The SEC does not, for the most part, directly regulate the competence or background of broker-dealer personnel, but rather assigns that responsibility to the SROs. The failure of a broker-dealer to register and qualify its personnel in accordance with applicable SRO rules is, however, a violation of Rule 15b7-1 under the Exchange Act that can subject the broker-dealer to fines of up to

$100,000 per violation. [422] FINRA is the primary regulator of the employees of registered broker-dealers. FINRA's rules generally require that any person engaged in the investment banking or securities business of a member firm register with FINRA, [423] and its rules apply to the activities of each "associated person of a member" as well as of each member broker-dealer. [424] FINRA also prescribes four general levels of competency for associated persons of FINRA members: (i) "principals," who generally are officers and other management and supervisory personnel who have taken and passed the FINRA's General Securities Principal ("Series 24") Examination, (ii) "registered representatives," who include other employees of FINRA member firms whose functions are not solely clerical or ministerial and who have taken and passed FINRA's General Securities Representative Examination ("Series 7"), (iii) "research analysts," who include employees of FINRA member firms whose primary functions are the preparation of research reports or whose name appears on research reports and who have taken and passed FINRA's Series 7 Examination and FINRA's Research Analyst Qualification ("Series 86/87") Examination; [425] and (iv) "operations professionals," who generally are personnel performing or supervising certain enumerated "back office" functions and persons with authority materially to commit a member firm's capital to such functions and who have taken and passed FINRA's Operations

Professional Qualification (Series 99) Examination. [426]

Each FINRA member, with very limited exceptions, must have at least two registered principals (who must pass a qualification examination for principals)
