Editors’ Preface

Proposals for regulation designed to address competition issues in digital markets have started to proliferate as policymakers have, in recent years, moved from deliberation to action.

With rolling waves of overlapping rules to navigate, businesses and practitioners may rightly feel overwhelmed. Written by global experts, this guide navigates uncharted waters to bring clarity to a brave new world of competition regulation in digital markets.

From the complex network of new regimes and rules, we identify three trends.

First, **many substantive rules mimic past or pending antitrust cases**. The drive for *ex ante* regulation stems from a consensus that traditional competition law rules are too slow, and the burden of proof on authorities too high, to protect and enhance competition in digital markets. Accordingly, some forthcoming rules prohibit certain conduct up front across firms and across product and service categories, with limited scope to look at effects on competition or for firms to justify conduct based on economic efficiencies. They obviate the need for targeted antitrust enforcement against specific firms and practices.

For example, rules on interoperability for operating systems reflect the European workgroup server case against Microsoft. Rules on self-preferencing in ranking and preinstallation of apps on smartphones are inspired by previous cases against Google. Rules concerning app stores’ mandated use of billing systems stem from investigations into Apple. And rules on the use of business user data to compete with those business users mirror investigations into Amazon and Meta. In addition, most regimes import broader principles from competition law, such as the notion of anticompetitive effects, the boundaries between integrated and separate products, and the concepts of fairness, reasonableness, and non-discrimination.

At the same time, competition law will remain relevant even as *ex ante* regulatory regimes come into being. Regimes like the European Digital Markets Act (“**DMA**”) and South Korea’s app store rules are sufficiently specific to leave space for antitrust to tackle conduct—and firms—beyond their scope. As EU Competition Commissioner Margrethe Vestager has said, antitrust and regulation “are complementary – both will remain necessary.”

Second, **the relevance of anticompetitive effects or consumer benefits when assessing firms’ practices varies across regimes**. Under the DMA, for example, there is no express requirement for the European Commission to establish that a breach of the rules adversely affects competition before finding a violation. Presuming anticompetitive harm in this way is driven by a view that certain forms of conduct that were traditionally considered competitively beneficial, or at least neutral, risk damaging competition when undertaken by large digital platforms.

The dispensation of effects analyses in certain forthcoming regimes may also result from the lodestar of competition law—the protection of competition and consumers—giving ground to a different goal: the preservation of pluralistic market structures. This goal, inspired by US Supreme Court Justice Louis Brandeis and the ordoliberal origins of EU competition policy, has the consequence of disregarding welfare gains that flow from successful competition that generates both competitive advantages for innovators and benefits for consumers. It abandons the fundamental tenet of competition law that tolerates—even lauds—the exclusion of less efficient firms.

---

1 Margrethe Vestager, speech at Global Competition Law Centre annual conference, Bruges, Competition policy: where we stand and where we’re going (March 25, 2022).
This approach is not, however, universal. The proposed UK regulatory regime for digital markets, for example, will be based on evidence of harm to competition and will take consumer benefits into account. Proposed bills in the US require proof of harm to competition as a precondition of a violation. And the German section 19A amendments already in force allow firms to justify their conduct based on consumer benefits. Even under the DMA, gatekeepers should be able to rely on the general principle of proportionality under EU law to limit harmful intervention. A more flexible approach is welcome. Ignoring procompetitive benefits can deprive consumers of the fruits of innovation, whereas protecting less efficient rivals from exclusion can remove the incentive for firms to innovate altogether.

Third, authorities should engage in regulatory dialogue with target firms and other stakeholders in order to produce compliance solutions that balance the interests of end users, business users, and platforms. Such engagement is expressly contemplated under the DMA. Regulators appear also to envisage involving stakeholders in a form of participatory regulation. Margrethe Vestager has stated that DMA compliance solutions will be subject to dedicated “technical workshops” with consumers, who could help determine whether a remedy “could actually work” or “[live] up to what is in the law.” The UK Competition & Markets Authority (“CMA”) will, under the UK’s proposed regulatory regime, have the power to test and experiment with compliance measures.

Authorities seem particularly interested in interventions that could result in digital firms changing the designs of their digital products in order to promote greater user choice. For example, recent investigations and research by the CMA demonstrate its appetite for engaging with firms’ designs—from the positioning of buttons to the color of text—as it mulls potential regulatory rules. The European Commission also has experience in scrutinizing the minutiae of user interface design through previous cases where it negotiated choice screens on the Windows and Android platforms and the design of Google’s search page. Participation from industry will introduce an additional dimension to designing, testing, and iterating workable compliance solutions in this area.

Thomas Graf, Jackie Holland, Henry Mostyn, and Patrick Todd

December 2022
Australia

**Rules Under Development**

In Australia, digital firms are subject to general competition and consumer protection laws applicable to all firms. In March 2021, Australia introduced a “News Media and Digital Platforms Mandatory Bargaining Code” intended to address the bargaining power imbalance between news media businesses and digital platforms. The Australian Competition and Consumer Commission is currently conducting a five-year inquiry into digital platform services, due to be finalized in March 2025. Until then, digital markets regulation in Australia remains pending and its contents uncertain.

*Authored by* Henry Mostyn, Goksu Kalayci, and Leonor Vulpe Albari

1. **What rules govern competition in digital markets in Australia?**

The legislation governing competition in digital markets is set out in the Competition and Consumer Act 2020 (the “Act”). In March 2021, the Act was amended to include the News Media and Digital Platforms Mandatory Bargaining Code (the “Publisher Code”), intended to address the bargaining power imbalance between news media businesses and digital platforms (specifically Google and Meta). The Code applies only to “designated digital platforms,” but the Treasurer has not yet designated any such platform.

**March 2021**

**IN MARCH 2021, THE COMPETITION AND CONSUMER ACT 2020 WAS AMENDED TO INCLUDE A BARGAINING CODE INTENDED TO ADDRESS THE BARGAINING POWER IMBALANCE BETWEEN MEDIA BUSINESSES AND CERTAIN DIGITAL PLATFORMS.**

Any digital platform designated under the Publisher Code is required to comply with certain general requirements in relation to its designated services (see Question 6 for more details).
The Act is enforced by the Australian Competition and Consumer Commission (the “ACCC”), an independent government agency. The ACCC must apply to the Federal Court of Australia to seek orders enforcing the Act, including by penalties and injunctions. The ACCC is not itself a determinative body.

2. What is the status of any forthcoming digital markets regulation in Australia?

The ACCC is currently conducting a five-year inquiry into digital platform services (the “DPS Inquiry”), as directed by the government. Until the DPS Inquiry is finalized, digital markets regulation in Australia remains pending, and its contents uncertain.

Rod Sims’ recent remarks, however, indicate that the ACCC may recommend ex ante rules. On September 28, 2022, the former ACCC chair said that “there should be ex ante rules to describe what [digital platforms] should and shouldn’t do.” Sims referred to regulation in various jurisdictions, including Germany, the US, and the UK, before concluding that “if Australia doesn’t get on board, the bus will leave without us.”

As part of the DPS Inquiry, the ACCC has published, and is continuing to publish, interim reports every six months. The DPS Inquiry will conclude with the publication of a final report, which the ACCC aims to publish by March 31, 2025.

Most recently, as part of the DPS Inquiry, on November 11, 2022, the ACCC published its fifth interim report on competition and consumer issues and regulatory reform. It was published off the back of a discussion paper, published on February 28, 2022, in which the ACCC sought stakeholder views on the need for new regulatory tools to address competition and consumer issues in relation to the supply of digital platform services, and if so, options for regulatory reform.

In its fifth interim report, the ACCC recommended mandatory, service-specific codes of conduct for “designated” digital platforms, operating under high-level principles enshrined in legislation (similar to the forthcoming regulatory regime in the UK). The ACCC also proposed strengthening consumer protection laws with an economy-wide prohibition on unfair trading practices, and rules applicable to all digital platforms on scams, harmful apps, fake reviews, dispute resolution standards, and an ombudsman scheme.

The Government will review the ACCC’s proposal and conduct further consultation before deciding whether to propose legislation. New laws and codes are unlikely to be in place until 2024.

3. How are the proposed rules expected to be enforced?

The ACCC has indicated that it does not consider that proceedings under existing legislation will be sufficient alone to address systemic competition concerns in the digital services industry in Australia. It therefore recommends that the new rules should allow the ACCC to develop mandatory, service-specific codes of conduct for “designated” digital platforms, operating under high-level principles enshrined in primary legislation. The ACCC should be responsible for enforcing such regulatory solutions, including by

---

1 See Monash University, Roundtable Discussion (September 28, 2022), 1:05-1:07.
3 The ACCC recommends that such principles should focus on promoting competition on the merits, informed and effective consumer choice, and fair trading and transparency. See ACCC, Digital Platforms Services Inquiry Interim Report No. 5: Regulatory Reform (September 2022).
making designation decisions, which should be wider than its current enforcement powers under the Act.

The ACCC has also established a new Digital Platforms branch with AUD 27 million in funding and extensive investigative powers. According to former ACCC chair, Rod Sims, the new branch will “ensure continuous and close scrutiny of this complex sector.”

$27mn

THE ACCC HAS ESTABLISHED A NEW DIGITAL PLATFORMS BRANCH WITH AUD 27 MILLION IN FUNDING AND EXTENSIVE INVESTIGATIVE POWERS.

The parameters of the proposed new regime are unclear, but the ACCC’s final report on digital advertising and interim reports for the DPS Inquiry suggest that the rules and enforcement of the new regulation may be structured as follows:

— The ACCC will develop sector specific rules to address competition concerns in digital markets (e.g., ad tech, online search, social media, and app marketplaces).

— The rules will apply to providers of digital services that meet certain criteria, which will be linked to their market power and/or strategic position in the sector.

4. To which firms will the proposed rules apply?

The rules will apply to providers of digital services that meet certain predetermined criteria linked to a provider’s market power and/or strategic position. The ACCC’s final report on digital advertising, and its interim reports on search, social media, app marketplaces, and regulatory reform as part of the DPS Inquiry, contemplate that platform owners such as Google, Apple, and Meta will be within scope of the new rules.

5. What are the main substantive rules that would govern the firms covered by the proposed digital markets regulation?

The ACCC has not yet set out what its proposed ex ante regulations of digital platforms will cover, but it may involve obligations of the kind set out in the EU’s Digital Markets Act and under consideration in other jurisdictions.

The ACCC’s fifth interim report on regulatory reform¹ (published as part of the DPS Inquiry) provides some examples of what could be covered in the ACCC’s codes of conduct:

— Rules prohibiting anticompetitive self-preferencing;

— Rules prohibiting anticompetitive tying and bundling;

— Rules limiting pre-installation and default settings in certain circumstances;

— Data access and portability requirements, but only once privacy and security risks are appropriately managed;

— Transparency requirements in app review processes;

— Transparency requirements in ad tech; and

— Choice screens, following a careful examination of the effectiveness of such rules in other jurisdictions.

⁴ ACCC, Speech by Rod Sims: The ACCC’s Digital Platforms Inquiry and the need for competition, consumer protection and regulatory responses (August 6, 2020).

¹ ACCC, Digital Platforms Services Inquiry Interim Report No. 5: Regulatory Reform (September 2022).
As described under Question 2, the ACCC also proposes strengthening consumer protection laws with an economy-wide prohibition on unfair trading practices, and rules applicable to all digital platforms on scams, harmful apps, fake reviews, dispute resolution standards, and an ombudsman scheme.

6. Are there specific rules governing digital platforms’ relationships with publishers in Australia?

As described under Question 1, Australia’s Publisher Code addresses the perceived bargaining power imbalance between digital platforms and news media businesses. It aims to facilitate bargaining between designated digital platforms and news media businesses for remuneration for their news content. The Publisher Code applies only to “designated digital platforms” and their “designated services.” No digital platform has yet been designated by the Treasurer.

Any digital platform that is designated under the Publisher Code will be required to comply with a set of general requirements in relation to its designated services and its engagement with registered news businesses. For example, designated digital platforms will be required:

— to participate in bargaining, and negotiate in good faith, upon receiving a notice from a registered news business to bargain;

— if no agreement is reached within three months, to participate in a mediation and negotiate in good faith; and

— if no agreement is reached after two months of mediation, to participate in arbitration in good faith.

The Publisher Code also allows designated digital platforms and news businesses to reach agreements outside the Code. The ACCC must be notified of any agreements to disapply provisions of the Code.

On February 28, 2022, the Treasurer began its review of the Publisher Code in consultation with the ACCC and other Australian government departments.

7. Will the ACCC need to show anticompetitive effects in order to establish a breach of the proposed rules?

Until the ACCC’s DPS Inquiry final report is published, it remains unclear what rules the ACCC will recommend, and whether the ACCC will need to demonstrate the effects of firms’ conduct in order to establish a breach of the proposed rules.

8. Will firms be able to defend or objectively justify their conduct under the proposed rules?

Until the ACCC’s DPS Inquiry final report is published, it remains unclear what rules the ACCC will recommend, and whether, under those rules, firms will be able to defend or objectively justify their conduct.

The ACCC’s fifth interim report (published as part of the DPS Inquiry) indicates that the ACCC is considering drafting codes of conduct that allow for defenses or justifications. In discussing its recommendations for targeted competition obligations, the ACCC explained that “[t]he drafting of obligations should consider any justifiable reasons for the conduct (such as necessary and proportionate privacy or security justifications).”

---

6 ACCC, Digital Platforms Services Inquiry Interim Report No. 5: Regulatory Reform (September 2022).
7 Ibid., p. 123.
9. What procedural safeguards will there be under the proposed rules?

Until the ACCC’s DPS Inquiry final report is published, it remains unclear what rules the ACCC will recommend and what procedural safeguards will accompany those rules.

10. What kinds of penalties or remedies will the ACCC be able to impose following a breach of the proposed rules?

Potential sanctions and penalties will likely be addressed in the ACCC’s final report at the conclusion of its five-year DPS Inquiry. In its fifth interim report, the ACCC explained that “significant financial penalties”, as well as injunctions, declarations, and disqualification orders should be available for breaches of new consumer and competition obligations. The ACCC stated that penalties available against digital platforms should reflect the financial strength of the digital platforms and should, at a minimum, be equivalent to the largest penalties already available under the Act.

11. Has the ACCC issued any guidance or reports regarding the proposed rules?

The ACCC has published a series of reports following sector inquiries into digital platforms, digital advertising services, and digital platform services:

— Digital platforms inquiry: final report (June 2019).

— Digital platform services inquiry 2020-2025, including:
  - September 2020 interim report.
  - March 2021 interim report on app marketplaces.
  - September 2021 interim report on search defaults and choice screens.
  - February 2022 discussion paper seeking stakeholder views on the need for new regulatory tools to address competition and consumer issues in relation to the supply of digital platform services, and if so, options for regulatory reform.
  - March 2022 interim report on general online retail marketplaces.
  - September 2022 interim report on regulatory reform (published on November 11, 2022).

12. Will the proposed rules be competition based, or will they target other types of conduct, such as consumer protection, moderation of content, or privacy?

Until the ACCC’s DPS Inquiry final report is published, it remains unclear what rules the ACCC will recommend, and whether the regime will be competition based.

---

9 Ibid., pp. 191-192.
10 ACCC, Digital Platforms Inquiry: Final report (June 2019).
16 ACCC, Digital platforms inquiry Interim Report No. 4: General online retail marketplaces (March 2022).
17 ACCC, Digital Platforms Services Inquiry Interim Report No. 5: Regulatory Reform (September 2022).
In light of the ACCC’s fifth interim report\(^{18}\) (published as part of the DPS Inquiry), it is likely that any new regime, if proposed, will touch on a range of related issues, from competition to consumer protection and online privacy.

The ACCC’s fifth interim report proposes regulation to address the harms to competition and consumers arising from digital platform services, and discusses how to implement regulation without causing more harm than good, for example by safeguarding consumers’ privacy.

13. What is the current enforcement practice with respect to conduct that is expected to be addressed by the proposed rules?

Enforcement action against digital platforms has largely focused on consumer protection measures, as opposed to breaches of antitrust law. Recent enforcement action includes:

— Federal Court finding against Google that it misled consumers about personal location data collected through Android mobile devices between 2017-2018 (April 2021).\(^{19}\)

— Federal Court proceedings against Meta that it misled consumers by representing that the free Onavo Protect app would keep users’ data private, but instead used the data for its commercial benefit (since December 2020).\(^{20}\)

— Federal Court proceedings against Meta, alleging that the company engaged in false, misleading, or deceptive conduct by publishing scam advertisements featuring prominent Australian public figures (since March 2022).\(^{21}\)

14. Are there merger rules specific to digital platforms in Australia?

While new merger control rules for digital platforms are not yet in force, the ACCC recommended the following changes to Australian merger control in its final report on the Digital Platforms inquiry:\(^{22}\)

— Amend the relevant part of the Act to include the following additional factors to be taken into account in the merger analysis:

  • the likelihood that the acquisition would result in the removal from the market of a potential competitor; and
  
  • the nature and significance of assets, including data and technology, being acquired.

— Require large digital platforms to provide advance notice to the ACCC of any proposed acquisitions that may impact competition in Australia. The ACCC proposes that the details of the notification protocol be agreed between it and each digital platform, and would specify:

  • the types of acquisitions would require notification, including minimum transaction value; and
  
  • the minimum advance notification period prior to completion for ACCC to assess the proposed acquisition.

In August 2021, the ACCC proposed a further set of significant revisions to Australian merger control, stating that the current regime is not

\(^{20}\) ACCC, ACCC alleges Facebook misled consumers when promoting app to ‘protect’ users’ data (December 16, 2020).

\(^{21}\) ACCC, ACCC takes action over alleged misleading conduct by Meta for publishing scam celebrity crypto ads on Facebook (March 18, 2022).

\(^{22}\) ACCC, Digital Platforms Inquiry: Final report (June 2019).
“fit for purpose.” These wider-ranging proposals include:

— Changing Australia’s current voluntary merger review regime to a mandatory or suspensory one, where merging parties contemplating transactions that exceed certain thresholds cannot complete pending ACCC approval.

— Confining appeals against ACCC decisions to limited merits review.

— Changing the substance of the merger test, including by:
  
  • updating the factors to be taken into account (as above);

  • lowering the current threshold of “likely” to substantially lessen the competition in the market;

  • introducing a presumption that transactions where a merger party has substantial market power substantially lessens competition; and

  • introducing special rules for acquisitions involving large digital platforms, to address the particular challenges these transactions can pose.

---

23 ACCC, Speech by Rod Sims: Protecting and promoting competition in Australia (August 27, 2021).
1. **What rules govern competition in digital markets in China?**

There is currently no standalone digital-specific competition legislation in China. Digital firms are subject to general competition, consumer protection, and data security laws applicable to all firms, which may contain competition-related provisions specific to online platform operators.¹

The main governing competition law in China is the Anti-Monopoly Law (“AML”). The first major amendments since AML’s enactment (“AML Amendments”), which include digital-specific provisions, took effect on August 1, 2022. The AML is supplemented by a number of implementing regulations and guidelines, including the Antitrust Guidelines for Online Platforms that provide guidance on the application of AML to online platforms. The AML Amendments are vague and designed to be supplemented by updates to various pieces of guidance and implementing regulations.

2. **What is the status of any forthcoming digital markets regulation in China?**

The AML Amendments, which include digital-specific provisions, took effect on August 1, 2022. The AML Amendments are vague and designed to be supplemented by updates to various pieces of guidance and implementing regulations, which the Chinese competition authority has been updating, including:

— Draft updates to the Regulation on Prohibition of Abuse of Dominant Market Position (“Abuse of Dominance Regulation”), which propose to add a provision prohibiting dominant platform firms from self-preferencing and using non-public data of platform participants.

---

¹ Certain existing and draft non-competition laws and regulations contain digital-specific rules and provisions. This chapter focuses on laws and regulations that are substantially related to competition.
Draft updates to the Regulation on Prohibition of Monopolistic Agreements, which propose to add a provision prohibiting firms from entering into monopolistic agreements via data, advantage in algorithm, technologies or capital, or platform rules.

Although it remains uncertain when the draft updates will be adopted, they reflect the Chinese competition authority’s enforcement practices in digital markets.

Numerous other digital-specific regulations are under consideration in China, but it is currently uncertain whether and when they will take effect. In particular:

### AUGUST 2021

A new “Anti-Unfair Online Competition Regulation” was published for public consultation.

### OCTOBER 2021

Two draft guidelines were published for public comments.

### NOVEMBER 2021

The Cybersecurity Administration of China published the draft Network Data Security Management Regulation for public comments.

— In August 2021, a new Anti-Unfair Online Competition Regulation was published for public consultation. The draft regulation covers conduct including online false advertising, online defamation, and exclusive dealing. It requires that online platform operators enforce against unfair behavior on their platforms by participants such as vendors.

— In October 2021, two draft guidelines were published for public comments proposing to adopt an online platform classification regime (“Platform Classification Regime”) where platforms would be classified based on factors such as main business area, number of active users, and market capitalization. Based on their classifications, platforms would be subject to different obligations in the areas of data protection, fair competition, and labor treatment.

— In November 2021, the Cybersecurity Administration of China published the draft Network Data Security Management Regulation (“Data Security Regulation”) for public comments. The draft regulation focuses on cybersecurity and privacy but also includes competition rules, such as those that prohibit online platform operators from taking advantage of data for unfair discriminatory practices against users or vendors using the platform.

### 3. How are the proposed rules expected to be enforced?

The AML and the accompanying antitrust regulations and guidelines are enforced by the State Anti-Monopoly Bureau of China’s State Administration for Market Regulation (“SAMR”) and its local branches. Anti-monopoly Enforcement Division I of the State Anti-Monopoly Bureau has also set up a department dedicated to enforcement against online platforms.

The enforcement of competition rules under the other digital legislation may involve other authorities, such as the Cybersecurity Administration of China.

---

1 The proposed Anti-Unfair Online Competition Regulation and the proposed Platform Classification Regime will also be enforced by SAMR.
4. To which firms will the proposed rules apply?

The AML is applicable to all firms. Certain provisions in the accompanying regulations and guidelines apply to operators of online platforms, which are defined as “a form of business organization that enables bilateral or interdependent parties across the platform to interact through network information technology under the rules and facilitation provided by a specific carrier, thereby creating value together.”

The proposed Anti-Unfair Online Competition Regulation would apply to all firms that carry out activities online.

The proposed Platform Classification Regime covers all operators of online platforms. Platforms that are classified as “super large platforms” would face additional obligations. Super large platforms are those with more than 500 million global annual active users, are active in multiple business areas, and have a market capitalization of more than CNY 1 trillion (c. USD 16 billion).

The proposed Data Security Regulation covers all online data processing and management activities within China.

5. What are the main substantive rules that would govern firms covered by the proposed rules?

The various proposals under consideration in China (see Question 2 above) include a mix of new rules that would apply to various classes of digital firms. For example:

— Self-preferencing. The draft updates to the Abuse of Dominance Regulation, an AML implementing regulation, for example, propose to add a provision on self-preferencing that would prohibit dominant online platforms from, without justification, (1) giving priority to the display or order of their own products, or (2) using the non-public data of operators on the platform for the development of their own products or to inform their decision-making. Under the Platform Classification Regime, those firms operating what are deemed super large platforms would also be prohibited from using non-public data of operators on platforms without justification in competition with these operators.

— Interoperability. Under the Platform Classification Regime, those firms operating super large platforms would be subject to obligations to ensure interoperability with other platforms. For example, super large platforms may be required to offer multiple e-payment options at checkout, including those offered by rivals.

— Unfair data practices. The draft Data Security Regulation prohibits online platform operators from engaging in a range of anticompetitive or unfair competition practices concerning data. Several of these rules mirror proposals in other jurisdictions, like the EU (but go even further). Proposed rules include addressing platforms from taking advantage of data for unfair discriminatory practices, unfair competition against vendors within the platform, impairing users’ right to make decisions about the processing of their data, processing data without user consent, and unreasonably restricting small-to-medium sized enterprises on the platform from fairly obtaining industry and market data generated by the platform.

— Digital-Based Monopolistic Agreements. The draft updates to Regulation on Prohibition of Monopolistic Agreements, another AML implementing regulation, propose to add a provision that would prohibit firms from entering into monopolistic agreements via data, advantage in algorithm, technologies or capital, or platform rules.

---

1 Article 2(1), Antitrust Guidelines for Online Platforms.
6. Are there specific rules governing digital platforms’ relationships with publishers?

No.

7. Will SAMR need to show anticompetitive effects in order to establish a breach of the proposed rules?

Under the AML and their accompanying regulations, SAMR generally needs to establish anticompetitive effects in order to prove an infringement, although effects can be presumed for the most serious anticompetitive conduct (e.g., price-fixing cartels).

Under the draft competition-related provisions of the proposed digital-specific rules, authorities may not need to establish the effects of certain conduct in order to establish a breach. For example, the proposed Platform Classification Regime requires that super large platforms avoid self-preferencing and promote interoperability with other platforms, regardless of the conduct’s effect on competition.

8. Will firms be able to defend or objectively justify their conduct under the proposed rules?

Under the AML, firms may defend against an abuse of dominance allegation by showing justifiable reasons for their conduct.

Firms will also be able to defend themselves based on justifications under the proposed updates to the Abuse of Dominance Regulation. The proposed updates provide that potential legitimate justifications may include that the conduct is consistent with industry standards or transaction norms, and other justifications support the reasonableness of the conduct.

Whether such a defense is available under the proposed Anti-Unfair Online Competition Regulation and Platform Classification Regime varies between the specific provisions.

9. What procedural safeguards will there be under the proposed rules?

Under the AML and the accompanying regulations, a firm may appeal SAMR’s decisions via administrative reconsideration or litigation pursuant to the Administrative Procedure Law.

Prior to a penalty decision, a firm has the right to be informed of the facts and reasons against it, state its case, put forward a defense, and apply for a hearing according to laws. To date, few parties have pursued administrative appeals, which ended either in dismissal or affirmation of the penalty decisions.

A decision under the proposed Anti-Unfair Online Competition Regulation and the draft Data Security Regulation may also be appealed via administrative reconsideration or litigation pursuant to the Administrative Procedure Law, which also provides for the right to be informed, the right to put forward a defense, and the right to request a hearing.

It is unclear at this time what procedural safeguards would be available under the proposed Platform Classification Regime.

---

4 Art. 20, Updates to Regulations on Prohibition of Abuse of Dominant Position (July 2022, Draft for comments).
5 In particular, the defense would be available for provisions with qualifiers such as “without justifiable reasons” or “reasonable”.
6 Art. 65, Anti-Monopoly Law (First Amendment).
7 Art. 51, Anti-Monopoly Law (First Amendment), Arts. 44, 45 and 63 of Administrative Penalty Law.
10. What kinds of penalties or remedies will SAMR be able to impose following a breach of the proposed rules?

Under the AML, a firm may be fined 1-10% of its turnover for implementing monopolistic agreements based on either horizontal violations or abuse of dominance violations. For severe violations or repeat offenders, the AML now allows SAMR to impose a fine two to five times the statutory limit.

The proposed Anti-Unfair Online Competition Regulation provides that most violations would be subject to fines up to CNY 5 million (c. USD 740,000) pursuant to China’s Anti-Unfair Competition Law. Violations that constitute abuse of dominance should be fined in accordance with the AML. In 2021, Alibaba was fined CNY 18.228 billion (c. USD 2.8 billion) and Meituan was fined CNY 3.44 billion (c. USD 534 million) for abuse of dominance based on platform exclusive dealing requirements (see further Question 14).

The draft Data Security Regulation provides for fines of up to CNY 10 million (c. USD 1.5 million), suspension or termination of operation, and revocation of business licenses.

It remains unclear what penalties or remedies can be imposed under the Platform Classification Regimes.

11. Has SAMR issued any guidance or reports regarding the proposed rules?

No. However, the Anti-Monopoly Committee of the State Council has issued Antitrust Guidelines for Online Platforms that provide guidance on the application of AML to online platforms.⁹

12. Will the new regime be competition based, or will it target other types of conduct, such as consumer protection, moderation of content, or privacy?

The AML Amendments and the accompanying guidelines and regulations are competition based.

The proposed Anti-Unfair Online Competition Regulation covers a wide range of issues, including competition, consumer protection, moderation of content, and data usage.

The proposed Platform Classification Regime likewise touches on a wide range of issues, including fair competition, anti-monopoly, data protection, cybersecurity, credit rating, anti-monopoly, intellectual property, privacy, and consumer protection.

The proposed Network Data Security Management Regulation focuses on cybersecurity and privacy.

13. What is the current enforcement practice with respect to conduct that is expected to be addressed by the proposed rules?

Antitrust enforcement against Chinese internet platforms has been an enforcement focus of SAMR since 2020. SAMR has issued a handful of penalty decisions under the current AML, focusing on the imposition of exclusive dealing contracts on platforms’ business users. For example:

— **Abuse of dominance fine against Alibaba.**
  In April 2021, SAMR imposed a record CNY 18.228 billion (c. USD 2.8 billion) fine against Alibaba for abuse of dominance in the market for internet retail platform services by forcing exclusive contracts on vendors and restricting vendors from multi-homing on other platforms via incentive and penalty mechanisms.

---

⁸ Art. 38, Anti-Unfair Online Competition Regulation (August 2021, Draft for comments).
— Abuse of dominance fine against Meituan. In October 2021, SAMR fined Meituan CNY 3.44 billion (USD 534 million) for abuse of its dominant position in the Chinese market for online food delivery platform services by forcing exclusive dealing contracts on vendors and restricting vendors from participating on rival food delivery platforms by charging non-exclusive high commission fees, giving lower promotional priority, and other differential conditions.

14. Are there merger rules specific to digital platforms in China?

Recent AML amendments specify that SAMR has the power to investigate transactions that fall below the notification thresholds if they have anticompetitive effects. This power was previously specified in the AML implementing regulations, and its recent statutory footing reflects the growing appetite in China to enforce merger control rules against so-called "killer acquisitions".

SAMR has also proposed amendments, via AML implementing regulations, to the current merger filing thresholds that are generally applicable to all firms, though are clearly targeted at acquisitions of smaller companies by larger Chinese technology firms. The proposed amendments include a new threshold covering acquisitions of companies with a market capitalization (or valuation) no lower than 800 million (c. USD 120 million) and at least one third of its revenues generated in China by a company with China turnover exceeding RMB 100 billion (c. USD 15 billion). The amendments also propose to increase the current turnover thresholds applicable to all transactions.

NEW THRESHOLD COVERING ACQUISITIONS OF COMPANIES WITH A MARKET CAPITALIZATION (OR VALUATION)

¥800MN
Target has market capitalization of at least ¥800 million (c. $120 million) and at least one third of its revenues are generated in China.

¥100BN
Acquirer's Chinese turnover exceeds ¥100 billion (c. $15 billion)

1. What rules govern competition in digital markets in the EU?

Digital firms are subject to general competition and consumer protection laws applicable to all firms (e.g., the Treaty of the Functioning of the European Union (“TFEU”), European Union Merger Regulation, and General Data Protection Regulation).

The European institutions have adopted two main regulations to govern the conduct of digital firms: the Digital Markets Act ("DMA") and the Digital Services Act ("DSA"). These regulations form part of the European Commission’s wider “Digital Services Act Package” which aims to “establish a level playing field for businesses” and to “create a safer digital space where the fundamental rights of users are protected.”

The DMA marks a paradigm shift in the regulation of digital markets, giving the Commission unprecedented powers to regulate large digital platforms. It formulates a series of behavioral “dos and don’ts” for “gatekeeper” platforms that are inspired by competition law cases and that are considered important to protect and enhance competition in digital markets. The DMA entered into force on November 1, 2022, and its substantive rules will become operational during Q1 of 2024. Meanwhile, enforcement of existing competition laws against large digital platforms remains a priority for the European Commission, with pending cases against Google, Apple, Meta, Amazon, and Microsoft.

---

1 European Commission, The Digital Services Act package (July 5, 2022).
it disseminate. It formulates rules for digital intermediaries relating to exemption from liability for content, due diligence obligations, and oversight of content moderation activities. The DSA's rules are expected to become operational during Q1 of 2024.

2. What is the status of the DMA and DSA?

The final text of the DMA was approved by the European Parliament and subsequently ratified by the European Council in July 2022. The DMA was published in the Official Journal on October 12, 2022 and it formally entered into force on November 1, 2022.

Key future dates include:

— Gatekeepers will have to notify their “Core Platform Services” (“CPSs”) that meet applicable business and end user thresholds by July 3, 2023.

— The Commission will issue decisions to designate CPSs by September 6, 2023.

— The DMA’s substantive rules will become operational six months later, between January and March 2024. (The rules on mergers, discussed below in Question 14, will enter into force earlier, as the Commission designates platforms as gatekeepers, between July 3 and September 6, 2023.)

The final text of the DSA was approved by the European Parliament and subsequently approved by the European Council in early October 2022. It is expected to be signed by the Council and European Parliament at the end of October 2022. The DSA will formally enter into force twenty days after publication in the Official Journal.

Key future dates include:

— Providers of online platforms and search engines must publish data on their average monthly active service recipients (i.e., end users and business users) three months after the DSA enters into force (likely February 2023). Based on this publication, the Commission may designate them as “Very Large Online Platforms” (“VLOPs”) or a “Very Large Online Search Engines” (“VLOSEs”).

— The Commission will then issue decisions to designate VLOPs and VLOSEs. Firms designated as VLOPs and VLOSEs will have four months following the Commission’s designation decision to comply with the relevant DSA obligations.

3. How will the DMA be enforced?

The Commission will be the sole authority empowered to enforce the DMA, though private parties may be able to bring actions based on the DMA before civil courts for some of the rules (see Question 15).

Designation process. Firms need to be designated as gatekeepers for the DMA’s rules to become applicable. Only the specific services designated as CPSs are subject to the DMA’s behavioral rules. The process for designation is as follows:

— Gatekeeper notification. If a firm operates one of the CPSs listed in the DMA that meets the quantitative thresholds under Art. 3 (see further Question 4), it must notify the Commission within two months that it falls within the scope of the DMA. If in their gatekeeper notifications, firms can seek to rebut the presumption of gatekeeper status,
albeit the DMA says that this would happen only in “exceptional circumstances”. The DMA also explains that the Commission will not consider arguments against designation based on market definition or economic efficiencies.3

— **Gatekeeper designation.** The Commission must designate a firm as a gatekeeper within forty-five working days after receiving the firm’s gatekeeper notification.4

- If a firm has sought to rebut the gatekeeper presumption, but the Commission does not believe the arguments to be “sufficiently substantiated,” it must reject the rebuttal within forty-five working days after receiving the firm’s gatekeeper notification.5

- If a firm has sought to rebut the gatekeeper presumption, and the Commission believes the arguments to be “sufficiently substantiated”, it may launch a market investigation within forty-five working days.6 The Commission should communicate its preliminary findings within three months and complete the investigation within five months.7

- The Commission may also launch a market investigation to determine whether a CPS should be designated despite the service not meeting the quantitative thresholds.8 The Commission should communicate its preliminary findings within six months and complete the investigation within twelve months.9

— **Compliance.** Firms will have six months to comply with the DMA’s behavioral rules following the Commission’s designation decision.10 Within this timeframe, gatekeepers must submit to the Commission an independently audited description of any consumer profiling techniques that it applies to or across its CPSs.11 They should also submit a report describing their compliance with the behavioral rules in Arts. 5-7.12

**Further specification process.** The behavioral rules set forth in Arts. 5 to 7 of the DMA apply directly and are self-executing, without further specification by the Commission.

That said, gatekeepers may request the Commission to engage in a process to determine whether the gatekeeper’s measures comply with the behavioral obligations set out in Arts. 6 and 7 (but not Art. 5).13 The Commission has the discretion to decide whether to engage in this process in line with general principles of equal treatment, proportionality, and good administration.

If the Commission wants to specify measures the gatekeeper must implement to comply with Arts. 6 or 7, it must first adopt a decision opening formal proceedings.14 Within six months of this decision, it may then adopt an implementing act

---

1 DMA, Art. 3(5) and Recital 23.
2 DMA, Art. 3(4).
3 DMA, Art. 3(5).
4 DMA, Art. 3(3), referring to the procedure in Art. 17.
5 DMA, Art. 17(3).
6 DMA, Art. 3(8), referring to the procedure in Art. 17.
7 DMA, Art. 17(1).
8 DMA, Art. 3(10).
9 DMA, Art. 15.
10 DMA, Art. 11.
11 DMA, Arts. 8(2-3). To do so, the gatekeeper must submit a “reasoned submission” setting out the measures it intends to and/or has already implemented to comply with Art. 6 or 7 rules. It must also submit a non-confidential version which can be shared with third parties.
12 DMA, Art. 8(2) referring to the procedure in Art. 20.
specifying the measures that the gatekeeper must implement to be compliant.

This engagement process, however, does not prevent the Commission from adopting a non-compliance decision or imposing fines.

**Enforcement process.** The Commission may at any stage issue a request for information to a firm, carry out interviews with consenting natural or legal persons, and conduct physical inspections.\(^{15}\)

Where the Commission suspects that a gatekeeper may not be complying with the DMA’s rules, its enforcement practice will likely follow these steps:

— **Opening of proceedings.** The Commission must adopt a decision opening formal proceedings when it intends to investigate potential non-compliance.\(^{16}\)

— **Statement of objections.** If the Commission considers adopting a non-compliance decision, it must communicate its preliminary findings to the gatekeeper and set out its proposed remedies in a statement of objections. The Commission may also consult with third parties.\(^{17}\)

— **Response to statement of objections and access to file.** Gatekeepers will be permitted to respond to the Commission’s preliminary findings.\(^{18}\) They will also be able to receive access to the Commission’s file (see Question 9).\(^{19}\)

— **Non-compliance decision.** The Commission must aim to publish a non-compliance decision within twelve months from the opening of proceedings where it considers that a gatekeeper has infringed the DMA’s rules.\(^{20}\) The Commission may impose fines (see Question 10).\(^{21}\) The DMA does not set out a timeline for the Commission to adopt a decision finding no violation.

— **Response to non-compliance decision.** In response to a non-compliance decision, the gatekeeper must explain how it intends to bring the infringement to an end within the deadline specified in the Commission’s decision.\(^{22}\)

— **Appeal.** Commission decisions are subject to appeals before the EU courts by the addressees of those decisions but they do not automatically have suspensory effect (see Question 9).

— **Investigations into systematic non-compliance.** The Commission may also launch a market investigation to assess whether a gatekeeper engages in systematic non-compliance (i.e., where the Commission has issued at least three non-compliance decisions within a period of eight years). The Commission must communicate its preliminary findings to the gatekeeper within six months (including what remedies it considers may be necessary and proportionate) and conclude the investigation within twelve months.\(^{23}\) If the Commission finds a gatekeeper to have engaged in systematic non-compliance, the Commission may impose behavioral or

\(^{23}\) The Commission may, however, extend the deadline within which it must communicate its preliminary findings or publish a non-compliance decision where it is objectively justified and proportionate.
4. What firms does the DMA apply to?

The DMA applies to platforms that operate as gatekeepers between business users and end users and that hold an “entrenched and durable position.”

To be a gatekeeper, a firm must operate at least one CPS in at least three member states. CPSs are defined based on a broad list of services: online intermediation services (e.g., online marketplaces and app stores), search engines, social networks, video-sharing platforms, number-independent interpersonal communication services, operating systems, web browsers, virtual assistants, cloud computing services, and online advertising services.25

If a firm operates a CPS, it will be presumed to be a gatekeeper if it meets three cumulative criteria:26

— **Financial threshold.** The firm’s group must have an annual EU turnover of at least EUR 75 billion in each of the last three financial years or an average market capitalization amounting to at least EUR 75 billion in the last financial year.

— **End users and business users.** The CPS must have at least 45 million monthly active end users (“MAUs”) established or located in the EU and at least 10,000 annual active business users established in the EU. The DMA’s annex provides a methodology and indicators for calculating MAUs and business users, per CPS category.

— **Lasting basis.** The quantitative thresholds for end users and business users must be met in each of the last three financial years.

Even if the presumption of gatekeeper status does not apply, the Commission can designate firms offering CPSs as gatekeepers on the basis of qualitative criteria, albeit this is a longer process requiring an up to twelve month market investigation.27

The Commission must, under the qualitative designation procedure, establish that the firm in question has a significant impact on the market and operates a CPS that is an important gateway and that enjoys an entrenched and durable position.

The DMA sets out a series of factors that the Commission must take into account, at least in part, to qualitatively designate a gatekeeper.28 Examples include the size and turnover of the

24 DMA, Art. 18.
25 DMA, Art. 2(2).
26 DMA, Art. 3.
27 DMA, Arts. 3(8) and 17.
28 DMA, Art. 3(8).
firm, CPS user figures, network effects and data-driven advantages, benefits arising from scale and scope, and lock-in effects.

The DMA also allows firms providing CPSs, in exceptional circumstances, to rebut a presumption of gatekeeper status. The DMA states that arguments related to market definition or efficiencies will not be taken into account as part of this assessment. As discussed in Question 3, the Commission may reject these arguments within forty-five working days after the firm’s gatekeeper notification or launch a market investigation that should take up to five months.

Once a firm is designated as a gatekeeper, it must comply with the DMA’s behavioral rules for each of its CPSs that satisfy the quantitative thresholds. In other words, the DMA is not “all in” such that once a firm is designated as a gatekeeper, the DMA’s rules would apply to all its products or services. Rather, only the specific products or services designated as CPSs are subject to the DMA’s rules. This feature of the DMA contrasts with some other digital regulatory regimes, such as Section 19a of the German Competition Act.

5. What are the main substantive rules that govern the firms covered by the DMA?

The DMA sets out three sets of behavioral obligations with which gatekeepers must comply. The first set of obligations is presented as being “specific” (Art. 5), while the other two are described as being open ended and capable of further specification by the Commission (Arts. 6 and 7). In practice, the difference between these obligations is reasonably minor: all rules appear to apply directly and are self-executing.

Some of the DMA’s rules apply to all CPS categories. For example:

- Prohibition on combining or cross-using personal data obtained by a CPS with data obtained by other services without the user’s consent (Art. 5(2)).
- Prohibition on using non-publicly available data of business users of CPSs to compete with the business users (Art. 6(2)).
- Requirement to provide end users of CPSs, free of charge, with the ability to port their data to other platforms (Art. 6(9)).

Other rules apply to specific categories of CPS. For example:

- Requirement to allow end users to uninstall apps from a CPS operating system (Art. 6(3)).
- Requirement to enable users to easily change defaults and to show choice screens on their CPS operating systems for choosing virtual assistants, web browsers, and online search engines in certain circumstances (Art. 6(3)).
- Prohibition on CPS search engines, online intermediation platforms, virtual assistants, and video sharing platforms to treat first party services more favorably in ranking compared to similar third party services (Art. 6(5)).
- Requirement for CPS operating systems and virtual assistants to give third party service providers and hardware providers, free of charge, interoperability with and access to the same hardware and software features as to the gatekeepers first party products (Art. 6(7)).

---

29 DMA, Art. 3(5).
30 DMA, Recital 23.
31 DMA, Arts. 3(5) and 17(3).
32 As discussed in response to Question 15, Art. 5 rules may be susceptible to private litigation but arguably Arts. 6 and 7 are not because the DMA recognizes that these rules require further specification.
— Requirement for CPS online search engines to share anonymized ranking, query, click, and view data with rival search engines on a fair, reasonable, and non-discriminatory basis (Art. 6(11)).

— Requirement to make the basic functionalities of a number-independent interpersonal communications service interoperable with rival service “by providing the necessary technical interfaces or similar solutions that facilitate interoperability” (Art. 7).

For a summary of all the DMA’s rules, see the Annex at the end of this Chapter.

6. Are there specific rules governing digital platforms’ relationships with news publishers?

There are no rules in the DMA regulating the relationship of online platforms and news publishers. In particular, contrary to some demands raised during the legislative process, there are no obligations for platforms to pay news publishers for content that appears on their CPSs.

While some have suggested that Art. 6(12) might require gatekeepers to pay news publishers for the display of content, Members of Parliament that were involved in the negotiation of the DMA’s text have clarified that this is not the case.33

7. Does the Commission need to show anticompetitive effects in order to establish a breach of the DMA?

Not expressly. The Commission does not need to establish the competitive effects of gatekeeper’s conduct in order to establish a breach of the DMA’s behavioral rules. The Commission will, however, need to consider firms’ arguments that the conduct in question either is not covered by the scope of the rule, falls under the narrow grounds for suspension or exemption in Arts. 9 and 10 of the DMA, or is proportionate given the DMA’s overall objectives.

In addition, the DMA is subject to the overall principle of proportionality (see Question 8).

8. Can firms defend or justify their conduct under the DMA?

The DMA does not explicitly allow for efficiency justifications and only provides for narrow grounds for suspension or exemption:

— **Suspension**, if the obligation puts the “viability” of the service at risk “due to exceptional circumstances beyond the control of the gatekeeper,” which is a high bar.34

Suspension may be subject to conditions and obligations defined by the Commission.

— **Exemption**, on grounds of public health or public security.35

In practice, however, the DMA must be interpreted, applied, and enforced based on the fundamental principle of proportionality.36

The Commission’s measures must therefore be appropriate and necessary to achieve

---

33 See e.g., tweets by Marcel Kolaja.
34 DMA, Art. 9.
35 DMA, Art. 10.
36 TFEU, Art. 5. See also Maurits Dolmans, Henry Mostyn, and Emmi Kuivalainen, Rigid Justice is Injustice: The EU’s Digital Markets Act should include an express proportionality safeguard (December 10, 2021).
the objectives of the DMA. Where there are numerous appropriate measures, the least onerous measures should be used, and the disadvantages of the measures must not be disproportionate to the aims pursued.  

Accordingly, gatekeepers should be able to rely on the principle of proportionality to justify their conduct under the DMA. Proportionality is a general principle of EU law, and it is therefore implied that proportionality has to be considered by the Commission in each individual case.

Finally, several rules explicitly import concepts of fairness, reasonableness, or proportionality, and therefore by implication allow for justifications on those grounds. Such rules include:

- **Art. 6(3)**, which carves out the uninstallation obligation for apps that are essential for the operating system or device and are not offered on a standalone basis by third parties;

- **Art. 6(5)**, which refers to fair conditions of ranking;

- **Art. 6(7)**, which refers to necessary and proportionate measures to ensure interoperability while not compromising the integrity of the CPS or its associated hardware and software;

- **Art. 6(11)**, which refers to fair and reasonable conditions of access to search data; and

- **Art. 6(12)**, which refers to fair and reasonable access to app stores, search engines, or social networks.

### 9. What procedural safeguards does the DMA provide?

Ahead of adopting any decision under the DMA (e.g., non-compliance, fines, commitments, suspension, exemption, market investigation), the Commission must inform the gatekeeper of its preliminary findings and measures that it may propose in light of its preliminary findings. The Commission will provide the gatekeeper with a deadline (at least fourteen days) within which it may respond to the Commission’s preliminary findings.  

Gatekeepers are entitled to have access to the Commission’s file subject to the legitimate interests of undertakings in the protection of their business secrets. The right of access does not extend to confidential information and internal documents of the Commission or the NCAs.

Gatekeepers will be able to appeal the Commission’s decisions under the DMA before the EU courts. The EU courts will conduct a full review of the facts and law underpinning the Commission’s reasoning, and the normal processes can be expected to apply (e.g., there is no bar on private parties adducing new evidence before the EU Courts).

In traditional competition cases, the Commission has enjoyed a margin of discretion when it comes to complex economic assessments, such as market definition and dominance. When it comes to the DMA, however, there is not expected to be such a margin of discretion because the DMA is supposed to avoid complex economic assessments in favor of simple rules.

---

37 See Judgment of the Court of Justice of November 13, 1990, in Case C-331/48 The Queen v Minister of Agriculture, Fisheries and Food and Secretary of State for Health, ex parte: Fidesa et al., ECR I-4023; Judgment of the the Court of Justice of October 5, 1994 in Joined Cases C-331/93, C-300/93 and C-362/93 Antonio Crispolti v Fattoria Autonoma Tabacchi and Giuseppe Natale and Antonio Pontillo v Donatab Srl, ECR I-4863; and Judgment of the Court of Justice of May 5, 1998 in Case C-180/96 United Kingdom v Commission, ECR I-2265.

38 DMA, Arts. 34(1-2).

39 DMA, Art. 34(4).

Appeals before the EU courts will not have automatic suspensive effect unless interim measures are granted. Parties can apply for interim measures. The test for granting such measures is whether the appeal gives rise to a prima facie case and there is urgency because implementing the decision gives rise to a risk of serious and irreparable harm.

10. What kinds of penalties or remedies can the Commission impose following a breach of the DMA?

Non-compliance with the DMA’s rules can lead to fines of up to 10%—or, in the event of repeated infringements, up to 20%—of annual global turnover. The Commission may also impose behavioral and structural remedies in the case of systematic infringements (i.e., where the gatekeeper violates the rules at least three times in eight years).

In instances where there has been a breach of the procedural framework (e.g., failure to provide the Commission with complete and accurate info, including notification for gatekeeper designation), gatekeepers can be fined up to 1% of global annual turnover.

There is no personal or criminal liability under the DMA.

11. Has the Commission issued any guidance or reports regarding the DMA?

The Commission has the power to issue guidance to assist gatekeepers in the implementation of their obligations under the DMA, but it has not yet done so. The Commission is expected to publish draft guidance for consultation in November 2022, before finalizing the guidance in early 2023.

12. Is the new regime competition based, or does it target other types of conduct, such as consumer protection, moderation of content, or privacy?

The DMA is principally competition based and many of its behavioral rules have been inspired by previous competition cases. Its rules touch on conduct relating to a range of issues, such as privacy, data usage, and consumer protection issues.

The EU is separately introducing new regimes to tackle other areas of concern in digital markets. The Digital Services Act seeks to improve user safety online (particularly in relation to illegal content), transparency, and the accountability of online platforms. The Data Act intends to regulate online platforms’ data practices, provide users and businesses with greater control over their data, and create a harmonized framework for data sharing within the EU.

13. What is the Commission’s current enforcement practice with respect to conduct that is expected to be addressed by the DMA?

Many of the DMA’s rules are inspired by the European Commission’s previous competition decisions or ongoing investigations. For example:

— **Apple Pay investigation.** The Commission has issued a statement of objections in its investigation into whether Apple has abused its dominance by limiting access to the near-field communication technology used for

---

42 DMA, Arts. 30(1-2).
43 DMA, Arts. 18(1-2).
44 DMA, Art. 30(3).
45 DMA, Art. 46 and Recital 95.
46 The European Commission published its proposal for the Data Act in February 2022. The European institutions are currently negotiating the final text. See European Commission, COM/2022/68 final, Proposal for a Regulation of the European Parliament and of the Counsel on harmonised rules on fair access to and use of data (Data Act).
contactless payments on mobile devices only to Apple Pay.47 This investigation inspired the DMA's interoperability obligation for operating systems and virtual assistants (Art. 6(7)), along with the workgroup server case against Microsoft.

— **Apple App Store investigation.** The Commission is investigating concerns that Apple mandates the use of its proprietary in-app billing system by app developers on iOS and restricts the ability of iOS app developers to inform users of alternative payment methods outside of apps via anti-steering provisions.48 This inspired the DMA’s anti-steering provisions (Arts. 5(4) and 5(5)) and the ban on app stores requiring the use of first party payment systems by app developers (Art. 5(7)).

— **Amazon Marketplace investigation.** The Commission is investigating Amazon’s use of non-public data related to its third party sellers to compete with them as a retailer on its own online marketplace, its criteria for selecting which product offer is placed in the “Buy Box”, and which sellers can list products under Amazon’s “Prime” label on its marketplace.49 Amazon has offered commitments and negotiations are ongoing.50 This investigation inspired the DMA’s rule prohibiting the use of business users’ data to compete with them (Art. 6(2)).

— **Google Shopping decision.** The Commission found that Google had abused its dominance by positioning and displaying Google Shopping more prominently than rival comparison shopping services in its general search results pages. The General Court partly upheld the Commission’s ruling.51 Google is appealing the decision to the Court of Justice. This decision inspired the DMA’s non-discriminatory ranking obligation (Art. 6(5)).

---

### 14. Are there merger rules specific to digital platforms in the EU?

Art. 14 DMA requires gatekeepers to inform the Commission of all intended mergers and acquisitions “where the merging entities or the target of concentration provide core platform services or any other services in the digital sector or enable the collection of data,” regardless of whether these transactions meet EU merger control thresholds.52

---

**Article 14**

**ARTICLE 14 IS DESIGNED TO HELP THE COMMISSION REVIEW TRANSACTIONS THAT FALL BELOW THE JURISDICTIONAL THRESHOLDS OF THE EU MERGER REGULATION.

In practice, Art. 14 means that gatekeepers should inform the Commission of substantially all of their transactions prior to closing. But the Commission does not need to make a clearance decision under Art. 14 before a gatekeeper can close a deal.

---

---

49 See European Commission, Commission sends Statement of Objections to Amazon for the use of non-public independent seller data and opens second investigation into its e-commerce business practices (November 10, 2020).
50 See European Commission, Antitrust: Commission seeks feedback on commitments offered by Amazon concerning marketplace seller data and access to Buy Box and Prime (July 14, 2022).
52 DMA, Art. 14(1) (emphasis added). “Digital sector” means the sector of products and services provided by means of, or through, information society services. “Information society service” means any service normally provided for remuneration, at a distance, by electronic means and at the individual request of a recipient of services.
Art. 14 is designed to help the Commission review transactions that fall below the jurisdictional thresholds of the EU Merger Regulation by making it easier for NCAs to create jurisdiction for the Commission through referrals under Art. 22 of the EU Merger Regulation. The Art. 22 route allows the Commission to review transactions that do not meet EU or national merger control thresholds, even post-closing, within strict time limits.

15. Is private enforcement possible under the DMA?

EU law provides for the ability of parties to invoke EU regulations before national courts if the rules in question are sufficiently precise and unconditional and confer rights to individuals. At least some, but not necessarily all, of the DMA’s behavioral rules may meet these conditions. The DMA, accordingly, formulates rules for “proceedings for the application” of the DMA before national courts (e.g., the right of the national court to ask the Commission for an opinion, the obligation to transmit judgments, and the right of the Commission to intervene in such proceedings).

National courts will, however, not have the power to impose fines or to designate gatekeepers, which will be reserved for the Commission.

Behavioral rules susceptible to private litigation might include rules listed under Art. 5. By contrast, it is more questionable whether the rules under Art. 6 and 7 are sufficiently precise for private litigation because the DMA recognizes that these rules require further specification.

The recent Court of Justice judgment in DB Station & Service AG may have implications for private enforcement of secondary EU legislation such as the DMA. On one reading, the judgment suggests that before a private action could be taken, there needs to be a decision of the competent sectoral regulator. The consequences of this judgment are still being assessed.

16. What is the role of national competition authorities in DMA enforcement?

As the Commission will be the sole enforcer of the DMA, national competition authorities (“NCAs”) will not be able to adopt gatekeeper designation or infringement decisions under the DMA. However, the DMA provides for NCA involvement in supporting enforcement and investigating potential DMA infringements. In particular:

— The Commission may consult NCAs on any aspect of the DMA.
— The Commission will have the ability to ask NCAs to support its market investigations under the DMA.
— NCAs may investigate cases of potential non-compliance under Arts. 5, 6, and 7 of the DMA in their own territories provided that the Commission is not investigating the same conduct.
— NCAs will be competent to hear complaints by third parties about non-compliance with the DMA.
17. What role do interested third parties (such as complainants) play in DMA enforcement?

While the DMA does not set out a specific complaint handling procedure, third parties may inform the Commission or NCAs about any conduct that may infringe the DMA. The Commission and NCAs retain full discretion to decide whether or not to investigate the conduct in question.62

The DMA also provides for third party involvement at various stages of the enforcement process. In particular:

— Third parties may provide comments ahead of the Commission adopting any specifying measures that the gatekeeper must implement to comply effectively with specific Art. 6 or 7 obligations.63

— Third parties may be consulted before the Commission implements a non-compliance decision.64

— Third parties may provide comments prior to the Commission adopting any commitments to address non-compliance.65

— The Commission may consult third parties during a market investigation into whether to expand the list of CPSs or gatekeeper obligations.66

— Third parties may provide comments ahead of the Commission adopting an implementing act.67

Forthcoming implementing legislation may specify the position of complainants and interested third parties in more detail.

18. Can the Commission add new CPS categories or substantive rules?

Yes, the Commission may conduct a market investigation to examine whether other services in the digital sector should be added to the list of CPSs or whether new obligations should be included in the DMA. The Commission must aim to publish a report outlining the findings of its investigation within eighteen months from the opening of the investigation. It may then make a legislative proposal to the European Parliament and Council to add further CPSs or new obligations to the DMA.68

## Annex: Overview of Substantive Rules

<table>
<thead>
<tr>
<th>Article</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>5(2)</td>
<td><strong>User consent for combining personal data.</strong> Requires gatekeepers to obtain user consent for (1) processing personal data obtained from third parties using a CPS for advertising purposes; (2) combining personal data between a CPS and another first party or third party service; (3) cross-using personal data between a CPS and a first party service provided separately by the gatekeeper; and (4) signing in users to other first party services in order to combine their personal data, subject to certain GDPR-based carve-outs, for instance, to protect users or to comply with other laws.</td>
</tr>
<tr>
<td>5(3)</td>
<td><strong>No MFNs.</strong> Requires designated online intermediation services (like app stores or marketplaces) to allow their businesses to offer the same products to end users at different prices or conditions both on other platforms and their own websites.</td>
</tr>
<tr>
<td>5(4)</td>
<td><strong>No anti-steering provisions.</strong> Gatekeepers cannot restrict app developers from promoting offers to users and contracting with users outside the gatekeeper’s app store. Gatekeepers must allow users to access content, subscriptions, features, and other items acquired without using the gatekeeper’s app store.</td>
</tr>
<tr>
<td>5(5)</td>
<td><strong>Use of identification services, payment services, and web browser engines.</strong> Prohibits gatekeepers from requiring businesses or end users to use a gatekeeper’s identification service, payment service, or web browser engine in the context of services provided by businesses using the gatekeeper’s CPS.</td>
</tr>
<tr>
<td>5(6)</td>
<td><strong>Tying subscriptions or registrations.</strong> Prohibits gatekeepers from conditioning business or end users’ access to one CPS on the users subscribing or registering with another CPS.</td>
</tr>
<tr>
<td>5(9)</td>
<td><strong>Disclosure of ads prices and revenue shares.</strong> Requires gatekeepers to disclose pricing information, revenue share information, and the measures on which prices and remuneration are calculated to advertisers and publishers upon their request, free of charge and on a daily basis, if this information is also available to the gatekeeper.</td>
</tr>
<tr>
<td>6(2)</td>
<td><strong>Use of business data to compete.</strong> Prohibits gatekeepers from using non-publicly available data generated or provided by business users and the customers of those business users on gatekeepers’ CPSs, to compete with the business users.</td>
</tr>
<tr>
<td>6(3)</td>
<td><strong>App uninstallation, easily switchable defaults, and choice screens.</strong> Requires gatekeepers to allow end users to uninstall apps from the operating system (“OS”) of the gatekeeper. The provision includes a safeguard for apps that (1) are considered essential to the functioning of the operating system or the device; and (2) are not offered by third parties on a standalone basis. Gatekeepers will also be required to enable users to easily switch defaults on their designated operating systems, browsers, or virtual assistants. They will also, in certain circumstances, have to show choice screens to prompt users to select their default search engine, browser, or virtual assistant on the gatekeeper’s designated operating system and select their default search engine on the gatekeeper’s designated browser or virtual assistant.</td>
</tr>
<tr>
<td>6(4)</td>
<td><strong>“Sideloading” and app stores.</strong> Requires gatekeepers to allow third party apps and app stores to be installed on their operating systems. These third party apps and app stores must be accessible via means other than the CPS of the gatekeeper (i.e., users must be able to “sideload” them or download them through another app store). The obligation also precludes gatekeepers from preventing third party developers from prompting users to set their apps as default.</td>
</tr>
<tr>
<td>Article</td>
<td>Description</td>
</tr>
<tr>
<td>---------</td>
<td>-------------</td>
</tr>
<tr>
<td>6(5)</td>
<td><strong>Non-discriminatory ranking.</strong> Prohibits gatekeepers from treating their first party services and products more favorably in ranking compared to similar third party services.</td>
</tr>
<tr>
<td>6(6)</td>
<td><strong>No restrictions on multi-homing or switching on an CPSs.</strong> Prohibits gatekeepers from imposing any restrictions on end users’ ability to switch or multi-home across apps and services accessed through the gatekeeper’s CPSs.</td>
</tr>
<tr>
<td>6(7)</td>
<td><strong>Enable interoperability for operating systems and virtual assistants.</strong> Requires CPS operating systems and virtual assistants to give third party service providers and hardware providers, free of charge, interoperability with and access to the same hardware and software features as first party services. Gatekeepers may take strictly necessary and proportionate measures to ensure that interoperability does not compromise the integrity of the operating system, virtual assistant, hardware, or software.</td>
</tr>
<tr>
<td>6(8)</td>
<td><strong>Ads performance measurement tools.</strong> Requires a gatekeeper to provide advertisers and publishers with free access to relevant information and performance measuring tools so they can independently verify the performance of their advertisements.</td>
</tr>
<tr>
<td>6(9)</td>
<td><strong>Data portability.</strong> Requires gatekeepers to provide end users, free of charge, with the ability to port their data to other platforms, as well as tools to facilitate data portability.</td>
</tr>
<tr>
<td>6(10)</td>
<td><strong>Data access.</strong> Requires gatekeepers to provide businesses, upon their request, with “continuous and real time access” to data on their use of their CPS and the users interacting with their products.</td>
</tr>
<tr>
<td>6(11)</td>
<td><strong>Search data sharing.</strong> Requires online search engines to share anonymized ranking, query, click, and view data with rival search engines.</td>
</tr>
<tr>
<td>6(12)</td>
<td><strong>Fair, reasonable, and non-discriminatory access to app stores, search engines, and social networking services.</strong> Requires gatekeepers to apply fair, reasonable, and non-discriminatory general terms and conditions of access to their CPS app stores, search engines, and social networking sites. The accompanying recital makes clear that this article does not provide a general right of access to these services.</td>
</tr>
<tr>
<td>6(13)</td>
<td><strong>Termination of use.</strong> Prohibits gatekeepers from imposing contractual or technical restrictions to termination (e.g., unsubscribing or terminating a service contract more generally) on its business users and end users.</td>
</tr>
<tr>
<td>7</td>
<td><strong>Enable interoperability for messaging services.</strong> Requires gatekeepers to make the basic functionalities of their “number-independent interpersonal communications services” interoperable with rival services upon request and free of charge. This rule is designed to expand over time. Following designation, the requirement will be limited to text messages and sharing of images, voice messages, and videos between two users. Within two years of designation, the obligation will expand to messaging and sharing in groups, and within four years of designation to voice and video calls between two users as well as groups.</td>
</tr>
<tr>
<td>14</td>
<td><strong>Merger alerts.</strong> Gatekeepers will have to inform the Commission of all intended mergers and acquisitions involving “another provider of core platform services or of any other services provided in the digital sector” regardless of whether these transactions meet EU merger control thresholds. This rule is designed to facilitate the possibility of referrals under Art. 22 of the EU Merger Regulation, which enables the Commission to take jurisdiction over transactions referred by national competition authorities.</td>

Effective January 2021, Germany has introduced new rules for undertakings with “paramount cross-market significance.” The provisions, which target large digital platforms, enable the Federal Cartel Office to prohibit forms of conduct legally defined as problematic without the need to prove anticompetitive harm. General competition rules have been extended and remain applicable in parallel. The Government has announced further amendments (e.g., in relation to national enforcement of the EU Digital Markets Act).

**1. What rules govern competition in digital markets in Germany?**

In January 2021, the 10th Amendment of the Act against Restraints of Competition (“ARC”) came into effect. Focusing on competition in the digital sector, the ARC contains a new regulatory framework targeting large digital platforms, along with a revised legal framework for abuse of dominance.

With Section 19a ARC, the German legislator has enabled the Federal Cartel Office (“FCO”) to intervene in digital markets without establishing anticompetitive effects, going beyond existing rules on abuse of dominance. Section 19a follows a two-step process:

<table>
<thead>
<tr>
<th>SECTION 19A FOLLOWS A TWO-STEP PROCESS:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 The Federal Cartel Office designates an undertaking as having “paramount cross-market significance” (“PCMS”)</td>
</tr>
<tr>
<td>2 If PCMS is established, the FCO can prohibit specific forms of conduct ex ante</td>
</tr>
</tbody>
</table>

— First, the FCO designates an undertaking as having “paramount cross-market significance” (“PCMS”) based on a set of qualitative criteria without having to prove dominance in any specific market. Undertakings found to have PCMS will be subject to a five-year monitoring period.
— Second, if PCMS is established, the FCO can prohibit specific forms of conduct \textit{ex ante} (i.e., conduct deemed, in principle, harmful to competition without a finding of anticompetitive effects).

Digital undertakings remain subject to the existing provisions prohibiting the abuse of dominance. The 10th Amendment introduced several changes directed specifically at abusive conduct in digital markets, including the following:

— The relatively strict causality required between an undertaking’s dominant position and exploitative conduct like excessive contract terms has been abolished.\(^1\) Under the new rules,\(^2\) a normative causal link between the dominant position and the anticompetitive conduct is sufficient to establish an exploitative abuse. In practice, this means that conduct that the undertaking is only able to enforce due to its dominant position, (e.g., contractual terms that violate other legal requirements) may be regarded as abusive, even if smaller competitors engage in the same conduct.\(^3\)

— New criteria were introduced for the assessment of relative dominance of intermediaries.\(^4\)

— Existing rules on abusive conduct by undertakings with relative market power were extended to capture relative dominance based on access to data.\(^5\) This can capture scenarios where data has not been shared with any third party in the past.

In addition, the 10th Amendment introduced a provision enabling the FCO to counter the so-called “tipping” of markets towards a company that benefits from strong network effects.\(^6\) The new provision prohibits undertakings from hindering competitors from achieving their own network effects if fair competition is significantly impeded. This applies not only to undertakings with dominance but also with relative or superior market power.

Side from the ARC, digital undertakings can be subject to sector-specific regulations such as the German Telemedia and Telecommunications Acts and general consumer and data protection laws (e.g., consent requirements for data processing, the requirement to provide a masthead on websites, and various customer protection provisions). The Network Enforcement Act requires digital platforms to moderate content, in particular to remove illegal content. Recently, Germany introduced the Telecommunications-Telemedia Data Protection Act, implementing the rules for tracking “cookies” under the EU ePrivacy Directive (EU/2002/\$8).

---

\(^1\) In exclusionary conduct cases, normative causality was already accepted by the Federal Court of Justice before.

\(^2\) This was implemented by a small change of wording in Section 19(1) ARC (“abuse” instead of “the abusive exploitation”).

\(^3\) See Explanatory Memorandum, BT-Drs. 19/23492 (October 19, 2020), p. 71 et seq.

\(^4\) Section 19(2) no 4 ARC.

\(^5\) Section 18(3)(b) ARC.

\(^6\) Section 20(1a) ARC.

\(^7\) Section 20(3a) ARC.
2. What is the status of any forthcoming digital regulation in this jurisdiction?

The Government plans to amend the ARC further. A first draft for an 11th Amendment was published on September 26, 2022. It would introduce the following changes:

— **Sector inquiries.** The FCO would be able to impose structural remedies, independent of an abuse, when a significant, continuous, or repeated distortion of competition is identified during a sector inquiry. As a last resort, the FCO may order the divestment of shares or assets, unless those shares or assets have been acquired within five years prior to the investigation and cleared under German or EU merger control rules. Following a sector inquiry, the FCO could order undertakings active in this sector to notify acquisitions where the target’s turnover is more than EUR 500,000.

— **Profit skimming.** The new rules would introduce a presumption that an undertaking violating competition rules has obtained a profit of at least 1% of its domestic turnover with the affected product over the entire duration of the infringement. At the same time, the maximum profit that can be skimmed off is capped at 10% of the worldwide turnover of the undertaking.

— **Digital Markets Act enforcement.** While the European Commission remains the sole enforcement authority for the DMA, the draft rules would authorize the FCO to assist the European Commission by reviewing undertakings’ compliance with the DMA. To facilitate private enforcement of the DMA in Germany, the Draft 11th Amendment extends the provisions transposing the Damages Directive to the DMA where appropriate.

3. How are competition rules in digital markets enforced?

Only the FCO can prohibit conduct under Section 19a ARC. The provision is not self-executing, meaning changes in market conduct are only required following an order from the FCO. Using the new powers set out in Section 19a ARC, the FCO has initiated proceedings against Meta, Google, Amazon, and Apple to determine whether they have PCMS, as well as related conduct investigations. In its investigations, the FCO can employ a wide range of measures, ranging from requests for information or surrender of documents to the right to search business premises, homes, land, and objects.

PCMS designation and prohibition of conduct can be combined in one decision, but the FCO has not done this in any PCMS decisions to date (see Question 12).

The FCO also enforces general provisions against abuse of dominance by ordering undertakings to cease problematic conduct and by imposing fines. However, in practice abuse of dominance provisions, including the new provisions on data access, tipping, and intermediation power, are mainly enforced by private parties before German civil courts without an intervention by the FCO. By contrast, private parties can only enforce Section 19a ARC before courts after the FCO has imposed a prohibition decision.

---

9 Section 31f(4) Draft 11th Amendment.

10 Section 31f(3) Draft 11th Amendment.

12 Section 59 - 59b ARC.
The Draft 11th Amendment would strengthen the FCO’s role as the primary enforcer of German competition law, especially with regard to its proposed new power to impose structural remedies following sector inquiries. In addition, with the entry into force of the EU Digital Markets Act, the FCO could become the central national authority in all related enforcement matters (e.g., assisting the European Commission in its investigations or investigating DMA violations at national level).

4. Which firms does Section 19a ARC apply to?

Section 19a ARC applies to undertakings that are found to have PCMS. The provision is aimed mainly at digital platforms. For a finding of PCMS, the FCO takes into account in particular the following (non-exhaustive) factors:

— an undertaking’s dominant position on one or several markets;

— the undertaking’s financial strength or access to other resources;

— vertical integration and activities in related markets;

— access to data relevant for competition; and

— relevance of the undertaking’s activities for third party access to supply and its related influence on the business activities of third parties.

The FCO has determined that Google, Amazon, and Meta have PCMS (see also Question 12). A similar investigation against Apple is ongoing. According to several press reports, the FCO is also preparing PCMS proceedings against Microsoft.

The rules on abuse of dominance apply to all undertakings with a dominant market position, including undertakings in the digital sector. As a special feature of German competition law, the ARC’s provisions are also aimed at undertakings with relative market power that are not dominant in absolute terms but only in relation inter partes to other market participants. Some factors are of particular relevance for digital companies, such as the “access to competitively relevant data,” which is listed as a factor to determine PCMS and can also support a finding of relative market power.

5. What are the main substantive rules that govern the firms covered by Section 19a ARC?

When the FCO has designated an undertaking to have PCMS, the FCO can prohibit the following conducts:

— Self-preferencing, i.e., giving preferential treatment to the firm’s own products or services to the detriment of those offered by the firm’s rivals, in particular by preferential display of the firm’s own services on its platform or exclusive pre-installation or integration of its own services.

— Exclusionary conduct targeting companies active on upstream and downstream markets if the platform with PCMS is relevant for access to those markets, i.e., hindering market access by using mandatory pre-installation or integration of software or by creating hurdles for other companies to

* It is not clear whether the German legislator has the right to propose such a significant power under Regulation 1/2003.

* Section 18 (3a) ARC.

* Section 18 (3a), Section 20 (1a), (3a) ARC.

* Section 19a(2) no 1 ARC.

* Section 19a(2) no 2 ARC.
advertise or to contact new customers outside the platform.

— **Leveraging or “market roll up”,** i.e., hindering competitors on markets into which the undertaking could quickly expand its position (e.g., through tying or bundling).

— **Impediment of competition through data processing,** i.e., increasing entry barriers or otherwise hindering rivals through the processing of competitively relevant data or requiring users to consent to such processing, in particular:

  - Making the use of a service conditional on the user agreeing to the processing of data from other services of the undertaking or a third party provider without giving the user sufficient choice as to whether, how, and for what purpose such data are processed; and

  - Processing competitively sensitive data received from other undertakings for purposes other than those necessary for the provision of the firm’s own services to these undertakings without giving these undertakings sufficient choice as to whether, how, and for what purpose such data are processed.

— **Hampering interoperability or data portability,** thereby impeding competition. This rule aims to prevent lock-in effects that discourage consumers and/or commercial customers from switching between different platforms or services or to use multiple services or platforms in parallel.

— **Withholding information,** i.e., making it difficult for commercial customers to assess the value of the services they provide (e.g., by giving insufficient information on scope, quality, and performance of the service).

— **Demanding disproportionate fees or conditions** for displaying the offers of another undertaking (e.g., by requiring the transfer of rights or data not required for their display).

If the FCO establishes that the requirements of one or more of the conducts listed above are met, it can prohibit that conduct if the undertaking in question fails to establish that its conduct is objectively justified (see Question 8). Violating a legally binding order can lead to fines of up to 10% of the undertaking’s worldwide turnover in the previous business year (see Question 10).

### 6. Are there specific rules governing digital platforms’ relationships with publishers in Germany?

Under German copyright law, press publishers have a right to collect fees from digital platforms if the platforms access or use their content for commercial purposes (e.g., search engines that show extracts of press articles in their search results). However, in 2019 the European Court of Justice held that this provision is inapplicable because Germany failed to notify the European Commission contrary to obligations under the Transparency Directive.

Media platforms and intermediaries are also subject to specific rules laid down in the “State Media Treaty” (Medienstaatsvertrag).

---

19 Section 19a(2) no 3 ARC.
20 Section 19a(2) no 4 ARC.
21 Section 19a(2) no 5 ARC.
22 Section 19a(2) no 6 ARC.
23 Section 19a(2) no 7 ARC.
24 Section 87f - 87h UrhG.
26 Section 78 - 99e MStV (State Media Treaty).
These provisions are not primarily focused on maintaining effective competition in media or digital markets, but instead aim to ensure plurality of opinions and diversity of media offerings. Although there are some overlaps between the two regimes, the rules against abuse of dominance and Section 19a ARC remain applicable in parallel. Accordingly, the FCO has initiated an investigation under Section 19a ARC regarding alleged unlawful discrimination against individual news publishers.

7. Does the FCO need to establish the effects of certain conduct in order to establish a breach of Section 19a ARC?

When an undertaking has been designated as having PCMS, the FCO can prohibit certain conduct without having to show that the conduct has resulted in anticompetitive effects, as long as specific conditions are met (e.g., some of the relevant conduct results in hindrance of other companies). The legislator considers all forms of conduct listed in Section 19a ARC to be capable of preventing competition on the merits. The FCO will, however, have to consider pro-competitive effects as potential objective justifications (see Question 8).

8. Can firms defend or objectively justify their conduct under Section 19a ARC?

Yes, under Section 19a(2) ARC. The burden of proof for the justification lies with the undertaking under investigation. Whether the conduct in question was objectively justified is ultimately determined in an overall assessment balancing various interests, taking into account the regulatory objective to ensure undistorted competition.

9. What procedural safeguards does Section 19a ARC include?

If the FCO intends to prohibit a specific form of conduct under Section 19a ARC, there is no statutory requirement to issue a written statement of objections before it adopts a decision. However, during the investigation, the FCO must respect parties’ procedural rights, including the right of access to file and the right to be heard. In practice, the FCO shares a statement of objections subject to a relatively short deadline for the response (e.g., one month).

An appeal against a Section 19a ARC decision is limited to one instance: the Federal Court of Justice. The judicial review is therefore significantly shortened compared to other FCO proceedings. Both the decision finding an undertaking to have PCMS and the prohibition decision(s) can be appealed on the merits. In addition, the undertaking can apply for suspension of the FCO order.

Pohlnmann/Lindhauer/Peter, Das Leistungsschutzrecht für Presseverleger und die qualifizierte News-Aggregation durch Google News Showcase: Ein Fall für § 19 und § 19a GWB? – Teil 1; NZKart 2021, 466, 469 f.

See FCO, Press Release (May 25, 2022); FCO Press Release (June 4, 2022).

Section 19a(2) ARC, Section 32b ARC.
10. What kinds of penalties or remedies can be imposed following a breach of Section 19a ARC?

Under Section 19a ARC, an undertaking can be fined for violating a binding FCO order prohibiting certain conduct. Fines can amount to 10% of the undertaking’s worldwide turnover in the previous business year. Personal fines against individuals are capped at EUR 1 million. In addition, the FCO may require undertakings to commit to all necessary and proportionate behavioral or structural remedies to end an infringement effectively. The FCO may also impose interim measures if they are deemed necessary to protect competition or other undertakings from serious harm.

The Draft 11th Amendment introduces a presumption that an undertaking violating the competition rules has obtained a profit of at least 1% of its domestic turnover from the affected product over the entire duration of the infringement. At the same time, the maximum profit that can be skimmed off is capped at 10% of the worldwide turnover of the undertaking.

Google, Amazon, and Meta as undertakings with PCMS.

12. Has the authority issued any decisions under Section 19a ARC?

The FCO has determined that Google, Amazon, and Meta have PCMS. The FCO has not yet issued a prohibition decision regarding specific conduct under Section 19a ARC.

Separately, the new provision aiming to prevent “tipping” of markets has been applied in several related court cases by the Berlin Regional Court and the Berlin Court of Appeal. The courts found that the “list-first” rebates granted by leading real estate comparison platform, Immoscout, were abusive because smaller competitors were hindered from establishing their own network effects and fair competition was restricted.

13. Is Section 19a ARC competition based, or does it target other types of conduct, such as consumer protection, moderation of content, or privacy?

Section 19a ARC is principally competition based, though there is some theoretical debate as to whether it should be considered as part of the body of competition law in Germany or as a form of ex ante regulation.

Even prior to the entry into force of Section 19a ARC, the FCO had taken into account goals adjacent to effective competition in its analyses in competition cases, (e.g., privacy and consumer protection).

10 Section 19a(2) ARC, Section 32(2) ARC, Section 32a ARC.
11 Section 34(4) Draft 11th Amendment.
13 For a list of all ongoing investigations against digital companies see here (in German).
14 See FCO, Press Releases regarding Alphabet/Google (January 5, 2022), regarding Amazon (July 6, 2022), and regarding Meta/Facebook (May 4, 2022).
15 Section 20(3a) ARC.
16 Berlin Regional Court, judgment of April 8, 2021, Case 16 O 73/21 Kart; and related proceedings (Case 15 O 390/21 Kart; Case 16 O 82/22 Kart) - Immoscout/Immowelt24.
protection). For example, in 2019, the FCO found that Meta abused its dominance through cross-service combination of user data without user consent, which violated the GDPR.38

14. What is the current enforcement practice with respect to conduct addressed by Section 19a ARC or draft 11th Amendment to the ARC?

The FCO has not yet issued a decision prohibiting a specific conduct listed in Section 19a ARC. Based on its previous findings of PCMS, the FCO is conducting the following proceedings:

— In May and June of 2021, the FCO initiated two proceedings to (1) determine whether Google’s cross-service data processing conditions sufficiently take into account user choice; and (2) assess alleged self-preferencing of Google’s own services and discrimination of individual news publishers in the “Google News Showcase”39

— In the case of Meta, the FCO is examining the linking of Oculus’ virtual reality products with Meta’s Facebook platform. After the 10th Amendment of the ARC entered into force, the FCO extended its investigation under the regular abuse of dominance framework to cover the new Section 19a provision.40

— In June 2022, the FCO initiated a proceeding to investigate Apple’s tracking rules for third party apps and its “App Tracking Transparency Framework,” which raised concerns about self-preferencing and/or impediment of other companies.41

While the FCO has designated Amazon as having PCMS, the FCO’s two open investigations into Amazon (regarding its alleged influence on resale pricing of independent merchants and agreements between Amazon and branded goods manufacturers), have been launched under existing abuse of dominance rules.42

The draft 11th Amendment to the ARC aims to increase the efficiency and impact of the FCO’s sector inquiries to improve consumer protection. The number of these inquiries can therefore be expected to increase.

The FCO is currently conducting several sector inquiries into comparison websites,43 mobile apps,44 and messenger and video services.45 In March 2022, the FCO launched a further sector inquiry into the procedures of merchants for the verification of consumer solvency when shopping online.46

15. Are there merger rules specific to digital platforms in Germany?

Undertakings designated as having PCMS are not subject to additional merger control obligations. However, the 10th Amendment modified the merger control regime to introduce new rules designed to capture acquisitions by large digital platforms that may not have been caught by existing jurisdictional thresholds:

---

38 FCO, Press Release (February 2, 2019).
41 See FCO, Press Release (June 14, 2022).
43 FCO, Sektoruntersuchung Vergleichsportale, (April 11, 2019).
44 FCO, Sektoruntersuchung Mobile Apps (July 2021); Press Release (July 29, 2021).
46 See FCO, Press Release (March 31, 2022).
— First, new powers were introduced enabling the FCO to order an undertaking to notify every transaction in one or more particular economic sectors for a three-year period if the FCO sees “indications that future concentrations will impede competition” in those sectors following a sector inquiry. The undertaking must have global sales exceeding EUR 500 million and a market share of at least 15% in Germany in the relevant sector. Only transactions where the target has sales exceeding EUR 2 million and where more than 2/3 of the sales are made in Germany are notifiable.47 While so far the new provision has only been applied in the waste recycling sector,48 the provisions are also relevant to the digital sector.

— Second, a transaction must also be notified to the FCO despite the merger not meeting traditional turnover thresholds if (1) the transaction’s consideration (i.e., “all assets and other monetary benefits” that the seller will receive in connection with the transaction) exceeds EUR 400 million at the date of closing; and (2) the target has significant market activity in Germany.

If the draft 11th Amendment to the ARC were to enter into force in its current form, the FCO would be able to order undertakings subject to a sector inquiry to notify transactions where target’s turnover exceeds EUR 500,000.49

47 Section 39a ARC.
49 Section 32f (2) Draft 11th Amendment.
In Japan, competition in digital markets is mainly governed by general competition laws. The only current regulation that specifically targets competition in digital markets is the Act on Improving Transparency and Fairness of Digital Platforms, which came into force in 2021. This is a platform-to-business regulation, and its scope is fairly narrow. The Government is currently consulting on the need for \textit{ex ante} regulations for mobile ecosystems, voice assistants, and wearable devices. A new set of regulations on competition in digital markets could, therefore, be forthcoming in the next few years.

\textit{Act on Improving Transparency and Fairness of Digital Platforms.} In May 2020, the Government introduced the Act on Improving Transparency and Fairness of Digital Platforms ("TFDPA") to address transparency and fairness issues in digital markets. The TFDPA entered into force in February 2021. The TFDPA is a platform-to-business regulation that imposes a code of conduct on certain platform operators. Initially, it applied only to app stores and online marketplaces. In July 2022, the TFDPA’s scope was expanded to include digital ads services.

---

\textbf{1. What rules govern competition in digital markets in Japan?}

Digital markets are governed by general competition law in Japan, including the Antimonopoly Act ("AMA"). The Japan Fair Trade Commission ("JFTC") amended its Merger Review Guidelines in 2019 to apply the AMA more effectively in digital markets. For example, the Guidelines now specify that the JFTC will examine network effects in mergers where relevant.

Beyond general competition law rules, there is one new law and a potential set of new regulations that govern competition in digital markets in Japan:
— **Potential new rules.** The Government is considering potential new *ex ante* regulations that would apply to providers of mobile ecosystems, voice assistants, and wearable devices. The regulations would address potential competition concerns in different layers of mobile ecosystems, including operating systems, browsers, app stores, search engines, and other digital products. The regulations would be a similar style to the EU Digital Markets Act, although the precise scope and framework of any new regime is still uncertain. The need for new regulations is currently being investigated by an inter-ministry organization called the Digital Market Competition Headquarters (“DMCH”).

2. **What is the status of any forthcoming digital regulation in Japan?**

The DMCH is still in the early stages of consulting on potential digital markets regulation, and it is not clear when any new regulation would come into force.

After an initial period of consultation, the DMCH published an Interim Report in April 2022. The Interim Report sets out the DMCH’s preliminary views on potential competition concerns in mobile ecosystems and suggests areas for further exploration.

The DMCH published feedback from its consultation on the Interim Report and set out its initial responses on August 5, 2022.

### August 5, 2022

**THE DMCH PUBLISHED FEEDBACK FROM ITS CONSULTATION ON THE INTERIM REPORT AND SET OUT ITS INITIAL RESPONSES ON AUGUST 5, 2022.**

3. **How are the rules enforced or expected to be enforced?**

Ordinary competition rules are enforced by the JFTC. The Government Ministry of Economy, Trade and Industry (“METI”) enforces the TFDPA. It is too early to say whether the DMCH process will result in new regulations, and how these would be enforced.

4. **Which firms do the rules apply to?**

The TFDPA applies to “Specified Digital Platform Providers”. To date, METI has designated the following firms as Specified Digital Platform Providers:

- **Online shopping marketplaces:** Amazon.co.jp, Rakuten Ichiba, and Yahoo! Shopping.
- **App stores:** Apple’s App Store and Google’s Play Store.
- **Digital ads platforms:**
  - **Media-integrated digital ad platform providers:** Google (Google Search and YouTube), Meta (Facebook, Messenger, and Instagram), and Yahoo! Japan.

---

2. DMCH, Documents submitted to the Secretariat (regarding the opinions received in the consultation) [title translated from Japanese] (August 5, 2022) [Japanese]. *See also* DMCH, Documents submitted to the Secretariat (issues to be discussed in the future, etc.) [title translated from Japanese] (August 5, 2022) [Japanese].
3. METI, Designation of Digital Platform Providers Subject to Specific Regulations Under the Act on Improving the Transparency and Fairness of Digital Platforms (April 1, 2022) and Designation of Digital Platform Providers Subject to Specific Regulations Under the Act on Improving the Transparency and Fairness of Digital Platforms (October 3, 2022).
The potential new DMCH rules would likely apply to large providers of mobile ecosystems. According to the Interim Report, the DMCH is considering whether certain provisions should only apply to the largest providers.

5. What are the main substantive rules that govern the firms covered by the digital regulation?

Under the TFDPA, Specified Digital Platform Providers must:

— Disclose their terms and conditions and other information (such as criteria for refusals to deal and for determining search ranking);

— Voluntarily develop procedures and systems to ensure transparency and fairness on their platforms; and

— Submit to METI an annual report with a self-assessment, explaining the measures they have taken to comply.

METI will review the annual report of each Specified Digital Platform Provider and publish an assessment of the transparency and fairness of each firm. Specified Digital Platform Providers will be expected to make voluntary improvements based on the results of those assessments. If METI suspects that a Specified Digital Platform Provider is violating the Antimonopoly Act, it can request the JFTC to take action.

For the potential new regulations, the DMCH is exploring concerns around the following broad areas:

— Pre-installation and defaults;

— Self-preferencing;

— Collection and use of data to the platform operator’s competitive advantage;

— Interoperability;

— Practices that might restrict the user from leaving the platform operator’s ecosystem; and

— Transparency and disclosure to digital platforms’ business users.

6. Are there specific rules governing digital platforms’ relationships with publishers?

No. The DMCH is not currently considering specific rules governing digital platforms’ relationships with publishers.

7. Does the authority need to establish the effects of certain conduct in order to establish a breach of the new or proposed rules?

TFDPA: No. METI assesses compliance with the TFDPA rules based on the annual reports submitted by the Specified Digital Platform Providers. Stakeholders may be invited to contribute to METI’s assessments. The results of the assessment are published along with a summary of the annual report submitted by the Specified Digital Platform Providers.
Where METI has any suspicion that a given Specified Digital Platform Provider is in violation of the AMA, it will refer the matter to the JFTC.

**Potential new rules:** It is not clear how any potential new rules would apply in practice and whether an effects analysis would be required.

**8. Can firms defend or objectively justify their conduct under the new or proposed rules?**

The TFDPA does not expressly provide that firms can objectively justify their conduct. METI assesses Specified Digital Platform Providers’ conduct based on the annual reports they submit. There is nothing to prevent providers from including objective justifications in their reports.

It is too early to say whether potential new DMCH rules would allow firms to defend or objectively justify their conduct.

**9. What procedural safeguards are there under the new or proposed rules?**

The TFDPA does not provide for express procedural safeguards, but usual competition procedures would apply if METI referred a case to the JFTC. JFTC decisions can be appealed before Japanese courts under the AMA and general administrative litigation legislation. It is too early to say what kinds of procedural safeguards are being considered under potential new DMCH rules.

**10. What kinds of penalties or remedies can be imposed following a breach of the new or proposed rules?**

A Specified Digital Platform Provider can be fined up to JPY 1 million (approximately USD 7,000) if it breaches an order issued by METI requesting it to perform disclosure obligations properly. These orders can be issued if the platform fails to implement a METI recommendation without justification.

A platform can be fined up to JPY 500,000 (approximately USD 3,500) if it fails to file an annual report, fails to provide necessary information in an annual report, or makes a false statement in an annual report.

It is too early to say what kinds of remedies could be imposed under potential new DMCH rules.

**11. Has the authority issued any guidance or reports regarding the digital regulation?**

METI has issued various pieces of guidance on aspects of the TFDPA.4

---

The DMCH has issued a summary of its Interim Report in English. The full version of the Interim Report is only available in Japanese.

12. Has the authority issued any decisions under the digital regulation in this jurisdiction?

So far, METI has only issued decisions designating Specified Digital Platform Providers under the TFDPA (see Question 4).

13. Is the new regime competition based, or does it target other types of conduct, such as consumer protection, moderation of content, or privacy?

The potential new DMCH rules will be competition based. The TFDPA is a broader platform-to-business regulation that is mainly about promoting transparency in platforms’ dealings with the listed businesses on the platform.

14. What is the current enforcement practice with respect to conduct that is expected to be addressed by the digital regulation?

The JFTC has increased its scrutiny of conduct in digital markets over the past few years. For example:

— Investigation into Amazon’s conduct on online marketplaces (closed in 2017). The JFTC investigated Amazon Japan for a suspected breach of the AMA due to its use of most favored nation clauses in seller contracts. Amazon agreed to remove the relevant clauses from contracts (or waive its right to exercise them), and not to include the clauses in future contracts.

— Investigation into Airbnb for alleged exclusionary practices (closed in 2018). The JFTC investigated Airbnb on suspicion that it was restricting competition by preventing property owners from listing properties on websites other than Airbnb. Airbnb agreed to waive its right to enforce the offending provisions.

— Investigation into Apple for its agreements with mobile network operators (closed in 2018). The JFTC investigated Apple for potential breaches of the AMA through its sales contracts with mobile network operators. The JFTC found that Apple was distorting competition by requiring three mobile network operators to offer users a plan with a lower upfront cost but potentially higher monthly costs. Apple did not allow the operators to offer any other type of iPhone plan. Apple agreed to change its sales contracts to remedy this concern.

— Investigation into Apple’s conduct on its App Store (closed in 2021). The JFTC investigated Apple on suspicion that certain App Store practices breached the AMA. For example, the App Store Guidelines stipulated that app developers selling digital content through their apps had to use Apple’s in-app payments system, which charges a fee of 15-30%. The JFTC found that this could restrict competition from other potential sales channels. Apple agreed to allow “reader” apps like Netflix, Spotify, and Hulu to include an

in-app link to allow users to make payments through their websites.10

15. Are there merger rules specific to digital platforms in Japan?

No. However, in April 2022, the JFTC announced the creation of a new office specialized in market analysis for the review of, among others, digital-related mergers.

This proposal followed the publication of a revised set of merger review guidelines in December 2019,11 which introduced significant amendments to better capture transactions in the digital sector. Under the new guidelines, parties to a merger that does not meet the notification thresholds but has a transaction value over JPY 40 billion (approximately USD 275 million) and is expected to affect Japanese consumers are strongly encouraged to voluntarily consult with the JFTC. The revised guidelines also mention data foreclosure and network effects as elements to be considered in the substantive assessment of a merger.

10 JFTC, Press release: Closing the investigation on the Suspected Violation of the Antimonopoly Act by Apple Inc. (September 2, 2021).
A recent amendment to Korea’s Telecommunications Business Act imposes specific obligations on app store operators. Other digital regulations have been introduced as bills in parliament, although the new Government is looking at setting up a framework of digital platform self-regulation as an alternative. Digital markets remain an enforcement priority area for the Korean competition authority under existing competition law rules.

1. **What rules govern competition in digital markets in South Korea?**

Competition in digital markets is governed by general Korean competition law, including the Monopoly Regulation and Fair Trade Act.

Korea was the first jurisdiction to implement—and enforce—legislation targeting specific exclusionary and unfair conduct by digital platforms. In particular, the Telecommunications Business Act has been amended to impose particular obligations on app store operators (the “TBA Amendment”) (see Question 5). This amendment took effect on September 14, 2021.

Other proposed legislation and rules governing competition in digital markets include:

- The Fairness in Online Platform Intermediary Transactions Act and the Act on Protection of Online Platform Users, which include restrictions on the terms and conditions of online intermediation platforms, price transparency obligations, and rules on the use of data generated on the platform.

- The Act on the Consumer Protection in Electronic Commerce, which includes consumer protection rules for online retailers and other platform operators.

- The Act on Protection of Newspapers, which imposes an obligation on online news service providers to remunerate news publishers.
Following the 2022 elections, the Government is considering setting up a framework for platform self-regulation as an alternative to these measures. Whether and when these proposals will enter into force therefore remains uncertain.

In July 2022, a pan-governmental consultative body was established to develop South Korea’s new digital platform self-regulation policy. It includes representatives from other authorities such as the Ministry of Science, the Korea Fair Trade Commission (“KFTC”), the Korea Communications Commission (“KCC”), and the Personal Information Protection Commission. It aims to establish a private, self-regulatory organization, incentivize those participating in self-regulation, support the organization in devising self-regulatory measures, and conduct a comprehensive study into digital markets.

In the meantime, in August 2022, the KFTC announced a survey into online platform sectors in order to identify unfair trade practices. The KFTC intends to use the survey to identify potential enforcement cases and devise a suitable and timely policy for digital platforms.

---

2. What is the status of any forthcoming digital regulation in South Korea?

The TBA Amendment, which introduced new rules specific to app stores, came into force on September 14, 2021. The status of other legislative proposals remains unclear due to the Government’s new emphasis on self-regulation by digital platforms (see Question 1).

3. How are the rules enforced or expected to be enforced?

The KFTC is generally responsible for enforcing competition law and digital markets regulation in Korea. In January 2022, the KFTC announced that its “ICT Task Force” would be reorganized into a more comprehensive “digital market response team” that will be better able to deal with fast-paced and multi-faceted digital markets.

---

1. See MLex, South Korea launches effort to develop platform self-regulation policy (July 6, 2022).
2. See MLex, Self-regulatory body for online platform launches in South Korea (August 19, 2022).
3. See MLex, South Korean competition regulator to conduct survey of online-platform sectors (August 2, 2022); MLex, Online platforms target of survey by South Korean antitrust regulator (August 2, 2022).
4. Telecommunications Business Act, Article 22-9 and Article 50.
January 2022

In January 2022, the KFTC announced that its “ICT Task Force” would be reorganized into a more comprehensive “Digital Market Response Team” that will be better able to deal with fast-paced and multi-faceted digital markets.

The Telecommunications Business Act, which includes the new rules specific to app stores, is enforced by the KCC, despite the competition law focus of the rules.

If the Government follows its current proposed path of self-regulation, it is unclear whether there would be any oversight of the firms subject to the rules that are introduced.

4. Which firms do the rules apply to?

Currently, the only new digital sector regulation in force—the TBA Amendment—applies to businesses that operate app stores that intermediate transactions of mobile content.

Other rules that have been proposed (see Question 1) would apply to digital platforms such as app stores, online marketplaces, online shops, online news services providers, search engines, and others.

5. What are the main substantive rules that govern the firms covered by the digital regulation?

The TBA Amendment prohibits app store operators from:

— Requiring app developers to use a specific payment method or preventing promotion of other payment methods by unfairly taking advantage of their superior bargaining position in intermediating transactions involving apps;

— Unfairly delaying the review of apps;

— Unfairly removing apps from their app stores; or

— Unfairly imposing discriminatory conditions and restrictions on app developers.

6. Are there specific rules governing digital platforms’ relationships with publishers?

If passed by the National Assembly, the proposed Amendment of the Newspaper Act would impose an obligation on online news service providers to pay compensation to news suppliers. It also provides for the establishment of a committee that would mediate disputes regarding payment of compensation by online news service providers and would have the authority to request submission of relevant materials.

The rules are not expected to come into force before 2023 at the earliest, though, and their future is uncertain in light of the Government’s recent exploration of self-regulation as an alternative to legislation (see Question 1).

7. Does the authority need to establish the effects of certain conduct in order to establish a breach of the rules?

Liability for breaches of the app store provisions of the Telecommunications Business Act referred to in Question 5 is strict. There is no need for the KCC to establish anticompetitive effects in order to find an infringement. However, certain aspects of the provision, such as notions of unfairness and superior bargaining power, imply that there needs to be unmeritorious conduct established based on evidence before an infringement can be found.

1 Telecommunications Business Act (April 20, 2022), Article 22-9 and Article 50.
8. Can firms defend or objectively justify their conduct under the new or proposed rules?

Liability for breaches of the app store provisions of the Telecommunications Business Act referred to in Question 5 is strict. There is no scope for firms to objectively justify their conduct.

9. What procedural safeguards do the rules include?

Under the Telecommunications Business Act, the KCC must inform the company of any measures it may seek to take and provide the company with an opportunity to be heard before issuing a formal order. The KFTC’s investigatory powers under general antitrust law are subject to the usual procedural safeguards. KFTC and KCC decisions are subject to appeal on the merits.

10. What kinds of penalties or remedies can be imposed following a breach of the rules?

The regulator can issue a corrective order and/or impose a fine of up to 3% of the company’s average annual Korean revenue during the three preceding years. A criminal fine of up to KRW 300 million (approximately USD 250,000) is also possible.

11. Has the authority issued any guidance or reports regarding the digital regulation?

An amended Enforcement Decree providing guidance on the new provisions in the TBA Amendment took effect on March 15, 2022. The guidance includes detailed information on relevant standards included in the app store rules, such as “bargaining position,” “forcedness,” and “unfairness.”

12. Has the authority issued any decisions under digital regulations in South Korea?

No. Under the TBA Amendment, the KCC has conducted an initial examination of app market operators like Google, Apple, and One Store to identify possible violations of the new app store

---

6 Enforcement Decree Of The Telecommunications Business Act (March 15, 2022).
The examination found that Google, Apple and One Store may be violating the new rules. As a result, in August 2022, the KCC announced that it would begin a fact-finding investigation to determine whether there have been any specific violations of the app store rules that warrant the imposition of a penalty or other corrective measures.9

### August 2022

In August 2022, the KCC announced that it would begin a fact-finding investigation to determine whether there have been any specific violations of the app store rules that warrant the imposition of a penalty or other corrective measures.

#### 13. Is the new regime competition based, or does it target other types of conduct, such as consumer protection, moderation of content, or privacy?

The TBA Amendment that imposes obligations on app store operators is principally competition-based, but some rules have a consumer protection flavor.

Other new laws in the digital sector that may be adopted are also expected to be competition-based with consumer protection and privacy elements. The self-regulation proposal is likely to seek to achieve similar goals.

#### 14. What is the current enforcement practice with respect to conduct that is expected to be addressed by the digital regulation?

Digital markets remain a priority area for the KFTC. For example, the agency is launching a market survey into online platform sectors with a view to identifying potential new cases and areas of concern. In recent years it has pursued investigations into the practices of international digital companies, including Meta,10 Google,11 and Apple,12 as well as large Korean digital platforms, such as Naver13 and Kakao.14 In September 2022, the KFTC conducted a dawn raid in Apple’s Korea headquarters in connection with alleged abuse of its dominance in app stores.15

#### 15. Are there merger rules specific to digital platforms in South Korea?

No. However, in December 2021, a transaction value jurisdiction threshold took effect under the Monopoly Regulation and Fair Trade Act. Under the new threshold, a transaction is notifiable if its value exceeds KRW 600 billion (approximately USD 540 million) and the acquired company is substantially active in the Korean market. This jurisdiction test applies to all firms, not only digital platforms. However, as with other jurisdictions that have implemented transaction value tests (e.g., Germany and Austria), its introduction follows growing concerns about so-called “killer acquisitions” where large firms, especially in the digital sector, acquire nascent potential competitors with small current revenues.

1. **What rules govern competition in digital markets in Turkey?**

There are currently no digital-specific competition law rules in force in Turkey. Digital firms are subject to general competition and consumer protection laws applicable to all firms under the Act No. 4054 on the Protection of Competition ("APC"). There are no special rules or exemptions applying to competition in digital markets.

2. **What is the status of any forthcoming digital regulation in Turkey?**

At the start of 2020, the Turkish Competition Authority ("TCA") initiated a sector inquiry into e-commerce platforms. In its Final Report, published in April 2022, it made policy recommendations applicable to a wider set of technology companies beyond e-commerce platforms.

Following these recommendations, in October 2022, the Turkish Government published its Draft Regulation on Amending Law on the Protection of Competition (the “Draft Regulation”). The Draft Regulation proposes amendments to the APC that in several places track the language of the EU Digital Markets Act (“DMA”) (see Question 5). The preamble to the Draft Regulations states that “the fast-paced changes in internet technologies in recent years have reshaped the digital market and consumer habits.”

---

1 Turkish Competition Authority, E-Pazaryeri Platformlari Sektor Incelemesi Nihai Raporu (available in Turkish only) (April 2022).

2 General Preamble to the Draft Regulation.
The Draft Regulation was issued for feedback from companies that are expected to be in-scope. There are, however, no updates on when the regulation is expected to take effect or what the final law will look like, if passed.

3. How is the Draft Regulation expected to be enforced?

The Draft Regulation proposes an enforcement mechanism similar to that provided by the DMA, albeit in several places it goes further. The TCA may choose to cooperate with relevant public authorities and institutions in monitoring obligations and enforcement.

Designation process

Only firms designated as undertakings with significant market power (“USMPs”) will be subject to the obligations and prohibitions proposed in the Draft Regulation. The process for designation is structured as follows:

— Notifications of USMPs. Firms that provide core platform services (“CPSs”) must apply to the TCA within thirty days of the thresholds in the relevant Communiqué (which is yet to be published) being exceeded. This application must contain the firm’s objections, if any, that despite meeting the thresholds, it does not enjoy significant market power. The TCA must review the application and make a USMP designation decision within sixty days. The TCA may also designate a firm as an USMP on qualitative grounds, even if the firm does not exceed the quantitative thresholds in the relevant Communiqué (see Question 4). A USMP designation is valid for three years. This period is extended by a further three years automatically if the undertaking does not apply to the TCA to dispute its designation at least ninety days before the end of the initial three-year period.

— CPSs. The Draft Regulation has replicated the list of CPSs from the DMA, which includes online intermediation services, online search engines, online social networks, video-sharing platforms, number independent communication services, operating systems, web browsers, virtual assistants, cloud computing services, and online advertising services.

The Draft Regulation has also largely copied the definitions of the CPSs, but not always identically.

— Relevant thresholds. The relevant quantitative thresholds that must be met for obligations to apply will be set by the TCA’s Communiqué, which has not yet been published. The Draft Regulation states that the quantitative thresholds will take into account: (1) annual gross revenues; (2) the number of end users; or (3) the number of commercial users. The use of “or” in the Draft Regulation differs from the DMA, which sets out cumulative criteria based on revenues and market capitalization and end user and business user numbers.

— Compliance. Together with its designation decision, the TCA must determine a reasonable period of time not exceeding six months for
the USMP to fulfill the substantive obligations proposed in the Draft Regulation. The USMP may submit justifications explaining why it will not be able to fulfill the relevant obligations within the prescribed time period. The TCA must evaluate the justifications within sixty days, and may order compliance by the firm if it is not convinced by the justifications.

**Enforcement process**

— **Notification of infringement.** The TCA may determine that there is an infringement on its own initiative or in response to a denouncement, complaint, or request from the Ministry. The TCA must notify an infringement decision to the defendant firm, setting out any behavioral or structural remedies with which the firm must comply. The TCA may impose structural remedies only if it is clear that behavioral measures would not be sufficient.

— **Failure to comply.** If a USMP fails to comply with the obligations set out in the Draft Regulation twice or more in a five year period, the TCA will have the power to ban mergers and acquisitions by that USMP for up to five years. This is said to protect against “the damages arising from repeated violations or to prevent serious or irreparable damages that may arise.” For other penalties imposable under the Draft Regulation, see Question 10.

4. **Which firms would the Draft Regulation apply to?**

The Draft Regulation is proposed to apply to firms designated as being USMPs. This is a similar concept to “gatekeeper” under the DMA. USMPs will be designated, similar to the DMA, based on whether they operate a CPS and meet certain quantitative thresholds. The Draft Regulation has not yet set out what these quantitative thresholds may be, so it is not yet possible to assess which kind of firms will be subject to the Draft Regulation. As noted in response to Question 3, the quantitative thresholds will take into account: (1) annual gross revenues; (2) the number of end users; or (3) the number of commercial users.

---

**THE DRAFT REGULATION STATES THAT THE QUANTITATIVE THRESHOLDS WILL TAKE INTO ACCOUNT:**

1. Annual gross revenues;
2. The number of end users; or
3. The number of commercial users.

In USMP designation decisions, the TCA may take into account factors such as ownership of the undertaking, vertical integration and conglomerate structure, economies of scale and scope, lock-in and evolution impact, switching costs, multi-homing, user behavior, M&A activity, and quantitative thresholds to be set by the relevant Communiqué.

While not completely clear, the proposed set of substantive obligations seem to apply not only to specific products (or CPSs) of the USMP, but to the whole undertaking designated as an USMP. This would mark a significant departure from the DMA, despite the obvious inspiration that has been drawn from it.

The rules proposed by the Draft Regulation apply to USMPs that provide CPSs to end users or business users located in Turkey, irrespective of

---

6 Draft Regulation, Article 6.
7 Ibid.
8 Draft Regulation, Article 5.
9 See Draft Regulation Article 4 (introducing a new Article 6/A to the APC).
whether they have offices or establishments in Turkey.10

5. **What are the main substantive rules that govern the firms covered by the Draft Regulation?**

Several of the rules appear to have been modeled on behavioral obligations in the DMA, but in places they go considerably further due to the Draft Regulation’s uncertain and open-ended drafting. These include:

— **Prohibitions on:**

- Self-preferencing in ranking, crawling, indexing, or “other conditions” (the equivalent DMA rule (Art. 6(5)) does not refer to “other conditions”);

- The use of non-public data when competing with business users (equivalent to Art. 6(2) of the DMA);

- Conditioning the supply of goods and services offered to business users and end users on the supply of other goods and services offered by the USMPs (there is no equivalent DMA provision);

- Conditioning users’ access to any CPS offered by the USMP on membership or registration to another CPS offered by the USMP (similar to Art. 5(8) of the DMA);

- Restricting business users from working with competing undertakings (there is no equivalent DMA provision);

- Combining users’ personal data obtained from one CPS with data obtained from other services the firm offers, and using such data in the context of other services, especially targeted advertising (this is similar to Art. 5(2) of the DMA, but seems to go considerably further because the DMA allows combination of personal data with user consent); and

- Discriminating between business users by imposing unfair or unreasonable conditions (there is no equivalent DMA rule that applies to all CPS types).

— **Obligations to:**

- Allow users to uninstall preinstalled applications, switch to third party applications or software, and easily change default settings (this is somewhat similar to Art. 6(3) of the DMA, though there are no express requirements to show choice screens);

- Provide business users with free, effective, continuous, and real-time access to end users’ data produced by their use of CPS (this is somewhat similar to Art. 6(10) of the DMA);

- Facilitate data portability (this is similar to Art. 6(9) of the DMA, which is about user data portability);

- Enable free interoperability of CPSs with other related products or services (this is much broader than the DMA equivalent, because the interoperability rule in the DMA (Art. 6(7)) applies only to operating systems and virtual assistants, not to all CPS types);

- Provide advertisers and publishers with access to real-time information regarding the visibility and usability of ad portfolio, including pricing terms of bids submitted, the auction process and pricing principles, and the fee paid to the publisher for the ad services (similar to Art. 5(10) of the DMA).

While the prohibitions and obligations are largely similar to those contained in the DMA, certain

---

10 Draft Regulation, Article 2.
provisions are significantly wider in scope in comparison. For example:

— The prohibition on self-preferencing covering “other conditions” extends the scope of the ban considerably.

— The prohibition on rendering goods and services dependent on other goods and services offered by the USMP might, if enforced literally, impose a broad and absolute ban on tying or bundling any type of product.

— The prohibition on restricting business users’ work with competing undertakings may cover all contractual exclusivity agreements or loyalty arrangements, irrespective of the market share of the product.

6. Are there specific rules governing digital platforms’ relationships with publishers in Turkey?

There are no rules in the Draft Regulation which regulate digital platforms’ relationships with publishers.

7. Will the TCA need to establish the effects of certain conduct in order to establish a breach of the rules?

No, there is no requirement for the TCA to establish the effects of conduct to establish a breach of the rules proposed under the Draft Regulation.

8. Can firms defend or objectively justify their conduct under the Draft Regulation?

The Draft Regulation does not contain any provisions that allow for objective justifications or defenses. In fact, it goes even beyond the DMA, which, as well as being subject to the overall principle of proportionality, has narrow defenses to cover public health and public security, and cases where the gatekeeper can demonstrate that complying with an obligation would endanger the economic viability of its operation.

9. What procedural safeguards does the Draft Regulation include?

Procedural details have not been included in the Draft Regulation. But given that the Draft Regulation contains a set of rules proposed to amend the APC, we would expect the procedural safeguards and processes set out under the APC to apply, such as the right to judicial review of TCA decisions,11 the right of access to file,12 and the right to be heard before the TCA makes a decision on remedies.13

10. What kinds of penalties or remedies can be imposed following a breach of the rules under the Draft Regulation?

The TCA may impose penalties on USMPs for non-compliance with the notification obligation and for breach of the substantive obligations. For breaches of substantive obligations, the TCA may impose administrative fines of up to 20% of the USMPs’ annual gross revenue in the financial year preceding the TCA’s decision (the Draft Regulation does not specify whether the revenue generated in Turkey or globally is used).14

11 Article 55 of the APC.
12 Communiqué No. 2010/3 on the Regulation of the Right of Access to the File and Protection of Trade Secrets.
13 Article 9 of the APC.
14 Draft Regulation, Article 9.
11. Has the TCA issued any guidance or reports regarding the digital regulation?

On April 14, 2022, the TCA published the Final Report in its sector inquiry on e-commerce platforms. The Final Report made policy recommendations, including ex ante regulation of USMPs. But the TCA has not published any guidance or reports following the issuance in October 2022 of the Draft Regulation.

12. Is the new regime competition based, or does it target other types of conduct, such as consumer protection, moderation of content, or privacy?

The proposed regime is principally competition based, with many of the rules having been inspired by the DMA. The Draft Regulation touches on issues relating to data usage, but does not address other issues relevant to digital platforms such as privacy or content moderation.

13. What is the current enforcement practice with respect to conduct that is expected to be addressed by the digital regulation?

The TCA has been active in its use of existing enforcement tools against digital platforms. Some recent enforcement action taken by the TCA include:

- **Investigation into Google Search (April 2021).** The TCA fined Google over 296 million lira for abusing a dominant position in search engine services, including by favoring its own price comparison for accommodation and local search services.

- **Interim measures against Meta for data sharing between platforms (January 2021).** The TCA found that WhatsApp’s terms of use and privacy policy requiring mandatory consent to data sharing was likely to result in serious and irreparable harm. It imposed interim measures, requiring Meta to cease the roll out of the new terms of use in Turkey.

- **Investigation into Google Adwords (November 2020).** The TCA found that Google had abused a dominant position by increasingly placing text ads above general search results. The TCA’s decision requires Google to offer text advertisements at the quality, scale, and location that will not exclude organic search results, and to submit compliance measures to the TCA.

- **Investigation against Trendyol (October 2021).** The TCA launched a preliminary investigation into whether Turkish e-commerce platform Trendyol (controlled by Alibaba) engaged in self-preferencing and discrimination against business users on its platform. It found that Trendyol had violated the APC by intervening with algorithms to rank its own products at an advantage and by providing next-day delivery only for its own products. It further found that Trendyol used business users’ data to its advantage and discriminated between business users.

14. Are there merger rules specific to digital platforms in Turkey?

Under the Draft Regulation, the TCA may ban mergers and acquisitions involving a USMP for up to five years if the USMP has breached the newly proposed obligations twice or more in five years.

---

15 Turkish Competition Authority, E-Pazaryeri Platformlari Sektor Incelemesi Nihai Raporu (available in Turkish only) (April 2022).
16 Reuters, Turkey fines Google for abusing dominant position (April 14, 2021).
17 TCA, The Competition Board launched an investigation against Facebook and WhatsApp and stopped the data sharing obligation imposed by Facebook to WhatsApp users, (January 11, 2021)
18 TCA, Reasoned Decision on Adwords (available in Turkish only) (November 12, 2020).
19 Arden Papuççiyan, Webrazzi, Rekabet Kurulu, Trendyol hakkında gecici tedbir karari aldi (October 1, 2021).
Save for this provision, the Draft Regulation does not propose amendments to existing merger rules.

Merger rules applicable to transactions involving technology companies\(^{20}\) were amended in March 2022\(^{21}\) and came into force in May 2022. Under the amended regime, the local turnover threshold does not apply to acquisitions of technology companies that operate in the Turkish market or are engaged in research and development activities or provide services in Turkey. It requires mandatory notification even where the target company has no turnover, as long as the other notification thresholds are met.

---

\(^{20}\)“Technology companies” include companies active in digital platforms, software and gaming software, financial technologies, biotechnology, pharmacology, agrochemicals, and health technologies, as well as assets related to these companies.

\(^{21}\) See Communiqué No. 2022/2 on Amending Communiqué No. 2010/4 Concerning the Mergers and Acquisitions Requiring the Turkish Competition Board’s Approval.
There are currently no digital-specific competition law rules in force in the UK. Digital firms are subject to general competition and consumer protection laws applicable to all firms. The Government has agreed to move forward with a digital regulation regime targeting firms with “strategic market status” when parliamentary time allows.

1. What rules govern competition in digital markets in the UK?

There are currently no digital-specific competition law rules in force in the UK. Digital firms are subject to general competition and consumer protection laws applicable to all firms (e.g., the Competition Act 1998, the Enterprise Act 2002, and the Consumer Rights Act 2015). Digital firms may also be subject to other sectoral regulation, depending on their activities (e.g., telecommunications rules under the Communications Act 2003).

The Government has proposed a new “pro-competition regime for digital markets”. The new regime is not expected to come into force until 2024 at the earliest. Once introduced, the regime is intended to “proactively shape the behaviour of the most powerful technology firms.”

2. What is the status of the forthcoming pro-competition regime for digital markets in the UK?

The Government has proposed a new “pro-competition regime for digital markets” targeting a small number of firms designated as having so-called strategic market status (“SMS”) in relation to specific digital activities. The Government consulted on the introduction of the new regime in July 2021, and published its response in May 2022.

The Government has stated that it will bring forward legislation to implement the new regime.

---

3 Government Consultation Response.
“when parliamentary time allows.” In October 2022, the House of Commons Business, Energy, and Industrial Strategy Committee issued a report in which it urged the Government “to publish the Draft Bill before the end of November 2022.” In November 2022, although a bill still had not been published, the UK finance minister Jeremy Hunt stated that a “Digital Markets Competition & Consumers Bill” would be brought forward by May 2023. Subsequent comments by CMA officials expressed a wish that the regime would be in place by October 2023.

The Competition and Markets Authority (“CMA”) has said that it supports the Government’s proposals and “will work with the government on the draft measures and with Parliament and stakeholders.” Former CMA Chief Executive Andrea Coscelli expressed frustration at the delay to the legislation: the UK was initially “ahead of the European legislation” regulating digital firms, while now it risks being a “rule taker”.

3. How is the pro-competition regime for digital markets expected to be enforced?

The new regime will be enforced by the “Digital Markets Unit” (“DMU”), a specialist team within the CMA. Since April 2021, the DMU has been operating in shadow form pending establishment of the new regime. The DMU is currently reported to have approximately 70 staff members.

The UK pro-competition regime for digital markets has not been finalized, but is anticipated to be structured as follows:

— The DMU will designate firms as having SMS in relation to specific digital activities following evidence-driven assessments, based on criteria that will be set out in legislation.

— Firms that are designated as having SMS will be required to comply with: (1) a set of overarching principles set out in legislation; and (2) firm-specific conduct requirements developed by the DMU. The legislative and firm-specific conduct requirements will pursue three overarching objectives, defined in legislation: “fair trading,” “open choices,” and “trust and transparency”.

— The DMU will have the power to impose remedies on firms that breach the conduct rules (e.g., fines and/or behavioral interventions). It will also be able to issue interim orders in order to pause or reverse actions taken by SMS firms if they breach conduct requirements.

— The DMU will be able to impose targeted “pro-competitive interventions” (“PCIs”) on SMS firms to remedy adverse effects on competition. The Government has stated that PCIs “will not be limited to a constrained list of specific remedies set in legislation.” Instead, the DMU “will have broad discretion” over what...

4 Government Consultation Response, para. 16.
6 Will Hayter, CMA Blog, Digital markets and the new pro-competition regime (May 10, 2022).
7 Kate Beisley, Financial Times, UK risks being a ‘rule taker’ on tech regulation, warns CMA chief (June 20, 2022).
8 Will Hayter, CMA Blog, Digital markets and the new pro-competition regime (May 10, 2022).
9 Government Consultation Response, para. 78.
remedies to deploy, as in the existing market investigations regime.10

4. Which firms will the pro-competition regime for digital markets apply to?

The new regime will apply to firms designated as having SMS. An undertaking as a whole will be designated as having SMS, but the rules will only apply to designated activities.11

In particular, to establish SMS, the DMU must conclude that a firm has “substantial and entrenched market power” in respect of at least one “digital activity”, providing it with a “strategic position”.12 The Government expects that a “small number of the most powerful firms” will be designated in practice, and intends to introduce further substantive guidance and minimum revenue thresholds to make clear which firms are in scope.13

THE GOVERNMENT’S PROPOSED TEST FOR STRATEGIC MARKET STATUS COMPRIS ES THE FOLLOWING FOUR COMPONENTS:

- Digital Activities
- Substantial and Entrenched Market Power
- Strategic Position
- UK Nexus

The Government’s proposed test for SMS comprises the following four components:14

— Digital activities, i.e., products, services, or processes that have or fulfill a similar or specific function, and which have digital technologies as a core component.

— Substantial and entrenched market power, i.e., where a product or service lacks good alternatives, there is limited threat of entry or expansion, and the firm’s position is likely to persist over time. This assessment is expected to follow the approach the CMA currently takes in market studies and investigations.

— Strategic position, i.e., where the effects of a firm’s market power are likely to be particularly widespread or significant. The Government has set out proposed criteria for the DMU to consider when assessing the extent of a strategic position (e.g., the size or scale of the activity, whether the firm is an important access point for consumers, whether the firm can use the activity to determine the “rules of the game”, and whether the activity enables the firm to entrench or extend its market power).15

— UK nexus. The DMU must establish that the designated activity has a UK nexus.

The DMU will have discretion to decide which firms to prioritize for SMS assessments. It will, however, be required to publish guidance on its enforcement priorities and on the concepts of “digital activities” and “strategic position” and their application. The costs of the new regime

---

10 Ibid.
11 By contrast, under the German laws applicable to digital firms (Section 19a of the Act Against Restraints of Competition), the Federal Cartel Office can designate an undertaking as a whole as having “paramount cross-market significance,” then implement rules that apply across the entire firm.
12 Government Consultation Response, para. 44.
13 Government Consultation Response, paras. 44-46.
15 The list of criteria used to assess whether a firm has a strategic position will be exhaustive and set out in legislation.
will be partially recouped through a levy on SMS firms.\textsuperscript{16}

There will be a statutory deadline of nine months for the DMU to complete SMS designations, extendable by three months in exceptional circumstances.\textsuperscript{17}

The CMA’s final report in its Mobile Ecosystems market study\textsuperscript{18} gives some indication as to its anticipated approach to SMS designation once the new regime is in place. The CMA concluded that Apple and Google would both meet the currently proposed test for SMS in relation to the supply of mobile operating systems (and, in Apple’s case, the devices on which they are installed), native app distribution, mobile browsers, and browser engines.

5. **What are the main substantive rules that will govern firms covered by the pro-competition regime for digital markets**

The Government has proposed that firms designated with SMS would be required to follow legally enforceable conduct requirements, which would manage the effects of market power by setting out how firms with SMS are expected to behave. In particular, the rules governing SMS firms will consist of the following elements:\textsuperscript{19}

---

**OVERARCHING OBJECTIVES:**

- **Fair Trading**
- **Open Choices**
- **Trust and Transparency**

---

\textsuperscript{16} Government Consultation Response, para 5.

\textsuperscript{17} Government Consultation Response, para. 48.

\textsuperscript{18} See CMA, Mobile Ecosystems Final Report, Appendix L: Assessment of strategic market status (June 10, 2022).

\textsuperscript{19} Government Consultation Response, paras. 56-68.

\textsuperscript{20} Government Consultation Response, para 59.

---

\textbf{Overarching objectives.} The Government has proposed three overarching objectives to guide the aims and scope of SMS firms’ conduct requirements. These objectives are:

- **Fair trading:** users should be treated fairly and be able to trade on reasonable commercial terms with firms with SMS.

- **Open choices:** users should not face any barriers to choosing freely and easily between services provided by firms designated with SMS and other firms.

- **Trust and transparency:** users should have access to clear and relevant information to understand what services SMS firms are providing, and to make informed decisions about how they interact with the firm.

\textbf{Legislative categories of conduct requirements.} The legislation will define categories of conduct requirements that can be used by the DMU to develop firm-specific conduct requirements. The categories are likely to include: requiring SMS firms not to apply discriminatory terms, conditions, or policies to certain users or categories of users, compared with equivalent transactions; preventing tying or bundling designated activities with non-designated activities; and providing clear, relevant, accurate, and accessible information to users.

\textbf{Firm-specific conduct requirements.} The DMU will specify legally binding, tailored conduct requirements defining the behavior expected of each SMS firm. The DMU will also have the power to remove or amend conduct requirements. The Government has stated that it will define the circumstances in which the DMU can make such changes.\textsuperscript{20}
In the CMA’s final report in the Mobile Ecosystems market study, the CMA presented examples of Apple’s and Google’s practices that it anticipates could be addressed by conduct requirements. For example, responding to concerns that Apple prevents users switching from iOS mobile devices to Android mobile devices, the CMA is considering rules that would prevent Apple from denying or restricting interoperability between its software and hardware with Android devices.

Firm-specific guidance. The DMU will have the ability to develop firm-specific guidance in which it will set out its view on how the firm-specific conduct requirements apply to that firm. The guidance would not itself be legally binding.

Pro-Competitive Interventions. The Government proposes that the DMU should have a broad discretion to impose PCIs in order to address SMS firms’ market power and undermine it over time. The remedies available to the DMU through PCIs—and the process of imposing them—will resemble the existing market investigations regime under the Enterprise Act 2002. Potential remedies will include behavioral, structural, and informational interventions.

The DMU will be required to publish guidance on the types of PCIs it will consider implementing in different circumstances, how remedy trials will be run, and how interventions will be monitored and reviewed.

PCI investigations will have a statutory deadline of nine months, extendable by up to three months in exceptional circumstances. The publication of conduct requirements will not be subject to a statutory deadline, but the DMU is expected normally to publish conduct requirements along with its SMS designation decisions.

6. Are there specific rules governing digital platforms’ relationships with publishers in the UK?

The CMA and the UK telecommunications regulator, Ofcom, have published preliminary advice on how the proposed regime could apply to the relationship between digital platforms and online publishers.

The advice makes three principal proposals to address publishers’ concerns: (1) payment for publishers’ content, to be agreed between the parties with a “backstop” if no agreement is reached; (2) increased transparency about the algorithms used by platforms, and equal treatment rules regarding their application; and (3) a requirement for platforms only to collect data that is “reasonably linked” to the services they provide.

This advice is preliminary and states that further work and consultation would be required before any specific requirements are ultimately put forward.

7. Does the Digital Markets Unit need to establish the anticompetitive effects in order to establish a breach of the rules?

It is unlikely that the DMU will be required to demonstrate the competitive effects of SMS firms’ conduct in order to establish a breach of their conduct requirements. It will, however, need to consider firms’ arguments that their

---

21 See CMA, Mobile Ecosystems Final Report, Appendix M: Examples of practices that could be addressed by SMS Conduct Requirements Introduction (June 10, 2022).

22 Government Consultation Response, paras. 77-85.

23 In particular, the remedies imposed must be proportionate, evidence-driven, address an adverse effect on competition, and take into consideration any countervailing consumer benefits.

24 See CMA and Ofcom, Platforms and content providers, including news publishers: Advice to DCMS on the application of a code of conduct (May 6, 2022).
conduct is justified by reference to consumer benefits (see Question 8). Whether conduct creates anticompetitive effects may therefore be considered as part of the overall assessment of whether an alleged breach results in a net adverse impact on competition.

In addition, the Government has emphasized that SMS designations and conduct requirements will be implemented “according to the evidence.” There is therefore expected to be scope for engagement with the DMU as it develops conduct requirements, during which firms will be able to adduce evidence about the effects of their conduct.

In order to impose PCIs, the DMU will need to demonstrate an adverse effect on competition. This standard of proof is well developed as a measure of anticompetitive effects in the market investigations regime under the Enterprise Act 2002.

8. Can firms defend or objectively justify their conduct under the pro-competition regime for digital markets?

The Government has stated that it will introduce an exemption in order to ensure that conduct which results in net consumer benefits will not breach conduct requirements. This reflects the recognition, as stated by the CMA, that “conduct which may in some circumstances be harmful, in others may be permissible or desirable as it produces sufficient countervailing benefits.” Firms would be exempted from conduct requirements where their conduct is “necessary, or objectively justified, based on the efficiency, innovation, or other competition benefits it brings.”

Before imposing PCIs, the DMU will need to take into account any countervailing benefits when considering whether an adverse effect on competition exists and consider the impact of any proposed remedies on benefits enjoyed by consumers.

9. What procedural safeguards does the pro-competition regime for digital markets include?

Details of specific procedures have not yet been finalized, though the Government has stated that the DMU’s range of information gathering tools will be “subject to appropriate safeguards.” We would expect investigations under the regime to include common procedural rights such as the ability to comment on preliminary findings and proposed remedies, an oral hearing, and an independent decision maker.

The Government currently proposes that firms will be able to appeal decisions of the DMU (including SMS designation decisions, decisions finding violations of conduct requirements, and PCIs) to the Competition Appeal Tribunal. The standard of appeal will be ordinary judicial review grounds, as in the UK mergers and markets regimes (as opposed to full merits appeals, as in Competition Act 1998 investigations).

The DMU will likely have a duty to consult publicly before taking SMS designation decisions, imposing PCIs, finding breaches of conduct requirements, or modifying conduct requirements.

---

25 Government Consultation Response, paras. 7; 44.
27 Ibid.
28 Government Consultation Response, para. 100.
29 Digital Markets Taskforce Advice, paras. 4.110-4.112.
Affected parties and third parties would therefore have an opportunity to provide input on the DMU’s decisions.

10. What kinds of penalties or remedies can be imposed following a breach of the rules?

SMS firms in breach of DMU decisions will face financial penalties of up to 10% of global turnover for the most serious offenses, and up to 5% of daily worldwide turnover for continued breaches. A lower level of 1% of global turnover (and up to 5% for each day of ongoing non-compliance) will apply to information offenses.

The DMU will be able to apply to the court to disqualify individuals from holding company directorships in the UK and also to impose civil penalties on named senior managers who fail to ensure that their firms comply with information requests. It will also be empowered to apply criminal penalties where false or misleading information is provided (as is already the case for other CMA functions).

The DMU will be able to issue interim orders for breaches of conduct requirements (to pause or reverse actions taken by SMS firms, or require a firm to take action to comply with the relevant requirement). In addition, as explained at Question 5, the DMU will be able to impose targeted PCIs on firms.

11. Has the CMA or Digital Markets Unit issued any guidance or reports regarding the pro-competition regime for digital markets?

The Government’s response to the consultation regarding the proposed pro-competition regime for digital markets represents the most up to date guidance on how the new regime will operate. This builds on the recommendations of the Digital Competition Expert Panel led by Professor Jason Furman and advice from the CMA’s Digital Markets Taskforce.

The CMA’s final reports in the Online Platforms and Digital Advertising and Mobile Ecosystems market studies, include recommendations on how the new regime might apply to the markets considered.

12. Is the pro-competition regime for digital markets competition based, or does it target other types of conduct, such as consumer protection, moderation of content, or privacy?

The proposed regime is principally competition based. It is likely, however, to touch on conduct relating to a range of related issues, such as data usage, consumer protection (e.g., in relation to online choice architecture), and online privacy. The Government has separately introduced an Online Safety Bill that would apply to firms which host user-generated content.
13. **What is the current enforcement practice with respect to conduct that is expected to be addressed by the pro-competition regime for digital markets?**

In light of delays to legislation introducing the proposed regime, the CMA has doubled down on its use of existing enforcement tools in digital markets. Ongoing investigations into companies expected to be covered by the proposed regime include:

- **Investigation into Google’s “Privacy Sandbox” browser changes (opened in January 2021).** The CMA carried out an investigation of Google’s proposals to remove third party cookies on Chrome on desktop and replace third party cookies and other functionality with a range of different tools. The CMA accepted commitments from Google in February 2022.

- **Investigation into Apple App Store (opened in March 2021).** The CMA is investigating suspected breaches of UK competition law by Apple in relation to the distribution of apps on iOS and iPadOS devices, in particular the terms and conditions governing app developers’ access to the App Store.

- **Investigation into Meta’s use of ad data (opened in June 2021).** The CMA is investigating Meta’s conduct in relation to the collection and use of data in the context of providing online advertising services and Facebook’s single sign-on function, and whether this results in a competitive advantage over downstream competitors.

- **Investigation into Google’s and Meta’s conduct in online display advertising services (opened in March 2022).** The CMA is investigating whether an agreement between Google and Meta restricted or prevented the uptake of header bidding services, and whether Google also affected the ability of other firms to compete with its products in this area.

- **Investigation into Google’s conduct in ad-tech (opened in May 2022).** The CMA is investigating whether Google’s practices in three parts of the ad-tech chain (demand-side platforms, ad exchanges, and publisher ad servers) distort competition.

- **Market investigation reference into mobile browsers and cloud gaming (November 2022).** Following its Mobile Ecosystems market study, the CMA launched a market investigation into mobile browsers and cloud gaming. The investigation will focus on Apple’s requirement on browser developers on iOS to use Apple’s own web rendering engine and Apple’s restrictions on the distribution of cloud gaming apps through its app store. The decision to launch a market investigation reference was driven in part by the delays to the legislation introducing the pro-competition regime. The CMA had initially concluded in its Ecosystems interim report that a market investigation would be inappropriate as the new regime would in principle be best placed to address the concerns it identified.

34 See CMA, Press release: CMA to investigate Google’s ‘Privacy Sandbox’ browser changes (January 8, 2021).
35 See CMA, Press release: CMA to keep ‘close eye’ on Google as it secures final Privacy Sandbox commitments (February 11, 2022).
36 See CMA, Press release: CMA investigates Apple over suspected anti-competitive behaviour (March 4, 2021).
37 See CMA, Press release: CMA investigates Facebook’s use of ad data (June 4, 2021).
38 See CMA, Press release: CMA investigates Google and Meta over ad tech concerns (March 11, 2022).
39 See CMA, Press release: Google probed over potential abuse of dominance in ad tech (May 26, 2022).
40 See CMA, Mobile ecosystems market study (June 10, 2022).
41 See CMA, Mobile browsers and cloud gaming: Decision to make a market investigation reference (November 22, 2022).
— **Investigation into Google’s conduct in the distribution of apps on Android devices (opened June 2022).** The CMA is investigating Google’s conduct in relation to distribution of apps on Android devices in the UK, in particular Google’s Play Store rules which require certain app developers to use Google’s own payment system for in-app purchases.43

— **Investigation into Amazon’s Marketplace (opened in July 2022).** The CMA is investigating Amazon’s conduct in relation to the way non-public third party seller data may be used within Amazon’s retail business, how Amazon sets criteria for selecting which product offer is placed in the “Buy Box”, and which sellers can list products under Amazon’s “Prime label” on its Marketplace in the UK.44

The CMA has also carried out several consumer protection investigations into digital firms under UK consumer legislation, including:

— **Investigation into anti-virus software (opened in December 2018).** Following an investigation into the anti-virus software sector, in particular the automatic renewal of anti-virus subscriptions, the CMA agreed commitments with McAfee and Norton.45

— **Investigation into online console video gaming (opened in April 2019).** Following an investigation into auto-renewal practices in respect of Nintendo Switch, Play Station, and Xbox, the CMA agreed commitments with Sony, Nintendo, and Microsoft.46

— **Investigation into fake reviews (opened in June 2019).** The CMA is currently investigating whether Amazon and Google took sufficient action to protect users from fake reviews.47 This investigation follows an initial probe of several other digital businesses (e.g., eBay and Meta) on the same topic.48

### 14. Are there merger rules specific to digital platforms in the UK?

The Government’s proposals for the new regime contain a mandatory reporting regime for certain mergers before the relevant transaction can be completed. SMS firms will have to report any transaction where:

— The SMS firm acquires a 15%+ equity or voting share in the target;

— The value of the SMS firm’s holding is over £25 million; and

— The transaction meets a UK nexus test (this has not yet been defined, but will likely be similar to the existing nexus test under the UK’s merger control regime).

In addition, the Government intends to introduce changes to its merger notification thresholds for all firms under a wider set of reforms to competition law. These changes, intended to capture so-called “killer acquisitions”, will result in the CMA having jurisdiction to review transactions where the acquirer has both:

There are currently no digital-specific competition laws in the US. Two pieces of pending legislation may change that: the American Innovation and Choice Online Act and the Open App Markets Act. Both bills target so called “self-preferencing” by large digital platforms. As of November 2022, neither bill has passed. Overall, passage seems unlikely at this stage, but cannot be ruled out.

Rules Under Development

There are currently no digital-specific competition laws in the US. Two pieces of pending legislation may change that: the American Innovation and Choice Online Act and the Open App Markets Act. Both bills target so called “self-preferencing” by large digital platforms. As of November 2022, neither bill has passed. Overall, passage seems unlikely at this stage, but cannot be ruled out.

1. What rules govern competition in digital markets in the US?

There are currently no digital-specific competition laws in the US. Like all firms, digital firms are subject to the Sherman Act (which regulates agreements and single-firm conduct), and the Clayton Act (which primarily regulates mergers), the FTC Act (which largely runs in parallel to the other statutes, though may have a slightly broader reach), and similar state laws. In recent times, case law has expanded in ways that are particularly relevant to digital markets. For example, the Supreme Court in Ohio v. American Express held that both sides of a two-sided platform must be taken into account when assessing competitive harm, in certain circumstances.¹

However, there are at least two relevant pieces of pending legislation—the American Innovation and Choice Online Act (“AICOA”) and the Open App Markets Act (“OAMA”). If passed, the AICOA and OAMA would introduce sweeping changes to the regulation of competition in digital markets in the US, targeting companies such as Google, Apple, Meta, Amazon, Microsoft, and likely TikTok. Various states, including Ohio and New York, have also considered legislation that would either specifically target digital firms, or would likely have significant effects on them.

2. **What is the status of any forthcoming digital regulation in the US?**

While drafts of the AICOA and OAMA were voted out of committee in a bipartisan manner (through a 16-6 January vote and 20-2 February vote respectively), the bills have since stalled. Senate Majority Leader Chuck Schumer committed to bringing the bills to a vote in summer 2022 if he could gather the support necessary, but was unable to do so.

Despite this setback, the legislations’ sponsors claim they have the necessary votes and the White House is planning a post-midterm elections push to get the bills to a vote. If passed, the AICOA would take effect in one year and the OAMA would take effect in 180 days.

Overall, passage of either bill seems unlikely at this stage, but cannot be ruled out.

3. **How are the rules expected to be enforced?**

If passed, the AICOA and OAMA would be enforceable by the FTC, DOJ, and State Attorneys General. As currently drafted, the OAMA would also create private rights of action for developers. All these groups have demonstrated their strong appetite for litigation against large digital platforms. Should either or both bills enter into force, investigations and litigation should be expected.

Injunctive relief would be available under both bills. Further, under the AICOA, enforcers would be able to seek penalties up to 10% of the defendant’s global annual turnover. Under the OAMA, app developers could bring private suits for treble damages and State Attorneys General could sue for such damages in the name of developers from their states.

4. **Which firms will the rules apply to?**

If passed, the OAMA would apply to companies that own app stores with over 50 million US users. The OAMA is intended to regulate iOS and the Apple App Store and Google Play and Android. It would also likely cover the Microsoft Store on Windows.

The AICOA would apply to a broader set of “covered platforms.” In simple terms, these are online services, owned by large companies, that have a significant number of active users or business users. In practice a significant number of popular products and services supplied by companies like Google, Apple, Meta, Amazon, Microsoft, and likely TikTok will qualify as covered platforms.

Covered platforms under the AICOA are defined by reference to the following criteria:

- The product or service must be a website, online or mobile app, operating system, digital assistant, or online service.
- The product or service must (i) allow users to generate, share, or interact with content;

2. OAMA Sec. 3(b).
3. AICOA Sec. 3(a)(6)(B).
4. OAMA Sec. 5(a)(1), (b).
5. OAMA Sec. 5(a)(1), (b).
(2) allow users to perform broad searches; or (3) facilitate offering, selling, shipping, or advertising of goods or services between entities not controlled by the platform.

— The product or service must have at least 50,000,000 US monthly active end users or at least 100,000 US monthly active business users.

— The product or service must be a “critical trading partner” for the sale or provision of any product “offered on or directly related to” the platform. In other words, the product or service could be used either to: (1) restrict or impede access of a business user to its end users; or (2) restrict or impede access of a business user to a tool or service it “needs to effectively serve” its end users.

— The product or service must be at least 25% owned by a company with (1) a market cap greater than USD 550 billion; (2) US revenue greater than USD 550 billion; or (3) greater than 1 billion global monthly active users.

5. What are the main substantive rules that would govern firms covered by the proposed digital regulation?

If passed, the AICOA would broadly prohibit covered platforms from self-preferencing (i.e., preferencing first-party products and services over those of other business users on a covered platform in a manner that materially harms competition).6

The AICOA also contains a number of more specific prohibitions:

— **Terms of service discrimination.** Covered platforms cannot discriminate among similarly situated business users in the application or enforcement of their terms of service in a manner that materially harms competition.7

— **Interoperability.** Covered platforms cannot materially restrict or impede business users from interoperating with the same features available to first-party products and services that compete with products or services offered by business users on the covered platform.8

— **Tying.** Covered platforms cannot condition covered platform access or preferential placement on the use of other first-party products that are not part of or intrinsic to the covered platform.9

— **Use of data to compete.** Covered platforms cannot use non-public data generated by business users, or their users, to support first-party products that compete against business users on the covered platform.10

— **Data access.** Covered platforms cannot materially impede business users from accessing data generated on the platform by them or their customers’ interactions with them.11

— **Defaults and uninstallation.** Covered platforms cannot impede platform users from uninstalling preinstalled software or changing default settings that steer users to first-party products.12

— **User interface.** Covered platforms cannot treat first-party products more favorably than those of other business users within any

platform user interface, including search or ranking functionality. 13

— Retaliation. Covered platforms cannot retaliate against users that raise good faith concerns with law enforcement about legal violations.14

The OAMA contains a number of prohibitions specific to covered app stores and operating systems, some of which mirror the AICOA:

— Obligatory first-party payment systems. Covered companies cannot condition use of their app stores or operating systems on use of first-party in-app payment systems.

— Most-favored nation clauses. Covered companies cannot employ most-favored nation clauses in app store terms of service. In other words, covered app stores would be prevented from prohibiting developers from offering better terms to users on rival app stores.

— Anti-steering provisions. Covered companies cannot discriminate against developers that offer different terms of sale for use of third-party payment systems or app stores and cannot restrict developers from communicating legitimate business offers.

— Use of data to compete. Covered companies cannot use non-public data from third-party apps to compete against them.15 This provision is narrower in scope than the AICOA’s equivalent prohibition, which prohibits the use of such data entirely in any first-party app that generally competes on the covered platform.

— Defaults. Covered companies must provide “readily accessible means” for operating system users to choose third-party apps and app stores as defaults.16 This provision does not prevent covered companies from setting first-party apps as default. Unlike the EU Digital Markets Act, the OAMA does not contain an express requirement to show users default choice screens.

— “Sideloading”. Covered companies must provide “readily accessible means” for operating system users to install third-party apps and app stores outside of the covered companies’ first-party app stores (i.e., to enable so-called “sideloading”).17

— Self-preferencing. Covered companies cannot unreasonably preference first-party or business partners’ apps in their app stores.18

— Interoperability. Covered companies must provide developers access to the same operating system features that are available to first-party products and services, as well as to those that are available to business partners.19

6. Are there specific rules governing digital platforms’ relationships with publishers?

No. The AICOA and OAMA do not contain specific rules governing digital platforms’ relationships with publishers. Senator Amy Klobuchar has introduced a separate bill, the Journalism Competition and Preservation Act, which would give publishers a six year

safe-harbor from antitrust law in order to negotiate collectively against covered online platforms.20

7. Will the authority need to establish the effects of certain conduct in order to establish a breach of the proposed rules?

If passed, the AICOA’s general self-preferencing and terms of service discrimination provisions would require plaintiffs to show “material harm to competition.” The remaining provisions do not contain affirmative effects requirements, but would not apply if the defendant shows a lack of “material harm to competition.” In order words, the burden would be shifted from the plaintiff to the defendant for these provisions. As a matter of general antitrust law, harm to competition typically means that prices are rising, output is falling, or innovation or quality is decreasing; it is not sufficient to show that the challenged conduct harms competitors.

The OAMA would not require plaintiffs to establish the effects of challenged conduct.

8. Will firms be able to defend or objectively justify their conduct under the proposed rules?

The AICOA would take into account the overall competitive effect of conduct when determining liability. In particular, the self-preferencing and discrimination provisions require plaintiffs to show “material harm to competition.”21 And under the other prohibitions, defendants can avoid liability by showing, by a preponderance of the evidence (>50%), that conduct did not materially harm competition.22

The AICOA also provides specific affirmative defenses where a defendant can show that conduct was “reasonably tailored,” and “reasonably necessary” to: (1) prevent a violation of law; (2) protect safety, privacy, or security; or (3) maintain or enhance core platform functionality.23

The AICOA provides specific affirmative defenses where a defendant can show that conduct was “reasonably tailored,” and “reasonably necessary” to:

1. Prevent a violation of law;
2. Protect safety, privacy, or security; or
3. Maintain or enhance core platform functionality.

The OAMA contains affirmative defenses, albeit on fairly narrow grounds. In particular, covered companies can defend actions by showing they were necessary to: (1) achieve user privacy, security, or digital safety; (2) prevent spam or fraud; or (3) prevent a violation of, or comply with, Federal or State law.24 However, the covered company must also show “by a preponderance of the evidence” (>50%) that such actions were:

— Applied on a demonstrably consistent basis to the covered platform’s apps, its business partners’ apps, and other apps;
— Not used as a pretext to exclude, or impose unnecessary or discriminatory terms on, third-party apps, in-app payment systems, or app stores; and

20 JCPA Sec. 5(b)(1). The JCPA applies to “covered platforms.” Similar to the AICOA, covered platforms are online platforms with over 50 million US monthly active users that either: (1) are owned by a company with market cap greater than USD 550 billion; or (2) have over 1 billion global monthly active users. JCPA Sec. 2(2).
21 AICOA Sec. 3(a)(1)-(3).
22 AICOA Sec. 3(b)(2).
23 AICOA Sec. 3(b)(5).
24 OAMA Sec. 4.
— Narrowly tailored and could not have been achieved through a less discriminatory and technically possible means.

The OAMA substantially shifts the burden of proof on these issues. Under current doctrine, protecting user privacy or security is considered a permitted procompetitive justification that defendants can avail themselves of. In particular, in antitrust cases, if a defendant takes an action to protect user privacy or security, a plaintiff must demonstrate the existence of a reasonable alternative with substantially smaller competitive effects. By contrast, under the OAMA, if a defendant takes an action to protect user privacy or security, the defendant is still liable unless it can show, by clear and convincing evidence, that no less discriminatory alternative existed.

9. What procedural safeguards would the proposed rules include?

If passed, the AICOA and OAMA would be enforced in the same manner as existing antitrust laws. In particular, both bills could be enforced through the courts, where Defendants would have all the rights available within the American legal system. Further, as is true today, the FTC could bring cases through its internal administrative system. In the FTC’s administrative system, claims are initially presided over by an FTC administrative law judge and then must be appealed to the FTC Commission (which decided to bring the claims) before they can be appealed to a Federal appellate court.

Both bills could also be enforced through agency investigations. Specifically, in addition to bringing claims, enforcers could issue broad subpoenas to investigate potential infringements. Responding to such subpoenas can often be quite burdensome.

Separately, when the agencies designate an online service as a covered platform, the owner of that service would have the right to challenge that designation in the DC Circuit within 30 days (whether or not the service was subject to an enforcement action in court). The agencies would also be tasked with publishing enforcement guidelines within 270 days of passage detailing how they would assess “material harm to competition,” affirmative defenses, and fines under the Act.

10. What kinds of penalties or remedies will the authority be able to impose following a breach of the proposed rules?

If passed, under the AICOA, enforcers could seek to impose penalties of up to 10% of a covered platform operator’s total global annual turnover. To provide further transparency, the Act requires the agencies within 270 days to draft enforcement guidelines detailing how they will assess penalties. Injunctive relief would also be available.

---

25 Nat’l Collegiate Athletic Ass’n v. Alston, 141 S. Ct. 2141, 2161 (2021) (“We agree with the NCAA’s premise that antitrust law does not require businesses to use anything like the least restrictive means of achieving legitimate business purposes. To the contrary, courts should not second-guess degrees of reasonable necessity so that the lawfulness of conduct turns upon judgments of degrees of efficiency.”).
26 AICOA Sec. 3(c)(1)(A); OAMA Sec. 3(a)(2).
27 There are currently cases pending in the US that challenge the constitutionality of the administrative litigation process used by the FTC and other administrative agencies.
28 AICOA Sec. 3(c)(1); OAMA Sec. 5(a).
29 AICOA Sec. 4(a).
30 AICOA Sec. 3(c)(6)(B).
31 AICOA Sec. 4(a).
32 AICOA Sec. 4(a).
Under the OAMA, app developers could bring private suits for treble damages and State Attorneys General could sue for such damages in the name of developers from their states. The OAMA does not include penalty provisions. It would be enforced by the FTC and DOJ in the same manner as the current antitrust laws in the civil context. In short, Federal enforcement would mostly be limited to injunctive relief, though in rare cases the DOJ may also seek equitable monetary remedies (e.g., disgorgement and restitution).

11. Have any guidance or reports been issued regarding the proposed rules?

No, as neither the AICOA nor OAMA have been passed into law. However, the agencies would have to produce enforcement guidelines within 270 days if the legislation is passed.

12. Will the new regime be competition based, or does it target other types of conduct, such as consumer protection, moderation of content, or privacy?

As a general matter, the AICOA and OAMA are competition-based. However, there is debate over whether the AICOA would have second order effects on content moderation by covered platforms (e.g., whether the prohibition on terms of service discrimination against business users would limit the ability of platforms to take down misinformation posted by fringe media outlets).

This debate has become a serious barrier to the bills’ passage. Progressives are pushing for amendments to explicitly prevent the AICOA from becoming a tool to punish platforms that moderate politically sensitive speech. However, some Republicans have stated that such an amendment would be a non-starter if they are to support the bill’s passage. For the AICOA to become law, it would need sixty votes in the Senate, which requires bipartisan support. Given the debate on content moderation, it is unclear whether such bipartisan support is possible.

18 Mike Masnick, TechDirt, Republicans Announce That If Content Moderation Is Written Out Of Antitrust Bills, They’ll Pull Their Support (June 23, 2022).
13. **What is the current enforcement practice with respect to conduct that is expected to be addressed by the digital regulation?**

Unlike in other jurisdictions, US agencies have not historically challenged self-preferencing by tech companies. This is likely because self-preferencing, while subject to US antitrust law, would rarely rise to the level that would trigger a potential law violation, for three main reasons. First, under US antitrust law, dominant companies are only required to do business with competitors in specific narrow circumstances, and do not have a general obligation to give competitors the same treatment they give themselves. Second, self-preferencing would only be actionable if engaged in by a monopolist and if it is likely to result in acquiring or maintaining monopoly power. Third, the effects of the self-preferencing would have to result in net harm to consumers, so courts would weigh the benefits of self-preferencing against its harms. This would change under the AICOA and OAMA, and greater enforcement would be expected accordingly.

Generally, however, enforcement of antitrust law in digital markets by the FTC, DOJ, and State Attorneys General has ramped up in recent years. The following cases are currently pending before the courts:

— The FTC is challenging alleged monopolization by Surescripts, the largest provider of digital services for filling pharmaceutical prescriptions and confirming insurance coverage for those prescriptions.

— The FTC is challenging Meta’s 2012 acquisition of Instagram and 2014 acquisition of WhatsApp, alleging that the acquisitions allowed Meta to maintain a monopoly in personal social networking services.

— The DOJ is challenging Google’s distribution agreements with mobile carriers and Apple, alleging that the agreements are exclusionary and have allowed Google to maintain a monopoly in general search services and search advertising. A coalition of State Attorneys General led by Colorado has joined the DOJ’s suit and is also challenging alleged restrictions on certain specialized vertical search providers’ access to Google’s Search results page.

— A coalition of State Attorneys General led by Texas is challenging practices on Google’s ad-exchange that the coalition alleges coerce publishers on the exchange into also using Google’s ad-serving tools.

14. **Are there merger rules specific to digital platforms in the US?**

No. Neither the AICOA nor the OAMA would create new merger rules for digital platforms. A separate piece of legislation pending in Congress, the Platform Competition and Opportunity Act, would substantially limit acquisitions over USD 50 million by Google, Apple, Meta, Amazon, and Microsoft. However, given its lack of progress...
and the lack of time left in the legislative calendar in the current session, the PCOA is not expected to pass.

---

**$50 million**

A SEPARATE PIECE OF LEGISLATION PENDING IN CONGRESS WOULD SUBSTANTIALLY LIMIT ACQUISITIONS OVER USD 50 MILLION BY GOOGLE, APPLE, META/FACEBOOK, AMAZON, AND MICROSOFT.
